Strenuous objections to build on Green Belt (GB) surrounding Kidlington. GB were created for preventing relentless expansion of town and cities and provide valuable amenity for residents in those cities. They should by definition be inviolable and permanently protected from development. Specific reference is made to Section 9 of the NPPF. CDC is to be reminded of Conservative government's election pledges to protect GB and to avoid siting housing developments on them. There must be sufficient brownfield sites on Oxford and Cherwell to obviate the need to destroy Kidlington's GB. Astounded that District Council is basing housing need projections on SHMA report. How can these be "objectively assessed needs" when the SHMA was produced by a team led by property consultants with close connections to the development sector? Therefore the housing requirements are far in excess of previous estimates and regarded as being grossly inflated. The need would be more credible if Oxford City Council were not prioritizing employment development sites. Kidlington's character would be totally destroyed by the 70% increase in population. The invaluable green gap between Kidlington and Oxford would be lost. Such a huge increase in population would produce enormous infrastructure problems in the Kidlington area. Health and school provision would reach breaking point. Traffic congestion is already an everyday problem. A massive increase in housing would produce intolerable congestion. Detailed reference is made to the Kidlington Framework Masterplan. CDC has always defended the Kidlington GB and it has a duty to Kidlington's residents to continue to do so if their environment is not to be irredeemably ruined.

Reject the proposals for the following reasons: Meeting Oxfords unmet need: The case for Oxford's housing need has been overstated. If Oxford was to switch land designated for business to housing it would be able to meet its housing obligations. It is premature for Cherwell to even start the process. It feels like a decision has been made 'behind closed doors'. Green Belt: The Local Plan Review attacks the core principles on which GBs depend. Even if the unmet need was proven the council should meet the need in locations other than the GB. The 3 villages affected have the least GB around them and there are other areas better suited that should be considered. Sustainability: How is the GB the most sustainable option? The loss of GB is the opposite to sustainability. It is the council's duty to locate other sustainable sites in the district previously identified. Density: If the Council built at higher densities there would be a greater opportunity for people to purchase genuinely affordable housing. Much higher density targets should be set. Transport: The proposed new railway station between Begbroke and Kidlington is unrealistic. The new housing should be delayed until the Oxford to Cambridge Expressway route has been decided, East West railway reopened and the full expansion of Bicester is agreed with its potential new transport infrastructure. The rep goes on to detail existing specific local traffic problems. More traffic will increase these problems. Employment: New employment needs to be focussed at Bicester where there are already large numbers of new housing being built and infrastructure already in place to manage this. Woodstock: Identified housing development in Woodstock would put undue stress on local infrastructure and services, threaten a world heritage site, damage a rural environment and turn an historic town in to an Oxford suburb. Am astounded the Council would consider doing this. The roads around Yarnton and Woodstock are often gridlocked especially during an event at Blenheim Palace. Additional houses would exacerbate this situation. In conclusion, there are other places to build the housing. The proposals mean that the GB would be almost eradicated in our area. Advocate taking plans to another part of Oxford where it will be less disruptive to local residents.

Objection to 4400 houses being build in Yarnton. Oxford has allowed a housing crises to prosper and continue and does not want to properly address the issue. The answer is not to destroy the beautiful village of Yarnton. Oxford has allowed the housing units to become rentals and tourists to invade its city. The landlord's are absent in Oxford and they're allowing the housing stock to be degraded and inflated in price. This is Oxford's problem. Protect Yarnton. Yarnton is an charming village that could expand but not by 4000 numbers. Yarnton property prices will decrease and it's appeal diminish. This expansion is not the correct expansion project and the developers do not care about Yarnton. " they care about profits". Oxford's immigrant landowners, rent rooms out for high prices with mould in the rooms. Why would you want this repeated in charming Yarnton? This is Oxford's housing crisis that can be addressed by the citizens who allowed it to flourish there. Oxford can correct this problem with better rules and regulations. Opposed to 4000 housing units that destroy Yarnton village. A smaller upscale and carefully planned expansion is advisable at 200 units at most. That will ensure the property values and charm remain.

Moved from Oxford to Yarnton in 1957. Yarnton was given Green Belt (GB) status so that it cannot be built on to protect our lovely village. Now it is proposed to build on it for Oxford people. There is land in Oxford to build houses, not commercial premises. The infrastructure cannot cope with such a proposed development, which is also agricultural land, producing food for the country. We are now importing 50% of our food. Categorically oppose these plans, to build on our Green Belt land.

44	PR-C-0039	04/08/2017	Mr & Mrs P.	Moylan				No	
		Comments		<p>Concern expressed regarding the plans released by the CDC to build 4400 new houses around Yarnton, Begbroke and Kidlington on Green Belt (GB) land. Attracted by the community, identity and beautiful green spaces and wildlife surrounding the village. The proposed plans would lead to a tripling of the current size of the village and the merging of the villages of Yarnton, Begbroke and Kidlington into a major conurbation exceeding 27,000 people. This is on top of the irreparable impact country-wide of such an "development", forever changing the area which we cherish and want to protect. Objections to the CDC plans are based on the following concerns: 1. Cherwell is already committing to building 22000 houses in the district, why has the CDC committed itself to building more? The 2014 Oxfordshire SHMA must surely require review in the light of Brexit. Who, exactly, is it envisaged will buy/rent these properties, especially considering the economic and demographic outlook posed by Brexit? The plans therefore cannot be considered "consistent with national policy", as no one is clear what this is yet! Speculative building is unethical and greedy; it is well documented that developers and housebuilders regularly "sit" on land for an number of years confident that they can sell the land on for an better price at later date. Clearly, this will not benefit the local area. 2. Oxford City is proud of its 41% green space, but is happy to encroach upon and exploit the green areas beyond the city walls to meet the apparent housing needs. It is quick to dismiss sites that could easily be developed for residential purposes, but is able to find land for massive commercial developments such as the Northern Gateway. Land behind the back of BMW garage in Cowley is ideally placed for housing, why has this area not been explored for example, or the wasted space on the Botley Road industrial estates where many of the big technology business will likely withdraw because of the rise of online trading.</p>

46	PR-C-0039	04/08/2017	Mr & Mrs P.	Moylan				No	
		Comments		<p>The notion that it is possible to create SSSI is nonsense! The plans leave precious little in terms of green space around and between the villages. The plans will lead to increased pollution which will in turn gravely and irreversibly harm Begbroke Wood, Pixey and Yarnton Meads (SSSI), and Cassington Meadows. In addition, there is a roost of bats (possibly Noctule bats) living behind Rutten Lane in Yarnton, yellowhammers (RSPB Red List) can be seen on the allotments, hedgehogs and amphibians depend on the green areas and ditches surrounding the village, the return of otters to the Cherwell will be jeopardised, a plethora of old meadow grasses and at least thirty rare species of flowers. Rep refers to Dr Judith Webb's work. Threat to allotments where some allotment holders have been working the land for 40+ years: the pollution created by traffic and building work will make the current allotments unpleasant and unsafe areas in which to grow food. The allotments themselves provide habitats for a wide range of wildlife. 8. Floodplain (most recent major flooding event January 2014 in which the A34 was threatened by water on both sides between the Pear Tree and Botley interchanges): -the Partial Review July 2017' document alludes to the floodplain as a 'major constraint'. Reference is made to Forestry Commission advice on flood alleviation. Building on the GB will put the floodplain under even more pressure, and we will see serious, potentially fatal, flooding problems across the nearby communities. It also provides a unique and precious wildlife habitat.</p>

48	PR-C-0039	04/08/2017	Mr & Mrs P.	Moylan				No	
		Comments		<p>Undoubtedly, the homelessness crisis in Oxford is acute. It is folly to think that the building of houses will address this. The Council needs to fight harder to reinstate some of the vital services which have been limited or closed, particularly as regards physical and mental health, the most significant causes of homelessness, Rep provides website to express the point. The speculative building of houses signifies nothing other than a means of salving the conscience of the CDC and the present government. The transport infrastructure is already under strain. The proposal to modify the A44 from Bladon to Pear Tree by making one lane of the dual carriageway into a bus lane, is absurd. Traffic is often slow or stationary at present; this measure would lead to gridlock along the A44. The plans include the proposal to close Sandy Lane. This will remove a key road link between Yarnton and Kidlington. This action will lead to further traffic congestion at both ends of Kidlington and increased pollution. The suggestion that the Sandy Lane link can become a wheel-chair access and cycle lane as part of a cycle 'superhighway' into Oxford is ludicrous! In any case, such a project would simply lengthen cycle journeys! The introduction of another secondary school in the area, in addition to two further primary schools will increase litter, traffic and, sadly, crime. Where are the plans for increased community support, generally? The consultation period of 17th July to 29th August is too short a time-frame; indeed, we think it is poor judgement from the Council to run the consultation period during the school holidays, and thereby strongly urge for a considerable extension to the deadline. In summary, there are no 'exceptional circumstances' that justify building on the GB and altering forever the nature and identity of our historic villages and their beautiful and unique surroundings. The plans cannot be considered 'sound', in the sense that they have not been positively prepared, justified, or are effective and consistent with national policy. There must be more 'joined-up' thinking, analysis of real rather than perceived future need, and together with Oxford City, the CDC must be more resourceful and creative about finding responsible solutions to housing issues.</p>					
		Changes Sought		Reasons for Participation					
47	PR-C-0039	04/08/2017	Mr & Mrs P.	Moylan				No	
		Comments		<p>The Plan stresses the relationship between Oxford and surrounding communities. It entirely overlooks the fact that Oxford has become a commuter city for those working in London. Those who can afford to live in the new developments will be travelling on the train to work in London, and not investing their time or money in any real sense in Oxford or the communities in which they own a house. The proposal purports to support the move for 'affordable housing', something which we find laughable. 80% of market value in the area does not equate to 'affordable housing' in a county where the average house price is already £400,000+. The 'promise' that a proportion of the new houses will be made over to the Housing Association and be available for rental, is an attractive one, but we have seen across the country that this very rarely happens, in reality. Younger generations want the opportunity of owning their own homes, and do not want to continue renting. The density of 45 houses per hectare is very high, higher still than the recent development in Yarnton on the Cresswell Close estate which stands at 35 houses per hectare. This presumably means there will be more high-rise housing which will further ruin the environment and contribute to light and noise pollution. The greed of Blenheim Palace, Merton College and Exeter Colleges: these can at best be described as commercial, self-serving, and excessively wealthy enterprises. It came as no surprise to us that Blenheim, the Colleges, and university are happy to 'give up' their land in support of the proposals. Once happy to visit and admire the beautiful Palace and grounds at Woodstock, we now actively avoid the site which has become an ostentatious 'stop-off on 'the Bicester Village' tourist trail and venue for all manner of 'events', clogging up our roads and spoiling our surroundings with no obvious benefit to the surrounding communities. For the second year running, we have felt forced to make alternative housing arrangements for the duration of the 'Country File Live' event to avoid the misery presented by the transport access issues. Contrary to its misguided conclusions, the Palace does not 'benefit' the community as much as it claims to believe, as many local enterprises have been put out of business - this goes unchecked, as does the Begbroke Science Centre which, to date, has provided no obvious service to its surrounding communities, whatsoever!</p>

Proposed Submission Plan - General Comments

PR-C-0039	04/08/2017	Mr & Mrs P.	Moylan				No	
45	Comments							
<p>The centre of Banbury is disappearing because of the building of retail parks and housing out of town, and yet there is no refurbishment of the town centre as a residential area and social hub. In addition, the senseless threat of closure of a number of vital units in the Horton General Hospital in Banbury is a major concern. If the closures go ahead, there will be ever more traffic on the way to the John Radcliffe Hospital and associated units in central and East Oxford. It is already demanding for emergency vehicles to reach the J.R., but this problem would be dangerously exacerbated by excessive building in Yarnton, Begbroke, and Kidlington. The Green Belt is designed to prevent urban sprawl and loss of identity. If building goes ahead, the Parish boundaries of Begbroke, Yarnton, and Kidlington will be irrevocably lost. Furthermore, the decision to erode the Green Belt renders the designation meaningless, as it would run entirely contrary to the promise to safeguard our countryside, historic towns and villages, and it sets a dangerous precedent for the future. With the changes posed by Brexit, we are as a nation going to have to find ways to produce more of our own food, so the building on agricultural land is very unwise and short-sighted.</p>

<p>Considers the plan to be sound as it directly addresses existing and future issues regarding sustainable transport connectivity to and from central Oxford. It should be a priority to provide a sustainable movement corridor into and through the town for pedestrians, cyclists and public transport. The plan addresses this and provides not only for existing modes of transport but has the potential to provide for other rapid transport and environmentally friendly systems such as autonomous and electric busses, trams or other forms of mass transportation. There is significant growth in this technology which will be implemented during the life of this plan. The plan considers this point well, is "future protected" and that has to be applauded.</p>

<p>Objection to the Development proposals. Riding Roughshod through regulations: Why do we have regulations if the green belt can be thrown over for the very reasons stated for its existence. Why can Oxford impose development on Cherwell when Cherwell had its own plan completed and accepted as required. Who challenged the stakeholders over their wish list? Significant Conflict of interest: Very large windfall profits would be made by landowners who own the GB sites and who have recommended the development. Some of these landowners say they need affordable housing for employees. How will they contribute to that when the cost of residential land at more than a million an acre makes affordable housing pretty much impossible? Lack of Regulation: History shows that promised affordable housing does not get built and that land is released slowly to drive up value and returns to shareholders. This is perfectly correct from the point of view of the development companies and therefore it needs regulation to enforce what is required or it will not happen. The Oxford Council plan appears to be to hand over other councils' green-belt land to developers without any genuinely enforceable controls over what is built, or when, or whether the development will be properly supported by new infrastructure. They are not putting any money into this. There must be ways to set up suitable vehicles to ensure that this does not become a sprawl of opportunist developments. Lack of Trust: The appalling documentation which lacks executive summaries and can only be thought to be deliberately inaccessible. The timing of a consultation over the summer is either cynical or naive given that it is such a well-known ruse. The agreement between landowners and developers which is well ahead of any other consultation, leaving those who have had no say until now on the back foot. The marking out of additional green belt sites for nebulous use which can easily be seen as ring-fencing more green-belt for development as required. The sweeping lack of response to the objections received. Promises that joining all the villages up and then joining it all up to Oxford will not create a dormitory, with absolutely no response to the objections to this plan and no funded plan for the infrastructure that might prevent an infinitely worse quality of life for people in these villages. Out of date Data: The data being used is pre-Brexit. These are not sound data now. Cherwell Council appears to feel that it cannot refuse the demands of Oxford - but that is a nonsense. To what extent have they had an opportunity and the resources to test what is being demanded. There is a lack of any apparent enforcement of suitable infrastructure - are the people of Cherwell to pay for this too, one day, when life becomes impossible? • We need housing but more than anything else we need affordable housing for people who live and work here now - not for London commuters. We need to know exactly which sites will be used and to remove the soft land grabs proposed. We need to limit the amorphous mass proposed, maintaining some sort of separation from Oxford. We must limit the driving effect of windfall profits for one part of the community at the expense of others - and preferably direct some of them into reducing housing costs. We need better infrastructure now - let alone with additional housing. Oxford needs to help itself more and be seen to be doing so.</p>

Scale of the proposal is too large. 1. Why do you need so much land, when the density of the housing that you propose is only 18.5/ha? 2. Why do you propose to build on Kidlington GB land, considered important to prevent urban sprawl. 3. Increase in major traffic problems that already exist, specially at peak times. 4. Where would the occupants of the houses in the area designated PR7a access the highway? 5. What affordable housing is there going to be, and how would you propose to prevent commuters and speculators from buying these houses? 6. Where are you going to put the extra schools. doctor's surgeries that is required for the massive influx of people? Why are you going to cut off Yarnton from Kidlington?

<p>Do not agree that the proposed developments should take place. Any development north of Cutteslow roundabout would fill in land between there and Kidlington and be under the control of Oxford City Council. Existing developments at Bicester and Heyford are in progress with no improvements to infrastructure. A34 is a disaster and Junction 9 is one of the worst in the country. Need to maintain green areas between Oxford and Kidlington. There are plenty of large areas south of Oxford. It is Oxford City's problem and Cherwell Council should vehemently object to this Oxford overspill being developed north of the Oxford City boundary.</p>

<p>Limited space for development exists due to flood plains in and around Oxford, and although reasonable for surrounding villages to expand slightly to keep the region prosperous, the scale of the plan is out of proportion and unsustainable without massive investment in infrastructure. Local schools are at saturation point and struggling to provide a good standard of education to the existing population - how big would class sizes become with new developments? GB legislation is fantastic and should be respected above all else. It keeps the region in check, provides countryside for the natural population and this cannot be eroded - it would be a travesty for present and future generations. As a cyclist experience high levels of pollution already and buses get stuck in the bottlenecks that remove the bus lanes.</p>

	Deep opposition to the proposed development in Kidlington, Yarnton, Begbroke for the following reasons: 1. Our villages do not need this housing and Oxford housing target is based on massively overestimated growth figures. 2. Do not have the capacity to cope with so many extra homes - roads, schools, GP surgeries, shops etc. will be stretched beyond breaking point & there is no evidence of proper funding for the infrastructure needed for a doubling of our size. 3.This is green belt land and once build on it is lost forever. Our villages will be submersed into Oxford suburbs and the precious open spaces that are lungs not only for us but also for North Oxford and the wildlife will be destroyed. Had understood that Greenbelt is a treasured designation and is only build on in exceptional cases of need. Cannot see this is an exceptional case. 4. Currant waiting times at Kidlington doctors is 5 weeks for non-emergencies appointments. This has knock-on effects for A&E departments, mental health services, voluntary support group and family lives. A huge increase in homes without proper infrastructure will only makes this worse. 5. Kidlington is becoming a more and more costly place in which to buy a house. Property developers are delighted to build more profitable homes for London commuters using the new train station. Do not believe that the 50% target of affordable houses will be adhered to - nor believes that these homes will be lived in by those from Oxford who do need housing - rather it will encourage London commuters & do nothing for young people seeking local housing. 6. Walk every day in the green belt area around Kidlington and meet other local people doing outdoor activities. These greenbelt areas keep us healthy and improve the quality of peoples lives. 7. The areas are habitat for local wildlife. The plan is unsound.

147	Comments				
	Objection to building 4000 houses on the Green Belt on Begbroke, Kidlington and Yarnton. This will: 1. make traffic problems and pollution worse. 2. Stretch struggling public services even further. 3. Sacrifice open country side. 4. destroy local views, walks and habitats. Green Belt is meant to be permanent. once build on it is lost forever and what is left is under greater threat.

	To build on the golf course will be very detrimental to wildlife. The narrow green belt to the north of the city of which the golf course forms part, is essential as a wildlife corridor for animals. The buffer between Oxford and Kidlington is essential and must be maintained. I believe that there is a golf course within the city boundaries that could be built on to help Oxford meet its own need. Kidlington has a right to maintain its own identity and not become part of a greater Oxford. The large estates do not include any open spaces for people to roam. This is already a problem in this area. Doubling the size of the population with nowhere for people to go without the need for long car journeys is a symptom of the greed which is underpinning these plans and will be detrimental to the well-being to the residents. There are continuing reports about the effects of pollution on the health of the population, yet there are plans for PR7a to build right next to the A34, one of the busiest roads in the country. Increase in development needs to be done in a gradual manner so that numbers can be absorbed naturally and the services needed for them to be provided. With no end to austerity in sight and continued cuts planned we know that no additional services will be provided and this will lead to many people being unable to access schooling, and medical services etc. Objection to the complexity of the consultation documents. They are not easy to find on the council website and there are so many. These are all wordy and complicated for lay people to read. Unable to find a summary of the plans and other relevant data anywhere to assist with understanding. This is a discourtesy to residents of Kidlington, Yarnton and Begbroke assuming this has been done purposefully to make it difficult for residents to understand and therefore discourage objections. This underpins our understanding that this massive development is almost certainly about greed, financial gain and reward for some rather than an honest assessment of the actual need.

Proposed Submission Plan - General Comments

PR-C-0068	12/08/2017	Keith & Hilary	Prince		
148	Comments				
<p>Objection to building 4400 homes in and around Kidlington, Yarnton and Begbroke.1. It cannot be possible that the population will increase so rapidly in the next 10 years that this number of housing will be needed in addition. Agree that Kidlington and the local area can take some housing but this must be in the hundreds not thousands, so that infrastructure and the well-being of existing residents is considered. If this many houses are needed just to cover Oxford's unmet need why is the City Council a) building industrial/commercial units at the northern gateway when there is no shortage of jobs in the area. This would be an ideal position for housing with its easy access to Oxford but will only now add to the problem when people have to move to the area to fill the jobs. b) allowing the development at Templars Square Cowley (within the city boundary) to only have 20% affordable housing? If genuinely trying to meet unmet need then all the new housing should be affordable, low rent or part rent part buy, and be occupied by those working in the area in low paid jobs as key workers or in other essential services. The houses that are proposed will not be affordable, they are purposefully being built around the new station to attract those who wish to move out of London but continue to work there. This is not Oxford's unmet need but an enormous commercial profit scheme and many of the properties will immediately be bought by 'buy to let' landlords thus removing them from the housing market and immediately pushing up prices. 2. Such huge numbers of new residents who will move to the area to buy these houses will have a catastrophic effect on existing residents. The roads are already so full there is no capacity for the 10,000 or so extra cars that will arrive. Housing estates will become clogged with traffic every morning trying to leave. The notion that all will get on a bus every day is ridiculous as for most people the bus does not go where they need to go. Will need at least 3 more primary schools and one more secondary school and triple the number of Doctors surgeries and dentists. Have not seen any mention of this, although all the documents associated with the consultation are so complicated and wordy it is very difficult to find any facts at all. There are few shops to the north of the city. This is unlikely to change and so traffic numbers on the ring road will soar. One of the car parks in Kidlington has already been earmarked for development, but the size of the town is to double with nowhere for cars to go when shopping.</p>

PR-C-0070	10/08/2017	Moira	Speakman		
155	Comments				
<p>Great concern for the congestion on roads. Main road between North Oxfordshire and Whitney is often at standstill. Not enough recreational outdoor space for children in Kidlington. We have no park, unlike other towns. More people are shopping in Kidlington from Woodstock who have no shops with parking. All this is causing an overload on the environment. Old people living along the Moors have no access to the park or somewhere to walk, other than the shops. Another Science Park is being build which has an effect on the traffic congestion. Many houses are not selling in Kidlington so there will be an surplus. Young people are leaving as it is too expensive, so there will not be the demand.</p>

<p>Living in The Moors for 29 years we have seen no well planned investments in infrastructure to believe these plans are effective. Have seen family homes demolished and replaced with apartments. Our children and friends' children have been forced to move from the area due to astronomical rents and the 'affordable' housing is not affordable. Our roads are regularly like car parks - there is nothing in the plans to make us feel that they are effective and that traffic will cope. With the flooding issues as well, there are many reasons to oppose the plan.</p>

Proposed Submission Plan - General Comments

PR-C-0077	10/08/2017	Edmund	Isanski					N
185	Comments							
This would totally overwhelm the infrastructure. GP waiting time at key practice is already over 3 weeks, local roads already overloaded at rush hour towards Oxford. The Oxford ring road is already overloaded and will get worse due to Barton and Northern Gateway developments. The Kidlington population is already rising due to new flats being built, replacing houses on site. There is no development of local facilities and I object strongly to overwhelmed infrastructure and roads.

PR-C-0079	12/08/2017	Trevor	Elford					N
196	Comments							
Vast urban sprawl is not justified, Oxford must not encompass Kidlington/Yarnton or Begbroke. Getting out of Kidlington is already a nightmare and traffic infrastructure will not cope. Leave our GB alone. To provide correct infrastructure build a dual carriageway from Kidlington, Begbroke etc. to A34 to feed Oxford - this would overcome current and future traffic chaos.

PR-C-0085	17/08/2017	Adrian	Smith					N
217	Comments							
Oxford is full! There is no room for expansion in and around Oxford, with roads already gridlocked for large parts of the day. This will be exacerbated by increasing the number of houses to intolerable levels. The GB should remain to prevent, as intended, the creation of one massive conurbation. New affordable housing is needed but the vast majority of housing in the plan will not be affordable to the lower end of the market and will likely be bought by London commuters. I feel there are areas of unpopulated land that would be a better alternative to provide a new town. This would include office and business space, providing work for residents without the need to commute to Oxford. Although this would be a huge and expensive undertaking I feel it would be a better solution to the housing crisis, enabling a practical and efficient approach to the infrastructure and housing which is more likely to be affordable.

PR-C-0086	17/08/2017	C & E	Rogers					N
222	Comments							
Do not believe that the houses will benefit Kidlington people. They would cause traffic chaos as already any small blip causes traffic to come to a standstill with the service roads also becoming blocked. With less green areas flooding will become worse, there is already a three-week wait for a GP appointment sometimes, and schools will not cope. Houses will only benefit commuters, Kidlington people would only have inconvenience.

I oppose on all the above and especially on PR3 and PR11. The GB is crucial to the wellbeing of our indigenous species and they are vital in keeping the natural order of life, This is well-documented in the effect of decreasing numbers of insects, butterflies and bees on the essential biodiversity we need for humans to thrive. Also green spaces are vital for giving access to an environment which promotes wellbeing further. PR 11 - Developers rarely provide the required infrastructure for the kind of development envisaged for Begbroke and Yarnton. In ensuring profit, houses are built first and there is evidence from other developments of promised schools, medical centres and local shops not being provided. This puts a huge strain on the existing infrastructure. The Begbroke/Yarnton development will change the environment irreparably.

Strongly object to the size of the new house developments near Kidlington and Abingdon. Objection 1. No transport policy, the numbers of new cars could be in the region of 20,000, which would cause gridlock on the already very busy roads. This is counting 2 cars per house. Objection 2. Services will be overwhelmed. These developments are not positively prepared. Why not enlarge substantially the Park & Ride at Water Eaton to discourage motorists coming into Oxford? The effect on the A34 of the development near Abingdon will be enormous and it is already a dangerous road.

Oxfordshire will become one big urban sprawl if this goes ahead as it will open up the flood gates for other councils to join the bandwagon. Keep Oxfordshire villages as villages, and let Oxford City (including the University!) keep its own boundaries.								
Changes Sought				Reasons for Participation				
PR-C-0100	18/08/2017	Kenneth	Clarke					N
278	Comments							
Strongly object to building these houses and think it is stupid to take our only bit of green land space between Kidlington and Oxford. How long will it be before Kidlington becomes Oxford? Oxford City has plenty of open spaces and parks - take some of that and build the houses. Children in Kidlington will have nowhere to play in the future. More houses will worsen the roads into Oxford which are already at saturation during rush hour and will take up rain soakaway areas creating an even greater risk of flooding.

Proposed Submission Plan - General Comments

PR-C-0102	21/08/2017	D	Burns		N
287	Comments Object strongly to these proposals. How will these houses help first-time buyers - they will be unaffordable and the only people to benefit will be the developers, buy-to-let landlords and representatives from other organisations. The quality of life for people in Kidlington, Yarnton and Begbroke will be further blighted as thousands of additional car journeys will add to the existing congestion on the road network including the A34, the death road. There will be no additional infrastructure to support any development and little to alleviate the increasing noise, pollution, delays and disruption to local residents. As there is no viable alternative to the car for most people you will be forcing thousands of additional cars on to the A34. You have a responsibility to protect the GB which is there for the environment, quality of life of local residents and future generations. Use it wisely - poor decisions made by a few have to be suffered and endured by millions of others in perpetuity.

PR-C-0106	20/08/2017	Ellen & Dan	Fallows		N
307	Comments Understand the great need for housing in Oxfordshire. However the plans do not sufficiently factor in the fact that the A34 and Bicester Road are already gridlocked during peak times. There must be fully costed and funded plans for road improvement and cycle paths/bus routes. The natural landscape is also very much degraded (even over the past 10 years noticeably so). Plans must be in place to clearly designate wildlife areas within proposed sites to allow wild corridors to thrive.				
	Changes Sought				Reasons for Participation
PR-C-0107	06/10/2017	Jeff	Lyes		N
1117	Comments Objections to the Local Plan on the ground of it being unsound and unjustified are further confirmed by the comments made by Councillor Barry Wood at the Kidlington Public Meeting last month. He admitted that, as far as the council was concerned, a key goal of the plan was to appease land owners and property developers. This is not a duty of the council. He claimed the Plan was the only way to avoid "planning chaos". However the facilitation of a mass land grab is hardly a disciplined outcome. Surely a more modest and better thought through plan would serve this purpose better? He explained that it did not matter if the extraordinarily high housing needs numbers quoted in the plan were wrong, but rather that the process was compliant. This is a bit like saying the operation was a success but the patient died. If local people are to have their lives turned upside down we have a right to expect the cause to be an honest one. As the local debate about the Plan has unfolded further issues have emerged. For example a) it's becoming clear that the extraordinarily high target for "affordable homes" is so far from what is routinely achieved by local authorities that such ambitious schemes will require a new financial model to ensure delivery and b) the greatest threat to the Green Belt is from local authorities contriving to manipulate alleged housing requirements so as to ensure they can argue that they are meeting the "exceptional" circumstances that permit removal of Green Belt protection from land with high redevelopment value and c) the undue haste that characterises this Plan has prevented a thorough appraisal of, and provision for, the complex infrastructure needs of such a huge scheme.

Proposed Submission Plan - General Comments

PR-C-0107 20/08/2017 Mr Jeffrey Lyes N

308 Comments

In many respects its a "rip and read" plan. The proposed developments emanate from the economic self interest of Oxford City Council. Their claimed unmet housing needs have not been independently tested. Given the likely dramatic consequences of these claims the electorate has a right to expect that the data be peer reviewed and as accurate as possible. This cannot be the case when major events such at Brexit and the Government's well known interventions in the housing market have not even been taken into account. The housing market is in a different place to when the Plan was first drafted. The plan is not up to date. The Unmet Housing need of Oxford as presented in the Plan does not come about as a result of expected organic growth of the City but is a theoretical calculation based on the assumed consequences of the City adopting a specific economic policy. Similarly there is insufficient detail in the quantification of various types of housing. This makes the plan non-compliant with Government planning practice guidance which requires plans to identify specific sites for all types of housing. The three villages look the cheapest choice because the local authority will exploit the existing infrastructure, even though it was never designed for such increased capacity. This has the makings of being an irresponsible and self-defeating strategy. Government guidance requires Local Plans to "focus on the key issues that need to be addressed and be aspirational but realistic in what they propose". But then the "need" here is not real. It is a creation of the deliberate economic policy of Oxford. Surely they should therefore be paying for a better quality solution rather than inflicting their problems across the county? Question whether the Plan is legally or procedurally compliant as there are a number of areas where the Plan is at odds with the NPPF concept of Achieving Sustainable Development which include: Empowering local people -Genuine public participation can only occur if the public actually comprehends the Plan as presented. The Plan was prepared during a period in which Government radically redefined key definitions - Affordability, Sustainable - and did so in such a way as to render their generally accepted meanings obsolete. The Plan does refer to these new definitions but not in such a way as to make it plain that without the aid of these redefinitions the Plan makes no sense. As a consequence the whole process is flawed through Its failure to achieve a proper understanding amongst the people who are supposed to be participating! Provision of Infrastructure - the plan is unconvincing in that no significant new investment is identified or proposed. Contributing to protecting and enhancing our natural, built and historic environment - the Plan does precisely the opposite.Taking account of the different roles and character of different areas, promoting the vitality of our main urban areas, protecting the Green Belts around them, recognising the Intrinsic character and beauty of the countryside and supporting thriving rural communities within It. In this case the local council thinks green belt and houses are tradeable. Cherwell have set a new precedent in claiming that houses are equal to Green Belt in sustainability terms. They have done a straight swap in their Sustainability Report so there's no loss on the sustainability balance sheet. Thus an interesting precedent will be set whereby any city will be able to dump thousands of houses in the Green Belt and become "very special".Improve the places in which people live their lives. This clearly does not apply to the three villages where traffic issues and infrastructure shortcomings will plague them for years.Contribute to conserving and enhancing the natural environment and reducing pollution - many extra buses and thousands of cars will hardly be an improvement.The term "sustainable" now has an all-embracing legal definition, diluting its original meaning to the point of uselessness, and downgrading the trust the public can put in it.

An utter disgrace! This is GB land for a reason and these spaces mean an awful lot o so many people from many areas of the local community. This will give the go ahead o turn Kidlington into Oxford and Yarnton and Begbroke into Kidlington. The roads are already too busy and I have to wait 8 weeks plus to see my GP, which is dangerous, while schools and services are already stretched to their limits. Some of the proposed land floods and will be worse with more concrete and run off water. We still have a rare but priceless community spirit that has been eradicated in other areas by oversized/dangerous/badly planned & implemented housing schemes like this one. Shame on you CDC!

Proposed Submission Plan - General Comments

PR-C-0115	25/08/2017	Prof Diane	Taylor						N
350	Comments								
The Plan is not positively prepared, is not sustainable in terms of Infrastructure needs, particularly transport and utilities. Roads are congested, this plan would only increase this. Other forms of public transport could not cope either. Water supply is under pressure in the area and this would only be increased by the plan. Similarly for schools and health facilities. The plan is not therefore sustainable, or environmentally appropriate.

Absolutely appalled at proposals to develop of 4400 houses in Yarnton, Begbroke and Kidlington area, allegedly to meet Oxford City's unmet need!? What effectively is being proposed constitutes a small town populated by upwards of 9000 people! This would require extra schools, shops, medical facilities and transport links to Oxford, the latter would overwhelm the already heavily trafficked A44. As for proposing Bus Lanes from a 'Park & Ride' at Bladon to the Pear Tree area, a seemingly nonsensical plan because it would require the road between Yarnton and Peartree to be duelled and the two bridges to be rebuild.Small development, within villages is acceptable, as has taken place in this village in recent times, but development on the scale proposed is NOT. The Green Belt (GB) was designed precisely to stop the sort of development being proposed by CDC. The government itself has proclaimed it's commitment to protecting the GB and only in exceptional circumstances may councils alter it's boundaries. Fail to see why Oxford City's housing problem should be loaded on to us. There is still much land in theCity which could & should be earmarked for housing. CDC should first and foremost serve OUR needs rather than Oxford City' s, after all we pay our Council Tax to CDC and NOT Oxford City. Cherwell DC's planning proposals represent an unacceptable violation of the Green Belt and thus adversely affect our environment for evermore . Am therefore totally opposed to the plan for such a massive development on what is after all, Green Belt land.

Proposed plans would have a severe impact on the quality of life for local communities and mean a massive loss of valued open space and habitats. The urban sprawl would swallow surrounding villages and towns and make a 'dumping ground' for commuters, creating traffic gridlock and stretching public services (schools, hospitals etc.) Looks like a political move - the Council would like to use its own land for profitable business ventures and creating more jobs in the city.

387	Comments							
GB land is important to animal and plant ecosystems and should not be touched. There are plenty of alternative locations that would suit development better in Oxfordshire. GB just should not be a considered option. Nature is more important than government profit which would be made from using its land for business use rather than housing people.

Has Oxford no sign of decency? Keep Kidlington a village It is already an overspill, if Oxford can't look after itself don't put it onto us! Always understood GB to be division between city and country.. More houses, more business parks, more traffic. I dread to think about main road in terms of pollution, always busy. Traffic is already difficult and a new station will mean more gridlock. Infrastructure is or will not be good enough. Presumably Oxford wants more council tax from us!

GB land should be preserved. Building on the proposed sites will set a precedent for further erosion of this principle. Have no confidence in the vision of half the housing being 'affordable'. Recent news from the Barton and Templar Square sites are clear evidence that without being forced to price housing based on average local income they will be out of the reach of those on average local wages. Where is the infrastructure? How will the extra traffic impact on roads that are already gridlocked during term times?

421	Comments							
Oxford could meet its housing need within the city by prioritising housing over business parks, using brownfield sites, better planning and giving developers incentives to use these sites. GB is easy to build on and cheaper for developers but why should developers' profits be prioritised over local residents' quality of life? Once these finite resources have gone, that's it. Density targets in the city could be changed to meet housing needs. Green space and wildlife are critical to wellbeing and mental health.

PR-C-0131	10/10/2017	Fiona	Gibson					N
2312	Comments							
Oxford City Council can meet its housing need if they prioritised housing over employment, better use of brownfield sites, better planning and offering developers incentives to use the sites. Housing density in Oxford should be changed too. Green Belt land is more attractive to developers. Once Green Belt is built on it is gone. Green space and wildlife are critical for wellbeing and mental health therefore strongly object to the Plan.

436	Comments								
Am very concerned about the proposals and that the whole area will become a 'dormitory suburb'. Especially worried about traffic and air pollution. The plan represents a huge increase in housing that would put pressure on related infrastructure, not addressed satisfactorily by the plan. The indication is that housing is aimed at commuters rather than trying to address local housing needs. The loss of the GB and walks around Kidlington and Begbroke is a particular fear and would be a huge loss to future generations.									
Changes Sought					Reasons for Participation				
PR-C-0135	03/10/2017	Henrietta	Batchelor						
1582	Comments								
Objection to proposed development of planned 4,400 houses because of traffic, pollution, flood risk, danger to wildlife, lack of planning around statutory services and GB arguments. It is also our responsibility to steward recreational areas of the countryside in the crowded S. Midlands and SE England for the sake of future generations. This countryside is used by the people of Kidlington, Yarnton and Begbroke as well as many residents of Oxford keen to escape the confines of the city. Objection to the fact that this development appears more concerned with money in the pockets of developers than with an egalitarian desire to home people who find it hard to afford homes such as nurses, healthcare assistants, technicians and other low paid workers. Integration of large numbers of in-comers into what would be an urban tangle of concrete and glass usurping once beautiful countryside is likely to prove extremely problematic.

441	Comments								
Strongly object to the purpose to build 4400 houses in Kidlington area. 4400 houses represents at least 15000 more people. This is not sustainable and puts an burden on schools, doctors' surgeries and the traffic at the northern gateway - already gridlocked in rush hours. Could cause delays, pollution, potential for road traffic, accidents etc. Green belt is (a) designed to delineate separate villages, towns & cities, so that there is not one huge urban sprawl and (b) the Kidlington area is a beautiful recreational area enjoyed by residents & visitors and a haven for wildlife

PR-C-0136	16/08/2017	Anthony	Gladstone						N
446	Comments								
The Green Belt should be left alone for all the reasons it was established in the first place. Roads, cycle routes, footpaths and public transport are already inadequate, so no building should be done without well thought out infrastructure plans. Public services and leisure facilities equally need clear and imaginative plans before the developments start. It is important that a large majority of housing to be built is affordable. It would be devastating if the rural walks in the area were spoiled.

PR-C-0141	23/08/2017	Mrs G P	Savin		N
551	Comments				
Strongly object to the proposed development because of the vast number of additional vehicles on the roads which are already heavily congested and the air pollution these vehicles would cause. These houses would attract people who need a base for commuting and will not belong to the community. The Green Belt land should be preserved to avoid Kidlington becoming anymore overcrowded, with open spaces to enjoy and allowing wildlife to thrive around this area. The additional houses would put immense strain on NHS GP surgeries, further adding to lengthy waiting times as our surgery cannot cope with the demand from existing residents, due to lack of surgeries & GP's currently in Kidlington and surrounding areas.

Do not believe that Oxford City needs as many as 4,400 extra houses. Consider the projected expansion of Oxford businesses etc. necessitating these houses is an over-estimate. Do not think Cherwell District Council should be 'baling' Oxford City out by allowing them to be built around Kidlington. Especially object to the PR8 development of 1,950 houses between Kidlington/Begbroke/ Yarnton. This will destroy areas of open land currently used for walking and leisure pursuits - in an age when we are told we are not exercising enough, this is not acceptable. The development is also too large. Also object to the proposed Station at Sandy Lane, we do not need this and it will primarily be of benefit to commuters and further increase house prices in Kidlington, making them even less affordable to local people. Is a new Station really financially viable? Are Oxfordshire County Council really supporting this? Thought they did not have the funds or the inclination to build new stations. 4,400 extra houses will swamp Kidlington and exacerbate the traffic problems and increase the risk of accidents. As far as the Doctors' Surgeries are concerned, they are already under intense pressure and we have to wait three weeks for an appointment. These 4,400 extra households will make it well-nigh impossible to get an appointment! With an ageing population generally, and an increasing number of care homes and sheltered accommodation for the elderly in Kidlington, this makes for an impossible situation.

557	Comments				
Objection to the proposal of new houses for Kidlington, Yarnton and Begbroke for the following reasons. 1. Oxford City does not need to acquire the Green Belt (GB) for its houses, if it had wanted to provide affordable houses for workers and people on the council list, it could have built all those at Barton Park, instead of the expensive houses and flats it is building. The houses proposed for Kidlington, Yarnton and Begbroke are not going to be affordable houses, but purchased by people working in London and wanting easy access by train & able to live in the country, instead of the City. 2. Oxford City Council are planning to extend the Northern Gateway by building new businesses, not required because we do not have an unemployment crisis in Oxford. In fact they could build 3594 houses there, which would solve the housing problems. 3. The proposal to shut down Sandy Lane to enable a station to be built there, would shut off Kidlington completely from Yarnton & Begbroke, making Kidlington a no-go area, which would make a tremendous difference to the shops. The station should be built at Lyne Road, which is nearer to the village and the Airport. Sandy Lane is used continually & needs to stay open.

558	Comments				
No new schools are proposed, so where are the new children going to go to school? The present schools are already overcrowded, the same with the Doctors, there are not enough now and have to wait for at least 2 weeks for an appointment. How are they going to cope with the increase of the population? The proposal to build the houses between Oxford and Kidlington & the excess in Kidlington would lead to tremendous traffic jams. The road between Kidlington and Oxford are already jammed with cars every morning. The rep goes on to detail existing specific local traffic problems. This will cause extra pollution, which councils are supposed to be cutting down on for everyone's health. 6. There is proposal for land opp. Sainsbury to be used for sporting purposes - why - when across the road is Stratfield Brake, a purpose built sports ground. The amount of Green Belt land (GB) that you intend to build the new houses is far larger than the land needed for the houses proposed, presumably this is for future use? Using the GB for all these new houses would be criminal, it takes away from people, who live here at present, the opportunity to go walking, see the wildlife, enjoying the views and the open spaces around them. There will be no open space with what you propose, just URBAN SPRAWL, is that what you want to inflict on everyone? CDC has not given any thought to this proposal at all, stand up for the rights of the people you represent and tell Oxford City Council that you have changed your mind and have decided that the GB is more important.

Questions the wisdom of Oxford, trying to expand even though it sits on very low-lying land at the junction of several waterways, but recognises that the country does need more housing and agrees that some of the locations in and around Kidlington and Gosford which it is proposed to develop for housing are the best in the circumstances. Those are PR7a, PR7b, PR8. Doubts the wisdom of building up the locations PR6a and PR6b because of their proximity to the Kidlington roundabout. The extra population will surely add to the congestion at the morning rush hour. Raises two objections to the plans for PR8: 1) Sandy Lane should definitely not be closed off to motor traffic. It is an important connection between Kidlington and Yarnton for all kinds of traffic. In fact, the suggestion of turning it into a "green" route is about the daftest idea in the whole plan. Surely when expanding the population you need more roads, not fewer. The closure of Sandy Lane would mean more traffic on Langford Lane and force us to make inconvenient detours. 2) The proposed number of houses for PR8 is too great. It's not fair to impose such abig expansion on a small community like Yarnton. Let the number be reduced to 300.

564	Comments				
Oxford City Councils housing needs should be independently reassessed and likely sites within their boundaries revisited for suitability. Should it be deemed appropriate for the existing proposals to go ahead I sincerely hope that local issues identified by local residents be very carefully considered. A project of this size without doubt requires infrastructure to be in place before the housing. Failure to do this will seriously effect the quality of life of existing residents in both Yarnton and Begbroke.

Grateful for the consultation extension to October 10th but object to the proposals in terms of scale and location, which will destroy village character and have an unacceptably detrimental effect on traffic on the A40, A44 and A34 which are already significantly delayed at peak times. The A4165 between Kidlington and Cutteslowe roundabout will be exacerbated from barely acceptable to probably unacceptable if housing is added from Oxford Parkway to the Oxford City boundary. In all likelihood the housing will not serve local people as most of the property will not be affordable to them and will be purchased by London commuters or buy to let landlords. The plan is strategically flawed and Oxford should address its own issues and consider limiting its expansion. The national housing crisis needs to be addressed with new towns e.g. previously Milton Keynes and GB should be preserved. The proposals do not meet the needs of the constituents.

Parking in residential streets has become a problem since charging was introduced at the Park and Ride, and this issue will be exacerbated by the additional housing. Local roads are already congested and will come to a standstill, while local services such as doctors surgeries, schools and shops will not be able to cope. Why should the neighbouring districts dig Oxford City Council out of the hole that they have brought about by their own mismanagement?

PR-C-0150	03/09/2017	Christine	Brooks					N
589	Comments							
Concerned that Kidlington will lose its identity and that our surgeries and schools will not cope with the increased population. Rush hour traffic is already difficult without additional cars on the road and the sewage system is already unsuitable. Kidlington has already grown considerably and continues to do so due to the number of multiple occupancy buildings being approved each time a detached home goes up for sale. Many of these are vacant for a long time after completion, which would indicate that there is not a need for more homes in Kidlington.

594	Comments							
Improved services are critical to any new development and developers should be required to add these costs to their costs - not ignore lack of services such as public transport, medical services, schools and the increase in traffic on our gridlocked roads from Kidlington to Oxford. It is unreasonable to take 45-60 minutes to go 5 miles on the bus. A dedicated bus lane is needed for the entire route to remove bottlenecks. Equally important is the sacred green space which adds to the beauty and charm of the area - once it is built on it is gone forever. Oxford City should resolve its own housing problems and find brownfield sites to build on. Please. please, please say no!

613	Comments							
Affordable homes are needed - is the percentage stated in the plans truly affordable? It would help if the homes were built in conjunction with a housing association to provide affordable housing opportunities for young people rather than high cost buy to lets. There should be mixed-use developments e.g. the new business park near Kidlington could have apartments above the office space, as in Scandinavian countries. Additional buses and trains will be needed, as well as additional parking at the park and ride. The roads are already hugely busy in rush hour from Kidlington e.g. travelling beyond Oxford south on the A34. What about a new secondary school - Gosford Hill School will not be able to cope. Would make more sense to have smaller developments dotted around having less of an impact on the area.

Glad you have extended the consultation period, since the August deadline was entirely inappropriate. However, we have only received leaflets from the SOS campaign & not from yourselves. The plan is helpful in providing much needed houses for the area, so primarily supports it. However: 1. The station at Sandy Lane would be helpful. While we have good links to Oxford centre from Kidlington, the links to Banbury & the north of the county are poor. It is difficult to get into Oxford Station in rush hour to get trains to the north via Banbury, so that would help. However, it is critical that it has good road access & plenty of parking. 2. The traffic at Sainsbury's roundabout & down through Yarnton needs to be addressed. 3. One major improvement to reduce traffic around the Wolvercote roundabout / Frieze Way would be to extend the A34/A44 junction to link directly with the A40. (See sketch provided) - (This is a very rough sketch, but a link such as this would be relatively cheap in highway construction terms, as it requires no grade separation/ bridges, etc., & would only require land purchase of a field. It would reduce the traffic at the Wolvercote Roundabout significantly, by providing a route for A40 traffic to access the A34 more directly. I think this would be much more cost effective than the alterations to the Wolvercote & Cutteslowe roundabouts which were recently carried out at vast expense in terms of construction, disruption to local business & stress to local people, & resulted in only an incremental improvement, if any.) . 4. Pressure needs to put on the relevant authorities for a major upgrade of the A34, probably to motorway status. 5. It's very important to keep GB corridors with some woodland/ wilderness area. My children have enjoyed playing in the area between Grovelands & Begbroke. This is such an important part of childhood, & it's also important for dog walkers & others. That sort of thing has an impact on encouraging an outdoor life which improves health. These areas are particularly important to maintain a firm GB status: a) between the railway & the canal, & generally keeping a green corridor between Begbroke / Yarnton & Kidlington. You seem to be proposing this, though it is rather thin by Grovelands near Harts Close. b) a green corridor at the Old Yarnton Lane track to keep that traffic free walk between the villages. c) around Frieze Way & between the A34 & Bicester Rd. You have provided reasonably well for this. 6. We need a high proportion of affordable housing. We desperately need local housing for local people to work in local jobs. We don't need to provide housing to make Kidlington / Yarnton a town for wealthy London commuters.

Already a significant increase in traffic , minor roads are a hazard, especially for parents with children, the elderly and those with sight problems. The reduction in space and increased noise will affect wildlife e.g. hedgehogs have not been seen in vicinity for a number of years. The reduction in green spaces could affect the health of residents who will not be able to walk safely and enjoy the fresh air. This could lead to obesity. The increase in population will lead to an increased demand for food production - good land could be used for farming/food production instead of housing. As housing is erected rapidly who benefits financially and what checks are in place to ensure safety e.g. flood risk?

PR-C-0170	22/09/2017	Mrs Wendy J	Wearing					
660	Comments							
Concerned by the proposals. Oxford City has several large parks and Begbroke has none. Residents need and well use, and enjoy the clean air, walks and wildlife around the small GB area that divides Yarnton, Kidlington and Begbroke. It provides an escape from the busy A44 that bisects the village. The plan would ruin the quality of life for many for financial gain for Oxford City who have chosen to build luxury homes and do not include affordable housing in many of their developments. Cherwell has always built homes in suitable environments for its own District. and we have no objection to small developments. Please do not ruin our lives when Oxford City are not willing to use the nearly 4,000 places available within their own boundaries.

667	Comments							
Too many homes for the area and already there are issues with doctors' appointments and traffic, and this will get worse. It will take away the village status for Kidlington, Yarnton and Begbroke and result in a merge with Cutteslowe into one large, urban sprawl through to Oxford. Traffic will be awful and working in the area will be difficult to get around efficiently. Kidlington is a village and only has amenities for the already large population. It will completely change the way of life for all residents and not for the better. The proposals add nothing positive for existing residents, only many negatives.

It will be a disaster for the villages as they merge into one large urban place with too many houses. Already too much traffic and almost impossible to get around now. We need housing for local people but this will make the situation worse. Kidlington Centre will be more left out and the village will have no heart. We need to support those here and not add thousands more.

Devastated by the huge development to the north of the City. Objections: 1 the scale of the plans and the loss of Green Belt land, that will disappear under concrete & bricks. 2. The impact on local services e.g. lack of infrastructure. Roads are clogged as it is. More traffic will create more pollution. Doctors and schools can't cope as it is. The whole area will come to a standstill.

Proposed Submission Plan - General Comments

PR-C-0177	21/09/2017	Philip	Hine					N
691	Comments							
The proposed housing is just a vision with only 50% affordable housing and no guarantee that this will not be watered down by greedy developers. If this happens the Oxford housing need to support the youth of this area and also staffing of vital organisations, such as Oxford University Hospitals, is defeated.								
Changes Sought				Reasons for Participation				
PR-C-0178	20/09/2017	Mrs Rosemary	Keen					
692	Comments							
Main objection is to building on Green Belt land. Flooding will be very bad. Traffic is bad enough now, going to Oxford after 7.00am is a nightmare. There is enough land in Oxford to build on, for Oxford people. So called "affordable" housing is not affordable to most people. The councils should build more houses for young people, but not on the Green Belt.

PR-C-0180	21/09/2017	Andrew	Moss		Y	Y	N	N
698	Comments							
The proposals are unsound because they fail to address the housing need for Oxford. Oxford needs more affordable housing to rent below market value and affordable housing to buy, and the plan only provides for 50% affordable housing, which means building 50% for commuters and those with enough money to buy. This just stimulates the demand for land. A higher percentage, preferably 100%, as council housing would help meet local housing need and reduce the demand for land needed, because housing need is addressed instead of houses for the better off.								
Changes Sought				Reasons for Participation				
1. Increase the proportion of homes to be 'social housing' - not 'affordable' which is a misleading term. Real social housing is badly needed. 2. Reduce the area of land needed by building smaller houses at higher density (but not as high rise flats) 3. Amend the wording of the plan to read 'social housing'. At least 80% social housing would be a much better choice than 'affordable housing' which is misleading.								
PR-C-0181	20/09/2017	Kevin	Newton					N
703	Comments							
The scale of the proposed development is totally unrequired for Kidlington and surrounding villages. Development should be within Oxford itself or areas to the South East of Oxford, Greater Leys & beyond or around Bicester or Didcot with their vastly superior transport connections to Oxford by road & rail.

704	Comments							
As a resident of North Oxford for 48 years and a member of North Oxford Golf Club for 37 years, strongly objects to the plan. The prospect of houses being built on the wedge of GB land between Kidlington and Oxford would be very sad. Cannot believe that it would be in anyone's interests for Oxford to be joined to Kidlington or vice versa. The golf club was founded 110 years ago and is the second oldest club in Oxford, possibly the county as well. It has more than 25 different tree species, supporting countless bird species and other wildlife including the Great Crested Newt. It has over 500 members and the junior section fosters talent from an early age. The National Planning Framework stipulates that sports facilities should not be built upon unless equivalent or greater provision is made elsewhere. Frieze Farm is a ridiculous suggestion as the site is not big enough to take an 18 hole golf course. The GB land was selected deliberately. Presumably to separate Kidlington from Oxford and to build on it now would be a complete travesty. This particular piece of GB land is really special and should be preserved at all costs.

PR-C-0183	26/09/2017	Dr Niel	Livingstone					
705	Comments							
Object vehemently to the proposal to build houses on the golf course land. This is part of the Green belt (GB)and comprises a crucial buffer between Oxford City and Kidlington. It would be in no ones' best interest for Kidlington to be joined to Oxford. One of the reasons for classifying land as GB is to prevent urban sprawl. These proposals, if implemented, would defeat the very basis of the GB classification. The golf course has been in existence for over 100 years and performs a vital recreational facility for hundreds of members and visitors each year. Hopes that the Council will abandon this proposal and thereby preserve this significant piece of GB land for future generations.

Proposed Submission Plan - General Comments

PR-C-0184	25/09/2017	Ms Jane	Jackson					N
707	Comments							
Inadequate Infrastructure provision as what is proposed will not support the massive increase in movement of people that the number of dwellings would generate. An enhanced bus lane on the A44 is insufficient - the road is already highly congested and made worse by the roundabout enhancements in Oxford. There is often a bottleneck between the Turnpike and Loop Farm roundabout and the 'Bus/Rapid Transit Function' will not benefit Begbroke/Yarnton residents.								
Changes Sought				Reasons for Participation				

PR-C-0184	25/09/2017	Ms Jane	Jackson					N
709	Comments							
Oxford City's housing need is grossly overstated as it is based on the flawed Strategic Housing Market Assessment. It has been reported that there are over 1,800 empty homes in Oxfordshire, which could be used to meet some of the need. Oxford should prioritise solving its own housing crisis ahead of speculative industrial developments. Housing should also be built nearer employment to reduce commuting and therefore congestion.								
Changes Sought				Reasons for Participation				

PR-C-0184	25/09/2017	Ms Jane	Jackson					N
708	Comments							
The permanent loss of GB land is contrary to the Council's own Green Belt Report, and therefore the soundness of using the GB land is questioned. The National Planning Policy Framework states that GB checks the unrestricted sprawl of large built-up areas, prevents towns from merging, safeguards countryside preserves the character of historic towns, and assists in urban regeneration by recycling derelict and other urban land. I am concerned that villages will lose their identities and the loss of GB land will have a detrimental effect on farming, wildlife and recreation, as well as air quality and the bats as a protected species. Future generations will not have the benefit of the countryside. The use of brown field sites should be reconsidered as the 'exceptional circumstances' have not been proven.

Having lived and witnessed the growth of Kidlington for 38 years, earnestly requests that you please maintain the existing Green Belt areas surrounding Kidlington, Begbroke and Yarnton. The Green Belt was instigated by Governments to bring the country side alongside urban areas and separate towns from villages and allow the citizens of these towns and villages to enjoy nature in every way. Appreciated and enjoyed living so close to the Green Belt by being an involved in various walking activities and clubs. Has many enjoyable memories of the beautiful paths and by-ways around the Kidlington area. Please keep the Green Belt for future generations to enjoy through exercising for health and peace of mind. Build the necessary required houses on the available Brown Field sites in Oxford and not on the Green Belt.

Proposed Submission Plan - General Comments

PR-C-0189	06/10/2017	Susan	Oldfield		N	N	N	
1196	Comments							
<p>Objection in every possible way. It could not possibly achieve its alleged objective of providing affordable homes for workers in Oxford. It is too big and in entirely the wrong place. Building on GB is not consistent with National Policy, nor consistent with Cherwell's Local Plan approved in 2015. (see Policy ESD 14: Oxford GB). It is Not Justified as it meets no needs within Cherwell but is designed solely to meet Oxford City Council's alleged "unmet housing need". Oxford's demands are based on out of date figures taking no account of changing factors, including likely outcomes of Brexit. The expected new method will result in a significant reduction in the figures for both Oxford City and Cherwell District. In recent correspondence with the leaders of both Councils have been blithely told that the figure can be easily re-inflated, to all for "expected economic growth". Oxford City Council could meet its own housing needs by prioritising housing for its existing residents over greedy expansionism. Cherwell District Council has acted hastily and disproportionately, before the real future need is clear. The "duty to co-operate does not oblige Cherwell to provide a dormitory for Oxford's expansionist plans. It is not a duty to comply with inappropriate demands. Particularly when destruction of the GB is involved. This area of GB fulfils every purpose for which the GB was designed. It was intended to have permanent status, giving a clear city boundary and preventing urban sprawl. Environmental damage, and that to the quality of life for all concerned, would be immeasurable and irreversible. The plan is unsound and not effective - the sites either side of the A44 around the villages of Begbroke and Yarnton are regularly flooded rendering it entirely unsuitable for major development. Existing traffic problems would be exacerbated. Roads are already struggling/ regularly congested. Suggested plans for addressing these problems are unrealistic. Transport problems rely heavily on people leaving their cars at home and either walking, cycling or going by bus - unlikely scenarios. The vague idea of a new rail link appears to be unposted and fantastical. Banbury and Bicester already have direct rail links to Oxford. New employment opportunities should be located near to Bicester where there is already more housing than work - thus reducing commuting. The Plan is Unsound in terms of the Environmental Damage it would cause - it is wholly disproportionate and ill-conceived. It would engulf the villages of Begbroke and Yarnton producing a shapeless conurbation with no separation from Kidlington. Historical distinctiveness of villages would be destroyed and surrounding countryside consumed. These fields are currently productive agricultural land, and home to a rich variety of wildlife. Enjoyed by many, both local and from further afield. Green spaces would be reduced to a pitifully narrow strip. There is much anger and dismay that such a plan could ever have been considered.</p>

<p>WSP/Parsons Brinkerhoff compiled a 75- page air quality assessment (AQA) for the development of the 300 houses in the SE quadrant of Woodstock during the 7 year duration of the construction phase as well as the post construction phase on the potential effects of Nitrogen dioxide (Noz) and Particulate matter 10 and 2.5 on the prospective residents that will occur because of increased volumes of traffic generated by the development. The report concludes that the effects of these concentrations of noxious and deadly gases on those affected, "would be negligible." There is no such thing as a negligible affect! Everyone would be affected; it's a matter of how badly. Not at all convinced that this will be the case as even the authors of this AQA have admitted that, " Changes in local traffic volumes and characteristics resulting from the Proposed Development may also have an impact on local air quality" They also admit that "road traffic is a major source of the pollutants. This AQA only pertained to the Woodstock East Development of 300 houses. Cherwell's plan of 410 houses at PR 10 will more than double air pollution in the SE quadrant of Woodstock and the nearby area in Cherwell. . The government's most recent calculations in reducing housing need from 100,000 to 68,000 units also reduces the need for local councils to contribute to Oxford's so called "Unmet needs." Consequently, the Woodstock Action Group (WAG) sees no pressing need for the proposed 4,400 houses to support Oxford's now reduced housing needs and recommends that this proposal be deleted. This would ameliorate or eliminate many of the above and other causations and concerns associated with this now redundant proposition.</p>

731	Comments							
<p>Wishes to express concerns of the plans to build 4,400 houses to meet Oxford's so-called, "Unmet Needs." and specifically, on the adverse affects of such a magnitude of construction on local area air quality along the Oxford, Kidlington, Yarnton, Begbroke, Bladon and Woodstock corridor and its proposed expansion. The plan will "seek to: contribute to improving health and well-being and conserve and enhance the natural environment". How will the plan cope with the additional tons of nitrogen oxide gases that will be spewn from up to 150, 000 or more private cars owned by the several thousands of prospective residents and those already living in the SE area of Woodstock plus those in nearby Cherwell District? Haven't even, mentioned the atmospheric gases emitted from the jets and other crafts from the nearby oxford Airport!Public Health England has stated that 5.3% i.e., 276 deaths a year of adults 25 years and older are attributable to air pollution and others suffer with long term conditions such as lung diseases, asthma, cancer and birth defects. The Government has stated that deaths related to air pollution are the second biggest health threat after smoking. And yet, not a mention of these actual physical and biodiversity data are mentioned in Cherwell's plans other than, " ... air pollution can impact on our health, climate change & biodiversity". Most of us are well aware of this. Although three air quality areas are operative in Cherwell, transport sources." There is no overall CDC policy on air pollution in its local plan. There will certainly be a need to have an air quality policy and plan for the key growth corridor from Oxford north on the A44 to Woodstock when lines of start/stop traffic grind to walking pace as workers, shoppers, tourists and public service vehicles commute to and from Oxford daily emitting Noz and Coz into the surrounding areas. In areas of air quality deterioration as above, children are at greater risk as they run and play and inhale greater amounts of polluted air. Those with related lung conditions e.g., asthma, emphysema or heart conditions also more vulnerable to these acrid fumes.</p>

<p>Object to the number of houses being built as it is too many for the area to handle and will have a social impact on the area, which is already over-subscribed in the use of its facilities (schools and medical in particular). NHS is not coping with the current number of patients. Do not need this number of homes. About 1,500 would be more acceptable both economically a reasonable compromise, as some more housing is required. The GB is precious and once built on is lost forever, so should be preserved at all costs.</p>

Have lived in Yarnton for over 30 years and are extremely worried about the proposals, which will mean a further loss of GB after many changes to our village and the new houses built. It would merge Yarnton with Begbroke and add to the existing traffic problem on the A44 which is at a standstill at certain parts of the day. The proposed bus lane would not prevent the bottlenecks between the Turnpike public house and Peartree Roundabout, and if Sandy Lane is closed to traffic between Yarnton and Kidlington (used by many people) this will divert traffic onto heavily congested roads. Our property, in Rutten Lane, backs onto an open field and if houses or school premises are built on this land it could increase flooding here and elsewhere in the village. Government policy is that GB should only be considered where there is no alternative, but there is more suitable land within Oxford city to meet the housing need or other land within the district that is not green belt. Even with an amount of affordable housing many will still not be able to get on the housing ladder. Totally opposed to these plans.

<p>Oppose the proposed planning policy to build 4,400 houses within Cherwell District Council in order to fulfil Oxford City's unmet housing needs which according to the recent local news may well be an overestimate! Why can Oxford not deal with their own requirement as they seem to be filling Headington with student accommodation which would be better suited for local residents. Understand that new legislation/proposals are coming from the government in the spring and feels it would be prudent to wait at least until then, before reviewing the current proposals.</p> <p>Other concern is the closing of Sandy Lane - it is a vital link between Yarnton and Kidlington and if anything should be enhanced. From a personal point of view when on grandchild care, we will be adding at least 4 miles to our journey, twice a day for school runs which will help add to the traffic congestion with the other traffic generated by the extra houses! The A44 often cannot cope with the volume of traffic at certain times at the moment and with the introduction of another 3,000+ cars will make it even worse. Reference to the meeting at Exeter Hall.</p>

<p>Writing as a resident of Yarnton to object to the proposed plan to build 4,400 new houses on the Green Belt around Yarnton and Begbroke; especially the 3,660 in Yarnton. Feels that the proposed developments would not be appropriate to the Green Belt policy set out by national guidance and the council's own plans in that it would be contrary to a number of the basic purposes of the Green Belt policy. Notes that the council turned down a previous application - 14/00191/OUT - to develop new housing to the north of Yarnton on the east side of the A44 with access of Sandy Lane as "inappropriate development in the Green Belt.....would conflict with the key purposes....within the Green Belt. This was supported by reference to a ministerial statement " confirming the Government's intentions with regard to the importance of the protection of the Green Belt" Various examples were cited as being similar - Thundersley, Essex; Saltford, Somerset; Cheltenham and St Albans. Opposed to the closing of Sandy Lane as it would affect my wife and I travelling to Kidlington for grandchild care two days a week at least.</p>

<p>Underfunded Public services are already overwhelmed and will deteriorate further with an increase in population. Green belt development is wrong and in no cases has it ever been recovered once lost to developers. Building on them will destroy local habitats, views and footpaths. These areas are vital for our health and well-being and encourages the populace to get out and exercise, reducing the pressure on our medical services and the need to take time off work. The Green Belt must be preserved for us and for future generations. Must resist the urban sprawl that is threatening our Human Rights to live in a pleasant environment complete with it's green spaces and with an infrastructure that can cope. Concreting over our countryside will only exacerbate the local flooding we are already trying to prevent. In other areas in Oxford developers have promised 50% affordable housing but have not kept their word once approval for development has been given and the councils have not insisted that the make good on their promises. This is not acceptable. What is to say that the same would not happen in any new development in Cherwell? Is not affordable housing one of the very reasons that new housing is required? Oxford City instead of building more housing in it's own area wishes to push the problem out into the surrounding countryside causing more air pollution in those areas - something it has consistently failed to address within the City. The Cutteslowe and North Oxford junction redevelopment with the A40 has spectacularly failed to improve the traffic flow since it's inception and more housing to the North will only exacerbate the problem making journey times longer than they have ever been. This is a main route to the Headington Hospitals where traffic issues are already a major problem. There is a proposal to close Sandy Lane to motor vehicles due to the development PR8 but in the same sentence offers the construction of a new railway station at the Sandy Lane crossing. How is this sensible? How are commuters supposed to get to the station? This has been ill thought out and the new station is a carrot which will do nothing to offset the huge amount of extra commuters wishing to get to Oxford and Headington - the major areas for employment, or London via Oxford Parkway. Cherwell Councillors must act for the people of Cherwell and not for the developers and Oxford City landowners.</p>

<p>Strong objection to Cherwell District Council's plan to build 4,400 houses on the Green Belt surrounding the villages of Begbroke, Yarnton and Kidlington. Reference to The NPPF (National Planning Policy Framework, para. 80). The NPPF emphasises that 'GB boundaries should only be altered in exceptional circumstances' and I do not consider that Oxford City Council's inability to manage their own housing needs as 'exceptional circumstances'. Cherwell DCs plan also contravenes the NPPF's policy on the GB and their reasons for 'exceptional circumstances' are not acceptable both to myself and to many other people. The main purpose of the GB is to prevent urban sprawl. Cherwell's Local Plan which has been adopted states that that "The Oxford GB was designated to restrain development pressures which could damage the character of Oxford City and its heritage through increased activity, traffic and the outward sprawl of the urban area." If these plans are instigated then Oxford City will engulf Begbroke, Yarnton and Kidlington creating 'urban sprawl' on an unprecedented scale. These villages, which have stood alone for hundreds of years, will become 'incorporated' into the suburbs of Oxford and the loss of the GB which separates them will also be lost forever in a mass of bricks and concrete. To prevent neighbouring towns merging into one another - Government policy states that development within the GB should only be the very last resort and should only be considered if there is no other alternative. I do not accept that Cherwell District Council has taken into account the above statement. If these plans were to come to fruition Yarnton and Begbroke would be consumed by Kidlington and all would then be engulfed by Oxford city. These villages have their own historical significance and have stood alone for hundreds of years as I've already stated. This 'independence' would be lost along with each village's history. In the plans Cherwell has allowed for a 50m strip of GB to remain in place separating Yarnton from Begbroke – 50m is the length of a swimming pool and hardly a 'separation'!! By making one large conurbation, the strain on local services would be untenable. The majority of the influx of people would not be working in the area but would be commuting elsewhere. The plans to upgrade the A44 and create a rapid transport system would not alleviate the increase in traffic this proposal would generate. The A44 already experiences high levels of congestion and has a number of pinch points which could not be changed under the upgrade thus exacerbating the congestion even further. The small surgery at Yarnton could not accommodate a further 10,000 people which alone are said to increase the population by. Although the surgery is linked to Kidlington, they too would see their population explode and they too would be unable to cope with the influx. Loss of GB in this locations does not safeguard the countryside - it would result in the loss of rural habitat, Wildlife - deer/buzzards/woodpeckers, owls/bats/etc., agricultural land, trees and hedges, farms - poultry and venison. There would be an increase in carbon foot print, CO2 emissions, carbon monoxide levels, nitrogen dioxide levels, lead levels, population, traffic, noise levels and energy usage. There would be a strain on local amenities, (surgery in particular) and local transport routes.</p>

Proposed Submission Plan - General Comments

PR-C-0226	09/10/2017	Pamela	Todd				N	Y
1231	<p>Comments</p> <p>Opposes the plans for the following reasons; Loss of GB forever & Impact on villages & surrounds, losing 'village life': The NPPF para 80. states the existence of GB is to check unrestricted sprawl of large built up areas - The plan means Oxford City would engulf Begbroke, Yarnton & Kidlington creating unprecedented urban sprawl, losing GB under bricks & concrete. To prevent neighbouring towns from merging into one another - CDC hasn't taken into consideration the Government's. statement that developing on GB should be the last resort & be considered if no alternative. Leaving a 50m strip of GB is hardly 'separation'. To assist in safeguarding the countryside from encroachment - Losing GB would mean losing wildlife & their habitat, agricultural land, recreation for health & well being, an increase in CO2, CO, NO2, Pb, pollution, traffic, noise levels. To preserve the setting & special character of towns - Yarnton & Begbroke would lose their identities & history, dating back to 2700BC. CDC is contravening its statements in The Cherwell Local Plan 2011-2031, Pt 1 adopted 20/07/15, Policy ESD 14: Oxford GB. Yarnton & Begbroke are covered by 'Policy Villages 1'. To assist in urban regeneration by encouraging the recycling of derelict & other urban land - The NPPF states "GB boundaries should only be altered in exceptional circumstances". Oxford City Councils inability to manage their own housing need shouldn't be considered 'exceptional circumstances'. They should be using their own brownfield sites & switching land earmarked for business to housing. EG. Northern Gateway. The population increase will put strain on local amenities. The inadequate transport infrastructure will not cope with increased traffic, (already lost Yarnton to Kidlington bus link). Pollution increase will impact on health. The increase in carbon footprint. The SHMA figures are flawed & inflated to accommodate the proposal. Yarnton has already seen expansion in 2011. Over 200 homes built. The development could be place on sustainable sites CDC has already identified within their jurisdiction. The increased impact of flooding in Yarnton & Begbroke. Am personally opposed to these plans for the following reasons: • The loss of the Green Belt forever • The huge impact this development will have on the village and surrounding areas • The population increase and the strain it will put on local amenities • The inadequacy of the transport infrastructure to cope with the increase in population and traffic (we have already lost our bus link to Kidlington) • The increase in pollution and the impact it will have on health • The increase in the carbon footprint • The environmental impact it will have on the wildlife • The loss of the 'village life' • Because the SHMA figures are flawed and inflated to accommodate the proposal • Because Yarnton has already seen an expansion with over 200 homes being built in 2011 • Because the planned development could be placed on sustainable sites Cherwell DC has already identified elsewhere within their jurisdiction • Because of the increased impact of flooding in Yarnton and Begbroke. The Green Belt is meant to preserve the countryside for all and should not be sacrificed to meet development needs. The Green Belt is needed to aid the health and wellbeing of people living in an urban environment so that they can spend time enjoying nature in a peaceful setting. Once all these things have been taken they cannot be replaced and this would be a crime. Urge you to reconsider your plans and leave the Green Belt boundaries alone to let future generations enjoy the rural setting and village life this area offers.</p> <p>Changes Sought</p> <p>Reasons for Participation</p> <p>Would like Begbroke and Yarnton Green Belt Campaign to act as my representative during the Examination by the Planning Inspector.</p>

789	<p>Comments</p> <p>Not bothered about building more housing. But feels bothered that a good proportion of the new residents will have cars, and want to travel into Oxford in the mornings. It doesn't matter how excellent the public transport is, if it can't get to the bus lane for the weight of traffic, then it will take longer to get into work.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							
PR-C-0229	24/08/2017	Alys	Thomas	Cushman & Wakefield on behalf of Royal Mail Group				
791	<p>Comments</p> <p>The Local Plan (Part 1) Partial Review Consultation document makes provision for an additional 4,400 new homes over the plan period, to be delivered through 7 strategic sites. These sites are focused on a geographic area extending north from Oxford to south Kidlington, along the A44 corridor to Yarnton and Begbroke, and up to Woodstock in West Oxfordshire. Any increase in the number of dwellings is likely to have an impact on the capacity of Royal Mail's operations and its ability to provide universal postal services within the District. It is considered that the expected growth will have capacity implications for existing Royal Mail properties, particularly those within the Kidlington area where the majority of the proposed growth is concentrated. As a consequence Royal Mail, as a statutory provider, may seek the expansion of existing assets or new sites, particularly where housing developments are concentrated and where existing properties are nearing capacity. A rule of thumb is that for every 400 new dwellings, one additional postal round is required, and for developments approaching 1,000 new dwellings in one area, an increased footprint or new delivery office may be required. It is imperative that this is kept in mind in the preparation of the Local Plan (Part 1) Partial Review, particularly in the context of Royal Mail's statutory duty to provide efficient mail sorting and delivery for the Council's administrative area. Royal Mail must therefore continue to be informed about proposals for strategic locations, planned expansions and growth areas, and would welcome further engagement with the Council to ensure appropriate business development and planning and to safeguard future operations in the District.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>

Strongly disagree with proposal to build houses on the North Oxford Golf Club. This is a vital recreational facility, a green lung, a home for trees and wild-life and a beautiful property that should not be desecrated. It is a vital recreational facility. It is madness to simultaneously house more people while restricting recreational facilities. The Club is successful, has a long and valued history in the City and, if left alone, will have a bright future and should still be flourishing in 100 years time. The proposal to re-site the golf club to Frieze Farm is nonsensical. Why go the trouble and huge expense of moving the golf course a couple of miles when you could just build the required homes at Frieze Farm???? If the North Oxford Golf Club has to close down it will be a sad day for the City and a stain on the record of the planning committee. Don't let it happen.

Have three concerns regarding the proposed development of farmland surrounding Begbroke and Yarnton. Main concern is an increase in flooding in the area if large areas of farmland are built on. Properties in Fernhill Road, in particular the eastern end, have a very high water table and the gardens flood after a period of heavy rain, reaching around two feet in the middle of the gardens. Not had flooding in the house but have had water only a few inches below the floorboards. If properties flood as a result of building on these natural floodplains will Cherwell District Council take responsibility and compensate for damage caused to properties? The large number of houses is meant to provide homes for people working in the Oxford area, but the Water Eaton rail station provides a fast link to London and the additional housing will attract London commuters. What method will be put in place to ensure the new housing goes to local workers? Our property is quite a distance away from the Begbroke Science Park but any south-easterly wind carries the continuous high-pitched humming produced by the cooling system used in their computer room. This causes sleepless nights. This will affect residents of the proposed housing around the Science Park.

Objection to the proposed development of 4400 houses, as it would effectively meld Kidlington, Yarnton and Begbroke together turning the countryside of North of Oxford into another Milton Keynes. The infrastructure doesn't support that number of houses being built, the roundabouts at Wolvercote and Cutteslowe barely able to cope now. The whole plan is unsound, has not been properly thought out or prepared, neither is it justified and it will not be effective, as soon as they are built there will be a proliferation of "To Let" signs throughout the development. If these are deemed necessary, and to impose on the green belt then why not create a new village either side of the Banbury Oxford road north of Sturdies Castle, and the other side of the road north of Tackley, this would also make it more viable for the bus companies to reinstate bus services to villages such as the Bartons. History shows us that despite the promise of affordable housing none of them will materialise, a three bedroom house on the new Barton development going for a proposed £600000. Oxford with the new station at Water Eaton is turning the north side of Oxford into a dormitory for Londoners wishing to commute. If green belt has to be sacrificed it should be with miles between the current developments of the three villages most affected by the proposal, and with an infrastructure to support it, doctors surgeries, shops, a pub and churches. Oxford City needs to look at the vast number of empty properties under their purview, and stop building vanity science parks that require housing to support them.

Disgusted and horrified at the proposed destruction of the GB and the associated environment and communities of Yarnton and Begbroke. Moved from Oxford two years ago leaving behind traffic and noise, light, air and environmental pollution. The proposals will remove forever the rural atmosphere and have a catastrophic effect on the environment for generations to come. There will be other unpleasant aspects of the proposals but wish to concentrate on the effect the proposed development will have on the current rural environment and communities. Urge you to reconsider your proposed eradication of our GB.

Strongly against the proposed development on the Green Belt around Yarnton, Begbroke and Kidlington. 1. Understand that the land in question is designated as Green Belt land and should not be developed. Important to keep the villages of Yarnton, Begbroke and Kidlington separate. 2. The extra traffic would make the existing congested roads at peak times considerably worse. 3. Has Oxford City Council made enough effort to provide their unmet housing need within the city? Can they not use existing derelict business/commercial sites within the city boundary instead? Are there not alternative sites surrounding Oxford? 4. Is it really necessary to provide an extra 4,400 houses in/around Oxford, especially in view of Brexit? 5. It is often difficult to get a doctor's appointment here and the extra houses would impose extra pressure on the existing stretched service. 6. We would lose the rural feel surrounding Yarnton and it would be terrible for local wildlife and farmland.

Proposed Submission Plan - General Comments

PR-C-0244	08/09/2017	Michael	Groves		N	N	N	
830	<p>Comments</p> <p>Strong disagreement to proposed plans. GB enables and encourages distinct identities and characteristics for towns and villages whilst providing valuable space for exercise and enjoyment of the countryside. This long held tradition that has been enshrined in law is put at risk, riding roughshod over planning laws and local inhabitants. Houses are needed for local young people doing vital work in the caring, emergency and low paid industries but, as in the case of Barton where affordable housing was used as a pretext for gaining planning permission - there is now no affordable housing for local young people. It is feared that this vast development will become a dormer town for the better off/well paid in Oxford and London. To help local people the landowners could donate portions of their gifted lands to help local councils with smaller and less divisive developments. Whilst people employed by these landowners may well receive subsidised accommodation, this will not help our hospitals, schools, nursing homes or council workers who are vital to support the local infrastructure and are currently being forced out of the locality in order to be able to afford to rent or buy their own property. These people far away from friends and families will not be able to give or receive help from their families at time of need, thus impacting further on social services. Development of this size is horrific when the A34 and A44 are currently totally inadequate and overwhelmed. Local schools, nurseries, GP surgeries and hospitals are all overstretched and unable to cope with current numbers. Cherwell District Council has a duty of care to plan responsibly for the inhabitants of Cherwell and not become a dormer city for the convenience of Oxford City.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							
PR-C-0245	07/10/2017	Neil	Sadler					
1844	<p>Comments</p> <p>The plans to build 4,000 homes north of the Cutteslowe area are deeply worrying and threaten the natural environment that separates Oxford from Kidlington. It also sets a very worrying precedent for councils grabbing green belt and other natural areas for urban sprawl. How can there not be a more suitable site which doesn't risk changing the feel of the entire area as much? These houses are also likely to be extremely desirable as being next to the train station, so I am not sure how they can be described as social or affordable housing.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							
PR-C-0247	01/08/2017	David C	Hinde	Begbroke & Yarnton Green Belt Campaign (2)				
834	<p>Comments</p> <p>Multiple documents have been submitted with this representation. These are summarised as follows. Appendix A: Baseline Data and Evidence. Relevant information gathered through the baseline review is presented on the plans provided in Appendix A. These plans provide a record of the issues & constraints that have guided the development of potential design options. The key points & themes to emerge are summarised in this section but the Appendix A is missing. Appendix B: Stakeholder feedback. The feedback & comments from stakeholders are provided in Appendix B. The key themes to emerge after analysis of the feedback are summarised in the report but are not available for review as Appendix B is missing. Appendix C & D: Design Overview. Plans showing the preferred corridor design are provided in Appendix C. It is unclear if this is the information provided in PR36b. The operation of selected junctions has been modelled for a future year scenario (2031). The findings are discussed in context below, & presented in detail in Appendix D. Appendix D is missing. Appendix E: Design decision. Further to the design notes provided in the report, a record of all design options considered throughout the corridor is provided in Appendix E. This appendix is missing & would seem relevant given the residents of the area may consider aspects of the other options more appropriate given local knowledge. Hard to achieve this if the information is not provided for review & comment. Appendix F: Full Cost Estimates. The main body of the report provides a summary of the total scheme costs. The full cost estimate calculations are provided in Appendix F which is omitted. The report acknowledges the proposed schemes are costly and therefore it would be appropriate to have access to these detailed costs to understand better which elements of the proposals could be cut. As the plans remain unfunded understanding these detailed costings is again very important. The relevance of the above is related to CDC alleged Exceptional Circumstance 9 on page 66 of the Proposed Submission Plan: "The improvement of transport infrastructure in the north Oxford / A44 corridor area." Document PR36 is also included in PR52, Transport Assessment in Appendix 6. The six appendices are again omitted. The inclusion of PR36 in PR52 further underscore its relevance & importance to the process. Without these documents the general public are simply not able to participate in a reasonable and meaningful Consultation as they should be. This is again plainly unacceptable and quite unreasonable & puts in doubt the genuineness of the Consultation. It is quite unreasonable & procedurally unfair for the CDC Submission Plan Consultation to proceed unless & until the missing documents are made available to the general public.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							
PR-C-0247	01/08/2017	David C	Hinde	Begbroke & Yarnton Green Belt Campaign (2)				
833	<p>Comments</p> <p>BYG are concerned that CDC's consultation is not compliant with statutory framework, not procedurally fair & not reasonable as a matter of law for the following reasons: 1. Insufficient time for review of documents. There are vast numbers of documents to consider comprising thousands of pages & yet CDC have given only the bare statutory minimum period for the Consultation of 6 weeks. (Oxford CC provided 8 weeks for its consultation). This is unreasonable. 2. Consultation taking place over the Summer Holidays. The timing could not be worse as it coincides with the school Summer Holiday season when many people are away on holiday. Indeed we note that the Options Consultation on the proposed CDC PR also coincided with the Christmas holiday season. This is unreasonable & we conclude that both consultations were deliberately timed to avoid the maximum number of relevant residents who will be most affected by the Partial Review being able to participate in the process. 3. Very important documents are missing. As if points 1 & 2 were not serious enough it turns out that important documents which should have been made available by CDC are missing from its evidence base documents suite which has been put out as part of the Consultation. We are still identifying missing documents but at the very least the following important documents are not available when they plainly should be: (provided in table form) PR54 Housing and Economic Land Availability Assessment (HELAA). The HELAA provides important evidence for the development of a Local Plan. The HELAA is required by the NPPF. The HELAA enables planning policy to be devised on the basis of available sites. It is important to the Consultation because the HELAA should include detailed assessments of all sites considered within the Cherwell search areas & will enable a review of rejected sites in comparison with those put forward for development, which in turn is important to respondents in seeking to recommend alternative options. PR36: A44 & A4260 Corridor Study. This document was commissioned by Oxfordshire CC to review the A44 & A4260 corridor & key cross link roads bounded by the A4095 & the A4260 Frieze Way/Peartree Interchange. 5 of the 7 selected sites are either within this area or are located on the boundary. The study takes account of planned development in the area included in the CDC LP. At the time of writing, CDC is working on growth options for a partial review of the LP relating to Oxfords un-met housing need, some of which lie on the A44/A4260 corridor study area. Depending on the growth options taken forward from this partial review, some aspects of the proposals in PR36 may need to be revisited.</p> <p>Changes Sought</p> <p>Reasons for Participation</p> <p>BYG demands that the CDC Submission Plan Consultation be suspended immediately. In order to ensure a reasonable and fair Consultation CDC must: 1. Provide to the general public the documents which we have identified as missing; 2. Confirm that there are no other documents missing which are relevant to the Consultation; 3. If there are any such documents missing, in addition to the ones we have identified, provide to the general public those additional documents as well; 4. Upon the provision of all the missing documents; re-start the clock for the Submission Plan Consultation to run from the day after the provision of the missing documents for a period of 8 weeks to take account of the Summer Holidays which is consistent with Oxford City Council's Local Plan 2036 Options Consultation which started prior to the School Holidays and runs for 8 weeks. Please confirm by return that you will ensure as Leader of Cherwell District Council that the above entirely reasonable demands being made by BYG will be met.</p>

Request Cherwell District Council to suspend the consultation on Cherwell's Partial Review of its Local Plan on the following grounds:• Insufficient time for review of documents• Consultation taking place over the Summer Holidays• Very important documents are missingThere is very strong feeling at grassroots level about the unacceptable level of mass housing being proposed in Oxfordshire. It is a great disappointment the your Council, along with others, have conceded to the unverified demands of housing allocation being promulgated by Oxford City Council to meet their so-called 'unmet housing need'.On top of this scenario, it would appear that Oxfordshire is to bear the brunt of Central Government's 'vision' to develop the Cambridge – Milton Keynes – Oxford 'corridor' at the expense the quality of life and place currently experienced by those of us that live in Oxfordshire, and also at the expense of the depletion of wildlife and the natural environment. Your vision seems to be more concrete, more traffic, more pollution – the doom laden scenario of 'business as usual'. Instead of economic growth, you as a Council should be planning for 'sustainable growth / smart growth' where the qualities of the natural environment are placed at the heart of planning.I trust you will immediately respect the request / demand from the Begbroke and Yarnton Green Belt Group for the immediate suspension of the proposed submission Plan for Consultation.

Should be read in conjunction with Begbroke and Greenbelt Campaign. Not compliant with Duty to Cooperate - video evidence from the Cherwell District Council website indicates that members of the Executive felt forced to approve the initial plan. Subsequently at village meetings it appeared that Executive members felt they had been intimidated by the power of landowners and developers. Positively Prepared - No. Proposals in the document have not addressed their impact on residence or infrastructure. Justified - No. There are other sites that could be used: such as that designated for Northern Gateway, other brownfield sites within the City and sustainable sites in Cherwell District. Oxfordshire's Strategic Housing Market Assessment should be updated. A more modest growth target for each community would be more acceptable than the near tripling proposed for Yarnton/Begbroke. New economic forecasts and new Government guidelines make the figure of 4,400 units unsound, not positively prepared and unjustified. The City Council should do more to meet it's own needs. National Planning Policy Framework requires "very special circumstances" which have not been demonstrated. The transport proposals have not been "tested" or funded thus unsustainable. Closure of Sandy Lane would be highly detrimental to local residents, whose roads are already clogged by daytime parking by car owners commuting by bus to Oxford. Effective - No. Rushed proposal to accommodate Oxford's unmet housing need prepared before the City has prepared it's own Local Plan. There would need to be cast-iron powers to ensure affordability for locals. Consistent with National Policy - No. Total disregard to National Planning Policy Framework guidelines. Proposed housing coalesces three villages with loss of individual characteristics/history. Oxford City Council has 40% GB which it zealously guards, understanding the need for a Green Lung. The proposed plan would create a vast urban sprawl - a sufficiently rigorous case has not been made for destruction of GB. Housing figures must be further recalculated taking into account Brexit and revised forecasts of lower economic growth.

2046	Comments							
The CDC's Proposal does not consider the impact of flooding. The CDC knows flooding in the area is an issue. There are pictures showing the impact to flooding on Yarnton and Begbroke village. If the CDC have been unable to meet their residents' needs in this area now, it would be irresponsible to propose the growth in housing in this way. The CDC is completely irresponsible proposing these plans. The proposal is also irresponsible as it does not consider the impact on wildlife. The countryside that surrounds our two villages is rich in wildlife. The loss of this habitat for housing will have a massive negative environmental effect. Therefore the CDC's Proposal is irresponsible.

Unhappy & concerned about short consultation period being held over the summer months. Oxford City Council should meet their own unmet needs, not their neighbours. Their needs have been overstated & the council will have all powers to cover these. Passing their responsibilities to other councils is a good strategy but it is irresponsible. It seems that CDC is more interested in meeting the request of Oxford CC than hearing its own people. An additional 4,400 houses for the district by 2031, over & above that allocated in the adopted part of its LP is outrageous! 1. The LP Review is intended to only accommodate Oxford's "unmet need", but this is substantially overstated & Oxford has not satisfactorily identified the amount of it they might not be able to meet. Oxford is capable of accommodating all or almost all of it by switching land earmarked for businesses to housing instead. It is premature for CDC to even start the process of accommodating it. 2. The Council's LP Review is not just to build in the GB, but to attack the core principles on which GB's depend. Even if Oxford's inability to accommodate its own housing need was real & had been properly quantified Oxford could and should meet it elsewhere than in the GB, which 3/4 of its own voters want to see protected. 3. Sustainability - Although you say the most sustainable option is to build on the GB, to it is the very definition of unsustainability. It should be located the sustainable sites it has identified elsewhere in the district. 4. Density - In the adopted part of its LP & in this Review you waste land by proposing to build at very low densities. This is an unsustainable waste of a vital resource, & higher densities would produce the more affordable houses people actually need. 5. Transport - You say the housing could be supported by a new railway station 'between Kidlington & Begbroke' but this is unlikely to be deliverable. The plans should be put on hold until the Oxford to Cambridge Expressway route is settled, the East-West railway is re-opened & the full extent of the expansion of Bicester is agreed, with its possible new transport infrastructure. 6. Any new high-tech employment sites in the district should be focused at Bicester where large numbers of houses are already being built/have been provided for on the basis that high-tech employment would be provided, but this has not yet been forthcoming. 7. The planned housing for Yarnton will put undue stress on the rather weak local infrastructure & services, which are practically non-existent & damage the rural environment. Many neighbours are already abandoning this area.								
Changes Sought				Reasons for Participation				
The Council should set much higher density targets on building properties.								

Proposed Submission Plan - General Comments

PR-C-0251	09/10/2017	Antonio	Corbi		N	N	N	Y
5622	<p>Comments</p> <p>The CDC's Proposal should be amended. CDC has not given time to develop a parallel proposal but I can highlight the following points that should be considered to amend the CDC's Proposal: • Cherwell DC should consider other sites: Bicester is one example of a place that is easy reach of Oxford by train. • Oxford City Council should use its own brownfield sites. Oxford could prioritise solving its own housing problems by using sites like the Northern Gateway or its own golf courses. The CDC should look after their residents and is irresponsible to pass the Oxford Council's responsibilities to the CDC's. • Oxford City Council should consider building taller buildings. • Oxford City Council should consider using sites located closer to the major employment areas: the City Centre, Headington and Cowley (recall these last two areas employ more people than the City Centre does) . Any sites on Green Belt land would need to avoid undue urban sprawl or merging villages together – two points that the Cherwell proposals fail on. • Reviewing the housing forecasts. These are based on the 2014 Strategic Housing Market Assessment or SHMA and are overstated. The forecasts used historical data and was undertaken before the European Union referendum happened.</p> <p>Changes Sought</p> <p>For the reasons given AND the Representations made by the Begbroke & Yarnton Green Belt Campaign which are additionally supported, the Plan cannot be changed to make it legally compliant or sound and should therefore NOT be submitted for Inspection.</p> <p>Reasons for Participation</p> <p>Would like the Begbroke & Yarnton Green Belt Campaign to represent me at the Examination should it take place.</p>							
PR-C-0251	05/10/2017	Antonio	Corbi					
1180	<p>Comments</p> <p>Addresses Cllr Barry Wood & thanks him for attending the Kidlington Parish Council public meeting on 21/09/17 & for taking questions on the proposed changes to the LP. Your frank responses reinforced my view ,shared with many others, that CDC does not intend to take the public consultation seriously. That it is listening only to the development lobby & running scared of litigation. Tellingly, most of the reasons given in the LP for building on the GB North of Oxford read as if they have been copied & pasted from some Local Enterprise / Oxfordshire Growth Board strategy document for capitalising on cashing in the land value. You dismissed suggestions to wait on the outcome of the current Government consultation that could well show that the current SHMA housing targets are perhaps double what is needed. You seemed remarkably unconcerned by the possibility Cherwell is committed to many more homes than it really needs & seemed determined to compound the error by building homes that Oxford City doesn't need in the most inappropriate and vulnerable part of the Green Belt. Your defence was twofold: that the SHMA target doesn't need to be accurate so long as it has been approved via the correct process, if a new formula were introduced that slashes the existing target you were confident in the Council's ability to find ways to keep housing need projections at the current level. Do you really think that this is an appropriate & professional response to serious & legitimate concerns? Never saw such a blatant display of official contempt for both the probity of the Council's conduct of an evidence based process & for public scrutiny. It is most important to be sure the housing target is as accurate as possible. Recall the initial LP Examination in Public saw Cherwell's case thrown out for not meeting newly revised SHMA targets. It had to go back to the drawing board to double the housing numbers. Is that not a clear pointer toward the need to stop & rethink – to apply your vaunted ingenuity to bring the numbers down? This requires making a clear separation between need (which is finite) and demand (which is massive & almost infinite). Cherwell already has a massive new build commitment & a LP in place. It need not rush to add more. It certainly should not progress a process designed to take land out of the GB against a background of heightened uncertainty magnified by Oxford City not having a LP in place. I urge you to take a principled stance in your role as Leader of the Council & our representative on the Growth Board. Please do everything in your power to apply the safety brake. I think the 400+ members of the public present at Exeter Hall on Thursday made their feelings clear & gave you a mandate to change direction. It is time our elected representatives acted to re-open the housing need question. CDC should work with the Growth Board to withdraw support for allocating Oxfords unmet housing pending an urgent review of the underpinning housing need projections. If you really are unwilling or powerless to Stop Oxford's Sprawl and save our GB then perhaps it is time to resign. No one of principle would want to preside over the urbanisation of Oxford's GB. History will not forgive you.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							
PR-C-0251	09/10/2017	Antonio	Corbi		N	N	N	Y
2038	<p>Comments</p> <p>Cherwell District Council (CDC) is barely able to cope with the needs of the population and therefore the proposal to more than double the number of houses is irresponsible. Access to Oxford by road has not completed. The roads are not paved, the traffic is overwhelming, the services provided by CDC are insufficient to meet the needs of the population, there is a problem with flooding in some areas and the CDC is unable to give timely response to all the demands of their residents. The proposal is also irresponsible because merging the populations into a single large conurbation in Kidlington does not make sense and is unreasonable. The proposed development is entirely on green belt land and would result in there being only a narrow gap separating the villages of Yarnton and Begbroke. This new development crosses the parish boundaries and we estimate that the physical gap between Begbroke and Yarnton will only be approximately 50 metres. There is also only a small gap between this enlarged development and Kidlington , meaning in effect that the three villages are merged into one large conurbation. We estimate the population would be around 30,000. The proposal is also irresponsible because it is against the purposes of the Green Belt as define in the National Planning Policy Framework (NPPF). Highlights five points in the NPPF that have not been met in the proposals from Cherwell DC that are irresponsible and is quoted in the letter. The proposal is irresponsible because if it is approved CDC could not comply with the approved own policy on the Green Belt: Local Plan 2011-2031 adopted 20 July 2015. Policy ESD 14 states the points given in the letter. Yarnton and Begbroke are covered by "Policy Villages 1" - as referenced above. This means only certain types of development can happen in such villages and is limited to the following:• Minor development• Infilling• ConversionsIt is breath-taking reading the above when reviewing the proposals for 4,400 new houses on the green belt land around our villages. It is clear these proposals from Cherwell contravene their ownLocal Plan policy on the Green Belt. Therefore the CDC's proposal is irresponsible!</p> <p>Changes Sought</p> <p>For the reasons given AND the Representations made by the Begbroke & Yarnton Green Belt Campaign which are additionally supported, the Plan cannot be changed to make it legally compliant or sound and should therefore NOT be submitted for Inspection.</p> <p>Reasons for Participation</p> <p>Would like the Begbroke & Yarnton Green Belt Campaign to represent me at the Examination should it take place.</p>							
PR-C-0253	10/10/2017	Layla	Moran, MP		Y	Y	N	Y
1988	<p>Comments</p> <p>The estimate of housing need published by the Government in the Planning For Homes consultation (published on the 14th of September 2017) are so significantly lower than the figures this plan is based on that the only reasonable course of action is for Cherwell DC to halt the current process and reassess. The new figures not only suggest that a much lower target is needed for Cherwell DC, but also for Oxford and other neighbouring districts. This may have a substantial effect on what the level of Oxford City Council's unmet need is. Until the case for the unmet need is unequivocally made, given the huge public opposition, a more cautious approach should be taken. The proposals will cause significant coalescence between Yarnton, Begbroke and Kidlington, undermining one of the key principles of national planning policy. Cherwell DC have failed to set out 'exceptional' reasons why there is a need to build on the Green Belt on the scale proposed when there are other sites available in the district. In light of the Government's consultation on its new approach to housing assessment, Cherwell DC should halt the current process and reassess its figures before continuing.If or when the process does continue, housing development on this scale is not justified on Green Belt sites around Kidlington, Yarnton and Begbroke and alternative sites in the district should be reassessed. Local residents strongly express the view that should building happen on the Green Belt, it should be a last resort, meet local need, is fully supported by infrastructure and be affordable to the community.This plan meets none of these criteria.</p> <p>Changes Sought</p> <p>In light of the Government's consultation on its new approach to housing assessment, Cherwell DC should halt the current process and reassess its figures before continuing. Proposed Submission Plan - General Comments

PR-C-0254	19/09/2017	Denise	Greenspan						
841	Comments								
Complete and unequivocal objection to Cherwell District Councils plans to build Oxford City housing on the Yarnton and Begbroke GB. Objections to the threat to wildlife and creeping urbanisation of our cities and further objections to consultation process. Suggests approaches to ribbon development. The plan is based on flawed and out of date information (pre-Brexit data and a discredited SHMA). With regard to increase in traffic a CDC representative at the exhibition in Begbroke village hall felt that there would only be a 1.2% increase, there is simply no way that tripling the size of the village will lead to only a 1.2% increase in traffic. Objections are: 1. The loss of vast swathes of countryside and wildlife around Yarnton 2. Irreversible harm to the history and identity of the village 3. Traffic gridlock on the A44 – it already takes one hour to get from Yarnton to Cowley each morning and no amount of bendy buses will improve that because there is only room for one lane in each direction over the bridge. 4. Air pollution from said increased and gridlocked traffic 5. Lack of water supply – Thames Water has informed me that water will be brought in from Wales. The reservoir that South Oxford is trying to build is to support the water supply in London – only 20% of it, if it is ever actually built will be allocated to South Oxford. 6. Ironically then – this proposal would also lead to an increased flood risk. 7. Closure of Sandy Lane – this is a busy thoroughfare between Yarnton and Kidlington, its closure would require a 3 – 4 mile detour in either direction - leading to even more traffic on the A44 8. Since this is housing for Oxford City it should be said that this is just too far for public transport in to the city; it would take me more than 2 hours each way, by bus, to get to my office in Cowley. It takes 2 hours to get to London. This plan would end up being London housing, not Oxford City. Oxford City should be exploring other non-greenbelt sites closer to the city. As well as having higher density targets within the inner city or perhaps building where better infrastructure has already been provided, such as Bicester.

Objection to Oxford City Council's actions in building more commercial properties on land that could be used for housing. Should be protecting the green belt which gives residents of Oxford somewhere to escape from the polluted air of the city. Whether they are concerned about the environment I begin to wonder having seen the building on what thought was green belt, namely Barton Park. These were lovely green fields with cattle and ponies grazing and as mentioned before it is such a sad sight to see our green spaces disappearing around the City. Concern lies with the Plan and the destruction of North Oxford Golf Club. I have been a member there for over 30 years and not only has it kept me fit and healthy, I have met some lovely people there who have helped me through some difficult times. It is a breathtakingly beautiful place to be with mature trees and interesting bird and animal life and it pains me to think what would happen to the area if building is permitted on this land. The Club provides recreation which we are pressed to take part in by the health authorities and is also a social hub for members and their friends and lives would be destroyed and long held friendships would be difficult to maintain if these opportunities were not available. We are told that loneliness is the worse illness we can experience and I believe that the breakup of the club would inflict this upon some of the most vulnerable of our members.

The closure of Sandy Lane is cited within the TA (PR52) and the A44 Corridor Study (PR36, incorporated into PR52 as an appendix). Sandy Lane is a minor road but provides a crucial link between Yarnton and Kidlington villages. It is the only such link outside of the two main corridor roads at Langford Lane and Frieze Way. Its strategic importance is highlighted by it being salted in winter. It is estimated that 190-240 cars per hour use the road at off-peak times with near-equal flow rates in both directions (personal travel survey data). This further highlights its importance as a link between these two villages. It provides access to local schools (the catholic primary school for Yarnton and Begbroke is located in Kidlington, along with a secondary school) and health services (the GP surgery at Exeter Close Kidlington and Rutten Lane Yarnton are part of the same practice). The closure of Sandy Lane is classified as 'crucial' within the PSP, with a cycle / pedestrian shared use path being created in its place. Having greater provision for pedestrians and cyclists is a sensible proposal and is welcomed. This however could be done in parallel to retaining it as a key link for car journeys. The closure of Sandy Lane will affect the length of car journeys. It is 2.4km from the A44/Sandy Lane roundabout to Kidlington Village Library on Oxford Road. If Sandy Lane is closed, the distance is 5.0km via Langford Lane or 6.0km via Frieze Way, increases of 110% and 150% respectively. With no public transport options, the closure of Sandy Lane will result in increased journey times and generate more congestion on local corridor roads. This is will be an issue with the plan in PR36 that would see traffic being diverted away from the A4260 onto the A44. The closure of Sandy Lane would add more traffic onto the A44 corridor so exacerbating congestion. The closure of Sandy Lane as proposed in Policy PR8 is therefore unsound.

The Policy Sites PR8 and PR9 provide an attractive environment around the villages of Yarnton, Begbroke and Kidlington. Use these regularly for leisure activities including running. The sites are largely used for agricultural purposes and are well tended. The loss of access to this open space would affect the quality of life for the existing residents of these villages. The land set aside within the PSP would not provide any compensation for the loss of this open, beautiful Green Belt land. Sandy Lane provides a vital link for getting my young children to school and its closure would have a substantial effect on family life. The road is well used but not busy. Not experienced delays at the level crossing and Canal Bridge. Not witnessed any accidents on this road. Do believe better provision for cyclists and pedestrians should be provided, but not at the expense of road users. Yarnton and Begbroke villages have their own unique character. It is without question that if the PSP is implemented that this village character, and associated history, will be permanently lost. Bats are regularly seen in the garden. Live close to Policy Site PR8 and would be concerned about impact of this development on the local wildlife.

The transport strategy relies heavily on the use of the existing road network. The A44 is used as part of my daily commute. It is regularly congested from Sandy Lane to Pear Tree at peak times. Traffic frequently queues from Pear Tree towards Oxford with the recent upgrade of Wolvercote and Cutteslowe roundabouts appearing to have provided little benefit to reducing congestion. Additional traffic monitoring would be advised to confirm the lack of improvement on this important stretch of the corridor. The addition of 4,400 houses can only exacerbate this situation. The A4260 through Kidlington is regularly queued from Bicester Road to Kidlington Roundabout, including the service roads. Journey times at peak time are poor. Accessing Oxford Parkway at peak times is difficult due to the traffic congestion. With no safe cycle access (and no direct provision is made within the transport strategy from Yarnton) this makes one reliant of using cars. The A34 is heavily congested during the working week. This road is used as part of my daily commute to Milton Park. The journey from Yarnton can take on average between 45 to 60 minutes at peak-times which equates to an average speed of 20-30 mph. The addition of 4,400 houses will exacerbate this congestion.

Considerable amount of local concern and real anger across Yarnton, Begbroke and Kidlington not least because of the manner, bias and timing afford the consultation. Difficult to put together a more misjudged set of proposals which has created a total solution to fit the desired objectives of Oxford City, University land owners, the U turning of Cherwell District Council and commercial house builders. In following a process based on the assumption that economic growth is paramount then they are guaranteed to fail in the same way as previous models of urban growth in the South East have done in the UK. Oxfordshire is unique in that its population is primarily centred on one location, Oxford, with the next biggest 6 towns' total population still not equalling that of the city. As such the very last place one would wish to develop is by extending into the GB outside Oxford. The future has to be with brand new communities built alongside the required infrastructure and looking forward to new employment opportunities in areas with, or capable of attracting both the employers and the skills/labour needed. This requires plans based on creating new opportunities in areas of the UK outside the SE not adding sprawl to heavily congested towns and cities. To fully challenge these plans would require considerable time spent on all of the elements.....housing assumptions/estimates, GB, wildlife loss, unworkable transport schemes, Brexit impact, Oxford City's failings. I choose however to delegate my voice on these matters to the Begbroke Yarnton Green Belt Campaign who will represent the totality of my concerns. Proposals are contrary to existing policies firmly in place. Findings of the review have no democratic justification

When we moved to Yarnton had solicitors look into the field adjacent to our house because of the fact that it is some 7 feet higher than the position of the houses in our road. Would never have spent this amount of money if ever thought there was a chance that houses would be built that would look overlook our houses and gardens. It also would present a tremendous flood risk because our site used to flood and there had to be extra measures put in place for our development. Add to that the fact that we wanted to be in the country, surrounded by fields that would not be built on. Were advised that the land could not be built on and fought hard a few years ago when Oxford University wanted to put a road through the field. This was turned down. The infrastructure in and around Yarnton, especially the roads cannot cope with the level of traffic we have now and measures need to be put in place just for the status quo, not for thousands more cars to be trying to get in and around Oxford through the same small road system. Our sewers are constantly blocked due to too much stress being put on them, please check with the water authorities. There are so many field in and around the Oxford Ring Road that would be far more suitable and would place workers much, much closer to the jobs they will be working in. Need to reduce traffic, congestion and commuting times. There is absolutely no logical reason apart from pandering to Oxford University and their want to expand the Science Park for more houses in and around our village. The council should not be willing to place the lives of local villagers over one of the world's richest Universities. They have acres of land in and around Wheatley that is far, far more suitable, with much better roads systems and facilities. Also, please advise why a failing golf course in the centre of Oxford is not being used rather than green belt fields. Nobody wants a rich man's sport like golf anymore, it is not sustainable and is much better suited to a site outside the ring road for the few that want to and can afford to play. This site would be right in the middle of where the job needs are. Are organised and willing to place a great deal of money to fight this along with ensuring there is no collusion between staff at the council and the University. Will be asking questions about this and will hire private investigators to look into anything that may not be deemed legal, professional or correct in any way including collusion and conflicts of interest. Will also be highlighting any planning that has been turned down in Oxford both now and in the future, where circumstances would be much better than building on fields that look over other's houses.

Strong objection to the proposed erection of 1950 dwellings in Begbroke and 530 dwellings in Yarnton. Both Yarnton and Begbroke are dispersed settlements: infilling could ruin the character of the village while estate development would overwhelm it. The protection of Begbroke and Yarnton's visual, historic and archaeological qualities is also supported by the National Planning Policy Framework, which states that permission should be refused for development of poor design that fails to take the opportunities available for improving the character and quality of an area and the way it functions. Building what amounts to be the largest high density development in the area; merging the sizeable town of Kidlington with the villages of Begbroke and Yarnton will destroy the unique character of these villages entirely, with the loss of the surrounding GB areas which give the villages their identity, rather than becoming part of yet more urban sprawl. Whilst pressure from Oxford DC for the development in Cherwell DC is considerable, mainly for housing city commuters, it has been successfully resisted in similar cases by Vale of the White Horse DC re the large area of brown field land adjacent to the BMW plant, amongst other areas. The reasons for rejecting those schemes included the inadequacy of the local lanes to accommodate even small increases in traffic, and because road widening would destroy ancient field boundaries. There is concern about Cherwell DC's proposals to increase bus services in order to facilitate the proposed developments by closing one lane of the already busy dual carriageway (note: traffic surveys have been averaged over a 12 hour period, ignoring the rush hour bottlenecks that occur at the Turnpike roundabout / following bridge and roundabout on the A44 prior to Pear Tree interchange) as a dedicated bus route. As cyclists, we are increasingly aware of the poor quality of both the road surfaces in the area due to volume of traffic and poor repairs, and the badly maintained cycleways. Increasing traffic through already congested roads will not improve this, and will most likely lead to more RTA's in the area. The proposed siting of the developments are particularly ill-considered: they are on greenfield sites used by many villagers and tourists for recreation and walking dogs. Building here would both diminish the striking views available to locals and new developments would be prominent from many areas of the village. Furthermore, there is no need for this kind of 'open market' housing in the village, which has already seen several 'new' estates being built in recent years. Cherwell DC has more than five years' supply of housing land in other larger areas (Bicester, Banbury, Kidlington etc.) to meet the requirements of its emerging Local Plan's policy. The villages of Begbroke and Yarnton already have enough housing developments: the only identified need is for affordable housing for residents who work locally, as recently confirmed by your Housing Department's Housing Needs Survey. As an alternative to this proposal, we would support the construction of further housing developments for both Oxford and London commuters (making use of Oxford Parkway Station) on, or near to the proposed Northern Gateway site, or other brown field areas which could be identified within the Oxford area, rather than build on GB land merging villages in to greater conurbations.

Traffic - Anybody who travels in the Kidlington area knows that the system has already reached capacity & it regularly gridlocks. Adding construction traffic to the mix & you have recipe for chaos. Unaffordable homes - The Barton development is an example that promises in this regard simply cannot be trusted. So called affordable homes are either blatantly priced out of the reach of first time buyers or not delivered at all.

Live in Bladon and every time we want to join the A4095 which runs through the village, we wait ages then risk life and limb joining the constant stream of traffic. Whatever will it be like with all these extra houses, especially with the huge development happening in Long Hanborough? Surely the roads need improvement and more village traffic lights, before extra traffic is added.

	As a resident of Kidlington for 2 years (Yarnton for the previous 5+) and as a commuter using the A40 and M40 on a daily basis I am extremely concerned that the proposed 4400 homes in the Kidlington / Yarnton area will cause near gridlock on local roads. The revisions at the Cutteslowe roundabout have had limited effect relieving congestion for the current volume of traffic. There is queueing on a daily basis on the A40 from before the footbridge. The new lights have created a lot of stop start traffic which must be having a negative affect on air quality not to mention frustration for road users. As well as congestion, supply of schools, doctors and flooding risks also need to be considered. Do not object to some new housing being built, it is required. However do object to the amount being concentrated in the Kidlington area. Oxford city needs to do more to solve their own problems; one idea would be to build flats for students allowing many of the city's houses to return to family homes rather than being used as multiple occupancy student accommodation. Building such a large quantity of new homes on the GB surrounding north Oxford's village isn't fair, it should be protected to preserve the wildlife. Turning the area into one massive housing estate will destroy what makes the area desirable in the first place.

	Do not agree that there is a definite need for more housing (especially affordable housing) on the site of the proposed plan, as there is in most of the county and the City of Oxford. Think that the proposed plan is generally too ambitious with regard to the size and nature of the planned development. Particularly concerned about: 1. Volume of traffic on the A44 causing severe disruptions to public and private transport. 2. High density estates. 3. Potential shortages in basic services such as schools and medical facilities. 4. Urbans sprawl. Fear that the proposed plan in its present form will cause these issues to materialise, to the detriment of all who live in the area. The safeguard measures to prevent these problems discussed in the Plan booklet are too often vague and unclear in attempting to allay such concerns. However, do recognise the need for more housing do support that, it is the scale of the proposal that causes concern.

<p>As a resident of Kidlington object to the proposed plans to build 4,400 houses in and around Kidlington, Yarnton, and Begbroke. These plans are unsound and ill-considered, and irrevocably risk the future outlook for Oxford and its immediate surrounding area. Concerns around how the Oxford road network can withstand the additional traffic volume this level of development will inevitably entail. This needs to be considered alongside other development around the city perimeter. Given the mediocre success of the new roundabouts at Cutteslowe and Wolvercote to manage the current traffic congestion, cannot see how a level of development reaching near 35,000 homes will not lead to gridlock. There is the concomitant increase in air pollution and impact on the health of the residents. Oxford already regularly exceeds maximum levels of air pollution, with woeful preparation for the population increase in terms of infrastructure and facilities. Schools, GPs, and policing, already pushed to the limit, will be stretched to unsafe levels and require additional resourcing. There are serious questions why Oxford City is not able to do more to meet its own housing need. through use of brownfield, empty retail, or by reducing student numbers etc. East Oxford housing stock has been dramatically reshaped by family homes being used as student housing - such student housing could be found by purpose-built properties. The residents of Kidlington, Yarnton, and Begbroke deserve a district council that will do more to challenge the City Council and encourage more innovative solutions to its own housing problem than that the city has so far been able to identify. The City has not adequately prepared for, or responded to, a housing crisis that was easily predictable, and Cherwell and other districts should not have to come to the rescue. It is doubtful that these homes will also be affordable based on the area's track record for 'affordable' housing, the Barton Mosaic's development and Templars Square two examples of this. These new properties are likely to attract domestic and foreign buy-to-let investors, and a target of 50% being affordable is too low. Green space will be lost forever and this will impact on local biodiversity and habitat, as well as mental and physical health. The increase of built space will further stress an already stressed flood defence system. The GB was conceived as a permanent designation and I object to building on it in principle. The loss of this green space will also irretrievably change the character of the city and surrounding area - a city once characterised as green and historic will become a bland contemporary urban sprawl. These villages should not be allowed to coalesce. Particular concerns about Stratfield Brake as well as the area around Sandy Lane.. The plans are unposted and funds are unidentified and the residents deserve better. Urge Cherwell to give very serious consideration to these plans and do their utmost to challenge the City planners and developers to provide a more sustainable solution for the area that better balances the urgent need to provide affordable housing with the equally urgent need to protect the environment, public services, and character of the city and its immediate vicinity.</p>

<p>I understand the need to build more houses in the Oxford area and accept that many of them need to be based around Kidlington. Further to my mail in August, I now understand that a developer (Bloombridge) is pushing to further develop the land behind the Moors, Kidlington. Personally I'm not so bothered about the GB argument, however I do object the building more houses if transport infrastructure is left in its current state. The current roads cannot accept any further traffic without bringing the whole area to a standstill, plus the additional pollution impact will make living in Kidlington significantly worse for the allergy sufferers. Specifically, the Moors is already used as a cut-through and any further traffic would not be a good idea. So before any further housing in the Kidlington area can be acceptable, an integrated transport infrastructure needs to be proposed (quicker bus services, better cycle routes in to Oxford (use the canal) and bypass the traffic passing through).</p>

<p>The need to build additional housing is recognised. This is not NIMBY. The key issues are to do with infrastructure and the types of houses being built. Infrastructure - the current roads cannot accept any further traffic without bringing the whole area to a standstill, plus the additional pollution impact will make living in Kidlington significantly worse for the allergy sufferers. New roads linking Kidlington to the A34 and M40, that would take the traffic away from the Kidlington, Cutteslowe and Wolvercote roundabouts are required. Also need to make it far safer for cyclists to get into Oxford to reduce traffic. Need to consider new schools, sports facilities and healthcare provisions. Housing type. Developers like to build big houses to gain most revenue, but that is not what we need. Need affordable housing particularly for our health and educational workers. Let's move away from traditional houses and start building apartment blocks, as the majority of EU cities do. In fact the majority of private developments in Kidlington are already knocking down houses and building apartments.</p>

Proposed Submission Plan - General Comments

PR-C-0322	15/09/2017	Christine	Lea	
954	Comments			
<p>Objection in the strongest possible terms to the proposals for Cherwell to approve 4,400 homes to assist Oxford's 'unmet housing. 1. Need not proven - Oxford City Council requires more than 24,000 houses for projected population growth (40%). Oxford already has full employment, so why encourage more business/new ventures which necessitates a massive house building programme? New jobs/opportunities should be going to more deprived areas of Britain. If Oxford wants more jobs it should find space within its own boundaries. 2. Urban sprawl - Large areas of open countryside will be sacrificed. Incursions will be made into GB and 'exceptional circumstances' cannot be demonstrated to support this. The GB was designed to prevent exactly what is proposed. This will completely change villages and historic towns like Woodstock. The rural character of small towns/villages need to be protected. Local communities should not be forced to take Oxford's overspill. Woodstock will become like Iffley and Headington - a historic heart lost in a huge housing estate. 3. Lack of infrastructure - Infrastructure will not be able to cope. The A44 traffic between Woodstock and Oxford is very heavy at present, particularly in the rush hour and when Blenheim has special events (most weekends nowadays). 300 houses have already been approved south east of Woodstock and the Strategic Development sites proposed would add 410 more. Woodstock has an excellent bus service but most people choose to drive. At the consultation exhibition planners spoke of a 'rapid transit' system. The chances of getting funding are very slim, and the chances of anyone using it are slimmer still. The local roads be in gridlock, and pollution levels will be unacceptable. Woodstock surgery has been named the second worst for facilities in the county. It has 9,000 patients and very limited space. It will not cope with at least 1,500 more patients? More schools would be needed. Who is going to pay for these? It is impossible to park in Woodstock at any time of day, which seriously affects retailers, restaurants, pubs etc. West Oxon's parking survey of Woodstock showed that spaces were already 99 per cent full throughout the day. 4. Affordable housing is needed in the area. Developers have no interest in providing this as it reduces their profit margins. 50% affordable housing required for the 310 approved houses south west of the town currently cannot be met. Once developers have planning permission they claim it is not 'sustainable' to meet the quota. The 4,400 new homes will not meet the needs of many lower paid workers wishing to get on the housing ladder. Most would almost certainly be purchased by London commuters. So much for meeting Oxford's perceived housing shortfall. Cherwell should not allow Oxford to impose its housing need on its neighbours. Instead, Oxford should look to solve its problems within its own boundaries.</p>

<p>Living in Yarnton major concern is the amount of traffic this will add to the already very busy A44. There are particular problems with major events at Blenheim (of which there seem to be an increasing number). Trying to exit from Yarnton at the Cassington Road or Rutten Lane roundabouts, where we have to give way to the right, it is almost impossible to get into the endless flow of traffic heading for Woodstock. Yarnton increased considerably in size not so long ago when numerous houses were built on fields just off the Cassington Road, which increased traffic. It will only get worse if there are 2,480+ additional cars (i.e. assuming just one per household). Also concerns about flooding if local fields become covered in concrete. Yarnton is low-lying and prone to flooding already. A few years ago our next-door neighbour (an elderly lady) had 2 or 3 inches of muddy water inside her back porch. Water was coming over the ditch alongside her house, flooding our gardens, and just stopped short of coming over our front step. Part of the problem is that ditches are not maintained and people have been allowed to incorporate them into their gardens, install pipes and build over them. Complaints to the Parish Council fall on deaf ears! More building around Yarnton will only make matters worse. Closure of the link road to Kidlington will cause Yarnton residents inconvenience. It would be better to upgrade it. We use that route several times per week. Having to go the long way round will just add to traffic and pollution on the A44. Please think again.</p>

<p>Against further development in the Oxford Green Belt as proposed as part of the Cherwell Local PlanThe claimed unmet housing need has to be properly quantified. I cannot agree to it in the way it is being presented. Total figure is overstated, unmet need not properly quantified. All housing needs could be met if housing was created on sites earmarked for business. The density of the proposed plan defies all claims of trying to meet any housing needs sustainably. Building in the Green Belt is the very essence of unsustainability; it destroys much needed recreational space important for the environment and the health of the citizens. Proper multi story (about three and up to five stories) townhouses should be built in appropriate places. The example of the Castle Mill development is a good example for good functional town housing, however, great care should be taken where to build such housing. Building outside the ring road also means that public transport options are reduced and transport issues increased. Again, inefficient and unsustainable. The Green Belt is an important structure that must not be destroyed. It sustains wildlife, creates oxygen and gives the citizens an important recreational space to stay happy and healthy in their town. It must not be destroyed or undermined.</p>

<p>Main concerns are:A) the obliteration of the Green Belt.B) the sheer density of the proposed number of houses.C) the inevitable traffic congestion and resulting air pollution.A and C : The obliteration of the Green Belt and resulting congestion and pollution. As recently as July 2016 the Secretary of State Sajid Javid was quoted as saying ' the Green Belt is absolutely sacrosanct'. I am aware the caveat to that is ' unless under exceptional circumstances', but as is pointed out by the CPRE , there is high availability of brownfield land in the centre of Oxford ' which has the potential to meet the current housing needs of the city'. This last point has enormous bearing on the whole issue of reducing commuting and thus cutting down on the major source of pollution, which the inevitable road widening and greater load of traffic will be the result of the current plans.B) High Density of Housing.It is well understood by those of us living in this area that this whole project is being driven by the University of Oxford's need to construct a Science Park which can compete on the global stage, and, more specifically, with Cambridge University. Feel that those aims are intentionally being played down against the more eye-catching (and government-driven) 'Oxford's Unmet Housing Need' . Point is that were the city's housing needs met to a much greater level within its own boundaries, the need for such a huge and disruptive development here in the Green Belt would and could be far less, without compromising the University's plans for a viable Science Park. Surely it is important fully to exploit the housing potential of Oxford city before irrevocably ripping up the precious Green Belt and creating further anonymous urban sprawl, traffic congestion and pollution. There must be a better way forward.</p>

Proposed Submission Plan - General Comments

<p>PR-C-0328</p> <p>964</p>	<p>28/08/2017</p>	<p>Phil & Anne</p>	<p>Hayes</p>	<p>Comments</p> <p>Object very strongly for the below reasons: 1) Traffic grid lock on A44; this is already bad morning and evening and so will be even worse also causing greater air pollution. 2) There will be high density estates with 50% social housing - who will control this Oxford? 3) Possibility of more crime and disorder 4) The Green Belt will be abolished - why are they not built in Oxford 5) There are flooding and sewerage risks - these are already in place in Yarnton so additional homes will cause even more problems 6) Vague infrastructure plans 7) Unproven housing numbers 8) Will this cause closure of the link road to Kidlington 9) An urban sprawl will be created from Oxford northwards to Woodstock - additional housing was denied in Woodstock recently so why has it moved towards Yarnton and Begbroke 10) Damage to local wildlife 11) A need for better bus services and a bus lane on A44 12) Greater issues with the supply of G.P.'s - there is already a shortage in supply of these so cause even more problems in obtaining appointments - do not say further surgeries will be opened because we do not have doctors to fill the ones currently. These are only a few of the many issues this will cause. Fed up with the traffic issues we have currently especially with all the events at Blenheim when traffic restrictions are put in place with police support - does The Duke pay for any of this out of his vast profits from the event? Lived in the village since 1978. We both work locally so do not want to be forced to move even though these additional homes creating an urban sprawl will mean house prices decreasing. We say NO to these plans especially on such a huge scale - Oxford's housing should remain in Oxford. Those who have wanted to live in a village should not have that taken away from them. We object very strongly and need to be heard.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>
<p>PR-C-0329</p> <p>965</p>	<p>30/08/2017</p>	<p>Emma</p>	<p>Wiggins</p>	<p>Comments</p> <p>Strongly object to proposals for the development of urban sprawl to the west of Yarnton and to the area connecting Yarnton, Begbroke and Kidlington. The proposed development is completely out of proportion and instead of 3 separate, modestly sized centres, we would end up with a mass of mundane housing which would put even more strain on existing infrastructure and services. Understand there is a real need for more housing but building on precious green belt land should be a last resort and instead should be focusing on brownfield sites within or adjacent to existing centres. Large scale housing developments are not the answer, particularly when most of them contain 5-6 bed houses which struggling first time buyers cannot afford. The closure of Sandy Lane is also a bad idea. This road is used frequently getting from Yarnton to Kidlington and although it is seen as a small cut through, am always passed by at least 10 cars coming the other way. This is a deceivingly busy road and by closing it you would be putting even more strain on the existing infrastructure (already buckling under the pressure of increasing numbers of Blenheim tourists and commuters). Connections between Kidlington and Yarnton are poor as it is - to get a bus you have to go into town to go back out again (over an hour bus trip for a 10 minute car journey!). To summarise, the number of proposed houses is disproportionate, the ratio of affordable/social housing is far too high, services are already struggling and the character of 3 distinct areas will be lost within an urban sprawl. More onerous should be placed on Oxford City Council to rethink how we look to develop the centre by re-addressing brown field sites and being more open minded in regard to denser housing. Currently younger generations and people who work in Oxford are being priced out by London-based property developers. This means people are being pushed further out, forced to drive or rely on public services, which in turn places more strain on infrastructure whilst also being unsustainable. Rather than encouraging people to work on the outer peripheries, more incentive needs to be placed on finding affordable alternatives within the ring road. There is a reason Green Belt land is protected and it is not to be compromised for the sake of finding 'quick answers' because when it is lost there is no going back.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>
<p>PR-C-0330</p> <p>966</p>	<p>12/09/2017</p>	<p>Michael</p>	<p>Westall</p>	<p>Comments</p> <p>Oppose to the plan to build high-density housing on Green Belt land to the east & west of the A44 between Yarnton and Begbroke on the following grounds:1. The Green Belt is a valuable breathing space to prevent urban sprawl and in many cases is agricultural land. The Government is committed to protecting this green belt and development should only be permitted when no brownfield sites are available.2. Green belt should not be developed to meet any part of Oxford City's perceived unmet housing need when the city has brownfield sites within its boundaries. Sites around the Cowley area, and the Northern Gateway area are ready for development and the existing P&R site at Redbridge could be used for housing with the parking transferred to a site less suited to housing. These brown sites would have the advantage of being closer to residents' places of employment, so not further impacting on road congestion. 3. The impact of all these additional houses on the already congested A44 has not been adequately addressed. The suggestion of bus lanes is impracticable because no consideration has been given to the various pinch-points, chiefly south of Yarnton where the railway and the canal bridges restrict the width of the carriageway. 4. The ensuing traffic congestion will inevitably lead to longer journey times, increased pollution and further wear and tear on already deteriorating road surfaces, along with more missed hospital appointments, increased delivery costs as well as more potential for traffic accidents. 5. The suggestion to close Sandy Lane to through traffic will cause considerable inconvenience to residents who use this road to access the facilities in and around the High Street area of Kidlington: the Medical Practice, the Library, the Cherwell District Council Office as well as the shops and street market that many people value. The increase in journey times caused by using a longer route will add to the pollution and congestion. 6. Some of the residents of these houses will be travelling west towards the A40, through Yarnton village and Cassington village. This road is a narrow country road, also restricted in width by a railway bridge and already very busy with traffic doing a rat-run to avoid the Wolvercote roundabout or to access the A34. Additional traffic on this route will add to the dangers already experienced by the children at the local schools in Yarnton and Cassington and the users of Yarnton Park.7. Nowhere seen mentioned that several acres of land to the South side of Sandy Lane just before the sharp right-hand bend was, some years ago, a landfill site and although used now as agricultural land could be subject to subsidence and release of gases if the subsoil is disturbed by building. 8. Final point concerns the potential for flooding which could severely affect any houses built to the west of Yarnton on the lower slopes of Spring Hill. Heavy rain causes flash flooding and the water runs through the gardens of the houses on Rutten Lane and makes the road at the junction with Aysgarth Road impassable.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>
<p>PR-C-0332</p> <p>968</p>	<p>26/08/2017</p>	<p>Mrs Mercedes</p>	<p>Wilks & Family</p>	<p>Comments</p> <p>Very much against building of 4400 homes, the CDC is being asked to build within the District by 2031. Not an acceptable proposal for the residents of Yarnton and Begbroke. A lot of people are all very much opposed to this development. Not only the actual impact that would have in the lives of the residents but the actual impact that this will have in services such as Doctors, traffic, flooding and sewerage risks. The traffic has become a nightmare in the last past years. The tranquillity that one had has very much gone and your suggestion that this enormous amount of houses would not have a devastating impact not only to people but to the wildlife. My family and I are very much against your proposal and we would do the our utmost to stop it going ahead.You need to start listening to the concerns of people more seriously. Thought this sites were all green belt, so why are you proposing to build this properties in the green belt, I though that was to preserve no matter what.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>
<p>PR-C-0333</p> <p>969</p>	<p>24/08/2017</p>	<p>Fiona</p>	<p>Thomas</p>	<p>Comments</p> <p>Objections to the proposals to build new housing on the green belt land and surrounding Oxford to fill Oxford's anticipated housing need. Do not understand why Oxford was proposing to build new business parks, which would attract new workers who would need new housing. It seemed then and now to be a complete madness. Looked at CPRE web site and objections: Agree that proposals are "unjustifiable urban sprawl". Wondered why land is being prioritised in Oxford for jobs and not housing. S They suggest making better use of brown field sites and increasing housing density. Agree. This seems to me to be all about economic growth at the expense of quality of life. It is about money and not the environment. Reference is made to quotations of Herman Daly. Environment, health, biodiversity and no increase in commuting should be way, above considerations of economic growth The fundamental purpose of green belt is to prevent urban sprawl by keeping land permanently open.This means nothing given councils can constantly move green belt boundaries in their local plans. It is an absolute nonsense. Do we have a green belt or don't we? Do we have a green belt until the words "economic growth" are mentioned like some Hogwartian hex and suddenly councillor's eyes glaze over and they skip off into the sunset with some developer or other. Should absolutely not be looking at ANY plan which involves more commuting. The council and its' economic plan will find themselves on the wrong side of history. Sustainability has to be your guiding principal. Quality of life not eternal economic growth. Do not allow yourselves to become slaves to policy papers and ££££ signs.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>

Unhappy about the possibility of building on green belt land. Need the lung for air quality. What happened to the idea of building pre-fabricated homes above the car park at Oxford Parkway station?

In the Summary booklet there are a number of references to the term "affordable", however, the terms are not defined in the booklet. Would be grateful if you could provide CDC's definitions of "affordable" with regards the following terms: 1. "affordable housing "2. "affordable and low cost housing "3. "affordable and sustainable transportation"

Opposed to the CDC proposals to build 4,400 houses to meet the unmet housing needs of Oxford City with the preferred sites between Yarnton, Begbroke and Kidlington. Contravening the Principles of the Greenbelt: The purpose of the green belt is clear in checking the unrestricted sprawl of large built up areas – the proposed plans are a direct contribution to the urban sprawl of Oxford city and will have a permanent and detrimental affect the nature of distinctiveness of the surrounding villages. The unique character and communities of our villages will be lost in the proposed sprawl. The proposal does not safeguard the countryside from encroachment and is therefore in direct contravention to the government’s greenbelt policy. A Place in History: Yarnton’s history as an independent and distinct village goes back 5000 years according to Oxford University’s research – this distinctive nature of the village should be preserved in perpetuity in light of its historical importance. Pollution: Oxfords pollution levels are amongst the highest the country. The proposals will prevent the council from focusing on addressing the immediate issue of pollution, which should be their primary focus. Building extra housing so close to the city will just exacerbate a problem that already needs urgent attention. Road Congestion & Closure of Sandy Lane: The heavy road congestion on the A44 is well understood and documented. The current transport strategy is not adequate to address the issue of congestion (particularly on the A44) and therefore the proposals will only make the problem worse. Sandy Lane is a main avenue relieving some congestion on the A44 and its closure would have a highly detrimental impact on the already congested A44. .Pressure on Public Services: Yarnton’s housing population has recently increased by over 100 housing units – this has resulted in further congestion on the roads and roundabout on the A44, with increased pressure on local schools and other public services (e.g. it can take up to 4 weeks to get a GP appointment in Yarnton and Kidlington). Additional housing in the area will exacerbate these types of problems. The council has not been able to solve the issues even for the recent relatively modest increase size in the population of this area. In addition the maintenance of the internal roads has deteriorated resulting in many potholes, the two Yarnton A44 roundabouts are a mess and grass has been allowed to grow between the curb stones on the A44. This deterioration all leads to a looming expensive maintenance repair problem. Solution. Build on brown field sites around the County to ensure that the Green belt is maintained. Properly maintain existing facilities.

1. Welcomes the move from discussion about the validity of Strategic Housing Market Assessment (SHMA) data to more concrete proposals to tackle Oxford’s housing shortage; also the agreement by Cherwell Council to its apportionment of 4400.2. Accepts that the Green Belt will have to be compromised to meet our housing needs, but am concerned that the Partial Review only covers 50% of the anticipated housing need of 28,000 by 2031. Will we be ravaging the Green Belt again when the next plan is developed?3. Re. the Vision (on page 6), would like to see specific mention of the use of technology to support working from home (this is part of the County’s Transport Plan). Would also like to see a qualifier along the lines of “... whilst not degrading the quality of life for people in existing communities and neighbourhoods.”4. Proposed Development Sites (page 14). Understand that Options A and B fall within Cherwell District, but the proximity to Oxford of PR6a and PR6b mean that it will feel like an extension to the Wolvercote Ward. The 2011 census reported 5847 people in 2593 households in that ward, suggesting an increase of approximately 45% in the number of households/homes... hence my concern for the quality of life for existing residents.5. Proposed Policies... (page 14). Since the purpose of the review is to meet OXFORD’S unmet housing need, I think Policy PR2 should specifically state this... and then you will need figure how/if this can be implemented. 6. Particularly concerned about increased traffic congestion and air quality further reduced, and to that end would like to see joined up thinking with regard to the provision of cycle-only paths. Major concern and that is with regard to the current lack of maintenance of the roads and the state of the roundabouts on the A44. In addition there are a considerable number of motorists who use Cassington Road and they complain of the major repair bills they suffer as requests for the humps to be removed or reduced and the pot holes repaired, seems to fall on deaf ears in CDC. It is not a case of reducing speed but the CDC’s design which is at fault. Personally have just paid second bill for maintenance costs, both being in the region of two thousand pounds. Would appreciate it if you would pass these thoughts to the appropriate authorities in CDC. Main point concerning the Planning Initiative is that if the CDC do not have the means to maintain what they have now, how will they cope with an additional 2,500 houses in Yarnton?

Finds the whole idea of building dwellings to support Oxford City in the outer regions of North Oxfordshire totally unacceptable because this creates further transport problems when some of the current problems have not and are not being satisfactorily addressed. Land should be found in the City to provide for the housing needs of the City. All that is being proposed will only increase traffic and therefore pollution.

978	Comments			
Whilst Oxford’s recent Plan consultation advises that there is space to accommodate Oxford’s housing needs within it’s boundaries, utilising some limited GB land release, if the need has to be served by Councils with land adjoining the City through GB release there, then it is clear that for Cherwell District Council, the Kidlington option has to be the most sustainable. There can be no logic to expanding villages further from Oxford to meet Oxford’s unmet housing requirements - were this feasible then District Councils further away such as in Gloucestershire, Northamptonshire or Buckinghamshire which are just as accessible to Oxford would have to be included in the prospective list of options. Logic demands that Oxford’s needs should be met very close to Oxford for traffic, infrastructure, journey to work, cultural, availability of local facilities and locational “belonging” reasons.

Proposed Submission Plan - General Comments

PR-C-0342	14/09/2017	Alan	Plumb	Milton Parish Meeting	
979	Comments Many local villages are losing their character as large housing estates have recently been and are being built on greenfield sites adjoining them – Adderbury, Bodicote and Bloxham have suffered particularly in this regard. In regard to this, it has been brought to the attention of the Parish Meeting that Taylor Wimpey is suggesting building 250 houses on Milton Road, Bloxham, in order to attempt to address the issue of Oxford's Unmet housing need. Bloxham to Oxford is 25 miles centre to centre; Chipping Norton, Burford, Lechlade, Faringdon, Watlington and even Aylesbury and Buckingham are closer and with greater linkage to Oxford- clearly this proposal is opportunistic nonsense led by this developer's existing land interests rather than being based on any thought-through realistic solution to Oxford's problems. Milton Parish Meeting strongly objects to this Taylor Wimpey proposal.				
	Changes Sought				Reasons for Participation
PR-C-0342	14/09/2017	Alan	Plumb	Milton Parish Meeting	
980	Comments Whilst Milton Parish Meeting believe that Oxford should find a solution within its boundaries, if this is not possible then it agrees with CDC's proposals that Oxford's unmet need should be met within as close proximity to Oxford as possible and that some limited Green Belt relaxation by all adjoining District Councils should be considered to permit this. With these reservations, Milton Parish Meeting therefore supports the proposals for housing development close to Oxford City in the parishes of Kidlington, Begbroke, Thrupp and Woodstock. It agrees with CDC that this is the least damaging of potential options outside the City boundaries and is assisted by the presence of Oxford airport, the new Oxford Parkway station and improved rail links to Bicester together with established bus routes, providing close public transport connections to Oxford for residents who will work in Oxford and the industries situated nearby.

PR-C-0343	11/09/2017	Christine	Inker		
981	Comments <ul style="list-style-type: none"> • Excellent idea about the new railway station at Begbroke, which would be on the Oxford to Birmingham line as better rail links would help ease congestion on the roads. However was told that this station will only be built if there is an identified need for it in the future. Feels strongly that the infrastructure to improve travel links, both locally and to other parts of the country, together with providing extra parking facilities, needs to be addressed before extra housing is created. • Concerns that any houses built at North Oxfordshire Golf Club will command a premium price because of the close proximity to Oxford Parkway and the desirability of living in North Oxford, as it has good road links in all directions. Are not going to benefit local people or those who are trying to get on the property ladder. Was told that the creation of a new golf course next to Stratfield Brake will go ahead if it is felt it is needed at a later date. Have a concern that the proposed new golf course will never happen and that instead this land will be used for more housing. • Affordable housing: Aware that Oxford has an increasing number of homeless people on the streets. Was wondering how the planned development in Oxfordshire will help those people and how the planning of new homes links in with the social care system. Difficult to understand where all the people will come from to move into all the houses being planned. • Can't see that there will be a significant increase in employment in the area, where will all the people purchasing the houses work? The only extra jobs being created are at the Begbroke Science Park and the Technology Park being built at Langford Lane. These are specialised areas of employment, which means that people working here may not live in the local area, thereby creating a need for people to travel into work, causing more congestion. • Other main concerns are: <ul style="list-style-type: none"> • The traffic around Oxford is already horrendous, particularly during rush hour. The A44, A40, A34 and other major routes are already gridlocked at certain times of the day and this will only get worse with an increased number of houses and more cars. Unfortunately public transport is often not practical because direct routes are not possible and cycling is hazardous. • It is becoming increasingly difficult to exit side road due to the steady stream of traffic in both directions. • There will be increased pressure on local health centres and the hospitals in Headington. Waiting times to see a doctor can already be over a week, so how are the health centres going to cope with the increased number of patients on their registers? Also thinks that the development will have a huge impact on the primary and secondary schools in the area. • The planned developments will have an impact on the environment and the people already living in the area's quality of life. At the moment the suburbs of Oxford are fairly green and have pockets of space for walking, cycling away from the traffic and enjoying other leisure activities. The amount of development planned will eat into these green spaces and make the area a less pleasant place to live. • Have resources, such as water, been considered in these plans? Apparently this is often overlooked when new housing developments are being planned and there could come a time when there is no water in the taps. Careful thought needs to be given to how Britain is being developed. It may be better to build new towns.

PR-C-0344	22/08/2017	Prof John	Batchelor		N
5295	Comments With regard to the timing of the consultation process, it is symptomatic of the underlying cynicism implicit within the management of the Cherwell Local Plan that the timetable was originally timed to coincide with the school holidays. Am encouraged by the fact that Cherwell has been forced to back down over this and extend the deadline. In summary and underpinning my arguments above, is that the proposed use of Green Belt land is wholly unacceptable. Green Belt legislation in the south of England has been invaluable in protecting historic cities and villages and ensuring that there is NOT one huge urban sprawl with Oxford as its centre. The Green Belt area surrounding Kidlington is beautiful recreational land dotted with historic villages and ancient buildings, in particular St Mary's Church in Kidlington. The spire of St Mary's has been a landmark for hundreds of years and is visible standing within an uninterrupted green landscape from footpaths cycle tracks and fields to the north of Kidlington, through Hampton Poyle, Hampton Gay, Bletchington and beyond towards Kirtlington, and these areas harbour and conserve a wide variety of beautiful wildlife. The Green belt legislation is an essential safeguard in an overpopulated country. The policy states that it should be violated only in 'exceptional circumstances.' The present circumstances are not 'exceptional'. Kidlington is not part of Oxford, and there is no case for forcing Kidlington to help solve Oxford's problem. The Plan as a whole is not sustainable. I would like to add today, 22nd August, that I would echo George Osborne's fresh intervention this week in which he seeks to revive the pressure for improved transport and business stimulus in the north of England. If this wholly sane policy were to be adopted the present intolerable pressure on the south of England would be eased.

Proposed Submission Plan - General Comments

PR-C-0344	02/10/2017	Professor John	Batchelor		N
499	<p>Comments</p> <p>Objections follow on from two developments: firstly, the very welcome news that Oxfordshire's unmet housing needs have been over-estimated, and that the figure for new housing need in the county is nearer 68000 than the 100000 previously estimated, and secondly the Campaign for the Preservation of Rural England renews is clear and principled argument which can be summed up in the following quotation from its press release 'Government Policy requires development in the Green Belt to be the very last resort, only to be considered if there is no alternative. Cherwell has stood that Policy on its head by making building in the Green Belt its very first choice, rejecting what it accepts were reasonable alternative.' Further, the CPRE points out that the Green Belt's proximity to Oxford is directly in line with a key feature of Green Belt legislation: the protection of historic cities. Cherwell District Council, as the CPRE says, 'by declaring that proximity to Oxford is itself an exceptional reason to build on the Green Belt which surrounds the City, fundamentally undermines its very purpose.' None of the arguments offered in the plan for building on the Green Belt are valid. The submission plan is unsound, not positively prepared, not justified, and not effective. I would add that there is no adequate planning or provision for the improvement of roads, the provisions of schools and medical services. The impact of Cherwell District Council's policy would be to worsen the air pollution in these communities and cause relentless and steadily increasing traffic congestion. Finally, Layla Moran, MP for West Oxford and Abingdon, memorably advised at the public meeting attended by over 400 people in Exeter Hall, Kidlington, that the plan should be put on hold, and all progress towards a decision on the plan should be stopped, until the revised calculation of housing need in the county has been carried out. This is obviously right. It is astonishing that any member of Cherwell District Council and Oxford City Council should think otherwise.</p>

462	<p>Comments</p> <p>Was pleased that this crazy plan has gone for further consultation. The idea that the Begbroke and Yarnton area can just absorb thousands of houses onto our GREEN BELT without having a major affect on our lives is nonsense. The A44 is already operating to its maximum with at times severe congestion, adding a few thousand extra cars is not going to help an already difficult problem. Why build on the GREEN BELT when there is ample Brown Field space in the area, Upper Heyford has enough space to swallow this assumed need. What happened to Bunkers Hill ECO village? all we seem to have is masses of lorries spewing dirt and rubbish onto the highway! On a final note as a taxpayer who has paid Cherwell tens of thousands of pounds in Council Tax over the last 40 odd years I had thought you guys were looking after my needs not the supposed needs of Oxford City and some greedy Oxford College looking to cash-in on the GREEN BELT. A very concerned council tax payer.</p>

PR-C-0347	06/09/2017	Jill	O'Brien		
463	<p>Comments</p> <p>Disappointment that this is even being considered. Surely Oxford City Council have enough land around the Kassam stadium to build and instead of using University land around Yarnton, is there no University land that could be built on in the City? The traffic situation is already dire around the A44. Sometimes have to wait nearly 6 or 7 mins to pull out of Rutten Lane and onto the A44. Building more houses will simply make us prisoners in our own village. It is already nearly impossible to get a Dr's appointment. I know the plans state there will be a new surgery, but as there don't appear to be enough doctors to go around, I doubt this will solve anything. At the public meeting a few years ago regarding the Cresswell/Hayday close development, we were assured by Michael Gibbard that no further large scale development would take place in Yarnton/Begbroke. Yet again, councils break their words to the very people who vote them into position. The most stupid idea is the suggestion to close Sandy Lane. This is a perfect short cut for local people to get to Kidlington and beyond, especially if the A44 is blocked with things taking place at Blenheim Palace. Understand that there is a possibility of closing one of the lanes on the A44 and making it into a bus lane. Do the people who come up with these hair brained ideas actually visit the places at peak times, or go in the middle of the night? I think we in Yarnton/Begbroke already feel that decisions have been made and that we are simply going through the motions by lodging our feelings as traffic lights are already in place at the Science park and now that Yarnton Nurseries has apparently been sold, we all feel we are being sold down the river with this. Please, please, please, Cherwell Council, put your foot down about this and refuse to go along with it.</p>

469	<p>Comments</p> <p>Urban Sprawl. Kidlington will become part of a vast urban sprawl encompassing north Oxford, Cutteslowe, Wolvercote, Begbroke, and Yarnton. Unaffordable Houses. Very few of the new houses would be 'affordable' in reality. Developers across the country consistently default on their affordable housing quota. Predicted prices for so called starter homes at Barton Park are already beyond the reach of first-time buyers. Most of the new houses are likely to serve the London-commuter and buy-to-let markets, and Kidlington's young people and the county's key workers still won't get the truly affordable housing they need. Public services to get worse. Underfunded public services, already struggling, will deteriorate further: waiting times to see your GP will be even longer and school class sizes will rise. Traffic Gridlock. Traffic congestion and air pollution will undoubtedly worsen due to thousands more vehicles on our roads. This is in addition to the extra traffic from the 22,000 houses already approved elsewhere in the District by Cherwell, and over 10,000 more houses to be built in the other Districts just for Oxford overspill. Construction traffic and road works will add to this chaos for years while the development takes place. Sites rejected by Cherwell this stage are still vulnerable. Sites all around Kidlington were initially identified for possible development. Cherwell has now rejected some of these sites, but the developers will be making strong representations to have them reinstated. They are still at risk. You could say that you support Cherwell's rejection of these sites. Mention any these sites of particular concern to you and say why you think Cherwell was right to reject them.</p>

Proposed Submission Plan - General Comments

PR-C-0351	06/09/2017	Stephen	Franks	
470	Comments			
<p>It is incredibly difficult to work out what the current plans are as the websites for both Cherwell and Oxfordshire are incredibly opaque. However we understand that there are up to 90 houses planned for the field behind our house behind Banbury Road to be accessed via Green Lane - by what is currently a single gate to the field. Obviously are concerned from a visual point of view that this is being considered - destroying the green spaces within Woodstock. What also concerns us is that this seems completely inappropriate in terms of what restricted access there is. Green Lane - as its name would suggest is a single track lane - in part. Where it is wider there are cars parked - essentially making it all a single lane. The road is used to access Owen Mumford - a major employer. Over 100 cars use this road to get to Owen Mumford - along with trucks and large lorries - in the morning and evening as well as throughout the day. At the top of Green Lane - In Shipton Road there are two schools. Parents use Green Lane to bypass Woodstock to get to these schools. This is on top of all other residents getting about. From all the above - to add to the pressure on this very congested area to add what could be 180 cars using Green Lane at peak times would create a complete log jam - as only one car can travel down Green Lane at a time. The suggested access through the small gate to the proposed development would also only allow a single car at a time. Access beyond Green Lane is also very restricted with Union Street and Brook Hill being both single lanes, and Hensington Road being a very difficult narrow entrance from Oxford Road - already causing difficulties. Assumed naturally that the new houses would continue along Banbury Road from the new houses. This would make more sense, It makes no sense however to squeeze in any number of houses with such tight access in and out from Green Lane. A better place by far is 'Woodstock East' for any new houses - with easy access to the dual carriageway with the option of avoiding Woodstock town. Your proposal for the development with access through Green Lane will create havoc.</p>

<p>The respective locations of Kidlington, Begbroke & Yarnton will be lost forever. With Oxford Parkway they will become commuter homes serving London which cannot be in Cherwell DCs objective. Other objections include loss of Green Belt, open countryside, views and walks, impact on nature, implications for flooding and drainage, the impact on local road traffic. The proposed recent changes to Heyford vehicle park were rejected due to traffic infrastructure. What is proposed here is far worse and in no way addresses traffic. All this proposal will do is invite London commuters with the new station so be useless for the respective council aims.</p>

<p>The Consultation has been very poorly publicised. Cherwell should have done more – via Cherwell Link article and all other means available, to raise public awareness of the possible loss of Green Belt via this revision of the local plan. It was very difficult to find the consultation details on your website. The consultation papers are long and difficult. I understand that the Council does have discretion on the timing of a public consultation. Choosing to hold the consultation and public exhibition in Kidlington over the Christmas period is not reasonable.</p>

<p>Object strongly to development in the Oxford Green Belt. The Green Belt around Kidlington, Yarnton & Begbroke is mainly pleasant and unspoilt countryside with many well-used footpaths and ‘green spaces’. It is much appreciated and enjoyed by large numbers of local residents. It also helps to protect the historic city of Oxford from the effects of over-development. I understand that Green Belt is a permanent designation and that Government guidance states that unmet housing need is not a reason for building in the Green Belt. The Government’s Manifesto promise and Cherwell’s existing policy to protect the Green Belt must be upheld. . The proposal to develop in the Green Belt is based on incorrect assumptions about the growth in jobs in Oxford. Thinks that there are alternatives to housing development in the Green Belt including making better use of previously developed land in Oxford and using some proposed employment sites in the city for housing instead. It is not reasonable to develop within the Green Belt.</p>

<p>No! An extra 4,400 houses north of the city is not sustainable and will mean that: traffic problems will get much worse; schools and health services will be even more stretched; open countryside in the green belt will be sacrificed; countryside walks and views will be lost; natural habitats will be destroyed; our quality of life will suffer, air, noise and light pollution will increase. The 4,400 is based on dubious calculations which have been heavily criticised since they were made public. They rely on assumptions of very high growth in jobs around Oxford requiring many people to move into the county. The locations are identified are located close to Oxford Parkway - 55 minutes from Marylebone- making it a commuter target and will keep property prices high. The government is keen to provide new housing as affordable. It is therefore nonsensical to choose such a high priced location.</p>

<p>Remember what the green belt was intended for - exactly to control growth and urban sprawl. Land has already been released in the past for development. If the framework specifically states the green belt is protected to keep a check on unrestricted sprawl of large built up areas; Prevent neighbouring towns from merging into one another and assist in safeguarding the countryside from encroachment - then surely there is no argument otherwise might as well give up now and lapse into anarchy. Must bear in mind who is driving this and for whose personal benefit and not those who will actually have to suffer more land/road works in an already thriving housing and employment market in Oxford. More emphasis should be placed on development of disused office space and industrial units that are standing empty rather than new builds that we all know will not be affordable to young people from the area. If any of these councillors actually had to experience a commute in or around the city they would definitely have not supported these consultations. All know it starts very early in the morning and the thought of more cars, motor bikes, buses, lorries, taxis, bikes etc. is unfathomable and cannot understand how they believe another train station would resolve this - where will the cars be parked that the commuters will drive to the station in? The A44 Woodstock Road, Yarnton is becoming increasingly dangerous around the two garages - Texaco and the Budgens store. The service road is particularly busy and is an accident waiting to happen. What would happen to the Daltons Road - a bridleway/footpath between Yarnton and Begbroke and the historic Frogwelldown Lane footpath between the villages. Would these just enter into dispute and end up on the 10 year waiting list with the councils countryside services?</p>

Understands the need for more housing particularly genuinely affordable and part buy part rent houses for the young people who have grown up in the area. However thinks the proposal is too dense and will cause a huge amount of increased traffic. If these houses are to go ahead the area needs sufficient infrastructure to support both the new and existing residents. Yarnton Scout group is thriving but needs to move to a bigger building we are basically full now and would not be able to accommodate any new families. The scout group owns the building and the land it stands on so is in a position to negotiate with the council and developers. The new plans show provision for 3 new schools so clearly there will be many young people wanting scouting and guiding.

Opposed to the proposed plans by Oxfordshire County Council to build 4400 houses on our green belt. 1. The already- saturated roads in our area can in no way cope with any extra traffic. 2. Local services are already stretched beyond capacity i.e. Schools, hospitals, water supply, utilities.....how can they cope with having to serve 4400 more households? 3. Oxfordshire County Council are proposing to build on Cherwell County Council greenbelt land. This is NOT theirs for the taking.

Objects to the inclusion of North Oxford Golf Club for housing development within Cherwell DCs proposal plan to address Oxfords housing need. North Oxford Golf Club is a very mature park land golf course with many varied and mature species of trees that provides an ideal green belt break between North Oxford and Kidlington, the land scape also supports a varied amount of wild life, Animals & Birds. The local area has many congested roads with the A34,A44,A40 and Banbury road with traffic queuing at times all around the golf course, the open space with over 1000 trees provides a chance for clean air to be replaced. The golf course provides a sport facility for all ages from young children to senior's at a time when the government are trying to encourage all ages to take on more exercise it does not make any sense to destroy a 110 year old golf course to build houses which will cause more traffic congestion and less open spaces for people to take part in sport. The proposal of a 18 hole Golf course within the plan for a replacement site at Frieze Farm does not make sense as it is only 600yds from present site, it does not look to be big enough. In addition the Government's National Planning Policy Framework states specifically that sports facilities should not be built on unless equivalent or greater provision is made elsewhere. Is this being adhered to?

Being a resident from Yarnton and having been for 10 years with my wife and 2 children, my wife and I are really not happy with the proposal of over 2000 houses being built on land between Yarnton, Begbroke and Kidlington for many reasons especially when its Oxford City Council's problem and their promise to fulfil the house building numbers. The roads (especially the A44) just won't cope and to be honest there are so many areas in Oxford that they could build on. We want our village to remain a village and NOT turn into a town! Sure half of these or high percentage would have to be social/council housing too which doesn't float our boat either. There's also the environment and pollution to consider as Yarnton being fairly rural has some lovely wildlife that lives and visits the area. Believe they are building on green belt land too which isn't acceptable.

The shortage of housing highlighted by the government is understood, but it is not understood why Oxford's need should be forced upon village residents when there are large areas of unused and brown sites within Oxford that can be developed before encroaching on peaceful communities in the vicinity. The proposed development of around 4,400 houses in or near to Yarnton village is horrific and absolutely excessive. Yarnton offers peace and tranquillity separated from the urban sprawl, this would be lost forever.. The main aspects of protected Green Belt land are being ignored and abused in this proposed development. It will in fact merge neighbouring villages into the town of Kidlington. It is said that the Green Belt is part of our National Heritage, a most favourable idea, which is being ignored and destroyed around Begbroke and Yarnton with the development proposal. With easy access to Oxford, another feature which will be lost due to excessive traffic and demands on public transport. The latter point on transport is at least poorly, or even barely addressed

Horrified to hear of the proposal to build 4,400 houses on the Green Belt around Yarnton, Begbroke and Kidlington. for the following reasons: Building on green belt land would mean there is no distinction between the 3 villages. The extra housing would create further traffic problems. Impact on local services such as GP surgeries. Losing farm land would damage the character of the area and would completely destroy the local wildlife. A large new estate has already been built in Yarnton of dense housing. In view of the strain on the infrastructure, It is not believe we need this level of extra housing here and there must be other areas which are not on Green Belt land and are either within Oxford City boundary or on Brown Field site surrounding Oxford. Totally against the proposal in its present form.

Proposed Submission Plan - General Comments

PR-C-0366	12/09/2017	David	Peddy					
1001	Comments							
The plan for the building of 650 houses between Cutteslowe Park and Oxford Parkway station is very ill considered for the following reasons: It is a naturally attractive view and home to much wildlife. The highway infrastructure in that area is completely unsuited to the additional traffic that would be generated and there are no plans to improve it . Banbury Road is already busy on that stretch and the Banbury Road roundabout, Sunderland Avenue, Five Mile Drive and Elsfeld Way /Northern Bypass are congested now. It will also slow down traffic and increase pollution levels. Much of the proposed housing could be sold to commuters into & out of London with no links or real contribution to Oxford/Oxfordshire and the Community. For these reasons the plan is inappropriate and should be stopped.

The Local Plan is sound and justified. 1) Oxford's 'unmet need' being unproven: The need for additional housing in Oxfordshire is clear, and the affordability of housing in and around Oxford relative to average incomes is one of the worst ratios in the country. As a result in recent years both house prices and private rental prices have risen significantly, making a stable home unaffordable for many on average incomes, which is simply not possible for the vast majority of young people or new house buyers. 2) Green Belt: The sheer number of new houses required suggests that some land currently used for farming may need to be converted to housing. Sure that the council have considered measures such as converting brownfield and industrial sites where practical. 3) Sustainability: With suitable infrastructure improvements (i.e.: drainage and road access) the additional housing should be sustainable. These improvements are presumably already in the proposal. Density: Suggesting that higher density housing be built to reduce urban areas simply forces young people and their families into cramped and unsuitable housing in order to protect the houses of those who have been able to afford the existing housing stock. 5) Transport: Additional housing will require some investment in the local transport routes to accommodate the additional traffic. This includes both local access roads and if necessary improvements to the larger access routes. Presumes that the Local Plan recognises and makes suitable proposals to address this need. 6) Employment: As a high skilled employee of a business based in Begbroke, acutely aware that the cost of living is a significant hindrance to hiring the workers that my company needs. The additional housing is needed to meet current employment needs, regardless of additional business growth in the area.

The development you are proposing is unacceptable for the following reasons: 1) It will destroy the wildlife in our area including barn owls and bats which are protected species 2) There will be at least another 4000 more cars on an already congested road, at the moment the traffic is bad especially when there is an accident on the A34 or the M40 or an event at Blenheim palace, where is all the traffic going to go. 3) Our village and Yarnton will lose there identity and the safe environment. All these houses and social housing will mean our villages will not be safe there will be an increase in crime as has been proven on other developments. 4) Building two primary schools and a senior school will also bring in more traffic as well as an significant increase in pollution in the whole area. 5) The area you have suggested is also prone to flooding which will mean an added risk to flooding to our houses in the existing village. 6) This housing is Oxford cities problem and not Cherwell's and they should use there own land not take away green belt land and destroy an area with extensive wild life. Due to all the points this development of green belt land is totally unacceptable and should therefore not progress.

Strongly object to the planned housing proposals for the Kidlington, Yarnton and Begbroke areas on the grounds of unfounded reasoning, loss of green belt, lack of infrastructure planning and unaffordability. The 4000+ houses that are being consulted on do not address the chronic shortage of affordable housing and will do nothing to limit increasing prices on the surrounding housing supplies. I have seen no evidence to suggest the same pricing scheme would not be applied to the Kidlington, Begbroke and Yarnton developments and so have no faith that the affordability criteria for these new builds will be over the required 50% affordable housing for this area. As a 22 year old worker in Oxford and having grown up in Kidlington, I feel that these proposals will do nothing to increase my chances of house ownership over the coming years and will lead to me being gradually priced out of the area. I would also like to draw particular attention to the planned building on the green belt land around the Yarnton and Begbroke area which would be a significant loss of habitat and scenery for the local area. This would also lead to a loss of individuality for Yarnton, Begbroke and Kidlington by joining them in an 'urban sprawl'. A removal of these areas would deprive the chances of future generations enjoying the surrounding countryside. Finally, there is very little guarantee of investment in the local infrastructure, in particular for the local GP surgeries and secondary schools. The addition of nearly 2000 houses to the Kidlington area would be disastrous for the local GP surgeries in Kidlington and Yarnton. One of my largest concerns is in regard to the increases in school needs. It is well known that Gosford Hill Secondary School is one of the largest and only providers of secondary education in this area of Oxfordshire and already faces pressures from increasing intakes. It may also force many of the local children to seek secondary schools further away which adds to unwanted commuting and traffic concerns. Unless there is a clear guarantee of new local schools being constructed to accommodate these new families, I feel that these plans do not provide for the local area's infrastructure needs.

Would like to record my support for the building of 1,180 extra houses in the green Belt gap between North Oxford and Kidlington, provided that the majority of these houses are small, first-time buyer type homes, or small houses / flats which young people could afford to rent. I would like to add that I greatly value the concept of the Green Belt, but that I think it sometimes has to be sacrificed for the 'greater good', especially when Wolvercote Common is so close at hand.

Objection and concern to the proposed plan objection to build over 4,000 new houses on the green belt land around Kidlington, Begbroke and Yarnton. The green belt land in this area is not suitable for development as it will significantly alter the landscape and the character of these villages. This precious land should be preserved for future generations as once it is built upon it will be lost forever. It is also extremely concerning about the impact on traffic in the North Oxford area and these roads are already gridlocked at peak times. They simply would not be able to cope with the amount of traffic that would be generated by such a huge development. The plans for a bus lane and a Park and Ride are not practical due to the 'pinch' point between The Turnpike and Stratfield Brake. It is the local resident's lives and futures that will be changed forever so our views deserve to be taken into consideration.

Objection to building on GB, there is only 13% of it left. The sanctity of GB must be respected, once it's gone it is gone. Concerns with regard to wildlife (which is fighting for survival and does not have a voice), loss of open spaces and enjoyment of countryside, overpopulation, traffic congestion (roads are already gridlocked) and pollution. This is not wanted in Oxford. England's green and pleasant land should be respected and replenished, not destroyed. Locals have a right to enjoy the countryside. Once the countryside has been destroyed no amount of money can put it back with wildlife intact. Also concerned that locals are unable to afford to buy housing due to high prices resulting in them being pushed out. Keep Oxford rural, beautiful, with its identity, heritage and countryside intact. Woodstock is an example of an old historical town with a real community, our villages are too valuable to de-grade with urban sprawl. Our GB is needed. Leave it alone.

Completely against the plans, as they stand:1). CDC state that there "could be" affordable housing "up to" 90% of the home built. How come the planning materials do not say there WILL BE affordable housing of AT LEAST 90% of the homes built?Without real, tight, unbreakable commitments to a high percentage of affordable homes (not apartments...real live homes) that are sold to first-time buyer exclusively the housing crisis in Oxford will continue. We need legal contracts that severely penalise builders and companies that violate the affordable housing rules. Indeed, penalize them so severely that they would go out of business and so that the council can use the money so gathered to rectify the mess by creating more council estates. 2). Parking of cars OFF STREET needs to be considered in the FIRST instance...not as an afterthought. Now is the time to demand that every home built has space for off-street parking. Kidlington really wins with its free parking. We will not be able to sustain that economic boon if parking spaces for all the new people coming in are not at the top of the agenda. 3). Road and street access and infrastructure. This was another area that looked like an after-thought in the plans. some 4000 new homes require a street and access layout such that 10,000 people can easily access the area. Emergency services must be able to enter and leave easily and with relative ease. We should not put lives and property at risk just because we can squeeze a few more square-box houses into the space. Not opposed in principle to the construction of many new homes in the region, but opposed to these plans and for the reasons stated above. Not seen any of these issues taken seriously, therefore completely oppose the plans presented so far.

New Government calculation shows the country only 'needs to build around 68,000 houses' over the next twenty years. The figure of 4,400 houses was derived from the SHMA which estimated that 100,000 houses were needed. Therefore the need for 4,400 houses in the area in part or in total; indicates that planning proposals are based on ill-founded and therefore unsound information. They should be reconsidered in their entirety.

Concerns over density. Question mark as to whether the low cost 'affordable' housing for first time buyers regarded as priority for Oxford's 'unmet housing needs' will be provided by the homes planned for the 'Kidlington Gap' site. Prices of £600,00 for three bedroom houses on the Barton Park site suggests that the Kidlington, Begbroke and Yarnton sites with their equally convenient access to the Oxford Parkway train link to London will benefit the London commuter market rather than local and younger purchasers.

Proposed area of development is land designated as GB, consisting largely of good agricultural land crossed with a number of public rights of way. Once built on, this valuable resource will be lost to farming and wild life as well as to the public for recreation for ever. Stated Government policy is to preserve the GB, unless circumstances are 'exceptional'. No exceptional need has been brought forward. These houses could be built elsewhere on brown field sites or in Oxford itself. The proposals are unjustified and should not have been accepted by Cherwell District Council which has a duty to follow Government policy to protect GB.

PR-C-0404 2344	04/10/2017	Dr Hilary	Maddicott					N
Comments								
Oxford's unmet need is based on the SHMA, however the recent Government's consultation document suggest that the housing need is lower. Housing need to be reconsidered. Government's policy is to protect Green Belt unless exceptional circumstances can be demonstrated, which CDC cannot. Low density proposed in the Kidlington Gap which risk not providing low cost affordable housing for first time buyers. New homes will benefit the London commuter market rather than local and younger purchasers. Proposals will merge the three current separated villages of Kidlington, Begbroke and Yarnton into one. Traffic congestion on the Woodstock and Banbury roads into Oxford at peak times will worsen and with it air pollution for both drivers and residents of those roads. The closing of Yarnton.Sandy Lane from Kidlington to Yarnton will make traffic worse from Begbroke and Yarnton (or Kidlington to those villages). No indication that developers will be responsible for essential new infrastructure such as water supplies, sewage, schools and medical facilities to cope with the new developments.

Comments								
The proposals do nothing to build sustainable communities, indeed they threaten their quality of life. The infilling of the fields which divide the villages (currently with their own separate communities) as well as from Oxford will lead to a vast undifferentiated and characterless urban sprawl. Traffic congestion and air pollution, which is already bad enough will worsen. The proposal's plan to close the convenient short cut, the Yarnton/Sandy Lane from Kidlington to Yarnton will only make matters worse. There is no indication that the developers will be responsible for the essential new infrastructure, namely the water supplies, sewage, schools, and medical facilities that will be needed to cope with a population of at least 10,000 if not 15,000 added to the limited resources available at the moment. Lack of sustainability.

Congratulations to Cherwell District Council for excluding this area from its planning proposals, as it is clearly unsuitable for development: The Moors and Mill Street could not cope with the traffic generated by a housing development. It would also be contrary to the public interest, depriving local citizens of one of the most-used open green spaces in the whole Kidlington area. A development proposal is therefore unsound and unjustified. Since this space was not included in the District Council's planning policy documentation, it has not been considered in the public consultation. The proposal has become public only a short time before the close of the consultation, and few people know about it. It would be disgraceful if the proposal were to be approved without having been available for proper public scrutiny.

Proposed Submission Plan - General Comments

PR-C-0407 1054	14/09/2017	Jane	Leech	
<p>Comments</p> <p>Opposed to proposed development of 4400 houses in Yarnton, Begbroke and Kidlington area. Objections as follows: 1. Completely excessive number of houses. In fulfilling Oxford's needs, the size of Yarnton will be tripled. 2. Together with northern gateway housing, this huge development will merge Yarnton, Begbroke and Kidlington to Oxford. This will create urban sprawl and change the character of the individual villages and more importantly the historic City of Oxford forever. All of which are against the key principles of GB. The GB around Oxford should not be destroyed - it has to be protected for future generations. 3. Volume of traffic on UK roads continues to grow. Congestion on the A40 will potentially be relieved by a link road to take traffic to the A34. However, this will simply move the congestion, and effectively cause even longer tail backs on the approaching A44. Extra developments in Woodstock and Eynsham will compound this. The A34 is one of the main transport links from the Midlands to the South of England. Queues at times go from the M40 junction back to North Abingdon in both directions. The proposed bypass round Oxford is years away. The suggestion to close Sandy Lane except for bicycles is ludicrous - why block off a way that already relieves congestion? 4. The density of the housing is concerning. It will have a major impact on utilities and local public services. The wait to see a doctor is already too long. The idea of people occupying these houses using public transport is feasible if they live within Oxford City Centre, but out of the city centre people use their cars - where are they going to park them when they are not in the traffic jam on the A44? 5. The high density of housing will directly affect my property which is situated adjacent to the deer farm. There will be many, many houses overlooking my property, compounded by the fact that the planned development is on land which is several feet higher. It is completely unreasonable for Yarnton to take on Oxford City's housing needs. Why not re-develop their golf courses. Density of housing would be more manageable and key workers would be nearer to work with the public transport and services already in place. If you really have to build a significantly reduced number of houses, build them at Frieze Farm - closer to Oxford and transport links, and if you have to encroach on Yarnton, put the proposed golf course where the deer farm is. The protection of the GB is paramount and needs to be protected for future generations. Urban sprawl has to be prevented and we have to retain the historic character of an internationally renowned city.</p> <p>Changes Sought Reasons for Participation</p>

<p>Comments</p> <p>People are objecting to this because it has been years in the planning (having seen all the soil testing, etc. that has been going on) and it was all kept quiet. Why has it been done on the quiet and sprung on us as a fait accompli? What right has the council got to do this without asking any of the people it would affect? What has been going on in the background that we are yet to find out about?</p> <p>Changes Sought Reasons for Participation</p>				
PR-C-0409 1056	10/08/2017	Mrs Valerie	Moyses	
<p>Comments</p> <p>The arrogance of the Oxford planners is equalled only by their hypocrisy. They have suitable spaces within the city boundaries, but will not use them. There is (at least) one currently useless open space which could permit the building of nearly 200 dwellings (or more if they would only let their height limits rise a little, and maybe increase density a little). The planning requests for the afore mentioned plot - have been turned down because a number of rich influential Oxford inhabitants do not want construction vehicles going past their expensive doors, or the noise of building work near them. Is Oxford really justified in holding on so jealously to this kind of useless space whilst small towns and villages within commuting distance of Oxford have to accept (often huge) developments which their residents don't want? If Oxford needs more homes, its powers-that-be should look less selfishly at their own spaces. Forcing Oxford's housing needs onto distant areas will only turn the city's already-hideous traffic into gridlock. It appears that Oxford planners want to have their cake and eat it - let lots of workers provide for Oxford's needs, whilst denying them homes anywhere near their work. For Oxford workers to live in Banbury would entail at least two hours a day travelling. You'd be far better off commuting to London/Reading/Birmingham. It is quite clear that Oxford's powers-that-be have in mind the eventual imposition of a congestion charge. Having created the congestion themselves by forcing so many people to live far away and commute, they will profit again by charging for parking and the use of buses. Could it be excessively cynical of to suspect that the Oxford planners are the same people who don't want noisy developments to spoil the peace of their executive homes in their executive areas?</p> <p>Changes Sought Reasons for Participation</p>				
PR-C-0411 1058	04/09/2017	Steve	Brooks	
<p>Comments</p> <p>Kidlington will lose its identity and become a suburb of Oxford. Existing infrastructure will not be improved. Already the roads are gridlocked during rush hour times, and the sewage system is already at maximum capacity. Existing schools, doctors and dentists are already full. The current building of flats where bungalows were demolished has proved to be unnecessary, lots are still unoccupied. Why should Kidlington become an overspill area for Oxford?</p> <p>Changes Sought Reasons for Participation</p>				
PR-C-0413 1972	10/10/2017	Theresa	Goss	Bloxham Parish Council
<p>Comments</p> <p>Bloxham Parish Council supports the proposals of this Partial Review of Cherwell Local Plan Part 1 to provide dwellings to meet Oxford's unmet housing need close to Oxford where there will be access to convenient and affordable transport. It would complement Oxfordshire County Council's plans to improve access to sustainable transport options such as the 'Rapid transit network' or a new tram system and to reduce the pressure on the county's road systems. The extent of Oxford's need for affordable housing makes this access to transport extremely relevant.</p> <p>Changes Sought Reasons for Participation</p>				
PR-C-0413 1973	10/10/2017	Theresa	Goss	Bloxham Parish Council
<p>Comments</p> <p>Bloxham is not well connected to Oxford by public transport and any further development here would continue to encourage reliance on private cars. Research for the Save the Horton campaign has shown how difficult access to Oxford is by car and how long it takes. BPC commented on the Issues Consultation in January 2016 on the proposal by Taylor Wimpey to put forward their site on Milton Rd, Bloxham to meet Oxford's housing need. We commented that further housing on Milton Rd would increase traffic on an already overloaded rural road and road network and would add further that sites such as the one put forward would not provide the easy access to sustainable transport options that sites closer to Oxford would. In addition, it is noted that this particular site has not been assessed as having the potential to deliver the 250 houses suggested and is of course contrary to Bloxham's Neighbourhood Development Plan and Local Plan 2011-2031 Part 1 Villages 1.</p> <p>Changes Sought Reasons for Participation</p>

1067	Comments			
Objection in strongest of terms to huge number of houses which will more than triple the present population for the following reasons: Cherwell District Council's unmet needs should come first. Liability to flooding in the area, coming from Spring Hill. Infrastructure: The A44 already has huge tailbacks. A bus lane would be to the detriment of the dual carriageway, and most importantly of the cycle track, which is much needed in the interests of health and anti-pollution. Environment: There are bats (protected species) present in some locations. Many of the fields grow much needed crops. Many footpaths in the area have been used by Yarnton inhabitants for decades. I have been a Yarnton resident for over 42 years. Employment: Most of the growing employment is in the south of the county. Tripling the population here would lead to even more road congestion as people travel to work in the south of the county. Does not believe that exceptional circumstances can be demonstrated to cause the destruction of the GB in this area. More care should be taken to find Brownfield sites (particularly within Oxford City boundaries).

Traffic on the A44 is totally gridlocked now in the mornings during rush hour - what will it be like when there are even more cars, bikes and buses. Trying to get to Headington for hospital appointments or to visit family/friends is a waste of time, this will be even harder and more stressful. To even think of closing off a lane to allow a bus lane is another ridiculous idea, along with the closure of the link road to Kidlington. It is used as a rat run but it does keep the A44 a little clearer of a lot more cars, and its not just to Kidlington it goes, Banbury and Bicester to name but two.

Facilities in the local villages: The nurseries are visited from far and wide. The doctors surgery would be unable to cope and building a new surgery would be a waste of time and money as there would be difficulties recruiting GPs and Nurses. There is one shop left in the village now, and this is handy for the locals who are unable to get to other shops since the regular 'little' bus was taken away. But there is only so much a little shop can take (it is also used by passing trade). A lot of people have turned into recluses now they are unable to get to Kidlington on a regular basis. People like village life and care enough to try and protect then now and for the future.

Yarnton has a habit of flooding, mostly due to the fields from Spring Hill behind Rutten Lane. Sewage risks - last year there were lorries 24/7 pumping out sewage from drainage ditches. The fields were unsafe due to sewage leaking over the surface of the fields.

This is Oxford's unmet housing needs, not Yarnton, Begbroke or Kidlington's. Yarnton needs its GB, there is plenty in Oxford - including golf courses that could be used for the unmet needs. High density estates with 50% social housing. Yarnton already has this with the new build opposite the old SEB building.

1077	Comments			
Milcombe village is less than 2 miles from Bloxham with whom it shares many of its facilities, such as schools, Doctors, Dentist, Post Office, etc. Taylor Wimpey has now brought in a proposal for a further 250 houses on the Milton Road in Bloxham with land available for a school claiming to help ease Oxford's unmet housing needs. Milcombe is in close proximity to the villages of Bloxham, Bodicote and Adderbury who have all had more than their fair share of development over the past few years. Making a piece of land available for a school will not solve any issues and should not sway CDC planning into granting the application. Taylor Wimpey are not going to build it, so who do they expect will and what type of school do they envisage? Schools need areas for playgrounds and sports facilities. It is very doubtful that they would allocate enough land for the facilities that a school would require. Milcombe Parish Council definitely objects to the Taylor Wimpey proposal.

Proposed Submission Plan - General Comments

PR-C-0416 1073	14/09/2017	Theresa	Goss	Milcombe Parish Council	
Comments					
Local authorities have a statutory duty to consult and co-operate with their adjoining authorities, hence the need for consultation on Oxford's Unmet Housing needs. CDC has obviously worked hard in the preparation of this consultation. Milcombe Parish Council has concentrated on the effects this will have on the Cherwell area. MPC did make a response to the initial consultation of November 2016, making known its objections as it was felt that the proposal for Cherwell to take on another 4400 houses is too high and was not viable and how many houses are likely to be affordable for first time buyers which is a need for the Cherwell area without adding Oxford's needs as well.

Comments					
Wildlife – Protection of flora and fauna, preservation of the natural environment and areas of outstanding natural beauty in and around Cherwell as well as retention of existing agricultural land which diminishes year on year with few remaining farms in which was once an area of farming communities. We must consider our heritage and conserve and preserve wherever it is possible.

Comments					
Milcombe does not have the infrastructure or facilities to cope with any further development. Downgrading of the Horton General Hospital will not have helped with regard to additional housing in Cherwell and additional traffic travelling to Oxford by road will add to the time for journeys. There will also be a need for improved road and rail links. The addition of a further 4400 houses in Cherwell district is totally unviable and unsustainable and Oxford needs to re-consider and prove that it cannot accommodate more housing. Close monitoring will be required at all stages on everything that is likely to affect Cherwell and surrounding districts.

Infrastructure – As well as the roads, also of high importance is updating utilities to accommodate any additional housing. Parking and shopping is a huge concern in Banbury town and will need to be addressed for the additional numbers expected to visit the town centre when Banbury's own housing needs are met. They need to be encouraged to shop in the town as well as the out of town retail outlets and supermarkets. Education – Additional housing requires additional school places and many schools are already overstretched trying to accommodate the needs of those who already live here. New schools from early learning pre-schools to 6th form will need to be built or present schools extended. Integration – Building sustainable communities with sports halls and playing fields. These and schools will need land, so land is not just required for housing. Healthcare – The District needs additional provision for health care. Some areas are already struggling due to a lack of Doctors (General Practitioners) and all that goes with the well being of the general public. It goes without saying that downgrading the HGH was a particularly bad move when Oxford wants to send its overspill to live in the Banbury area and then take them back to Oxford to hospitalise them. It may be too late for the Horton, but still needs to be said.

PR-C-0416 1078	14/09/2017	Theresa	Goss	Milcombe Parish Council	
Comments					
Transport and Employment – To avoid already heavily congested roads, provision should be made for employment where houses are to be built. Will Oxford's overspill be looking for employment in Oxford, already working in Oxford, or looking to find employment in the Banbury/Bicester areas? Highways – Already congested and full of potholes making many roads unsafe particularly in rural areas. Many rural villages are already used as rat runs by heavy goods vehicles and the A361 is particularly dangerous.

PR-C-0419 478	15/08/2017	Kenneth	Porter	Croprey Parish Council	
Comments					
The Review is intended to accommodate Oxford's need for housing but, as far as we are aware, Oxford has not satisfactorily identified its requirement and appears to be doing little to meet the challenge itself. It appears inherently wrong that the city should simply pass the burden to the districts and we note that South Oxfordshire has not agreed to its proposed apportionment. We deprecate any diminution of the Green Belt and believe that Oxford's stated needs should be thoroughly tested before any changes are made to Cherwell's Local Plan. However, if a need for substantial housing outside the city is proved, of the alternatives proposed by CDC we strongly reject options C to I and reluctantly agree to accept options A and B. However we also feel that the density levels proposed should also be reassessed in order to damage the Green Belt as little as possible.

<p>Objection to proposed development as it would not prevent neighbouring towns merging together. Yarnton and Kidlington would become a single, large suburban sprawl. Referral made to Oxford Green Belt Study. The character of Yarnton would be changed and would lose the beauty of the countryside that residents and visitors enjoy. There would be little green belt land separating this new large conurbation from Oxford itself. The Local green belt was designed to prevent this urban sprawl that is now being proposed. We have a duty to safeguard the countryside from encroachment and should preserve this heritage for future residents. Another concern is the roads around Yarnton. They are already subject to considerable queues, most notably the A44 and A34, though problems are not limited to those roads alone. Even if we accept the necessity of building so many houses so close to this area, which is questioned, to do so would without significant development of these roads be folly, however the current plans do not address this issue adequately. It is urged that you preserve the setting and special character of historic towns and check the unrestricted sprawl of large built up areas.</p>

<p>Comments about the proposed railway station at Sandy Lane. Having lived in Kidlington all their life, they have seen it grow from a relatively quiet village to the sprawling mess that it now is. It is virtually gridlocked, especially between -7.00 - 09.30 & 15.15. - 18.00. Parking is a problem with residents parking controls and more and more cars parking further up Banbury Road, then either cycling (they take their bikes off their cars) or jumping on a bus. Very often vehicular access to our own properties is blocked. There should be focus on a bypass and make the heavies use it. No HGV's (over 7.5 tons unless for direct home delivery/access) and stop the 18 wheelers using Kidlington as a rat run. Planning authorities should stop greedy developers building on any postage stamp size land to take advantage of the rail station access and increased property prices. Closing Sandy Lane (when the canal bridge was done) caused chaos even then when the traffic was a lot lighter. Forcing that rat run to close will push even more traffic onto the Oxford/Banbury Road. Obviously there has been no open publicly (sic) for general consultation. It is clear to me that the people making these unsound decisions do not have to endure the current gridlocks to get to work and back everyday.</p>

<p>This procedure and requirement to comply with overly complex administrative requirements is wholly inappropriate and flawed. The proposal seeks to effectively make Kidlington and Yarnton into one 'super village/town' which if accepted will become one very large suburb of the City of Oxford. This is a fundamental breach of the planning process. The purpose of our GB reflects national policy. This proposal flies in the face of the National Planning Policy Framework, para. 80 which clearly states that the GB exists to: 1. Check the unrestricted sprawl of large built up areas. (precisely what is being proposed) 2. Prevent neighbouring towns merging into one another. (As above) 3. To assist in safeguarding the countryside from encroachment. (This proposal destroys it) 4. To preserve the setting and special character of historic towns. (as above) 5. To assist in urban regeneration, by encouraging the recycling of derelict and other urban land. (This is the most egregious aspect of the proposal - there has patently been insufficient consideration by Oxford City Council to fulfil its obligations under this section. They currently have around 42% of their own open space which has not been fully evaluated.) There is nothing within the proposals which suggests there are 'exceptional circumstances' for encroaching on GB land. The proposed transport and infrastructure plan is far from adequate. Having lived in Yarnton/Kidlington for the past 32 years I am very well acquainted with problems accessing Oxford City from the north. The current road, rail and bus provision cannot cope with existing levels of commuter and leisure traffic. Recent changes at the two key pinch points in North Oxford have failed to have any significant impact on traffic flows at peak times. There is already a huge strain from traffic congestion and pollution at peak times on the A44 in Yarnton. It is frankly staggering to add to this mayhem. This is not NIMBYism just a fact of physics that the proposal to feed Oxford City's housing needs from the north just won't work. It doesn't work now. The addition of schools, shops and other amenities in the area merely exacerbates matters further. Movement of pupils, parents and teachers in an already heavily congested area, alongside additional commuter traffic is utterly unsustainable. The air pollution in the proximity of the schools alone would be beyond anything we've witnessed so far. There is an abundance of wildlife in this GB area. The destructions of their habitat has not been fully considered and needs further examination. IF there were clear and sensible proposals for the building of significant road/bus/rail links from the Kidlington and Yarnton area into and around Oxford it is conceivable that some development in this area could be effective and sensible. Whilst the obviously pinch points remain within the single carriageway sections and roundabouts in the North it is inconceivable as to how these proposals can remotely work.</p>

<p>Opposition to proposal to building 2,480 houses on GB land adjacent to Yarnton and Begbroke. Has lived in Yarnton for four years, after moving from North Oxford in 2013. Yarnton was chosen as the perfect place to raise young family, with its Ofsted rated preschool and primary school, good transport links and immediate access to some beautiful countryside. It is enjoyable to live here because it is peaceful, with a village feel and good community spirit. The proposed development would completely change the look and feel of Yarnton and Begbroke. Large swaths of countryside would be lost, whilst there would be increased traffic congestion, air pollution, noise, pressure on local amenities such as shops and schools, as well as significant damage to local wildlife and countryside. This is for Oxford City Council's own unmet housing needs and would result in a conurbation nearly three times the current size of Yarnton and Begbroke. It would be incredibly damaging to the villages and would change the face of the irreparably.</p>

<p>Strong objection to build 4400 houses around Yarnton and Begbroke. The large area of high density housing and it's infrastructure will completely destroy the distinctive, separate character of the villages and convert them into part of a large suburban sprawl. It will destroy, permanently, a large area of countryside which is a tragic mistake and a betrayal of future generations. The development is contrary to all five stated purposes of GB - safeguarding the countryside (and the natural environment); preventing urban sprawl; encouraging redevelopment of existing areas in the city; checking urban sprawl; and preventing the merging of communities. GB is there for a reason and must be protected. It is appalling that the benefits of GB can be casually thrown away. Please halt these plans.</p>

Proposed Submission Plan - General Comments

PR-C-0429	25/09/2017	Mr Peter F W	Lea	
1087	Comments			
<p>Objection for following reasons: 1. Plan is based on Strategic Housing Management Assessment for Oxfordshire but the accuracy and validity of these requirements has long been disputed, and the government has now revealed they are significantly overstated. Actual requirement is now calculated at about two thirds of the previous one, and this too may well prove an over-estimate. Therefore Cherwell's plans are based on erroneous and invalid assumptions, and must be withdrawn and re-formulated on a much more modest basis. 2. The A44 and A4260 are already choked with traffic at peak times. 4,400 houses will add 10,000 - 12,000 new residents, most of whom will have cars. Cherwell's presentation says they will apply for a central government grant to develop a 'rapid transit system', to encourage people to use public transport and bicycles; however such schemes have been shown to have little effect on people's travel habits. The amount Cherwell intend to apply for is a significant proportion of total funds government has set aside for this purpose across the whole country, there is no guarantee (and little likelihood) that it will be wholly or substantially granted. Until it is known precisely how much will be made available, it is folly to plan large-scale new housing. There is virtually no scope for effectively improving traffic flows through Kidlington, and creating a bus lane along the dual carriageway section of the A44 will slow traffic to a crawl, and worsen the bottleneck of the single carriageway section south of Yarnton. 'Rapid transit' will be a sick joke and that is if the money is made available. 3. Lack of essential facilities in the area proposed for development. The NHS cannot afford to build a new doctor's surgery and the existing surgery struggles to cope satisfactorily with its current patients let alone the additional homes already approved in Woodstock by the West Oxfordshire District Council. Funding needs to be secured for the necessary improvement to essential facilities before plans are finalised. 4. The plans specify 50% affordable housing. Past history of developments in the area suggest that it is very doubtful whether this will be achieved. While Oxfordshire in general and Oxford in particular need affordable housing, no plans should be agreed without cast-iron assurances from prospective developers that the 50% target will be met. 5. The government has re-stated it's commitment to preserving the GB, and Cherwell District Council should structure it's plans to do so, not nibble away at it.</p>

<p>Object to having any housing development built on our much loved green belt. In Yarnton we struggle with Yarnton Manor and what they have done to our fields. We don't have that much more land to be able to freely roam, to either just go for a walk with the family or the daily dog walks we enjoy. The is one of the reason I purchased my house here, it is such a quiet and friendly Village, this development will destroyed that. The surgeries are already stretched and having problems, how long do you think is acceptable to obtain a Doctors appointment? Believes this is going to have a negative effect on our house prices as well. The A44 is already at breaking point on many days, not to mention the increase in air pollution. Yarnton also suffers from flooding on Rutten Lane, this will only increase the problem. One of my big concerns is also the wildlife, how beautiful it is to see the deer and rabbits running around, where are they going to go? I don't understand what you are all thinking, to destroy such Countryside is ludicrous. I don't think this has been thought through properly. Understand that a few people on Sandy Lane have written in with their support. The reason being, they have already been offered a huge amount of money to sell their properties to the developers. They will be moving out of the area, so they really don't care what happens. The bottom line for them is the huge pay-out. Please do not ruin the life we have all come to love here!</p>

<p>Object to the plans to build 4400 houses in the Woodstock, Yarnton, Begbroke and Kidlington area, in addition to the 22000 already proposed for the District as a whole in the Cherwell Local Plan. It would appear from the review that 14850 houses are proposed, so why is there the necessity for this additional 1850? Of the total of 4400 proposed for the Woodstock, Kidlington, Begbroke and Yarnton area, a total of 2480 are planned for land to the east and west of the A44 between Begbroke and Yarnton. This is an excessive proportion of the total and, despite what the review states, will result in the amalgamation of Begbroke and Yarnton with Kidlington, to the detriment of the existing local communities. Appreciates that more housing is desperately needed in the Oxford area, but to put such a large number of dwellings in one area will totally change the character of the area. Much of the land to be built on is Green Belt, and although the percentage of Green Belt which will be lost is only very small, there is no guarantee that further expansion into it will not happen in the future if Oxford City or Cherwell decide that more housing is needed. The Local Plan states 'the character of Oxford in a rural setting cannot be maintained without the protection of the special relationship of Oxford and nearby settlements and the maintenance of the character of the intervening countryside'. Is all this to be ignored? The residents of the new houses owning cars and using the A44 and other roads in the area will travel into Oxford for work on public transport, but in their leisure time they will use cars, and not all residents will work in Oxford itself. Parents with younger children at school in Oxford will not want them to travel alone by public transport and will still use their cars. To prioritise the A44 over the A4260 as the route for motor vehicles into and out of Oxford will cause yet more congestion on the road, particularly where the dual carriageway ends by the Turnpike pub and traffic converges into one lane in each direction. And if a bus lane is created southbound on the A44 from Woodstock to the Loop Farm roundabout, then all other traffic will be squashed into one lane, causing congestion and hold-ups, particularly at peak times. The creation of a bus lane in addition to the current dual carriageway would seem to be an impossible and costly operation which is extremely unlikely to happen. The proposal to shut Sandy Lane to motor vehicles except for access to the houses and Yarnton Nurseries makes no sense at all. Those of us from Yarnton who use Kidlington for our shopping, banks, the library, the market, etc. will be forced to travel several miles via either Langford Lane or Frieze Way in order to get there, causing more congestion and pollution, as well as additional costs for us in fuel and wear and tear on our cars. We are not all able to cycle or walk that distance, and in any case cycling or walking is no good if you have shopping to carry home. There is mention in the review of improving Kidlington centre, so surely people should be encouraged to get there easily, not made to travel further. If the proposed railway station is built by the Sandy Lane crossing, how are people from Yarnton and Begbroke supposed to get there? We certainly can't walk or cycle with luggage, and it is a very long way round to go by the A44 in either direction. There is also the question of impact on the environment, drainage, flood prevention, wildlife, natural habitat, etc. Not against change, but cannot see any benefit to the existing communities of Yarnton, Begbroke, Kidlington and Woodstock, of building such a large number of dwellings in such a relatively small area. It will totally change the character of the villages and the lives of those of us who have made our homes here for many years.</p>

PR-C-0435	01/10/2017	Mrs Christine	Bower	
1095	Comments			
<p>Object to the proposed building of 4,400 houses on Oxford's green belt. Plan should at least be put on hold until the government decides how housing targets are calculated, which are likely to slash Oxford's unmet housing needs and lower the total needed across the county. At recent meeting in Kidlington, councillor Mr Barry Wood dismissed this recent announcement as rubbish and seemed committed to go ahead with the proposed building of these houses despite the feeling of local resident and the in-eversible loss of valuable green belt. Therefore it makes me suspicious that CDC are hiding behind the need that Oxford City Council need these houses and in fact CDC want these houses as they think London commuters will buy them. Living in Oxford and commuting to London is more expensive than living in London itself and if these houses are built they will not be gaining from living in the country, because Oxford will be just one big sprawl of houses, making it worse than Living in London. There will be a higher pollution as the roads will be congested with even more traffic than there is already and the infrastructure in general will be near to bursting. Read nothing about more schools being built and we already have to wait weeks to see a doctor. So with the possibility of 10,000 + additional people surgeries will be packed. Also as you are building on all possible land, flooding would also be a risk. Taking away green belt land and the golf course is also taking away peoples chance to exercise and enjoy the country air which is again a risk to health. The golf course has been on that site for 110 years and is a welcome green space to break Oxford from Kidlington. This should not be moved to an unsuitable piece of land, which is also being looked at for housing, meaning that the golf course could be lost forever. Neither Kidlington or Oxford residents, want to be joined together to make one large urban sprawl as it will down grade Oxford residents to be joined to Kidlington, and Kidlington residents enjoy being part of a village and do not want to be part of Oxford. As a long standing Kidlington resident, urge you to rethink your plan to build these houses, as it is not justified or a proven requirement and it is unsustainable. Object to the proposal of removing green belt which preserves open spaces which is appreciated by local residents and protects the historic city of Oxford.</p>

Proposed Submission Plan - General Comments

PR-C-0437	06/10/2017	Louise	Dale	Ministry of Defence				
1106	Comments							
The Ministry of Defence (MOD) received notification through Devplan. The MODs principle concern relates to ensuring that tall structures especially tall buildings do not cause an obstruction to air traffic movements at MOD aerodromes or compromise the operation of air navigational transmitter/receiver facilities located in the area. As you will be aware air traffic approaches and technical installations at MOD aerodromes are protected with statutory safeguarding zones which identify height consultation zones in the area surrounding MOD aerodromes relative to topography and distance from the sites. The aerodromes are also protected with statutory bird strike safeguarding consultation zones. Therefore, DIO Safeguarding is concerned with the development of open water bodies, the creation of wetland habitat, refuse and landfill sites. These types of development have the potential to attract large flocking bird species hazardous to aviation safety. The MOD statutory aerodrome height, technical and bird strike safeguarding zone for the district of Cherwell is for the main operational base RAF Weston on the Green and Dalton Barracks. On reading the Cherwell Local Plan 2011-2031 (Part1): Partial Review Proposed Submission Plan, it can be confirmed that the MOD has no statutory safeguarding concerns subject to any development which includes the creation of open water bodies, nature parks, SUDs schemes etc. should be referred to this office for review. Please note the above comments are purely related to the DIO Statutory Safeguarding interests.

Strong disagreement with the Cherwell Council plans for building on green belt land to the north of Oxford. Firstly, though some social housing is promised, around 4000 houses within easy reach of, and fast and efficient services from Oxford Parkway to Marylebone will be mostly bought by London commuters and not people working in Oxford. Secondly, traffic will increase enormously. Such planning for road improvements is sketchy with little serious thought for anything but new bicycle paths, bus lanes and additional park and rides. This is understandable as it is hard to see how the infrastructure can be seriously improved without mammoth investment and coordinated vision. Thirdly, a part of the green belt is to be destroyed in favour of a building project that will not benefit Oxford or Cherwell and will simply create urban sprawl. The Oxford colleges and OUP who own land in the designated area appear to have no thought for the effects on the environment and on life around Oxford but are pursuing narrow financial interests. They all have a duty to think of wider issues.

These comments should be considered in conjunction with the Representations made by the Begbroke & Greenbelt Campaign "BYG". The plan needs to be considered in the context of the many proposed building projects circling Oxford, which threaten to inflict permanent damage on the Oxford environs. Eating into the GB land in such a substantial way is non-reversible and make a mockery of the whole concept of GB in protecting the countryside from encroachment in order to protect wildlife, maintain space to 'get away' from the urban environment (e.g. walking on rural footpaths) and to keep settlements as separate entities. From a personal viewpoint we settled in Yarnton due to its semi-rural character with a close-knit sense of community and countryside right on our doorstep. Being away from the city, in a village situation with access to footpaths has been essential at time for my mental health. Even the thought of the permanent loss of this resource for me, my family and the wider community has caused me significant anxiety to the point where it has been hard to respond in a meaningful way. To take away this resource permanently in response to a perceived need which appears to have been significantly exaggerated cannot be prudent.								
Changes Sought				Reasons for Participation				
For the reasons in my representation AND the representation made by the Begbroke & Yarnton Green Belt Campaign which I additionally support and adopt as part of my own representation in this document, the Plan cannot be changed to make it legally compliant or sound and should therefore NOT be submitted for Inspection.								
PR-C-0446	08/10/2017	Catherine	Henderson		N	N	N	Y
1126	Comments							
This response though separate, own should be read in conjunction with the Representations made by the Begbroke & Greenbelt Campaign. "BYG". 1. This expansion is due to Oxford City Council's unmet housing needs which currently is not substantiated and should be revised in the light of Brexit and the government predicted housing requirement adjustment. 2. The GB is a designated area even declared by CDC in The Cherwell Local Plan 2011-2031, and should be protected at all costs. These plans do not constitute exceptional circumstances for building on GB land. There are many other identified brownfield sites in and around Oxford that could be used. 3. Traffic on the A44 is already dire without an increase of a further 8000 plus vehicles on the road. Traffic jams occur at different times of the day caused by sheer weight of traffic which is confined by the railway bridge and canal causing bottlenecks. 4. The closure of Sandy Lane is diabolical. The road is used on a daily basis and the increased route caused by closure does not comply with the need to be conscious of air pollution, which is already a problem in Oxford and the surrounding areas. 5. Doctors and schools are already struggling, with a shortage of doctors and teachers unable to afford housing in the area. This will only get worse. The amount of affordable houses developers build is just a token gesture. With amazing wildlife the GB areas are regularly utilised by villagers for fresh air, peace, nature watching, exercise, farming, etc. Obesity is on the rise in this country and wildlife is in decline and it is our duty to protect these valuable areas of our countryside. Without these beautiful green spaces we will become one large suburb of Oxford without the need for local councils!

There are many failings in the proposed submission but most of all it is clear that the submission is based on out of date data, a gross misrepresentation of fact of there being any form of exceptional reason to build on the Green Belt, and a collusion between Developers, the University of Oxford and the Councils of all kinds to use the purported exceptional reason of unmet housing need in Oxford, purely to expand the Begbroke Science Park which in itself it can not do without a change in the designation of the Green Belt it sites within. Of course if changed, the designation changes forever with mass high density housing in the form of a 'New Urban Neighbourhood' to follow which is neither needed wanted or desired or necessary. It is worthy to note that this linked outcome is highly contingent on land becoming available IF the Green Belt designation is changed. Ergo as it stands there is no actual land available for development and it only would become available if the designation is changed. That such a submission could be based on a contingent tithe that was likely entered into many years ago without wider consultation and consideration of local impact is itself unsound. This so called contract which apparently exists between the University and landowner(s) should be made public and available for update and critique. I need not repeat the valid objections of BYG but I must put significant complaint to the proposed closing of Sandy Lane. It is plainly ridiculous. It is a key arterial communications for my family and all who live in Yarnton to access the services of Kidlington on which we rely. Doctors, Dentists, Banks, Supermarkets, Libraries, Leisure Centres are key items we need to live. Such services will simply not be replicated under the proposed submission. The notion of closing it or turning it into 'a pedestrian/ cycle / wheelchair access route' is quite frankly fanciful. Closing it will mean extended daily journeys of more than 6 miles round trip each way. I suspect however the real reason to propose a close to Sandy Lane is for the Universities desire 'for their researchers not to be disturbed during the building process', it being sufficiently far away from the Science Park as for the vibration of 30 tonne lorries making hundreds of journeys, interfering or ruining their sensitive analytical equipment. The impact on traffic on the A44 in peak hours will result in gridlock. The scheme is unsound and unfunded and wholly contingent on additional capital funding that has not been applied for or won from central government. It is also Unsound to claim that the proposed submission will result in housing for key workers in Oxford City. The vast majority of people passing through the A44 corridor do not work in Oxford City, they work to the South of the City and toward Didcot and Harwell. In closing, I would like to record that Yarnton is in the Green Belt. The Green Belt is special and has to be protected in the interest of all. It is not an 'Urban Neighbourhood' as the submission proudly trumpets the new developments will be nor should it become one. Time and time again we in Yarnton are sacrificed on the basis of that we are in the wrong part of Cherwell (too far south) and too close to Oxford. We get caught in the middle and end up with the worst of both from sporting provision to public transport

Changes Sought

For the reasons I have given above and the Representations made by the Begbroke & Yarnton Green Belt Campaign which I additionally support and adopt as part of my own Representation in this document, the Plan cannot be changed to make it legally compliant or sound and should therefore not be submitted for Inspection.

As a local resident of 30 years there has been a huge rise in the volume of traffic and congestion on local main roads. Every work day morning traffic is backed up between the Banbury Road and Sainsbury's roundabouts. The situation is similar between the Pear Tree and Woodstock roundabouts. The proposed road infrastructure plans are scanty and superficial, centring upon extra bus lanes and cycle paths. Traffic will simply grind to a halt. There has been insufficient thought given to the infrastructure needed to support a development of this magnitude. This includes schools, GP and hospital services. It is virtually impossible to park at the JR Hospital. These problems will be exacerbated with the addition of 4000 new homes. It is strongly objected to building on the Green Belt and the creation of a vast urban sprawl between Oxford and Kidlington. It is refuted that this scheme will produce enough affordable housing by Oxford's workers.

Oxford City Council needs to radically rethink its housing and transport strategy. Any further development without adequate provision of essential services threatens social cohesion. 1. One of the doctors in the Key Practice, Exeter Hall, Kidlington, told me that 4,400 houses would require an entire new surgery with 6 full-time GPs, and the requisite ancillary staff, its building and access. The current provision is already at breaking point, with waiting lists for appointments from personal experience, standing at up to 6 weeks. 2. As a Senior Citizen I am proud to use the bus services, but it is not always possible. Last Tuesday, driving into Oxford for an 8.45 am appointment took 50 minutes, this is the norm, despite two years of road works at the roundabout at the Banbury Road end of the inner-ring road, itself originally built to ease congestion in the City. A tram-system or monorail such as link Manchester or Porto to their far extended suburbs is feasible: the Banbury and Woodstock Roads provide the perfect loop with St Giles and Frieze Way at head and tail. 3. There are four primary schools already in Kidlington, yet provision for Reception infants this year was wholly unacceptable in one or two of them. With effectively only one secondary school (which our child attended from year 7 to year 13), the provision was skeletal, and even in her time the scaling down of important aspects of the curriculum, and extra-curricular activities was in process, as the school resorted to draconian responses to numbers. There is a sense of defeatism attached to objecting to the sheer scale of development. The issue is a national one, and as such it is highly political. Consultation becomes an agent of anger and frustration when deployed, as it is locally perceived, with cynicism, and there is very little faith in an inspectorate appointed by government. Housing for whom, we ask? The suspicion generally is that this will not be starter homes for young families working locally, who belong in the community with a network of family support who rely on parental and grandparental support to raise young children. The anxiety is that with the coming of the railway it is not so much Oxford's but London's unmet housing need, as has proved to be the case in Bicester. Few people would argue there is not a housing shortage, though when properties stand empty because their intrinsic value is greater as real estate for outside investors, when potential dwellings above commercial properties in town centres remain unused for false economic and health and safety reasons, and students live in accommodation designed for families (a particular problem in Oxford), the shortage is self-inflicted and remediable, and not by building – the easier, more profitable solution - on the Green Belt.

The Green Belt was designated there to prevent urban sprawl of large built-up areas and the coalescence of settlements. The villages of Yarnton, Begbroke and Kidlington are of very different identity and character and from the outbursts of emotions that your proposals have caused they have each expressed that they want to remain as a separate village with their surrounding countryside. The proposed loss of the large area of countryside (the fields, plants and animals, the waterways, etc.) is non-reversible and would deprive people for ever from enjoying this countryside, its walks and nature.. It is not considered that the provision of housing for Oxford City Council to be an 'exceptional circumstance' or an acceptable reason for this loss of Green Belt. The extra traffic from the proposal to add 4400 houses to our locality will greatly impact traffic movement on local roads, particularly the A44. Whilst considering Cherwell DC's road and traffic proposals in this area it looks to be an extremely slow entrance to and exit from North Oxford. Traffic noise and air pollution have greatly increased and the road surfaces have suffered badly. It should be noted that Yarnton suffers from flooding of roads and houses in certain rainy conditions due to water running off land on the west side of Yarnton, within PR51 on Cherwell Local Plan. There is an increasing number of London commuters living in the Oxford area. The recent opening of the Oxford Parkway station is likely to encourage more to this area. If this housing proposal were allowed to materialise, the housing is most likely to provide numerous homes for London commuters rather than for Oxford city workers. Oxford City Council should provide for its people's housing and it should do so without impinging on the Green Belt. We rate-payers in the Cherwell District expect and hope that the District Council which we elected as our representatives to oversee the area will make decisions to the advantage and support of the population in this district. Please re-think this issue and give priority to the views of the District's inhabitants rather than accommodate the unmet housing needs of Oxford City Council.

485	Comments				
Having already made an earlier response to the planned new build in Kidlington on grounds of lack of infrastructure, crowded roads for people working within the ring road travelling from Kidlington to Oxford and reduction of Green Belt with effect on wildlife and local people. The points clearly apply in connection with the land behind the Moors also. However an added key point is the use of land which drains on to the Cherwell river flood plain, thereby exacerbating problems with flooding lower down in the more southerly reaches of the river within Kidlington. Any new housing reduces the capacity of the land which it stands on to absorb rain water and this is particularly difficult in such an area already vulnerable to flooding.

It is believed that the unmet housing needs of Oxford are unproven and that this is currently being recalculated, using new figures issued by the government. There is land that could be used within the Oxford City area. The plans would totally take away the single villages of Yarnton and Begbroke to form an urban sprawl with no identity. The traffic at the moment is horrendous in the mornings and evenings at the pinch point between the Turnpike Public House and Frieze Way in the plans there is no improvement in this section of road.

There is land that could be used within the Oxford City area. Peartree Park & Ride, if a new one is built at Bladon. Also Showmans land and the Oxford side of the Northern Bypass. Adjacent to Redbridge Park & Ride.					
PR-C-0454	22/08/2017	Hilary	Lord		N
319	Comments				
Appreciate that more houses are needed - especially for low-earning families, but the proposal for 4,400 is too high and developers do not make enough low-price housing, but are generally more concerned to make high profits. There is already a strain on medical services in Kidlington. The loss of GB land, widely used and appreciated in the Kidlington area, is also a particular concern. Vulnerable wildlife will be at risk and will probably disappear.

You propose to build 4400 houses in this area for Oxford overspill. It is believed that this is a highly inflated estimate of our housing needs. The government has said recently that this number is not a necessary requirement, and we don't want it for several reasons. As a local Kidlington resident for 44 years, it is known how difficult it is to get medical appointments. Our surgery struggles to accommodate us and appointments are not easy to make. The local schools here are struggling with higher numbers in classes than is recommended. Roads around Kidlington are frequently choked with traffic and many extra houses will compound the situation. Loss of the green belt by building on it causes me the greatest distress. Once we have lost these spaces they can never be recovered and it cannot be stressed enough how necessary they are for the well being of the community. We shall become a vast urban sprawl instead of distinctive ancient and historical villages.

The plan proposed by Bloombridge Development Partners to develop land behind The Moors, Kidlington, is completely unacceptable, especially as the land is in the Green Belt, which should be preserved to prevent urban sprawl. Having moved to Kidlington in 1970 it was considered that this was an excellent place to bring up a family as it was close to shops, schools, medical care and other amenities as well as being able to walk across the fields, through the woods and along the river. To lose such an amenity does not bear thinking about. Much of the land is subject to flooding and extra development would surely increase the risk of this happening. The extra traffic from such a development would have a severe impact on the roads serving the area. Cherwell District Council must continue to exclude the area behind the Moors, Kidlington from any development plan and it is urged that you do so.

Confirms strong support for Cherwell's decision not to include the Moors land for development. It was the right decision for Kidlington. Is dismayed that Bloombridge still considers the land appropriate for development as it is not for the following reasons: The land is in Green Belt. This is an important landscape for the oldest part of the village. There is risk of flooding. The area is already has a stretched infrastructure. This area is rich with wildlife, putting them at risk. The area is well used by local residents and a reason why many of us choose to live there.

Complete and unequivocal objection to the Cherwell District Councils Plans to build Oxford City housing on the Yarnton and Begbroke greenbelt. In the beginning, it was thought to be an actual consultation and hours were spent exploring greener and more creative options to the housing shortage. Ways were found of using old fashioned 'Ribbon Development' ideas that would allow us to preserve masses of green belt but also free up some areas for eco housing and even self-build plots: all with a nod to smaller and more affordable homes too. Then it was found that this wasn't a consultation at all, there is no discussion; there isn't even a tangible plan. It is just something that you are going to do to us and we have no choice! Even worse, it is based on flawed and out of date information (pre-Brexit data and a discredited SHMA). Objections are: 1. The loss of vast swathes of countryside and wildlife around Yarnton 2. Irreversible harm to the history and identity of the village 3. Traffic gridlock on the A44 - it already takes one hour to get from Yarnton to Cowley each morning and no amount of bendy buses will improve that because there is only room for one lane in each direction over the bridge. 4. Air pollution from said increased and gridlocked traffic 5. Lack of water supply - Thames Water has informed me that water will be brought in from Wales. The reservoir that South Oxford is trying to build is to support the water supply in London - only 20% of it, if it is ever actually built will be allocated to South Oxford. 6. Ironically then - this proposal would also lead to an increased flood risk. 7. Closure of Sandy Lane - this is a busy thoroughfare between Yarnton and Kidlington, its closure would require a 3 - 4 mile detour in either direction - leading to even more traffic on the A44 8. Since this is housing for Oxford City it should be said that this is just too far for public transport in to the city; it would take me more than 2 hours each way, by bus, to get to my office in Cowley. My husband gets to his office in London in 2 hours. This plan would end up being London housing, not Oxford City. 9. Oxford City should be exploring other non-greenbelt sites closer to the city. As well as having higher density targets within the inner city or perhaps building where better infrastructure has already been provided, such as Bicester.

<p>Objection made to Bloombridge's proposals to push for planning on the land behind The Moors. All the wildlife which is behind The Moors which includes the great crested newts etc. Also this area is renowned to flooding and it is therefore not practicable. The development would exacerbate the flood risk to adjoining housing and land. In particular objection made to Broadfields application to build housing and industrial units behind The Moors, (particularly behind us in Moorlands) this is absolutely ridiculous, the traffic congestion that this would create would be catastrophic.</p>

<p>The decision taken not to include the land behind the Moors (Sites PR14 and PR27) was correct. The number of houses and business units proposed would alter the general area and drastically increase the amount of traffic along The Moors Road. Over time The Moors and Mill Street had considerable work carried out installing larger pipework connected to the over worked and overloaded foul drainage system. The increase in volume from the proposed sites would once again increase the chances of having the overflow from the drainage system coming out onto the surface again. The sites that are also in the Green Belt which should be preserved to prevent the sprawl of urban development. The fields which would be used for these sites are a well used amenity by villagers and visitors and this area has long been looked on as a local green space.</p>

<p>Strong support for The Cherwell District Council decision not to include The Moors land for development by the developer Bloombridge. Too much land in this area has already been taken away from wildlife and any development will only exacerbate the problem. As an example, the development of the Lincroft Meadow Residential Home on land adjoining The Moors and Banbury Road has already displaced a herd of deer, which, in trying to find new 'homes' have frequently been roaming at night around our cul-de-sac and many other streets in the vicinity. This is a sad consequence of too much land being taken away from wildlife for building development, with minimal consideration for the effects.</p>

<p>Referral to the Cherwell Local Plan 2011 - 2031 regarding the proposed development by Bloombridge LLP with reference to the land behind The Moors. Full support is given to Cherwell District Council by the following submitted objections: The site is in the Green Belt which must be preserved to prevent urban sprawl. To preserve village status and as this is part of the oldest areas of the village, we must retain it's landscape and rural outlook. increased risk of flooding as the surrounding area floods regularly. The increased impact on the infrastructure which is already over burdened due to recent developments in the past 10 years. These being the impact on roads and junctions, surface and foul drain and increased traffic around local schools. The damage to our countryside would also mean the loss of our Short Eared Owl, Great Crested Newts and the ever diminishing Skylark.</p>

1142	Comments		
<p>Objection made in the strongest terms to the proposed development on land behind The Moors by Bloombridge developers for the following reasons: This Green Belt land is used by countless local residents for leisure and recreational purposes and is one of the few areas left untouched in Kidlington. The proposed 300 plus dwellings and small business units could conceivably create an additional 1000 plus daily traffic movements along The Moors. The Moors is already difficult to navigate at peak times, this proposal would make The Moors a gridlocked no go area for large periods of the day. The proposed entry/exit road completely cuts through and will destroy the protected pond which has been proven to be a Great Crested Newt habitat. The proposed entry/exit road will create a complex and very busy junction with The Moors and Benmead Road. The increased traffic volume from such a development will choke The High Street, Green Road, Benmead Road, Evans Lane, The Moors and Banbury Road as new residents travel to their places of work, school etc. These roads are already congested and cannot cope with such increases in volume.</p>

PR-C-0467	06/10/2017	Louis	Borucki
1143	Comments		
<p>If approved, this development would cause many years of disruption during the construction phase with heavy plant and building supplies lorries using The Moors and surrounding roads to access the single entrance to the site. There is no need for this area to be developed as Cherwell have already earmarked enough land to more than meet current housing requirements of the overestimated Oxford unmet housing need. An objection is also made to the overall plan to build 4400 houses in Kidlington, Yarnton and Begbroke areas on the grounds that the proposed development is far in excess of the Government's latest growth forecast and question the need for development on this scale. It is also felt that the proposed housing density figures for new houses are far too low and that higher density building would result in more affordable housing for local people and cut the number of sites required. This would therefore reduce overall disruption to our local communities greatly.</p>

Proposed Submission Plan - General Comments

PR-C-0470	05/10/2017	Michael	Cahill					
1147	Comments							
<p>It is also felt strongly that Cherwell council should be resisting any pressure being brought to bear with regard to satellite villages becoming swallowed up as part of a 'Greater Oxford'; an action that in the main can only benefit developers and land owners - principally Oxford University. Anyone living in the Kidlington area is acutely aware of the chronic lack of effective road systems in North Oxford area, despite significant recent expenditure in improving the Oxford ring road to meet current transport difficulties. To inflame this problem by adding significantly more traffic to this already congested area can only further antagonise the local communities. Finally, I do not accept that the planned housing development will do anything significantly to address the key factor of building houses at a cost that will enable new, young individuals to be able to afford to purchase housing and remain in their communities, i.e. Yarnton, Begbroke, Islip, Kidlington, Cutteslowe etc.. If additional housing is required in Oxford City (and undoubtedly it is) then it should be done in a way that strictly precludes the inclusion and adoption of any and all green belt and recreational land, wherever that might occur, and first and foremost must be achieved within the City council's boundaries. No council should be able to sidestep their obligation to meet a planned housing development within their own jurisdiction with the ease in which Oxford City Council have been able to.</p>

<p>As someone who was born in Yarnton and lived in the Kidlington area all my life, It is extremely concerning that Cherwell council are proposing to use Green Belt land to help meet the shortfall in Oxford City's proposed land allocation for new housing development. To compound this situation Cherwell council are also proposing to allow the inclusion of recreational sports ground namely, North Oxford Golf Club. In addition, several thousand more use it weekly as an occasional sports facility, with both young and old enjoying the peace and tranquillity offered by this 110 year old institution. This golf course is believed to match all the purposes of the Green Belt as set out in the Government's National Planning Policy Framework. So why are Cherwell council proposing actions that to go against this policy?</p>

1149	Comments							
<p>It is understandable why Cherwell DC is reluctant to change its recently adopted Local Plan and wants to deal with the question of Oxford's housing needs as a separate and distinct issue to be addressed in the area immediately around Oxford, but no evidence is produced in the draft Review Plan to justify the claim that additional allocations at Bicester would prejudice the adopted Local Plan's proposals. Furthermore, ring-fencing the area around Oxford reduces the options available, inevitably means housing development in the GB, and limits the prospect of achieving the best strategy for the District as a whole. In paragraph 3.18 of the Review Plan the Council says "The Partial Review has been prepared with the understanding that a development strategy based mainly on the 'country towns' approach would not be sufficient to meet both Cherwell's and Oxford's needs." However there is nothing in the Plan that justifies or explains such an "understanding". Also, the statement is made on the basis of the Oxfordshire SHMA figures. If the Government's current proposals for assessing housing need are now followed, the "need" figures for Cherwell District will be significantly lower and the Council's present "understanding" would have to be re-assessed. Ultimately, the question is whether the draft Plan has demonstrated beyond doubt that exceptional circumstances exist for building in the GB and that no alternative option could possibly meet the Plan's objectives. This has not been demonstrated and, as a result, the Plan is unsound.</p>

<p>The foreword to the draft Review Plan says "We are of the view that development must be provided so that it is well connected to Oxford and supports the city's economy, universities and its local employment base. In addition, growth must ensure that people have convenient, affordable and sustainable travel opportunities to the city's places of work and to its services and facilities." I agree generally with this broad aim, but the issue is whether there is only one option for meeting it. The Plan goes on to say "We have considered options across the district for achieving this and are of the view that there are clear, exceptional reasons for providing development within the Oxford GB." I most definitely do not agree with this conclusion because, in my view, - at least one other realistic option exists which does not breach GB policy, so exceptional circumstances to allow development in the GB have not been demonstrated; - more housing on the edge of Oxford will cause further harm to the character and setting of an important historic city through increased traffic and pressure for additional facilities in the historic core; - it will lead to urban sprawl and the coalescence of the built up area of Oxford with adjoining settlements to the north, with consequent loss of their separate and unique character; - the scale of housing proposed exceeds local housing needs as calculated by the latest Government advice; - the housing figures proposed are largely based upon an ambition and desire for future employment growth, which is unrealistic and would be harmful to the area; - its sustainability would depend upon significant investment in ambitious alternative means of transport and in other community infrastructure which is unlikely to be forthcoming; - the majority of the developments proposed will be private housing, sold by developers at high market prices and only meeting a general demand for expensive houses in or near to Oxford rather than meeting the real need for social housing.</p>

1148	Comments							
<p>Cherwell Council's reasoning for its preferred strategy is crucial in justifying the Plan's soundness, but the six bullet points set out in paragraph 2.14 of the draft Partial review are brief giving little detail. The Sustainability Appraisal gives more information but is not the clearest of documents. Its findings are not conclusive with some options performing in a similar way and with subjective judgements playing a part. The wording of both the draft Plan and Sustainability Appraisal give the impression, albeit perhaps unfairly, that a decision on the Plan's strategy involved some subjective or political input, rather than being a result of an objective and rigorous planning appraisal. I am not at all convinced by the Plan's analysis of the options. The six reasons in paragraph 2.14 for the choice of strategy are all simplistic, not particularly clear in their meaning, and open to interpretation. I do accept that many of the reasons would apply to some of the options considered by the Council - for example the options for dispersing development around the District or locating it around Banbury - but I don't agree that they would apply to others, particularly development in and around Bicester. The Plan's suggested allocations for housing in the GB would not perform well against some of the points in paragraph 2.14, particularly numbers 2, 3, 4, and 5. The proposed allocations are scattered around the edges of existing communities and it is difficult to see how, compared with Bicester, they would be; - better situated "to assist with the delivery of the Oxford Transport Strategy, in terms of existing sustainable travel connectivity and the opportunity for sustainable commuter travel behaviour"; - more likely "to result in a higher level of commuting to Oxford by private motor vehicle"; - more likely "to result in less affordable transport options for accessing Oxford for potential occupiers of affordable and low cost housing"; and - better at providing "the opportunity for strategic infrastructure investment (e.g. transport and education)". The draft housing allocations might be 'closer' to Oxford, but access from them to the City would be more problematic because of poor transport links. Proposals to improve these links are little advanced, their practicability untested, and are reliant on significant new funding. The draft allocations are also in settlements that are not as well provided with other facilities as Bicester and future residents of these sites would be likely to use their cars to access employment, schools, shopping, and entertainment in Oxford. Reason 6 in paragraph 2.14 seems to be the main reason why the Council has decided to reject the option to locate new development in and around Bicester, saying that "significant new development could not be built at Bicester by 2031 in addition to that in the existing Local Plan" (about 10,000 dwellings resulting from the SHMA process). However, the Inspector's report on Cherwell's 2011-2031 Plan confirmed that the strategy of focusing most new development on the two towns of Bicester and Banbury, rather than it taking place in the smaller settlements, was "clearly the most sustainable strategy for the District". Given the role that Bicester plays already in central Oxfordshire it seems logical to build upon the District's current sustainable strategy when considering how best to meet Oxford's housing needs, especially as the housing need figure both for the District and for Oxford should almost certainly be reduced under the Government's new proposals, leading to fewer houses being needed in Bicester.</p>

1155	Comments							
<p>Previous reply to consultation on 8th January 2017 still reflects current opinion: Q1: Don't know, it completely depends of the projected increases in population. This itself depends on the development policies of the council. If the council encourages the growth of jobs, then it will require more housing to house the workers attracted by the employment. Q2: No, don't think that we have that obligation. Oxford City Council has promoted the increase of employment unrelated to its traditional industries, which are in the main linked to the university, by building business parks. Oxford City Centre is already an over congested place, too small to be the centre of a large urban sprawl. Commuting into central Oxford already takes a long time. I am a key worker who could not afford the Oxford prices when I took up my job, Central Oxford's main street environment is very much like that of a large central bus station. My concern is that options A and B will be preferred, focusing on Kidlington which will be chosen as being closer to Oxford hence more attractive to developers. The GB will be destroyed to build more housing developments stuck between arterial roads and rail lines, essential workers deserve better than that. Kidlington is not in an area of outstanding natural beauty, but there are spots just outside the village which must enhance the quality of life of its residents, in particular the nature park along the Cherwell river. Some developments have already encroached on its edge, more would transform it from a nature park to a suburban park visited by an excess of dogs. Q10: We should seek to re-use brownfield sites, some of which may be small, rather than concrete over green fields, therefore smaller sites should be considered. When I referred to Oxford's traditional activities, I omitted to mention the BMW factory which provides non academic and non medical employment to the local population that need it. I believe that this drive to expansion of Oxford is mainly driven by developers who could make a considerable profit from developing land around Oxford. I am not convinced that the housing provided would go to the workers of more modest means who need it the most. Even if there is a respectable proportion of "affordable housing" provided by housing associations, because of the Right to Buy, this housing will be sold off by its resident, and be transferred to the open market, and in a further 30 years, more social housing will be wanted. Oxford should cease to plan for the development of business parks which draw more population, and devote the space to housing for the Oxonians.</p>

<p>Has been a member of North Oxford Golf Club for 22 years. Sad to hear that the site is to be used for building of 650 homes - supposedly 50% of that is affordable homes. There are well over 450 members some are in their later years who enjoy the game of golf and to socialise with members. We are all encouraged to become active in sport for health and well being and here you are taking it away from us. It is a beautiful course and you want use to relocate to Frieze Farm (PR3c) a flat uninteresting, no trees field, which is about 300 yards as the crow flies. Why can't the houses be built on Frieze Farm? Understands the owner of Frieze Farm wants to sell the land for building. The amount of houses to be built in the area and Yarnton, Begbroke and Kidlington is NOT acceptable. The roads in this area will not be able to cope with the amount traffic.</p>

<p>It is believed that the Green Belt's principle must continue to be respected, for the long-term, for overall health of the country. It's been one of the most important, post-war acts, to defend both the "green & pleasant" quality of the land, & the identities of communities. This promotes society's welfare in many more ways than can be defined purely economically. Having been born in Oxford, & growing up & settling in Kidlington, the Green Belt's always been a fundamental part of my identity. While undoubtedly, there's a need for affordable housing, essentially, this is being presented to the public as a done deal; whereas the obvious ambition's to grow commercial opportunities, at the expense of both our natural heritage, & the distinct identities of our villages. What's being argued by Oxford as its "unmet housing need", is really predicated on a corporate desire to grow both business, & the population to service it.</p>

<p>Transport: The A44 corridor is already congested. As a resident of Yarnton I have frequently experienced lengthy delays, indeed it can literally be impossible on occasions to get out of Yarnton by car towards Woodstock and Oxford. At these times the only possibility is to travel to Kidlington via Sandy Lane. The closure of Sandy Lane to through traffic would have an impact on many Yarnton residents who use it on a frequent basis to access shops, banks and other basic essential services in Kidlington.</p>

<p>The proposed submission plan is unsound, not positively prepared, not justified and not effective. Green Belt: The plans challenge, indeed contravene the very purposes of Green Belt as defined in the NPPF. In addition, Cherwell's own policy on Green Belt development (Policy ESD14: Oxford Green Belt) specifically states that ribbon development and urban sprawl are to be checked and that the coalescence of settlements is to be prevented. Exceptional circumstances are unproven in this instance for the proposed removal of land from the Green Belt.</p>

The SHMA figures for Oxford 'unmet housing needs' are far too high and this is being confirmed by the government's new method for working out levels of housing need. In these circumstances, irresponsible plans to build on the Green Belt north of Oxford should be scrapped or, at the very least, subjected to a moratorium pending a rethink. This is a matter of major and long term importance and you have a responsibility to stand up to the developers and have a genuine rethink.

My family and I have lived in and around Oxford for 25 years, raising our family in Begbroke. Both my wife (a Research Scientist) and myself (an Artist) who work at home and at the University, are alarmed and feel well qualified to offer a passionate plea on the proposed development. As a family we are involved in preserving wildlife in Begbroke, looking after woodland taking great lengths (both financially and via employment) to reinstate the natural surrounding landscape. Whilst understanding the need for housing (though the statistics are questionable with no explanation offered within the document) the 'unmet' need is most certainly within the City of Oxford. This failing rests firmly with the City Council and especially with the University, who have spared no expense in the erection of many new university buildings, some of which are little used. They also own many buildings which could be used for housing and are not. Large swathes of GB land, including the landscape around Begbroke, are also owned by the University. It is wholly unfair that they are trying to put pressure on all surrounding areas in an attempt to cover up their own short sightedness and failings. The University estates have resolutely refused at all times over many years to entertain any possibility of selling land, citing the land as strategic for the college, looking after the GB , surrounding area, and character of the village of Begbroke. This document and the previous one show this as duplicitous and contradictory to these assertions and actions. Therefore questioning the motives for countenancing even the possibility for this development around Begbroke Science Park, changing the precious infrastructure for generations to come, and suggest that motive is financial gain rather than unmet housing need. "Affordable housing" itself currently a term in question, as the wider economic landscape renders the term redundant. Proposals in this plan are mistaken and would completely undermine the natural beauty and fabric of the area (documented in the Doomsday Book). It places great strain and unnecessary pressures on its infrastructure, biodiversity and its unrivalled, unfettered views across ancient ridge and furrow land surrounding Begbroke Wood containing beautiful rare untouched meadowland with hedges and streams for a huge variety of animals and wildlife, enjoyed by many local walkers. With regard to Begbroke being fully connected to Oxford, the cycle path from Begbroke to Oxford is woefully inadequate and dangerous, involving crossing the A34. Even if it were to be updated, Begbroke is 8 miles from the centre of Oxford and travelling in each morning is extremely difficult. At present, the cycle path is largely unused. The A44 is jammed each and every morning suggesting overwhelmingly that the area is not coping with traffic. Development of the scale suggested would place an even greater burden on what is already a great problem. Begbroke itself offers the first area outside of Oxford of complete protected GB. To develop on this land would set an unprecedented danger to the character of the landscape in such close proximity to Oxford. This beautiful, special and unique place should be vehemently protected. It is a unique place to look over Oxford and out to the Chilterns. There is no other place like it and this is the wrong place to consider developing.

1166	Comments				
Increasing concern of the initial plans to make way for development around the village of Begbroke. The existing plan allows for encroachment into this very sensitive site which contains much beautiful wildlife and is a refuge for visitors to Oxford and its surrounds. There is indeed much land immediately surrounding Oxford and around the airport and indeed elsewhere which are far more suitable. This reasoning seems to show scant regard for extremely important matters such as existing Infrastructure (the A44 is currently jammed every day), the Green Belt (where surveys have shown rare ecology and wildlife.

1168	Comments				
Strong opposition to the current plans to increase the number of houses in the Yarnton and Begbroke areas. Suggesting that there would be a 1.2% increase in traffic on the A44 is a foolish and indefensible number that shows not only is the data incorrect but there has been no actual thought that has gone into this plan. There has been no concerted effort to protect the Greenbelt and building thousands of houses in a small area will turn the roads into gridlock. Further concern is given to the lack of adequate water supply, damage to the air quality, the depreciation of existing properties and the inconvenience to residents and commuters. It is hoped that the opinions and concerns of the locals who will be affected by the plan are listened to.

1169	Comments							
<p>Objection to Cherwell District plans to increase the housing in Yarnton and Begbroke areas. The entire case appears to be based on assumptions about oxford's unmet housing need that it is believed was based on a flawed SHMA methodology which it is understood has been revised down thereby invalidating the entire basis of the plan. Specific objections made for the following reasons: 1) Reduction of greenbelt leading to less wildlife 2) Overly optimistic assumptions about traffic and infrastructure-based remediation 3) Inadequate local water supply</p>

<p>The Consultation on the Proposed Submission Plan has, like its predecessor, been poorly publicised. Planning the consultation process for the main holiday period was very disappointing and the public (which the council exists to serve) only had the opportunity to comment due to intervention by our local MP and Kidlington Development Watch which forced Cherwell to extend the consultation period. Cherwell should have done more – via Cherwell Link article and all other means available, to raise public awareness of the possible loss of Green Belt via this proposed revision of the local plan. The consultation papers are over long and difficult to assimilate in a short time. It is understood that the Council does have discretion on the timing of a public consultation. Choosing to hold the consultation and public exhibition in Kidlington over the summer holiday period was unreasonable. Cherwell District Council appears to be more concerned with following the process of consultation than considering the views of local residents and acting on what people are telling them. This was borne out by Councillor Wood's shameful performance at the Kidlington Parish Council public meeting on 21st September. Councillor Wood appears to have no regard for the probity of the Council's conduct of an evidence based process and for public scrutiny. It is most important to be sure the housing assessment estimate is as accurate as possible. So much relies on it. The initial Local Plan Examination in Public saw Cherwell's case thrown out for not meeting newly revised Strategic Housing Market Assessment targets. Not one of the Council's twenty four questions mentioned the GB or asks about the acceptability of development in the GB – perhaps the most important matter of all. The Council must act professionally this time and take account of new lower government estimates of housing need. In conclusion wish to emphasise that object in principle to building on the Green Belt and consider that the excessive and overwhelming housing development proposed is unjustified, unsustainable and totally unacceptable. There are alternative sites available in Oxford which are more suitable for Oxford's requirements and their development will have the benefit of assisting in urban regeneration in the city by encouraging the recycling of derelict and other urban land.</p>

1181	Comments								
<p>Totally against any erosion of the Green Belt in this area as it was to preserve the individual identities of settlements and prevent urban sprawl. It seems questionable that the projected housing need in Cherwell to "meet Oxford's unmet housing need" is an accurate assessment of the requirements in view of the latest government calculations indicating that the projected numbers of new houses required is not as great as originally suggested. Regarding the "unmet housing need of Oxford City Council", it appears that there is more than sufficient 'brown field' land within the city boundaries where housing development could take place, using land for housing rather than giving this over to the ever increasing office/commercial development within the city. Concern is also the impact a development of this scale would have on the already heavily congested road system and the pressure it would place on local services, doctors' surgeries, schools, local amenities, etc. Urge you to reconsider the scale of the Proposal and ensure that our Green Belt is protected.</p>

1186	Comments								
<p>The proposed developments will do little or nothing to address the evident need for 'affordable' housing in and around Oxford. CDC claims that its 'vision' is for half of all houses built on the GB to be 'affordable'. However, experience has shown that CDC and other councils all too easily renege on their promises for 'affordable' housing when developers offer even lame excuses. The fact is that developers are interested in serving the profitable London commuter and buy-to-let markets. OCC Leader, Bob Price, has even admitted (possibly in an unguarded moment) that new housing in the proposed areas would be very attractive to London commuters. OCC should be doing all in its power to create new, truly affordable housing for its key workers, but fails to do so: for example, OCC accepted just 20% affordable units at Templar Square. Heard CDC Leader Barry Wood say recently on television that there must be at least 30% affordable housing in all new developments in Cherwell. However, the Council's own figures show that it has consistently failed to meet this 'target', under pressure from developers.</p>

<p>I have become increasingly vexed by the public pronouncements of local councillors relating to this matter. CDC councillors in particular appear to be focused chiefly on showing that they have followed proper procedure, rather than discussing in an open manner the merits of their proposals. At a recent public meeting at Kidlington's Exeter Hall, CDC Leader Barry Wood defended the Council's position by stating: "You have to understand we're up against very rich developers who employ extremely good lawyers", and encouraged anyone who wanted to object to focus on proving that CDC had not followed the correct procedure when drafting its proposals. This tells the public that Cherwell councillors are mostly concerned with protecting themselves from official/judicial criticism in the event of a legal challenge by developers. It is extremely disappointing that councillors seem to have little interest in (a) looking at the wider question of whether the proposals are actually necessary or desirable for their local communities, or (b) taking seriously their responsibility to act in the interests of the residents whose interests they are supposed to be representing. . If you nevertheless proceed with these ill-conceived proposals regardless, you will risk destroying forever the special environment of Kidlington, Yarnton and north Oxford, leaving behind a bitter legacy which future generations will neither understand nor forgive you for.</p>

1194	Comments								
<p>Main concern is around the destruction of countryside and the effect this will have on both wildlife and local residents. The green belt around Oxford supports a diverse range of plants and animals, who rely on the hedgerows, woods and fields that would be lost as part of this development. In addition to this, having open countryside in close proximity to villages such as Kidlington, Yarnton and Begbroke (as well as North Oxford) is an important factor in supporting local residents' mental health and well-being. The local footpaths and lanes are well used by walkers, riders and cyclists and without these, local residents will be left with nowhere to go to enjoy the great outdoors. Understanding is that the green belt can only be built on in exceptional circumstances. However, recently read an article in the Oxford Mail saying there were 4,400 unoccupied homes in Oxfordshire, with the number on the rise. Surely with this being the case, it is impossible to argue that an exceptional circumstance should be made for the proposed developments around Kidlington, Yarnton and Begbroke! Furthermore, as has been widely reported in the press recently, the number of new houses put forward is based on an old calculation method. The new method means that Oxford needs half as many houses as previously thought. Therefore there is absolutely no justification to build on the green belt and there are certainly no exceptional circumstances to allow this. Potential for flooding am concerned about the potential for flooding as a result of large scale development in the area. Both a river and canal go through the proposed sites near Begbroke, Kidlington and Yarnton, as well as a brook. Know from speaking to neighbours that some gardens in Begbroke already flood as a result of the brook and large-scale development could make this catastrophically worse. Destruction of important historical sites Begbroke is an incredibly old village (mentioned in the Domesday Book) and the proposed developments will essentially merge this historic village with Kidlington and Yarnton, hence destroying its identity. Severe negative impact on local services Have lost a number of bus services over the past few years and the cycling infrastructure in and around Begbroke, Yarnton and Kidlington is in desperate need of regeneration. As a result, the traffic in and out of Oxford can be extremely heavy during peak periods and any new development will only make this worse. In addition to this, our local Health Service is already stretched. My neighbour had to wait three weeks for an appointment recently and given his age and poor health, this is not good enough. Again, any new development will only make this worse.</p>

Proposed Submission Plan - General Comments

PR-C-0504	06/10/2017	Mrs Heddwen	Hewis				N	Y
1198	<p>Comments</p> <p>Strong opposition to building on GB to meet Oxford City's unmet housing need based on a gross over estimation. There are many reasons to oppose these large scale development proposals: 1. Loss of valuable GB. 2. Inadequate infrastructure - detrimental impact on already congested roads. 3. Flooding. 4. Health grounds - serious concerns on this issue. GB land is paramount for health and well-being of residents. Fundamental aim of GB is to prevent urban sprawl with essential characteristics of openness and permanence. GB provides our vital "breathing lungs" World Health Organisation listed Oxford City amongst the top ten most heavily polluted cities across the United Kingdom. Absence of heavy industry in the area attributes toxic pollutants directly to volume of traffic. More houses will increase this significantly bringing serious health implications. Air pollutions of this nature is responsible for over 40,000 premature deaths per year in our country. Is this the legacy you wish to hand down to future generations of this "Green and Pleasant Land"? It is now your responsibility. If you wish to retain our green belt and respect our environment act responsibly and give serious considerations to the future health and well being of its residents.</p> <p>Changes Sought</p> <p>Reasons for Participation</p> <p>I would like the Begbroke and Yarnton GB Campaign to act as my representative during the Examination by the Planning Inspector.</p>							
PR-C-0506	07/10/2017	David	Blowers				N	
1205	<p>Comments</p> <p>Kidlington, Gosford and Water Eaton will become part of a vast urban sprawl encompassing north Oxford, Cutteslowe, Wolvercote, Begbroke and Yarnton. Very few of the new houses would be 'affordable' in reality. Predicted prices for so called starter homes at Barton Park are already beyond the reach of first-time buyers. Most houses are likely to serve the London commuter and buy to let markets, Kidlington's young people and the county's key workers won't get affordable housing. Underfunded public services, already struggling will get worse. Traffic congestion and air pollution will worsen. Construction traffic and road works will add to the chaos for years. Sites rejected by Cherwell at this stage are still vulnerable. Support for the sites Cherwell has already rejected around Kidlington, particularly those on flood plains - the developers will be making strong representations to have them reinstated. Water supplies will be overstretched and infrastructure plans are not positively prepared regarding this. The people of this area are firmly against these plans.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							
PR-C-0507	08/10/2017	Bridget	Atkins					
1209	<p>Comments</p> <p>Support for Cherwell District Council's decision that the land behind the Moors in Kidlington should not be developed on. This site is in GB which should be preserved for the wellbeing of residents and the countryside (thereby the wellbeing of the wider population, wildlife and climate). Fields are used by Kidlington residents for walking, cycling, enjoying the countryside. Have all seen the fields being the Moors flood regularly. Further development would increase the risk of flooding. The views need protecting (property developers are already guilty of putting up new rapid growing tall hedgerows to deliberately obscure views across the countryside). The area is one of natural beauty and a conservation area - with listed buildings including St Mary's Church. It must be conserved. It is not for this generation to spoil it for the next.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							
PR-C-0509	06/10/2017	Laura, John & Benito	Wainwright					
1213	<p>Comments</p> <p>Strong support for Cherwell District Council's rejection of countryside that extends from behind the Moors as a development site. It is GB land and is described in the Inspector's Report of 1991 as "an area of High Landscape Value". The Kidlington Framework Masterplan (2016) designates this area as a 'green corridor' which it annotates "Protect high quality setting" on the accompanying plan (11.0/12.0,p.79). The Oxfordshire Wildlife and Landscape Study declared these meadows and woodland to be national priority habitats for nature conservation. They shelter several protected habitats; badgers and their setts, great crested newts. They are also home to roe deer, muntjac deer, foxes, grass snakes and many priority bird species: bullfinch and song thrush. As well as many wild flowers, some quite rare. These fields are prone to flooding which would seriously affect any houses built there as well as aggravating the flood risk to existing houses nearby, including those in the conservation area near St. Mary's Church. The volume of traffic generated by development would completely destroy the character of this pleasant semi-rural road. Residential Benmead Road would also become a major traffic thoroughfare. This is a narrow road and the large increase in traffic would present major danger to children at the primary school and nursery.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							
PR-C-0509	08/08/2017	John, Laura & Benito	Wainwright				N	
2523	<p>Comments</p> <p>4,400 houses is unrealistic. Oxfords growth figures based on the SHMA report are inflated. If Oxford thinks it has a housing problem, it shouldn't be developing new business parks such i.e. Northern Gateway providing 8000 new jobs when unemployment isn't a problem in this area. This will exacerbate housing demand! If there is a housing problem, this land should be used for housing. Green Belt should be protected and to meet the 5 purposes of the Green Belt. It would be a tragedy to destroy this around Kidlington, depriving locals of beautiful countryside and walks, and destroying habitats for wildlife and increasing pollution. Once Green Belt is built on it, it's lost forever. It would be the thin end of the wedge in developing even more Green Belt. An environmental tragedy. CDCs 2016 Kidlington Framework Master Plan itself refers to "this high quality & varied landscape character" of Kidlington's Green Belt (para 3.7). An urban sprawl would result around North Oxford and Kidlington. There is no infrastructure in place to cope with doubling Kidlington's population. Traffic congestion on Kidlington's main road, already bad, would worsen. There would be pressure on Schools and health services, already stretched, and air pollution from more vehicles would be a serious health threat. It is inevitable on past form that many of the homes would be bought by buy-to-let landlords and London commuters, rather than locals, due to Oxford Parkway station.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							
PR-C-0509	06/10/2017	Laura, John & Benito	Wainwright				N	
1215	<p>Comments</p> <p>Houses affordable for local people? Past form shows that new homes would not be affordable for young people or local workers. Developers are consistently allowed to renege on affordable housing quotas. Local GB would be ravaged to benefit London commuters and opportunist buy-to-let landlords. Kidlington Framework Masterplan describes Kidlington's "distinctive character as a village set in the landscape" (12/2). This would be irredeemably lost if these proposals to build on local GB ever came to fruition. Proposed submission plan is unsound unjustified and potentially an environmental tragedy for Kidlington and the surrounding areas.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>

Suggested sites are currently prone to flooding and sewerage and water supplies are already at full stretch with current population usage. Proximity of Oxford Parkway Station makes it likely that houses will be brought by London commuters, not local people who will not be able to afford the prohibitive prices. Previous developments suggest that any affordable housing targets will not be met by developers. Objection as the impact of this housing development has not been quantified and will amalgamate these villages into one huge urban sprawl changing the way of life of current residents. Accessibility of Local Plan is difficult for ordinary people to wade through with complex planning jargon. This will have put off may residents who may have wished to respond.

Objection - An extra 4,400 houses north of the city is not sustainable and will mean that: - traffic problems will get much worse- Health, Social and other services will be stretched beyond breaking point- open countryside in the green belt will be sacrificed- countryside walks and views will be lost - natural habitats will be destroyed- our quality of life will suffer, air, noise and light pollution will increaseThe 4,400 is based on dubious calculations which have been heavily criticised since they were made public. They rely on assumptions of very high growth in jobs around Oxford requiring many people to move into the county. The Green Belt around Kidlington is much appreciated and enjoyed by large numbers of local residents. It also helps to protect the historic city of Oxford from the effects of over-development. Understand that GB is a permanent designation and that Government guidance states that unmet housing need is not a reason for building in the Green Belt. The Government’s Manifesto promise and Cherwell’s existing policy to protect the Green Belt must be upheld. The idea of “Green Belt Review” makes a mockery of the concept and purpose of the Green Belt. How can the Green Belt stop urban sprawl if its boundaries can be moved when they are considered inconvenient? There are also better alternatives to housing development in the Green Belt including making better use of previously developed land in Oxford and using some proposed employment sites in the city for housing instead.

1232	Comments								
Everyone knows that the housing targets were invented by committees dominated by construction industry appointees and do not represent reality. There is no demonstrated need for these GB Housing developments and to this extent the Plan has no foundation in reality. Thus it is unsound.

1256	Comments								
A local planning authority should regard the construction of new buildings as inappropriate in Green Belt. Exceptions are quoted in the letter.The proposals are none of the mentioned exceptions..The exceptions may be acceptable if limited. (Limited infilling in villages, and limited affordable housing for local community needs under policies set out in the Local Plan; or limited infilling or the partial or complete redevelopment of previously developed sites (brownfield land), whether redundant or in continuing use (excluding temporary buildings), which would not have a greater impact on the openness of the Green Belt and the purpose of including land within it than the existing development) Certain other forms of development are also not inappropriate in Green Belt provided they preserve the openness of the Green Belt and do not conflict with the purposes of including land in Green Belt. These are:● mineral extraction● engineering operations;● local transport infrastructure which can demonstrate a requirement for a Green Belt location;● the re-use of buildings provided that the buildings are of permanent and substantial construction; and● development brought forward under a Community Right to Build Order. Housing and extension of Begbroke Science Park are not in the acceptable list. These proposals are unsound and cannot be justified. Removal of parts of and building so extensively on the Green Belt cannot be justified. There are no exceptional reasons for doing so when alternative sites are available. Employment and housing are inappropriate developments. National Planning Policy - The Government attaches great importance to Green Belts. The fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open; the essential characteristics of Green Belts are their openness andtheir permanence.d. It will mean coalescence of villages ruining their identities. These proposals are unsound and cannot be justified. When considering any planning application, local planning authorities should ensure that substantial weight is given to any harm to the Green Belt. ‘Very special circumstances’ will not exist unless the potential harm to the Green Belt by reason of inappropriateness, and any other harm, is clearly outweighed by other considerations.f. A local planning authority should regard the construction of new buildings as inappropriate in Green Belt.

1259	Comments								
Flooding can be a major problem. Despite assurances – additional building is bound to increase pressure on streams such as Rowel Brook and the ability of fields to drain. 1853 Sanitary survey of Yarnton was carried out for several reasons – one of which was low lying land subject to flooding. Mead Farm of 272 acres was susceptible to flooding After the last housebuilding off Cassington Rd – tankers were regularly pumping water from ditches to prevent flooding Detailed Flood Risk Area map is provided as are pictures of Rowel Brook overflowing in to Oxford Canal. Flood pictures are provided for Begbroke Pumping Station FP 7 and Science Park - Begbroke East and a house in Begbroke west - Begbroke Roundabout and local fields - Extreme flooding Footpath 5 and Churchyard.

1266	<p>Comments</p> <p>What does Begbroke gain? Absolutely Nothing.- A loss of green belt and open spaces that have existed for many years (recorded in BPC minutes February 1957)- No controlled pedestrian crossing in the village on increasingly busy roads.- More problems for residents with access/egress to the A44- Difficulties getting to work.- The proposed local centre has been placed in Yarnton parish near to old entrance to science park and a great distance from Begbroke Village.- No nearby retail or facilities for Begbroke – but two in Yarnton.- The loss of existing green space- Loss of habitat for wildlife What benefits are there for Begbroke? None.- Loss of Green belt- Loss of views in every direction- Development encroaching on the village- Begbroke Science Park expansion- Worsening traffic - everywhere- Increased nearby populations resulting in pressures on services.- Increased pressure on reduced open space.- Increased pollution- Pressure on the Oxford Canal. Begbroke are mostly against these proposals. We feel there are some limited opportunities for small housing developments in line with the NPPF e.g. Yarnton Nurseries, brownfield site off Begbroke Crescent, possible flat type rental accommodation for workers at Begbroke Science park and Vans for Bands site in Begbroke. Conclusions: This Cherwell Local Plan 2011-2013 (part 1) partial review is a clear message to the various site proposers to build on Green Belt. There is no guarantee of future green belt erosion – see page 151 policy PR12b – “CDC has taken a formal decision that additional land beyond that allocated in the review is required to ensure the requisite housing supply” Well Begbroke, its residents and neighbouring villages are sending you a message– These plans are unsound, not justified and will forever change the local landscape, lifestyle and amenities for our descendants No building on our Green Belt - withdraw the proposal N OW</p>

PR-C-0517	25/09/2017	Malcolm	Goodspeed			
1235	<p>Comments</p> <p>Concern as a Kidlington resident about the possible housing development, not least in GB south of Kidlington. 1. Chief concern is that the proportion of affordable housing is far too small and the developers do not build affordable houses even to the percentage required by government. Houses are needed for key workers and other essential operatives, who cannot currently afford to enter the property market even with low interest rates, to sustain and increase the infrastructure of our communities. 2. This loss of GB will lose the distinction between Kidlington and Oxford and the village will simply become a suburb of Oxford. 3. The merging of Kidlington, Begbroke and Yarnton will considerably diminish the distinct character of the villages. 4. Oxford City should provide more units to meet it's own needs. There are numerous sites they could build on, particularly if they used the college sports field. These are used to a minimum level and doubling up could release acres of land for building.</p>

PR-C-0517	24/08/2017	Malcolm	Goodspeed			
1004	<p>Comments</p> <p>As a resident of Kidlington, asks for the following points to be considered: Developers indicate that they cannot afford to build affordable housing while making exorbitant profits by building luxury houses. So, they paid a sum of money to local authorities in lieu of such housing, who in turn do not build affordable housing. Affordable housing is necessary for key workers in the area who currently cannot afford the costs of mortgages or rents. Key workers include nurses, teachers, care workers and public transport operatives. This is not an exhaustive list. It is accepted that some green belt areas may need to be sacrificed to meet housing needs. However, before agreeing to any figure, Oxford City and particularly the University need to demonstrate that they have made similar sacrifices. Their current estimate of 500 houses within the City boundary is abominably low; have they considered building on some playing fields owned by the colleges? The impact of 4,400 houses on this village would be to add over 70% to the size of the village. Would the infra-structure be built to match this in an area where there is already pressure on primary school places. The amount of housing would radically change the nature of the village and make us just another suburb of the city.</p>

1246	<p>Comments</p> <p>Object to building 4,400 new homes on GB in Yarnton, Begbroke & Kidlington. The reasons being; Green Belt - The villages will blend into one urban sprawl. The development, as per attached map, has gone over the Yarnton-Begbroke boundary! Have Oxford City & CDC exhausted all possibilities to find the final area to build on? References made to a previous consideration of a new development in Heyford regarding the urbanisation of rural areas. Flooding - this major issue occurs most years, filling the gardens in Fernhill Rd (photos attached). Wildlife - Rushy Meadows, is an SSSI. Our fields have skylarks, bats & great crested newts. These are important wildlife protection sites. Our Roads won't cope with 2K more cars & only 2 exits onto the A44. Our bus service was reduced due to worsening traffic around Oxford. The additional P & R's & new bus routes from Woodstock completely miss out the A44 at Begbroke/Yarnton. Oxford City should build on it's own GB & brownfield sites & use its 2000 empty homes! There is nothing in place for GP's & Schools & where the extra teachers will come from. Barton Park has shown that there will not be affordable housing. When I asked the Cherwell staff what his thoughts on the proposals he said 'it's like a football team, you want your team to win' Really?? These are our homes and they will be here forever not a 90 minute football match! And the staff had no idea about how bad the traffic was during peak times! Once this area has been developed then there's it no going back and once it's gone it gone. What a shame that this Law was put into place generations ago to stop this actual thing happening, to protect our countryside, wildlife and landscapes and you are allowing it.</p>

Proposed Submission Plan - General Comments

PR-C-0523	08/10/2017	John & Elizabeth	Begley						
1270	Comments								
<p>As residents of Woodstock for the past 26 years it is felt that the planned additional housing for Woodstock would put further undue stress on local infrastructure and services which are already under pressure. This development is out of all proportion with the size of the town and would destroy the approach to a World Heritage Site, the rural environment, and the historic town of Woodstock would be turned into a suburb of Oxford. This is totally unsustainable. The need for affordable housing for key workers and ease of 'connectivity' are reasons given for developing the A44 corridor - but this will funnel a massive increase in traffic down an already congested road. It is disappointing that Oxford's/Oxfordshire's planning decisions seem at odds with providing for the pressing unmet need: Application for 83 flats providing 73 residences for tenants from the Council's approved list of key workers at a site off William Morris Close in Temple Cowley (inexpensive and easy 'connectivity' for Headington hospitals) - Council recommendation to turn this down. Whereas development of 8 luxury homes just outside the City boundary on the A44 (clearly being marketed to London buyers) was approved by Cherwell. It is unacceptable that rural towns and villages are being asked to accommodate Oxford's unmet need when incoherent decisions such as these are being taken. It is shocking to see the extent to which the National Planning Policy Framework is being allowed to be played and driven by land owners such as Blenheim Estates and Oxford University and developers for their own financial gain, with little consideration for providing the affordable housing that is actually needed in the right location. The scale of this need is based on shifting and nebulous housing numbers, as evidenced by the recent down forecast of Oxford's housing needs. Is this destruction of rural Oxfordshire the legacy we wish to pass on to following generations. If opportunistic landowners and developers continue to dictate planning decisions this will cause irreparable harm to local communities.</p>

<p>Submission that the plan as presently proposed is unsound for the following reasons: 1. The sites currently proposed for development are all clustered round Oxford Parkway station. Therefore attractive to households who want to move out of London on cost grounds. The breadwinners in these households will commute to London for work. Therefore the plan will not fulfil its stated purpose of helping to relieve Oxford city's housing shortage. 2. There appear to be no plans to support the development with appropriate public services - adequate roads, schools, doctors etc. In particular, the continuing problems with the Banbury Road and Wolvercote roundabouts will get much worse, thus making the development unattractive to residents working in Oxford. 3. The wish of an overwhelming majority of Kidlington, Yarnton, and Begbroke residents to remain as individual communities, split from Oxford by Green Belt land, has been largely ignored. This is surely unsound on democratic grounds.</p>

1290	Comments								
<p>"The duty to co-operate is not a duty to agree".. However, it is evident from the video put up on the Cherwell District Council Website of June 2017 Cherwell District Council Executive Committee vote on the proposals, that many voting members felt obliged to agree despite having voiced reservations. By not showing worst/mean/best case scenarios within the consultation documents (e.g. the Transport Assessment) there is a clear bias in the proposals which is not addressing adequately their true impact. That is NOT being 'positively prepared' but is instead misleading. Justification is lacking across 3 key underpinning documents: The Strategic Housing Market Assessment uses outdated economic data that is now discredited post-Brexit. It has grossed up 40%+ the housing need (para 3.39) to cater for economic growth which is no longer reasonable or defensible according to IMF, HM Treasury and Office for Budget Responsibility data post-Brexit. The National Planning Policy Framework has been abused. The proposals couldn't be further from the principles of para 80 regarding the GB and there is insufficient justification to cite the "very special circumstances" warranted per para 34 of the National Planning Practice Guidance for such scale of development on the GB. The Transport Assessment (July 2017) has modelled its scenario on the successful delivery of ALL the proposed critical investments listed in Table 8-2, assuming for example that a full bus lane is achievable from Begbroke to Loop Farm roundabout Yarnton (TA Appendix 5.2.2), whereas it admits there is no feasibility study and that it "has a very high cost". TA 8.1 refers to the investments as 'considered necessary and proportionate, if CDC and the eventual site promoters/developers are to support sustainable mobility', yet the absence of a feasibility study renders it very likely a failure to deliver ANY investment in full will cause the Plan to be unsustainable - given the constraints of 1 railway bridge, 1 canal bridge and private properties aligning that proposed new bus lane (A44 Southbound bus lane to Loop Farm Roundabout) it seems highly unlikely that the transport proposals can be met as proposed and that therefore the Plan is unsustainable and unjustified. The effectiveness of the submission is then negated by the lack of proper investigation and feasibility study for all the elements being proposed. It has been done with too much haste. Consistent with National Policy - No. The abuse of the National Planning Policy Framework means that the proposals are NOT consistent with national policy.</p>									
Changes Sought					Reasons for Participation				

<p>The Plan takes root in the 2014 SHMA which was based on data from 2013. The economic claims of the SHMA were already considered optimistic but have since been overtaken and discredited by Brexit and the consequent downturn in the economy, Unmet housing numbers for Oxford accordingly require a material correction. The scale of the proposed development is excessive and coalesces the villages of Begbroke and Yarnton to form an urban neighbourhood. This is neither necessary (given the overstated unmet housing need) nor an appropriate use of the green belt (per NPPF guidelines for "limited" development which benefits the "local" community). Plans need toning down significantly or dropping altogether. The Transport Assessment (July 2017) makes critical investment recommendations without which the proposals are unsustainable. A key critical investment being the A44 Southbound bus lane from Begbroke to Loop Farm Roundabout has not undergone any feasibility study yet has the constraints of 1 railway bridge, 1 canal bridge and adjacent private properties, making it a very unlikely or otherwise significantly disruptive and costly investment to provide. I suggest a formal feasibility study and costing is a pre-condition before any shovel breaks the dirt on development build. Finally, it is clear that Councils lack power to commit developers to the level of affordable housing that is needed, yet the Local Plan has no merit or credibility if in the end it fails to deliver the requisite level of affordable housing (after adjustment for SHMA correction). The Council and the developers need to be held to account to deliver the mix of affordable and other housing that the public eventually sign up to so, unless Councils are given authority to build for themselves, appropriate Performance Bonds for 5% of development value in favour of the affected parishes should be a pre-condition of any allocation of affordable housing quota in those parishes.</p>					Reasons for Participation

The proposals will have a major impact on transport with extra pressure being placed on already congested roads. The plans for new transport infrastructure deal with the existing needs and do not model the impact of the additional 4,400 houses. These plans will also cost millions of pounds and are currently unfunded. The Rapid Transit system will not pass through either Begbroke or Yarnton but will instead go from the new proposed Park & Ride site at Bladon roundabout to Kidlington along Langford Lane. Traffic that normally passes through Kidlington will be encouraged to use the A44. This means our villages will not be served by the Rapid Transit system and will suffer increased traffic, and that is before considering the new houses. There are hold-ups at the two Yarnton roundabouts during morning and evening times making travelling into Oxford and returning home horrendous. Any additional motors along this route will add to these existing problems. 4400 new houses in these modern time equates to at least 4400 additional cars being used for commuting, travel to the shops, Doctors, schools etc. which will in turn, affect any bus routes/movements. I have trouble daily getting from Cassington Road onto the A44 and have to arrange my travelling time accordingly now. There is insufficient money to mark the road lines or repair potholes and yet consideration is being given to adding more traffic to the already over-burdened roads. The proposal of shutting the road between Yarnton Roundabout and Kidlington (Sandy Lane) is ridiculous. This road is used daily by numerous people as an alternative to going along the A44 and over to the Sainsbury's roundabout (which is often very busy). It is the most direct route from Yarnton & Begbroke to the centre of Kidlington. The transport plans indicate that Sandy Lane will be closed to through traffic at the level crossing. Sandy Lane, by the admission of Oxfordshire County Council and Cherwell District Council, is a well used road. It provides a valuable link between our two villages and Kidlington. There is no public transport option planned to link these villages together with the only option being to travel further by car (which is already being discouraged) or walking or cycling. This is not an option for many people.

Flooding in the area is an issue. There are pictures showing the impact to flooding on Yarnton and Begbroke village. If the fields are concreted over, where will the rain water that falls be absorbed? The areas on the edge of the site form part of the flood areas for the Oxford Canal and Rowell Brook. Removing important GB land will only exacerbate the risk and misery that flooding brings to families. Much of Yarnton village relies upon the operation of Sewage Pumps to get rid of foul wastage. There have been problems in the past due to the sewage pumps becoming inoperative, causing flooding of sewage. Have the new properties being envisaged been planned, so as not to add to these problems?

Impact on Begbroke & Yarnton: Increase in population Yarnton is a village with a population of approximately 2,550 and Begbroke is a village with a population of approximately 780 based on the 2011 Census. There are approximately 1,350 houses in Yarnton and 390 houses in Begbroke. The proposals from CDC will be to build 2,480 new houses on the Green Belt land that currently separates our two villages I DO NOT think that this development is appropriate, especially given its size compared to the current size of Yarnton and Begbroke villages. Merging of villages: The proposed development is entirely on green belt land and would result in there being only a narrow gap separating the villages of Yarnton and Begbroke. This new development crosses the parish boundaries and we estimate that the physical gap between Begbroke and Yarnton will only be approximately 50 metres. There is also only a small gap between this enlarged development and Kidlington, meaning in effect that the three villages are merged into one large conurbation. We estimate the population would be around 30,000. I DO NOT think it is right that the villages of Yarnton and Begbroke are merged together with Kidlington to form a single large conurbation.

Housing Density. The housing density of the new developments will be 45 houses per hectare on the main site to the east of the A44. This is 50% higher than the density of the Cresswell Close/Pixey Close/Hay Day Close development in Yarnton a few years ago. Indeed, Cherwell stated when given planning permission that the number of houses on that site must be restricted to prevent over development. I do not understand why the Policy has changed. I DO NOT THINK that this is consistent with the existing community and think that this so called 'landmark development' will jar with the historic villages of Begbroke and Yarnton.

Proposed Submission Plan - General Comments

PR-C-0530	08/10/2017	Derek	Taylor		N	N	N	N
1300	<p>Comments</p> <p>The five purposes of the Green belt as set out in the NPPF are 1. To check the unrestricted sprawl of large built-up areas - Relevance preventing Oxford City from expanding beyond it's current boundaries and becoming an urban sprawl. 2. To prevent neighbouring towns merging into one another - Relevance the villages of Begbroke and Yarnton would be merged together and also with the village of Kidlington. 3. To assist in safeguarding the countryside from encroachment - Relevance the sites proposed are part of the countryside that currently surrounds our two villages and are high grade agricultural land that is also use for recreational purposes. 4. To preserve the setting and special character of historic towns - Relevance Yarnton and Begbroke have long histories and the proposals threaten their identities and history. 5. To assist in urban regeneration, by encouraging the recycling of derelict and other urban land - Relevance There are other sites within Cherwell and the neighbouring districts, including Oxford City, that could accommodate these new houses without needing to remove precious land from the GB. Once GB land is removed, it is lost forever. These plans contravene the purposes of the GB. Cherwell District Council have not considered their own policy on GB development. It is clear that comparison of Policy ESD 14 extracted from The Cherwell Local Plan 2011-2031, Part 1 adopted 20 July 2015 and these proposals are in direct contravention. In particular Yarnton and Begbroke are covered by "policy Villages 1" meaning only certain types of development can happen and is limited to, minor development, infilling and conversions. It is breath-taking reading the above when reviewing the proposals for the new houses on the green belt land around our villages. It is clear these proposals from Cherwell contravene their own Local Plan policy on the Green Belt.</p> <p>Changes Sought</p> <p>For the reasons I have given above AND the Representations made by the Begbroke & Yarnton Green Belt Campaign which I additionally support and adopt as part of my own Representation in this document, I am of the opinion that the Plan cannot be changed to make it legally compliant or document sound and should therefore NOT be submitted for Inspection</p> <p>Reasons for Participation</p> <p>I would like the Begbroke and Yarnton Green belt Campaign to represent me at the Examination should it take place.</p>							

PR-C-0530	08/10/2017	Derek	Taylor		N	N	N	N
1302	<p>Comments</p> <p>Land can only be removed from the GB if exceptional circumstances can be demonstrated. None of the twelve points listed by Cherwell District Council in their Proposed Submission Plan constitute the 'exceptional circumstances' needed to remove land from the Oxford GB. Many of these points (such as the strengthening of Kidlington village) have no connection with meeting Oxford's unmet housing needs with these 4,440 houses. Others are spurious. When reviewing the twelve points, consider that these houses are to meet the 'unmet housing need of Oxford'. If this is correct, it is important to look at where the jobs are within Oxford. It is clearly stated within Cherwell's documents that the three major employment areas are focussed on the City Centre, Cowley to the South and Headington to the East. Cowley and Headington combined employ more people than the City Centre. It is also noteworthy that jobs are migrating AWAY from the City Centre to the eastern and southern fringes of the Oxford urban area. The representation lists Cherwell's twelve "exceptional circumstances" as listed in the Proposed Submission Plan commenting that these arguments reverse the Cherwell District Council's own stated policies on the protection of the GB, as well as failing to conform with national guidelines. Cherwell DC has not provided the "exceptional circumstances" needed for removing our GB land as it makes NO sense to locate Oxford's unmet housing needs to the north of the city when the major employment centres are in the east and south. These "exceptional Circumstances" will have a disastrous impact on Traffic movements.</p> <p>Changes Sought</p> <p>For the reasons I have given above AND the Representations made by the Begbroke & Yarnton Green Belt Campaign which I additionally support and adopt as part of my own Representation in this document, I am of the opinion that the Plan cannot be changed to make it legally compliant or document sound and should therefore NOT be submitted for Inspection</p> <p>Reasons for Participation</p> <p>I would like the Begbroke and Yarnton Green belt Campaign to represent me at the Examination should it take place.</p>							

PR-C-0537	06/10/2017	Joan	Tossell					N
1330	<p>Comments</p> <p>It has been frustrating to watch CDC's response which has been compliance in accepting Oxford's claim now shown to be unjustified. The resulting has not given proper consideration to alternatives; it is not supported by any meaningful research; it has not addressed appropriate funding and flies in the face of national guidelines on the GB. Councillor Barry Wood addressed a packed hall of Kidlington residents and his best advice seemed to be that we should engage expensive legal teams if we want to fight this plan. In my naïve way, I had thought it was CDC's role to support and defend its constituents but it seems that we have to fight CDC as well as developers and Oxford city. I hope to see a change of approach and that Cherwell District Council's response will match that of South Oxfordshire in supporting the wishes of its constituents and oppose Oxford City's demands that are based on outdated and highly suspect research. Hope you will suspend this review in the light of the recent Government announcement and seek greater clarification before any more money is wasted on this matter.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							

PR-C-0537	06/10/2017	Joan	Tossell					N
1324	<p>Comments</p> <p>Even if some new homes have to be built, GB means GB: A large number of new homes cannot be built in Kidlington for the simple reason that there isn't any room left for expansion. The boundary of the village has grown in recent decades and it now meets the edge of the GB. The Partial Review assumes that Kidlington must surrender large areas of its GB but National Planning Policy Framework is clear that "The fundamental aim of GB policy is to: • "prevent urban sprawl" - and more specifically "to prevent unrestricted sprawl of large built-up areas" (e.g. Oxford City); • "prevent neighbouring towns merging into one another" (e.g. Oxford, Kidlington, Begbroke and Yarnton); • "preserve the setting and special character of historic towns" (e.g. Kidlington Conservation Area). Your proposal is urban sprawl in the GB on a massive scale which will inevitably connect Kidlington to Oxford and other settlements and destroy the historic setting of the most delightful parts of our settlements. It is not just the National Planning Policy Framework that argues against it but also central government policy as the 2015 Conservative Party Manifesto proclaimed "We will protect the GB" (p54). If those aren't sufficient by way of statements of protection, CDC's very own Kidlington Framework Masterplan, prepared as recently as March 2016 recognises that "The protection of the GB has prevented coalescence of settlements and preserved the integrity of the village and ensured the retention of Kidlington's landscape setting" (p17). It further states that it is a strength of the village that the "GB has prevented urban sprawl and coalescence" (p24) and that, "pressures for development in the GB" would be seen as a weakness. It concludes that, "the Local Plan's housing requirements and development strategy can be achieved without the need for a strategic review of the GB in the District" (p63) and that "the village is surrounded by GB and physically separate from Oxford and the surrounding villages of Begbroke and Yarnton. It is keen to remain so, retaining its independence as a settlement rather than becoming a suburb of Oxford" (p80) and that, although "landowners have promoted land within the GB for development ... it has been determined that the District's objectively assessed needs as identified in the SHMA can be accommodated without a review of the GB boundary and no sites have been allocated in the Local Plan Part 1" (p95). In short, the Government's election manifesto that is little more than a year old and the newly adopted Kidlington Framework Masterplan have both presented strong statements supporting the NPPF to protect Kidlington's GB. Oxford City is not willing to part with its green spaces for housing development - University Parks, South Park, Christchurch Meadows, Port Meadow, Cutteslowe Park, Shotover Country Park or South Oxfordshire Golf Course - so why should they expect Kidlington to surrender its green spaces? The plan is again unjustified but also contravenes national policy.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							

Proposed Submission Plan - General Comments

PR-C-0537	06/10/2017	Joan	Tossell					N
1322	<p>Comments</p> <p>If there really is an unmet housing need in Oxford city, it appears to have been created by the policies of the city council. Over many years we have witnessed successive building projects within the city that have favoured retail and commercial development over housing - particularly low cost housing - for the workforce required to support such developments. The most recent example of this is the Northern Gateway plan which, it is claimed, will generate 5,000 new jobs but contains no plans for housing the workforce. There is no reason why these new industries have to be sited in Oxford when there are areas around Banbury and Bicester which are better suited by way of motorway and other transport links and also have the facility to include affordable housing on nearby non-GB land. That Northern Gateway land should be used to meet any city housing need before any declaration of unmet need. On this basis alone, the city's claim is not justified and CDC's response is not sufficiently thorough in its research. Even where land has been made available within the city for housing, developers have been allowed to backtrack on agreements to build quotas of affordable housing. The most recent example of this is the Barton Park development where 885 homes are currently being built on the north-eastern edge of the city which it is estimated will cost £300,000 (one bedroom), 360,000 (two bedroom) and £600,000 (three bedroom). These are properties that will be bought by the buy-to-rent sector or people moving out from London and the south-east, attracted by the recently built Oxford Parkway Station with its direct line to London. Again, the city's claim must be regarded as not justified due to its continued policy of not allocating land for the purpose of meeting its own housing needs and CDC has not been sufficiently robust in its response. The result of Oxford's policies has been to generate higher rateable properties rather than the "affordable homes" that local people, especially the low-paid workers, which Oxford claims will need to be housed. The city is now invoking the statutory duty for other councils to cooperate in solving a problem of its own creation. Yet it can be shown that this "problem" is largely a myth.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							
PR-C-0537	06/10/2017	Joan	Tossell					N
1323	<p>Comments</p> <p>The claim by Oxford City Council that it has an unmet housing need of 28,000 homes by 2031 is flawed. This estimate was reached by the Strategic Housing Market Assessment (SHMA) after an "independent" review. However the review was not carried out by a truly independent body: GL Hearn Ltd, in their own words, exist to provide "property advice to the public sector, developers, investors and occupiers" and surely this is a far too cosy a relationship between reviewer and those with an interest in property development with an inflated figure clearly beneficial to the latter party. This seems far from "independent" and the resulting flawed estimate has been finally exposed for what it is: within the last month the Government has revealed its own method for calculating housing need which has shown that the county as a whole, which had been planning for 100,000 new homes by 2031, actually needs to build only 68,000 and Oxford city's perceived need has been halved. There are two factors which will reduce the newly calculated city housing need to nil. Firstly the Office for National Statistics has calculated that there were 4,300 people resident in the city and a further 15,400 resident in the county actively seeking employment during the period July 2015 to June 2016 (the most recent available figures) who need jobs but already have homes. Secondly, research produced by Oxford city itself in February 2013 showed that there were 1,800 unoccupied dwellings within the city and yet the council has done little over the subsequent 4 years to bring these back into use with over 1,300 dwellings still remaining unoccupied. Thus an unmet housing need now estimated at only 14,000 homes could easily be met by employing a significant proportion of the 19,700 already resident job seekers in the county and by using the existing 1,300 unoccupied properties within the city. Far from an unmet housing need, the city could, with a change of policy, have a housing surplus! But the city's response to the Government findings appears to insist that it must follow policies like the Northern Gateway that require an influx of workers from outside the county who are able to afford the highly priced homes that it is hell-bent on building in neighbouring councils especially in the GB. This exercise is a very transparent cover for a land-grab by the city to incorporate nearby communities into its boundaries. The city's policies are thus unsustainable and the resulting unmet housing need not only suspect but unjustified. Once again CDC's response has been compliant rather than investigative.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							
PR-C-0537	06/10/2017	Joan	Tossell					N
1324	<p>Comments</p> <p>Many initiatives are planned or have been recently put in place to make such traffic capture possible. It is already proposed that the existing Peartree Park and Ride be replaced with one located to the north of Kidlington - presumably with the route into Oxford down the dual carriageway from Woodstock to Pear Tree Roundabout and the Woodstock Road. The Government has recently announced that a "Garden Village" will be built near Eynsham - near to one of the other proposed new Park and Ride termini. A new rail link which opened recently takes commuters from Bicester into Oxford and, if a spur road could be built off the A34 into the new railway station in Kidlington, it would further take the pressure off existing congested roads by drawing in traffic from the north which is currently deterred by the current congestion in Kidlington to reach the existing entrance. Therefore it is not logical to locate new homes within the ring of railway stations and proposed new Park and Ride termini and expect commuters to drive away from the city to reach them! It makes more sense to build the homes outside that ring and to encourage a daily public transport commute into the city by strategically locating Park and Ride and railway stations with easy access and free parking where commuter traffic will be captured before it is funnelled into the already congested traffic closer in to the city itself. It would also incidentally go some way towards addressing the rising concerns about exhaust emissions. 4,400 homes would almost double the population of Kidlington. We have seen the effects of successive big housing developments in this village over the past 40 years - Dogwood Green, Grovelands and Park Farm. Each time land has been set aside in the plans for such things as shops, medical centres and schools but every time the allocated land has ended up covered with houses and not the promised services. Currently in Kidlington, our primary schools are full, our secondary school had a full year 7 intake in 2017 and it takes over 2 weeks to get a non-urgent appointment with one's GP. Expansion of the current services is already difficult because house prices discourage teachers, doctors and other public service professionals from living in the area. Kidlington cannot afford to be twice the size and sustain the support network it needs. The "It must be Kidlington" argument falls because more affordable homes can be built further away from the city and outside a ring of public transport options and where public services stand more of a chance of coping with the influx. On this basis the plan is once again unjustified but also unsustainable because of its poor research.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							
PR-C-0537	06/10/2017	Joan	Tossell					N
1325	<p>Comments</p> <p>Even if there has to be some new homes and it was deemed to constitute "exceptional circumstances" sufficient to justify trashing the GB, Kidlington is not the answer. It is a false logic that the best place for any new dwellings is close to Oxford for the following reasons: • According to Rightmove the average selling price of a Kidlington residential property over the past year was £341,000 - a rise of 19% over the previous three years. By comparison, Rightmove gives the following residential selling prices for search areas that you initially identified but quickly dismissed in your research - £308,000 (a 3 year rise of only 16%) for Bicester and £237,000 (a 3 year rise of only 13%) for Banbury. The least affordable properties are in the city and surrounding areas like Kidlington but the further you move away from the city, the greater is the possibility of building affordable homes. Homes built recently in Kidlington have, in the main, attracted property developers, the buy-to-rent market and London commuters. There is no reason to suppose that any new houses built here in the near future will meet any supposed local shortfall. The proposed low house building density per hectare in your plans will not produce "affordable homes". • Had you done any surveys and costings you would certainly have concluded that the transport network in and around Kidlington will not support the massive developments proposed. Already we have daily traffic congestion through the village into and from Oxford, made worse during school term time when children are ferried to and from city schools to add to the commuter traffic. There is also frequent congestion in streets off the main roads in the village as commuters park close to bus routes into the city rather than pay to use the Park and Ride. 4,400 new homes in Kidlington for Oxford commuters means a minimum of 4,400 more traffic movements in each direction on each working day - more during school terms. We are not coping now: we cannot cope with a doubling of the problem. Recent measures to accommodate more traffic in and around Oxford have demonstrated the futility of such schemes - the recent expensive and 18 month period of roadworks to speed the peak flow of traffic around the north of the city has resulted in journey time improvements which have been measured in only a few minutes. So how would Oxford City workers get to work if new homes were built further away from the city than Kidlington? The answer is already in your very own Cherwell Local Plan 2011 - 2031 (Part 1) Summary Leaflet in which you say: "The County Council's strategy is to move Park and Ride facilities further away from Oxford to improve the operation of the A34 and other roads it intersects. Its Oxford Transport Strategy states that future housing and employment growth within Oxfordshire is set to further exacerbate congestion on the A34, the outer ring road and other corridors that feed into the city, unless traffic can be captured before it reaches them". The "It must be Kidlington" argument therefore falls because a true logic is that more affordable homes can be built further away from the city and outside a ring of public transport options and where public services stand more of a chance of coping with the influx. On this basis the plan is once again unjustified but also unsustainable because of its poor research.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							

Proposed Submission Plan - General Comments

<p>PR-C-0539 1333</p>	<p>04/10/2017</p>	<p>Frank</p>	<p>Vreede</p>	<p>Comments Objection to: 1. Sacrificing GB without showing clear "exceptional circumstances" Protection of GB is a critical point laid down in law. 2. Oxford's "unmet housing need" is speculative, based on out of date, inaccurate figures, which are wildly overestimated. 3. Whilst Oxford is prioritising land for business development over housing, Kidlington is expected to sacrifice GB for housing. If Kidlington has to sacrifice GB is should be for the benefit of Kidlington residents, more employment in Kidlington would mean less commuting to Oxford. Transport measures included in the proposal are laughable. 4. The Council should be carrying out the wishes of the people they represent. These proposals have proved to be VERY unpopular in earlier consultations, with only lip service paid to them. Councillor Barry Wood suggests that Cherwell residents may need to take professional legal advice if they wish to successfully challenge the Council's plans. I would propose that more houses are built in Oxford City using available land for housing (at higher density) rather than business development, and development is targeted to centres not constrained by GB. Kidlington should be allowed or even assisted to develop as Kidlington.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>
<p>PR-C-0540 1334</p>	<p>08/10/2017</p>	<p>Sophie</p>	<p>Hyndman</p>	<p>Comments Plan has been developed as a consequence of the Oxfordshire Strategic Housing Market Assessment which is unsound in it's methodology. The Government is consulting on 'Planning for the right homes in the right places: consultation proposals,' which presents a different method for calculating need. It is inappropriate to go forward with the Cherwell Plan as it stands with the current method for calculating need under review. Cherwell Council should await the result of this new consultation, as new estimates of housing need may be substantially reduced, thus rendering the current plans unnecessary. Cherwell Plan is based on SHMA and flaws in that document are: 1. Any 'strategic' thinking on development should be at national level. Oxfordshire is linked to the rest of the country. It seems the Government has completely give up on drawing development away from the South and South East (with the possible exception of the controversial HS2) and yet there are towns elsewhere which need economic expansion. Prosperity should be shared not hoarded in one place. 2. The basis of the SHMA appears to be driven entirely by an economic growth model. Other stakeholders - heritage, environment, residents etc., appear to have had very little input. The SHMA did not ask, 'what overall vision do all stakeholders want for Oxfordshire?' instead it has simply asked, 'what does business want for Oxfordshire?' It is likely that most stakeholders would want some economic growth - but not at the expense of everything else that matters to them. 3. The consultancy firm which compiled the SHMA was following guidance which states that in making their predictions, they 'should not apply constraints to the overall assessment of need, such as limitations imposed by the supply of land for new development, historic under performance, viability, infrastructure or environmental constraints' (p.7, SHMA) presumably to get a 'pure' idea of need. The guidance also says, however, that 'these considerations will need to be addressed when bringing evidence bases together to identify specific policies in development plans'. (P.7). The SHMA is also clear that these issues are important and that 'They are very relevant in considering how much development can be sustainably accommodated and where new development should be located'. (P.183). It appears, though, that the councils of Oxfordshire have chosen to interpret this not to mean 'actually it might not be sensible or sustainable to build all these houses', but 'we'll try and put them in the least offensive places.' (4) As one reads through the SHMA, the numbers of houses get bigger and bigger with a series of 'what ifs' which are by no means certainties. Since its publication, there have been changes which could easily influence the likelihood of predicted economic developments, the most significant of which is Brexit. (5) How can you possibly increase the numbers of dwellings by more than one third and not expect a significant impact on the landscape and life in the county? According to the SHMA (p.15), in 2014 there were c. 272,000 dwellings in Oxfordshire. The adoption of the most extreme prediction, of an additional 100,000 homes by 2031, appears to have been done with no 'sense check' as to the ridiculousness of this number. (6) The SHMA makes hardly any reference to the significance of London in the Oxford housing market. The peculiar idea that North Oxford Golf Course should be moved a few yards down the road so that its current site can be developed, is only acknowledgement of this fact. The new station was not open at the time of the SHMA, but a report that predicts many things seems not to predict a potential impact of improved transport links to London. To talk of solving Oxford's 'unmet housing need' by building is short-sighted. We will be catering, in addition, for London's unmet housing need, and any local person wishing to buy a house on the open market in Oxfordshire may well be competing with people on London salaries. (7) The 'Predict and Provide' model used in the SHMA has been shown to be unsound. It would be better to say what we want, and then to achieve that vision with appropriate planning carrots/sticks? (8) Building on GB land is surely wrong. GBs were invented to prevent this type of development? The Oxford GB was put in place to stop precisely what is happening now? The SHMA has been roundly and more 'professionally' criticised by sensible organisations such as CPRE. If the new approach to determining housing need, currently out for consultation, is accepted, we would still have to wait and see how Oxfordshire Councils respond to it, e.g., whether they wish to extend the baseline numbers relating to household growth and affordability by considering employment growth etc. Any proposed development in Cherwell may well be influenced by this new formula and its interpretation. The latter may also be flawed if any of the criticisms of the SHMA can be applied to the new approach. . We trust councillors to make decisions for us. Most busy people only notice housing developments when they appear on the doorstep. It is essential that decisions made that will irrevocably change Oxfordshire are based on sound data and a sensible national strategic approach to development.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>
<p>PR-C-0543 1346</p>	<p>03/10/2017</p>	<p>Lynn</p>	<p>Pilgrim</p>	<p>Comments Cherwell District Council appears to be more concerned with following the process of consultation than considering the views of local residents and acting on what people are telling them. CDC does not appear to be taking the public consultation seriously and the leader Mr Barry Wood has stated that the SHMA target doesn't need to be accurate as long as it has been approved via the correct process and that the council is confident that it will find ways to keep housing need projections at the current level. Is this serving the people of Cherwell district or fuelling the greed of the development lobby?</p> <p>Changes Sought</p> <p>Reasons for Participation</p>
<p>PR-C-0546 1353</p>	<p>06/10/2017</p>	<p>John M</p>	<p>Titchmarsh</p>	<p>Comments The alleged need for 4,400 houses was made by the SHMA of 2014. This assessment method was discredited on 14/09/17 in a Govt. white paper. It proposed a new calculation method will be implemented in March 2018. Also, CDC's proposal was made before Oxford City Council (OCC) completed its future housing needs. Thus, it is non sequitur that CDC's assessment is even logical. Comparing results of the SHMA & the new method show OCC's & CDC's estimates are incorrect. Building on GB. GB directives state building on GB should only be permitted under 'exceptional circumstances'. References made to NPPF's 5 purposes of the GB. CDC's proposals clearly contravene these. The plans encourage urban sprawl, merging Begbroke, Yarnton & Kidlington with Oxford. Begbroke & Yarnton are distinct, characteristic villages. The CPRE have identified numerous brownfield sites within Oxford City suitable to build high density, affordable housing, closer to major employers. The development is the opposite side of the city to BMW & major hospitals. CDC's plan reverses/contradicts statements in its own Cherwell Local Plan pt1 (2014). Reference made to A11 & B.260 of this LP. This demonstrates a frivolous & inconsistent approach to long term planning. Proposal of 'rapid transit system' through Kidlington & dedicated bus lanes on A44. The vague promise of such schemes would require huge infrastructural funding to overcome the railway & canal bridge obstacles. Funding needs major Govt. commitment & is not readily forthcoming. Closing Sandy Lane would inconvenience residents of Yarnton & Kidlington, consequently causing longer journeys and further overcrowding the A44. The transport proposals are UNSOUND.</p> <p>Changes Sought</p> <p>Reasons for Participation I would like the Begbroke and Yarnton Green Belt Campaign to act as my representative during the Examination by the Planning Inspector</p>
<p>PR-C-0547 1359</p>	<p>09/10/2017</p>	<p>Hilary</p>	<p>Fletcher</p>	<p>Comments Cutteslowe Park is Oxford's largest, used by tens of thousands p.a. It gives easy access to these people & gives views across the GB. People walk, use public transport & cycle to it. It is used for sports & recreation, as well as nature & river areas. It needs to be extended to include woodland, not restricted. We need a guarantee of the assigned areas of the park extension & arable land shown on guidance map 27.09.17 as a minimum.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>

Proposed Submission Plan - General Comments

PR-C-0548	09/10/2017	Clive	McDonnell						N
1365	Comments Objects to proposed plan & sustainability appraisal. It is inconsistent with the NPPF because it fails to provide sustainable development, ensuring a better life for current/future generations. It fails to: Promote realistic sustainable transport; Protect GB; Meet the challenge of climate change & resultant flooding; Conserve and enhance the natural and historic environments. The consultation process has been unreasonable. I object to the complexity of it, with the demand that representations are made on a specific form, and being timed over school holidays. CDC failed to give the public an opportunity to digest the proposals & make their views known. Considers the proposed submission plan, associated policy maps and sustainability appraisal to be unsound, not positively prepared, not justified and not effective for the reasons detailed in specific objections and comments.								
	Changes Sought			Reasons for Participation					
PR-C-0550	06/10/2017	Jacqueline	Orton						N N N Y
1367	Comments Poor planning, research & proposal development making plans poor for these reasons: 1. Unjustified permanent removal of GB. 2. Lack of justification for CDC having to take Oxford City's unmet housing needs. Further investigation needed in how Oxford City should be developed if it can't meet it's own housing need. Allowing Oxford to sprawl into its surrounds is not a long term solution. Oxford City should provide housing to meet it's own requirements, prioritising housing over commerce. If it increases employment but doesn't build housing within, this impact transport issues. More people will travel in from outside, further congesting & polluting roads. 3. Unjustified removal of recreation areas (e.g.. Golf Course), adding congestion & pollution. 4. Merging villages,Begbroke/Yarnton/Kidlington. 5. Lack of supply of facilities for the additional population, i.e.. Schools, GP's etc.

PR-C-0551	04/10/2017	Jackie and David	Hoyle and Bryan						N Y
1368	Comments It is Unsound for these reasons; 1. Traffic on A44 a. The roads are saturated with traffic at peak times & heavy at other times. Building a dual carriageway will be difficult, increasing noise & air pollution. b. Many workers in the Oxford vicinity need to get other parts of the city as well as the centre, and to other local towns. Public transport isn't adequate for these commuters. Any reassurances regarding improvement of the public transport infrastructure are unacceptable. Plans should be put on hold until sustainable transport solutions, including enhanced cycling provision, have been properly identified. 2. Closing the road to Kidlington, forcing more traffic down the A44 is unacceptable. 3. The extent of Oxford's unmet need hasn't been properly established. More should be done to provide it within Oxford City, e.g.. the golf course to provide housing for public sector workers, with prices pegged to ensure on-going affordability. Oxford is failing to prioritise house building. e.g.. the decision to develop the sports park at Horspath. Horspath would be an ideal site for hospital workers in Headington, & various business & industrial sites to the East of Oxford. 4. The damage to the GB & to the identity of Kidlington & Yarnton from building either side of the A44 can't be justified. It hasn't been established that this is a "last resort" that can justifiably be pursued. 5. Any building (to be justifiable as a last resort) must be on the East side of the A44 alone, reduced in scale & be combined with measures set out above if the effects are to be acceptable & sustainable.

				I should like the Begbroke and Yarnton Green Belt Campaign to act as my representative during the Examination by the Planning Inspector.					
PR-C-0552	02/10/2017	Alexandra	Gallaher						
1369	Comments The proposal destroys NOGC, the most vulnerable & important part of the whole GB. The land on which NOGC sits precisely matches all the purposes of the GB set out in the Government's NPPF. It prevents the merging of communities with urban sprawl & loss of identity. 110 year old NOGC is an attractive landscape supporting a variety of wild life, with over 25 different tree species & 55 different bird species & pond life including the Great Crested Newt. It is a green lung, counteracting pollution in a high traffic area. It is a thriving, vibrant club, open to all, with 475 regular playing members. Some have been members for over 50 years. Around 3,000 visitors play there every year. The club also hosts social/ sporting events, e.g. Pilates & yoga. Members come from all ages & walks of life & regard it like we might regard our family. The Junior section fosters an interest in sport from an early age. Many senior members consider it to be their life blood, having led active sporting lives but are now of an age where they need to pursue less physically demanding sports. It is a community of people. If it were to disappear then members would lose all of the above benefits. What would they do for socialising & exercise whilst another course is being developed? Because of its unique layout the course is ideal for those learning to play & developing their skills, & the older players who find other courses around Oxfordshire too long & challenging. Apparently CDC has not spoken to the Golf Club. A replacement site at Frieze Farm has been suggested. Where is the logic in destroying a magnificent course & moving it across a dual carriageway to an unsuitable site? Why not build houses there instead of creating this mindless destruction? A new 18 hole course could not be fitted into the smaller Frieze Farm site. Who would pay? It takes many years & lots of money to build & develop an 18 hole golf course. It is far more than just a piece of land. Why not come and visit the Course? I would be delighted to arrange for you to be driven around so you can really see what they are planning to destroy.

Proposed Submission Plan - General Comments

PR-C-0555	01/10/2017	Chris	Skinner					
1380	Comments							
<p>1. Any building on the Oxford side of Oxford Parkway is likely to bridge any perception of Kidlington/Yarnton as separated from Oxford. It would dilute the value of the GB more than any other aspect of your proposals. Once continuous building is in place along the Kidlington to Cutteslowe Rd it is then likely that decision making will continue until Kidlington is subsumed within Oxford's boundaries. This may be 20-30 years away but it should be resisted. 2. The building at Water Eaton Lane makes only a small contribution to the proposed dwelling target but would significantly change the feel of that area & increase the loading in the signal-controlled junction at Bicester Road, increasing delays on the flow of traffic at peak times. 3. A significant emphasis is made of the importance of environmentally friendly transport, particularly a cycle super-highway to Headington. I strongly urge that any planning approvals are made wholly contingent on providing this & that an improved traffic-free, more direct cycle & walking route is considered including bridges across the Bicester Road, the A34 & the railway & then on a new, dedicated route running east of Cutteslowe park before swinging round via a new bridge to join the A40 cycle route to Headington. A significant investment & focus on prioritising cycling will be required to truly change the transport choices made. 4. Filling in around Begbroke Science Park, between the railway & the A44 is the least worst solution to providing the number of homes. It is imperative that this must not be watered down in the commitments to the new bridge to Stratfield Brake, the closure of Yarnton Lane to motor traffic & the provision of the new railway halt. All should be made a mandatory requirement of any developer. The costs should be part of the developer's & neither the CDC's nor the community's. CDC should set standards & hold all to them. 5. Strongly oppose development on land to the NE of the Moors/St Mary's Fields. This pushes the developed boundary into open land [as opposed to infill between Yarnton/Kidlington] & removes a linking community amenity to the Cherwell valley. 6.Improving rapid bus transit to the hospitals & Headington should be considered. References to this are non-specific. I would encourage that these are made mandatory to any plan & costs or contributions from developers expected. The current 700 bus route is very slow, diverting into Oxford Parkway & waiting 5-10 mins, then diverting into the JR & back out again. I would suggest this is re-routed directly from Cutteslowe, along the A40, leaving at the new junction, using the rear entrance into the JR, avoiding Summertown & Marston completely [already served by bus services]. A target journey time of 30 mins from Kidlington centre to the Churchill would not be unreasonable, even at peak times. Without a real focus on providing easy, fast, non-car journeys to Headington, the proposal will not be a viable choice for the workers [hospitals, university].</p>

<p>* Provision of an improved traffic-free, more direct cycle & walking route should be considered including bridges across the Bicester Road, the A34 & the railway & then on a new, dedicated route running east of Cutteslowe park before swinging round via a new bridge to join the A40 cycle route to Headington. A significant investment & focus on prioritising cycling will be required to truly change the transport choices made. * Improving rapid bus transit to the hospitals & Headington should be considered. I would suggest the current 700 bus route is re-routed directly from Cutteslowe, along the A40, leaving at the new junction, using the rear entrance into the JR, avoiding Summertown & Marston completely [already served by bus services]. A target journey time of 30 mins from Kidlington centre to the Churchill would not be unreasonable, even at peak times.</p>

Page 2631	<p>Object to the proposed submission plan. It is unsound, not positively prepared, not justified and not effective for the reasons given in specific objections below.The size of the development proposed is totally inappropriate. Begbroke and Yarnton would lose all sense of supporting village life. The impact on our villages would change forever our separate identities. The number of homes proposed means we would become one huge conurbation. The type of housing and density proposed is not consistent with the existing community and would jar with the historic villages of Begbroke and Yarnton. The GB is part of our village environment and personally enjoy walking and cycling from my village to various points that I can reach on foot or bicycle. This area is good for our health and it's one of the attractions of living in a village.There are other sites within Cherwell and Oxford City where new houses could be built without needing to remove land from the GB. The proposals would leave little opportunity to enjoy our countryside any walks and paths would be lost for ever. When commuting to work in Oxford I have endured many years being stuck in traffic jams I am appalled at the proposals. The idea that any adaptations to the infrastructure could cope with increased traffic the development would create. We live and work so close to Oxford a beautiful historic town which is extremely difficult to navigate by car. Also very dangerous to tackle using a bicycle. Delays are a common occurrence on normal days and that does not take account of the increased traffic on Event days at Blenheim Palace. The closure of Sandy Lane would add to traffic delays and problems. Has witnessed many times when traffic is at a standstill between the roundabouts in Yarnton on the A44 drivers mounting the grass verge to cross and escape to the other carriageway. Sandy Lane does give an alternative to this procession of sitting cars and escape route and allow some chance of taking a different route. Sandy Lane is a frequently used road for access to Kidlington by residents of Yarnton. The closure would mean a longer journey and also increased traffic on the A44. Kidlington is where I access activities shopping and friends on a daily basis. Flooding and drainage has been an ongoing problem at the bottom of Rutten Lane near Cassington Road for many years and I have complained in the past with no success or resolution. Therefore the proposed Development can only add to an existing problem. Cannot understand how concreting over such a large area makes any sense when the existing infrastructure is unable to cope.</p>

<p>Our comments are similar to those submitted in the last consultation response. Although we recognise that more detail has been provided in respect of some of the points we were seeking clarification over. We acknowledge the approach in meeting unmet need in the latter part of the plan period & having a stepped trajectory would be useful in terms of delivering Oxford's unmet need. We also understand that any planning permissions granted for housing that will be delivered beyond 2031 & which results in the requisite 4,400 homes for Oxford being exceeded, will be taken into account in meeting Cherwell's housing need in the next LP Review. However, whilst we understand that the 7 sites which have been identified to meet Oxford City's unmet need require reasonable 'lead-in' times, together with the need for the district to maintain their own 5 year housing land supply, it may be possible that some of these sites could be delivered earlier. Any over delivery in the earlier part of the plan period could be counted towards Oxford's unmet need & it is considered that further clarity should be provided in respect of this point. This may be particularly useful as presently, a significant portion of unmet need is due to be delivered later in the plan period, between 2026-2031. SODC also notes that approximately 3% of the existing GB land in Cherwell is proposed to be removed to accommodate the development of the strategic sites other than land to the south east of Woodstock. We note that justification for this has been presented but that fundamentally, this mainly relates to meeting Oxford's unmet need. This itself is not an exceptional circumstance to release GB land and we are cautious of this approach.</p>

Plan Summary Booklet Page 30 - In respect of Duty to Co-operate, our question is whereas the districts have clearly committed to contributing to a solution to Oxford's housing need, has the city really exhausted all possibilities to meet it's own needs? After all the best place for housing for the City is in the City-that possibility should be re-examined

Changes Sought

Regarding the Duty To Co-operate, we think the plan consultation should be delayed while that duty is discharged in respect of: - basic re-evaluation of the assumption that other communities and their GBs should be decimated to accommodate the city's needs. - re-assessment of housing needs across Oxfordshire and the south east. -requirement for Oxford City to fundamentally review their housing estimates.

Serious objection to development in the Oxford GB especially around the Kidlington area.The GB was introduced to preserve Oxford's iconic city landscape. To build here would be to destroy a unique area and open the way for continued development in the future by destroying even more GB. The number of houses originally proposed was based on very way out guesses not a detailed analysis. It looks as it has fallen at the first hurdle as the Government now states the figures for Oxford's needs are now only half the number originally proposed. This alone should mean the withdrawal of the plan to destroy the Kidlington area and local countryside. The plans should thus be reconsidered as I believe is being done in South Oxfordshire. Considers that many of the houses proposed are not for local housing need but to allow for more commuters from London.

What is needed is a careful rethink of the reduced need and to cater for it with a little more imagination. Explains the housing situation in Copenhagen in the letter. This allows for better public transport and a very high bicycle usage. Higher densities would allow similar solutions relieving the awful transport chaos that Oxford and the surrounding area suffers from and that will be made even more impossible by the type of development proposed.It is obvious that this is what the local people want I expect we will suffer from the usual democratic deficit and the crazy current plans will be pushed through and we will become even more disillusioned with our politicians.Please think again.

This country currently needs a lot more houses. Here is an excellent place to build them. Near to 2 rails stations and a good road network. The Green Belt is hardly the South Downs. The little that would be lost will be well worth it. If there had not been similar expansion in Kidlington in the past, we would not have the amenities we have now. Three supermarkets, 2 Post Offices, Swimming Pool, many Schools and Surgeries, plus a number of developments for the elderly. This development will raise over £3,000,000 in Council Tax, might bring down/stabilise house prices in the area.

This policy as worded, is largely meaningless as it describes an “approach”. It might as well say “We hope that the necessary infrastructure will be provided”. The infrastructure schedule in Appendix 4 has no costs identified and very few sources of funding. Where funding sources and ‘partners’ are identified there seems to be an excessive reliance on developers. Without information on costs it is impossible to assess whether the proposed development will or will not be able to meet the contributions needed, bearing in mind the requirement for it to also subsidise 50% affordable housing. The policy is therefore not justified, not positively prepared and not effective. The projects listed in Appendix 4 do not include any significant proposals to increase capacity on the highway network, indeed it is possible that public transport improvements would reduce capacity for other vehicles. However, traffic movements are likely to increase substantially because many journeys cannot be made by public transport and there appear to be no proposals to cater for these additional movements. Furthermore traffic will also increase as a result of the developments planned for the other Oxford Districts, as well as that planned elsewhere in Cherwell. There is no evidence that this has been taken into account or catered for. Clearly this needs to be addressed at a wider spatial level than either the area covered by this plan or Cherwell District. The draft Oxfordshire Infrastructure Strategy is an attempt to do this, but this document admits to a historic deficit in infrastructure provision and shows that only £500million of the £9 billion of infrastructure funding deemed necessary has so far been identified. It seems highly unlikely that this gap will be bridged, so the plan will be ineffective as it can not be supported by the necessary infrastructure. Regardless of this, we consider that some of this infrastructure, particularly road building, would in itself be environmentally damaging to the Oxford GB, and we would not support it, even if it could be funded. Our argument remains that an overall spatial strategy for Oxfordshire is needed, including infrastructure provision, that is (a) based on realistic levels of growth and (b) directs much of that growth away from the city of Oxford, retaining the GB and protecting the historic city.

Changes Sought

The plan should be withdrawn and an overall and realistic spatial strategy for Oxfordshire developed, including infrastructure provision, that is (a) based on realistic levels of growth and (b) directs much of that growth away from the city of Oxford, retaining the GB and protecting the historic city.

Totally agrees with the plan to put these houses in the area running from Kidlington to Woodstock. It is the natural corridor as Kidlington has never been a conventional village but rather a suburb of Oxford. Also it would obviously be convenient for the local Airport. Cannot see how one can provide the housing required to meet Oxford's needs without building on some areas in A and B that are presently Green Belt. It would be counterproductive to build further afield than A and B as the houses will not be used for Oxford's unmet needs but for local needs instead or commuters to London (as is already the case). Totally against these houses coming to Bicester or any of the areas designated as C through I inclusive. Is also against any of the South Oxfordshire “quota” coming to Cherwell. Assumes that by not agreeing to take any houses, South Oxfordshire hopes to shunt them onto other areas – i.e. ours! I.e. NIMBY! This is the reason we already have everything in this part of Cherwell (or just over the border) that no-one else in the South wants – i.e. 2 waste recycling plants, thousands of houses, no infrastructure, no decent shops, roads that weren't fit for purpose many years ago (let alone with over 20,000 extra houses!) and a shopping “village” that would appear to “run the show” and has taken over the better half of Bicester's rail service! My initial thoughts regarding the proposed Submission is that for once common sense has prevailed and that the houses are best placed in Areas A and B.

Absolutely devastated and extremely upset to hear of your plans to build on our beautiful and agriculturally productive Greenbelt. Lived in Yarnton for over 50 years. MP Layla Moran pointed out that the Government's consultation on a new method of calculating housing need, halves the housing requirements for Oxford and reduces Cherwell's by one third. However, this appeared to have fallen on deaf ears judging by the response given. Therefore this plan now needs to be scrapped or at least reconsidered as to the number of houses necessary. Rep goes into detail in her letter concerning life as it was, in Yarnton in 1966. To the west of the main road on Spring Hill where you propose to build nearly all the ancient hedgerows have been grubbed out to create enormous fields where crops are grown to feed the Agrivert Food Digester to the left of the Yarnton to Cassington Road. Spring Hill is called that for a very good reason that it has springs all over it which cause flooding in the village and on the main A44 already without concreting over even more. Yarnton residents have also had to put up with the destruction of our land between us, Worton and Cassington with extensive gravel workings we can no longer walk near, despite promises. These have already wrecked 5000 years of our village history and now the licence for more has now been extended for further years by Hansons. Also in that area a huge dusty and potentially hazardous Recycling Plant has been built which you have to walk past on the footpath/permissive path which was made next to the railway line. This on the site of Yarnton Halt where the old historical railway turntable has been destroyed to re-route the path. Therefore Yarnton has lost many of our footpaths and bridleways already on the west side of the A44. Now you propose to build 2500 houses on land to the west and east of the A44 while will mean ours, Begbroke and Kidlington Parishes will be merged into one great blot on the landscape of urban sprawl. You also propose closing Sandy Lane to through traffic making a 9 mile detour necessary to get to Kidlington by car. From our house we can see the traffic on the A44 absolutely stuffed and moving at snails pace and the building of so many houses will only create more traffic problems all round. Without the infrastructure being put into place first, a housing development of this size will make the traffic situation even worse and we'll never get out of the village. Rep refers to public transport in Yarnton in her letter. The productive agricultural fields you propose to build on to the East of the A44 are, like Spring Hill fields to the west, an absolute quagmire in the winter months, which we will also lose if this ridiculous, unnecessary and ill thought out housing plan goes ahead. Once the Greenbelt is built on here it will open us to the threat all over the country which is an unbearable thought. Yes, people need affordable housing with the sky high prices around this area, but my boys cannot afford to live and work here and have had to move away meaning we cannot see them or our grandchildren that much. However, to wreck our greenbelt here for Oxford's Unmet Housing Needs is criminal especially when Cherwell can't even meet its own. Oxford has plenty of land and brownfield sites it could use first, not to mention the stock of houses belonging to them which have fallen into disrepair and should be refurbished. Also to the north of the city between Woodstock and Peartree Roundabouts there is plenty of land for housing rather than more industrial units and science parks. The same could be said for both sides of Frieze Way where you propose to build a golf course on our side. However many golf courses do we need with people having to work longer hours, into their seventies when they might have more leisure time? Please reconsider and rethink or resign as Councillors as you are not acting in the interests of us the people who elect you. Wait until the end of the consultation by the Government and PLEASE PRESERVE AND PROTECT OUR GREEN BELT AROUND OUR TWO VILLAGES AND PRESERVE THEIR HISTORY AND INDIVIDUAL CHARACTER.

Changes Sought

I have delayed sending my Representation against until now as I wanted to attend all the meetings and read all your expensive literature and hear your representations regarding it first. I have now done this and following the meeting at Exeter Hall on the 21st September when our MP Layla Moran was in attendance. and pointed out that it is clear that the Government's consultation on a new method of calculating housing need, halves the housing requirements for Oxford and reduces Cherwell's by one third. However, this appeared to have fallen on deaf ears judging by the response given. Therefore this plan now needs to be scrapped or at least reconsidered as to the number of houses necessary.

Strong support for Cherwell District Councils decision not to include the Moors land for development. The land is well used by local residents, having views towards the Historical St Marys Church in the oldest part of the village. The land is currently in GB and should stay in GB. The area is often flooded so any building will increase the risk of flooding to existing homes in the area. There is already a stretched infrastructure along with a rich wildlife which will be put at risk. I do not want to see any development which has been sought by Bloombridge.

Objection to the Local Plan Partial Review and the proposed 4,400 Homes. 1. Green built should only be built on in exceptional reasons. Oxford City's unmet housing needs is not exceptional. Not only has Oxford City failed to meet it's own needs by not using all land available to them, they have also not demonstrated that all avenues have been pursued. 2. The Green belt preserves open spaces that protect the historic City of Oxford and also serves to prevent coalescence. 3. Oxford City have a huge number of sites where they have not reached the agreed affordable housing figures. Despite this they want CDC to comply with a 50% affordable housing figure. This is not commercially viable for the builder and cannot be enforced. This is therefore not acceptable. 4. Oxford City has huge parcels of land earmarked for employment. These sites could in fact be used for housing outside the green belt. Oxford does not have a problem with employment, in fact we have a problem finding employees. 5. There is no infrastructure delivery plan, merely a wish list and this is not acceptable. Has little faith in the proposed plan after suggestion in the plan was made that North Oxford Golf course could be replaced with a new Golf Course at Frieze Farm. CDC has had no consultations with the Land owner of Frieze Farm and the statements made are therefore unfounded. The Landowners of Frieze Farm actually want to build houses and have no inclination or desire to build a golf course! All new allocated developments should not proceed until certainty of an off site infrastructure has been established.

Objection to the below planning proposals: 1. We need an environment for future generations which allows space for recreational activities. Green Belt around Kidlington is ideal for all ages to keep fit and enjoy the countryside. The need for new housing is not a priority in this area for the following reason: 2. The assessment of the number of new houses to be built has now been shown as incorrect at government level. The infrastructure case has not been tried and tested for validity if so much housing is to be allowed. 3. The green areas around Kidlington are rich in wildlife, including deer, many bird species including owls, ducks, kingfishers, swans (black swans have appeared from time to time). Many of us in Kidlington believe that these natural habitats should not be interfered with by introducing huge amounts of concrete buildings. 4. The water table in Kidlington (actually in the village) is very high. Flooding is a constant threat and often becomes a reality for many homeowners in Kidlington. Sandbags are frequently seen in a number of roads in the village, which illustrates the point. New homes will also be vulnerable to flooding if the above proposals go ahead, 5. The high numbers of proposed houses to be built will increase the population of Kidlington and surrounding areas by more than 50%, which will require a huge amount of infrastructure to cope if the proposal goes ahead. Do not believe that enough funds will become available to meet the need, which will lead to a poorer quality of life for all who live in this area.

<p>PR-C-0580 1465</p>	<p>03/10/2017</p>	<p>Lorna</p>	<p>Bennett</p>	<p>Comments</p> <p>If the proposal for so many houses goes ahead on this land, with the density proposed, everyone would be living in each others pockets and paying a premium for the privilege. There will be no space for people. In the proposal I note there is so called “affordable housing”. That phrase does make me laugh. How can 20% or whatever off the asking price be affordable to local people. If I thought for one moment the likes of my son and everyone else’s children etc. could afford these houses I may have a different opinion. Obviously my definition of affordable is not the same as that of the Council. To me, affordable means affordable. Appreciate more homes are greatly needed but feels we are building the wrong types of home. We have plenty of luxury 3-4-5 bed houses and larger. What we need is cheaper homes or indeed going back to the days, council houses, to enable the younger generation and indeed some older people who are stuck in rented due to not being able to afford the houses in this area. Surely there has to be a scheme whereby they are affordable and if the house increases in price to put a cap on it so as others can then climb the property ladder. The people more likely to be buying these houses (boxes) are more than likely going to be people from London/commuters who are on a much higher wage and can therefore afford to purchase these houses but probably not quite purchase houses in London therefore putting up the prices even more in this area. Also is expecting a lot of these houses to be bought as investment properties to rent out.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>
<p>PR-C-0580 1468</p>	<p>03/10/2017</p>	<p>Lorna</p>	<p>Bennett</p>	<p>Comments</p> <p>It would be an extremely sad day if this proposal was to continue. Never bought my house to live in such an environment but now cannot even afford to move away because there are no “affordable” housing for me to buy. If I wanted to live in a town I would go to a town. I wanted to live in a village as this is where I was born and grew up and I now feel you are pushing the likes of me out. I am sure, without too much thought, the Council could find far better and sustainable sites for this development and indeed probably make a whole new community. Please leave our green belt alone. We don’t have a lot here and this means so much to so many people.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>
<p>PR-C-0585 1480</p>	<p>08/10/2017</p>	<p>Edwin</p>	<p>Southern</p>	<p>Comments</p> <p>Let Oxford solve its own expansion problem.Who wants the expansion of development into the greenbelt surrounding Oxford?It seems to have been initiated by Oxford City Council. Rep refers t news paper article to support the question in the letter.The council argues that Oxford city will need 12000 new homes by 2030 to meet its need for expansion. On what is this based? It must be a desire to meet the ambitions of the major employers, the university and companies in Oxford. Does Oxford itself have space to meet their expansion? Evidently not in the view Oxford's residents, who have expressed strong objections to building in aesthetically sensitive areas. See the outrage generated by the student accommodation built around Port Meadow. Rep refers to website to support the student accommodation issue.A second, and related, reason for the lack of space is the height limitation placed on buildings in Oxford – the so-called Carfax rule – which limits buildings to four stories. But the council is considering relaxing this rule to allow a height of up to six stories. This would have a large positive impact on the city’s capacity for accommodation and housing, especially of the type needed by the university and high tech companies. There are ways in which Oxford could address its space problems and, surely, this makes more sense than shifting the burden onto neighbouring towns and villages, the great majority of whose residents are appalled by the planned intrusion into their greenbelt, and all the attendant impact on infrastructure.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>
<p>PR-C-0588 1483</p>	<p>28/09/2017</p>	<p>Andrew</p>	<p>Mundy</p>	<p>Comments</p> <p>OBJECT to plans on the green belt of 4400.00 homes in Kidlington Begbroke and Yarnton. The reasons to this are as follows...: Green belt – this not an exception circumstance and planning should be declined purely on this issue. If the Oxford CC planning application was rejected purely on these ground, then CDC should also be rejected, there is no difference. All villages will blend into one and I can’t believe that Cherwell and Oxford for that fact have exhausted all possibilities and thus is the final area they can build on. Also the parishes boundaries between Yarnton and Begbroke is clearly shown on the attached map and you can see that the development has gone over the boundary! Showing that the villages are far too close together and the villages will just blend into one urban sprawl. This was quoted by Oxford regarding the development on the Heyford site that said However ... the County Council is opposed to the development of a large new settlement due to ... the threat of urbanisation in a rural area. There are numerous brown field sites that could be Developed in front of green belt land. Flooding. We live next to the Rowel brook, which surrounds the proposed fields earmarked for development. The brook floods most years and the flooding extends to gardens in Fernhill Road and the field behind Fernhill road. If this area is developed, this will push more water in the brook and provide further flooding risks to my and my neighbours properties. I have attached photos Wildlife: We have array of wildlife skylarks nest in these fields as well as bats and also I've seen great crested newts in the local brook. We are very close to Rushy Meadows site which is also an important area and is under the SSSI and local wildlife protection sites. Deer constantly roam the fields and gardens. Roads: There going to be another 2000 homes with 2 to 4 thousands cars approx. and only 2 exits leading on to the A44, how will the road network cope with this influx of cars. Our bus service into oxford has been reduced to make the service better and this was due to the worsening traffic around Oxford. This was quoted by stagecoach. This is before the extra 2000 + cars added to this journey. The additional park and rides and new bus routes from Woodstock go via Kidlington from the airport and miss the A44 at Begbroke and Yarnton completely. The council have already admitted the new roads will not be able to have a bus service, how can you have a planning application with no transport links? Housing:I am hugely disappointed in CDC agreeing to meet Oxford City Council unmet hosting needs without any thought for their own residents. The only reason Oxford City Council is not bolding on their own land is that they are run by both Oxford University and Oxford colleges. Why wasn’t the old Radcliffe site used for housing? Did we really need another university building clogging up the echo of Oxford? Why isn’t the Tuck Wells site in Headington being used for housing, this is a perfect location. I can't understand that Oxford City cannot build on some of their green belt and the fact that there is 2000 empty homes in oxford! Why are these not being used?? And also there are free brown belt sites that could be built on. There is nothing in place for doctors and the school. Where are all the teachers coming from as there will not any affordable housing as this has clearly show on the Barton site! Once this area has been developed then there's it no going back and once it's gone it gone. What a shame that this Law was put into place generations ago to stop this actual thing happening, to protect our countryside, wildlife and landscapes and you are allowing it.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>
<p>PR-C-0592 5449</p>	<p>07/10/2017</p>	<p>David</p>	<p>Wintersgill</p>	<p>Comments</p> <p>Opportunity for improvements to the quantity and quality of new public open space, green infrastructure, sport and recreation facilities and in terms of access to the countryside. Access is now available to wide open areas not just narrow corridors of green that will inevitable become busy. The Green Belt has got many footpaths that are accessible to the general public including recreational facilities. This is just a ruse and it is not an exceptional reason for building in the Green Belt. Once can understand that if the merging of the three villages with North Oxford then green spaces will be needed and so will the recreational facilities for the extra population and give the impression of protected Green Belt.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>

The unique place shaping potential of land near the University of Oxford’s Begbroke Science Park and Oxford canal. Do not know what “shaping potential of land” means. However existing industrial development of Langford Locks has forever altered this stretch of the Oxford canal alongside Rushy meadows which are a group of canal side meadows at Kidlington. They have escaped agricultural improvement through ploughing and reseeding or using fertilizers and herbicides. Consequently Rushy Meadows has a rich variety of grassland wildflowers. They are wet and in places tall wet and vegetation with reeds and tall sedges has developed. Meadows such as this are a national priority for conservation. Do not see “shaping the potential of the land” in the greenbelt an improvement. It’s not a valid or an exceptional reason for building in the greenbelt. It will have an adverse effect on the Greenbelt. The planning consent in the past for Begbroke Science Park did not allow or envisage for further development outside the perimeter of the existing Science Park.

Whilst there is a need for affordable housing in Oxford, the figures are exaggerated and not as great as suggested. With BREXIT the local economy will have less students and European workers from the EU which will drop the demand for new housing. Also there is no guarantee that the housing will in the long term be for the benefit of Oxford and its local communities. Many of the current stock is being used by commuters from outside Oxfordshire and mainly from London region. The idea that they will be for local residents and those who work in Oxford is to mislead as current legislation does not prevent new housing going to outsiders. Affordable housing also means that it is only those that can afford the 80 percentage of the market rate which for Oxford means that it is unaffordable for the lower paid. The clear inability for Oxford to fully meet its own needs. They have not tried hard enough. Oxford could have built at higher densities which has not been doing. It needs to be more innovative in their development plans so as to obtain greater densities. They should use Compulsory Purchase Orders on sites where the landowners have resisted on building of housing. It should not be encouraging more business activity when it doesn’t have the ability to house more people. The absence of sustainable, deliverable and appropriate alternative sites. Untrue - There are identifiable sites that Oxford could build on, such as Showman’s field and Marston Saints Sports field, in addition to their own Green belt. Housing in Oxford will not be sustainable when the cost of housing is out of reach for most of the lower income groups. Also there is no current legislative barrier of preventing people from outside Oxfordshire buying or renting these additional housing. Homes for outsiders should not be provided so that they can commute to London etc. The relationships between existing communities and the proposed development areas and Oxford. This will generate housing need in this area – not Oxford. This “relationship” is more easily argued for Oxford and Littlemore Science Park as one example. Exceptional argument for developing in the Greenbelt, especially when people currently commute from Banbury and Bicester and elsewhere in Oxfordshire to work in Oxford cannot be seen.

The HBF is the principal representative body of the housebuilding industry in England and Wales and our representations reflect the views of discussions with our membership of national and multinational corporations through to regional developers and small local housebuilders. Our members account for over 80% of all new housing built in England and Wales in any one year. As with our submission to the previous consultation on the partial review we agree with the conclusions of the Oxfordshire Growth Board that it is difficult to be categorical about the precise extent of Oxford City’s unmet need. The exact supply of homes that can be provided cannot be predicted exactly and we consider a working figure of 15,000 homes to be reasonable. The approach taken by the Oxfordshire authorities in addressing unmet need is a clear demonstration of the effective and on-going cooperation within Oxfordshire. However, due to the uncertainty regarding the actual capacity of Oxford we consider the final agreed delivery outside of Oxford 14,850 homes should be considered as a minimum that will need to be accommodated. Oxford City’s consultation on it Preferred Options continues to state that housing needs could be as high as 32,000 new homes by 2031 but in its Housing Needs and Supply Paper supporting the latest consultation document suggests that for the period 2011 to 2031 it is likely to deliver 8,484 units. Whilst the City Council have stated they will seek to maximise delivery this new evidence would suggest that the unmet need arising from Oxford City could be higher the previously considered.

Regret that land behind The Moors which was earlier stated unsuitable for development is now at risk of having a development of 300 houses plus business units, in spite of being in the Green Belt. Does nobody consider future generations when proposing these plans? The pond at Holmwell House was restored by an Environmental Group and was then, and still is now, a habitat for Great Crested Newts. The proposed access for the site would certainly destroy the pond. How will The Moors and Mill Street cope with all the additional traffic? How will the local schools accommodate the extra children? Not to mention medical services already under pressure. It would be appalling to cover this beautiful rural landscape in concrete. Plea to the Planning Inspector to refuse these proposals in the interest of Kidlington residents.

1521	Comments							
Support for decision not to include land behind The Moors in any development. Site is in the GB which must be preserved and protected to prevent urban sprawl as stated in the Conservative Government's manifesto. Loss of landscape and rural views towards the oldest part of the village would affect the setting of St Marys Church and the Church Street conservation area. Any development will exacerbate the flood risk to housing and adjoining land/conservations area. There is inadequate local infrastructure to support any development on the land behind The Moors. The fields are an important and very well used amenity for village residents and regular visitors providing walks and views of the village towards St Marys Church. The land should be treated as a permanent local green space.

<p>Recently received notice re partial review of consultation on development of land to the back of The Moors. Have enjoyed walking in the fields since 1991, observing lots of wildlife and enjoying the views particularly of St Marys Church. Regularly used by locals and visitors. Recent large increase of cars parking on The Moors and surrounding roads for long periods of time. Noticeable increase of traffic in Benmead Road and The Moors is often bottlenecked between Benmead Road and High Street. Flooding has affected The Moors and any further building on this land would exacerbate the situation. The addition of Moorside has already impacted on the surrounding area. It would be disastrous for the community going forward to loose this land forever when it is an area of natural beauty in the oldest part of the village.</p>

<p>Land still at risk of development by Bloombridge. Please preserve this site in the GB thereby preventing urban sprawl. GB must be protected and preserved, preventing loss of landscape and the wonderful rural views which are so loved and appreciated, especially towards the older part of the village. Development as suggested would undoubtedly exacerbate flood risk, also increase traffic on already very busy roads, for vulnerable children and families. The fields are so important to village residents who thoroughly enjoy the abundance of the wildlife and the opportunity to walk in them. We most certainly do not want the development to take place, and wish this land to be left as a permanent green space.</p>

<p>Dismay at proposed development around Yarnton, Begbroke and Kidlington. Need for housing is appreciated and modest development of genuinely affordable housing between the three villages would be acceptable, these proposals go way beyond anything that would be acceptable. Proposals are presented as a plan to solve Oxford's unmet housing need. Latest reports indicate this need (and Cherwell's) has been considerably overestimated. Even if this is disputable Oxford should do more to meet it's own needs. It has land available for commercial development, but not housing. When land is made available for housing, the type of provision does not match the range of need. The new Barton development had the proportion of affordable housing cut and some properties are currently on the market for £600,000 plus. Elaborate plans in the scheme for transport systems ignore the problems which continue to exist around the north of the city despite the extensive and protracted "improvements" at Cutteslowe and Wolvercote roundabouts. The A44, A34 and A40 are already frequently congested which will become more acute by the Northern Gateway development. Whilst in favour of good public transport, it is not convincing that people will use it to the extent envisaged in the plans. Whatever type of transport people use to access Oxford they have to negotiate the bottle-neck on the A44 between Yarnton and Pear Tree. In this respect the proximity of the area to Oxford City is no advantage over areas further afield. While Yarnton, Begbroke and Kidlington are to become one big suburb, a main link between Yarnton and Kidlington (Sandy Lane) is to be blocked off to traffic. With no public transport provision between the villages there will be longer car journeys from one village to the other which is not environmentally sound. The area is surrounded by GB land designed, amongst other things, to protect the separate identities of settlements and to avoid urban sprawl. Planning regulations state that GB should only be used in exceptional circumstances which have not been demonstrated. The proposed separation between the villages is derisory and very unclear. Yarnton is selected for the most development, doubling the size of the village and changing it's character forever. Loss of GB is presented as being only 3%, whilst not disputed, it is feared that a precedent will be set resulting in yet more loss. This area offers a wide range of habitats for wildlife, greatly adding to the attractiveness of the area, which would be lost forever. Flaws in the plans should be seriously reconsidered.</p>

<p>Cherwell District Council accepted Oxford City housing needs which were based on growth proposals and calculations which are out of date (particularly post Brexit) and also subject to revised housing number calculations currently part of a HM Government consultation. No convincing argument showing that all other options have been explored and eliminated before allowing Oxford City to overspill into GB. CDC has not described exceptional circumstances that warrant development in the Oxford GB. The document does not respect the District Council's responsibility to uphold its own policies. Proposals are unsound and contradict national policy regarding Green Belt and CDC Local Plan 2011-2015 Part 1 regarding development in Category A villages. I am in full support of objections presented by the Begbroke and Yarnton Green Belt Campaign Yarnton Parish Council and Begbroke Parish Council but wish for my personal objections and comments above to be included at any further stage of planning process.</p>

<p>This involves destroying the green belt around Yarnton and Begbroke in order to satisfy the so called Unmet Housing need of Oxford. CDC claim exceptional circumstances. This has not been proved. The Housing White paper and the NPPF categorically state that the green belt should be protected and not built on. Lived in Begbroke for over 30 years and for most of the time been a member of the CPRE. So has always put countryside protection at the top of my agenda. Is not a nimby. The countryside is not a sterile area where houses do not yet exist. It is a vibrant part of the ecosystem, supporting a rich variety of wildlife or supporting agriculture. In my area there are at least 20 species of butterfly. We also use the green belt to provide refreshing walks and space from noise and pollution. You are planning to destroy our community of 2 villages. Your claim that the development will enhance biodiversity is utter rubbish. Furthermore you have no viable plan to improve the infrastructure which would be vital to make the plan sustainable. We already have terrible congestion on the A44 and surrounding roads. Your plan would aggravate this. Traffic would grind to a halt, especially between the Turnpike and Peartree. It will be impossible to widen the road here because of the topography. CDC representatives seem to have no idea for the problems that we currently experience daily. Does a lot of voluntary work involving taking vulnerable people to appointments and this activity would have to cease. Your plan to close Sandy Lane, our only sensible route to Kidlington, is nothing short of vindictive and ill thought through. We would have to join traffic to Oxford or go via Sandy Lane. Both choices would cause chaos.</p> <p>Oxford's unmet housing could easily be accommodated in the city if more effort was put into this by City Council. For instance Southfield golf course is a large area near places of employment. The city plan to build businesses at the Northern gateway should be scrapped and house built instead. Does not believe these planned 4400 house in the green belt are for Oxford. They would be occupied by people commuting to London from Oxford Parkway. The Colleges, CDC, OCC and others are conspiring to make large sums of money from developing land, currently held by the University at the expense of our villages. There would be continuous and ruinous sprawl from Oxford to Woodstock. In short your plan to develop land around Yarnton, Kidlington and Begbroke is UNSOUND in all aspects and you should stand up for the residents that pay your salaries. Your duty is to us, not Oxford and all it's cronies. We need our green belt and we object strongly to it being taken away.</p>

Proposed Submission Plan - General Comments

PR-C-0625	08/10/2017	Prof Martin	Oldfield			N	Y
1547	Comments						
<p>Oxford's Housing Need is Overstated - is based on calculations made prior to the Government's recent new guidance which would reduce the requirement. Is flawed because Oxford City Council has prioritised commercial development over housing in the city, e.g. Northern Gateway, and wants to export their housing needs to surrounding Councils. It would be much better to maintain Oxford as circumscribed city with a medieval core and then develop commercial expansion outside the Oxford GB, with appropriate housing for workers. Oxford's GB is a resource for residents and should not be destroyed. The National Planning Policy Framework has listed the purposes of the GB: 1. To check unrestricted sprawl of large built-up areas (Oxford should not be allowed to expand into a larger urban sprawl). 2. To prevent neighbouring towns merging into one another (Begbroke, Yarnton and Kidlington would become one vast housing estate, with ridiculously small 'green' strips between them). 3. To assist in safeguarding the countryside from encroachment (These areas are both agricultural land and used recreationally). 4. To preserve the setting and special character of historic towns (Yarnton and Begbroke are historic villages - the proposal threatens their character). 5. To assist urban regeneration, by encouraging the recycling of derelict and other urban land (There are brown field sites and other unused land in Oxford and the surrounding area which could be used to accommodate a reduced housing need without ruining the GB). Policy ESD 14: Oxford GB in Cherwell's earlier local plan 2011 - 2031 recognised these concerns. The latest proposal runs completely counter to this, coalescing Begbroke, Yarnton and Kidlington into an extended urban sprawl and makes complete nonsense of the concept of the 'Kidlington Gap'. The A44 corridor is already running at peak capacity with long traffic jams daily, existing park and ride buses also suffer from the jams. The addition of 4400 houses will only exacerbate the problem. The solution of cycling/walking would only minimally help and be underused. Closing Sandy Lane will remove a well used link with traffic using Langford Lane or Frieze Way instead adding to the already severe traffic problems. The proposed new railway station is unlikely to materialize in time to alleviate these A44 problems, if ever. The new Oxford Parkway - Marylebone line is already heavily used by London commuters and will not help Oxford's housing need. Flooding in areas A and B would get worse. There has been periodic flooding in the last 12 years, particularly the bottom of Spring Hill as well as other parts of the chosen sites. Replacement of GB with impervious surfaces inherent in development will only make the flooding worse. Recent extreme weather events in USA have shown the impact of Global Warming increases the likelihood of torrential downpours adding to the extra flooding due to the proposed development. The "Exceptional Circumstances" cited for ruining the GB are not justified, easily refutable (reasons given) and should be voted down or subsequently refused. Affordable housing - Recent experience at Barton development shows the proposed scheme is unlikely to provide much affordable housing for Oxford residents. House prices are likely to be high and bought up by commuters to London using Oxford Parkway. Existing commercial activity in Oxford is in the South-East sector, that is where affordable housing should be built.</p>

<p>Exercise in public consultation woefully inadequate both in the letter and spirit of the law. Regulation 18 of the Town and Country Planning (Local Planning) (England) Regulations 2012 states that: 1. A local planning authority must: a) notify each of the bodies or persons specified in para (2) of the subject of a local plan which the local planning authority propose to prepare, and b) invite each of them to make representations to the local planning authority about what a local plan with that subject ought to contain. This regulation has not been complied with. Each household was not notified in writing - the only method used to notify each person was to put an item in the magazine Cherwell Link. Only one edition refers to the plan (Winter 2016) - but unable to verify this as it has disappeared from the website. Reference consists only of shortest possible paragraph saying nothing more than that a Plan was being prepared, and giving a link to the website. In order to satisfy both Regulation 18 and their stated aim of engaging with the community, the produced short Summary Booklet for this Plan should have been sent to each household in the affected areas. Community engagement aims are: Information, Consultation and Participation. There has been almost no attempt to make anything other than the weakest of efforts to engage the community. Most community engagement was done by groups of volunteers. Consultation took place over the holidays and was carried out in such way as to minimise and discourage the involvement of the community. Derisory response from the Council to the Consultation in January - with many comments from the public being ignored, thus discouraging involvement.</p>

<p>Horrified at proposals for expansion of North Oxford/Cherwell district to develop new housing on the GB area and north of Cutteslowe. The need for affordable housing in the area is obvious, however planning seems to ignore the issues causing the massively inflated prices of property in Oxford. Stamp Duty is now so expensive that anyone wanting to relocate are prohibited from doing so, university colleges subsidising houses for employees who could never afford to live here means that price inflation gets worse, private landlords passing all charges onto tenants mean that opportunities to save towards purchasing a home are even more greatly reduced. What guarantee that these new planned developments will not simply be purchased by people commuting into London with no benefit to the local infrastructure or jobs on this area? As a resident of Summertown I have witnessed the disastrous transport planning around the Banbury Rd roundabout, for 2 years travel chaos was tolerated on the promise of an improved journey around this area. Millions of pounds and years of frustration have made the situation at best the same and at worst a total disaster. You now expect residents to put their faith in your ability to plan for even more journeys to be made around this vital junction into Oxford? The GB land is there to prevent urban sprawl. The idea that my children will grow up in one huge concrete jungle without the beautiful open spaces surrounding Oxford is horrifying. Where next? We must resist at all costs the transformation of Oxford in to one even bigger concrete city and the expense of all the things that make it such a great place to live and work.</p>

<p>Concerns about the proposed building of more than 1100 new houses between North Oxford and Kidlington. The existing transport infrastructure can cope with the additional houses. Every morning I either walk, cycle or take the bus from Wentworth Road to the South Parks Road science area and do the return trip in the evening. The traffic on Banbury Road moves at a snail's pace in the morning and the fastest way to get to Marston Ferry Road is to walk. The buses are also very full at rush hour and very slow moving. There is no way that the roads can accommodate more traffic. I have read the proposals to expand park & ride capacity and other measures for improving public transport. You need to actually implement these and show significant progress before approving the construction of new homes. Will building these houses meet the needs for housing in Oxford? The proximity of the planned development to the Oxford Parkway station will make these houses desirable for commuters rather than for key workers in Oxford (schools, NHS, university workers). There is no reason that we need to provide more housing for people who work in London.</p>

The loss of GB land is significant even if the percentage quoted is small. At the exhibition on Cutteslowe Park I asked if any account had been taken of the proposal to relocate the Oxford United stadium into this area by Oxford Parkway for which the Oxford City Council and the Club have discussed long term plans. There was complete ignorance of this which is worrying and shows a lack of awareness of what is going on. I suggested you speak to Oxford City Council to verify the position. Finally an added word about traffic. There seems to have been no traffic improvement plans suggested which must be in place before 4400 houses are built.

Objection to the consultation process which was unreasonable, unfair and unnecessarily complex. The council have produced a large number of documents in the hope that people won't read all of them and constantly using legal terms, so that you need a law degree to understand what is actually being proposed. At the public meeting held at Exeter Hall 21st September, Councillor Wood managed to anger local residents by not answering their questions. He presented a monologue of why the Oxford had to do this and skirted round the topic as to why villages had to take on Oxfords housing needs. He repeatedly tried to twist what people had been saying (specifically the issue of affordable housing within the development). He has said this is non-negotiable, that they have decided we are having Oxfords housing requirement. This is not consultation; our views are not being listened to. As a single person who has lived in Kidlington all my life, with a well paid job and not on minimum wage, I am unable to afford a house or flat of my own (even affordable housing). What Oxford needs is to build affordable homes within the city boundaries. Instead they are building estates like Barton park with houses that have extortionate prices tags, appealing to people commuting to London with London weighting. The actual percentage of affordable housing built always ends up being lower than the proposed percentage, but is still unaffordable for local people. The main reason put forward for building these 4400 houses is to provide affordable housing for local residents - the proposed plan will not do this. More unaffordable homes built to take London's housing issues at the cost of the GB and local villages are not needed.

PR-C-0640	05/10/2017	Carole	Walton		
1575	Comments				
Unaffordable Houses. Very few of the new houses would be 'affordable' or 'social housing' in reality. Developers across the country consistently default on their affordable housing quota with impunity. Predicted prices for so called starter homes at Barton Park are already beyond the reach of many first-time buyers. Most of the new houses are likely to serve the London-commuter and buy-to-let markets, and Kidlington, Yarnton and Begbroke's young people and the county's key workers still won't get the truly affordable housing they need. If permission is granted there is a fear that local developers will then be granted permission at a later date to build even more houses on GB areas currently rejected, until no GB remains around Kidlington, Yarnton and Begbroke. So take action on the new Government formula and revise the plan cutting down the number and size of sites required using land not within the GB.

Agreement with submission document over the retention of GB designation on sites on the north-eastern side of Kidlington (between the village and the river Cherwell), and the absence of development allocations in these areas. These sites, which lie behind the houses on the north side of The Moors, are part of the GB countryside. It is a priority to retain these sites as undeveloped land that contributes to the recreational amenity of local residents and the setting of Kidlington. It forms one of Kidlington's key countryside assets and helps to add an attractive rural dimension to Kidlington's largely urban identity. These sites are well provided by footpaths and they have become important areas for countryside pursuits walking and jogging. St. Mary's Fields is a conservation area on the eastern edge of these sites and would be damaged by development. Totally opposed to development of any kind on these sites.

1583	Comments				
Strong opposition and objections to new developments surrounding Begbroke (west) and Yarnton. The development will destroy the countryside both the flora and fauna. The area is home to rare butterflies and unique grasses due to the natural wet springs (Springhill road was named after these springs). The areas outstanding beauty will be lost forever. England has a well deserved pride in protecting its rare flora and fauna. Why kill the animals and plants in this area after spending so many years protecting them. Personally passionate about preserving our amazing wetland flora and protecting our native butterflies\cats\owls to name a few of the animals that surround the area. An influx of people to this sensitive ecosystem that has taken thousand of years to develop would destroy this forever. Even large recreational areas would destroy this truly unique environment. It needs a large protection zone. It will also create unacceptable congestion in the area. The roads will be even more congested because there will be too many people, no amount of public transport could accommodate the different commuting patterns people have to travel.

Objection to building on the GB around Yarnton, Begbroke and Kidlington: Traffic and the roads - already congested and traffic is forced to use side roads and lanes that are not suitable for heavy use. More cars will create complete log jams and add enormously to pollution. The new planned park and ride traffic will only attract cars from outside the area adding to this. There are also additional houses planned for Woodstock. Numbers of houses - Since Oxford doesn't even know how many houses they are going to need, why is CDC so keen to cover the GB with houses which might not be needed? The building spree will attract commuters from places like London where they can't afford to buy a house. Precious GB - In this very crowded part of the country the GB is a truly precious thing both for humans and for wildlife. It creates green space and lungs for the city and the surrounding villages. It is both beautiful, grows food and makes the area a pleasant place to live. The only ones to gain from this terrible idea are the land owners and the builders.

Concern over the impact of the proposed Woodstock urban extension, including the potential adverse effects on the settings of important heritage assets. It is not clear that Cherwell have appropriately considered the cumulative impact of the proposed urban extension in combination with the proposals in the proposed West Oxfordshire Local Plan. The proposed West Oxfordshire Local Plan proposes 670 new homes on urban extension to Woodstock, including 300 homes to the immediate west of the Cherwell site which now have planning approval subject to a Section 106 agreement. The cumulative effects that need to be considered include the impact on the setting of the Blenheim Palace World Heritage Site. The site at present is a large open field, whose openness is readily apparent from the A44 as visitors travel towards Woodstock from the South, and this contributes to the setting of the World Heritage Site. A key issue to consider is the harm that the Cherwell proposal might cause in combination with the adjoining development in West Oxfordshire. Cherwell have not considered that already there is a woeful lack of parking available in Woodstock and there is a real fear that development of this site would create a satellite village whereby shoppers would use the private car to commute to and from Kidlington. Another important issue is the impact of the proposal on this setting of the Blenheim Villa Scheduled Ancient Monument which is within the site itself. Although the SAM itself will be protected from residential development, the proposed housing area would represent a significant change to the landscape just to the north of the SAM thereby adversely affecting its setting. There is a strong hedgerow feature on the western boundary of the site, which follows the alignment of a historic tract. The proposed urban extension would breach this natural boundary and extend development in an incongruous 'finger' to the east. As such it would not relate well to the existing urban form of Woodstock in this area. The proposed allocation is considered to cause harm to the settings of important heritage assets, it would also impact on the landscape and setting of Woodstock as a result of an incongruous urban extension which is poorly related to the characteristics of the location. The benefits of the proposed allocation do not outweigh these harms, given that there is scope to deliver housing to contribute towards Oxford's needs in alternative ways, such as through a modest increase in density on sites released from the GB, or by the development of the site Policy PR3a, which is to be removed from the GB but is not proposed for housing development in the proposed submission plan. More efficient use of the GB sites could deliver at least 410 additional homes and therefore eliminate the need for the proposed Woodstock urban extension. As such the proposed allocation is contrary to the NPPF.

Objection as Oxford's unmet need has not been justified, nor has it been proved. The Oxford Growth Board assumed a figure of 15,000 dwellings. "The Oxford Growth Board should note that the working assumption of 15,000 is a working figure to be used by the programme as a benchmark for assessing the spatial options for growth and is not an agreed figure for the true amount of unmet need". More thought and detail needs to go into proposals reconsidering using GB land over available brownfield sites. Oxford has to get it's Local Plan in order and make provision for it's own needs, visiting it's own brownfield sites with it's own boundaries. Reliable, verified, up-to-date figures of housing needs are required before any allocation.

Strong objection to the proposed use of NOGC land for housing development. Agreement that Oxford needs additional housing to meet forecast population figures but many other areas highlighted in your review document are more suitable in terms of size, location and impact on the local community. These large swathes of land are just ripe for larger scale development so why pick NOGC whose land would yield a mere fraction of the housing units required? This magnificent 110 year old parkland golf course is a wonderful example of biodiversity and boasts over 25 tree species supporting a habitat for over 50 recorded bird species. Add to this, the great crested newt and it almost becomes a protected Site of Special Scientific Interest. The National Planning Framework certainly has mechanisms to prevent urban sprawl, so again your proposal contravenes Government guidelines. Kidlington joined with Oxford. Surely current policy prevents you from doing this? Section 8 of the National Planning Framework entitled Promoting Healthy Communities. Paras 69 to 78 give the distinct impression that the planning system can play an important role in the social, recreational and health of local communities by catering for such facilities in the planning process. This is exactly what we have at NOGC. Across all age groups. From teens to over 80's. Golf for members and non members from Oxfordshire and surrounding counties, social functions and a meeting place for members, non members and established societies, wedding receptions, Pilates classes. The list goes on. A club integrated into the local community and vice versa. I believe your plan to destroy this key local facility is a very significant violation of the National Plan and your proposal should be withdrawn on this point alone.

Objection and concerns re proposal to build 4400 new houses in and around Kidlington. Infrastructure systems in Kidlington are already overloaded and there is no evidence of a credible plan to address issues such as: schools, sewage handling, health facilities, shops, community facilities, retaining open spaces in the Village, road parking, etc. Main roads into Oxford are already over-loaded through Kidlington and there is no space to increase capacity. Part of the recent increase in traffic is because many 3-4 bedroom houses in Kidlington have been converted to several flats, each now with one and two car occupants so that work recently completed to improve the Summertown ring-road roundabouts are again overloaded. The proposal is to build on GB land which currently makes for a reasonable life, but which infilled will make life for everyone less pleasant through no green spaces, facilities unable to cope and chronic traffic problems. Even the bowling green next to Exeter Hall appears at risk as it was on a 20+ year lease (ending Dec 2017) and is now being offered a 2yr lease, presumably to enable extension of the Exeter Hall Surgery to cope with some of the 10,000 extra people planned to use the Village. This approach if true, would remove a well-used and loved green space. If GB land is to be compromised and new houses built for residents to gain access to increasing work availability in the Oxford area it would be well to build a new Garden Village close to existing main road ways and build the necessary infrastructure to cope. Land on either side of the M40 between junctions 8a and 9 would give access to the motorway, A40 into Oxford or A34 north and south – The A34 particularly will need widening to cope with additional households already committed in Bicester. Tragic recent deaths and injuries from truck and car incidents on the A34 must in some degree be the effect of overloading this roadway and plans to increase the A34's loading yet further by building new housing proximate to it, must look at the potential for increased accidents and fatalities (has a report been commissioned on this?) and offer credible mitigation, or seek to build elsewhere and so load other roadways better able to cope.

Objection to building 4400 houses around Yarnton/Begbroke/Kidlington. Proposed areas are part of GB and should not be used. The roads will not cope with addition of the extra traffic - they are already solid in the mornings and late afternoon/early evenings. The proposed changes to public transport are not sufficient. The bottle neck into Oxford is the single carriage road (A44) before Loop Farm Roundabout. No planned changes/widening will only mean that adding more buses will not make a difference but may make the problems worse. The proposed closure of Sandy Lane will be terrible. This road is a life saver for many people who need to get out of Kidlington/Yarnton. Closure for through traffic will force traffic to join the other roads, making the traffic problems even worse. There are already long waiting lists to see local GP's. The health services and schools will struggle to absorb over 10000 people extra.

Objection to plans to build on GB land between Yarnton and Kidlington. There are many areas beyond Kidlington that are better for development, and which could be connected to Oxford via park and ride buses and trains. Please use these sites and stop the Oxford sprawl which lessens quality of life and damages ecosystems.

1642	Comments								
Plan is Unsound, Not Positively Prepared, Not Justified and Not Effective on the following grounds: 1. Transport - With no safe way to cycle to work or use public transport (either it does not take us close enough, or takes substantially longer than is feasible), we need our cars for work. Like many households we have to run multiple cars and this won't change however much public transport is improved. Infrastructure does not support current traffic requirements encouraging 'rat runs' through the villages Traffic reaches a standstill on A34, A44 and A40 with traffic from Bicester impacting greatly to roads in the area. Many hours of work have been lost due to the current road situation and it is unthinkable to increase the amount of housing in the area without improving the road network. 2. The Unmet Need - figures based on unsound method and have been revised down. Proposal should be re-thought. Oxford City should increase housing density within the line as per most European cities. Private housing blocks should be built for student accommodations rather than letting out properties. 3. Employment - New jobs and high tech sites should be targeted to Bicester where the new housing has been sited. This would stop traffic congestion and air pollution caused by increased traffic in Oxford. 4. GB - GB supports much wildlife (barn owls n field adjacent to us). Destruction of these habitats, because we cannot build efficiently in the City, is upsetting. The farmland provides food, oxygen, a beautiful environment for us to walk in. Individual village identity will be lost with the area becoming an urban sprawl. There is land available within the city - GB should be preserved for future generations.

Despite current time constraints, the new figures issued by the government are so significant that surely the District Council can put forward a strong case for deferring deadlines. The District Council has already had to redesign its approved Local Plan to increase numbers as dictated by the SHMA – figures for Cherwell District that are now suspect. To now be visiting even more houses in the District to take on a disputed (with now added strength) requirement is to say the least foolhardy. It is well known that CDC fought hard against the proposals of Oxford City for the Cherwell District to take on a duty of cooperation to cover the claimed “unmet need”, and that CDC disputed the fact that if there was a need to cover an overflow that these should NOT be located closest to Oxford where it would take development into the GB, of which at that time CDC was a great defender. What has changed? Residents are being advised by lead members of Cherwell DC of the wonders of these proposals. Already there is an expressed defence of the existing numbers with no expression of relief that there is a strength to disputing their necessity. I believe that CDC has a duty to question the need. Residents set to be blighted by the imposition of this housing expect the Council to look after their interest. Arguments against the proposals are well-rehearsed and it was shameful that a packed public meeting in Kidlington where intelligent views against the proposals – including preservation of the GB, the real exceptional circumstances of ignoring GB policies, the density of the dwellings that would reduce the amount of land required, and many others, were taken no notice of by the leader of the council who failed to answer questions raised and made contradictory claims about the economic proposals in the county.

Implore the Council to reconsider this Plan which is unsound, not justified and will be totally ineffective in resolving any of the issues in Oxford and it's villages. The area will just become even more attractive for wealthy London commuters and local people will still have nowhere to live and fewer recreational opportunities never mind services. The City and its environment will be destroyed and become even more congested and polluted. This is a heritage City! It's currently an absolute disgrace. Don't make it even worse!

1666	Comments									
1. This is ancient GB Land widely used by both villagers and wildlife and provides the necessary separation between a tiny village like Begbroke and its much larger neighbours. Turning this into a conurbation with Yarnton, Kidlington, and Oxford, would simply demonstrate the total incompetence of the councillors/planners concerned who were duly elected to defend the wishes of their constituents. Explanation is required how merging 390 houses and 780 inhabitants of Begbroke into a conurbation of 30000 people is protecting the GB and open spaces that define this area. 2. Flooding has been a frequent problem for many residents in Begbroke with properties adjacent to Rowell Brook and any additional development to the south of the brook will simply ensure that a problem which has been partially alleviated over recent years will return with a vengeance. 3. Wildlife is an important feature of life in Begbroke as the land is traversed by both deer and foxes while rare species of newt breed here, and there are several bat colonies. 4. Transport is already a major problem as the queue that forms along the A44 frequently stretches back through Begbroke in the mornings yet ALL the traffic from the Banbury road through Kidlington will be diverted onto this overcrowded road! A Park and Ride is proposed at the Bladon roundabout adding even more buses to the queue. Adding thousands of new homes to this chaos will simply totally paralyze the entire transport system along the A44. The current traffic density already ensures that the vehicle pollution limits that the council should have monitored before making these proposals are regularly exceeded making Begbroke a dangerous place to live. 5. Elderly residents of Begbroke have a major problem in crossing the A44 from the bus stop as due to the intensity of the traffic it can take more than 10 minutes to cross the road at anywhere near rush hour times. There is no central reservation refuge so you have to stand in between fast moving traffic hoping that one of the many crashes will not occur while you are in such an exposed position. Even our bus shelter which is stone built and set well back from the road was flattened by one of these events recently. Yarnton bus service allows the elderly to safely alight and cross quite village roads, but in Begbroke we ALL have to cross the A44! When planning permission was granted to Oxford University to add a major highway from the A44 into the BEGBROKE Science Park ALL the Councillors, Planners, Oxford University Staff and Developers who attended the meetings in BEGBROKE village hall promised us that the 600 monies would be spent on ensuring that Begbroke would be given a traffic light controlled pedestrian crossing to solve this pedestrian problem. (Similarly when we all objected to this new road as it would simply open up our GB land for development we were assured that no such intent would ever exist!) Yet without any communication this pedestrian crossing suddenly appeared in Yarnton where it was not even needed as traffic on the A44 obeys the speed limit by then unlike in Begbroke. They also have a wide central reservation providing a pedestrian refuge and only a tiny number of villagers have to cross the road anyway!

<p>Comments</p> <p>6. A key safe and quiet corridor for all of us is provided by Sandy Lane between Yarnton and the shops in the centre of Kidlington as this avoids the hazards associated with the busy industrial area traffic in Langford Lane or the huge detour involved in going via Frieze Way and the busy roundabouts at each end, yet these plans eliminate this vital link.</p> <p>7. So where should all the new housing go, well the first place is on all the available development sites including those earmarked as industrial sites in Oxford if indeed they need to add new housing for Oxford as it expands its industrial sites in Cowley and the southeast corner of the city. Then the people who wish to get there would already be in Oxford rather than simply clogging the roads into the city from the northwest. This would then persuade expanding companies or new businesses to move towards Banbury, Didcot, and Bicester where the vast new housing estates already being established are crying out for the addition of enlarged new local employment areas and could even attract traffic away from Oxford rather than towards it!. Oxfordshire including Cherwell should then look at all the villages including Begbroke and add additional housing in them all where sites can be easily identified e.g. on the rough land at the end of Begbroke Crescent / behind the "Vans for Bands" site where a limited development could easily be blended into the village. This if repeated throughout the County would generate many thousands of extra homes without destroying the total greenbelt within a single area or forming a sprawling urban spread that totally obliterates the boundaries of historic villages like Begbroke. 8.The greed of the University Colleges underpinning this application should be recognised as they simply want to destroy greenbelt and sell off land to further increase their salaries and have no interest in retaining the essential assets of the area. They will only succeed in this mission if enough corrupt councillors and planners take their side in return for the fees per house they will receive, and we are therefore hopeful that the planners and councillors in Cherwell will recognise this and vote against this application.</p>					<p>Changes Sought</p>				<p>Reasons for Participation</p> <p>As I am frequently not available I would like the Begbroke and Yarnton Green Belt Campaign to act as my representative during the Examination by the Planning Inspector.</p>

<p>Comments</p> <p>I find this plan unsound because of the quantity of proposed houses, the traffic plans are not viable as the roads are already gridlocked into Oxford and the new plans proposed solve none of these problems. People will not cycle into Oxford as it is further than the normal cycle distance from home to work. Housing for Oxford needs to be nearer or inside Oxford. Building on GB land is not necessary when there are brown field sites available in Oxford where Oxford City could fulfil their own housing shortage. Green countryside is one of the main attractions of Oxford and building what will be an extension of Oxford and merging surrounding villages is something that can never be reversed. Given that the houses are being built near to the train station it seems to me these houses would be for London commuters and not for local first time buyers. This response should be read in conjunction with the Representations made by the Begbroke & Greenbelt Campaign which also form part of this representation.</p>					<p>Changes Sought</p> <p>For the reasons I have given above AND the Representations made by the Begbroke & Yarnton Green Belt Campaign which I additionally support and adopt as part of my own Representation in this document, the Plan cannot be changed to make it legally compliant or sound and should therefore NOT be submitted for Inspection.</p>				<p>Reasons for Participation</p> <p>I would like the Begbroke & Yarnton Green Belt Campaign to represent me at the Examination should it take place.</p>		
PR-C-0681 1668	07/10/2017	David	Young					Y			
<p>Comments</p> <p>I think it fair to say that the proposed allocation for housing development in the Approved GB to the north of Oxford represents a facile and lazy-minded response to the perceived problems of the City's housing need – and the proposal for the North Oxford Golf Course in particular, possibly the worst single planning proposal I have ever come across. I think that the strategic planning vacuum induced by the previous few governments, has allowed the City Council to perpetrate unsubstantiated growth on the surrounding Districts. The figures agreed by the Oxfordshire Growth Board are far too high and the City deliberately has inflated its projected employment growth, at the same time refusing to contemplate housing development on its vacant employment and other sites. Recently published government housing figures for Oxfordshire, substantially reduce the totals needed. In principle, all the Local Plan reviews currently predicated on the Growth Board figures should be put on hold until a County-wide re-assessment is carried out. Whereas successive County Structure Plans achieved a balance of growth needs against those of conservation, and the provision of the infrastructure to serve them, there has been no observable exercise here, and very little prospect of service provision to match. There are lots of arguments against an increasingly Oxford-centric strategy, but I believe the impossibility in today's economic climate (which Brexit will probably worsen) of achieving the necessary infrastructure at the right time to meet the resulting transport demand, is the most pressing.</p>					<p>Changes Sought</p>				<p>Reasons for Participation</p>		
PR-C-0681 1669	07/10/2017	David	Young					Y			
<p>Comments</p> <p>I am on record, as saying that the Kidlington Gap is the most important part of the Oxford GB. As a whole it matches precisely all three original purposes and indeed the reconfigured five purposes of the government advice. It is also an area in which there will be huge pressure from landowners/developers not to provide so-called affordable or social housing. (A real problem of housing in Oxford is of course qualitative need). I find it difficult to think of any part of the OGB anywhere near as important as this. The analysis in the Partial Review seems to confirm this, yet the conclusion allocates huge tranches for housing which will remove almost all the observable gap.</p>					<p>Changes Sought</p>				<p>Reasons for Participation</p>		
PR-C-0681 1671	07/10/2017	David	Young					Y			
<p>Comments</p> <p>Following publication of the revised housing need figures the whole process should be halted until a countywide review can take place. If this does not happen there should be a balanced assessment of the Kidlington Gap in relation to the points raised. The proposal for the Golf Course should be withdrawn immediately. I have some significant unease about the process that Cherwell has followed, not least the uncritical acceptance of some dubious Growth Board figures. On the golf course proposal I have even more procedural reservations. Cherwell talked to the Colleges/Agents, but it did not at any stage approach the Golf Club. I believe Exeter was not however spoken to about Frieze Farm.</p>					<p>Changes Sought</p> <p>Following publication of the revised housing need figures the whole process should be halted until a countywide review can take place. Personal response to the local plan is that it has been a joke – you are laughing at the local residents in the areas concerned and you are laughing at us. This supposed ‘public consultation’ is insulting. There is no evidence that the previous consultation was listened to and there is evidence that you will not listen to the local evidence presented in this round. As evidence I direct you to Cllr Wood’s disastrous appearance at the public meeting on the 27th September – he was very frank and the distinct impression we all felt was you think we’re idiots and you have already made these deals.

Do not find this a lawful process in any shape manner or form. It feels like a deliberate chance to bamboozle local residents into giving up on objecting. The documentation you have provided and the response format has been done to deliberately put local people off of responding. There is no justification provided in this document to build on greenbelt land in this area. You need to go back to drawing board and find non-greenbelt land to build on.

I do not agree that the housing proposed is necessary, especially as it is proposed on GB land when alternative solutions are available. The quantity of housing required is in dispute so should be put on hold until the number is officially clarified. The traffic is not managed now so how will cope with and extra 1-3 cars per new household, the transport solutions proposed are not viable. This response should be read in conjunction with the Representations made by the Begbroke & Greenbelt Campaign which also form part of this representation.

Opposition to proposed plan to address predicted Oxford City Housing shortage. No confidence in accuracy of study indicating predicted shortfall and future requirements to eradicate the problem. Not enough has been done to identify land suitable within Oxford for housing and their proposed allocation is a joke. Decimation of GB bordering Kidlington, Begbroke and Yarnton is not justified. Good reason for protecting GB and any changes must be fully justified. Not the case with this proposal. Traffic is already a problem and development would make this worse. No solution to improve current difficulties let alone any additional problems. This will not solve Oxford’s problems - it is more likely to assist London commuters with the access to Oxford Parkway. Whilst there is a need for additional housing, Cherwell should not be so readily volunteering to bail out Oxford City. Legislation says that neighbouring Authorities can assist but not that it MUST, certainly not until every other avenue has been examined which I doubt in this occasion.

Saddened to find fields surrounding our house threatened by proposed development. Oxford City has 42% open space, why isn't some of this used for their unmet housing need. If development goes ahead I will have to travel to the other side of Begbroke to find fields to walk in. This will effectively join Begbroke and Yarnton villages together. The drawings do not show the parish boundaries, which are at the Science Park Road. The buffer zone is actually in Begbroke which is quite misleading and against your own policy of keeping the villages separate. Sandy Lane is a vital link with the joint doctors surgery, if the road is closed, people from Yarnton will have to go via either Pear Tree roundabout or the airport road. Neither would be acceptable due to gridlocked traffic resulting in missed appointments. Sandy Lane would become an access road to the new housing and is totally unsuitable for such a high volume of traffic. Air pollution will be horrendous. The A44 is congested and often at a standstill during the rush hour - how will it cope with all the extra traffic? The road is not wide enough to accommodate a bus lane from The Turnpike to the Pear Tree roundabout. If there is a bus lane from Woodstock, the one lane for cars will create even longer traffic queues. Infrastructure has not been thought through - who will pay for it? Why are the houses not being built on land within the city? There is a huge golf course within the city with direct access to Cowley and Headington, as well as many other courses. People on Oxford's housing list want to live in Oxford, not out in the country! The employment is not in the North of Oxford either. Who will manage the 50% social housing. Oxford University are pushing this through to make a fortune from the land sold. The local farm in Yarnton will lose their livelihood. This is a disgrace. I urge CDC to vote against this proposal.

1. Loss of GB and the Consequences for our villages - Once GB has gone it can never be replaced. Oxford City Council's inability to plan for its housing needs is not an exceptional reason to allow building on GB land. Oxford City council now admits their numbers were over estimated. The proposed building will virtually join Begbroke and Yarnton. This penalises our villages with loss of individual characters with long historical connections. GB reasons are well established - breathing space between villages/towns; help in combating Air and Noise pollution; protection of the environment. Government and Cherwell policy is that GB should be preserved. Additionally Prime Agricultural Land will be lost which as a country importing more than 65% of our food we can ill afford to loose. There are already problems with flooding and more building with the accompanying tarmac will only increase this problem. We are fortunate to have wildlife around us- Barn Owls, deer, fox, red kites and hedgehogs- with many walks to enjoy the flora- all of which will be lost with building on GB. 2. Transportation: There is already traffic congestion trying to get in and out of Oxford/to the Park & Rides/or further South. If we have a 9 o'clock appointment at one of the hospitals, we must leave by 7 o'clock to be in time. There is no bus service to the hospitals from Yarnton and our regular bus service is only half hourly. 100's more cars will leave us sitting in traffic jams. 3. Closure of Sandy Lane - direct link to Kidlington and is a busy road gritted by the County in winter. Other routes to Kidlington are heavily traffic congested. There are no buses to Kidlington. Dentist/Medical Practices and Veterinary Surgeons are in Kidlington. 4. Pressure on GP and School Services - Regular check-ups require least 2/3 weeks advance booking. Likewise, our school is also full having just added more capacity. While new schools will provide places, the road traffic will increase, all adding to the difficulties here. 5. Development may be needed; but should not be located on the GB, there are brown field sites available exist even in Oxford City. Density targets for building could be higher providing more affordable housing. Councils are unable to hold developers to agreed social housing numbers, (Barton and Temple Square developments). Oxford City Council proposal for business at North Gate instead of housing only aggravates the situation. Yarnton with Begbroke and even Kidlington so that we will all be forced to live in an urban conurbation of some 30,000 people. Our GB is too precious and important to loose.

Objection on following reasons: 1. Loss of GB. Once gone it can never be replaced. Oxford City Council's miss-management of it's housing needs do not make exceptional circumstances to build on GB. Furthermore, the Council now admits their numbers were over-estimated. This extra housing would join Yarnton to both Begbroke and Kidlington with loss of individual village characters. Reasons for GB are well established: breathing space between villages/towns; help combat noise and air pollution; protection of the environment. Building on this GB land will add to the flooding problems. Prime agricultural land is also at risk which, for a country that imports more than 65% of our food, we cannot afford to lose. Both Government and Cherwell policy is to preserve the GB. We do not wish to live in an urban sprawl, losing landscape, walks and the historical associations; our quality of life will suffer. 2. Transportation - already we are faced with traffic congestion trying to get in and out of Oxford and further South. 9 o'clock hospital appointments necessitate leaving by 7 o'clock to be in time. Our bus service is half hourly only into the city centre. We still face traffic problems if we try to go to Park and Rides. 100's more cars we leave us sitting in jams and make our lives miserable. 3. Closure of Sandy Lane. This is our direct link with Kidlington and is a busy road gritted by the County in winter. To get to other routes to Kidlington we face traffic congestion. There are no buses to Kidlington. Dentist and further Medical Practices, and Veterinary surgeries are in Kidlington. 4. Pressure on GP and School Services. Our surgery is very busy. For regular check-up visits it is necessary to book at least 2/3 weeks in advance. Such an increase in population will make things impossible. Likewise our school is also full having just added more capacity. While new schools will provide places, the road traffic will increase, all adding to the difficulties here. 5. Development may understandably be needed; but should be located on brown field sites and others that are not GB. Density targets for building could be higher providing more affordable housing. Councils are unable to hold developers to agreed social housing numbers. We have examples of this from Oxford City Council in the Barton and Temple Square developments. Comments

Objection in strongest terms to proposals to meet Oxford City's Unmet Housing Need. It is flawed, unrealistic and based on inaccurate, over-estimated figures which must raise a concern over its legal compliance. First, Transport Strategy has clearly been drawn up without local knowledge or experience. Already huge daily congestion and pollution on the A44 during peak times which is exacerbated when national events are held at Blenheim Palace. As this feeds onto the A34, already notorious, the implications are much wider than simply 'traffic through Yarnton and Begbroke'. This cannot be solved by installing a bus lane from Woodstock to Oxford: the A44 reduces to a single lane between Yarnton and Pear Tree Roundabout, already a pinch-point for the feeder roads onto the A34, and it is not obvious how this could be widened, so traffic will have to merge at one of the busiest junctions. Faith in local bus services is misplaced: the bus companies are driven by economics and it is not clear that the Council could insist on specific bus routes. Nor is it clear that this Strategy would be fully costed and funding guaranteed before building commenced. Second, pressure on facilities/infrastructure in Yarnton is already at breaking point: just this week, it has been reported that properties are suffering problems with drainage and sewers. The village could not cope with an increased population unless the existing infrastructure is vastly improved and expanded. Who would pay for this? What power does CDC have to force developers to provide adequate, additional facilities? Third, the destruction of GB in Yarnton. The Council claims that the plan proposes only a 3% reduction of GB across the District. Approximately 90% of that 3% is in Yarnton and Begbroke, in effect creating a new town, Yarnton and Begbroke would lose their village identity and become subsumed into a suburb of Oxford. Currently when entering Yarnton, there is a sign proudly stating that the village is one of the oldest settlements in the country, dating back 5000 years. The GB Policy is meant to prevent urban sprawl, to preserve the special character of such a village and it is shocking that it can be so lightly over-turned. Brownfield sites are more expensive to develop but at some stage, Council/Government is going to have to find a way of financing their development otherwise Oxfordshire will become a mass of urban sprawl interspersed with derelict land. There should be a strong challenge on why brownfield sites were discounted. Destruction of GB would involve a loss of recreation and farming land. It would do irretrievable damage to the local environment and wildlife, the GB is one of the 'lungs' surrounding Oxford city with all its attendant pollution. If destroyed and the GB Policy is in effect meaningless, I am fearful for the precedent this will set. If our objections are overturned and CDC's proposals come to pass, my final point concerns the likelihood of affordable housing being built. Developers do not want to build affordable or social housing, it is not a profitable undertaking, and Councils seem impotent in the face of their demands. In a recent television interview it was announced OCC negotiated with developers to build a small proportion of affordable accommodation on the new Barton development where 1-bedroom flats are being sold for £300,000 and small houses for £600,000. Can we really support a plan which will destroy our environment, our identity, our way of life, our values, in order to create unaffordable housing which will not meet the needs of young/local people?

Para. 80 of National Planning Policy Framework suggests that GB is intended "to prevent neighbouring towns merging into one another". The Plan appears to merge Gosford and Water Eaton with Oxford. Throughout the documents Gosford and Water Eaton are not referred to by name but described as "North Oxford". This is problematic.

<p>Objection to the plan to build 4400 new homes for Oxford City Councils unmet housing needs. Kidlington is a huge village with very limited amenities for our size. Increasing Kidlington's size will worsen this problem. With very little for local children to do, antisocial behaviour is likely to increase with damaging effects to our village and society. Doctors, schools, policing and council provided services are already under massive pressure and will not cope with extra housing. The plan is not positively prepared because it does not provide for necessary infrastructure. Building on the GB is an irreversible mistake. The GB and the beauty, wildlife and advantages it currently provides will be lost forever. It protects both the historic city of Oxford from overdevelopment and neighbouring villages from coalescence. Government guidance says that GB is a permanent designation and that unmet housing need is not a reason for building in the GB. The plan is therefore ineffective and not consistent with National Policy. Traffic congestion and air pollution will undoubtedly worsen due to thousands more vehicles on our roads. The area of road by Water Eaton Lane and Bicester Road has the highest level of pollution in the county, it will have damaging consequences on the health of local residents if the amount of traffic/pollution increases further. Very few of the new houses would be 'affordable' in reality. Developers across the country consistently default on their affordable housing quota. Most of the new houses are likely to serve the London-commuter and buy-to-let markets, and Kidlington's young people and the county's key workers still won't get the truly affordable housing they need. Affordable housing is needed but it must be proportional to the local areas. This number of houses will completely change Kidlington and the surrounding villages. They will all be consumed within Oxford City because there will be no boundaries.</p>

<p>For the sake of future generations cannot condone under any circumstances the permanent loss of GB. The countryside around Yarnton is rich in wildlife and the loss of habitat will have a massive environmental impact which cannot be rectified. This goes against the National Planning Framework guidance - To check unrestricted sprawl of large built up areas. - To prevent neighbouring towns merging into one another. - To safeguard the countryside from encroachment. - To preserve the setting and special character of historic towns. - To assist in urban regeneration by encouraging the recycling of derelict and other urban land. Has Oxford City Council proved beyond all reasonable doubt that there are not more suitable locations which could be used or regenerated with its own city boundary? Are there not more suitable locations around the county not requiring the loss of GB land? Why has Cherwell District Council ignored its own Policy ESD 14: Oxford GB? The Oxford GB boundaries within Cherwell District will be maintained in order to: Preserve the special character and landscape setting of Oxford. Check the growth of Oxford and prevent ribbon development and urban sprawl. Prevent the coalescence of settlements. Assist in safeguarding the countryside from encroachment. Assist in urban regeneration, by encouraging the recycling of derelict and other urban land. Development proposals within the GB will be assessed in accordance with government guidance contained in the NPPF and NPPG. Development within the GB will only be permitted if it maintains the GB's openness and does not conflict with the purposes of the GB or harm its visual amenities. A11: "Development in the open countryside will be strictly controlled. In the south of the District, the GB will be maintained, though a small scale local review of the GB will be conducted to accommodate identified employment needs at Kidlington." B.260: "It is essential that the impact on the GB is minimised, therefore priority will be given to locations that lie adjacent to existing development, avoid the coalescence of settlements, protect the vulnerable Kidlington Gap and otherwise have the least impact possible on the GB." Yarnton is a village with approximately 1,350 houses, Begbroke has just 390 houses. Building 2,480 new houses between the two villages is disproportionate to the size of both villages and will mean that each village loses its own unique identity and instead merges with Kidlington into one large conurbation. Public services are already stretched in the area and will be under even more pressure. Local businesses often experience difficulties getting to the office and going to meetings due to the congestion caused by traffic heading towards the Pear Tree roundabout and connecting routes. The additional impact is likely to mean that the A44 will be gridlocked during daily commuting times. Whilst Oxford's unmet housing needs may be met, anybody living in the area will face real difficulties actually commuting into Oxford - even allowing for the proposed new transport infrastructure (if the recent updates to the traffic system around Wolvercote roundabout which have had no impact whatsoever are anything to go by). If fields are concreted over for new housing developments how does Cherwell District Council propose that excess rain water will be absorbed? Will they foot the bill when villages become flooded? Cherwell District Council should be looking after the needs of its constituents.</p>

5425	Comments							
The Transport Assessment is not based on any feasibility study and so is disingenuously optimistic about what can be achieved. It speaks of a bus lane from Begbroke to Loop Farm disregarding the fact that a railway bridge and a canal bridge would preclude this from happening on this single carriageway. It acknowledges that the cost of delivering the necessary road improvements would be very high but there is absolutely no guarantee that anything like the amount of money needed would be found. A cursory look round Yarnton at the state of the potholes and weeds growing along the road edges indicate that roads have been a very low priority for a long time. Furthermore, the closure of Sandy Lane to cars would mean drivers having to take a much longer route to our nearest shopping centre, Kidlington, thus adding to air pollution.

The Strategic Housing Market Assessment (SHMA) is based on data gathered pre-Brexit for growth which is no longer creditable post-Brexit. This fact alone should be enough to halt the plan. The proposed extra housing would effectively join up the 3 historic villages of Yarnton, Begbroke and Kidlington. Each village has its own unique character which would be destroyed were this amalgamation to proceed. The GB was introduced to prevent, among other things, urban sprawl. No better illustration of the phrase 'urban sprawl' than what has been suggested in this proposal. The green areas around the 3 villages are very important, not just aesthetically but also for the physical and mental health of everyone living here. At a time when we are constantly encouraged to walk and exercise more and when poor air quality is known to be a factor in ill health, getting rid of GB land is indefensible. The traffic build-up at peak times along the A44 is bad enough now. There is sometimes gridlock between the Sandy Lane roundabout going south towards Pear Tree and beyond. The Transport Assessment is not based on any feasibility study and so is disingenuously optimistic about what can be achieved. It speaks of a bus lane from Begbroke to Loop Farm disregarding the fact that a railway bridge and a canal bridge would preclude this from happening on this single carriageway. It acknowledges that the cost of delivering the necessary road improvements would be very high but there is absolutely no guarantee that anything like the amount of money needed would be found. A cursory look round Yarnton at the state of the potholes and weeds growing along the road edges indicate that roads have been a very low priority for a long time. Furthermore, the closure of Sandy Lane to cars would mean drivers having to take a much longer route to our nearest shopping centre, Kidlington, thus adding to air pollution. Oxford City, rather than thinking of growth, should reflect on the fact that it is blessed with beautiful buildings, lovely parks and a wealth of history, which millions of tourists come to see and enjoy every year. There is virtually no unemployment and so no need to draw in extra industry and consequent need for extra housing. Brownfield sites within Oxford City itself could be developed for 'truly' affordable housing for key workers and others which would offset some commuting, resulting in less road congestion/air pollution. The City Council should do more to help the homeless with day centres and night shelters - if not for humanitarian reasons, then for the shame it brings to our city.

1729	Comments							
Very few of the new homes will be affordable for Oxford City workers. Oxford City have breached their own policies. The £60m Cowley shopping centre development has been approved with less than half of the housing set apart for social housing. The City Council approved no social housing to be part of the £440m Westgate Shopping Centre and Barton Park "affordable homes" have a £600,000 price tag. (The latter has delighted estate agents who say the price will further inflate Oxford house prices which presently average £400,000.) Barton Park was supposed to be the City Council's remedy for the chronic shortage of key worker housing. Oxford City Council have squandered far too much land on commercial use which earns them huge profits in rates and has not given enough thought to housing needs.

Comments					
Consider that the proposed submission plan is unjustified and unsound for the reasons given in my specific objections. Local Services: If another 4400 houses were built in Kidlington and the surrounding area, services would be even more overstretched than they already are. The health services in Kidlington are already under stress and it can take over 4 weeks to arrange an appointment with a doctor of choice, for example if continuity of treatment is required over a period of time. The service will be unsustainable if there is a large increase to the local population. There will also be an adverse effect on schools in the area. Affordable Housing: Any study of significant housing developments in Oxfordshire (and many other places) will show that very few new houses are 'affordable' in reality. There is little reason to be optimistic in this case as developers consistently default on their affordable housing quota without much opposition from the planning authorities. Using the new Barton Estate development as an example, predicted prices for what are described as starter homes are already beyond the reach of first-time buyers. In reality, any development to the north of Oxford would attract many commuters working in London and would not really be meeting the needs of young people and the key workers in this area.

Object because local experience shows that very few of the new houses would be 'affordable' in reality. Developers across the country consistently default on their affordable housing quota. Predicted prices for so called starter homes at Barton Park are already beyond the reach of first-time buyers. Most of the new houses are likely to serve the London-commuter and buy-to-let markets, and Kidlington's young voters and the county's key workers still won't get the truly affordable housing they need. Object because public services will get worse. Underfunded public services, already struggling, will deteriorate further: waiting times to see your GP will be even longer and school class sizes will rise. Object because traffic congestion and air pollution will undoubtedly worsen due to thousands more vehicles on our roads. Is concerned about the impact of additional pollution on the rep's health and that of family. This is in addition to the extra traffic from the 22,000 houses already approved elsewhere in the District by Cherwell, and over 10,000 more houses to be built in the other Districts just for Oxford overspill. Construction traffic and road works will add to this chaos for years while the development takes place. Support Cherwell's decision to reject some sites around Kidlington that were initially identified for possible development. Specifically, support rejection of land north of The Moors and land behind Webb's Way.

Considers that the proposed submission plan is Unsound, Not Positively Prepared, Not Justified, and Not effective for the reasons given in my specific objections below Motivation for developing the plan is described as response to Oxford's unmet housing need. In the first instance this is Oxford's responsibility. Oxford has not fully discharged this responsibility as yet because the City Council has not exhausted all options to meet this need within Oxford itself. The plan itself will not create sufficient affordable housing for Oxford or Cherwell. The cost to buyers of the housing described in the plan will be out of reach for most local people. The location of the majority of proposed development on green belt land is wholly inappropriate and destructive. Cherwell's responsibility to protect the local environment is being abdicated. Irrespective of the supposed safeguards, natural habitats and clean air will inevitably suffer from construction and population increase. The absence of sufficient associated development of transport and other infrastructure means residents will have the worst of both worlds: increased congestion and pollution without improvement in local communications.

Kidlington will become part of a vast urban sprawl encompassing north Oxford, Cutteslowe, Wolvercote, Begbroke, and Yarnton. All these areas will lose their distinct character. Is not against building more houses in the right places that will provide low-cost/low-rent homes for local residents. But I need to be convinced that future plans take all the concerns outlined above into consideration.

What about affordable housing? Developers cannot be depended upon to provide a sensible number to house those in need. There is a danger of building 4000 houses that no one can afford. Any developments on sites north east of Kidlington are at risk because of flooding not only to the site themselves but areas further south because the loss of water run off areas.

There is a need for social housing in Oxford. This should be a priority. However, the plans to meet Oxford's housing needs seem to be based on targets stemming from the building of new business parks in Oxford and significant new housing that is not social housing. The quantity of housing seems excessive and in the area near Oxford Parkway will mostly likely become commuter housing for London. Surely Oxford should first build social housing and not business parks. There is not an employment need but a housing need. Also, there should be better and more certain work done on the true need. If Oxford City Council altered its emphasis away from business property and towards building social housing it could meet a lot of its needs within its own boundaries and non-green belt areas. - Closing the Kidlington Gap will significantly transform both Oxford and Kidlington. Instead of separate communities there will be a large urban sprawl. This is exactly what Green Belt is designed to prevent. - If Green Belt boundaries are re-defined Local Authorities should define boundaries clearly using physical features that are readily recognisable and likely to be permanent. This is not the case on the area to the east of the A4165 (Oxford Road) because there are no such features and therefore no eastern boundary. This could therefore lead to unrestricted sprawl of large built up areas – exactly what the Green Belt is there to prevent. (National Policy Planning Framework, paragraph 85).-There does not seem to be plans to address the impact on traffic congestion and pressure on other amenities and public services. The roads surrounding this area are already under strain. Most of the infrastructure plans are to be unfunded so may not happen. -Would request that consideration be given to the light and security of the houses bordering the area. We are next to the site in question and would be adversely affected if housing were built too close or were tall constructions. Requests a green area between the new development and existing area be maintained.

Outrageous that CDC considers it practicable to build 40000 houses and kill the green belt and the golf club when there is an obesity epidemic and problem with air quality. There is a lack of infrastructure and too much traffic already.Cowley is suited to key workers at the JR and much of it is only used for 55% of the year. There should be compulsory purchases in this area to supply affordable homes for key workers; and student accommodation - flats - could be built fairly near the universities, high rise not being suitable for families but for the young. This would stop landlords making money from the housing crisis and the council and the universities could rent direct.There are many other brown sites available in the city, which suit those wishing to use public transport.At present, Oxford is just about a discrete city although it's constantly encroaching on the green belt. The garden suburb proved an excellent model and it could be effective to build new garden cities at say Great Milton or Middle Barton to enhance the feeling of community. If Oxford becomes an urban sprawl, it will be a victim of its own success.

The Government has released "Planning for the right homes in the right places: consultation proposals", setting out a revised methodology for estimating housing need. In the Housing Need Consultation Table, the housing need requirements, based on the new methodology, for both Cherwell DC and Oxford CC were reduced by between a third and a half from those previously calculated (presented in the SHMA). Since the 4400 homes being proposed by Cherwell are based on the previous methodology, the whole basis for the Partial Review is now flawed. The Partial Review should be halted until new, lower figures, are estimated.

The proposed submission plan is Unsound, Not Positively Prepared, Not Justified and Not Effective for the reasons given in my specific objections below. Destruction of countryside; loss of footpaths and wildlife: There are many footpaths in the area around and between Begbroke, Yarnton and Kidlington. Walk paths around Begbroke almost daily and they are used by a huge number of people from dog walkers to tourists walking longer distance footpaths such as the Shakespeare Way or diverting from the Oxford Canal Path. Many of these offer beautiful views (particularly the paths on Spring Hill). The area is a haven for wildlife – has encountered a huge range of different animals, including badgers, hares, shrews, water voles, deer (roe and muntjac) and wood mice, to name but a few. It would be a huge loss if all this was destroyed.

Proposed changes to the plans In light of the objections outlined above, I would suggest: <ul style="list-style-type: none"> • reviewing the housing forecasts on which the current Local Plan is based. The calculations used to make these forecasts have been revised recently and the number of new homes required has fallen as a result. • looking to build on brownfield sites within Oxford itself. This would significantly reduce the impact on local transport infrastructure, and provide housing where it is actually needed. • looking to build on sites closer to the main industrial areas of Oxford (namely the City Centre, Headington and Cowley); again, this would reduce the impact on local transport infrastructure and increase the likelihood that these houses would be bought by people working in Oxford rather than people looking to commute to London. 				I would like the Begbroke and Yarnton Green Belt Campaign to act as my representative during the Examination by the Planning Inspector

<p>Horrified at the scale & impact of the proposed policies which appear to be unsound in every way. Understand that the housing computation is based on incorrect methods and that the numbers of houses needed is inaccurate. The Cherwell local Plan Partial Review has disregarded not only the importance of preserving the Green Belt but also the historic nature of Oxford, as a world heritage City, which will be affected deeply by these proposals. Shameful that a policy of such huge significance has disregarded the present state of traffic and infrastructure, in and out of Oxford, which is already stretched. The proposal will only add chaotic conditions for all concerned, present and future generations. There is nothing to indicate that these proposals will do good where it is needed. Oxford should plan it's own housing policies. Calls on H.M.Government Inspectors to do all the careful enquiry needed before implementing any of these proposals.</p>

<p>Having 4000 houses built in Kidlington, Yarnton and surrounding areas to accommodate Oxford's overspill is outrageous. If Oxford City stopped building business parks that still advertise space long after completion and built homes, affordable or otherwise, then this would not need to happen. It is scandalous that Oxford City can demand that District Councils bail them out because they can't or won't organise their own housing needs appropriately. 4000 more houses are going to generate at least 8000 more cars and roads around Kidlington and Yarnton are congested enough now and would be even more so if these houses went ahead. What infrastructure would be put in place to support these extra homes/families? It is hard enough to get a medical appointment in Kidlington and Yarnton and get your children into nearby schools now without more pressure on these services. More children in the area would also increase the size of classrooms which are large enough already. Public transport would be another issue if more people needed to use this. Buses going to into Oxford in rush hour times are full to capacity already and this is at a time when funding for public transport is also being cut in some areas. The vision of "affordable housing" never materializes as young local people are still unable to afford these properties. Especially in Kidlington as it is now advertised as a commuter area. I wouldn't imagine that any properties in commuter areas of the country are "affordable". There is also the loss of countryside to take into consideration where people walk their dogs or just go walking.</p>

<p>The Housing White Paper states that: '... Green Belt boundaries should be amended only in exceptional circumstances when local authorities can demonstrate that they have fully examined all other reasonable options for meeting their identified housing requirements.' (1.39)These include:1. making effective use of brownfield sites; 2. potential of land currently under used, including surplus public sector land; 3. optimising the density of developments; 4. exploring whether other local authorities can help meet some of the identified development requirement Oxford's 'identified housing requirements' have not been accurately forecasted and should be reassessed, and that 'all other reasonable options' for meeting the City's housing need have not been examined, including: (a) A halt to Oxford's policy of releasing land for employment and its reallocation for housing. (b) An inventory of brownfield sites in Oxford and elsewhere in the county (including public-sector land) to establish their capacity for meeting housing need. (c) A review of other sites not currently considered for housing within the City, such as Southfield golf course. (d) Housing construction at higher density and – where appropriate – height in the City. (e) A review of future student housing demand within the City in light of the projected downturn in student numbers resulting from Brexit and new immigration policy, together with the requirement for the universities and other relevant educational establishments to provide more student accommodation on their own land. (f) The redistribution of intended employment centres to elsewhere in Cherwell and Oxfordshire. Other areas in the county and region would benefit from and welcome employment opportunities in the variety of sectors that Oxford plans to expand, and could accommodate the necessary housing. The majority of Oxfordshire's high-tech economic growth does not need to be concentrated in Oxford, especially at the enormous cost to the environment, countryside and quality of life outlined above. The value of the so-called knowledge sector and its spin-offs is recognised, but such employment does not have to be in Oxford or even in close proximity to it or to each other, given the universality of communications technology. It could be located elsewhere in the county, and in the Cherwell District in Bicester or Banbury, where land is available for commercial use, there are good rail links, and housing cost is lower.</p>

1855	Comments								
<p>Oxford Local Plan. Oxford has not yet agreed its own Local Plan 2036, which was still at consultation stage concurrently with Cherwell's own partial-review consultation. Cherwell's 2015 Local Plan states that it: '... recognises that Oxford may not be able to accommodate the whole of its new housing requirement for the 2011-2031 period within its administrative boundary. The urban capacity of Oxford is as yet unconfirmed.' and it remains the case that the 'urban capacity of Oxford is as yet unconfirmed'. Oxford has not so far published an inventory of its own housing capacity, either in its draft Local Plan or as far as is known elsewhere. There is little sound evidence in Oxford's draft of housing numbers, densities or sites. Housing need is in itself not sufficient; the inability to satisfy it in any other way must be demonstrated. There is little evidence that Oxford City has systematically reviewed reasonable options, most especially its own land use and availability. The failure of Oxford to publish its own Local Plan and provide evidence of its own housing capacity in time to inform Cherwell's Partial Review undermines the soundness of both. Oxford economic strategy. The imposition by Oxford of massive housing development on its neighbouring District results from Oxford's perverse adoption of an economic strategy that supports commercial over housing land use within the City and attracts substantial inward employment that will further exacerbate the City's housing supply problems. The strategy of encouraging further employment growth in and around Oxford takes away land in the City that could be used for housing and at the same time creates additional demand for housing. Oxford continues to prioritise commercial over housing development at sites like the Northern Gateway, Osney Mead, and the Westgate despite its identification in its draft Local Plan of housing as its top concern. It is perverse to deliberately pursue a policy of economic growth necessitating the commercial uptake of land and the generation of inward employment and increased housing demand in an area of full employment such as Oxford already enjoys. Such a policy is not sustainable. It compounds the already critical problem of affordable housing supply, places additional stresses on the City's capacity to cope with an increased population in addition to growing tourist numbers, and increases commuting and visitor traffic, with its associated congestion and pollution problems, both within the City and in neighbouring localities.</p>

Proposed Submission Plan - General Comments

PR-C-0736	01/10/2017	Liz & Roy	Moore		N
1861	Comments				
<p>The democratic validity of this and other public consultations is weak. No individual can reasonably respond to the avalanche (often concurrent) of Oxfordshire's public consultations which have the capacity to profoundly affect their quality of life, and on which they have the right to express their views, in the timescales (of which the three most recent have been over holiday periods) and by the consultation processes currently employ. Reiterate the very serious concerns, also expressed at previous consultations, that this current Partial Review consultation process is too short to allow proper scrutiny of the massive and complex documentation; that it is inadequately publicised (were it not for the efforts of Kidlington volunteers, who notified practically every household in the village, few residents would have been aware that the consultation was taking place); and that document presentation is difficult to access and hard to read. Very few hard copies of key documents are available, and only available to read in public buildings. Readers that can (and a large minority cannot) are forced to access documents on-line, where the list of documents gives little clue to their contents, and where the documents themselves are in double-column format, compounding the difficulty of reading them on a computer screen. The colour registers and hatching in the Key Site Proposals maps contained in the Summary Booklet are a poor match to the keys, the text of the keys is too small to decipher (for the elderly at least!), and the maps are inaccurate – for example in four out of the five maps where site PR6b (largely comprising the golf course) appears it is not labelled as such and is not in the cream colour used to indicate nearby sites, giving a misleading impression of the proposed scale of development.</p>

1858	Comments				
<p>Existing residents in the areas that would be affected by the development proposals have the right to expect that their health and welfare will be rigorously and fairly considered in the decision on whether the development plan is approved. There are few if any net benefits. The Plan would damagingly transform the surroundings, environment and quality of life of residents in the ways set out below, which equally apply to the quality of life that incoming occupants of the new housing developments would experience. Urban sprawl and coalescence. The proposed development will create one long arc of urban sprawl from north Oxford, through Kidlington, Yarnton and Begbroke to the Northern Gateway and Wolvercote, which will effectively result in – as one Oxford councillor has described it – an 'urban extension' of Oxford. Cutteslowe, Kidlington, Yarnton and Begbroke will effectively be merged, losing their distinctiveness and individuality. The uniqueness of Oxford's city centre will be submerged and damaged by massive suburban extensions and increases in traffic and air pollution (already at a critical level in the City).</p> <p>Unsustainable population increase. The Begbroke site (PR8) for example will more than double the combined population of Begbroke and Yarnton. The overall increase in population will put huge stresses on already struggling public services (which the infrastructure plan does little to address) and what remains of the surrounding countryside.</p>

1862	Comments				
<p>There is enormous local opposition to the development proposals set out in the Partial Review, as well as opposition from Oxford residents and many conservation groups; our local MP, Leyla Moran, has expressed her opposition to piecemeal development in the Green Belt, and our parish councils are against the plan. If they have not already done so, we would urge Cherwell councillors and planners, and the Government Inspector, to visit the sites under threat so that they can fully appreciate the destructive impact that this plan would have on our countryside, green spaces and villages, and on our quality of life.</p>

<p>The processes which have given rise to the necessity to undertake a partial review of Cherwell's Local Plan and to the constant plethora of other strategic plans in the county generate enormous public costs. This is a serious concern. It is funding which could be better directed to struggling public services - and even to the provision of affordable housing.</p>

<p>Strongly oppose the current proposed plans and believe that other solutions are possible including a realistic assessment of Oxford housing needs and design of affordable housing plans. Lived in Templar Road since 1993 and have seen many changes take place in the area. Among the positive changes is the care and nurturing of Cutteslow Park as an area enjoyed by all of us locally and increasingly drawing in families from a much wider area to enjoy this space. The setting of the park within the green belt area is very important to get away from the noise and pollution of urban life and associated health issues.-The volume of traffic especially on Banbury Road, Sunderland Avenue, all the roundabouts has increased very significantly over the years leading to gridlock for much of the day (not only at peak times) . It is mind boggling to imagine several thousand more cars on our roads with no costed road infrastructure in the plans.- Our local schools and GPs are full to capacity. Current waiting times for a doctor appointment is anything between 7-10 days- Developers have been targeting land in this part of Oxford over many years demolishing larger houses and building expensive flats in their place. Two 3 bedroom houses have been built in the back garden very nearby. All the objections to this development were over ruled and the council arguments included the housing shortages in Oxford. However, these houses went on the market for 500.000 each; one has been used as buy for rent since it was built. No nurse, teacher or care worker can afford such rents or mortgages and one can only conclude that profit not people or community centred development is the principle driver of housing development in our area. More housing near the Oxford Parkway railway station will almost inevitably be bought up by those who can afford these levels of house prices and of course London commuters.- Wolvercote, Summertown, and now Kidlington are becoming increasingly merged as part of Greater Oxford. According to national policies, the Green Belt is intended to stop urban sprawl of this kind and prevent the merging of different towns in this way it seems without limit as the sprawl could well continue beyond the boundaries proposed in the current plans/ Why are we going against national policies in such a flagrant way?- Housing projections for the city have to be more realistic and given the transport and road infrastructure challenges we already face it would make much more sense to develop sites in the city and include well planned and designed high rise apartments that were affordable. Urban re-design should be a positive challenge to planners to take us into the 21st century while keeping our history and all that make Oxford such a great place to live.</p>

<p>Encourage building in the Yarnton/Kidlington area. When building please include as much social housing, affordable housing, help to buy and shared ownership homes; including a fair proportion for families. Please ensure there is sufficient infrastructure to support the community in a good way and to avoid having everyone having to drive out for everything they need. Please build the extra schools as they will be needed and please ensure sensible and safe cycle and walking routes between Yarnton and Kidlington and make sure there are sufficient bus routes in all directions.</p>

New jobs and high-tech employment sites should be targeted to Bicester and the Harwell Research site which is being specifically developed for such. This is where new housing has and should be sited and it would stop the traffic congestion and air pollution caused by increased traffic into Oxford.

Lived in Yarnton for 70 years, does not want the village being turned into a town. The plan set out for new housing is a complete joke. Had expert advise on the planning proposals and was told that this housing issue would not be excepted in any form what so ever, never mind the traffic question. Suggest you stop Oxford City Council from bullying you and tell them to build their houses on the brown fill sites around Oxford. You represent the people of Yarnton, Begbroke and Kidlington, stand up and be counted.

Strongly object by making one large conurbation, the strain on local services would be untenable. The majority of the influx of people would not be working in the area but would be commuting elsewhere. The plans to upgrade the A44 and create a rapid transport system would not alleviate the increase in traffic this proposal would generate. The A44 already experiences high levels of congestion and has a number of pinch points which could not be changed under the upgrade thus exacerbating the congestion even further. The small surgery at Yarnton could not accommodate a further 10,000 people which are said to increase the population by and nor could the surgery at Kidlington. Opposed to these plans for the following reasons:• The loss of the Green Belt forever• The huge impact this development will have on the village and surrounding areas• The population increase and the strain it will put on local amenities• The inadequacy of the transport infrastructure to cope with the increase in population and traffic (we have already lost our bus link to Kidlington)• The increase in pollution and the impact it will have on health• The increase in the carbon footprint• The environmental impact it will have on the wildlife• The loss of the agricultural land• The loss of the 'village life'• Because the SHMA figures are flawed and inflated to accommodate the proposal• Because Yarnton has already seen an expansion with over 200 homes being built in 2011• Because the planned development could be placed on sustainable sites Cherwell DC has already identified elsewhere within their jurisdictionUrging you to reconsider your plans and leave the Green Belt boundaries alone to let future generations enjoy the rural setting and village life this area offers.

Comments

The "Housing Trajectory" in Appendix 3 has only 1700 of the 4400 houses being built in the first half of the 10-year period. Since we have a considerable backlog of unmet housing need, thinks more houses are needed sooner. The plan also sees the largest sites 6a, 6b, 8, 9 under construction for long periods. It is not very nice to live on a construction site so would think it would be better to aim to build faster on fewer sites at a time, and then move on to the others. Since 6a is closest to Oxford and has cycle lanes and good public transport into Oxford, thinks it should be completed as soon as possible, certainly by 2026. This would bring the 2021-26 total to 2000, which is still less than half of the 4400 total, so further front-loading should be sought.

Already have air pollution problems in this area. Thames Valley is known as a hotspot for air pollution. More houses will increase air pollution, not to mention the extra cars that they will bring, further reducing air quality. Thames Valley has higher than average health problems with asthma, glue ear and other diseases associated with poor air quality already.

Should not be using county green belt to meet city housing needs. That is wrong. Especially when there are still brownfield sites that could be used in the city. House prices in Oxfordshire are very high and most houses are beyond the means of a first time buyer locally. Many Oxford workers commute from places such as Banbury where housing is cheaper. These are the people who should be front of the line to buy any new housing built locally but they will not be able to buy these new houses because they still won't be affordable (in real terms). This means that they will continue to have long commutes. The new houses will place increased strain on the already stretched traffic infrastructure locally and combined with those already commuting it will become impossible to leave the village without joining a traffic jam. On bad traffic days the cars already queue past the village. People who will be able to buy any new houses built would be London commuters, or people who are wealthy, and not local people who have grown up here, or already work here, and are looking to settle. We are not short of high end houses but of affordable ones. The proposal for affordable housing suggests that affordable is as much as 80% of current market value. That is far from affordable and makes a mockery of the term. In addition the government estimates of future housing requirements are currently being reduced. Therefore, these houses are extremely likely to be found unnecessary.

Object to building on the Green Belt on principle but specifically, in this case, there is no exceptional circumstance to justify proposing to build on the Green belt. Green belt makes up a tiny % of England's land and here in both Oxford and Oxfordshire there are non Green belt sites that could be used instead of Green belt. Very against this proposal because of the resulting loss of wildlife that it will cause. Lives in Begbroke and describes the animals in and around her garden. All of which are declining in the UK because of loss of habitat. We need green belt areas to provide wildlife with the chance to survive. We should be increasing the green areas and planting wildlife friendly plants and trees locally (and nationally) not building houses. We are only just beginning to understand the real importance of bees and insects to humans. Without them many crops won't survive and more diversity will be lost which affects the future of humans too. Chosen to live in a Green belt area to be closer to nature and enjoy wildlife. There are documented health and well being benefits to humans for living in green areas and interacting with nature. This development will remove these benefits from me and the other current residents.

Flooding has been a local problem over the years. In the main it has remained a minor problem for most houses with mainly only gardens badly flooding. However, the local pub was flooded twice in a short space of time requiring closure and high costs of refurbishment once water had subsided. At present surrounded by green belt a lot of water is absorbed which has kept this flooding to a minimum. Building more houses will mean significantly higher risk of flooding. In fact I cannot believe flooding wouldn't happen regularly if these proposed houses were built.

Strongly object to the building of 4,400 homes in the North Oxford and Kidlington area as follows: - Lack of education facilities - Currently there are not enough schools to cater for the families who will be relocating to the area due to the new proposed development. The schools which are already in the Kidlington area require improvement in their education standards. Increasing students will only reduce the standards of the schools further.- Lack of health facilities - The current 2 surgeries in Kidlington do not have staff sufficient to cater for the increase in its local population, as they are already overworked.- The potential increase of traffic - It is highly likely that the current traffic problem along Oxford road going down to Cutteslowe round about in peak hours is likely to get worse. The above weighty factors need to be addressed before adding 4400 houses in the area. Strongly oppose the building of houses in the area.

<p>Comments</p> <p>See changes</p> <p>Changes Sought</p> <p>Reasons for Participation</p> <p>Understand that traffic modelling across the County has been used to inform the air quality assessment, have concerns that this does not take into account housing allocations in the emerging Local Plans for South Oxfordshire, Vale of the White Horse or Oxford City. Advise that, in order to fulfil the requirements of the Conservation of Habitats and Species Regulations 2010, with regard to in-combination assessment, traffic modelling which takes into account all proposed allocations in emerging and adopted Local Plans across the County is needed. Natural England would advocate a co-ordinated approach from Local Authorities across Oxfordshire in order to achieve this.</p>								
PR-C-0764 1926	10/10/2017	Chris	Baines	Natural England	N		N	
<p>Comments</p> <p>See changes</p> <p>Changes Sought</p> <p>Reasons for Participation</p> <p>Habitat Regulations Assessment - Air Quality. Our concerns with the HRA relate to the assessment of air quality impacts; we advise that the scope of the HRA should be extended to assess if there are any likely significant effects on Aston Rowant SAC arising from traffic generated along the M40, from the plan alone and particularly in-combination with other plans. This should initially consider whether the plan would result in an increase in traffic of 1000AADT or more along the M40 adjacent to Aston Rowant SAC, and also whether this threshold would be met when traffic generation from other plans and projects is considered in-combination. If an increase of 1000AADT or more is predicted, we would advise this to be a likely significant effect and further assessment would be needed.</p>								
PR-C-0764 1925	10/10/2017	Chris	Baines	Natural England	N		N	
<p>Comments</p> <p>Natural England is a non-departmental public body. Our statutory purpose is to ensure that the natural environment is conserved, enhanced, and managed for the benefit of present and future generations, thereby contributing to sustainable development. Natural England is of the opinion that as it stands this Local Plan is not legally compliant and currently does not meet all of the tests of soundness, namely, whether it is effective and whether it is consistent with national policy. However, Natural England's concerns centre around the need for further evidence; once this evidence is available we would be happy to review our advice with regards to soundness of the plan.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>								
PR-C-0765 1934	10/10/2017	Eleanor	Williamson					
<p>Comments</p> <p>Cherwell is not a sacrificial lamb for Oxford City. Oxford City is driving this push for new build. Yet City is only willing to accept a tiny proportion within its own boundaries. This is grossly unfair on Cherwell residents. Oxford City must take a greater share of the quota. Dispute the expression 'unmet housing need' as disingenuous. This is speculative building on an 'if we build, they will come' model. It is a plan for population growth, not for stabilising the housing needs of the existing population. It is a model for putative future residents, relocating into the county to take jobs in Oxford that do not yet exist. It is wishful thinking by those with vested financial interests. This is not a 'need' that justifies raping the villages and ripping up the greenbelt. Indeed, the Government has already revised (lowered) the initial 4,400-home projection. Mistrusted the 4,400 as unrealistic, unachievable and unsustainable. Right to mistrust it. Detailed comments provided includes: transport, air quality, infrastructure, house prices and homes for commuters, and loss of rural landscape.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>

1938	Comments							
All site allocation policies - Based on the information received at the recent 'duty to cooperate meeting' it is our understanding that site allocation proposals including the proposed quantum of development and associated maps have been informed by high-level masterplanning work. Very much welcome this as we consider it essential that quantum and layout are tested against the policy requirements including housing numbers, open space and GI. The policies are very detailed and can see that a lot of thought has gone into them. They include many elements that are supported such as the protection of designated sites, habitats and species (including sites downstream), requirements for a net gain in biodiversity, the use of an accepted biodiversity calculator, the integration of Green Infrastructure, the integration of biodiversity into the built-up areas, the production of a Biodiversity Improvement and Management Plan (BIMP) and the need for long term management. The policy maps provide considerable detail on the layout, which is welcomed. However, these are indicative only and might still change as a result of this consultation or at outline planning stage. Therefore reserve the right to make further representations should layouts change in a way that might result in increased adverse biodiversity impacts on sites, habitats or species. The policies are very specific on survey requirements based on ecological scoping survey. Welcome the requirement for various surveys but are concerned that these are based on limited survey effort (see comments on evidence base below) and that a comprehensive extended Phase 1 survey might highlight the need for further surveys than those mentioned in the policies. Welcome that the policies require development on the sites to be considered and assessed in its entirety rather than in individual phases. Related to that we consider it important that any on-site ecological mitigation and compensation is delivered at the beginning of the development phase to provide confidence about delivery and to ensure that the necessary green infrastructure and related benefits for residents are in place from the outset. Welcome the requirement for long-term management and recommend that it is more clearly defined.								
Changes Sought				Reasons for Participation				
Recommend for the policies to be less specific but to state that protected and notable species survey will be required, and will need to be informed by a Phase 1 Habitat survey. For example bat or invertebrate surveys are currently not mentioned in the policies but might be required. As mentioned above recommend that long-term management to be defined as for the life-time of the associated development.				Potential biodiversity impacts as outlined in the representation.				
PR-C-0766	10/10/2017	Haidrun	Breith	Berks, Bucks & Oxon Wildlife Trust				Y
1936	Comments							
As a wildlife conservation charity, comments relate specifically to the protection and enhancement of the local ecology in Oxfordshire. Pleased to see that many potential sites put forward in the recent options consultation are no longer pursued for development. Find it difficult to judge whether the calculated unmet housing need for Oxford is appropriate but believe that if additional housing in Oxford is required it should be met close to Oxford if possible. As such agree that areas A and B are probably best suited to address Cherwell's contribution on meeting Oxford's housing needs due to their proximity to Oxford. Having said this remain concerned about the overall proposed quantum of development not only in Cherwell District but in Oxfordshire, which will inevitably impact on wildlife. No comment on Greenbelt issues but aware that all proposed sites are in the GB and as such might not be found acceptable in planning policy terms. Commented on previous Local Plan 2011-2031 consultations and many of the comments still apply, e.g. comments made with regard to impacts on designated sites, cumulative effects, management, Green Infrastructure planning and Biodiversity in Development (please see comments from 9th January 2017).

W. The proposed plans will destroy one of the spaces providing the area with fresh air between Oxford and Woodstock. They will destroy the open spaces between Begbroke, Yarnton and Kidlington. In addition building on land which is subject to flooding. Evidently no thought has been given to the additional traffic the development will create. By building another Park and ride near Woodstock will not be a solution neither will a bus lane to Pear Tree. Traffic on the A44 and the Banbury Road is already very heavy 7 days a week. With the new Science Park in Langford Lane, the increase in size of Begbroke Science Park and the shutting of Sandy Lane gridlock will occur throughout the working day even before the Northern Gateway is built. Every day traffic also diverts from the A40 through Bladon, Cassington, Yarnton and Begbroke both in a westerly and easterly direction.

OCCG is pleased to see considerable reference to health, and wellbeing, within the documents, and is happy to continue to work with Cherwell District Council on this and other developments. Concern is raised however to the need for ALL developments to have sufficient provision made for healthcare infrastructure. Without this health provision will not be able to meet the needs of the growth in population.

PR-C-0769	10/10/2017	Mr Sam	Alcock		N	N	N	Y
517	Comments							
The traffic and congestion on the A44 during peak periods is already unmanageable. Large assumptions appear to have been made with respect to those who would live in the new housing and their use of public transport to get into Oxford city. In reality many will commute to work outside of the city and undoubtedly many will use their own cars to do this. Not enough thought and consideration has been put into the infrastructure plans to mitigate against this large increase in personal vehicle usage in and around Begbroke, Yarnton and Kidlington.								
Changes Sought				Reasons for Participation				
For the reasons given above AND the Representations made by the Begbroke & Yarnton Green Belt Campaign which the rep additionally support and adopt as part of my his Representation in this document, the Plan cannot be changed to make it legally compliant or sound and should therefore NOT be submitted for Inspection.				Would like the Begbroke & Yarnton Green Belt Campaign to represent me at the Examination should it take place.				

Proposed Submission Plan - General Comments

PR-C-0770	10/10/2017	Jane	Olds	Wendlebury Parish Council				
518	Comments							
The Parish Council has discussed the response to the Local Plan Part 1 Partial Review of Oxford's Unmet Housing need and agrees with the District Council's reasons for restricting the housing development to Areas A and B. The infrastructure needed for the development and for Oxford is also more appropriate for these areas.

PR-C-0771	10/10/2017	Amanda	Darley					
1946	Comments							
Objection raised - Understand there is a housing shortage in the UK and that Oxford City has predicted it will need a significant amount of new housing over the coming years, firmly believes that building thousands of houses in the Kidlington/Yarnton/Begbroke area is the wrong response. Firstly, why does a city with limited space and naturally narrow streets need to expand its commercial/business population beyond its natural boundaries? Has Cherwell District Council challenged this? Secondly, there must be options to spread this housing around Oxfordshire rather than concentrate it in this area. More imagination and creative thinking by planners is required instead of looking at the easy option, which will be devastating for transport, character and quality of life in the area. Thirdly the housing density proposed in some areas is alarming - people living in such close proximity will have no privacy.

PR-C-0775	10/10/2017	Jon	Alsop	Savills on behalf of Christ Church, Exeter & Merton Colleges and Oxford University				Y
1959	Comments							
The consortium welcome the approach that the 'Submission Plan' now sets out, with locations closest to Oxford, such as the North Oxford Triangle, being allocated as strategic sites for meeting the unmet housing needs of the city. It also supports the proposal to undertake a GB Review as part of the preparation of the Cherwell Local Plan Partial Review and agrees with Cherwell District Council that there are exceptional circumstances that warrant the removal of land from the GB in accordance with the National Planning Policy Framework (NPPF).								
Changes Sought				Reasons for Participation				
On behalf of the consortium, given the significance of their land interests, would wish to participate in the oral examination.								
PR-C-0775	10/10/2017	Jon	Alsop	Savills on behalf of Christ Church, Exeter & Merton Colleges and Oxford University				Y
1960	Comments							
The representations focus on the site-specific policies which relate to the North Oxford Triangle and also those strategic policies which are also relevant to the site. While the inclusion of the North Oxford Triangle as a strategic site through these policies is welcomed there are some specific points that the consortium would like to comment on. The representations are also accompanied by the consortium's 'Development Concept Plan' for the North Oxford Triangle, which seeks to demonstrate the ability of the site to deliver a sustainable mixed use extension to Oxford and provides a more detailed indication of the capacity of the site.

On behalf of the consortium, given the significance of their land interests, would wish to participate in the oral examination.								
PR-C-0778	10/10/2017	Sarah	Knox-Brown	Begbroke & Yarnton Green Belt Campaign		N		N
5465	Comments							
Begbroke & Yarnton Green Belt Campaign's (BYG) main concern is that they believe there is no proper justification for altering the Green Belt boundaries from where they currently stand. On a local level, they particularly object to the removal of the land described as PR8 and PR9 from the Green Belt due to the significant detrimental impact of that removal on the villages and villagers of Begbroke and Yarnton. They also object to the removal of land described as PR6a, PR6b, PR7a and PR7b from the Green Belt due to the importance of these sites in maintaining the gap between the villages of Begbroke, Yarnton and Kidlington to Oxford City and to the land described as PR10, a green field site due to the impact its development will have on the adjacent A44 corridor. Instructed Bruce Bamber, a transport consultant, to prepare a report on the transport implications of the allocation of sites PR8 and PR9 for housing purposes. Although his technical review has focused on these areas, the broader methodology to identify potential development locations has also been assessed for its soundness. The report has been provided as Appendix B. Key conclusions from the report includes: the Sustainability Appraisal Report was published before the Transport Assessment and therefore cannot properly take into account the transport impact of development options. The SAR fails to report the adverse traffic congestion impact from the proposed development around Begbroke and Yarnton and is therefore flawed. Transport evidence base and the associated environmental assessment work is fundamentally unsound and cannot be relied upon. A number of legal issues are raised in Appendix A with a detailed summary provided. If the Council proceeds as planned, we consider the Inspector will find the Plan unsound due to inadequacy of evidence base and failure to ensure effective consultation and participation by the public.								
Changes Sought				Reasons for Participation				
PR-C-0781	10/10/2017	Ronan	Leydon	Vale of White Horse District Council				Y
1984	Comments							
Cherwell District Council and Vale of White Horse District Council have a history of working effectively together. At a strategic level both councils, together with the other Oxfordshire councils, are members of the Oxfordshire Growth Board and its supporting Executive Officers Group established in 2014. Vale of White Horse District Council is committed to engage constructively with Cherwell District Council and the other Oxfordshire authorities on matters of strategic importance at both member and officer levels. Do not have any further comments to make on the Proposed Submission Plan. Vale of White Horse District Council are currently preparing Local Plan 2031 Part 2 which will address the Vale's proportion of un-met housing need from Oxford City. At least 2,200 dwellings will be delivered on land which is demonstrably close to Oxford City and which benefit from excellent public transport links.								
Changes Sought				Reasons for Participation				
Would welcome the opportunity to attend Examination in Public following submission of the plan to the Secretary of State, should it be required.								

Proposed Submission Plan - General Comments

PR-C-0786	10/10/2017	Elizabeth	Hounsell		N	Y		
2006	<p>Comments</p> <p>Should this development be deemed necessary and as yet the need has not been demonstrated accurately. The method of selecting location of development suggested out of all areas within district area is not supported by the rational for it. People choose where to live and work. Just because they live close to Oxford doesn't necessarily mean they will work in Oxford. Given accessibility of London in all likelihood more people would commute from area if further housing provided. There appears to be little consideration given to infrastructure and the impact on local transport , already difficult. Should this development honestly be needed look at small developments in each local village and spread it out. Consider development of TVP & Gosford Hill sites and relocate the schools.</p> <p>Changes Sought</p> <p>Accurately demonstrate a need. Don't assume statistics given are accurate.</p> <p>Reasons for Participation</p>							
PR-C-0787	10/10/2017	John L	Broad	CPRE Cherwell South District				N
2010	<p>Comments</p> <p>Despite their acknowledging that housing need is the number one priority, particularly for more affordable homes, the City intends to address only a third of it within its boundaries, pleading lack of capacity to accommodate it. The rest is off-loaded on to surrounding authorities under the Duty to Cooperate, not just creating commuting, but also exacerbating the land supply problems of those neighbouring authorities. On page 17 of the CDC Proposed Submission Plan, Page 17, there is a definition of the requirement of "A Duty to Cooperate". This states, "Local Authorities are required to 'engage constructively, actively and on an on-going basis'". When this requirement is assessed against how CDC has carried out its "duty", we find a number of anomalies. To engage on an "on-going" basis, should suggest CDC questions the City SHMA in the light of the government statement to reduce the SHMA but this doesn't seem to have happened. CDC do not appear to have been constructive in their discussions as otherwise they would have indicated, as objectors have done, that the CITY has not allocated the land in a logical manner. Adding more employment to a crowded city and then expecting the new employees to have to live outside the city in dormitory estates just creates problems with the already over subscribed transport infrastructure. The CDC proposed submission plan, on page 16, quotes from the NPPF requirements and under point 4 has the statement: "4. To work together to meet development requirements which cannot wholly be met within their own areas, for instance because of lack of physical capacity or because to do so would cause significant harm to national principles and policies". It has to be apparent that Oxford City and CDC have not "worked together" as if they had, CDC would not have produced this plan that "would cause significant harm to national principles and policies"; the plan contravenes the NPPF regarding the GB and recent government statements.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							
PR-C-0787	10/10/2017	John L	Broad	CPRE Cherwell South District				N
2009	<p>Comments</p> <p>The 2014 SHMA determined that Oxford's housing need was between 24,000 and 32,000 dwellings. Of this, 63% is for smaller more affordable housing. The government has in the last few months agreed with CPRE that the calculations for the SHMA are some 40% too high. CPRE Cherwell South District would now expect Oxford City to revise their SHMA to be in agreement with the new government process prior to submitting their then revised plan to the government inspector, and for Cherwell DC to argue that Oxford City should do this before deciding where to allocate housing. The draft Oxford City Local Plan states at paragraph 1.20 that "Addressing the housing issue is the number one priority of the City Council", and at 3.13 recognises that "There is not only a shortage of homes in Oxford, but a shortage of homes that are affordable to local people". They then allocate valuable, potential housing, land to employment that could be placed in other areas such as Bicester. The City's own housing need is clearly best addressed in the City itself as to do otherwise is to create even more commuting and make for a less vibrant City.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							
PR-C-0787	10/10/2017	John L	Broad	CPRE Cherwell South District				N
2007	<p>Comments</p> <p>CPRE Cherwell South District object to the basic premise of this proposal as Oxford City have not provided proof, via an EiP that there is an 'unmet need' and so this review of the Cherwell Local Plan Part 1 is premature.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							
PR-C-0787	10/10/2017	John L	Broad	CPRE Cherwell South District				N
2008	<p>Comments</p> <p>CPRE Cherwell South District have serious concerns regarding the proposal to place the majority of Cherwell's allocated housing in the GB. Various government ministers have repeatedly assured the public and reinforced the wording of the NPPF Section 9 in statements that the GB is to be protected. Paragraphs 87-89 quoted. They then list a series of bullet points to identify these exceptions but none of these include such a massive housing proposal as that proposed by Cherwell District Council in this Review! Amongst the five main purposes of the GB listed in the NPPF under paragraph 80, which Cherwell include in their documentation, is "to check the unrestricted sprawl of large built up areas" and "to preserve the setting and special character of historic towns" such as Oxford City. Submit that this proposal is in direct contradiction with all parts of the NPPF and government ministers' statements.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>

The proposed transitional arrangement set out in the Consultation Document states that, for Plans which have been published but not yet submitted, such as the Cherwell Local Plan Review, the Council should continue with the current plan preparation using the existing methodology and evidence base, if the plan will be submitted for examination on or before 31st March 2018 or before the revised NPPF is published (whichever is later – NB the revised NPPF is scheduled for publication in ‘Spring 2018’). The current timescale for submission for examination is Spring 2018, indicating the Council should continue with the existing methodology and the tested evidence base contained in the SHMA, indicating an Objectively Assessed Housing Need of 32,000.

Comments

The Pre-Submission draft of the Local Plan Partial Review is not legally or procedurally compliant as a result of the approach undertaken to identifying first, broad Areas of Search Options and secondly, specific sites within those options that were taken forward (Options A and B). Bloor Homes currently control land at Dover Avenue and Thornbury Rise (Site PR 45), which lies immediately to the south of the existing allocation within the adopted Local Plan, BAN 3 – West of Bretch Hill. In line with previous representations submitted in relation to land at Dover Avenue and Thornbury Rise, it is considered that the site offers a logical and sustainable extension to the settlement of Banbury, which would not necessitate the removal of Green Belt Land. Furthermore, it is considered that the Local Plan Partial Review fails the tests of soundness set out within Paragraph 182 of the National Planning Policy Framework. 4.5 It is therefore considered that significant amendments to the Local Plan Partial Review are required before the plan can be found sound or legally compliant. Appendix 1 - Site Location Plan. Appendix 2 - Site Sustainability Appraisal.

Comments

Cherwell District Council (CDC) is barely able to cope with the needs of the population and therefore the proposal to more than double the number of houses is irresponsible. Access to Oxford by road has not completed. The roads are not paved, the traffic is overwhelming, the services provided by CDC are insufficient to meet the needs of the population, there is a problem with flooding in some areas and the CDC is unable to give timely response to all the demands of their residents. The proposal is also irresponsible because merging the populations into a single large conurbation in Kidlington does not make sense and is unreasonable. The proposed development is entirely on green belt land and would result in there being only a narrow gap separating the villages of Yarnton and Begbroke. This new development crosses the parish boundaries and we estimate that the physical gap between Begbroke and Yarnton will only be approximately 50 metres. There is also only a small gap between this enlarged development and Kidlington, meaning in effect that the three villages are merged into one large conurbation. We estimate the population would be around 30,000.

Changes Sought

For the reasons given AND the Representations made by the Begbroke & Yarnton Green Belt Campaign which are additionally supported, the Plan cannot be changed to make it legally compliant or sound and should therefore NOT be submitted for Inspection.

Comments

The CDC's Proposal does not consider the impact of flooding. The CDC knows flooding in the area is an issue. There are pictures showing the impact to flooding on Yarnton and Begbroke village. If the CDC have been unable to meet their residents' needs in this area now, it would be irresponsible to propose the growth in housing in this way. The CDC is completely irresponsible proposing these plans. The proposal is also irresponsible as it does not consider the impact on wildlife. The countryside that surrounds our two villages is rich in wildlife. The loss of this habitat for housing will have a massive negative environmental effect. Therefore the CDC's Proposal is irresponsible.

Changes Sought

CDC has not given time to develop a parallel proposal but the following points should be considered to amend the CDC's Proposal: • Cherwell DC should consider other sites: Bicester is one example of a place that is easy reach of Oxford by train. • Oxford City Council should use its own brownfield sites. Oxford could prioritise solving its own housing problems by using sites like the Northern Gateway or its own golf courses. The CDC should look after their residents and is irresponsible to pass the Oxford Council's responsibilities to the CDC's. • Oxford City Council should consider building taller buildings. • Oxford City Council should consider using sites located closer to the major employment areas: the City Centre, Headington and Cowley (recall these last two areas employ more people than the City Centre does) . Any sites on Green Belt land would need to avoid undue urban sprawl or merging villages together – two points that the Cherwell proposals fail on. • Reviewing the housing forecasts. These are based on the 2014 Strategic Housing Market Assessment or SHMA and are overstated. The forecasts used historical data and was undertaken before the European Union referendum happened.

Changes Sought

Horrified at the thought of so many houses being built around Kidlington, most of them on the Green belt. This was such a good, far-sighted law designed to stop towns and cities spreading in an uncontrolled way. Now it seems possible to ignore the law and we will see local communities and villages losing their identity and becoming part of a sprawling suburbia. The way this "plan" has been handled appears to have been badly prepared. Also the latest figures produced by the Oxford planners are for many fewer homes than this "plan" is based on. Who are the people that are expected to buy these homes? What proportion will be so called affordable homes? Will they really House local people? Will it exacerbate the current trend for Londoners to move out of the city and commute to continue to work there? Anyone using local roads during rush hours has already experienced gridlock in the area. There are many local services that are struggling with the existing demand. For example recently had to wait almost a month to see the GP.It would be sad to see our local fields built on. Green is the colour that is most important to most human beings, is it really necessary to do away with something so beneficial to our wellbeing? Has anyone given any thought to the wildlife, animals, birds, butterflies, insects, so much habitat to be destroyed? It can never be reclaimed. Everyone is up in arms about the plan, feelings are running high in this area. Very upset and full of apprehension. Please, please don't allow this ill thought out plan to go ahead.

Strongly object to the plan for major housing development in the Kidlington area. There are many reasons as follows: 1. This enormous plan shows a total disregard for the value of the Green Belt land. This was created for hugely important reasons. Green belt is the nation's heritage. . The huge concentrations of homes make for unpleasant living conditions for the residents of such estates. . The local roads will not cope with the huge additional traffic in the area. The roads are already very overloaded and even up in Bletchington, three miles from Kidlington, often feel the effects of any blockages in Kidlington and the A34 (itself only a two-lane carriageway when it should have been made into a three-lane motorway at the time of its construction). . The plans put forward include housing on the existing North Oxford Golf Course. This would be a tragedy. This is one of the beautiful remaining green spaces providing a buffer between Oxford and Kidlington. The owners might well not wish to sell the land if it was not being considered for development. Oxford and Kidlington would become a conurbation if this land were developed. 5. Schools, GP surgeries and other local facilities would not cope with the huge increase in the housing. Even with the plans to increase such provisions, there would be huge pressure on services. . So-called low-cost housing is still way out of reach of most young people. The cost of housing is sky high in Oxford. Every development's original plan for some cheaper housing in each plan gets dumbed down until there are very few such houses anyway. These are still very expensive. These plans will not help young people. . The plan to shut the road from Kidlington to Yarnton would cause a lot of inconvenience and cause even more traffic build up. This small road eases the pressure between two main roads ad is very convenient for local people. There are already a huge number or houses being build on the By Pass near Headington and these alone will have a huge effect on local traffic9 Some of the proposed building is on land which can flood.

Changes Sought

A. Build more small pockets of houses for sale close to existing communities but much further afield and not just in the Kidlington area. . Build lots more council houses, again in small pockets, and push the government for funding. C. Retain the Green Belt land at all costs. . Bring in penalties for owners of derelict and uninhabited homes and push the government to implement compulsory purchase for renovation for these buildings. . Push back the development to other areas and not Oxford. Please reconsider the plans. This area cannot support such huge development. It will have a massive and permanently detrimental effect and should be hugely scaled down. It will ruin an already very crowded part of Oxfordshire.

In terms of reducing air pollution, it is important to recognise that Knightsbridge Farm is previously developed land: its current use is haulage and plant hire. As a result there are a number of lorry/HGV trips related to the use. Redevelopment of the site for residential/mixed use would result in an end to these vehicle trips and provide an opportunity to create biodiversity enhancements within the site as part of any comprehensive development scheme.

Changes Sought

Remove the land at and adjacent to Knightsbridge Farm from the GB. Amend the boundary of the Begbroke Urban Neighbourhood (Policy PR8) so as to include the land at and adjacent to Knightsbridge Farm in the allocated site for residential development or a mix of residential and other uses.

Reasons for Participation

As drafted, and in so far as it relates to the land at and adjacent to Knightsbridge Farm, the Plan has not been positively prepared, is not justified and is not effective. This goes to its soundness and raises issues that should be explored fully at the oral part of the Examination.

The Local Plan Partial Review has not been positively prepared as there is clearly additional capacity for the development of new homes at Begbroke, a sustainable Cat. A Service Village within close proximity to Oxford City, which is not currently being fully realised by CDC. CDC has not undertaken a robust assessment of the options for accommodating Oxford City's unmet need at Begbroke. The draft Local Plan Partial Review is not justified as CDC has failed to fully consider all reasonable alternatives as land south of Sandy Lane is clearly a sustainable location given its relationship with land proposed to be allocated for development at Begbroke (PR8).

2069	Comments							
The Kidlington Gap/Green Belt - The council should oppose development in the 'Kidlington Gap' by respecting it's status as Green Belt. Such legislation appreciated the need to prevent urban sprawl. It keeps Kidlington discrete. - To shift a long established golf course with natural landscaping to a site which would require artificial remodelling is ridiculous. Kidlington Identity - Cherwell should be supportive of maintaining Kidlington's identity. Once lost, the built environment would stretch from Carfax to Langford Lane, a distance of 6 miles. Housing needs - Housing for whom? Shared concerns with many about the availability of affordable housing for which there is a real need. Family and community links are lost if those who have grown up in the area are unable to afford the necessary deposits to buy. Valued intergenerational links are weakened. The Exeter Hall audience heard that it was only a London salary that had enabled the speaker's own young family to settle where she had grown up and to maintain earlier connections. - A predominance of London commuters will inevitably weaken neighbourliness. Ensuring a healthy mix enabling people working locally to buy homes should promote local networks and a sense of belonging which would be to the benefit of all.

The Education and Skills Funding Agency (ESFA) welcomes the opportunity to contribute to the development of planning policy at the local level, and we aim to work closely with local authority education departments and planning authorities to meet the need and demand for new school schools. In this capacity, we would like to offer the follow response to the proposals. The ESFA welcomes Cherwell's acceptance of 4,400 dwellings over the Local Plan period to meet Oxford's housing need in addition to the housing already allocated in Cherwell. This demonstrates effective cooperation on strategic matters not only in relation to housing but also the associated infrastructure, including provision for new schools. The ESFA supports the Council's allocation and safeguarding of land for schools.Oxfordshire Growth Board's assessment of spatial options for Oxford's unmet housing need (September 2016) states that sites large enough to require a school of their own will be expected to provide both land and funding to deliver it. The ESFA considers this to be an appropriate approach. Clear signposting of this expectation throughout the Local Plan will help the Council demonstrate that the plan is effective and positively prepared, based on a strategy which seeks to meet objectively assessed infrastructure requirements.In light of draft Policies PR6a, PR6b, PR8, PR9 and PR10, emerging ESFA proposals for forward funding schools as part of large residential developments may be of interest to the Council. We would be happy to meet to discuss this opportunity at an appropriate time. One of the tests of soundness is that a Local Plan is 'effective' i.e. the plan should be deliverable over its period. In this context and with specific regard to planning for schools, there is a need to ensure that education contributions made by developers are sufficient to deliver the additional school places required to meet the increase in demand generated by new developments.The ESFA notes that Cherwell District Council has an emerging SPD on developer contributions, and consultation has taken place on a draft CIL charging schedule (paragraph 5.143). However, the Council is currently undecided on whether to progress CIL and is waiting for the Autumn Budget 2017.								
Changes Sought				Reasons for Participation				
The ESFA suggests that the Local Plan include a modification at submission stage to reflect the Council's current position regarding CIL and Section 106, with reference to an associated Infrastructure Development Plan which defines the extent of any funding gap. The ESFA would be particularly interested in responding to any update to the Infrastructure Delivery Plan or review of infrastructure requirements, which will inform any CIL review and/or amendments to the Regulation 123 list. As such, please add the ESFA to the database for future CIL consultations. Please notify the ESFA when the Local Plan is submitted for examination, the Inspector's report is published and the Local Plan is adopted.								
PR-C-0808	10/10/2017	Anne	Denby	Canal & River Trust				
2072	Comments							
The Oxford Canal runs for approximately 34 miles from the north to the south of the District. Paragraph 3.52 recognises the central position of the canal network within the District and the connectivity it provides between the main urban areas. The canal network can make an important contribution to achieving the Vision for meeting Oxford's unmet housing need. The waterways can be used as tools in place making and place shaping, and contribute to the creation of sustainable communities. The Trust seek for any development to relate appropriately to the waterway, minimise the ecological impacts and optimise the benefits such a location can generate for all parts of the community. The canal network can play an important role in supporting sustainable communities and bring benefits to the area from aspects such as tourism, biodiversity and walking /cycling. The waterways are significant Green Infrastructure, but they also function as 'Blue infrastructure' which serves in a variety of roles, including: an agent of or catalyst for regeneration; a contributor to water supply and transfer, drainage and flood management; a tourism, cultural, sport, leisure and recreation resource; a heritage landscape, open space and ecological resource; sustainable modes of transport; and routes for telecommunications. They also offer opportunities for leisure, recreation and sporting activities as part of the 'natural health service' acting as 'blue gyms' and supporting physical and healthy outdoor activity. As acknowledged in the document the Oxford Canal corridor is a designated conservation area and it is important for development to build on, and respond appropriately, to the historic significance of the canals whilst protecting their character and historical integrity.

PR-C-0808	10/10/2017	Anne	Denby	Canal & River Trust				
2195	Comments							
Any proposals for landscaping /access should be required to have appropriate regard for the setting adjacent to the canal conservation area. Any planting should be set back from the canal to allow for future growth and ensure they do not adversely impact on the stability of the canal or safe navigation of the waterway. The details / responsibility for the maintenance and management regimes for the local green spaces / nature conservation areas should also be set out. We recommend a number of guiding principles for waterside developments and individual waterways and water spaces need to be viewed as an integral part of a wider network, and not in isolation. Water should not be treated as just a setting or backdrop for development but as a space and leisure and commercial resource in its own right. The 'added value' of the water space needs to be fully explored. As stated above the Trust wish to engage further on the proposals outlined within the Plan and are happy to meet to discuss any of the comments made.

Proposed Submission Plan - General Comments

PR-C-0810	10/10/2017	Tom	Ibbotson	
2198	Comments			
<p>Objection on the quantity of housing proposed in this relatively small area of Cherwell District - it would change the character of the area dramatically, wiping out the GB gap between Kidlington and Oxford. If this number of dwellings is required there must be many other areas of the district where houses could be fitting in in a more considerate way. Actual forecasts for housing requirements for the area have been adjusted downwards and that alone is a good reason for reviewing the plans. Oxford City should be shouldering more of the burden of it's own requirements. It needs to make sure it builds it's own high-density housing rather than adding new plots for business (which would increase the demand for housing). The transport links would need to be addressed if this development went ahead - currently there are traffic bottlenecks though Kidlington every day and this would only become much worse with this development.</p>

2200	Comments			
<p>Three objections to building of houses to cover shortfall in the number required for Oxford's needs: 1. Shortfall created by Oxford planning, who now expect the rest of the county to bail them out. They have given permission for yet another business park, when the ones already built have numerous vacancies. Unemployment is low in Oxford so business parks are not needed for Oxford residents (indeed they create the need for more housing for people moving into the area). 2. New figures for the need are now at a level that can be covered within the Oxford boundaries, especially if the stupidity of Barton is not repeated - that housing will only be filled by London commuters as no one else can afford the prices! 3. While a transport study was done, no account was taken for the traffic that crosses between Yarnton and Kidlington via Sandy Lane - which it is planned to close. On top of this Green Belt would be built on and there are reasons for it's designation. Developers should not just be allowed to build expensive houses, they have already bought the land and won't want to tie their money up for decades - if they lose money that is the risk speculators take.</p>				
Changes Sought			Reasons for Participation	
<p>Plans should be rejected. Any building done should be affordable homes for the benefit of residents of Kidlington and the surrounding villages (both young and old).</p>				
PR-C-0816	10/10/2017	Joshua	Thomas	
2234	Comments			
<p>Angry at the proposals to build so many houses around the city of Oxford in order to meet Oxford's projected housing needs. So not needs that currently exist but needs that will be created by the City Council as part of their economic plan for growth. This is not creating affordable housing for local people. It is, instead, pushing an economic future on Oxford that will push up house prices, attracting London overspill and those coming to live here to fill the, as yet, uncreated jobs. There will be a loss of open space which currently exists between Oxford and the surrounding villages and the loss of open space between those villages. You are proposing to create a homogeneous which will impact the quality of life currently enjoyed by those that live in the area. If Oxford needs houses then let them build houses and not northern gateways. Understand that Councillors have expressed the view that they do not have the resources to fight the developers. That sounds pretty weak. The question should be what is right and not how much the fight is going to cost. Read CPRE's response to the proposal and totally concur with it will be a sad day if residents interests are trampled underfoot while the developers run amok in our countryside.</p>

PR-C-0817	10/10/2017	G	Davies	N
2237	Comments			
<p>Oxford 's objective is to ensure that everyone has the opportunity to live in a decent, sustainably constructed and affordable home. Oxford(shire) current housing need is for affordable housing for its existing local people, not high cost housing. Based on the housing densities proposed for the current plans north of the city boundary the area will only consist of multimillion pound houses for Oxford and London commuters. Outside London, Oxford has the most expensive housing. Within Oxford, North Oxford has the most expensive housing. People on high salaries are unable to buy houses in the city. The areas immediately surrounding Oxford are also expensive. Affordable housing will therefore need to be built some distance from the City of Oxford to be practical, unless heavily subsidised by government/developers, or unless high rise flats are considered. New housing could be built land vacated by relocating the current Park & Ride sites. Oxford should consider South Park and the land bordered by the Headington Road and Pullens lane to build housing or student accommodation. The city should also consider providing financial help to the commercial areas along the Botley Road and Seacourt Tower to relocate to an 'out of town' site to reduce congestion and then use the sites for housing. The unused commercial area which was vacated by the previous motor assembly sites could be used housing. The site has plots that never been taken up after numerous of decades and could be used for housing to support employment at the current BMW plant. Why was residential housing NOT built on the assembly sites when they first became vacant?</p>

2236	Comments			
<p>Oxford - Economy & Employment. Oxford is a world-renowned historic city with heritage second to none. Oxford has a distinctive physical form and a historic built environment. It has internationally important universities, a regional shopping centre and receives circa. 10 million tourists every year. The historic city parks, nature conservation areas and sites of special scientific interest create pockets and corridors of green space within the city boundary. Its economy is based on higher education, health services, car manufacturing, high-tech, medical scientific research and tourism. Much of its residential population is to the east of the city centre. Main employment centres are in the City Centre, Cowley and Headington. Current plans are predicated on the city of Oxford continuing to provide employment for commuters from surrounding districts and has major implications. Oxford is an area of low unemployment. There are numerous vacancies particularly for low paid retail work; the result of a lack of affordable housing and wage levels related to housing. Oxford does not have the equivalent of a London weighting allowance for the Oxford workers.</p>

2235	Comments			
<p>Totally opposed to the Council's plans to meet Oxford City's unmet housing needs, due to a lack of foresight by the Oxford City and Cherwell Councils in addressing fundamental interrelated issues that require a holistic strategy. High level points in support of my objection: Current plans mean that Oxford City will consume the adjacent villages of Kidlington, Begbroke and Yarnton; this equates to enlarging its city boundary. Unbridled urban sprawl with the loss of GB land and local amenities. Oxford City has created its own housing problems and will be perpetuating the planning mistakes of the past. Oxford City Vision is "To provide new balanced communities that form part of Oxford, of exemplar design; provide for a range of household types and incomes reflecting Oxford's diverse needs; and support the City's world-class economy and universities by ensuring people have convenient, affordable and sustainable travel opportunities to their Oxford places of work and study." There is no mention of the impact on its surrounding districts, beneficial or detrimental and therefore very isolationist. It seems to be a de facto assumption that Oxford provides the jobs and the surrounding districts provide the labour which commutes into Oxford. It is more appropriate that future plans take a holistic view and consider the county as whole. It is vital that areas of employment and housing are located in close proximity to minimise commuting.</p>

Northern Gateway Project - The Northern Gateway project is ill conceived and should be located north of Kidlington (possibly near or the Oxford Airport area) to minimise commuting, congestion and pollution problems for the city of Oxford. A new village/small town just north of Kidlington, including housing and its own infrastructure and transport links to Oxford and beyond would be more appropriate. Current public transport to Oxford, which is excellent would only need to be extended. It would also be close enough to the Oxford Parkway rail station and the Park & Ride site (or have its own Park & Ride scheme), the M40 and London Oxford Airport, providing links further afield from Oxford. The current planned for the Northern Gateway project could then be used for housing?

2239	Comments							
Evidence now shows that the requirement figure is grossly over estimated: the plan should be reconsidered in the light of this and before destroying the Green Belt. Whilst the nature reserve south of Begbroke is to be welcomed to help with the wildlife corridor it is inadequate and proposed to be squeezed into a space barely 50 yards wide at the western end. It needs to be much bigger. The proposed building / hard standing to the south of Begbroke must not encroach onto the falling contours (lower contour heights) towards Rowell Brook. Otherwise the risk is that it places more pressure on the natural flood plain to the south of Rowell Brook. Any building or hard surface should remain at the TOP of the contour. The proposals for expanding the Nanotechnology centre should remain to the south of its existing boundary. Also the planting at the centre was established to obscure the new buildings and was established as a long term offering to the wildlife corridor; any further building to the north of this negates the reasons offered for its planting. The pressure on the A44 and surrounding roads would be intolerable if the proposals go ahead. In summary, the whole plan needs reviewing. It is not appropriate to leave it to developers to accommodate such important decisions such as flood plain measures.

5076	Comments							
The Partial Review proposes to accommodate the 4,400 dwellings to meet Oxford's unmet need on seven large strategic sites immediately to the north of Oxford, six of which are adjacent to Kidlington and one of which adjoins Woodstock. * In so doing, the Council has rejected the options of locating development to meet Oxford's unmet housing need in other locations in Cherwell District. Spatially Cherwell is very closely linked to Oxford both in terms of transport connections and in travel to work patterns. Consequently it is not necessary that allocations to meet the needs of Oxford City are located in close proximity to the city. Paragraph 1.7 of the 2014 Oxfordshire SHMA (Summary of Key Findings in Housing Need) states that "The SHMA has defined Oxfordshire as the relevant housing market area...This reflects the flows of people moving home and commuting across local authority boundaries, as well as the economic influence of the City." It is clear therefore that the whole of the Oxfordshire HMA is an appropriate location for meeting Oxford's unmet housing need. It is also the case that the concentration of sites in Kidlington may lead to market saturation and the risk that a significant proportion of the 4,400 dwellings required are not delivered during the plan period. * The allocation of land south east of Woodstock for 410 dwellings is also inappropriate. West Oxfordshire Council in its Local Plan is already proposing the allocation of three sites for 670 dwellings in this village with a population of just 3,000. The growth of the village is constrained by the presence of the Blenheim Palace World Heritage site. * Whilst Gladman considers that large strategic sites have an important role to play in delivering the housing requirement, many of those proposed as allocations are dependent upon major infrastructure investment and consequently have longer lead in times. Housing delivery will as a consequence be concentrated towards the end of the plan period thus causing further delay in meeting Oxford's unmet housing need. The allocation of a portfolio of larger and smaller available and deliverable sites over a wider geographical area would ensure that the housing requirement is capable of being delivered as soon as possible. Such a strategy would also have the benefit of reducing the amount of land that is proposed to be removed from the Green Belt. * The Plan should identify a supply of specific deliverable sites sufficient to provide five years' worth of housing on adoption to ensure choice and competition in the market for land. The Council's housing trajectory purports to identify such a five year supply, however this is only achieved by the use of a staged housing requirement (see Section 6 below) which provides for a reduced housing requirement during the first five years of the plan. The trajectory is also extremely optimistic in its expectation of housing delivery with completions anticipated to commence on a number of sites in 2021. All of these sites (PR6a, PR7b, PR8 and PR9) will require the preparation of outline planning applications, submission, determination by the planning authority, Section 106 agreement, reserved matters applications, discharge of pre commencement conditions before development can commence. The delivery of housing on these sites in 2021 is therefore unlikely and Gladman contends that the Plan will not provide for a 5 year supply of housing on adoption and is therefore unsound. The evidence draws on the advice of the NPPF and the NPPG & SHMA.

2251	Comments							
Identity - The proposed development represents the end of Yarnton's village identity. It is hard to quantify on a balance sheet how highly the people who have chosen to make their home in Yarnton value this. Sprawl - Were the proposed development to go ahead it would seem inevitable that Oxford and Yarnton would ultimately sprawl into each other. Oxford's unmet need - The proposed development is presented as if it is the only solution to a fully defined problem. Oxford City Council seem to feel that providing for their own need is too difficult for them to deliver and that exporting the problem is the only solution. Transpo - The proposed development seems fairly unconcerned with how all the new residents of Yarnton will commute. Proposed bus lanes, for example, seem to imply that existing bridges will be significantly wider than they currently are, and would be interested to see if the proposed development's financial planning reflect that. How wrong would the assumptions made of the development's transport links to Oxford have to be before the end-to-end journey time into Oxford rose over an hour? Given how the slightest upset on the A34 affects the entire area currently, one imagines their assumptions would not have to be very wrong at all. Where would this leave us? Sitting in the middle of an unending suburbia. The houses Oxford had to have, only not enough to actually build them. Just on the edge of Oxford, but somehow an hour away.

Extremely concerned at the council response, at the September meeting in Kidlington, to the concerns of local people over development proposals on local green belt. It seemed in all respects to be a weak, fatalistic response based on bureaucratic rule following and spineless capitulation to developers based on the depth of their pocket and the potential skill of their lawyers. It really is not good enough. Your master should be your service to your constituents not a lily livered shoulder shrug placing the fight that is required in the too difficult box.

Proposed Submission Plan - General Comments

PR-C-0832 2260	10/10/2017	David	Flavin	Oxfordshire County Council					
Comments									
The County Council supports the proposed submission document and its alignment with the Oxford Transport Strategy (OTS). It is a well-written, coherent plan which seeks to address Oxford's unmet housing need in a positive, justified and effective manner, consistent with national policy in the NPPF. The proposed allocation of sites within close proximity to Oxford offers excellent opportunities for making use of existing transport infrastructure and for enhancing sustainable links into Oxford. Whilst the proposed sites score highly in terms of sustainability, it should be recognised that there are high levels of traffic congestion in the southern Cherwell/North Oxford area; this is an existing issue which extends into neighbouring districts and which will worsen with the impact of the cumulative growth across the region. Any of Oxford's unmet housing needs located within Cherwell would have some impact on this area in order to access the city. The sites proposed by CDC score highly in terms of sustainability due to the opportunities for public transport, cycling and walking connectivity with the city, and would therefore have a lesser impact in transport terms. OCC will work collaboratively with CDC and Oxford City Council to maximise modal shift. In addition, work on identifying solutions to the highway capacity problems will require a wider collaborative approach and should therefore be considered through future planned strategic development that is likely to be progressed through the Growth Deal. OCC welcomes the proposed education provision within the plan but has reservations regarding the proposed location of the new secondary school at Begbroke. Although identified as a scheme in OxIS (Oxfordshire Infrastructure Strategy), OCC also has reservations about the proposal for a potential new rail station at Begbroke. These include issues with deliverability, site size and layout, impact on the wider rail network and on existing level crossings.

Comments									
Early years provision - New primary schools will include early years provision; for larger developments, additional early education and childcare facilities may be required, and could be delivered through a suitable community centre building. Special educational needs provision - No specific comments are made about SEN provision, but additional capacity will be required across the county to meet population growth.

PR-C-0832 5050	10/10/2017	David	Flavin	Oxfordshire County Council				Y	
Comments									
The site policy wording requiring "layout and design that encourages the sustainable and safe management of waste by individual households and by residents collectively..." is supported. The additional 4,400 dwellings will increase waste arising in the county and the demand for waste management infrastructure, including household waste recycling centres (HWRCs). The nearest HWRC to the proposed allocation sites is Redbridge HWRC to the south of Oxford which already experiences capacity issues. The County Council will explore these issues further through Part 2 of the Minerals and Waste Local Plan.

The education provision in the plan is supported. Detailed comments are set out below. Please note that the general comments on school site locations have not been informed by site conditions, levels, flooding information, location within the development etc. The exact location of any school cannot be finally agreed until appropriate site information is made available. All school sites will need to: i. be within flood zone 1- land having a less than 1 in 1,000 annual probability of flooding; ii. Have no rights of way crossing the sites; iii. Have no site features that might restrict the area or obstruct its development; iv. Be flat or be regraded to create a flat site within the area identified; v. have a maximum noise level on any school boundary of 50 dB Laeq,30min; vi. Be uncontaminated; vii. Be rectangular with a minimum road frontage of 130m for a primary and 200m for a secondary, have accesses at each end of the road frontage and on at least one of the other sides.

Comments									
OCC strongly support the inclusion within the vision that development to meet Oxford's unmet housing need should "contribute to improving health and wellbeing" and that the 'golden threads' with 2015 Local Plan objectives to invest in social and physical infrastructure, address health inequalities and 'maximise' well-being and minimise pollution have been clearly made. In this context, we welcome the decision to focus development in 'Kidlington & Surrounding Area' (Option A) and 'North & East of Kidlington' (Option B) which will maximise the potential for sustainable and affordable transport and that recognise the relationship of existing communities to Oxford. Although we broadly support Policy PR4a, which seeks to "maximise the opportunity for affordable and sustainable transportation from development areas to Oxford's key employment areas, services and facilities", it is noted that schools are not mentioned. Similarly, although policies for North Oxford (PR6a Paras 6 and 12i), Begbroke (PR8 Para 35) and Yarnton (PR9 Paras 8c and 24) make reference to routes to and from schools, this is not the case for either Kidlington or Woodstock and in North Oxford the connections specified are only to wildlife habitats and nature trails. * To increase the likelihood of people knowing where services and amenities are located and trying activities that they might not have previously considered, we support policies that promote the multi-functional use of community facilities.									
Changes Sought					Reasons for Participation				
To embed healthy behaviours from an early age & minimise exposure of vulnerable groups to traffic related hazards, we strongly recommend that the Partial Review consistently highlights the need for active travel & wheelchair routes that allow children and families to independently & safely walk & cycle to new or expanded schools. Dovetailing with the overall vision for maximising the potential for sustainable & affordable transport consideration could be given to promoting the development of safe walking, cycling & wheelchair corridors from peripheral carparks to new & expanded schools (& other amenities & services) that could be used for 'park & stride/cycle' initiatives. * Although section 5.141 recognises that infrastructure necessary to support planned developments must be provided in a timely manner, no specific reference is made the need for health promoting infrastructure, such as community facilities, walkways & cycle paths to be provided from the outset or as near to the start of the development process as possible. To maximise the behaviour change potential of new development, we strongly recommend that developers are required to provide health promoting infrastructure as soon as practicable possible. * Although the development & use of active travel routes is integral to the overall vision of sustainable development the Monitoring Framework in Appendix 5 does not set out how the use of such infrastructure will be monitored & evaluated. As traditional fixed pedestrian & cycle counting equipment is expensive & only provides single point tallies (rather than an overall picture of how & why people are moving around), we strongly recommend that the Partial Review seeks innovative new ways to measure & fund ongoing monitoring of pedestrian and cycle activity.

Access for Firefighting. Oxfordshire Fire & Rescue Service (OFRS) assumes that access to the proposed sites and to the premises will be in accordance with the guidance in the current edition of Approved Document B to the Building Regulations volumes 1 & 2.									
Changes Sought					Reasons for Participation				
Water Supplies for Fire Fighting * We strongly recommend the provision of adequate and appropriate water supplies (fire hydrants) in accordance with the guidance in the current edition of Approved Document B to the Building Regulations volumes 1 & 2. we would also recommend that the development conforms to British Standards BS 9999:2008 (Code of practice for fire safety in the design, management and use of buildings – Section 23 Water supplies for fire and rescue service use - 23.2 Location and access to external water supply) & BS 9990 (Code of practice for non-automatic fire-fighting systems in buildings – Section 5, Private fire hydrants - 5.2 Provision and Siting). Automatic Water Suppression Systems - Oxfordshire Fire and Rescue Service also believe that fitting of Automatic Water Suppression Systems (AWSS) will materially assist in the protection of life, property and fire fighter safety. AWSS such as sprinklers and water mist systems do save lives; therefore OFRS strongly recommend the provision of such systems particularly in new build properties for the proposed sites.

Please note that there should be at least a 'No Comment' option in section 3. No opinion and no ability to comment on the matter of legal and procedural compliance, thus it would be wrong to select either 'Yes' or 'No' in this case. In the case of compliance with the Duty to Cooperate, the answer would be 'Not Necessarily', as this is a matter of interpretation of the proper response to the Duty, which itself depends on a sound interpretation of the Evidence Base. Believe the latter to be lacking, would argue that the Duty to Cooperate cannot be usefully considered without first addressing the Soundness of the Plan and its underlying assumptions.									
Changes Sought					Reasons for Participation				
The Plan can only be made Sound by addressing the issue of sustainability - and that means addressing the issue of housing affordability in a wider context than that of new construction. This approach would deliver thousands of unnecessary market homes to Cherwell - a result that flatly contradicts the guiding principle of sustainability in National Planning Policy. The Plan can only be made Sound by recognising the whole range of data in the Evidence Base and basing action upon a reasonable interpretation of that data, rather than cherry picking and misrepresenting data in the tendentious fashion of the Plan as currently presented. It must be noted that certain documents in the Evidence Base, notably the Sustainability Appraisal, are compromised by the fact they explicitly proceed from such tendentious misrepresentations.									
PR-C-0841	10/10/2017	Catherine	Newman					N	N
2278	Comments								
Duty to co-operate is not a duty to agree”, per the National Planning Practice Guidance (6th March 2014). However it is evident from the video put up on the CDC website of the June 2017 CDC Executive Committee vote on the proposals that many voting members felt obliged to agree despite having voiced reservations. The video evidence of the vote attests to key members feeling coerced into approving the initial Plan which they voiced as doing begrudgingly. Positively Prepared By not showing worst/mean/best case scenarios within the consultation documents (e.g. the Transport Assessment) there is a clear bias in the proposals which is not addressing adequately their true impact. That is NOT being ‘positively prepared’ but is instead ‘misleading’. Justified- Justification is lacking across 3 key underpinning documents. The Strategic Housing Market Assessment (SHMA) uses outdated economic data that is now discredited post-Brexit. It has grossed up 40%+ the housing need (para 3.39) to cater for an economic growth which is no longer reasonable or defensible according to IMF, HM Treasury and Office for Budget Responsibility data post-Brexit. The National Planning Policy Framework (NPPF) has been abused. The proposals couldn’t be further from the NPPF principles of para 80 regarding the Green Belt and there is insufficient justification to cite the “very special circumstances” warranted per para 34 of the National Planning Practice Guidance for such scale of development on the Green Belt. In fact Cherwell’s Local Plan, approved in 2015, Part 1 adopted 20th July 2015 states that development within the green belt will only be permitted if it maintains the green belt’s openness and does not conflict with the purposes of the Green Belt or harm its visual amenities. Proposals for residential development will also be assessed against Policies Villages 1 and Villages 3.

5691	Comments								
Oxford City should use its own brownfield sites, or other green belt ones which are located closer to employment areas: Headington and Cowley are two areas which employ more people than the City Centre. All of the Northern Gateway should be used for housing, there is no need for industry on the site. They could also build taller buildings with apartments. All of these houses should also be actual affordable homes for people who work in Oxford, not sky high “affordable homes” which only people moving from and commuting to London can afford.

5544	<p>Comments</p> <p>The Tripartite supports Cherwell District Council's ('CDC's' or 'the Council's') spatial strategy for North Oxford, Kidlington and the A44 Corridor. The Tripartite also supports the overall approach taken to the Partial Review of the Local Plan Part 1 and consider it to be a justified and positive step towards helping to meet Oxford's unmet housing needs (working assumption being around 15,000 homes). The general content of the Plan is also supported by the Tripartite. However, the Tripartite has a number of comments and recommendations for making the Plan more effective, justified and consistent with national policy, which have emerged from its own site investigations, assessments and understanding of the requirements of the proposed development of a new urban neighbourhood at Begbroke. This includes greater understanding through more detailed master planning and design work, examination of the transport implications, analysis of education needs, growth of the Begbroke Science Park and its, the University's and associated housing need. The proposed changes requested and set out in these representations are limited in their nature, scale and extent but would ensure the Plan remains 'effective', 'justified' and 'consistent with National Policy'. They are required to reinforce the overall general soundness of the Plan, which is a vital component in meeting the objectively-assessed development requirements of Oxford, supporting economic growth, providing associated infrastructure, improving transport connections and meeting sustainability objectives. It is in this context that these representations are submitted by the Tripartite.</p>							

Changes Sought

Reasons for Participation

The land owned and controlled by the Tripartite comprises some 86% of the largest draft allocation within the Plan and as such, occupies a unique and vitally important role in meeting Oxford's Unmet Housing Needs. As such, the Tripartite consider it is essential that it is present [and/or represented] and participates at the Examination in order to assist the Inspector by responding to any queries that may arise and supporting the assessment of the soundness of the Plan.

5596	<p>Comments</p> <p>"The strategic case for expansion of Begbroke Science Park" - Extract from Executive Summary - "The interface between academic research and its application and exploitation takes many forms. For nearly two decades, the University of Oxford's Begbroke Science Park has been home to a wide range of activities in this sphere, playing a vital role in the University's 'impact' strategy and the wider economy. Central to its success is the co-location of different stakeholders and activities within an integrated campus, which offers benefits not found in wholly commercial science or business parks. With the launch of a new Government Industrial Strategy, which plays to regional strengths, a step change in the exploitation of academic research, supported by Oxford Sciences Innovation, and maturing links with key overseas partners, the period through to 2031 offers major new opportunities for the region and the wider UK. This is supported by the National Infrastructure Commission's (NIC) work on the Cambridge-Milton Keynes-Oxford Corridor, which has identified an opportunity to develop a series of successful but distinct places into a major economic corridor that delivers substantial benefits to the UK as a whole. To capitalise on these opportunities – and realise the potential for new jobs, inward investment and economic growth – expansion of Begbroke Science Park beyond its current boundary is essential. Currently, the site is sub-optimal in size and at full capacity. Growth will enable agile responses by the University and region to new (often time-limited) opportunities; and, through a scale-up of activity and symbiotic links, will create a vibrant innovation community that will form a key part of the Cambridge – MK – Oxford corridor."</p>

Comments					
Object to the plan to build 4,400 houses in the area local to North Oxford and the villages of Kidlington, Yarnton and Begbroke to meet Oxfords unmet housing needs. Believe the case has not been made for such a large development which will be detrimental to the quality of life enjoyed by existing residents in the area. No proper explanation for the number of houses required by Oxford has been given. Have all brownfield sites been fully examined and what housing numbers have been allocated to these areas? What housing numbers have been allocated to greenfield sites in Oxford City, South Oxfordshire, Vale of White Horse and West Oxfordshire? Why has there been no mention of affordable housing or reserving some housing for local first time buyers who are usually outbid as a result of high prices and high market demand. When the UK leaves the EU net immigration level to the UK should be below the present levels of 350,000 per year. Has this future reduction in immigration been taken into account? Why have plans for extra employment sites such as the Northern Gateway and other Scientific and Industrial Parks been advanced if such major housing requirements are unmet? Planning new jobs around Oxford will draw in new workers from outside and further increase housing shortages.

4,400 extra houses will also need significant extra supporting facilities such as schools, GP surgeries, dentists, etc. These facilities are all in short supply at present and will require extra land to be allocated. The proposal will represent a huge change almost doubling the existing size of the village of Kidlington.

Very concerned that additional housing on this scale will put a severe strain on our traffic problems during commuter times. Local amenities are already stretched, like doctors, schools and libraries. Strongly believes that Green Belt should remain protected. It protect the rural landscape surrounding Oxford and is important for making sure Oxford doesn't become overdeveloped. Enjoyed by local residents. Important for wildlife and parts can serve as a flood plain. Very concerned about the calculations that were done to come up with 4400 houses - they have been widely criticised. Layla Moran MP said a currant government consultation would probably half the number of homes, councils have to build - let's wait for this.

Object to your proposals to build 4,400 new houses north of Oxford. The 4,400 homes is not an appropriate requirement. This is unsustainable. It would make traffic problems much worse. Schools and health services would be overstretched. Open country side in the green belt will be sacrificed, countryside walks and views lost forever. Natural habitats of great local importance would be destroyed. Oxford City's 'unmet need' is unproven and the extra housing figures are unrealistically high and Cherwell should challenge them. Object strongly to areas of search which involve development in the Oxford Green Belt. The Green Belt is much appreciated and enjoyed by large numbers of local residents. It helps to protect the historic city of Oxford from over development. understand that Green Belt is a permanent designation. The Government's promise, and Cherwell's policy, to protect the Green Belt should be upheld. Areas of search which involve building on Green Belt are not reasonable.

The need for 4,400 houses has not been proven and is based on the SHMA calculation of the county's need for 100,000 new houses, with the reasoning and calculations behind both figures have not been revealed. SHMA figures rest largely on input from developers, who have a vested interest. Any planning inquiry should demand to see the calculations behind these figures.

The plan will not help 'Oxford's Unmet Housing Need' as the housing as it is unlikely that any large portion of it will be 'affordable - on the new Barton estate the estimated market price for a one-bedroom flat is £300,000. It will likely go to London commuters.

		Within a green belt approval was not to be given except in very special circumstances. Although Cherwell District Council considers that there are very special circumstances and this land should be provided for housing this is not convincing. If the City Council want to use vacant land within their boundaries for business and commercial use rather than housing purposes it is very convenient for the owners of such agricultural land in the outlying villages. Oxford's 'Unmet needs' are substantially overstated. The amount of 'needs' that are unmet is not identified. If these proposals do go ahead then Begbroke, Kidlington and Yarnton will become suburbs of the City of Oxford. Increasing the size of these villages is obscene. Little realistic thought has been given to the possible increase of traffic on the A44, the problems of flooding and noise from the airport which has always been a nuisance. Flooding has always been a problem both in Begbroke and in Yarnton. With more land under concrete this will be increased. The land proposed for development is within the circuit of the airport. Constant complaints about aircraft noise and the dangers of accidents. Aircraft using the Oxford/London airport are larger and noisier than in the days of the flying school. The suggestion of a bus lane on the A44 is farcical. There is not room to incorporate in especially at pinch points. A train station at Begbroke is a purely fanciful idea and is not likely to happen. To cut traffic from Sandy Lane will mean that all traffic from this area will have to use Langford Lane or go up to the Frieze Farm roundabout. Once the countryside has gone it will never return.

		Strongly object to the above plan to build on Green Belt land. Green Belt is a government policy to provide permanent protection against urban sprawl and the need to build on this land is unproven. The proposal would create a vast sprawl merging three quite separate communities before joining them with Oxford City. Oxford is a small city and its historic charm would be harmed if it is allowed to sprawl out and encompass three other quite different communities on its northern side. Oxford's unmet housing need has been vastly overstated and Oxford would be capable of meeting all its needs by switching land earmarked for business to housing needs. Any new High-Tec business could be located where very large numbers of houses have already been allocated on the basis that such jobs would be provided. (i.e.. Bicester). A mature golf course and very precious open country-side should not be sacrificed in this way. With a railway line very close by there is a very real risk of simply attracting many London employed people to commute from the Golf Course development and therefore not contributing to the so called Oxford housing need. No adequate local transport plans proposed to cope with the vast increase in traffic and congestion that this proposal would create.

		Enough land in Oxford which could be used for houses instead of businesses. Therefore no valid reason to use Green Belt land, because there is other land available. The Green belt (GB) preserves open spaces that are much appreciated by local residents, protects both the historic City of Oxford from over development and neighbouring villages from coalescence. Government guidance says that GB is an permanent designation and that unmet housing need is not a reason for building on the GB. Particular disappointed that you do not intend to put the plan on hold while the government's new calculations for housing targets come into force. The plan has not properly addressed the questions of infrastructure costs and the implications for traffic and public services.

		Protest about the proposal to build 2500 houses around Begbroke and Yarnton on Green Belt (GB) land. This would damage our rural environment! Extremely concerned about flooding. When there is heavy rain there is often flooding in the Paddocks where it joins with Rutter Lane. There are already traffic problems on the dual carriageway going into Oxford - starting at Woodstock & continue all the way into Oxford, mornings and evenings. Should not be building here for Oxford City. Such a development would be a breath-taking violation of the founding principles behind our GB, destroying habitat for wildlife.

2381	Comments							
		Object to the plan to build 4400 houses on Green Belt (GB) land around Kidlington, Begbroke and Yarnton. First objection: the number of houses for Oxford overspill, is an unjustified number, based on over-estimated growth. The new Government plans to simplify how housing targets are calculated, are likely to slash Oxford's numbers. Oxford is capable of accommodating most of its housing need by switching land earmarked for business to housing. Oxford must sort out its own problems. In this case the plans to build on GB is not justified. There is other land. Losing the GB would mean loss for ever, of habitats, green spaces and quality of life for future generations as well as ours. Second objection: lack of any positive, costed infrastructure plans for an area of housing that will double the population. There are no plans to improve the existing road networks to alleviate the problems of the massive amount of new traffic. As well as that on public services, already overstretched, will be unable to cope. Finally: Dismayed that there is no real obligation as to how many of these houses will be affordable, nor is the any mention of social housing. What is planned is a huge, urban sprawl in the GB, to serve commutes to Oxford and to London form the new Railway.

Proposed Submission Plan - General Comments

PR-C-0884 2384	06/10/2017	Professor R E	Moon				
Comments		Request that you review the decision to allocate green belt land to the north of Oxford for housing. Do not think it 'demonstrates very special circumstances' that would necessitate such a breach of the green belt. In particular: • this would significantly increase air pollution in an already polluted part of the county (objection to policy PR12a)• the proposals ride roughshod over the purposes of the green belt, in particular the amenity provided for the health of the community. North Oxford Golf course, for example, has hundreds of members and thousands of other users; the alternative provision suggested is derisory (objection to policy PR6b and PR3).• the view expressed in CLPPR that meeting the City housing target represents 'exceptional' circumstances is not substantiated and not explained in para 5.17 . The proposal, if implemented, would create an urban sprawl through the green belt. The proximity of Oxford Parkway station will, with certainty, create an enclave of commuter houses rather than meeting Oxford city housing needs. The uncertainty about the Oxford city housing need is a further reason for withdrawing these proposals.

PR-C-0900 2427	10/10/2017	Kieran	Brooks				N
Comments		I am disappointed in the overall process surrounding the development of the planning proposals for the GB areas North of Oxford. Their progress was undertaken in a way which appears was intended to avoid discussion & debate until matters were well under way. Behind the veil of bureaucratic process it is perhaps easier to shield the proposals from visibility to those they are most likely to affect. It is frustrating that CDC, knowing perhaps that their selected 'solution' (conveniently redesigning the Green Belt) was going to be controversial & opposed, chose not to engage in a more open dialogue beyond the minimum required under the law. Overall I consider the Submission Plan to be unsound, not justified, not effective and not positively prepared.

Objects to building on Green Belt for these reasons; 1. Building will devour Kidlington as a village. 2. We will lose countryside & nature, valuable to future generations to enjoy. Important to not become a concrete jungle. 3. Traffic congestion, already bad, will increase. It has taken 1 hr to get to Summertown roundabout. 4. Schools, GP will not cope with extra volume. Valuable land along the canal to Yarnton has a development of houses that are not 'affordable homes'. How will the pathway between Kidlington and Oxford be made safer for walkers/cyclists? It is dangerous crossing the road from Garden City to the other side of the roundabout. You have to go onto the road to see if anything is coming. Dangerous as cars are driving fast and looking left and not seeing people crossing the road.

<p>Can't understand why they have to build on Green Belt in this area. There is not enough parking places for house owners now. You wait weeks to get an appointment to see your OWN GP. They are so busy treating so many emergencies. They say affordable houses but what do they mean by affordable? The one's being built in Oxford are over priced! What about the roads? There is always traffic jams. It takes ages to get to GP's, schools etc. with engines running, giving out pollution 24 hrs. Like to walk in parks but would be breathing in this awful air, especially in warm conditions.</p>

<p>A few logic questions. 1. Supply of services? 2. Can we afford to maintain roads to these houses? 3. Electrical generation costs? 4. Gas supply? 5. Water and Sewerage costs? 6. Major problem, traffic leaving areas, as this is a commuting area, only a small number of persons work locally. 7. Policing, very poor now and NHS, Doctors. It seems the only way out if we do need these houses, is build a new town. 8. Has anybody studied population rise = rise in crime, & volume of traffic, we can't cope now!</p>

<p>Believe this plan is a disaster in the making. In a village with congestion problems and a doctors surgery that require 3 weeks notice to get an appointment, an increase in population is ridiculous. It is appalling that permission is also being sought to develop and spoil beautiful areas of countryside and destroy some of the nicest walks available to residents to enjoy. Furthermore, believe the application approach has been handled in an underhand way, totally unfair and without consideration for residents.</p>

Often find even currently that doctors, schools and key services are stretched here. Only 1 community officer and rarely seen! The high street traffic can be chaos. Don't see how you can add more cars into the mix. In the village centre the current Co-Op development is threatening parking and services. Adding all these houses without proper facilities will affect all of our living conditions. A % age of houses should be handed out to each surrounding village around Oxford to allow locals a chance to buy where they grew up and stop the strain on services/pressure of traffic. A by-pass or similar additional route into Oxford MUST be sought. We can't handle more traffic through the village (traffic speeds are already a concern). The lack of shops and facilities then drives everyone to visit other places to shop. The traffic onto the A34 and ring road are stressed enough without an increase in pressure from Kidlington residents. IT IS NOT ACCEPTABLE. FIND A METHOD TO SPREAD IT ACROSS ALL OF OXFORD!

The infrastructure support for the proposals is ridiculous. Traffic, schooling over 11 year olds. GH School won't be able to cope. The health service provisions currently under stress would worsen. Visits to GP's becoming harder to obtain. The loss of Green Belt in our area will be catastrophic for wildlife. Journeys into Oxford, already taking up to 1 hr, will lengthen. People from the area will take their business elsewhere instead of Oxford. Local traffic in rush hour will worsen.

2543	Comments								
Parts of Kidlington are prone to flooding. Have you considered this? Green Belt is exactly that. Not for building on. Its for the locals to enjoy & a safe habitat for wildlife. 4000 houses will mean at least 8000 cars. Our roads are already gridlocked. We don't need more cars and the air pollution they will bring. You have no intention of providing much affordable housing for our local people. Selling to commuters from London/Birmingham is more lucrative to you. Schools and medical centres are bursting at the seams already. You don't seem to be addressing this. Or improved roads. Already overcrowded so, NO NO NO to your proposals.

2558	Comments								
The air (O2) quality around Oxford and its environs is appalling. Many people have persistent coughs due to this problem. How is the NHS going to cope into the future? If Oxford has money to spare for unnecessary houses, how about putting a road between the A40 and the JRH? Giving people on the current route to the JRH some cleaner air. That's my major concern. There is also the problem with sewer pipes etc. Pollution, overcrowded schools, shortage of GP's and the ground between Kidlington and Yarnton is a flood plain - more problems!

Reference to a public exhibition. Roads around Oxford need improving, in N Oxford in particular. Costly suggestion - build a road from Marston fly over on the A40, run the roads across fields and join up Kidlington roundabout. Build a link from Frieze Way roundabout to link up with the A40. This would alleviate traffic through Banbury Rd and Wolvercote roundabouts, assisting the flow from Woodstock, Kidlington into Oxford City itself. Currently at peak times there is gridlock. With 4,400 new homes even with only one car driver, no-one will be able to move.

Insufficient time to consult local people. The consultation was over the summer holidays whilst many people were away. Unable to attend the local displays for proposed plans as the times/dates were very short. Concerned some of the sites may cause increased flooding to houses and increased air pollution, higher than national safety levels. There is no evidence on managing traffic congestion and the increase on local facilities (schools, GP's).

These proposals have obviously not been thought out. Where's the money going to come from for GP surgeries, schools, road improvement, shops, new bus routes etc.? Also, the environment will be irreparably damaged. We will lose our countryside! Traffic congestion is bad enough now, let alone the massive disruption and damage during construction. The housing will not be 'affordable', as soon as it's built, prices will go up to Oxford prices, therefore unaffordable. So who will buy them? We will lose our identities as villages and communities and will become a massive suburban sprawl. Suggest you reconsider and leave the countryside alone!

Oppose the volume of building in Kidlington, Yarnton and Begbroke. Not enough thought/consultation has been brought to the table. 1. National statistics show most households have 2+cars. Where are 8,000+ cars going to park? 2. Cut the house build by 50% and follow Colchester Council's example, NOT to build houses on postage stamp size plots with large car sized garages and space for 1 car in front of it. This way 'no parking 24/7' would stop commuters parking in the street to catch buses into town. In the build plan there should be a clause stating garages must not be converted into bedsits thus turning them into HMO's like many are doing in Kidlington. 3. With London (Oxford) Airport ramping up it's business with larger aircraft & more flights, who will want to buy a house in the flight path? Can see this as a buy to let for the better off. In turn creating more problems down the line with HMO's and rents that families can't afford at a later date and eventually become homeless.

PR-C-0934	23/08/2017	Jack	Li					N
2593	Comments							
The current highway network in Oxford is in a terrible condition and can't meet traffic requirements. The A34 is already at capacity and it is not satisfactory for drivers. As a tax payer, often sit in morning traffic on the way to work. Oxford has no plan to improve this with building 4,400 new houses and their additional traffic. Kidlington will become a terrible place to live and our homes will be surrounded by cars and people. The current infrastructure can't meet the requirements for the additional cars and traffic. Will be stuck in traffic all day and won't be able to go out to work.

2603	Comments							
The proposal is UTTER MADNESS. 1. Infrastructure; approach roads to Oxford (A40, A34, A44 etc.) are already congested. 4000 more houses (with at least one car per house) will cause a perpetual gridlock. 2. Public Services; schools won't cope with increased pupil numbers, GP waiting times will be increased and the JR is already overstretched. 3. Sandy Lane Crossing; this is an essential route from Kidlington to Yarnton (and popular Yarnton Nurseries). Closing the road will force traffic to go via the A44. 4. Kidlington Village; is not an overspill for Oxfords problems. Our Green Belt should stay PERMANENT. Oxford is a beautiful city but it risks becoming notorious for traffic congestion.

1. Traffic is already bad in our area. Roads can't cope at peak times. Journey times will increase and we can't all use public transport for getting to/from work. As a home carer, would not be able to do the job by bus. A morning journey to Wolvercote can take 30-40 minutes (a distance of 3-4 miles!). This will worsen with the new developments. 2. Waiting times to see a GP will increase (appointments are now for 4 weeks time)! 3. School class sizes will rise, already large (40 in foundation stage), and lack of pre school places. 4. Emergency services and hospitals already stretched in the area.

1. CDC should do more to protect the area and its residents. 4,400 more houses may equal 12,000 more people. Far too many. There would need to be massive new infrastructure to support them. No evidence that all these new homes are needed and they will be unaffordable, bought by commuters (or foreigners as in Bicester) not by young people. 2. The Green Belt should NOT be touched. It's important now and for future generations. 3. The Government's policy is to protect Green Belt. Any infringement impacting negatively on well being, pollution levels and life. 4. The plans are too complex for the average person to understand. Feel that's deliberate, to discourage younger people from objecting.

Many Kidlington residents are still unaware of this proposal and potential consequences locally. Although there is a housing shortage and increased homelessness, this would not rectify the situation as they would be built for the wrong people. Developers would benefit not the homeless or people in need of social housing. It is a severe overdevelopment, poorly thought through. Questionable figures of housing shortage used! Who would live in the houses? Where are the people currently waiting on the houses? There's been a new build house for sale in our road for at least a year! If it was so needed why hasn't it sold?

Kidlington is still a village at the moment. Cars litter the streets mid morning. Parks are full. Its residents being lazy and people catching buses to Oxford. Lets have a warden or more yellow lines! Its nice to still have some green space, and to feel we are individual. In the 80's Oxford City houses starting to fill up between the A4200 and the canal. Please leave it at that! A lot of the land mentioned is low lying. Sewers are originally late 1940's and not big enough to cope. The Oxford map shows there's a lot of green spaces beyond Blackbird Leys, Wheatley, Shotover, Boars Hill, even East of the M40. Houses for London commuters would be more suited to some of the areas. This amount of houses are not needed they would add to pollution/problems. We are already too close to Oxford, we do not wish to be part of it.

Must not allow houses on Green Belt. Roads too crowded already in peak hours. The houses will not be available to local people - too expensive (i.e.. Barton). Should not be building houses at all for Oxford. They must build their own. This is their problem.

Comments							
Objects strongly about proposals to build houses on essential GB between Oxford and Kidlington/Begbroke/Yarnton. Cherwell District Council has given in to pressure from Oxford City Council to house it's overspill. Brown Field areas could be used by Oxford City Council. (Oxford City Golf Club which is central so transport links are already established). GB is to preserve the countryside for residents, a great need which Cherwell is agreeing to do away with. Oxford is one of the most polluted cities in the country. Increased building north of the city will increase pollution as the 'lungs' of the city provided by GB will be lost. The infrastructure cannot cope with more cars, hospitals and schools will be oversubscribed. Most of the houses will be bought by London commuters and will not house Oxford City residents. North Oxford Golf Club has, for over a hundred years, been a haven for wild life, an area for trees to grow to reduce pollution and provided green space for residents and members. With an ageing population it also provides social support for many people. Please preserve the GB and stop Oxford merging into Kidlington.

1. It is Oxford's job to maintain/sustain the city as an important and historic centre. Not CDC's role to allow the city to grow. Oxford City should meet it's own need, not expand into CDC's Green Belt. e.g. it could use Oxford City Golf Club. 2. CDC will allow the University to move millions of buildings on North Oxford Golf Club, but we know from the building by Port Meadow they run roughshod over the City Council. They will do the same to CDC. 3. The villages don't want to expand into one big Oxford sprawl. The Green Belt provides 'lungs' for the Oxford and the villages. Transport problems will increase which already causes pollution. CDC and Oxford's quest to increase the population will attract London commuters.

Kidlington is already over developed. Public amenities are currently unsuitable for us. Additional housing will make it worse. The small area of open land between Kidlington and Oxford is essential as a buffer. Oxford and its surrounds has many areas and brownfield sites that could be developed without encroaching on established settlements. The large, money making commercial developments are more important than providing housing.

PR-C-0983 2818	16/08/2017	Mr & Mrs J & M	Smith				N
Comments							
Cherwell should not be allowing the loss of Green Belt to compensate for Oxfords mis-managed housing problem. Little thought has been applied to the infrastructure required. There are already existing problems in the overlapping areas in the plan. Why has it taken so long to take action on the high number of empty houses in Oxford and Cherwell? It's suggested new Green Belt areas could be created. Why, when they already exist as well established areas? CDC has kept the council tax stable for a long time, Oxford hasn't. Cherwell residents would bear the brunt of this should the plan go ahead. Re-assurance is needed that our comments will be considered. Or as per previous consultations has the decision already been made and the plan will go ahead regardless?

Comments							
1. Oxfordshire County Council or CDC are unappreciative of the difficulties Kidlington residents will be subject to by proposals. 2. Kidlington is now a car park for commuters too mean to pay P & R charges. 3. Oxford is frequently gridlocked by the lack of proper infrastructure to accommodate existing traffic let alone the additional traffic it will create. 4. Oxford City Council should look to their own resources, not intrude on the Green Belt. A great loss of amenity. 5. OCC do not have a clue about traffic management. i.e. millions spent on Woodstock and Banbury Rd roundabouts - new systems that don't work.

Objects to; PR1a, building 4,400 homes around Kidlington, Yarnton and Begbroke, it's not a proven requirement. There is no guaranteed funding for vital infrastructure i.e. GP's, Schools and roads which are already heavily congested, and won't be able to cope with increased demand, resulting in total deadlock. PR3, removal of Green Belt is against Government guidance which states it is permanent. Unmet housing need is not a reason to build there. Not consistent with national policy. PR11, no costing shown and in most cases no source of funding provided.

PR-C-0993	19/08/2017	R	Prowton						N	
2868	Comments									
The proposals are out of order. The houses built won't be affordable, and are only designed to make massive profits for all concerned in the process. Cant see a GP now without waiting weeks, the current infrastructure won't cope with the amount of houses proposed. Why not invest on buildings in the Oxford area already in situ and improve those sites? Agree there is a need for housing, but it shouldn't be at the expense of Green Belt. It should be built for those in need and not for Londoners and the like to just buy up and rent, making it impossible for local people to obtain property where they were born.										
	Changes Sought							Reasons for Participation		
PR-C-0994	21/08/2017	Mr M	Bennett						N	
2873	Comments									
Oxford and it's surrounding villages and towns cannot cope with further large scale developments. Due to 40 years of limited funding both roads and travel networks in and around Oxford means locals and visitors alike spend hours daily in traffic jams in and around our city. Woodstock and Banbury Rd being the most congested. These proposals adding thousands of houses along these routes is unthinkable.

I consider that the proposed submission plan is unsound, not positively prepared, not justified and not effective for the reasons given; I don't object to SOME homes being built, I do object to 4,400. The villages effected being swallowed up, losing their identities. Local roads are already overloaded. More houses equals more vehicles. Kidlington is already a VERY large village. Other local villages should be targeted such as Kirtlington, Tackley, Wootton & Woodstock. Most importantly the GB land between Kidlington & Oxford will become one mass of houses. Many people wanting these plans stand to make a fortune. I suspect it's already a done deal. Oxford University don't give ANY consideration to local villages, all they want is money. GREED.

I consider that the proposed submission plan is unsound, not positively prepared, not justified and not effective for the reasons given; If we don't protect Green Belt it will be gone for us & our children. GB is good for lowering asthma, recreation & nice environment to live in. Infrastructure - roads can't cope as it is. Adding to it will impact hospitals, GP's Schools. Other sites should be used over GB (brownfield sites, instead of business parks etc.). This is based on profit rather than existing residents needs. It will add to flooding risks (impermeable creates more surface water). It will spoil the look of our village. Traffic queueing & pollution happen now, increasing with 4,400 more households. This is not the answer. Investment in other places is needed, rather than saturate this area.

I've lived in Kidlington for 30 years & brought up family here. I am shocked at the plans for around this village. It will spoil the Green Belt walks, affecting wildlife & environment. GB is needed to relax & de-stress in. These areas are liable to flooding & not suitable to build houses. The community will be affected by the addition of new people. It's already hard enough to get GP appointments & travel because of chaotic traffic on local roads. Pollution will increase. All of these factors will deprecate the values of homes. Green Belt was built for a purpose & thus should remain for our health!

PR-C-1008 2945	17/08/2017	Anita	Jackson				N
Comments							
I consider that the proposed submission plan is unsound, not positively prepared, not justified and not effective for the reasons given; If more funding & resources were in place to deal with the huge number of properties remaining vacant & derelict within Oxford City then the amount of houses needing to take up 'green space' could be reduced. Affordable housing is badly needed. It looks good at planning stage but in reality few, if any, especially in this expensive area, turn out to be anywhere near 'affordable' for key workers & the like. There needs to be a rigorous vetting system to oversee the 'affordable homes' issue, making sure the homes are available only to the sector of workers they are intended for. Developers will reel in their profits & we could end up with a worse situation than at present!

<p>1. I've lived Gosford & Water Eaton parish for approx. 50 years. The agricultural & recreational GB buffer zone between Oxford & Kidlington is within the parish & is essential for quality of life for local residents. 2. There is no good reason to build on this land for the benefit of Oxford City residents. Why can't GB land within the city boundary be used for them? 3. The railway station is a benefit for all and its location is beneficial. Building houses so close to it is of no benefit as Oxford City bus services can provide adequate transport to & from the city centre. 4. No need to build houses on North Oxford Golf course. Why not use the land reserved for the replacement Golf course? Residents on that area, PR6c would only have a short walk to the railway station if they wish to travel to London. 5. Parishioners in Gosford, Water Eaton & Kidlington want to stay a self contained community & not part of Oxford City. 6. The creation of 1,118 houses on PR6a & PR6b will create a potential of 3000+ car movements a day, together with a further 5000+ movements from PR7a, PR7b, PR8 & PR9. The traffic situation North of Oxford will be at gridlock even worse than that which occurred during the recent alterations to Banbury Rd & Woodstock Rd roundabout.</p>

PR-C-1024	24/08/2017	Rodger	Ayris					N
3015	Comments							
Having recently read in the news about the number of empty houses currently found in Oxford, I am even more strongly opposed than I was to the imposition of all these houses for Oxford overspill. This problem is not entirely attributable to Oxford as a city. Oxford, and to some extent Brookes Universities must also shoulder some of the 'blame'. No matter how much dedicated student accommodation they build within their own environs, until there is sufficient to accommodate every student within their campuses, their housing need will continue to distort the housing 'market' in the larger Oxford area. Presumably Oxford would not like to give up a chunk of its own 'green' areas. Port Meadow perhaps! So how can they realistically expect us to give up huge chunk of our 'green'?

Proposed Submission Plan - General Comments

PR-C-1028	24/08/2017	Mrs C	Green		N
3035	Comments				
Objects to the Cherwell Local Plan to build 4,400 houses in this area. Looking at the plan with so much land outlined in red, it would seem that number is only the beginning of the project. This is unsuitable. Facilities such as GP surgeries, dentists, schools etc. are already a problem & couldn't support the people this project would generate. The project is inconsistent with national policy. Green Belt areas were always protected. No development on those sites & should remain so. The risk of flooding is another reason for my objection.

1. The proposed plan will lead to an eventual boundary change bringing Kidlington into Oxford. 2. With increased ambulances bringing patients from the Horton hospital to the JR in Oxford this proposed development will lead to increased journey times. 3. Kidlington is already polluted by the prevailing wind bringing traffic exhaust from the A34. The proposed development will bring a further increase. 4. The proximity of the development to Oxford Parkway will make it attractive to Londoners who will buy properties unless a restrictive covenant applies to those buying the properties. 5. Kidlington's younger generation will not benefit from the proposals.

Journeys to/from Kidlington & Oxford on weekdays are already slow & congested at peak times. Extensive new housing would make this worse. Concerned at the effect on local services. It is already difficult to get appointments within a few days at local health centres. Not building new surgeries would make this harder. The same pressure for schools. The attraction of living in Kidlington is green spaces can be reached quickly & easily. It would be a sad if access to these spaces was lost through an extreme programme of house building.

Green Belt must mean Green Belt. If the Govt. are allowing development on it, it must consider NEW town development with infrastructure & facilities to support it. Overdevelopment of existing villages & towns creates enormous problems, e.g.. Heavy congestion through Kidlington, Kidlington & Peartree roundabout & social & domestic stresses. Crime occurs because we are losing the few open spaces & natural environment which families can enjoy. This leads to peace, harmony & happiness. This leads to the whole country benefitting from happier people. We totally agree more homes are needed, but the only justifiable way of using Green Belt land is to develop a new village or town.

1. The traffic out of Kidlington to Oxford is difficult enough now, taking 30-60 mins to get from Sainsbury's roundabout to Cutteslowe roundabout. Unless the plan includes building a new by-pass? 2. The Green Belt is just for that. 3. Oxford City Council NOT building enough houses, should NOT mean CDC takes up the slack building more houses in our Green Belt. 3. The local Primary & Secondary schools are overstretched now with lack of staff and v large classes, so extra 4,000 houses & children will stretch it further.

Where is the infrastructure? A year ago an enquiry was done confirming Kidlington can't expand any more and to remain a village. The Government/Council should be enforcing the law to protect Green Belts. Oxford residents have been moving out to Abingdon, Witney, Bicester, Faringdon, Banbury for years. It is quite obvious that these houses will be for London overspill. Convenient for the new Railway Station.

There is a reason for Green Belts & no reason to build on them. The roads are gridlocked at peak times (at least 3 hours p/d) as it is. Oxfordshire is being spoilt by executive boxes for Londoners. London should start building up (safely). The Government should start controlling immigration, making established housing more available & cheaper. Was on holiday when the meeting took place and nothing through letterbox explaining fully. CDC should start looking after their existing residents first & the Oxfordshire environment.

In the past houses in Grovelands went to Oxford people to relieve Oxford's housing problems. Why can't they sort out their own problems? There are young people in Begbroke, Kidlington & Yarnton who can't afford homes of their own, or even afford to rent. Why are they less worthy of consideration? What about schools, doctors, general infrastructure etc.? Traffic congestion is already appalling. Journey times at rush hour are virtually impossible & unpleasant with the pollution from fumes. Used to walk to Sainsbury's from Water Eaton Lane but the increased traffic & air pollution makes this intolerable, so goes by car, making things even worse. We need green areas for stress relief, and to walk freely to keep fit.

Oxford should meet it's own housing needs. E.g.. Build on derelict Oxford Stadium site & where they've plans for industry e.g.. The Northern Gateway. We have almost full employment, so people from outside will take these jobs & need more housing. Oxford should now (and have in the past) restricted the growth of Oxford Brookes University. Students take up precious rented accommodation & land in Headington which could have been used for local people. Most of the new homes will be expensive, unfordable, attracting more outside people or buy to lets. Young people here can't get on the housing ladder. They need affordable starter homes. The houses should be exclusive to 1st time buyers. GB land, there to stop urban sprawl & enhance the quality of life, should not be used in any circumstance. Neither N Oxford Golf course & the edge of Cutteslowe Park. Kidlington, Wolvercote, Begbroke & Yarnton do not have the infrastructure to cope with expansion. Many of these houses will be bought by London commuters (now Oxford Parkway is open), not by locals, so not helping Oxford at all. Oxford City is too small for such an expansion. They traffic is horrendous now.

Considers that the proposed submission plan is unsound, not positively prepared, not justified and not effective. CDC should robustly oppose Oxford City. They want to annex Kidlington and make it part of the City. They won't be happy until all of the A4260 corridor is concreted over. Why is housing now judged as a reason to build on Green Belt - that is not proven in law. Oxford should use their own brownfield sites. If they stopped creating jobs in the City then there would be less of a need for housing. Social housing should be a priority if they must build, rather than developers 'buying' out the rules.

3123	Comments							
I consider that the proposed submission plan is unsound, not positively prepared and not justified. 1. Roads within an 8 mile radius of Oxford City is already not fit for purpose with the existing population. 2. Schooling and health infrastructures not fit for a massive increase in housing & population. 3. Creating large housing estates not only doesn't promote healthy communities, it destroys existing ones. 4. Building all over precious and diminishing green spaces in the South is ridiculous when the rural areas of the Midlands and North of England are rich in green space, yet impoverished in population and jobs. Why isn't the emphasis on providing more housing and jobs not also helping to re-balance our country's stark divides? 5. Do we have enough water going forward to supply more dense populations in the South? Please think long term.

Of the opinion that the population of Kidlington village and the immediate surrounding area is already too large for the infrastructure currently in place. Traffic jams through Kidlington, especially at the 'Sainsbury's' roundabout, are already too frequent, especially at rush hour. Increased housing in the vicinity of Kidlington Cemetery will only exacerbate the problem. Have lived in Kidlington since 1974 and enjoy the relative tranquility but as the population increases there is a detrimental effect on the quality of life. We do not wish to be merely part of Oxford - enjoy being apart from Oxford whilst appreciating all that Oxford offers. Also worried about removal of even more land from Oxford GB and do not want to see it further diminished. The proposed plan is unsound, not positively prepared, not justified and not effective.

Proposed Submission Plan - General Comments

PR-C-1052	18/08/2017	Mrs Elizabeth	Bruce		N
3138	<p>Comments</p> <p>Object mainly as follows: Density of housing proposed is too high. So many extra dwellings would have a huge impact on roads, which are already way too busy. Medical facilities in Kidlington are already stretched and it takes weeks to get a routine appointment - more residents in the area would exacerbate this. Loss of GB land to be deplored - is it not against Government policy? To lose so much in such a small area is totally unacceptable. Lack of any real open space between Kidlington and Oxford, which would be the result of these policies, would make for an unattractive, undesirable and unhealthy urban sprawl, with little access to country walks and fresh air. Kidlington is a village with a long history and its own sense of community. It should not just become another suburb of Oxford - we do not need more 'connectivity' to Oxford but our own identity. Cherwell District Council is simply meant to be looking after the quality of life in the area it represents not simply sacrificing it to Oxford's supposed needs.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>				
PR-C-1053	17/08/2017	TJ	White		N
3143	<p>Comments</p> <p>To build in GB for Oxford is a disgrace. The properties will all be too expensive (just like the Barton development) and not purchased by local people but by commuters to London. How does that help local people? The GB will be gone forever and leave us as one large urban sprawl. Oxford seems more interested in building flats for university students. Will we get more schools, doctors etc. to cope with this? Trying to get a doctor's appointment is already difficult and what about the road network? have lived in Kidlington for over 40 years and it has changed greatly. The population will be much changed. This is Oxford's problem and Cherwell should not get involved.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>				
PR-C-1054	19/08/2017	Sandra	Whitfield		N
3148	<p>Comments</p> <p>Oxford City should endeavour to solve its housing problems with more effort being made to bring empty properties back into use and utilising brownfield sites. Nearly 2000 empty properties is a disgrace and there must be more sites in Oxford that could be used before building on the GB. Yarnton, Begbroke and Kidlington must remain separate villages preventing loss countryside walks which are enjoyed by many residents. North Oxford Golf Course is a much-used leisure facility and should stay where it is. If absolutely necessary, houses could be built on Frieze Farm land. With low unemployment in this area there is no certainty that many jobs will be provided or 4000 plus houses needed. GP services are already stretched and waiting time for hospital appointments will increase. Travelling is already difficult and time-consuming and with no improvement in the road network, air and noise pollution and traffic congestion will worsen. It is hugely unlikely that the majority of people will use public transport even if it is improved. The proposed number of houses should be scaled down until the infrastructure is provided to cope with such a proposed influx of people and vehicles. Affordable housing must be provided at the Government recommended levels and affordable must mean affordable.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>				
PR-C-1055	08/08/2017	Barry	Hiles		N
3153	<p>Comments</p> <p>We are a village, separated from other villages in the area by GB land. With the proposed development, we would lose our identity and become a town, encompassing other surrounding villages. The traffic that these proposals would create would turn the Oxford road into a car park. The Road is just about surviving with the current infrastructure. Any further developments would be a disaster.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>				
PR-C-1056	24/08/2017	Mrs Valerie	Brennan		N
3158	<p>Comments</p> <p>The GB is for us all to enjoy. Kidlington freely fells beautiful trees, such as a s making way for shops and flats in High Street, Kidlington, opposite Co-op. Residents freely take down trees illegally without consent, also hedges removed and wildlife affected. When Grovelands was being built many years ago, there was a meeting about there being a need for a new school - none was built. Instead, the Blenheim Road primary school was turned into a centre for adults with learning difficulties, and this was eventually built on for housing. If they do build, how far will children have to travel to school? Safely. There sll be lots of congestion on the roads, loss of wildlife and lovely open spaces.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>				
PR-C-1057	10/10/2017	S D	Rugg		N
3163	<p>Comments</p> <p>Oxford City cannot manage its own housing. A recent development has a 3-bedroom house to be sold for £600,000 - affordable - no. More must be done to solve Oxford City's housing within Oxford City boundaries. Much of the land shown as possible development is flood plain - nowhere else for the water to go. Currently 3 weeks to get a doctor's appointment - another 12,000 residents.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>				
PR-C-1058	23/08/2017	Mr & Mrs	Moore		N
3168	<p>Comments</p> <p>In addition to above policies object most importantly to building on GB land which should never be done. The roads in Kidlington are already getting busier than ever - partly due to thousands of houses that are being/have been built at Bicester plus building of Oxford Parkway. Doctors' surgeries already buckling with increased population and will be worse when GP practices are all an amalgamate, hence less GPs! Moved here several years ago from Oxford for healthier lifestyle but with proposed plans pollution will increase and Kidlington will virtually become part of Oxford. It is obvious with the new train stations locally this will encourage London commuters and buy-to-let markets!</p> <p>Changes Sought</p> <p>Reasons for Participation</p>

3183	Comments							
Do not believe the requirement for this scale of housing has been justified or proven. Indeed recent government forecasts are reducing the number required. The areas on the plan are all on GB land which is a permanent designation and housing needs are not a reason to build. All the proposed areas would access north Oxford on already highly congested roads. The plans show no ideas to improve what will be a much heavier traffic flow. Surely when the plans come u[for consultation there should be detailed and costed measures. Cherwell Council appear to be rushing into this process under pressure from Oxford City Council without the necessary due diligence. Regarding 'urban sprawl', residents in the villages affected value their identities as part of a 'village' community, of which keeping a 'green belt' between them and Oxford is important for recreation and, in the case of North Oxford golf club, an important sporting and social facility. Having seen how developers manage to circumvent their obligations to build affordable housing I do not see this proposal will help the need for lower cost housing. Do not see this as a sound and justified plan.

Yes! To building some actual affordable homes for Kidlington's own low-paid workers. No to the proposed overwhelming deluge of housing proposed for so-called 'Oxford Overspill'. Aware of the recent attraction of living in Kidlington through the opening of our railway station. With easy access to London, new jobs from Northern Gateway Business Park there is hope that new housing will accommodate workers and people moving into the area. Our village provides access to essential services within walking distance, and beautiful countryside which we value greatly and are desperate to keep. We do not want to be part of a large urban sprawl and its pollution nor do we want to lose our GB. We already have extra traffic with the new situation, and there will be more with the housing being built in the other vilages and there is no visible source of funding or costing for the infrastructure in the policy. Will there be money to develop new facilities or do we continue to develop what we already have?

The Green Belt is meant to be permanent. The health of future generations relies on open spaces and adequate leisure. The NHS services are overstretched and not adequate for the existing local communities which exist in neighbouring villages. Massive development would destroy local communities. The influx of London commuters would have little respect for such communities or Oxford itself. The high prices of recently built houses in Oxford demonstrates the lack of provision for key workers but serves the "buy to let" markets. Our young people will not get the affordable housing they need.

The public meeting on the 21 Sept. at Kidlington indicated that Oxford's "unmet housing need" has not been quantified accurately. Further development planning should be halted until a more precise forecast is published. Kidlington's unique character has altered in the last 6 years. Family houses have been replaced by expensive rental properties and overpriced flats have been slow to sell. Hundreds of new homes, commuting residents and cars will only stretch the local amenities and infrastructure to breaking point. Oxford Road is gridlocked at peak times, further development on either side of it will only add to the problem and traffic pollution. The Green Belt is an irreplaceable resource and defence. Once developed, the unique character, variety and eco system of Kidlington, Gosford, Yarnton and Woodstock will be gone forever, including the green "lungs" which run alongside several very busy roads. CDC must think again!

When is a village not a village? When Oxford wants to make it into a city?! Kidlington is a village. Pollution is at such a high level on our roads now. Traffic is at a standstill most days when schools are in session, clogging up our roads pumping out fumes. Oxford has plenty of underdeveloped land, why are they not using that? Realise that people need housing but why only Oxford? Kidlington people need housing too!! Green belt is there for a reason, to stop Oxford from encroaching into villages, we remove that then Kidlington becomes Oxford City. We have seen our share of housing for the overspill of Oxford once before - I feel strongly that Kidlington will suffer from this over development to our infrastructure.

Unreasonable to expect the Green Belt to be used for the Oxford overspill. Object to PR1, PR3, PR11. Agrees that the public has not had enough time to read and understand the proposals. There must be empty business spaces and empty housing that can be used. Schools and GP's are overstretched now, how will it be when 4,400 new houses are build? If the green belt is demolished it will damage the environment and our health. The loss of rural life and villages will be outrageous.

Objection to proposed development. After attending the meeting at Exeter Hall, the need for housing is understood, but for less than proposed. These houses should be affordable to stop local children having to move away as they cannot afford to live in Kidlington. The opening of the Parkway is a great advantage, but a commuter village is not needed. The golf course should remain as the traffic would be chaotic if more cars were to exit on Jordan Hill. Frieze Farm is unsuitable and would lead to ruination of Stratfield Break Wildlife area. All developments these days are advertised as luxury houses and flats. Local youngsters have to be able to remain in the area with a view to the future. As a suburb of North Oxford this would make Kidlington very expensive.

3349	Comments							
Kidlington is a lovely place to live, raise a family and then enjoy a happy retirement, which we have done and feel very lucky. Proposed developments will change this and bring problems. Traffic flowing through Kidlington will increase and the surrounding roads (particularly A44) will become almost at a standstill during rush hour. Shopping and parking in the village will be more difficult and footfall in already overstretched GP surgeries will increase. People will be unable to enjoy many open spaces locally and will suffer along with wildlife. Please do not allow this proposal to be passed.

PR-C-1097	05/10/2017	Mr & Mrs	Hand					N
3359	Comments							
Traffic at the Sainsbury roundabout is chaotic in the morning backing up the village and on the slip road. Residents are sometimes unable to get out of their gates until 09.00 - 09.15. More traffic would add to the chaos and pollution. Building houses so close to our properties would destroy residents peace of mind and bring a town onto our doorstep. We don't want to be part of a town or Kidlington. We are Kidlington villagers and want our green spaces where they should be - they cannot be put back once built on.

PR-C-1100	10/10/2017	Vassilis	Karatzios					N
3374	Comments							
The plans to close Yarnton Road and build a station where the level crossing is, is utter madness. This would cut Yarnton off from Kidlington. Yarnton villagers visit Kidlington for shopping and the Health Centre and vice versa. It is more convenient for some Kidlington residents to go to Yarnton Medical Practice as this takes the pressure off of Kidlington. A 5 mile detour to get to Yarnton would not be feasible for many people. The Key Medical Practice is oversubscribed already without the thousands of extra patients coming from the new-build houses.								
Changes Sought				Reasons for Participation				
PR-C-1100	09/10/2017	Vassilis	Karatzios					N
3573	Comments							
The traffic into Oxford is appalling and Kidlington cannot take any more houses. Schools are full and the health centre is a full capacity. Some of the planned houses are to be built on the flood plain between Kidlington and Yarnton. Cherry Close has flooded in the past and the canal cannot take any more water flowing into it at times of heavy rain.

3384	Comments							
Lives in Cherry Close in Kidlington & thinks that the proposals to build 100s of new homes around the village is complete madness. Oxford has plenty of housing which is occupied by students for only part of the year. If the 2 Universities were to take more responsibility for their own student accommodation & either build a few student blocks on the outskirts of the city, with transport into the city organised. Alternatively they higher their entrance requirements & take fewer students so that less accommodation is needed, this would free up the student houses in one fell swoop. I'm sure people who work in Oxford would prefer to live in Oxford, rather than face a bus journey into the city, which can take over an hour & is expensive. It's all a matter of money isn't it? The University doesn't need to sell off GB land to developers, it is just greed. Most of the new houses wont be affordable for local residents & will be lived in by London commuters. Save the golf course.

I do not understand why no major developments have taken place over the last 10 years but all of a sudden we are expected to lose part of Cutteslowe Park and lots more land in surrounding area. Where are all these people who are going to live in these houses going to work? Millions of pounds have been spent on 2 local roundabouts but traffic delays still occur. More cars on the road is not going to help. Millions are being spent on the Westgate but jobs cannot be filled - earning £7.50 and hour will not qualify for a mortgage. Promises are made on Barton developments but houses are going to be £600,000 plus - total greed/madness.

We should preserve the GB for future generations; I am shocked to see this plan which aims to destroy the wildlife sanctuary woodland have created at PR6c! The whole exercise is a money grab on the back of an otherwise clever transport solution at Oxford Parkway station!					
Changes Sought			Reasons for Participation		
PR-C-1124 3499	10/10/2017	Mr M	Stringer		N
Comments					
Consider that the proposed submission plan is unsound, not positively prepared, not justified and not effective. Specifically, think that the new rail station at Oxford Parkway, and the station at Oxford, which form a comprehensive, connected and integrated public transport network (together with bus routes) can bring commuters into Oxford to fill the many new jobs we may see in the future. There are huge developments of housing at Bicester & Didcot which will house such a workforce. If the proposed new housing for Cherwell goes ahead Oxford and its environs will be choked with vast number of people and the roads will become gridlocked, resulting in failure of the city.

3514	Comments							
Strong objection to building 4,400 houses in the Kidlington/Begbroke/Yarnton area: 1. Oxford City has historically failed to meet it's own housing needs and chosen to put the city's environment and economic growth above essential and sustainable social and affordable housing and public provision. 2. Area is largely GB and should therefore not be built on - to do so contravenes National Policy and threatens everyone's well being. 3. Proposal are not costed and type of housing is not sufficiently specified. Little or no certainty that social housing will be prioritised and every indication that the developers priorities will be on individual units. 4. Upgrading of infrastructure to cope with extra residents is not addressed. Roads are already congested and worsening, GP surgeries are full, schools have little room for expansion, recycling provision is stretched, there is a history of sewers overcharging, etc. More sprawling low density development like we have seen before is not a solution. Oxford City together with Oxford University need to find a more imaginative, fairer, effective and sustainable future for the area through co-operation with their neighbours not domination.

3519	Comments							
4,400 homes = 4,400 cars average household 3.5 people. Means 4,400 school spaces for schools already at max. Massive impact on roads which are already congested. More buses. It will boost local economy but likelihood of trade not coming into villages will have an impact. Affordable housing - plans for Woodstock priced at one million upwards is hardly affordable. This is not the expressed will of the local community. The revised figures, right number of houses, right number of people, downgrades the figures into hundreds not thousands. Look after local needs first above attracting business for homes. OCC do not have rules over the Kidlington Gap - This is Cherwell not Oxford.

1. No costs shown for infrastructure schedule. What road improvements are scheduled for houses in area PR6b, PR6a and PR8 as already very congested. 2. Noted additional swimming pool space - this would be needed as well used by public and schools at present. 3. No definite mention of extra health services - existing surgeries are already over subscribed with people waiting 2-3 weeks for an appointment. 4. More retail space would be required for the number of houses. 5. Agreement with open green space policy and having canal side parkland, and wildlife corridors unlike the canal area ear Oxford where housing has been built up to the canal pathway.

Oxford should be doing more to meet it's own needs than building unaffordable houses in our beautiful countryside. There will be even more pressure on our underfunded services such as schools and doctors surgeries. There will be even more disruptions with community to and from work - there are always hold ups in the mornings. This will also cause more pollution.								
Changes Sought				Reasons for Participation				
PR-C-1132	26/08/2017	Sonya	Willoughby					N
3538	Comments							
Traffic, heavy lorries and pollution through Kidlington already worse, more development with not sufficient infrastructure will make it even worse. Cycle lanes and better buses will not stop people using their cars to get to the larger stores. GP surgeries cannot cope now, one more surgery will not be sufficient for proposed number of new homes. Master plan states no urban sprawl and this will do just that making the master plan a waste of time. These houses will not be affordable, Barton estate is case in point. Developers will say it is not viable. More houses at Woodstock will mean more traffic along A44. Park and Ride is fine not everyone works in Oxford. Houses for Nurses etc., is fine but what about the young people - What constitutes affordable housing? Plenty of flats and house for sale or rent in Kidlington at the moment - not being brought or rented. So why more houses taking away swathes of GB. This will spell disaster for all the villages in it's path and the well being of residents.								
Changes Sought				Reasons for Participation				
PR-C-1132	10/10/2017	Sonya	Willoughby					N
4361	Comments							
To build on the Golf Course would take away valuable GB land between Oxford and Kidlington, making Kidlington part of Oxford. Kidlington still retains a village feel despite it's size and this would be taken away. The proposal to re-establish the Golf Course some little distance away is not viable in that it is a flat field and would take years to build and finance. There should be even more traffic coming out on Jordan Hill. The GB's open countryside in which nearly 4,000 of the houses would be built would be sacrificed for ever and it's walks and views lost. Natural habitats and wildlife would be destroyed.

Proposed Submission Plan - General Comments

PR-C-1132	10/10/2017	Sonya	Willoughby						N
4359	Comments								
There is not the infrastructure to support that many houses. When the M40 first opened traffic, especially lorries diminished somewhat. It is now getting worse day on day the lorries and car transporters that come through are huge, spewing out fumes. No amount of cycle lanes and better services will make any difference because people want to use their cars. The Northern Gateway development already means more traffic. Where are the plans for new roads to cope with all this traffic? GP Surgeries cannot cope now, one more will be required to cope with demand, but there is a chronic shortage of GPs.

3543	Comments								
Underfunded public services, GP services, schools etc., will not be able to cope with extra pressure and would be at breaking point. No adequate transport measures proposed to cope with increased traffic congestion. Roads are not maintained very well now and repairs do not last. Will cause more pollution and breathing problems and noise. Drainage and sewerage will not take much more pressure and could cause more floods. Keep the Golf Course where it is, will create more problems if moved. Need more affordable houses but not on GB. Developers want buy to let market and rents are usually quite high. Need to keep GB for many reasons; to benefit all, walks, wild life. If built on will be lost forever. It protects Oxford from being overdeveloped and keeps nearby villages separate. We do not want to be part of Oxford for many reasons. Our villages run things better.

3548	Comments								
This development will not solve Oxford's alleged housing problems, which are not proven. The need is for affordable and key worker housing. This plan will mostly provide for London commuter belt. Oxford should release their own land for housing. Keeping it for commercial purposes will only increase the problem with more pollution and congestion. Relocation/development of jobs away from Oxford City. Northern Gateway does not justify this amount of development. It is not an exceptional case so GB should be protected. The Golf Course cannot be easily relocated - the suggested site is too small for an 18 hole course and the land owners have other lanes for this area. Golf Course is also an important wildlife habitat. Recreational land is vital for physical and mental wellbeing and will be required for current and future needs. Scale of development is far too large to be sustainable. The health, educational, recreational and transport needs cannot be met. Current congestion in the area will get substantially worse. No matter how much public transport is offered, direct links to correct areas will not appear. Not many jobs are North Oxford or City. Travel to other areas (e.g. Headington) already takes 1 hour at peak times by bus. The individual identities and community spirit of Kidlington and surrounding will be lost.

3578	Comments								
Area is already overcrowded and has been identified as one of the most polluted cities in the UK. The increased traffic would add to this. Provides a valuable and essential amenity in a heavily built up area; a breathing space for recreation and walking. Infrastructure and public services will be over stretched. Any extra housing should be on brown field sites and affordable for key workers.									
Changes Sought					Reasons for Participation				
PR-C-1141	08/09/2020	Lawrence J	Middleton						N
3583	Comments								
GB is to prevent urban sprawl an is essential for wildlife and well being of residents. We do not want to become London commuter belt. Housing should be brownfield, affordable, key workers, high density, well designed eco builds. Traffic congestion already appalling. Government figures are not accurate. Property developers just want to make money.

Proposed Submission Plan - General Comments

PR-C-1142	30/09/2017	Mrs Patricia	Shaw					N
3588	Comments							
Stop the urban sprawl. Important to keep the GB it will never be reclaimed. Keep villages separate from towns to preserve communities from overdevelopment. Any new homes should be affordable for 'key workers' and not for 'buy-to-let' or commuters. Doctors, schools, nurseries, etc. will need to be included in any plans. Leisure facilities are lacking for young people i.e.: cinema, ten pin bowling, larger swimming pool, possible outdoor swimming pool. Only one superstore at present with limited parking for increasing population - at least one more required. Traffic congestion and pollution has not been though through. Asthma is on the increase. Residents need space for reflection and children a space to enjoy and explore nature. Don't forget more people need more policing. Overcrowding causes stress. Councils cannot keep approving development in such small plots. Neighbour noise disputes are on the rise. People must have space.

3593	Comments							
Cherwell Council should sort out it's own problems and leave Oxford Council to do the same. As a ratepayer of Cherwell do not wish for any of our resource to solve the problems of the City. GB should be sacrosanct. Cherwell has a housing problem and if land is available it should be built on for residents wanting to live in Cherwell. Kidlington (Cherwell) has its problems with the environment, traffic noise and pollution, difficulty getting from place to place and pollution form the airfield. (Recalls a public meeting in Kidlington where complaints about noise/pollution from the airfield was discussed. The Chairman of the Council gave an undertaking that traffic from the airport would be reduced - it has increased). Kidlington's population has increased but the services to the public have not increased proportionately. Cherwell should look at this. Whilst people's expectations are increasing, services are unable to cope. Cherwell has it's own role to fill and cannot cope with the City's problems.

The likely volume of extra traffic generated by these proposals will seriously inconvenience those of us who live very close to the Banbury Road roundabout in North Oxford/Summertown; congestion at certain times is bad enough already. The loss of a chunk of the GB will affect us adversely here too.								
Changes Sought				Reasons for Participation				
PR-C-1145	01/10/2017	Mrs M	Elliott					N
3603	Comments							
GB should not be built on - it is vital to leave corridors of open land for human health and for wildlife and vegetation. So many houses should not be built near to a city which is already struggling to deal with traffic congestion, and where the public services are overloaded. The proposal to build near to the Oxford Parkway Station will attract London commuters, adding to these problems. The Golf Course should remain where it is at present, as part of the green corridor.

3631	Comments							
Kidlington does not want to be part of Oxford. 1. Values location within GB 2. Why do Oxford want to build commercial/industrial estates when employment is low in Oxford. The land (e.g. Northern Gateway) should be used to build affordable houses for local residents especially first time buyers. 3. Kidlington residents do not want more large houses built between Kidlington and Oxford which would cater for London commuters not local people. 4. North Oxford Golf Course should be left where it is as it is acceptable use of GB land. 5. No proper plans given on costings for improvements to cut traffic congestions which is bad enough already. 6. Local services especially GP/Schools are struggling to cope now.

3661	Comments							
The roads in this area are already gridlocked from 7.20 am and residents in Islip/Wood Easton are frustrated by the constant stream of traffic as people try to avoid the ring road. GB is in place to prevent developers from building on every inch of available land permanently damaging the environment for future generations; every time the GB is built on this sets a precedent. Already routinely waits 3 - 5 weeks for a GP appointment, primary school classes up to 32. Kidlington already needs a better infrastructure.

PR-C-1156	12/08/2017	N H	Crombie					N
3666	Comments							
No consideration ref flooding. No indication as to where water supply to come from and if sustainable. No indication ref increase in traffic and what to do about it. What provision for improved public transport especially in view of recent cut backs? What size would house be and what density - no indication. No provision for open spaces and 'green access'. Shutting Sandy Lane would cut off Yarnton and Begbroke from Kidlington facilities. Where would power/gas supply be sources from - strain on networks. Overall impression is that plan is poor on detail especially ref infrastructure and transport and has been created as a 'knee jerk' response to central Government demands. Developers will try and cram as many houses as possible into sites with no consideration for residents. No comments in plan ref amenities to be provided and costs. No comments in plan ref loss of wildlife habitats. Any new housing should have solar panels.

3692	Comments								
1. Oxford City should be forced to use brown field sites for housing, not continually stating they are for commercial purposes. 2. There is no proven need for 4,400 houses in the Kidlington area. Oxford's unmet housing need is not sufficient reason for encroaching on the GB. 3. If a Park & Ride is to be built adjacent to the A44, rapid bus transit should be down A44 to Pear Tree/Wolvercote into city, not through Kidlington. Transit through Kidlington is already difficult enough. 4. Where will extra: Medical Centres, Car Parks, Schools be built to cope with influx. How will water supplies, sewerage systems and gas/electricity networks cope. All already struggling and causing problems. 5. 50% affordable housing is claimed for this project which no developer has managed to achieve. Barton Park has 3 bed @ £600,000, 1 bed @ £300,000. Affordable housing on this almost 2000 project is now just over 300. If Oxford City cannot control the developer, how will Cherwell enforce the 50% criteria. NB. Barton Park built on Council land. Kidlington land will have to be purchased from private landowners, adding to the overall costs. The model you are working to is out of date.

3691	Comments								
We visited your exhibition on two occasions without getting satisfactory answers. Plan for 4,400 houses has scant attention given to infrastructure and impact on residents. Kidlington area needs its GB. Health should be a major consideration. All plans will lead to unacceptable pollution. Wildlife will be greatly affected by loss of habitat, we cannot as custodians of nature let this happen. Kidlington has village status. Oxford City Council has for many years had an agenda to make Kidlington a part of Oxford. Consideration should be given to those of us who already live in Kidlington. With a proportion of houses being built within walking distance of Oxford Parkway Station, London commuters will benefit. It will not meet the supposed unmet need. Can you legislate that houses will be for Oxford City workers only? Stop Press - Proposal to build 881 student flats on Cowley Barracks Site. This will free up even more housing in Oxford to help unmet need.

PR-C-1165	23/08/2017	Dr Nika, Jiri	Abu, Faytl						N
3713	Comments								
Strong objection from entire family to the planned housing predominantly on the grounds of violation of the Oxford GB. No plans to update the necessary infrastructure as well as showing no evidence the housing would be truly affordable. GB was established to protect the land from acts exactly like this overdevelopment. The public trusts the Council to ensure the GB permanent protection is maintained. Violating this greatly diminished public trust in the Council on all other matters.

PR-C-1167	21/08/2017	Mrs Pauline	Rushby						N
3723	Comments								
No need to build on GB land. There are other 'brownfield' or less rural locations that could be used - they are just more difficult (e.g. not on open land) or less attractive/profitable. Once taken GB land cannot be reclaimed, it will be lost to future generations. Kidlington area does not have the infrastructure to carry large building projects. Kidlington roundabout is always gridlocked at peak times. You have to wait 1 - 2 weeks for a GP appointment. Any new development will only draw in the commuters, not local people. There is a lot of wildlife in the GB - deer, pheasant, fox, hedgehog, woodpeckers, jay - lose the GB and our wildlife will also be lost. Oxford City is just passing the buck - trying to bully other councils into sorting out their problems, instead of dealing with them themselves. Do not build on GB - even if it seems the easy option, it is not the best.

3733	Comments								
1. This will have an impact on travelling into Oxford from Kidlington as there will be more delays with more cars using the roads. There will be gridlock. 2. There will be a significant reduction in the opportunity for wildlife to prosper, impacting on children appreciating the countryside in this local area. 3. Extra housing will cause huge problems from nursery to secondary education because there will be insufficient places in an already stretched service. 4. It will impact on the already limited places available at health centres and doctors surgeries. 5. Dentists, physio's and Social Care, etc., will also be significantly affected. 6. Housing is already expensive and this will make it unaffordable for younger generations and it will end up as a commuter belt for London.

This development will remove GB land which is needed for leisure space for all to enjoy. It stops the edges of Oxford becoming even more of a "dormitory sprawl" and provides a beautiful, reachable area of natural beauty. Traffic levels, already very bad, would become intolerable. The ability to see and enjoy a wide variety of wildlife would be lost forever. Many brownfield spaces exist within the already developed areas of Oxford. These should be fully utilised before encroaching on our diminishing unspoilt spaces.

3754	Comments							
GB exists to maintain separation between existing towns and villages avoiding urban sprawl. These areas are well used for walking and cycling. Oxford should take care of it's own housing needs. Last week on walking through Christchurch Meadow we observed only a few cattle grazing. Surely the time has come for the University to take stock of how much land it could use to help out with housing in Oxford. The roads, schools, surgeries and public services are already stretched and additional housing in the numbers proposed will have a deleterious effect on these. Let common sense prevail. Leave our GB alone.

PR-C-1178	11/08/2017	Christina	Allen					N
3764	Comments							
More properties and brownfield sites could be utilised in Oxford. If people live in Oxford then they don't have to commute to work thus saving travelling costs and even more horrendous traffic problems on already congested roads. Park & Ride is not always the answer as people still have to drive to Park & Rides. It is vandalism of the highest order to invade the GB. The prospect of the urban sprawl of Kidlington, Yarnton and Begbroke combined is chilling. Total disregard for those residents. Building on the North Oxford Golf Course is a horrendous idea. Totally no consideration of people's feelings over the destruction of one of Oxford's oldest and much loved courses - 110 years old. A destruction caused entirely by greed.

Proposed Submission Plan - General Comments

PR-C-1184	19/08/2017	M	O'Mahoney						N
3794	Comments								
As always a council riding roughshod over the people who voted them in. Increased traffic, pollution, loss of GB, strain on already over stretched infrastructure (health services and schools). As long as developers can line their pockets all is good. Why was the development on Shipton Cement factory dropped and these large scale proposals brought in? It is not ok for Kidlington to be swallowed up by Oxford City. Kidlington will become one big traffic jam. This proposal has no benefits to the constituents of Kidlington apart from exacerbating our lives with pollution, congestion, unable to book GP appointments and demand on over subscribed schools.

3799	Comments								
Loss of natural habitats, views, walking areas. Increased traffic, pollution, strain on existing infrastructure - schools, GP surgeries, hospital. Cars will still be the favoured mode of transport regardless of all these 'new' cycling provisions. Entrance to Stratfield Farm will cause traffic problems on the Kidlington roundabout and slip road. South Avenue will be used as another entrance - I feel there will be even more traffic travelling along a residential road. More pollution and noise for my family to endure. No matter how much we do to save our local area - this is a done deal. We are the forgotten village compared to Bicester and Banbury. Councils should think about housing for their own waiting lists. It definitely won't be affordable housing. Cherwell should be supporting Kidlington.

3814	Comments								
That old adage comes to mind - 'not in my back yard', but sadly it now appears it will if these proposals are approved. Agreement with all valid reasons stated, loss of GB, environmental, traffic/pollution - even when electric 2040 arrives! Central Government have set the agenda and Councils have to toe the line. Kidlington became a prime target with the birth of the railway connection to London, it is a golden opportunity for developers and cash strapped Councils. If approved I fear the land adjacent to the present proposed sites will also soon be targets for further housing. Boundaries will be re-located so that Kidlington, Yarnton and Begbroke can become part of Oxford, a long held desire for many years.

I feel that there must be a large financial gain for Cherwell District to be giving this land for development for Oxford's needs. As we are the southern tip of the district majority of the Councillors are not really concerned as they will not be affected.									
Changes Sought					Reasons for Participation				
PR-C-1189	05/08/2017	Terence	Yeatman						N
3819	Comments								
Using Carfax as the central point of Oxford there are greater expanses of GB i.e. east and west closer to Oxford than coming north into the Cherwell District. Using this land would reduce congestion on already the congested roads (A44, A4260 and A40). Air pollution would be reduced with shorter journeys into Oxford. Shorter journeys would also enable people to use public transport (if developed properly) or cycle instead of using cars. There must be a large financial gain for Cherwell District to be giving his land for development for Oxford's needs. As we are the southern tip of the district, the majority of the councillors are not really concerned as they will not be affected.

<div style="border: 1px solid black; padding: 2px;"> Strong objection to removal of GB especially land between the Kidlington and Oxford boundaries. This will be the start of Kidlington merging with Oxford in one sprawl. All GB should remain protected. Concerned that there is no plan to accommodate all the extra people/cars, Doctors, roads, schools. Plans only mention what is hoped/ideal - NOT what will be and how/who will pay for any new infrastructure arrangements. Feel this is a "Done Deal" despite objections and we are being rail-roaded again into compliance. It seems these houses are for the people who will fill the job vacancies being created by all the new trade/industry not for the Kidlington people who need it. </div>

<div style="border: 1px solid black; padding: 2px;"> Idea is unsound, ridiculous and unreasonable. There will be a shortage of water in the area, no provision for sewage works on the plan. Downgrading of the Horton Hospital with more houses being built when the JR is having a job to cope, is ill thought out and puts more work on the surgeries in the area. Plus congestion on roads. Why should we join with Oxford? </div>

<div style="border: 1px solid black; padding: 2px;"> Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. I object to moving the golf course to Frieze Farm and building on its site. Its grounds are a positive community asset for future generations, with trees, wildlife, reducing global warming etc. The houses could be built on Frieze Farm instead. This wouldn't affect the occupants and their access to the Railway etc. Kidlington is a safe environment. The roads, infrastructure will be damaged. Sort Oxford spaces out better. </div>

Proposed Submission Plan - General Comments

PR-C-1202	08/08/2017	Mary	Timms					N
3888	<p>Comments</p> <p>Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. The leaflet suggests this is 'Oxford's' problem. I know government has set targets for the S E of England, so it's not specific to Oxford. We all have a responsibility to try to alleviate the problems. I am aware of housing shortages. However, councils need to ensure developers who state e.g. 40% of housing will be affordable, remains 40% or whatever they agree to, to obtain PP. Weak councils must not allow developers to change the goals once building starts or allow to sell affordable properties as Buy to Let. Councils must stay strong. Developers must agree to fund extra services e.g. Schools, GPs, roads etc. before completing stage 1, not once they're broken. Re plans, PR7(a) is preferable to building at PR6(b) and PR6(a) but not enough homes. If anything, allow PR8 and PR7(a), this may preserve Green Belt and keep a distance.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>

<p>Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. Such development makes a mockery of the foresighted decisions made by the inventors of the GREEN BELT. In law this is SACROSANCT. The whole area will turn into suburbia losing the community atmosphere of the different villages. Where will these people work? Plenty are already commuting/working in London, earning 'big bucks' and contributing little to the community. This will generate more traffic. Early morning traffic is already at gridlock heading to the Parkway Station & Oxford. Extra people will need all the local services putting even more strain on Schools, Doctors etc. Will the new homes have parking for the 2 cars most families find necessary now? There are already many cars parked on grass verges, paths and roads, especially at weekends. Also estate roads used as 'rat runs'.</p>

<p>Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. The Green Belt will be eroded. Walks in the countryside are known to have mental and physical benefits to young and old alike. Increased housing means increased traffic congestion. No-one in Kidlington would like the A4260 to become like the A40 Oxford to Witney. Traffic jams would increase pollution and there will be fewer trees and shrubs to absorb the harmful gases, causing lung problems etc. GP Surgeries and schools will be overwhelmed and new residents will be unable to enrol in these. It happened in Derby where we moved from. The quality of drinking water, already very hard, will deteriorate. The JR hospital is already bursting at the seams. Can it take more patients in A & E, Maternity etc.? STOP THE SPRAWL.</p>

<p>Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. 1. The plan is not consistent with national policy for Green Belt areas with no concern for wildlife. Once gone it cannot be recovered, becoming another urban sprawl. 2. Builders rarely include affordable housing as they are only concerned with builds that give them the biggest return, regardless of cost to consumers. 3. Public services, schools and roads are already overwhelmed. 4. Oxford City should use their own spare ground on affordable housing and not impose on local villages. Why build another business park? Oxford and surrounding areas already have an abundance. 5. Kidlington is already a large village. Is the council looking to make it a town, joining it with Cutteslowe, Begbroke, Yarnton?</p>

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. I was born in Summertown and settled in Kidlington on marriage as we couldn't afford a house in Oxford. Kidlington is nice to live in. We do not want to be part of Oxford and lose the Green Belt between the two. Green spaces are important for health and well being. Kidlington traffic is congested in the mornings. Building houses will bring more cars. Oxford thinks they can take over Kidlington. When the airport became commercial it became London-Oxford. The promised railways station became Oxford Parkway. This development may not affect me as I am 83, however I hold Kidlington dear and I have volunteered in various Kidlington groups over many years. The national policy is to keep the Green Belt.

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. 1. The fact that Oxford house prices are very high does not justify building on the Green Belt and creating the urban sprawl that the Green Belt was designed to stop. 2. Cherwell has no need to agree to Oxford's unjustified request and should consider the interests of its own ratepayers first. 3. Any houses built on the Green Belt wouldn't help those working in the service industries, but would be for London commuters. 4. No provision has been suggested for infrastructure and no costing has been suggested. 5. The Green Belt around Kidlington is subject to flooding and is unsuitable for house building.

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. My points are; A. Deport all at Campsfield Detention Centre and build the houses on that land. B. I object to the Oxford City development. Oxford should find it own vacant land. i.e. West of Oxford between Botley Road and Wolvercote, next to the A34. C. Why move the Golf Course and pay for a new one next to Stratfield Frieze Way, move people from Jordan Hill to Barton (where these houses were being built for Oxford's overflow), I thought these houses were Council, not private, for them to be sold?

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. I am concerned the impact proposed plans will have on Kidlington residents. Traffic is already a big issue and this will add to the problem. The impact on house prices in Kidlington is a concern. Losing green area's will effect the visual aspect of the village and the environment/wildlife. Extra housing will not benefit Kidlington residents, it will just provide commuters from London, Buy to Let landlords and other Oxford overspill with housing. I'm concerned about local services such as the J R and other Hospitals who are already struggling!

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. There is no need for an additional 4400 houses in this area. CDC need to refer this back to Oxford City. There is plenty of unused land and houses within the city, probably a lot owned by colleges, which could be utilised. More homes within the city would alleviate some of the enormous traffic problems the area already has. It is imperative that Green Belt land is protected and CDC must do this in line with Government policy. Infrastructure in this area is already stretched to breaking point. There is regular disruption on our roads due to accidents. Again, CDC should be protecting it's current residents who are paying Council Tax! CDC must see that housing proposed on such an enormous scale is merely to line the pockets of greedy developers and greedy landlords (e.g. Bicester Homes and latterly Barton new town - 3 bed houses at £600K!). There will not be affordable/social housing on a sensible scale without doubt! This proposal is not justified or proven - based on 40% increase in demand whereas 10-20% is actually expected.

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. The point of a Green Belt is for wildlife to keep their habitat, local residents having access to countryside and to STOP development. Why put conservation in place, then ignore it to suit developers or those with money? Its a mockery. Once Green Belt is destroyed, it's lost forever. I love the village I was born in. I want it to stay a village. If Oxford want homes let them find space near them. Our services are already overloaded. Will they provide extra schools, GP practices, shops & parking? This is not designed to benefit local residents and as we live here we should have the right to say what happens here. Kidlington is big enough. Traffic is already a problem, further development will make it worse.

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. The assumption that Brexit will have no effect on employment and housing needs is not justified. Building on the Green Belt is a major step and sets bad precedence both for other areas and for the rest of Oxfords Green Belt. It is already difficult to get to appointments at our Surgeries and Oxford hospitals. Closing Sandy Lane affects the former, 1 mile becomes 3 or 4 using either of the alternatives. No timings for travel to the hospitals appear to have been made by bus or car to predict journey times when houses are increased by 2/3. The information available is all but incomprehensible to ordinary people. Please explain - 'sustainable travel opportunities', 'pedestrian wheelchair & cycling connectivity' and 'green infrastructure network'. They SOUND good, but they tell us nothing.

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. This plan is unsound, poorly prepared, and almost certainly will be ineffective in dealing with the issue invoked as it's dubious justification, namely local housing need. Firstly, it is now clear that the evidence quantifying the latter requirement is completely unresolved, conflicting official figures mean the situation is confused and still disputed. It is manifest common sense that no plan should proceed until this fundamental question is properly decided. Secondly, if local housing need is indeed the motivation the key point to be considered is 'will people currently resident in and around Oxford, but in need of their own dwelling, be helped by this development, or not?' New build under plan, consisting largely of low density houses costing in excess of £300000, hardly seems likely to assist those unfortunate people referred to, such as the thousands said presently to be on Oxfordshire housing lists. But if the answer to the foregoing question is in fact 'no', then the whole case for the proposed plan is entirely spurious. There are many other severe drawback to the CDC plan, such as the appalling exacerbation of already serious traffic congestion in the area. In short, it seems a cynical attempt to exploit a lucrative commuter expansion based on new rail links to London at the expense, and against wishes of the existing communities.

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. We are 100% against these proposals, but as local residents the Council just expects us to put up and shut up! It is vital that green open spaces are retained and protected, and that of the villages in the proposed development areas too. The opening of the Parkway Station has created an invitation for urban sprawl for London commuters, which will push the house prices up, preventing local families from staying in their home villages. The infrastructure would have to be improved ten fold, but the funding just isn't available with all the current Government cuts. Please listen to the people of this area not ignore their concerns. We live in a beautiful part of the country and want it to remain that way.

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. I object to policy PR1(a), 4,400 homes means at least 5,000 more cars. PR3 - remove Green Belt? You are saying the people that made the Green Belt were wrong? I don't think so, lets keep it! The road outside my house (Oxford Rd, Kidlington) is a permanent CAR PARK with traffic gridlock.

4027	Comments Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. Oxford's housing shortfall figures are based on unsound data. Who is set to benefit from the Northern Gateway business park? There is very low unemployment, so we do not need to bring in more jobs. Oxford City Council is bullying the rest of the county to give up our Green Belt. This is giving away our children's legacy to a few peoples greed. Developers only want to serve the profitable London commuter and Buy to Let markets. Again, greed of the few who are only on the planet for a brief time. This will add to the traffic chaos, pollution, loss of diverse and beautiful countryside. A massive and overwhelming housing development is unsustainable and unacceptable.

4031	Comments Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. I am not in favour of this development. I consider it to be unsound, not positively prepared, not justified and not effective, having seen the concrete deserts created in other parts of the country in the name of 'progress' and 'need'. What of the thousands of properties that lie empty left to rot? Old industrial sites? Brownfield sites? The Moors where I live is already a rat run. There are three homes for the elderly, each with insufficient parking. So the road outside each is a 'car park'. Another for dementia is in the final stages of construction, thus more traffic, more medics, more ambulances. Now the land behind the houses is to be built on. The infrastructure cannot take it. You are building to bring people to the area NOT for present need. What countryside will future children have? What will happen to the wild flora and fauna?

PR-C-1244	13/08/2017	Pascal	Godard		N
4039	Comments Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. Roads are already saturated, traffic, pollution, noise. The plan doesn't take into account these problems. If we really need more houses, these issues need solving first before adding even more. The concern is not preserving Green Belt just for pleasure, but to preserve the Green Belt and improve infrastructure. Making Oxford a place where people wish to live and work, and not to leave because of these issues being ignored in the first place. We need to create new Park & Rides with dedicated bus lanes all the way into the City Centre and safe cycle lanes suitable for children.

PR-C-1246	22/08/2017	Mr B E	Braleley		N
4047	Comments Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. In 1970 we moved to Benmead Rd, Kidlington. It was an ideal situation with all amenities close by, good bus service into Oxford and countryside a short walk away. I am still here and presently so are many of the aforementioned advantages, despite the enormous developments in and around Kidlington during the intervening years. Development has reached saturation point, with frequent congestion on the roads, waiting time to see one's doctor increasing etc. The provision of new housing on the proposed scale with all the extra need for services, power, water, transport etc. can't possibly take place without encroaching on Green Belt land. This is unacceptable. The character of Kidlington and surrounding areas will be changed beyond recognition. I herewith submit my objection to the current proposals.

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. The object of a councillor is to serve the public who elected them and carry out their wishes. The building of these houses will cause more traffic chaos, overcrowded schools, and be even harder to get a GP appointment. I've no doubt most of these houses will be unaffordable to the general public. As for building on the Green Belt - absolutely unthinkable. What consideration is given to those of us who enjoy walking in the countryside? Leave Oxford to sort out their own problems. Leave Kidlington, Begbroke and Yarnton alone. Cherwell District Council, listen to those who elected you!

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. Once it took me 1.5 hours to travel from Kidlington to Cowley Road. Taking 45 minutes alone to reach Jordan Hill. The housing development will increase traffic congestion. It is already difficult to time a journey into Oxford. It's unpredictable depending on traffic congestion. The 'improvements' to the Cutteslowe and Wolvercote roundabouts haven't improved traffic flow. If there were around 8,000 more cars travelling our roads, it would become gridlocked. We would need more shops, more GP Surgeries and more schools. We would just become an extension of Oxford and lose our own village identities. We need to retain Green Belt areas to protect wildlife and conserve animals, plants and insects in the area.

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. Green Belt development is wrong. Local habitats, walks and views will be destroyed. They promote the wellbeing of local people, keeping them fit and active, in turn reducing the pressures on the NHS. They must be preserved for future generations. It's a human right to expect to live within in a pleasant green environment. Building this amount of new housing will have a huge impact on traffic problems in North Oxford and the A40, which is already under strain. Public services and infrastructure is unable to cope competently already, impacting the need to get to work, hospital or GP appointment in a reasonable time. Schools are already full. Cherwell is already prone to flooding. Concreting more of the countryside will make things worse. Green Belt is sacrosanct. That's Government Policy.

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. How has the figure of 4400 homes been reached? It's not sustainable in this already overcrowded area. The Green Belt must be kept and not used for building land. Our services are under strain. GP surgeries, hospital and schools all underfunded and stretched to breaking point. As are our roads. How will our water supplies cope if we have a dry spell? We will lose the natural flood plain surrounding us and consequently suffer more flooding. This is ill thought out and the number of houses planned appears to be unjustified. How many houses will be affordable? Where are the jobs for so many people?

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. I object to the proposed submission plan. Where are the people supposed to go? We can't get on the roundabout at the moment. The traffic situation in Kidlington is horrendous. There are no shopping facilities. Three supermarkets covering the current population are stretched. Parking will be squeezed, access to the rail station will be compromised. The Green Belt, wild life and local church graveyards should be protected from building. The Green Belt is an area of outstanding beauty, used by walkers, dog walkers, children and bringing in visitors. There are more rural areas that could be used, rather than putting pressure on a squeezed community, increasing traffic and pollution and impacting health establishments. Strongly objects.

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. The infrastructure in an around Kidlington & Gosford is already insufficient for local needs. Currently the wait for a GP appointment is 1 month! In the morning I can hardly move from my home due to traffic, worsened when the overburdened schools are open. At this time people frequently drive on the path along Lower Cromwell Way. I can see no concrete plan to address the current problems, let alone plan for a further expansion. The Green Belt allows Kidlington/Gosford and other areas to remain distinct from the ever burgeoning Oxford metropolis. These plans go against the National Planning Policy Framework dated 27th March 2012.

I consider that the proposed submission plan is unsound, not positively prepared, not justified & not effective for the reasons given; Oxford just wants to take over Kidlington to house its own people with no care given to existing residents. We prefer our own Cherwell Council. The last MP gave no attention to us or any mention in her literature. GP facilities are already overwhelmed. Already, Kidlington's main road has 5 sets of traffic lights & 4 pedestrian crossings within a few hundred yards & often traffic & buses are at standstill. This will only get worse & send more traffic onto side roads trying to get through. The A34 is often at a standstill & very prone to accidents due to frustration with the gridlocked road. More cars. Cycling is not a safe alternative. The roads are too narrow to cope.

It is unfair to take GB away from Cherwell to cater for the overspill from Oxford City. It would appear to be of no benefit to Cherwell's waiting list, who are themselves desperate for affordable homes. I have lived in the area for over forty years and in that time seen local young families driven out and housing taken over by incomers. We need houses for our local families that are affordable. Houses here are comparable to London prices, but wages are much lower. Transport links are already awful. The A44, A34 and A4260 into Oxford are usually almost gridlocked at rush hours. Streets are congested by commuter parking as they are unwilling to pay parking fees. Look by any bus stop and the adjoining roads will have cars parked close by, leading to congestion. Compared to London Oxon has very few parks and green spaces, so to take away any more GB would be madness. What about the pollution caused by more traffic? There are a 100 reasons not to go ahead with this.

Oxford chooses to use land within the city for business developments. Why expect Cherwell to provide land for housing the people wo come to work in them? - The GB was created to prevent urban sprawl and keep the character of distinct communities. - Schools, GP practices and other public services are already struggling and could not cope with extra burdens. - Roads through Kidlington and Gosford are already congested, especially at peak times. Air pollution and noise will increase. The premise that half of these houses would be affordable is nonsensical. Most will be bought by London commuters, not our young people and key workers who cannot afford to buy homes near work. - We need green spaces for recreation. The areas where building is proposed provide walkers and residents with welcome relief in a mostly built-up area.

The traffic proposals are ridiculous. Kidlington is already a giant traffic jam at peak times. The proposals seem to be put in more bus lanes, in other words, anyone driving can sit in even longer queues so long as Oxford's poor professionals can zoom through. Oxford has long had it's eye on Kidlington as creating cash - all that extra council tax and no intention of any benefits to us. We are a nice area with no real no-go deprived areas which need additional funds. The infrastructure cannot cope already and no solutions are presented. How are these extra houses going to be "affordable" when Kidlington house prices are so high. No building company is going to sell at less than market value. There is no guarantee that Kidlington residents will be given first choice of the "affordable" housing. Oxford "identified" the problem. Let them solve it. Stop building student accommodation or let their "professionals" buy them. All the benefits will go to Oxford and Kidlington will be destroyed as a community to become a satellite to Oxford.

We are very concerned by the proposal local plan as we believe it will have detrimental effects on the villages of Kidlington and Yarnton. We do not believe it will benefit local residents or Oxford in any way. The proposal for additional housing around the Oxford Parkway station will not benefit Oxford. The London commuter, "buy-to-Let", markets are already moving in to take advantage of the station. Additional homes in the area will exacerbate the problem. The additional traffic onto the Oxford Road in the vicinity of the station will add to our already very poor traffic situation in the area. The commuter traffic in Kidlington is already unbearable. This will add to local frustration, increasing noise and air pollution, and further reducing the quality of life for local residents. The local areas infrastructure, roads, cycle and tow paths, schools, doctors, etc., all need to be significantly improved before the proposed developments take place not afterwards. The developers do not have local residents or Oxford's interests in mind, generally just short term profits! We do not believe the proposed local plan is a sustainable solution as it appears not to address the local infrastructure issues. It does not provide a coherent plan for the area and it does not justify building on the GB. We hope that you will reject this plan and protect our local interests.

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. I agree with all the objections above. Kidlington should be left as it is, a 'large village', not become part of Oxford. Underfunded public services are struggling and will deteriorate further. Waiting time to see a GP will be even longer if plans go ahead. I fear for my children and grandchildren who live in Kidlington. There will be a 'traffic gridlock' as there seems no plans to improve local road networks. Air pollution will be worse as more houses will mean more traffic. Closing Sandy Lane would also be a disaster.

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. While SOME expansion would be acceptable it is not appropriate to plan to build 4400 houses in Kidlington, particularly at the cost of Green Belt. There is no adequate justification for the destruction of Green Belt. Oxford should look within its boundaries and not destroy the small amount of open ground between Oxford and Kidlington. The infrastructure cannot cope with that number of additional dwellings. The schools the roads, the facilities and amenities in the area to say nothing of the GP Practices! Listen to what the people who LIVE in Kidlington are saying and scale down the proposed developments. You are elected by the people to represent the people, not the developers and certainly to Oxford City Council. So do the right thing & represent our views!

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. If the additional homes are required by Oxford, is Oxford going to provide the funding for the additional infrastructure? I would expect any homes built near the Kidlington Railway Station to fetch a top rate selling price so how are the needy going to afford them? The additional traffic is going to be too much for the road to cater for. The trees and wildlife around Kidlington will suffer.

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. We must keep our Green Belt, which is designed to prevent urban sprawl. The proposed development around the new railway station will feed the high end of the market and will do little to address the housing crisis, or affordable housing - ref PR4a, PR7b, PR7a, PR6a, PR6b, PR6c. Have transport and other infrastructure projects been costed? Will Oxford pay for these? What about our wildlife? The proposals will harm habitats, flora and fauna irreparably. Will CDC & Oxford City Council ignore butterflies, lizards, snakes, great crested newts, wild flowers & deer, in breach of regulations? The Green Belt is important and irreplaceable environmental resource that helps promote locally grown food, supports wildlife and provides much loved breathing space. Villages want to keep their identity, but it seems local people are allowed little input.

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. There is a problem with Thames Water telling everyone in Kidlington to save water at the moment. Also the sewage drains are at capacity. Where will all the extra produced by new houses go? No thought to extra traffic produced as the infrastructure has to be bid for. What happens if the money does not get allocated after the development has been built? Could the open spaces within Oxford ring road be used instead of Green Belt e.g. from Wood Farm to Marston? This development by Oxford is unacceptable. Oxfordshire County Council and Oxford City Council should be looking for capacity in Oxford. Once Green Belt has been built on and a precedence started, nothing will stop the developers. Making this area an urban sprawl, the promise of social housing is only a rouse as has been proved in other areas of the country. Cherwell District Council are being held to account over this, apparently thinking that they can do as they want. Hence how they gave so little time initially to allow people to comment on the plans. Please take notice of local opinions!

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. I consider that the proposed submission plan is unsound, not positively prepared, not justified and not effective for the reasons given ; Our Green Belt and villages within them, so close to Oxford City must be protected from the proposed damaging major housing development for health reasons. This is to mitigate the effects of increasing harmful pollution levels and deteriorating air quality on the people that live in the villages, especially along the main arterial roads. My family and I have lived in Kidlington since 1981 and we have witnessed a dramatic increase in traffic volume and pollution in recent years. This is especially noticeable at peak times when the A34 and A40 roads are increasingly impassable due to high traffic levels and frequent accidents, resulting in locally clogged village roads. Our already congested and often gridlocked arterial roads through the villages of Kidlington, Yarnton and Begbroke cannot accommodate a further influx of high traffic volumes that a housing developments of 4400 homes would create. Our bus services are already under severe strain at peak times. Cherwell District Council has made no plans to improve the affected local road network, or a sustainable new infrastructure for further generations.

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. We would be losing Green Belt areas put in place to provide open spaces between built up areas for everybody's enjoyment. By joining together Kidlington, Yarnton and Begbroke with Oxford would make one massive urban development and these villages would lose their individual identities. Villages such as these make up the whole essence of the British way of life. Smaller developments, retaining Green Belt would be far more considerate.

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. I agree with the above objections the green Belt was introduced to stop urban sprawl. The infrastructure will not support the additional population and the main roads are a frustrating nightmare on Pear Tree. Kidlington is too big for a village and should be a town. This would stop Oxford trying to swallow it up and becoming another Cowley of Iffley. Shame on you Cherwell Councillors, you should look after Cherwell's interests, not bow down to Oxford.

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. I object to our area having to give up its Green Belt in order to solve the housing problems of Oxford. Particularly as the city has used land for Business Parks rather than housing. Public Services and roads in our area would be overwhelmed. I particularly object to the proposed closure of Sandy lane as this is our access to Yarnton Nurseries which is well loved and very well used.

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. I believe that the submission plan is neither justified or sustainable. Building on the Green Belt should never be agreed to. Oxford City is far too big as it is. We in Cherwell should not have to give way to this. The policy on infrastructure is not costed and the present highway network is already far too weak for the current housing. The public has not had enough time to object or agree to this. Once the Green Belt is built on it is lost forever, and all areas will be covered by ugly urban sprawl. We neither asked for, or agree to this. I consider the proposed submission plan is unsound, not positively prepared, not justified and not effective for the reasons given in my specific objections.

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. I wish to express my opposition to the proposed Cherwell Local Plan for the area including Yarnton, Begbroke and Kidlington. I would emphasise the areas which are designated "Green Belt" should not be desecrated by this development. The residents of this area will have their green lung permanently destroyed and the inheritance for future generations will be gone for ever. We have a right to breathe fresh air and should not have our environment, with the inevitable increase in traffic polluted by more and more vehicles. Furthermore we in Yarnton and Begbroke have been disadvantaged by the withdrawal of one of our regular Stagecoach buses from three to two per hour. We have no direct means of travelling to Kidlington via public transport and in the proposed plan it has been suggested that our direct route to Kidlington via Sandy Lane be closed to those who do have personal transport. The whole plan seems to have been conceived by a committee whose only interest is in financial gain for Cherwell with no consideration for the interests or well being of those who live there.

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. The roads in North Oxford cannot cope with the current volume of traffic even after all the roundabout improvements. Building new houses will bring even more traffic as it is not just one per household but often two or three. Politicians need to be much more imaginative than they are at present e.g. restricting the number of cars per household to one as in the Channel Islands, re-opening the Oxford-Witney-Fairford railway line with stations and car parks at Yarnton, Cassington, Eynsham and Witney, re-opening the Banbury-Kingham-Cheltenham railway line. In other words get the traffic off the roads before there is gridlock.

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. In addition to my wish to preserve some attractive Green Belt land, I have two concerns; 1. What provision will be made for the extra traffic which will result from the proposed development? Already the Kidlington roundabout is close to gridlock in the morning rush hour. Traffic lights at least will be needed there. Have you agreed this extra expense with OCC? 2. Part of the area which you propose to develop is low-lying and liable to flooding. What makes you think that people, especially those on lower incomes will be willing to buy houses in the new development if they cannot gain insurance, or if they can at an extortionate price?

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. I grew up in Oxford and return to visit friends and family. With each return I see a little less countryside and a little more congestion. Building on the Green Belt is not justified when so much Brown Field is available. The plan is unsustainable, urban sprawl must be contained. One day I hope to return to Oxford. However these plans are not positively prepared and side-line the quality of life of existing residents, so I feel less inclined to return. Arranging to meet people in Oxford becomes more difficult with congestion issues. Building on the Green Belt is not effective, showing short termism. We should be leading the way with innovative, forward thinking solutions not based on unsound plans & quotas. Please give the Green Belt and Oxford the space & respect it deserves.

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. I object to plan PR1(a) as being untenable and now redundant in the light of the national government's revised calculations of the number of houses needed in the local area from 100,000 to 68,000. Although not official policy yet I find it deplorable that CDC is rushing ahead with the plan in flagrant repudiation of proposed national government policy. The cumulative and substantial effect upon local villages along the A44 growth corridor from Oxford to Woodstock are obvious; traffic congestion, safety, noise, unhealthy air quality, overwhelmed infrastructure and degraded local environment. Also the destruction of the integrity and special historic character of the small town of Woodstock and its cultural heritage in the almost frenzied pursuit of local authorities hungry for more and more tax revenue.

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. We consider the proposed submission plan to build thousands of houses on the Green Belt in and around Oxford, unsound, not positively prepared, not justified and not effective. The proposal will impact on ourselves and the residents of North Oxfordshire & Oxford. It will raise pollution levels, our beloved countryside will disappear where people walk to relax and there are farms. It would be an atrocity to convert the golf course in North Oxford (the 1st and oldest course in Oxford) as it provides a space for young and old to exercise and socialise. Moving it elsewhere will require decades for trees to mature, and people will feel disengaged. The environment will be damaged by loss of habitat, deforestation, overpopulation and there will be an increase in CO2 due to an increase in vehicles. In turn this will cause a negative impact on health of us and future generations. Research indicates an increase in CO2 has a direct correlation with cancer, lung and neurological disorders. Quality of life will be impacted as traffic gridlock will occur on already overwhelmed roads, increasing noise and dust. Already strained local services like GP Surgeries, hospitals, schools, public transport will suffer. We all know the houses will be unaffordable for local people anyway, only benefitting profitable London commuters, Buy to Let and Foreign investors.

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. I agree with objections, PR1(a), PR3 and PR11 and to help save the Green Belt, the local countryside and our rural villages in Cherwell and Oxford's unmet housing needs. I support the stance CPRE Oxfordshire have taken that the city could meet most, if not all of it's housing needs within its own boundaries by prioritising land for housing and making sure houses are genuinely affordable homes that people are hoping for. This could be achieved by making better use of brownfield sites and taking a step increase in density targets. Extra housing would require extra transport requirements, but there appears to be no proposals to cope with increased traffic and congestion. Plans should be put on hold until this is addressed. Also Sandy Lane should be improved, not closed to vehicles. I believe CDC can do better with regard to building the required houses without concreting very the Green Belt we require for future generations.

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. I have moved from a very rural area to Kidlington over 20 years ago. I was delighted that I don't have to walk far to find countryside and wildlife despite Kidlington's size and proximity to Oxford. My partner and I visit the fields under threat with a bat detector. As a birdwatcher I've heard many different species. Obesity is increasing and Public Health England are encouraging people to walk more, but you will be taking away easily accessible local walks, the lungs of the area. Residents will have to use their cars to go elsewhere, or walk on polluted concrete pavement. Once the land is built and under concrete it will be lost forever to future generations. Please do not go ahead but think of the environmental damage and loss.

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. I'm dismayed by the proposal to build 4000+ homes in and around Kidlington on effectively virgin farm land/green belt. Kidlington has thus far preserved its distinct identity rather than being an extension of Oxford. The proposal will double our population, merging us with Begbroke and Yarnton, whilst robbing them of their separate entities. I understand the need for new homes but this is an ill judged plan to deal with Oxford's housing issues by dumping its problems on its neighbours. No attempt has been made to consider the transport and infrastructure requirements for the 4000 new homes. Kidlington's roads are near gridlock at peak times and GP surgeries oversubscribed. A letter to the Oxford Mail summed up the prevailing attitude by suggesting Oxford's Housing needs could be solved by "building on land near the airport". Presumably justified on the basis that Kidlington's residents are too ill informed to object and thus deserving of their environment being blighted by a massive overspill building scheme. I reject CDC's proposals, an example of unabashed urban sprawl. We deserve better.

4314	Comments							
Objects to the proposal of 2480 dwellings & other developments in Yarnton & Begbroke. Unsound for the following reasons: The proposals far exceeds the existing house numbers for Yarnton (approx. 1100) & Begbroke (approx. 350); It will overwhelm the local sewerage system which is already problematic since Pixey & Creswell Closes' were built; There will be a huge effect on drainage of rain; Extra traffic will be created on already saturated A44 (both ways). This will not be mitigated by a limited length bus lane (for which funding is not seen as available). This may only encourage routing via the A44, further reducing access already affected by a reduced S3 service from 3 to just 2 per hour in favour of yet another bus running through Kidlington. There is no need for a railway station at Sandy Lane crossing. The route along Sandy Lane is the main access to Kidlington from Yarnton for shops, dentist, library, sports centre banks & local council office. Any action to close this route to motor vehicles will result in additional car miles & pollution. The proposal will have a detrimental effect on local wildlife as we have deer, foxes, badgers, hedgehogs that roam around our open fields as well as plentiful open space for insects & other wildlife.

Proposed Submission Plan - General Comments

PR-C-1324	10/10/2017	Maureen	Haile					N
4343	<p>Comments</p> <p>Object to plans to build on GB because; It is premature. Oxford City has not yet produced its local plan, thus it's unmet housing need is unknown. The Governments methodology for calculating this indicates they've overestimated. No strong exceptional circumstance case for GB release has been made. It goes against NPPF policies to keep it permanent. Other non GB sites in Cherwell could be used. The Kidlington Gap (PR6a & PR6b) should be protected to prevent urban sprawl and village identities. The Golf course is a valuable recreational amenity that can't be moved. Object to transport strategy because; Most improvements are un-funded. Railway proposal is unrealistic. Unreal expectations for people to journey on foot, bicycle & bus. No demonstrations of air quality improvement, Oxford being an Air Quality Management Area, especially plans PR6a & PR6B adding to more cars onto the A4165. Does not take into account house building in the pipeline. How will building in PR6a & PR6b be affordable homes? London commuters will buy them. Schools, GP's, Hospitals etc. are already pressurised. Cutteslowe Park is not given sufficient protection.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>

4399	Comments							
I plead for you to not support the plan to build in the surrounds of Begbroke, Yarnton, Kidlington, Woodstock East Field, Oxford Airport, Langford Lane and the A4095. It would mean the whole area along the A44 will become an Oxford City suburb. It would join up Woodstock, Begbroke, Yarnton & Kidlington. Villages will lose individual identities & boundaries. The 'green lung' must be maintained. The diverse wildlife would lose their habitat and disappear. This arable land shouldn't be lost to housing estates. Woodstock residents lost the fight for 'Woodstock East'. We thought CDC did not wish to develop their part of this area, but Oxford City's 'need' has forced you to re-submit plans. I accept there is a housing need for essential workers & young people. However Woodstock properties sell to in-comers as their prices are too high for locals. The Oxford Parkway has encouraged people close to London to move here, not helping local need. It's unfair of Oxford City to force other Oxfordshire councils to accept their shortfall in housing & social housing needs. Is this legally binding? It's their problem, they should solve it within their boundaries, or cut back their plans. I understand Oxford City has enough land to meet its need but prefers to retain this for business & more attractive development. The Colleges have too much power, expanding at an alarming rate. E.g. the old VW dealership, Iffley Rd, which could have been used for social/affordable housing, but well off Colleges have acquired it for student accommodation. The infrastructure along the A44 cannot cope with a huge influx. Traffic at peak times already a nightmare. More P & R's will not solve this. The proposed Airport P & R will bring in more vehicles from outlying areas causing traffic chaos for Woodstock, Bladon, the A44 & A4095. Schools & GP Surgeries area already oversubscribed. I know sites for these are suggested, but developers seem to build, then run out of money to provide extra facilities, despite being part of the original planning consent. I understand that Blenheim & the Colleges who own this land will make a huge profit. I know you have put in a lot of thought to this plan, forced on you by Oxford City, but please join with WODC to fight this urban expansion. The economy after Brexit is unpredictable, Oxford City's plans may be over optimistic. Much of the housing may not be necessary.

Object to the housing plan on GB surrounding Yarnton & Begbroke. I understand to relieve Oxford City Council from building in the City due to having no space. Ariel views show the City has huge brown & green field sites for housing. I understand a majority of GB in question is owned by Oxford University & Colleges. They also own land within the City, presumably more precious. My family have resided in Yarnton since the late 1800's. Understandably villages grow. Yarnton has quadrupled in 40 years. The Cresswell Estate addition has negatively changed the village. The plans would join Yarnton, Begbroke & Kidlington into a town. Add this to the proposed Northern Gateway & Drinkwater Farm, we would then be in the City. At Begbroke Science Park Soirees, attended by myself, Prof Peter Dobson assured the community any future development would be within the existing tree lined perimeter of the site.

5084	Comments							
There is a significant bat colony (existing for over 35 years) behind bungalows in Rutten Lane, Yarnton. Already a great amount of wildlife has been lost due to the building of a 168 residence block in Yarnton. Pleads for no more losses.

4421	Comments							
Dismayed at the plan to build 4,400 houses in Kidlington/Begbroke/Yarnton because Oxford City couldn't accommodate the required number allocated to them. The long queues of traffic on the A44 will become worse and Kidlington is the only other route into Oxford on this side of the city. It is already full to capacity and traffic joining and leaving these two main roads are sure to cause more accidents. How can Sandy Lane be closed when it is the only access to Kidlington from Yarnton and Begbroke. It would mean a 2 or 3 mile diversion either to Langford Lane or Pear Tree Roundabout. It will destroy the GB and make this part of Oxfordshire a desert, and the high density development will leave children without space to play. There are many other reasons this seems to be a plan without consideration for people actually living in the area, and a little more consideration of the actual outcome and feasibility of the plans is needed.

PR-C-1353	09/10/2017	Mrs Valerie	Green					
4422	Comments							
Object to the proposal to build 2,480 houses on the perimeter of Oxford (between Yarnton and Begbroke). It will destroy the beautiful GB, endanger wildlife and make life unbearable for everyone. How long will it take to drive into Oxford at peak time when there are another 2,000+ cars on the A44? The infrastructure will not take it and cannot be sorted out satisfactorily. This is a very ill-advised project.

PR-C-1354	09/10/2017	V N	Smith					
4423	Comments							
Strongly object to the proposal for Oxford City overspill until certain problems are resolved. The infrastructure is already clearly inadequate and especially with regard to highways and hospitals. It is wrong to provide housing for people who work in Oxford yet insist that Cherwell residents travel to Oxford for hospital treatment. If the reduction in patient care at the Horton Hospital is not reversed no houses should be built for Oxford City.

PR-C-1355	09/10/2017	Mrs Marion	Jones				N	Y
4424	Comments							
Strongly oppose the proposal to build 4,400 houses on the GB land around Begbroke, Yarnton and Kidlington. It is likely that the development will exacerbate the existing flooding problems and the increase in traffic will severely affect road congestion and pollution levels; Turnpike and Pear Tree roundabouts already become gridlocked during rush hour. A large part of the GB land under threat is agricultural and other areas have well defined footpaths for recreational purposes. There will be the loss of valuable habitats for many endangered species of wildlife such as the Barn Owl. I would like the Begbroke & Yarnton Greenbelt Campaign to act as my representative during the examination by the Planning Inspector.

PR-C-1361	09/10/2017	Mrs Lorna	Logan						
5089	Comments								
Knows this area very well. Was born at Linkside Ave by N Oxford Golf Course (NOGC). Can see from walking the footpaths around there that plans already assume building on NOGC. The access from Linkside has been in place for years. The footbridge over the railway links the Northern Gateway with the park leading to Parkway / Water Eaton. This suggests pre-planned estates of premium housing which will be occupied by London commuters of means. This will not relieve Oxford's housing needs. Already local housing prices have risen. Who stands to gain? The landowners - mostly colleges! You are unaware of the value of this land for walking / recreation - I am. Objects to loss of GB.

PR-C-1366	09/10/2017	Dr & Mrs Charles	Steiner						
4442	Comments								
No consideration to the generation of extra traffic. Present congestion & pollution are already severe. Cutteslowe Park is enjoyed by many with its 'open rural views', could you not use Oxford's Brownfield sites? Local Authorities must define boundaries as per Para 85 of NPPF. This is not the case East of A4165 (Oxford Rd), giving no eastern boundary. The result being unrestricted urban sprawl, going against GB's purpose. Will there be low cost housing? Or will the majority go to London commuters, instead of Oxfords low paid workers, so in need.

PR-C-1367	09/10/2017	Mr Neil	Bennett						
4443	Comments								
Saddened that you think building on GB is acceptable, I'm heavy hearted regarding building 4,400 houses around Yarnton & Begbroke. Oxfords unmet housing needs; the number of houses required is overestimated, and calculated on businesses yet to locate to Oxford. Oxford City must have brownfield, derelict & vacant owned properties it could use. The City has much better road links & infrastructure to cater for more homes. Green Belt; CDC graded it as such recently. Sites along the M40 would be more suitable, creating a whole new community rather than 'swamping' existing communities. The recreational GB land, used by many locals offers peaceful ambience, differentiating each village. The proposal would make us part of Oxford. New houses would outnumber those existing. Yarnton has already suffered from this. More concrete would create greater flooding than already occurs, causing more disruption. Once GB has gone, it cant be recovered. Density; Everyone will be living in each others pockets. 'Affordable Housing' (20% off asking price) is not affordable for local people. I fear there will be more luxury 3-4-5 bed houses. These are not suitable for the needy younger generation. A scheme for capped prices should be made. The houses will instead go to well off London commuters and Buy to Let, increasing house prices even more. Transport; The current roads are already congested. New homes will have 2+ cars, swamping them further. Bus lanes will be hard to implement with all the bottleneck areas. Thus P & R not feasible either. Closing Sandy Lane is preposterous, making further congestion on alternative routes. Employment; I believe the figure over-estimated. Another Science park in Langford Lane will increase traffic, & units will remain empty. Buildings should be put near the M40. I am being pushed out of village life, and don't want to be a town.

4461	Comments								
Lifelong residents of the area and recognise the need for homes but they should be built in the right place for everyone's quality of life. Traffic has reached saturation point at many times of the day, stretching from the of the A34 at Kidlington and reaching to the Banbury roundabout and beyond. The plans show no access or exit roads or any provision for the extra traffic. Surely this should be of major concern before considering further housing in the area. Not NIMBYs and recognise the need for homes but they should be built in the right place for everyone's quality of life.

PR-C-1376	10/10/2017	Fay	Curtis						N
4465	Comments								
Urban sprawl - the area will become a vast urban sprawl encompassing Kidlington, north Oxford and, Cutteslowe, Wolvercote, Begbroke and Yarnton, and quality of life will suffer from increased air, noise and light pollution. Very few of the houses would be 'affordable' in reality; developers regularly default on affordable housing quotas and predicted prices at Barton Park are already beyond the reach of first-time buyers. Most of the new houses are likely to serve London-commuter and buy-to-let markets, and our young people and key workers won't get the truly affordable housing they need. Underfunded public services will deteriorate further, traffic congestion and air pollution will worsen due to increase in vehicles, already in addition to the extra traffic from the 22,000 houses approved elsewhere in District, and over 10,000 to be built in other Districts for the Oxford overspill. The roads cannot cope now e.g. A44 Yarnton.

The council appears to have accepted Oxford City housing needs based on growth proposals and calculations put forward by the LEP, Oxford Growth Board and other groups which are out of date (particularly post-Brexit) and subject to revised housing number calculations currently part of a Government consultation. The plan appears to be hasty, haphazard and lacking careful consideration for the GB and those impacted by the plan. It lacks convincing argument that all other options have been explored and eliminated and lacks respect for the Council's responsibility to uphold its own policies. GB is recognised as restricting sprawl of built-up areas, preventing towns merging, safeguarding countryside, preserving historic towns and assisting in urban regeneration through he recycling of derelict and other urban land. The proposals will create urban sprawl extending almost continuously for 8 miles from the centre of Oxford to the edge of Woodstock. The original Cherwell Local Plan 2011-2031 (Part 1) classifies Yarnton and Begbroke as Category A, and Cherwell District Council policy allows only minor development.

Changes Sought

The plan cannot be changed to make it legally compliant or sound and should therefore not be submitted for inspection.

Reasons for Participation

Would like to be represented by Begbroke and Yarnton Green Belt Campaign

The Oxfordshire Infrastructure Strategy Stage One Report in turn refers to the Thames Water report 'Taking Care of Water: The Next 25 Years' where concerns are raised about infrastructure capacity. In the light of this report it would seem that any additional significant demand placed on these facilities is likely to tip the balance unless additional investment is made in advance.

Changes Sought

Reasons for Participation

To have an opportunity to make a personal representation at the appropriate time and when further information is available about the scale of response to these plans. There will likely be many changes in circumstances between the submission of representations and the consideration of the outcome. I would like to be able to add additional relevant information at that time if appropriate. Also as Green Party Parliamentary candidate for many parts of the area under consideration I feel I should be able to give voice to the views of the Green Party supporters and voters when the time comes

There is very little direct evidence offered within the proposal document aside from oblique references to supporting studies, a number of which also contain data that directly contradicts the assumptions underpinning the review. There is a clear practice of 'cherry-picking' and reliance on half truths. In other areas of the proposal document there are outright contradictions with its own position. (Policy PR3) states one of the aims of the review is to "exceptionally allow for development in the Green Belt having considered all other reasonable options and the vision and objectives we need to achieve" Yet there are numerous references throughout the review document justifying the proposals by virtue of them not 'undermining' the original local plan submitted by the council in 2015. This hardly confirms that all other options have been properly considered. This theme is repeated throughout the document and seems to equate the principles of review with the action of 'undermining' previous plans and proposals. This hardly sets the scene for a genuine intention to leave no stone unturned when looking at ways of finding additional capacity. The original plans are treated as a 'sacred cow' that should not be altered in any way. This is repeatedly referred to in the document as a positive asset. In that sense it self-evidently does not represent a review at all. The proposals contained within are simply being 'bolted on' the original plans in order to prevent any need to actually look at them again. This is disingenuous, not only with respect to the Council's responsibility and agreement with the planning inspectorate to review their original proposals latter 2 years, but also to the people that Cherwell District Council (CDC) represents. The second thread is one of 'greenwashing' whereby spurious claims are made for the environmental benefits of destroying large areas of greenbelt. These include nebulous paragraphs suggesting 'green infrastructure' gains as well as ludicrous claims for increases in biodiversity, wildlife habitat, access to recreation, reductions in pollution and improvements in air quality. All of these aspirations are of course laudable, but few, if any, of them have any basis in fact. Neither is any direct evidence given of the realistic availability of these aims. They simply pepper the proposals in an obvious attempt to obfuscate the significant environmental damage that they represent. It is apparent from specific errors in geography displayed in these proposals that the planners involved have little knowledge of the boundaries and local landscape involved. However the penultimate paragraph in the executive summary seems to suggest that the architects of these proposals aren't even confident themselves that they can be achieved, allowing for the option of reversing the proposals if this proves to be the case. Another issue that needs to be examined is the true ability of Oxford City to meet its own housing requirements. Claims of being 'full up' seem to evaporate very easily when a new business or university development is proposed. Economic growth seems to trump the need for houses at every turn which brings into question exactly why Oxford's housing needs are not being met. Perhaps if they prioritised housing projects over business and science parks, such as the much lauded Northern Gateway plans, they might have more scope to deal with their lack of affordable homes. All the time they use up brownfield sites for new economic developments, they are not only removing that land from a pool that could be used for housing, they are further exacerbating the lack of living space for yet more workers that they are seeking to attract with further business opportunities. No account is taken of the potential impact of Brexit. This is something I would wholeheartedly agree with. The figures being used now to justify an unmet need in Oxford are very liable to change, and considering new evidence that has recently come to light, it's highly likely that these figures will be revised downwards, perhaps making this review redundant. There have already been calls from the local MP Layla Moran to halt this consultation pending further research and analysis on the exact position regarding Oxford's unmet housing need in the light of both new government statistics and the impact of Brexit. This would seem like a very sensible move which I would wholeheartedly endorse but something that has so far been resisted by the executive members of Cherwell District Council who seem more keen to demonstrate co-operation with dubious claims from Oxford city, the Local Enterprise Partnership, Oxford University and the Oxfordshire Growth Board than they do to show loyalty to the local electorate that voted for them to represent their interests. The ease with which CDC has capitulated to these demands would seem to suggest other matters take priority over their responsibility to their wards. It seems that most of them would rather have an easy life than oppose plans that would be potentially damaging to the areas they represent. It's also clear from public statements made by the leader of the council that they regard this matter as a 'done deal'."

Infrastructure Delivery
 We welcome the commitment to a collaborative approach between Cherwell District Council, Oxford City Council and other partners to identify infrastructure needs. We would expect to be included in this approach throughout the planning process.
 We welcome the improvement of sustainable transport links along a number of corridors and consider them essential to minimise the additional trips that will affect the SRN, especially at the A34/A44 Peartree roundabout. It is requested that the impact of these proposals upon the operation of the SRN be assessed.
 It is unclear at this stage what the cost of the transport infrastructure required to support the proposed PR development is likely to be. Furthermore, it is also unclear whether further funding (in addition to developer contributions, i.e. through local or central government etc.) would be required to fully provide the infrastructure required. We request that further clarity is provided on this.
 The Oxfordshire Infrastructure Schedule and Transport Assessment associated with the PR categorises infrastructure schemes in order to prioritise funding going forward, with the understanding that not all identified schemes are likely to go forward. It is unclear at this stage whether that potential shortfall relates to any of the schemes identified to support the PR development. It is therefore unknown if the impact of the additional development proposed through the PR would be fully mitigated and also whether there could be a residual adverse impact to the operation of the SRN. We request that clarification of this point is provided.
 Notwithstanding our comments above relating to infrastructure, there is also the issue of DfT's strategic study into the Oxford to Cambridge expressway (OxCam). It is reasonable to assume that if the case for the expressway were successful and a scheme duly delivered the current A34 corridor (be it either upgraded or supplemented/replaced by a new corridor) would more than likely be able to cope with the growth associated with the PR. However, the status of this study is such that no reliance can be placed on it with regard to the PR, either in relation to its timing, alignment or design. To this end the PR needs to strongly emphasise the challenges in relation to the A34 corridor of delivering the government's ambitions for substantial growth.

Transport Modelling: We have considered the potential impact of the proposed development locations on the SRN junctions in the local vicinity, using high level outputs from the Oxford Strategic Model's Refined Development scenario. With the enhanced transport improvement package, modelling shows that the links on the A44 corridor appear to be approaching or over-capacity in 2031 for both morning and evening peak hours, while some junctions along these corridors are predicted to be experiencing delay. It is unclear whether the model was used to identify the proposed mitigation measures to support the additional housing development set out in the PR or whether these were taken from other sources and adopted in the model as a 'given' and it is requested that clarification is provided on this. We understand that two packages of strategic off-site transport improvements were tested in relation to the proposed development using the OSM. Highways England consider that there is a lack of clarity regarding the schemes included within these model runs (including those discussed in the PR such as a new rail station at Yarnton/Kidlington, the conversion of the A34/A44 Peartree Junction to signal controlled, the severing of Sandy Lane, the A40/A44 link road and the mode shift to cycling). Further clarity is sought on details model infrastructure inputs in this regard. We note that following the implementation of PR development there are predicted to be capacity issues along the A34 and at M40 Junction 9. It is not fully clear whether or how the operation is predicted to worsen when compared to the Do Minimum scenario. It is requested that a more comprehensive set of outputs is provided to enable HE to assess the impact of the PR development on the SRN and to assess whether the proposed transport improvement measures sufficiently mitigate those impacts. Furthermore, we are unaware of any more detailed junction modelling that has been undertaken, making use of flow outputs from the OSM. In order to accurately determine the operation of SRN junctions (including the A34/A44 Peartree junction, other junctions on the A34, and M40 Junction 9) it is recommended that junction-specific models are used to assess the operation of the SRN both without development and with development and the proposed infrastructure measures. In connection with this, sensitivity testing should be carried out for scenarios in which the provision of infrastructure that would affect the SRN is/ is not included, for example the A40/A44 link road and the severance of Sandy Lane to motor vehicle traffic. Testing a scheme to convert the A34/A44 Peartree junction to traffic signal control should also be included, whether or not this forms part of the infrastructure to be provided, since it has been referred to in the TA as possible mitigation measure, unless it has been discounted.

Other Kidlington Sites - No objection to a small allocation in the 6.26 hectare site represented as 38A in the Green Belt study, Site 122 in the SA, and one part of HELAA 155. Reasoning for this is that it could be accessed directly from the Northern Gateway service area south of Peartree roundabout, and would have good access to the planned local shopping facilities that will form part of the Northern Gateway. Its proximity would encourage walking to work there, or accessing the Park & Ride bus for jobs in Oxford. It does not constitute a strategic part of the Green Belt in my view, and is protected by the Golf Club to the east. This site could also be part used to create additional playing fields, which would reduce the shortfall in Kidlington. No objection to part of the land east of the A4165 being used for playing fields. Also believes that the narrow strip of land north of The Moors in Kidlington should be reconsidered. It scores well (HELAA 152) where an allocation in the southern part of 180 is suggested. Though further away from Oxford, it has good access to premium bus services, and to Kidlington village centre so would also be of economic benefit to Kidlington. It is also close to Langford Lane employment sites.

Changes Sought

Add new policy to incorporate land north of The Moors as a standby site, allocation 180.

Reasons for Participation

Has spoken as a platform speaker at three public meetings in Kidlington and Gosford. Made a substantial representation at the Issues and Options stage. As a former parish councillor, has represented Kidlington Parish Council at the North Oxford Area Action Plan examination in public, and likewise was invited to the Examination in Public of the Local Plan. Has an MSc in Transport Planning, so part of representation covers that area. Also offers a distinctive perspective as a local resident, who agrees with the principle of a Green Belt review, but does not support the current planned site allocation. Has no interest in promoting a particular site, but only have some sympathy with those who would wish to preserve the Green Belt intact. Believe views represent many in Kidlington who recognise the need for local housing, but see these plans as strategically unacceptable. Representation contains primary research evidence which could be presented.

Site PR41 occupies the land the other side of Loop Farm, and shares the same advantages as the Frieze Farm site being close to the Peartree Park & Ride, within easy walking or cycling distance from the Northern Gateway site, and not close to a rail station that would jeopardise the ability to deliver genuinely affordable housing. There is a high quality bus service to the area, and to and from the nearby Peartree Park & Ride. This site operating in tandem with the Frieze farm site would require the need for the primary school I have proposed for the Frieze Farm site. The Green Belt Study (PR40) assesses this site as having high harm, and separates it into two parcels, and a total of 37.71 hectares. Most of the harm cited relates to the issue of integration with an existing settlement, the problem with the A34, and the harm to the canal side walk on the western boundaries. This site is highly likely to have a link road from the A40 to Loop Farm roundabout running right through the middle of it, which already introduces an urbanising feature, so it is, in my view easy to overstate the countryside location of this site, part of which also lies under the protective lee of the A34 flyover. My proposed use would be to use the link road as a spine road connecting to Loop farm, with development located primarily to the north and away from the canal side and screened from the noise of the A34. Not all of this site would need to be used. An allocation of 575 at 35dph would result in a land use of 16.42 hectares, and at 45dph the developed portion of land would be 12.78 ha. Either of these would allow for the creation of a generous buffer zone. A direct subway link could provide ready access to the Northern Gateway employment area, and this could form part of a green walkway.

Changes Sought

To develop 12.78 ha for 575 houses, to include access and Green walkway through to Northern Gateway, layout to link with proposed link road, extensive protection of canal side.

Objection to the procedure used by Cherwell District Council which has not fulfilled its obligations under section 3.2 of its Statement of Community Involvement, which states that the Council will 'provide the community with balanced, clear and easily understood objective information.' Detailed criticism of documents available and procedures relating to Executive hearing on 19 June 2017. The decision was taken to approve the draft over 2 months before the publication of the Housing and Economic Land Availability Assessment (HELAA) on 25 August 2017, and this has resulted in the extension of the consultation period. However, in my view that is not in itself procedurally acceptable. Councillors will not have had the opportunity to see this key document prior to their decision to submit the proposed submission plan. Neither is this assessment taken into account in the exhibition material that was taken to various locations in Cherwell. Incorporates a number of criticisms of the HELAA. Principally, the number of houses deemed acceptable for each site correlates suspiciously well with the Council's own housing allocations made and prepared for the submission stage and for the preparation of the public exhibition display. Considers that the HELAA was influenced by decisions that the Council had already made. Detailed criticism of the HELAA. Detailed criticism of summaries in previous consultation statement relating to the Options Paper (also see Appendix 1 of representation).

Not effective. Whilst there is no doubt that 4,000 houses could be delivered in the allocated locations, there is concern that in the case of the Kidlington gap locations in particular, the location close to Oxford Parkway Station would have the effect of raising prices such that the affordable housing would not be affordable, and for social landlords striving to purchase houses, the sums involved would be prohibitive, such that the target 50% would be unenforceable and ultimately most so-called affordable homes in this premium location would not be genuinely affordable, therefore excluding many, including key workers. Purchasers are far more likely to be rail users commuting to London (92.4% of rail users from the station are London bound). There is also disparity in destinations, as trains cross within 3 minutes of each other at Oxford Parkway. These have very little impact on the Oxford economy, and so fail to deal with the issue of meeting Oxford's unmet housing need.

Changes Sought

Reasons for Participation

Has spoken as a platform speaker at three public meetings in Kidlington and Gosford. Made a substantial representation at the Issues and Options stage. As a former parish councillor, has represented Kidlington Parish Council at the North Oxford Area Action Plan examination in public, and likewise was invited to the Examination in Public of the Local Plan. Has an MSc in Transport Planning, so part of representation covers that area. Also offers a distinctive perspective as a local resident, who agrees with the principle of a Green Belt review, but does not support the current planned site allocation. Has no interest in promoting a particular site, but only have some sympathy with those who would wish to preserve the Green Belt intact. Believe views represent many in Kidlington who recognise the need for local housing, but see these plans as strategically unacceptable. Representation contains primary research evidence which could be presented.

Transport. The proposals will have a major impact on transport with extra pressure being placed on already congested roads. The plans for new transport infrastructure deal with the existing needs and do not model the impact of the additional 4,400 houses. These plans will also cost millions of pounds and are currently unfunded. The Rapid Transit system (remember these are long buses, NOT TRAMS) will not pass through either Begbroke or Yarnton but will instead go from the new proposed Park & Ride site at Bladon roundabout to Kidlington along Langford Lane. Traffic that normally passes through Kidlington will be encouraged to use the A44. This means our villages will not be served by the Rapid Transit system and will suffer increased traffic, and that is before considering the new houses. There are hold-ups at the two Yarnton roundabouts during morning and evening times making travelling into Oxford and returning home horrendous. Any additional motors along this route will add to these existing problems. 4400 new houses in these modern time equates to at least 4400 additional cars being used for commuting, travel to the shops, Doctors, schools etc. which will in turn, affect any bus routes/movements. I have trouble daily getting from Cassington Road onto the A44 and have to arrange my travelling time accordingly now. There is insufficient money to mark the road lines or repair potholes and yet consideration is being given to adding more traffic to the already over-burdened roads. The proposal of shutting the road between Yarnton Roundabout and Kidlington (Sandy Lane) is ridiculous. This road is used daily by numerous people as an alternative to going along the A44 and over to the Sainsbury's roundabout (which is often very busy). It is the most direct route from Yarnton & Begbroke to the centre of Kidlington. The transport plans indicate that Sandy Lane will be closed to through traffic at the level crossing. Sandy Lane, by the admission of Oxfordshire County Council and Cherwell District Council, is a well used road. It provides a valuable link between our two villages and Kidlington. There is no public transport option planned to link these villages together with the only option being to travel further by car (which is already being discouraged) or walking or cycling. This is not an option for many people.

Exceptional circumstances. Importantly land can only be removed from the GB if exceptional circumstances can be demonstrated. None of the twelve points listed by Cherwell District Council in their Proposed Submission Plan constitute the 'exceptional circumstances' needed to remove land from the Oxford GB. Many of these points (such as the strengthening of Kidlington village) have no connection with meeting Oxford's unmet housing needs with these 4,440 houses. Others are spurious. When reviewing the twelve points, consider that these houses are to meet the 'unmet housing need of Oxford'. If this is correct, it is important to look at where the jobs are within Oxford. It is clearly stated within Cherwell's documents that the three major employment areas are focussed on the City Centre, Cowley to the South and Headington to the East. Cowley and Headington combined employ more people than the City Centre. It is also noteworthy that jobs are migrating AWAY from the City Centre to the eastern and southern fringes of the Oxford urban area. The representation lists Cherwell's twelve "exceptional circumstances" as listed in the Proposed Submission Plan commenting that these arguments reverse the Cherwell District Council's own stated policies on the protection of the GB, as well as failing to conform with national guidelines. Based on the above, Cherwell DC has not provided the "exceptional circumstances" needed for removing our GB land as it makes NO sense to locate Oxford's unmet housing needs to the north of the city when the major employment centres are in the east and south. These "exceptional Circumstances" will have a disastrous impact on Traffic movements.

Villages 1 and Villages 3. A small scale local review of the Green Belt boundary in the vicinity of Langford Lane, Kidlington and Begbroke Science Park will be undertaken as part of the Local Plan Part 2, in order to accommodate employment needs (see Policy Kidlington 1). Further small scale local review of the Green Belt boundary will only be undertaken where exceptional circumstances can be demonstrated." Other statements on the green belt included in the Cherwell Local Plan Pt 1 included: A11: "Development in the open countryside will be strictly controlled. In the south of the District, the Green Belt will be maintained, though a small scale local review of the Green Belt will be conducted to accommodate identified employment needs at Kidlington." B.260: "It is essential that the impact on the Green Belt is minimised, therefore priority will be given to locations that lie adjacent to existing development, avoid the coalescence of settlements, protect the vulnerable Kidlington Gap and otherwise have the least impact possible on the Green Belt." Cherwell District Planning Policy. Cherwell District Council have not considered their own policy on GB development. It is clear that comparison of Policy ESD 14 extracted from The Cherwell Local Plan 2011-2031, Part 1 adopted 20 July 2015 and these proposals are in direct contravention. In particular Yarnton and Begbroke are covered by "policy Villages 1" meaning only certain types of development can happen and is limited to, minor development, infilling and conversions. It is breath-taking reading the above when reviewing the proposals for the new houses on the green belt land around our villages. It is clear these proposals from Cherwell contravene their own Local Plan policy on the Green Belt. Policy ESD 14 also includes the five points on the purpose of the Green Belt as described in the National Planning Policy Framework. ESD stands for 'Ecological Sustainable Development'...

Impact on Begbroke and Yarnton. Increase in population. Yarnton is a village with a population of approximately 2,550 and Begbroke is a village with a population of approximately 780 based on the 2011 Census. There are approximately 1,350 houses in Yarnton and 390 houses in Begbroke. The proposals from CDC will be to build 2,480 new houses on the GB land that currently separates our two villages I DO NOT think that this development is appropriate, especially given its size compared to the current size of Yarnton and Begbroke villages.

Flooding in the area is an issue. There are pictures showing the impact to flooding on Yarnton and Begbroke village. If the fields are concreted over, where will the rain water that falls be absorbed? The areas on the edge of the site form part of the flood areas for the Oxford Canal and Rowell Brook. Removing important GB land will only exacerbate the risk and misery that flooding brings to families. Much of Yarnton village relies upon the operation of Sewage Pumps to get rid of foul wastage. There have been problems in the past due to the sewage pumps becoming inoperative, causing flooding of sewage. Have the new properties being envisaged been planned, so as not to add to these problems?

National Planning Policy. We should consider how the plans fit with the purposes of the GB as defined in the National Planning Policy Framework (NPPF). Five points from the NPPF and how they relate to proposals from Cherwell District Council are: 1. To check the unrestricted sprawl of large built-up areas - Relevance preventing Oxford City from expanding beyond its current boundaries and becoming an urban sprawl. 2. To prevent neighbouring towns merging into one another - Relevance the villages of Begbroke and Yarnton would be merged together and also with the village of Kidlington. 3. To assist in safeguarding the countryside from encroachment - Relevance the sites proposed are part of the countryside that currently surrounds our two villages and are high grade agricultural land that is also use for recreational purposes. 4. To preserve the setting and special character of historic towns - Relevance Yarnton and Begbroke have long histories and the proposals threaten their identities and history. 5. To assist in urban regeneration, by encouraging the recycling of derelict and other urban land - Relevance There are other sites within Cherwell and the neighbouring districts, including Oxford City, that could accommodate these new houses without needing to remove precious land from the GB. Once GB land is removed, it is lost forever. These plans contravene the purposes of the GB.

Housing Density. The housing density of the new developments will be 45 houses per hectare on the main site to the east of the A44. This is 50% higher than the density of the Cresswell Close/Pixey Close/Hay Day Close development in Yarnton a few years ago. Indeed, Cherwell stated when given planning permission that the number of houses on that site must be restricted to prevent over development. I do not understand why the Policy has changed. I DO NOT THINK that this is consistent with the existing community and think that this so called 'landmark development' will jar with the historic villages of Begbroke and Yarnton.

4515

Comments

Merging of villages. The proposed development is entirely on GB land and would result in there being only a narrow gap separating the villages of Yarnton and Begbroke. This new development crosses the parish boundaries and the physical gap between Begbroke and Yarnton will only be approximately 50 metres. There is also only a small gap between this enlarged development and Kidlington, meaning in effect that the three villages are merged into one large conurbation, with an estimated population of around 30,000. I DO NOT think it is right that the villages of Yarnton and Begbroke are merged together with Kidlington to form a single large conurbation.

Comments

We consider the plan to be unsound on the basis it is not positively prepared, justified, effective and consistent with National Policy. We urge the Council to review its spatial strategy with focus on its housing and infrastructure delivery strategies. A single comprehensive growth strategy should be adopted which addresses both Cherwell and Oxford City Councils' needs. It is A2D's position that: 1. NW Bicester can make a greater contribution to meeting housing needs, through a review of the Master Plan and improving the efficiency of the Master Plan. 2. The approach taken to meet the unmet needs in Cherwell should be consistent with the adopted spatial strategy, not contrary. 3. The Council has not discharged its duty to demonstrate exceptional circumstances to release the identified sites from the Green Belt pursuant to paragraph 82 of the NPPF. 4. There should be a single housing requirement for the Local Plan and five-year housing land supply.

Changes Sought

Reasons for Participation

Our objections in part relate to the proposed growth strategy to address Oxford City's unmet need, which we consider to be unsustainable and inconsistent with national policy. This is contrary to the adopted Growth Strategy set out in the Cherwell Local Plan 2011-2031 (Part 1), which focuses new development at key settlements, as identified in Cherwell's settlement hierarchy. The Council has not discharged its duty to demonstrate exceptional circumstances to release the identified sites from the Green Belt, pursuant to paragraph 82 of the National Planning Policy Framework. Further, there is insufficient evidence to suggest that opportunities to increase capacity at existing allocated housing sites have been robustly tested. Finally, there should be a single housing requirement for the Cherwell Local Plan. There is no justification for a separate figure to be applied to meet Oxford City's unmet need, as is currently proposed.

Comments

Fundamental objection is that Cherwell's proposals lack vision – they represent an admirable response to a very forceful case by Oxford City to make Cherwell accommodate Oxford's unmet housing need. But the benefits ('bog standard housing') do not justify the harm to the Green Belt and, as important, the harm to one of our nation's great cities as a result of not planning comprehensively for all of the city's needs, including the long-term needs of the University and nationally significant skills, innovation and R&D that are so attractive to globally significant inward investors. There are therefore both environmental and economic reasons why the draft plan needs to change. We would be delighted to be part of that reassessment. Expands on the specific representations to the Plan in Section 3 of the representation and provides 5 appendices in support of the representation:

Appendix 1: Draft Alan Baxter Master Plan

Appendix 2: The Oxfordshire Innovation Engine (SQW, 2013)

Appendix 3: LPP1 Topic Paper 6 on the Green Belt

Appendix 4: OXLEP Minutes of the Trip to Cambridge (22 September 2014)

Appendix 5: Master Plan Baseline

Changes Sought

We request that the following information is added to the Local Plan evidence base:

- The Oxfordshire Innovation Engine (SQW, 2013 and 2016)
- The original Alan Baxter Master Plan work from 2012/13, including the write up of the
- Stakeholder workshop (September 2013) and the report and plans presented to
- Kidlington Parish Council in Q1 2014.
- LPP1 Topic Paper 6 on the Green Belt

Reasons for Participation

We confirm that we wish to attend the examination in public.

Object to the development of North Oxford Golf Club. As a member for over 11 years, I have seen the course improve and the club attract a younger membership as well as maintaining the older members. It provides a regular form of exercise and meeting place for the older members, and as it's on a primary bus route, is easily accessible for juniors. North Oxford Golf Club has been on this site for 110 years and is the only green belt land that separates Kidlington and Oxford. It would be totally wrong to see so many trees, wildlife (including the rare great crested newt) and green space removed to provide houses for commuters to London to live in. This would not provide relief for any 'housing crisis' and would cause Banbury Road to become more of a carpark. The road cannot cope with the traffic in the mornings as it is. I cannot see the point in putting another golf course a few hundred yards away and uprooting such a great club with a history that North Oxford has. The Club is not only a members club but also has a large number of green fee players and golf societies and is open to all. On top of this there are a number of functions in the clubhouse throughout the year and hire by both members and non-members.

Comments

A summary of the most pertinent matters raised in the consultation response is provided below:

1. The site was previously considered a major developed site within the Green Belt under Planning Policy Guidance 2, 1995 and therefore should be considered a previously developed site in the Green Belt as described in the National Planning Policy Framework.
2. Shipton Quarry is an active mineral site with permitted after-uses that will result in a large part of the site being redeveloped regardless of the outcome of LP1 PR or GB designation. These uses include a concrete batching plant and asphalt coating plant. It is likely that residents of Shipton-on-Cherwell would prefer housing to such uses. Further detail of the planning history and current status of the site is provided on pages 4 to 6 of the consultation response enclosed.
3. The Planning Authority's evidence base gives significant weight to the ecological value of the quarry without justification. Any ecological value of the site must be considered in context of an active quarry. This is discussed in further detail on pages 18 and 19 of the consultation response enclosed.
4. The site is located on the boundary of the Green Belt and its redevelopment for housing would not impact on openness as demonstrated by the representative viewpoints included at Appendix 4 of the response.
5. As shown on the Illustrative Masterplan at Appendix 2 of the consultation response, an allocation in the LP1 PR would allow for:
 - Up to 1,000 homes within the quarry site;
 - The creation of over 28 hectares of land to be used for ecological enhancement
 - With public access and provide for flood alleviation along the River Cherwell;
 - Employment land;
 - Highway improvements (which already benefit from planning permission);
 - Site for park and ride facility;
 - Site for school should the need be identified (a government-owned property
 - Company, responsible for buying and developing school sites in England has
 - Already expressed interest in the site);
 - Playing fields;
 - A new rail station (at the location of the already approved railhead); and
 - Increased access to geological features on the site.

Changes Sought

Requests that CDC reconsider the exclusion of Shipton Quarry from the Local Plan Partial Review. Shipton Quarry offers an opportunity to provide a housing site which meets all the search requirements set out in the consultation phase of the local plan and therefore merits further consideration as an allocation in the Local Plan Partial Review. A number of key considerations have been overlooked or misinterpreted in the Sustainability Appraisal which was relied heavily upon by Cherwell District Council for site selection.

Reasons for Participation

As outlined, a number of inaccuracies relating to the site exist in the evidence base, that need to be addressed. Following a review of the evidence base and the scoring of the sites in the Sustainability Appraisal, it is considered that further assessment work is likely to result in the site receiving a more favourable outcome to the extent that it should be considered a potential strategic development site. Should Cherwell District Council disagree and continue to use the inaccurate evidence base to exclude the site then it considered necessary to participate in the Examination.

Government has demanded that Local Authorities should build more houses, especially so-called affordable homes. We now learn that the Government targets have been significantly reduced recently but no changes have been made to the proposals you put forward. Oxford is clearly a centre with high employment and is obviously a Centre for the development of high-tech (probably mainly University- based) industries. Oxford University is currently rated 'best University in the world' and the Medical School has been rated 'best Medical School' for 5 consecutive years. It is therefore entirely appropriate that Oxford and its environs should hope and plan to benefit from this unique resource BUT the new high-tech industries tend to develop on Science Parks which are scattered in the countryside around the city, not within it. It seems obvious that the new housing should be based near to these centres of development, i.e. NOT in the city. This is particularly relevant to the Cherwell District Council plan to build large numbers of houses between Kidlington and Oxford City. This area is unlikely to be a major centre for new employment and hence is inappropriate for major new housing development. In addition it is highly likely that new houses in this area would attract commuters from London since the new rail route from Oxford Parkway to Marylebone is very convenient for such a commute. In these circumstances it is also extremely unlikely that developers would be happy to build cheaper 'affordable homes' on this site. If large numbers of houses were built in this area (between Kidlington and Oxford) this would completely destroy the Green Belt and would threaten the heritage and special nature of the ancient and beautiful city of Oxford. Those responsible for such 'vandalism' would bear a terrible burden and would be long blamed for the damage they had caused. In addition this area already has very serious transport problems which have not been realistically addressed in these proposals. Those of us who live in this area have recently suffered huge delays while the Cutteslowe and Wolvercote roundabouts have been 'tinkered with', resulting in very little improvement to traffic flows. It seems obvious that the major roads, A34, A40 and A44 should not intersect. Only crossings at bridges or tunnels would improve the flow. The A34 should be a motorway through the area and the A40 should all be dual carriageway as it passes through the area. The same area North of the city of Oxford is already considering development plans for further housing and industry at 'The Northern Gateway' and for housing on the Wolvercote paper Mill site. The Cherwell DC proposals do not consider, or relate to, these parallel developments. This simply is not acceptable to local residents. "

Many recognise the SHMAA miscalculations about the economic situation but as that survey still drives Cherwell District's required housing supply numbers the proposed submission plan of July should be supported for its attempts to meet the following points: if it is really impossible for Oxford's Unmet Housing Need to be met within Oxford, then the houses must surely be adjacent to Oxford and linked by cycle routes and good public transport to the city, because already rush hour commuting into/out of Oxford is not only inefficient but causes air pollution which is a real environmental problem. If finding space adjacent to Oxford means using some of 'Oxford's Green Belt', then the 5 criteria for maintaining an area as 'Green Belt' should be remembered and reviewed for every part of Oxford's Green Belt. Believe several parts of the Oxford Green Belt no longer qualify for all 5 criteria, especially bearing in mind three dimensions, e.g. taking note of road flyovers, as not fitting the criteria and ideal aims of green belt. If the alternative is building over truly rural land further out, then using failing Green Belt land is environmentally preferable in order to be adjacent to Oxford. With so many areas of crawling traffic, the 'environmental harm' of building over failing green belt could be less than that caused by the traffic jams of commuters from further away. - Cherwell's road infrastructure is simply insufficient for more traffic to Oxford from further North. Already, 'rat runs' are a big problem for many of Cherwell District's villages, causing for example traffic jams right outside a village school, because the 'main road' infrastructure to Oxford and the main roads within Oxford City are not coping with the traffic. Again this means that new housing should be in or adjacent to Oxford. Indeed, this extra housing can only be considered to be for 'Oxford's Unmet Housing Needs' if the housing is in or immediately adjacent to Oxford, because further out in Cherwell District there are already people travelling to work in all directions, e.g., great numbers to London, others to Birmingham, Coventry, etc. What contribution do these recipient areas make to our district if we supplement their housing supply needs?

Object to Policy PR1(a) to build 4,400 houses in this area for Oxford overspill. This is not a proven requirement and not justified. It is based on a highly inflated estimate of housing need in the county. It is unsustainable. It would hugely worsen traffic problems and pollution. Schools and health services would be overstretched. The Green Belt's open countryside in which nearly 4,000 of the houses would be built would be sacrificed for ever and its walks and views lost. Natural habitats and wildlife would be destroyed. Oxford City Council has been allocating land in the city for employment instead of for housing. It has ignored the impact on surrounding Districts and failed in its duty to cooperate. The City Council should do more to meet its own needs.

Kidlington resident for the last 33 years and a Local Ecologist. I am a volunteer wildlife species recorder in the county. I submit large numbers of personal records to Thames Valley Environmental Records Centre on all kinds of species, sites and habitats in the county and I'm very familiar with the habitats and species in the GB area around Kidlington and Yarnton. I do not agree with the revised Strategic Economic Plan for Oxfordshire. Oxfordshire Local Enterprise Partnership needs to review the scale of the development proposed for Oxfordshire. I do not agree that Oxford City needs to grow at the rate suggested by the 'Oxford Growth Board'. The Oxford city should be prioritising affordable housing over employment in its designated local plan sites, such as for example the 'Northern Gateway'. Then it would not need to threaten its important internal green spaces with development and wildlife habitats within the city limits – these green spaces are essential for the health and well-being of city residents as well as for species diversity, such as Oxford Golf Course. Crucially Oxford City would not then need to spread its 'housing need' out into the GB areas outside the city into Cherwell District. The county housing growth targets are inflated and unrealistic. More account should be taken of potential environmental impacts and damage to communities. Growth on the scale suggested will result in great damage to this area of Oxfordshire. I do not want to see one huge urban conurbation stretching from the city to Kidlington, Yarnton and Begbroke. 4400 new houses around Begbroke, Kidlington and Yarnton are completely unacceptable from the point of view of : - Loss of protected GB. This land should not be removed from the GB. - Horrendous traffic problems and NOX air pollution that increased vehicle journeys on roads would bring to an already over loaded and pollution-generating road network, bad for human health and for the health of important wildlife habitats nearby, including Special Area of Conservation Oxford Meadows. - The destruction of local walks and views of open countryside around Kidlington and Yarnton. - Overloading of already over stretched public services in the area.

Proposed Submission Plan - General Comments

PR-C-1426	10/10/2017	Kathleen	Hayes				N	Y
4550	<p>Comments</p> <p>Green Belt - Yarnton and Begbroke are surrounded by GB land. It is what defines the two villages and allows them to retain their individual and historic characters and identities. They are part of a rural/historic part of Oxfordshire and this in turn helps to define Oxford City itself. To support this statement, the representation quotes the five points of Policy ESD14 of the existing CDC Local Plan (2015) which seeks to maintain the boundaries of the Oxford GB. The retention of GB land is also supported by National Government policies. The GB in this area contributes to the health and wellbeing of residents of Yarnton, Begbroke and Kidlington in particular (as well as those from further afield) through the use of public rights of way and other walks and rural pathways that provide them with access on their doorsteps to unspoilt open countryside and farmland, with its associated wildlife, and quiet peaceful places with wonderful views of nature that for many people helps to counter the stress of modern life. It also facilitates the farming of local land and production of locally sourced food products, which in turn support local agricultural employment. Cherwell District Council Health Walks Organisation leads weekly walks from the Royal Sun in Begbroke over Spring Hill (PR9) to Bladon and Yarnton, and across GB land east of the A44(PR8) towards the Oxford Canal. The present Plan proposes to replace this open countryside with "local nature reserves", "nature conservation areas", "public open green space as informal canal side parkland", and "community woodland" (p.121, Nos. 8,9,10 and p.130, Nos. 5,6). But these are urban forms of green open space that are small - hemmed in by high density urban development, and not wild, open or peaceful in the way our GB land is. They are in no way an acceptable replacement for the GB land being removed and built on. The reasons given for removing land permanently from the Oxford GB do not demonstrate "exceptional circumstances": It would appear that the figures used to support the case for Oxford's alleged unmet housing needs are now in doubt and may therefore not longer be valid. In addition, Oxford City could consider Brownfield, GB and leisure sites as well as sites reserved for non-housing development with the City to meet it's own needs. It would make more sense for Oxford City to explore the possibility of incorporating further high density developments within its own boundaries where there are already precedents for such urban styles of building, rather than expect Cherwell to build high density developments on it's GB land, thereby changing the character of such historic rural localities for ever. How can it be right that Cherwell is being expected to sacrifice Green Belt land when Oxford is not prepared to do the same itself? The main areas of growth and employment in Oxford are now around the Headington and Cowley areas to the south east of the City, and jobs are continuing to be moved there from the city centre. This therefore negates the need to locate such high density development in this area which is on the opposite side of Oxford from the new and growing major employment opportunities. All other reasons become invalid once the key reason of Oxford's unmet housing need is dismantled.</p> <p>Changes Sought</p> <p>Reasons for Participation</p> <p>I would like the Begbroke and Yarnton Green Belt Campaign to act as my representative during the Examination by the Planning Inspector.</p>							
PR-C-1426	10/10/2017	Kathleen	Hayes				N	Y
4332	<p>Comments</p> <p>The complete and utter annihilation of the nature of the rural area in which the villages of Yarnton and Begbroke are situated should not be preferable to finding less destructive solutions of the alleged unmet housing need of Oxford City. Oxford has chosen not to pursue a number of possible initiatives within the City, where higher density building would not be out of character. I would therefore request that the current Cherwell Plan should not be implemented and other less damaging avenues should be pursued.</p> <p>Changes Sought</p> <p>Reasons for Participation</p> <p>I would like the Begbroke and Yarnton Green Belt Campaign to act as my representative during the Examination by the Planning Inspector.</p>							
PR-C-1428	10/10/2017	Liz	Darley					
4556	<p>Comments</p> <p>Strong objection for the plans to the GB area around Yarnton and Begbroke. THE PLAN TO CLOSE SANDY LANE WILL VIRTUALLY CUT YARNTON OFF FROM KIDLINGTON. This is an important route between the two villages, used by MANY people, who see it as a lifeline. If this is closed, and the proposed plans for the A44 go ahead, it will lengthen the journey between the two villages by several miles and by a great deal more time. Building the proposed number of houses, therefore hugely increasing the number of cars, will mean that the A44 at certain times - if not ALL the time - will isolate those people living on the East side of Yarnton. To say that most of the people arriving in the area will use a Park and Ride just will not happen. It will also lose Kidlington a lot of trade, as new residents in the proposed houses will not access Kidlington, but go elsewhere, causing EVEN MORE traffic chaos. This road should be upgraded and should be considered a vital link between the two areas! It is proposed that a number of the new houses will be "affordable". It has been shown that when new properties are built, the number of "affordable" houses reduces considerably once building has started. In the Oxford area the cost of houses is prohibitive for most young people, even if they are "affordable". It seems odd that these houses are being proposed very near a new railway station with (as advertised) a much shorter journey time to London!</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							
PR-C-1430	10/10/2017	Michael	Marshall				N	
4561	<p>Comments</p> <p>Unaffordable Houses - Very few of the new houses would be 'affordable' in reality. Developers across the country consistently default on their affordable housing quota. Predicted prices for so called starter homes at Barton Park are already beyond the reach of first-time buyers. Most of the new houses are likely to serve the London-commuter and buy-to-let markets, and Kidlington's young people and the county's key workers still won't get the truly affordable housing they need.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							
PR-C-1432	10/10/2017	Mark	Babbington				N	N
4565	<p>Comments</p> <p>Please note that this response though separate and my own should be read in conjunction with the Representations made by the Begbroke & Greenbelt Campaign "BYG". Not Positively Prepared. Not Justified. Not Effective. Not Consistent with National Policy. 1 - Transport Infrastructure does not currently support the needs of residents or those passing through on a daily basis - nothing in the plan clearly shows that appropriate improvements will be made to enable the traffic to get through to the A34, M40/A40 or areas such as Cowley or Headington. Adding a bus lane will only serve to exacerbate the current traffic flow problems on the A44. There are difficulties conducting business locally at the moment due to transport issues - this will not improve under your plans and business owners will continue to have to conduct business away from Oxford. 2 - The Local Plan Review is intended to accommodate Oxford's "unmet need" for housing - however this unmet need is as yet unproven and almost certainly considerably overstated. Oxford has, as yet, not satisfactorily identified the amount of it they might not be able to meet so Cherwell is second guessing at best which is irresponsible. I agree with the Campaign to Protect Rural England's view that Oxford is capable of accommodating all or almost all of its need by switching land earmarked for businesses to housing instead. It is therefore premature for Cherwell to even start the process of accommodating this "un-met" need. 3 - Closing Sandy Lane between Yarnton and Kidlington means residents will have to travel an extra 3.7k round trip -adding to congestion on other roads as well as adding considerable amounts of extra fumes to the atmosphere - for example 200 medium sized diesel cars, per day, doing an extra 3.7km between Yarnton and Kidlington would have an impact of 98.6t CO2 per year (calculated on myclimate.org). 4 - Any new high-tech employment sites in the district should be focused around Bicester where large numbers of houses are already being built/have been provided for on the basis that more high-tech employment would be provided, although as yet this has not yet been forthcoming. These industries need to be closer to the M40 rather than cause further disruption on the A34/A4and A44 - many companies will not relocate to our area currently because of the difficulties getting round the A34/A44 and A40 - therefore M40/Bicester is a more realistic and viable location.</p> <p>Changes Sought</p> <p>Reasons for Participation</p> <p>I would like the Begbroke & Yarnton Green Belt Campaign to represent me at the Examination should it take place.</p>

Comments

Please note that this response though separate and my own should be read in conjunction with the Representations made by the Begbroke & Yarnton Greenbelt Campaign "BYG". Plans are not sound in that they would violate all five objectives of GB protection and coalesce Begbroke and Yarnton, resulting in urban sprawl from Oxford to Kidlington. I do not believe exceptional circumstances exist as described. Three of CDC's supposed exceptional reasons are flawed. How can there be an urgent need for Oxford housing when Oxford's own plan is still in the process of consultation? Oxford's unmet housing need as based on SHMA figures is questionable anyway, but especially given that the SHMA figures are now out of date. Nine of the exceptional circumstances put forward by CDC for releasing GB are not circumstances at all but rather opportunities that would exist through the release of GB. Not enough consideration was given to sites C-I put forward in the first consultation and that sites A and B have always been in Oxford's own sights and that the current plan review is based purely on opportunism following the perceived national housing shortage. The speed with which the CDC is attempting to rush this plan through is a testimony to that. Our district council is not serving the interests of its local residents and should be called to account for this. In fact I would go far as to say that our democratic rights are being subverted, and that if these plans do proceed the relationship you have previously enjoyed with local residents will be irrevocably damaged.

Changes Sought

For the reasons I have given AND the Representations made by the Begbroke & Yarnton GB Campaign which I additionally support and adopt as part of my own Representation in this document, the Plan cannot be changed to make it legally compliant or sound and should therefore NOT be submitted for inspection.

Reasons for Participation

I would like Begbroke and Yarnton GB Campaign to act as my representative during the Examination by the Planning Inspector.

Comments

1. Noke does not agree with the figures for Oxford's unmet housing need for the reasons set out in our previous submission. There is no definition of what an unmet need is. 2. Kidlington has a population of some 14,000. The addition of 4,400 homes represents an increase in this figure of some 60% over a short period of time. This is hardly sustainable development. 3. It is inconsistent that CDC is planning to sacrifice major portions of the GB in & around Kidlington whilst at the same time refusing small sustainable developments in villages i.e.. Noke & Islip on the grounds of development in the GB. Such developments are essential to maintain the viability of these communities & to sustain local services & amenities. 4. Much of this housing is likely to be acquired by London commuters rather than local workers. If this is to meet Oxford's unmet housing need, no strategy is in place to stop people from outside Oxford & the District from hoovering up the affordable/non affordable housing. 5. The existing transport infrastructure in & around Kidlington is grossly inadequate before any Oxford & CDC planned houses are built. There are long traffic tailbacks into Oxford on all major routes every morning & the A34 is often at standstill between Peartree & the M40 at any time of day. Has CDC calculated the cost in terms of lost man hours, pollution & human health of this existing congestion? 6. CDC should ensure that OCC & the highways authorities solve the existing congestion problems BEFORE any additional housing is built. 7. If further housing is to be built the transport infrastructure should be put in FIRST. None of the changes in the infrastructure Schedule (Appendix 4) are described as short term & many are described as long term, which is probably shorthand for being most unlikely to ever happen. 8. Has CDC considered/quantified the impact & cost (time, pollution, health) upon traffic flows through Islip on the B4027 & through Woodeaton joining the Oxford ring road at Marston? Additional traffic created by additional housing will inevitably try to use the B4027 as an easier route to the A40 & M40 Junction 8, or to access Oxford via Woodeaton & Marston. The B4027 is already inappropriate for the traffic it currently carries through Islip & Forest Hill. It is already hazardous & difficult to exit from Noke in the mornings because of an unbroken stream of 50mph (or more) southbound traffic approaching over the crest of a hill. There are morning tailbacks along the Woodeaton-Marston road often as far back as Sescut farm. 9. The transport measures aimed at improving provision for cyclists are welcome but risk being half hearted. Existing cycleways are poorly maintained (A43 towards Woodstock, Marston Ferry road in Oxford) & whilst they often provide an efficient & relatively safe transit between major intersections, cyclists are usually left to take their lives into their own hands or encounter long delays at intersections (e.g.. Peartree, A40/Woodstock Road, A40 /Banbury Road, Sainsbury roundabout in Kidlington). 10 Trying to reallocate existing road space between buses, cars & cycles is essentially a zero sum game. Improvements for one mode of transport will come at a cost to the other modes. What's needed is more or wider roads & purchasing additional land is needed to make this provision wherever possible. 11. There is no provision of safe cycling routes for Islip or Noke. This doesn't deter keen cyclists but won't create many converts to cycling & no parent would let their child cycle on these roads. There is the possibility of creating direct cycle routes from both villages across agricultural land (or alongside the railway) to Oxford. These would be shorter & much safer than the existing routes & do much to encourage cycling from these villages. 12. Unlike other communities, Noke has no public transport. Noke residents have no choice but to use their cars or risk their lives cycling. Noke residents therefore deserve special consideration before any building takes place or any other measures which could increase danger & congestion on the B4027 or the Woodeaton-Marston road. 13. Much of the transport strategy seems to depend on buses. These will inevitably be diesel powered (unless CDC insists upon electric) at a time when there are increasing concerns about the health impact of diesel particulates. 14. CDC along with OCC & Oxford City should consider more measures to encourage electric vehicle use & thus cut air pollution. Free parking & the use of bus lanes for such vehicles would make a significant difference. 15. Oxford doesn't seem to have seriously considered a congestion charge. This seems a logical solution to congestion problems. Road space is allocated to those most willing to pay for it, rather than by rationing. There is a boost to the public purse, enormous savings in man hours & journey times & improvements to public health & pollution. The London congestion charge appears to work well. On the whole traffic moves in the congestion zone rather than being gridlocked & the scheme probably now commands public support. 16. Oxford is ideal territory for a tram or rapid transit system, which it had in Victorian times. It was put out of business by the future Lord Nuffield . Two arterial routes running North South (from Kidlington) and East West would go a long way to actually solving Oxford's congestion & pollution problems.

OBU welcomes the opportunity to comment on the CDC PPCR of the CLP 2011-2031 (Part 1): Oxford's Unmet Housing Need. Cherwell District is home to a number of our staff & students &, as such, the 2 areas we feel are important for the University to comment on are housing & transport infrastructure. OBU is one of Oxfordshire's largest employers & requires housing options for its staff across all income levels. Current challenges of land availability & high land values result in high rents & purchase costs. Housing affordability remains an issue for staff at OBU. Many choose to live in conurbations within a commutable distance from Oxford. OBU welcomes planning policies that provide a range of residential accommodation which is attractive in cost & quality, along with adequate community infrastructure to support new housing developments. OBU supports the proposed plan as a positive & pragmatic approach to provide growth in the property sector. We also note that travel distances & road congestion play their part in the development of housing communities & would support the use of quality transport links including affordable park & ride options to access our sites in & around the city. OBU is committed to sustainable travel & encourages the use of efficient public & communal transport, cycling, & walking, with several measures in place to support those who travel using these means. Therefore it is vital that these means are supported by transport infrastructure developments. Whilst recognising the need to continually improve sustainable means of transportation, OBU would be supportive of road infrastructure developments that would improve traffic flow & manage the increase of road users as further housing is developed in & around the Cherwell District.

Welcomes CDC's proposed submission version of the Cherwell LPPR, & the continued positive approach to joint working on cross-boundary issues that has been demonstrated by CDC. This has culminated in a positive, timely & comprehensive approach towards planning for the unmet housing needs of Oxford. Oxford CC appreciates that making additional site allocations often involves a council having to make very difficult decisions, & probably more so when the allocations are additional over & above existing housing needs. Yet CDC has responded positively throughout the process, as a proactive member of the Oxfordshire Growth Board & working with Oxford CC, & this cooperative approach is to be commended.

Supports the overall spatial strategy, Vision & the new Spatial Objectives (SO16-SO19) as they specifically & positively respond to the issue of meeting Oxford's unmet need, & recognise that the strategy needed to be different to that of meeting the wider district needs. The strategy reflects how important it is for the sites to have a good spatial relationship to Oxford, & incorporates essential planning principles which align with those identified & agreed in the joint studies undertaken under the Growth Board; The strategy seeks to locate development so that it is well-connected to Oxford & supports the city's economy (Policy PR4a); & in addition it seeks to offer people convenient affordable & sustainable travel opportunities to the city's places of work, services, & facilities; These guiding principles are all welcomed. Supports the sites proposed in the Plan (Policies 6-10), which the evidence base demonstrates will offer residents good relationships to Oxford & sustainable travel options for accessing work & other requirements in Oxford. Welcomes how cross border issues including affordable housing & transport have been addressed for the sites which adjoin the administrative boundary, in order to achieve a joined up approach to design & integrated communities, particularly the links to the Northern Gateway site, access to Oxford Parkway station, & the sensitive consideration of Cutteslowe Park (Policy PR5).

Green Belt Oxford CC supports the position that there are exceptional reasons for development within the GB (Policy PR3). Both councils have used the same methodology in reviewing the GB (which also aligns with the GB work undertaken under the Growth Board). This is helpful to ensure a joined up & consistent approach across the planning areas in addressing this strategic issue.

Supports the approach in the Partial Review of progressing each of the proposed site allocations through a development brief. We consider that this is the appropriate way to consider the site specific details & infrastructure needs of each proposed allocation in a timely manner. We also welcome the opportunity to be involved in the production of the development briefs especially where there are cross-boundary issues to be considered. We acknowledge the on-going partnership work through the Oxfordshire Growth Board & in particular the Oxfordshire Infrastructure Strategy. This is a useful forum for the consideration of the cumulative impacts of planned growth & also cross boundary infrastructure issues. We are keen to continue the constructive partnership working & on-going dialogue with Cherwell & to assist in securing prompt delivery of these much needed homes.

Supports the allocation of sites at Begbroke, Yarnton & Woodstock. Our comments on the details of these policies are more brief as the physical links with the city are more limited (although the economic links with Begbroke & the University of Oxford as part of the 'Knowledge Spine' are clear and strong), however we welcome the delivery of sustainable transport links into neighbouring communities & onwards into Oxford to provide access to employment, services & facilities.

Supports the analysis that there is a close relationship between Kidlington & Oxford & that new homes to the south of the town would be well related to Oxford & help provide for the needs of the city. We agree that is possible to develop to the south of the town whilst maintaining an important GB gap between the two settlements & maintaining the character of Kidlington. Delivery of good public transport, cycle & pedestrian links to the transport hubs (and thereafter on into Oxford) are essential & we welcome the provision for these in the proposed policies.

Transport. The issue of the increased traffic which would result from the new housing development is very troubling. It would significantly increase the time taken for the daily commute into Oxford for work as the roads are already heavily congested during 'rush' hours and would make the situation even worse. I drive to the Park & Ride at Pear Tree and catch the bus from there. The worst part of the journey, taking the most time, is from Yarnton to the Pear Tree because the road crosses one of the busiest roundabouts in the country (Pear Tree roundabout) where traffic is crossing from north to south and west to east and vice versa. Frequently in the winter months the traffic is at a standstill. With the proposed closure of Sandy Lane, the only alternative route would be eliminated. This would be wholly inappropriate for residents as it provides a vital link between Yarnton and Kidlington. I use this link frequently to get to the shops in Kidlington. I have never cycled and would not be able to cycle into Oxford or elsewhere, especially on dangerously busy and congested roads, and there are countless people like me. Consideration of the significant increases of noise pollution and air pollution for residents living close to the A44 has not been taken into account. I therefore cannot support the plans for the resulting traffic chaos and increased local pollution it would cause.

Proposed Submission Plan - General Comments

PR-C-1438	10/10/2017	Serena	Marner			N	Y
4591	<p>Comments</p> <p>GB and Wildlife. Loss of the GB is very concerning as once lost it can never be replaced for future generations. The proposed development contravenes all the points defined in the National Planning Policy Framework and Policy ESD 14 adopted in 2015 by Cherwell District Council. Yarnton has some of the most unspoilt meadows in Britain and the land supports a range of wildlife. Just this summer Barn Owls have been nesting in the area, just to the east of the A44. Barn Owls are protected in the UK under the Wildlife and Countryside Act 1981 – they are classified as an Amber List species under the Birds of Conservation Concern Review as they have suffered a huge decline in numbers in recent years because of habitat loss. They require a rough grassland habitat in which to hunt their prey and ancient hollow trees to provide sites suitable for nesting. This habitat would be destroyed under the proposed development plans which would result in further loss of these beautiful birds and many other species of wildlife too. Oxford City Council has not demonstrated exceptional circumstances needed to remove the GB land from the area around Yarnton and Begbroke. The figures for the future housing needs of Oxford are exaggerated and houses could be built on brown field sites in Oxford, instead of providing the land for new businesses. Also as most of the housing will be needed for people working in the east, at the hospitals, and the south of the City, the GB to the north of the City is a totally inappropriate place for development. The proposed growth of the Begbroke Science Park is also exaggerated given that funding for science projects is extremely difficult to obtain.</p> <p>Changes Sought</p> <p>Reasons for Participation</p> <p>I would like Begbroke and Yarnton GB Campaign to act as my representative during the Examination by the Planning Inspector.</p>						
PR-C-1439	10/10/2017	Sharon	Yendle			N	
4595	<p>Comments</p> <p>Kidlington will become part of a vast urban sprawl encompassing North Oxford, Cutteslowe, Wolvercote, Begbroke and Yarnton. Very few of the new houses would be ‘affordable’ in reality. Developers across the country consistently default on their affordable housing quota. Predicted prices for so called starter homes at Barton Park are already beyond the reach of first-time buyers. Most of the new houses are likely to serve the London-commuter and buy-to-let markets, and Kidlington's young people and the county's key workers still won't get the truly affordable housing they need. Underfunded public services, already struggling, will deteriorate further: waiting times to see your GP will be even longer and school class sizes will rise. Traffic Gridlock, traffic congestion and air pollution will undoubtedly worsen due to thousands more vehicles on our roads. This is in addition to the extra traffic from the 22,000 houses already approved elsewhere in the District by Cherwell, and over 10,000 more houses to be built in the other Districts just for Oxford overspill. Construction traffic and road works will add to this chaos for years while the development takes place. The changes to Kidlington in the last 40 years have already spoilt the village I moved to. Parts of The Moors and the area now known as Grovelands were lovely green areas that have now given way to houses and a whole new housing estate. As it's Oxford City proposal to build more houses why are they encroaching on the North of the City? It will be very disappointing if the proposal goes ahead for all who live in Kidlington and future generations.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>						
PR-C-1439	10/10/2017	Sharon	Yendle			N	
4596	<p>Comments</p> <p>Sites rejected by Cherwell this stage are still vulnerable. Sites all around Kidlington were initially identified for possible development. Cherwell have rejected some of these sites, but the developers will be making strong representations to have them reinstated. They are still at risk. I strongly support Cherwell's rejection of these sites.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>						
PR-C-1440	10/10/2017	Stephen & Nicola	Mobley & Davies			N	
4597	<p>Comments</p> <p>Wholly in agreement with objections raised by the response submitted by Yarnton Parish Council dated 2nd October 2017. It seems wholly unsound to make life altering plans for residents of three discretely separate villages within the GB (Yarnton, Begbroke and Kidlington) based upon aged data gathered prior to and completely ignorant of political and economic changes that are imminent from the British public's democratic decision to leave the European Union. For negotiations continue over the coming years, no one is currently able to predict what effect this new reality will have upon the demands on housing and other infrastructure for an area as internationally dependent upon foreign investment, trade and associated business and leisure visitors as Oxford is. It is clear from travelling in to Oxford on the main route from our village(s) that the existing infrastructure cannot currently be maintained to a suitable standard. For example; village and main roads are in a state of long term decay and drainage is blocked and being damaged by vegetation overgrowth. To place further stress upon these areas without accounting for the cost of upkeep as well as initial investment is wholly unsound. Bottlenecks to Oxford along the A44 at the roundabouts, canal and railway bridges are obvious to anyone travelling into the city at any time especially when private, commercial and existing public transport is at its peak. Expecting the residents of the proposed and unsubstantiated new urban sprawl to travel in to the city using means other than the current percentage split of existing methods of transport is wholly unrealistic and will lead to unacceptable challenges and damage to our local rural environment. Your Partial Review document (marketing focussed) front page has a number of carefully selected key words surrounding the pictures which it suggests are your key drivers in equal measure when giving consideration to the plans: Community, Economy, Heritage, Environment, Connect, Sustainable, Growth and Well-Being. However, it is clear that the six which have a huge impact on local residents have been given a back seat to considerations of Growth and Economy for our neighbours in Oxford. This is unacceptable. We look forward to your urgent reconsideration of the current plan as and when new credible data becomes available. We also urge a submission to the relevant authorities in Oxford to revisit their archaic planning guidelines and require them to consider their own affordable housing options. Especially in what appears to be their single minded efforts to invest in commercial and academic growth whilst pushing the supporting population out of the city to the detriment of rural communities within the greenbelt.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>						
PR-C-1444	10/10/2017	Ian	Lough-Scott	Ian Lough-Scott on behalf of Upper Heyford Village Group			
4608	<p>Comments</p> <p>1) CDC must reduce the number of homes required following the revised method for calculating need in the county, which reduces the actual need from 100,000 to 68,000. The revised figure confirms CPRE's view that the housing need is substantially overstated. 2) Oxford has the capacity to accommodate substantially more homes within the city if it concentrated on meeting its obligations for housing rather than earmarking land for additional commercial activity. 3) There needs to be a fresh approach to providing homes for those in real need, it is simply not possible under the current developer led schemes to provide enough homes for rent or purchase which accord with CDC policy (objective SO18) viz. providing affordable access to new homes for those requiring affordable housing, new entrants to the housing market, key workers and those requiring access to Oxford's key employment areas; and, providing well designed development that responds to the local context 4) There needs to be a greater effort to encourage new ideas through architectural competition and co-operative housing schemes 5) It is a complete fallacy to imagine that the number of houses actually built between now and 2031 will be enough to keep house prices down, especially as the type of houses planned and now under construction will add to inequality rather than address it.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>

"Object to houses being built on the greenbelt for the following reasons; It would impact heavily on the wildlife in the area. The green belt should be there for future generations to enjoy not paved over, these things matter to me because I have an interest in walking and in wildlife and I DO NOT want it to disappear. By continuously adding houses to the outskirts of Kidlington and joining up with other villages, Kidlington will lose its identity. There is no justification for building more houses and it would impact Kidlington considerably. It would increase the volume of traffic on the roads considerably, there is already enough traffic on our roads. It would also increase the levels of pollution even more with more cars on the road, which would be bad for the environment. It would stretch public services even harder, like doctors practices and schools. Once these houses are built there is no going back, the damage to our environment will be permanent. It is for these reasons that I hope this will not go ahead. I hope that you will consider my views and the views of everybody else who has protested against this."

PR-C-1452	10/10/2017	Cllr Emilie	Walton			N	N	N	Y
5196	Comments								
"Green Belt: There will always be a need for more housing as there is a constant global population increase, but the whole point of designated Green Belt is to protect the green space from Urban Sprawl. Permitting this development, no matter which sites or the scale, is opening the flood gates to allow reclassification of land and future development to the point that there is no Green Belt. Not only do we stand to lose Green space, we will lose flora and fauna, we will lose the natural landscape, we will lose the vista towards Islip, we will lose a valuable and much loved network of tranquil outdoor leisure routes. The flora and fauna around the developed Oxford Parkway Station and railway have already had a significant damage as a result of the construction of the massive new bridge over the railway line at Northfield Farm, despite an environmental "relocation" of a protective newt species. I do not believe that there is any appropriate method for preserving local wildlife and development to be balanced. Infrastructure: The current road and transport infrastructure is woefully inadequate without the addition of a further 4400 to 10,000 vehicles, including the massively disruptive period of construction traffic during development. The road network around Oxford already frequently comes to a grinding halt for miles around the city and surrounding area when there is an incident or road works. The Park and Ride schemes only have a limited effect on alleviating the road network, and are still problematic and costly. Individuals then resorted to parking along the residential areas in Kidlington. This Parish Council has dealt with complaints from residents were received about not being able to exit their driveways and had to introduce restricted parking and enforcement at its expense. Demand on health services clearly have not been considered, e.g. social care as well as hospital capacity, waiting lists for GPs etc. It is not good enough for developers to say that there is space for a health facility to be accommodated but then for them not to be obligated to actually build the facility. Schools in the entire area of Kidlington/ Woodstock/ Yarnton are over capacity, especially where the demand to support international students and special needs pupils are concerned. More consideration to provide the current population of the area with these essential facilities should be assessed and developed prior to the introduction of further housing and demand on these already stretched resources. Water Supply: the Farmoor Reservoir is struggling to meet current demand. Thames Water frequently communicate to residents in the Oxfordshire area that they must conserve water. Are there plans to create a new Reservoir to meet the needs of Oxfordshire? Same could be said for waste and sewage facilities are over capacity. Air Pollution: The air quality around Oxford is very poor, particularly around the Gosford and Water Eaton area. Having spent most of my life living and working in Oxford I have developed asthma and sever hay fever. I know that I am not alone, there is an upward trend in respiratory issues and an increasing demand on health resources. Increasing the vehicular and other emissions, as well as removing valuable trees and green space will only further damage the health of the existing population. Flood Risk: It is not just the areas that they are proposing to develop that currently flood but also existing properties that are within or close to the current Environment Agency Flood Boundary. Increasing areas of hard surface within proximity to these 'at risk' properties will increase the likelihood of flooding. Insurance companies will refuse adequate cover. What compensation or prevention measure would be taken to protect these properties? Affordability: Will always be an issue especially if company and buy-to-let purchases are allowed. Housing within new developments should not only be about affordability but accessibility to individuals and families, particularly for key workers that are in massively short supply around Oxford. Oxford has a very high percentage of landlord and company owned residential properties, the new development will simply allow them to expand their property portfolios and drive up prices. If any development does proceed, there should be at least 75% allocated to affordability / key worker schemes. Oxford has a huge portfolio of executive housing, the new development should not extend to executive housing. Accepting some growth: Smaller sites of less than 100 homes should be considered. This will spread the burden and impact on surrounding areas and residents. There are pockets of land that are ripe for development that appear to have been left out of scope. Yet we are aware that the current owners or trustees would be more amenable to sell the land for development. Why have these been excluded? Other brownfield sites should be considered, even if they are more costly to develop and take longer for housing demand to be delivered, these sites should be given greater consideration and priority over Green sites."

PR-C-1458	10/10/2017	Jane	Olds	Caversfield Parish Council					
4622	Comments								
The Parish Council has discussed the response to the Local Plan Part 1 Partial Review of Oxford's Unmet Housing need and agrees with the District Council's reasons for restricting the housing development to Areas A and B. The Parish Council also agreed that the infrastructure needed for the development and for Oxford is more appropriate for these areas.

PR-C-1459	10/10/2017	Adrian	Gray						N
5198	Comments								
"Objection to the proposed housing developments in the Kidlington area. Fully aware that more housing is needed but do not think it sensible that Oxford should dictate terms to the surrounding area, rather that it should be made to put its own house in order. Extremely alarmed by the plans to sacrifice Green Belt land for housing, in defiance of Government and Cherwell District Council's own policies. Not only will this permanently sacrifice open spaces to housing, it will set a precedent for further development. Much of the proposed development area is also low-lying and prone to flooding – new houses are already being built near Yarnton on floodplain land – with the rise in rainfall and extreme weather events this can only lead to more and worse flooding events, and is removing land that flood water can spread onto to prevent it from causing flooding further downstream in Oxford and other communities. Do not believe that there will be a meaningful amount of "affordable" housing in the proposed developments. Young people cannot afford to live here, and I work with people who travel from Swindon and Warwick, despite low wages by the area's standards. Utterly astonished by the lack of plans to improve the road network. Traffic already regularly backs up well through Kidlington in the morning, and it only takes a single incident to cause major traffic problems through the area. Without major investment in infrastructure, the extra vehicles from the proposed developments will cause traffic chaos of the sort we have seen recently with the works at the Wolvercote and Cutteslowe roundabouts on a daily basis, clogging the Northern routes into the city, and causing gridlock on the roads feeding them. The growth in traffic is utterly unsustainable and I consider that the planned submission is unsound, not positively prepared, not justified and not effective."

Comments

The areas of land proposed to be removed from the Green Belt pay insufficient regard to the need to prevent coalescence of communities. The remaining areas of Green Belt between Kidlington and the proposed extension of Oxford City, between Kidlington and Yarnton and between Yarnton and Begbroke have been narrowed to such an extent that for all practical purposes the communities of Kidlington, Yarnton and Begbroke will become coalesced with each other and with Oxford City.

Changes Sought

"In order to maintain a meaningful separation between communities, the areas removed from the Green Belt for strategic development sites should be revised as follows: Policy PR6a: removal of approximately 6.2 hectares of land as shown on map PR6a. attached to the original letter. Policy PR6b: this policy should be deleted Policy PR7a: removal of approximately 53 hectares of land as shown on map PR7a. attached to the original letter Policy PR7b: removal of 4.3 hectares of land as shown on Policies Map PR7b (unchanged) Policy PR8: removal of approximately 93 hectares of land as shown on map PR8. attached to the original letter. Policy PR9: removal of 17.7 hectares of land as shown on the map attached to the original letter PR9.jpg The additional land removed from the Green Belt should be revised as follows: Policy PR3a: unchanged Policy PR3b: unchanged Policy PR3c: this policy should be deleted Policy PR3d: this policy should be deleted Policy PR3e: approximately 14.7 hectares of land adjoining Begbroke Science Park should be removed from the Green Belt, but the boundaries should be revised as shown on map PR8, attached to the original letter. Two new areas of additional land should be removed from the Green Belt as shown on map PR7a. Attached to the original letter. These are: New policy PR3c: the area comprising Gosford Farm and Bramley Close New policy PR3d: a small triangle of land adjacent to the development site and between that site and the A34 Table 4 needs in consequence to be rewritten: North Oxford: Policy PR6a: 180 homes Kidlington: Policy PR7a: 1230 homes Policy PR7b: 100 homes Yarnton Policy PR8: 1610 homes Policy PR9: 530 homes Woodstock: Policy PR10: 750 homes Total: 4400 homes Note: the area covered by policy PR8 is misleadingly described in the submission plan as Begbroke, but in fact falls predominantly within the parish of Yarnton, and so has been described as such in revised table 4 above."

Reasons for Participation

"This submission raises an important issue as to whether, in the event of the removal of Green Belt land being found to be necessary, residential development could be allocated in a different manner so as to reduce detriment to the Green Belt and minimise the coalescence of communities."

Please note that this response though separate and my own should be read in conjunction with the Representations made by the Begbroke & Greenbelt Campaign ""BYG"". I believe the plan is not effective or justified neither is it consistent with National Policy. The Council's Local Plan Review is not just to build in the Green Belt, but to attack the core principles on which all Green Belts are founded. Most residents are not at all in favour of the erosion of the greenbelt and from a personal point of view the Yarnton and Begbroke greenbelt land proved to be of huge emotional and physical benefit. The greenbelt is our main opportunity to get out in the fresh air and walk and have the health and wellbeing benefits of walking in green – removing that opportunity is irresponsible and in the longer term not cost effective. I do not believe the Council has a realistic plan for infrastructure; the roads in the area are already not fit for purpose; due to the price of homes in the area many residents travel by car to work, utilising the M40/A34 and M4, their transport needs are not currently met by public transport nor will they be under this plan. The low density proposed for much of the plan the means house prices will naturally be high and will attract higher earners who are likely to travel further for work, exacerbating the travel situation and adding to congestion. The reality of 4.4k new homes means 2 wage earners per house and an extra 8 thousand cars (at least) – trying to get through Kidlington, Yarnton and Begbroke – whilst some of the A44 is dualled not all of it is and there are several severe pinch points, recent housing developments in Yarnton have made the Turnpike roundabout much more congested on most days meaning traffic backs up the A44 almost to Begbroke. Plus there is the additional traffic cutting across from the A40 to avoid the Wolvercote roundabout. - In addition, no amount of work improving traffic flow on the A44 will have any effect whatsoever without first completing a considerable, and very costly, improvement of the A34 (extra lanes, bridge improvements etc.), Peartree roundabout, Wolvercote Roundabout (still), Sunderland Avenue, and the Woodstock road (which still backs up round the Wolvercote Roundabout every morning despite all the recent works). Surely any proposed development itself would be considerably hampered by the current poor infrastructure as well as causing so much additional congestion. - Closing Sandy Lane between Yarnton and Kidlington means residents will have to travel an extra 3.7k round trip, increasing congestion on other roads as well as adding considerable amounts of extra fumes to the atmosphere. In addition, where would all the dog walkers take their dogs for walks and would the cycle paths be protected? Where is the proof that this volume of housing is actually needed, the ""unmet"" housing need remains unproven, where would all these extra people come from?

Changes Sought

For the reasons I have given above AND the Representations made by the Begbroke & Yarnton Green Belt Campaign which I additionally support and adopt as part of my own Representation in this document, the Plan cannot be changed to make it legally compliant or sound and should therefore NOT be submitted for Inspection.

Reasons for Participation

I would like the Begbroke & Yarnton Green Belt Campaign to represent me at the Examination should it take place.

This is Greenbelt (GB) land. The purpose of GB land is to keep a green area in built up areas. I have major environmental concerns & strongly believe the environment will be harmed by this new development. Oxford City have not yet identified their current housing needs, so the idea that we need this development to help with their housing needs just doesn't make sense. There are already issues with flooding. More houses will add to this problem, which occurs on a regular basis. Fields & roads flood. Transport into Oxford is already Poor/inadequate. In the mornings, the traffic is often queued right back to Yarnton. Even the current bus lane has little effect until you get past Peartree Roundabout. More houses can only make this worse. For the reasons given and the representations made by the Begbroke & Yarnton Green Belt Campaign, which are support and adopted as part of this representation, the Plan cannot be changed to make it legally compliant or sound and should therefore NOT be submitted for Inspection.

Throughout the process, the lack of rigour in examining the city’s claim and the response to that claim has been staggering and is not concealed by the expensive, overly-long, glossy presentation of the plan that discourages any close reading. Yet large numbers of people have made that effort, mounted displays, attended meetings and delivered explanatory material that shows the concern and anger in this village. Even now I am far from convinced that CDC is prepared to act in the best interests of its constituents and I hope CDC will suspend this consultation in the light of the recent Government announcement and seek further clarification before any more money is wasted on this matter.

We urge you to oppose Cherwell’s Local Plan including the development of housing on North Oxford Golf Club. We support all the points made by Gill Davidson in her letter(summarised below). My husband, one of my sons and I are all members at North Oxford and obviously we are therefore biased against the plan but we fail to see any advantage in using this site over any other proposed site around Oxford. Surely there must be a huge benefit for the environment, air quality and public health in keeping this green space between Oxford and Kidlington which has existed as a Golf Club for 110 years. The development of housing on North Oxford GC would not contribute to the housing crisis because the housing would not be “affordable”. A golf course takes many years to establish and is costly to build from scratch – North Oxford GC does not have the funds to develop a new site and the proposed “sweetener” would be insufficient to make this possible. I fail to see how this Plan would contribute in a positive way to the interests of the community or to the national need for affordable housing. Please consider other options. Oxford and the surrounding countryside are protected from urban sprawl by the Green Belt. I urge you to recognise the importance of the Green Belt. Cherwell have not proven an exceptional need to build on the Green Belt. With such flimsy reasons for building on the Green Belt this would open the floodgates for uncontrolled development in the future. Do not be a person who allows this to happen. The Green Belt is vital to protect the character of the City and its surrounding countryside as well as providing a green lung that helps to maintain environmental quality. It is irrational to allow Oxford City Council to protect green field sites within the City where housing is needed, such as allotments, then to destroy the Green Belt and put neighbouring villages under pressure. North Oxford Golf Club Cherwell include in the plan the proposal to destroy North Oxford Golf Club which lies in the Kidlington gap, the most vulnerable part of the Green Belt. Far from solving the housing crisis it intends to build low density houses on this site. This is again is madness. I am dismayed by the fact that in the Cherwell Plan the golf course is treated just as another piece of land! The Club has been in existence for over 100 years. It is a beautiful green space supporting a rich environment. It is above all else a COMMUNITY of people. It provides recreation, social and employment for people of all ages. Some people have been members for over 50 years and many people rely upon the Club for their social connections. A number of the members are older and widowed, there are even some people with dementia who continue to play golf. These peoples’ lives will be destroyed. Surely it is important to encourage people to engage in recreational activities not destroy these opportunities. Where is the logic in proposing to replace the golf course on land at Freize farm just down the road? If necessary, why not build houses there instead of creating this mindless destruction of a beautiful site that helps so many people live fulfilling and healthy lives. A golf course cannot be made overnight but takes years of careful management to develop and a golf club is more than just a piece of land. It is quite clear that the university Colleges who own this land are driving this development to fill their coffers. I urge you to resist this dominance of the University landowners in Oxford’s planning. I am sure you will find overwhelming opposition to building on Green Belt land. Although I am opposed to building upon golf courses I would like to know why the golf course in the City is not being build on but the one in the Green Belt is? Traffic and Transport - Traffic congestion and associated deterioration in environmental quality is a worsening problem in Oxford and the surrounding area. Routes into North Oxford, through Woodstock and Banbury Roads are particularly bad and both these roads are in a shocking state of repair. These routes cannot sustain any further increase in traffic that would result from the 4,400 houses proposed in the Cherwell Plan. Whilst it is laudable to promote sustainable transport in the future, these problems need to be tackled first. If it is actually possible to encourage people out of their cars why not do it now? The £10 million spent on the Wolvercote and Cutteslowe roundabouts have made traffic problems worse. • Cherwell Council needs to put pressure upon Oxford City to review its own plan and to ensure that Oxford City uses its own land to alleviate the housing crisis and not to exacerbate it by focusing upon economic and commercial growth. They should also increase housing density. • Protect the Green Belt for the future. Do not be one of the people responsible for allowing this important resource to be devastated by development. • Recognise the need to develop infrastructure and transport before housing development and to resolve the current problems before making them worse. • Do not allow building on North Oxford Golf club. Recognise that the Club is a community of people not just a piece of land. Its development would have a negative impact on a number of peoples’ lives. • Challenge the dominance of the University and its Colleges in determining the planning for Oxford. • Above all focus upon sustainable development – do not destroy the character of the City and its surrounding villages. Sustainable development should consider, social, environmental as well as economic sustainability. • Cherwell’s plans are irresponsible and merely responding to pressure placed by the badly managed Oxford City.

Infrastructure - The Oxfordshire Infrastructure Strategy (OXIS) was prepared on behalf of the Oxfordshire Growth Board to provide a view of emerging development & infrastructure requirements to support growth from 2016 to 2031 & beyond. We would like to understand how the infrastructure identified as necessary will be funded in order to provide a sustainable strategy for growth. Flooding - As CDC will be aware, the Environment Agency is currently developing the plans for a proposed Flood Alleviation Scheme (FAS) for Oxford. OPT is informed by the EA that it is not in a position to model for future growth so that the current plans are based on what is there now. It does not appear that any account has been taken of this scheme in this Partial Review & in OPT’s view it is fundamental that any development that is to happen in Cherwell District takes account of the changes downstream at Oxford as well as in the more immediate vicinity & it would ask that this criterion to be added to the assessment of all potential development sites.

Proposed Submission Plan - General Comments

PR-C-1474	10/10/2017	Leslie	Allen			N	Y	
5201	<p>Comments</p> <p>"Lack of effort and due diligence by Cherwell District Council and Oxford City Council in researching potential sites. The Oxford City Council local plan preferred options rejects small site of less than 0.25 ha (Approximately 90 - equivalent to 30 football pitches) and also ignored sites in which the owners do not wish to sell plus those such as builders yards which due to city expansion over time are no longer suitably located and should therefore be considered for housing. There is a massive area where the old city gas works used to be which could also be suitable for housing. It is no wonder then that Oxford's contribution is so pathetically small at 3.7% Oxford have in the past also rejected schemes for a social housing development on redundant playing fields near William Morris Close. The Council does not seem willing to compromise but expects others to solve its problems. Oxford's information and approach does not appear to have been questioned by Cherwell and in my opinion indicates a lack of due diligence by both parties therefore making both plans unsound. In my opinion both councils have opted out of making tough decisions leaving it instead to the Inspector. Although housing is flagged up as a need, recent developments along the Botley Road e.g. Waitrose could have provided a local housing site, similarly the development for Islamic Studies in St Clements also could have been used for housing. It therefore appears that Oxford City Council does not have a practical grasp of solutions in its immediate locality. In addition, Oxford City Council has allowed the University and Oxford Brookes to expand out of all proportion swallowing up properties for their students rather than other residents. It is noted that the Cowley barracks site is earmarked for student housing, is there going to be corresponding relinquishing of properties for use by others? Similarly Cherwell have ignored opportunities to look at smaller sites less than 2.0ha which would lend themselves to discrete development and blend in with the villages. One of which was a brownfield site in Begbroke which was totally ignored (despite being previously suggested by the parish council) yet when the owners submitted plans for a small workshop, the application was rejected by CDC 'as it was in the Green Belt' !!!!! The ex-military bases in the Arncott area would be far more appropriate for large scale housing as there is already the presence of a rail infrastructure which could easily connect to the national rail network rather than just Oxford. The data supplied in previous documentation (Oxford's employment areas) indicate that 35,300 workers are employed to the East and South of the city compared with 31,400 in the city centre. It would therefore be more logical to develop housing in these areas rather than towards the North and therefore avoid increased journeys being funnelled through an already inadequate transport infrastructure. The level of job creation is not based on any real fact but mostly speculation. It does not take into account any effects of Brexit, the fact that there is an increasing trend towards working from home or the Government's latest guidelines on housing and is therefore unsound. Oxford City Council's recent thoughts of levying a charge for workplace parking could well reduce the level of companies wishing to operate in Oxford even further. The existing scientific sites are not full according to recent adverts Begbroke Science Park has large amount of space for rent in 2018 equally the Culham Science Park has non science tenants including a pest control firm. Although Oxford is a 'centre of excellence' in certain fields, Cherwell and the other Council's needs to develop other sources of employment apart from the hospitals and universities, if there is to be suitable and sufficient employment across the region. Putting you eggs in one basket is not a good strategy for the future. International companies will move facilities to wherever is more cost effective. There is a real risk 'affordable housing' may not be affordable for long. This is due to forces largely beyond local authority control .Flooding the countryside with houses will not have much effect. if located near 'mass transit systems' this will only help push the prices up.Type of developmentThere does not appear to be very much detail on the type of tenure there should be a mix of Freehold and rented. There is a lot of talk about 'affordable housing' but this is not defined and the Councils appear to be incapable of ensuring that developers cater for those on lower salaries. Fines are not enough as it is cheaper for the developer to pay the fine It is quite clear that unless the type of tenure is clarified then the land owners will not only profit from an exponential increase in land but also an ongoing substantial income unless they relinquish title. It has been reported in the press that key workers will get a 23%discount on the rental market rate. With extortionate rental levels they still won't be able to afford it. With regard to house prices, the affordability issue is not new. Oxfords proximity to London and the fact that it has always been within commutable distance has pushed house prices up yet local pay has always been lower. This effect was noticeable following the opening of the rail link at Water Eaton.Transport infrastructure and provision of public transport and biasedapproach to provision. It should be a condition that the transport infrastructure must be put in place before any development is permitted. Existing systems are inadequate for current needs let alone expansion. In addition, there has been vast expense and disruption to the major routes both within and to the north of the city for no real benefit., indicating that the knowledge of traffic movements both into Oxford and through the important junctions are seriously flawed there are also serious issues at motorway junctions (9 and 10) The bus lane improvement along the A44 Begbroke to Loop Farm.is physically impossible owing to the restrictive widths of railway and canal bridge crossings plus the underpasses at Peartree Interchange. Plans for 'cycle and pedestrian improvements along A44 between Bladon Roundabout and Peartree Roundabout', will not help either. Equally the constant referral to cycling needs to be put back into context. Although encouragement for this form of transport and the provision of safe route is commendable, it is not the major form of transport and given the age range and ability of the working population in Oxford combined with the British weather is unlikely to become so. It is also useless for carrying heavy loads such as the weekly shop. The proposed closure of Sandy Lane to motor vehicles. is unbelievably silly, un sound and not justified. It directly contradicts other proposals to reduce congestion at Langford Lane and Peartree. Sandy Lane is a vital and very well used link for Begbroke and Yarnton to get to Kidlington and vice versa. Closure of this link will add significantly to congestion and journey time for those in the affected villages. At present there seems to be no 'achievable' transport plan either by lack of funding or lack of joined up thinking by national , local and city authorities. Along with the major landowners. The Councils have a very poor track record in solving transport problems e.g. banning busses from Queen Street, modifications to the Cowley Road, Resisting the building of adequate car parking at the John Radcliffe hospital (which resulted in gridlocked roads) and spending £10 million on a roundabout scheme which increases journey time according to the local press. It is also clear that councils do not have the ability to influence commercial operators as we now have Oxford Bus and Stagecoach recently running competing services between Woodstock, Kidlington ((via Langford Lane) Water Eaton Summertown and Oxford yet missing out villages such as Begbroke which contain commuters and have no east/west connections following the demise of the K2 bus services following funding cuts. In addition, emphasis would be better focussed on diverting / improving routes for those travelling through Oxfordshire from either the N/S and E/W directions away from the problem areas near Oxford City.Discrimination against the elderly and mobility impaired persons on the A44at Begbroke Begbroke is a village cut in half by the A44 All persons using public transport therefore have to cross it at least once. Despite ongoing requests to Oxfordshire County Council for a controlled pedestrian crossing, the level of traffic is now such that elderly / persons with mobility issues cannot safely cross and are thus subject to discrimination. While traffic is queuing it is only possible to cross due to the good will of drivers. There does not seem to be provision of a suitable controlled crossing for Begbroke despite the increase in traffic which will result from any housing development. It should be noted that a crossing was provided at Yarnton yet the field of view for oncoming traffic is worse at Begbroke. Impact of the proposed developments on agricultural land and wild life populations. The land between Begbroke and Yarnton supports thriving populations of wild life including Red Kites, Deer, Woodpeckers, Pheasants Wrens , Hedgehogs, Bats and Dragon fly along with other species that support the eco system. Water voles have also been seen in Rowell Brook. The idea that wildlife will fit neatly into a wild life corridor is unsound. These species need the space and tranquillity away from human life in order to survive and flourish. Any development in this area will squeeze wildlife habitat and since people will inevitably bring cats, dogs and associated vermin such as rats, this will have a major effect on species currently thriving. Similarly any development along by the canal and special scientific interest sites will be detrimental. This has already occurred where building up to the canal at Kidlington and Langford locks has resulted in a downgrading of the environment and an increase in litter. It should also be noted that this area contains good agricultural land which in times of rising population should not be sacrificed. This area already provides a high quality walking and leisure environment for inhabitants of Kidlington , Begbroke, Yarnton and others. It must not be degraded."</p>

Identity of Kidlington, Yarnton and Begbroke: This densely over-populated and huge site would serve to merge the identities of what are currently three distinct places. Creating an indistinct sprawl, with east-west links worse than at present. This response though separate and my own should be read in conjunction with the Representations made by the Begbroke & Yarnton Green Belt Campaign "BYG".

Changes Sought

For the reasons I have given AND the Representations made by the Begbroke & Yarnton Green Belt Campaign which I additionally support and adopt as part of my own Representation in this document, the Plan cannot be changed to make it legally compliant or sound and should therefore NOT be submitted for Inspection.

Reasons for Participation

We object to the partial review for the reasons given below:
Do not consider the proposed submission plan to be sound and do not see any valid reason for exceptional circumstances to justify removal of green belt land in the area. The report that Oxford's unmet housing need is as high as stated in the plan has been thrown in to doubt with conflicting reports, and that new Government targets are significantly lower than this plan is based on. The plan is unsound and unjustified. It is being rushed through and not based on accurate figures. The proposed plan for improving infrastructure in the area to support this level of development is nowhere near realistic on a physical or financial basis. It does not begin to address the problems that will arise in this area. The proposal of closing the road between Yarnton and Kidlington is not justified at all. The plan is unsound as the need has not been thoroughly assessed or understood and no effective solution has been put forward. There is no justification for removal of green belt land in this area based on these proposals.

Grew up in this area and have recently returned after 15 years living in London in order to start my family in this beautiful part of the city. Pollution and increased traffic are my main concern as this would damage the area further – the horrendous concrete Cutteslowe Roundabout is bad enough already!! We need the Golf Club and the Green Belt to remain how they are to counteract the damage from the Cutteslowe Roundabout. More houses means more traffic and the roads around here are already over congested. Furthermore, I think the impact of the Northern Gateway and Papermill should be gaged before any new plans are settled upon.

Object in the strongest possible terms to your proposal to take land around Yarnton, Begbroke and Kidlington out of the Green Belt and to encourage developers to build thousands of dwellings to a high density. Consider that the proposed Submission Plan is Unsound, NotPositively Prepared, Not Justified and Not Effective for the following reasons:The result will be a practical merging of these three villages to create an urban sprawl, effectively creating a new town – and practically joined to North Oxford. Previous far-sighted governments created the Green Belts to prevent just this occurrence happening. This is against the National Planning Policy Framework regarding the Green Belt. It also spectacularly contravenes your own Policy ESD14: Oxford Green Belt (The Cherwell Local Plan 2011 – 2031 Part 1) where you promise to maintain all the Green Belt to protect against precisely what you are proposing to do (quotes the 5 purposes of land in the Green Belt in the letter)
Yarnton and Begbroke are two small, quiet villages each with a distinct culture and character which will be totally destroyed by any such development. Indeed, Yarnton has claim to be the oldest village in the country with a history of farming thought to go back 5,000 years. Its setting and character will be lost in this urban sprawl. Furthermore, Cherwell Local Plan 2011-2031 Policy Villages 1 (page 246) categorises Yarnton and Begbroke as Category A villages. The policy only allows minor development, infilling or conversion in, or alongside these villages.Besides the loss of our identity and character, the loss of the recreational and visual amenity value of these fields would be enormous, not to mention the loss, too, of good agricultural land. The pressure a development like this would have on our infrastructure would be tremendous and dwarf the problems we have now. The A44 can be dreadful already during busy times and the extra traffic generated by several thousand new homes would cause bigger traffic flow problems and not helped by the proposed closure of Sandy Lane to motor vehicles. This is classified as a key alternative route by Oxfordshire County Council in case of problems on the A44 or A4260. This is unacceptable. Flooding and drainage generally has been a problem in Yarnton for a long time and the loss of these surrounding fields to concrete can only greatly exacerbate the problems. The Strategic Housing Market Assessment (SHMA) has always been thought to be highly ambitious and inflated. Indeed, recent government recalculation has reduced Oxfordshire's need by nearly 50%. Economic growth projections are overoptimistic and who knows what will happen to the economy post Brexit but it's not looking positive – since the referendum, growth has slowed considerably in the UK while it is rising in the rest of the E.U. And new figures show UK productivity to be 15% worse than our European partners and the USA. The major employment areas in Oxford are in the South and East of the city so this housing will be in the wrong area. With the reduction in Oxford's housing needs, they should be looking to build housing in those areas preferably on their brownfield sites and ones earmarked for commercial premises.None of the twelve reasons you cite as justification for taking our fields out of the Green Belt are 'Exceptional Circumstances' at all. They are merely attempts to justify building an unacceptable volume of housing based on flawed and overinflated projections. Many of the reasons are not relevant at all to the issue.The Green Belt protects us and our rural identity, character and way of life. I urge you to think again, drop this draconian proposal and maintain the entirety of our Green Belt.

Object in principle and practice to the permanent loss of Green Belt land. The countryside around Yarnton is rich in wildlife and the loss of habitat will have a massive environmental impact which cannot be rectified. Why has Cherwell put forward a plan which clearly goes against the National Planning Framework guidance (quotes the 5 purposes of land in the Green Belt)

Has Oxford City Council proved beyond all reasonable doubt that there are not more suitable locations which could be used or regenerated within its own city boundary? Are there not more suitable locations around the county which would not require the loss of Green Belt land? Why has Cherwell District Council ignored its own Green Belt policy? (Quotes Policy ESD 14 - Oxford Green Belt and A11 and B.260 in letter)

Yarnton is a village with approximately 1,350 houses and Begbroke has just 390 houses. Building 2,480 new houses on the Green Belt land between the two villages is disproportionate to the size of both villages and will essentially mean that each village loses its own unique identity and instead merges with Kidlington into one large conurbation. The impact of an additional 4,400 houses and associated cars is likely to mean that the A44 will be gridlocked during daily commuting times. This main route into the city is already overstretched and can often cause huge delays with the volume of traffic currently using it before the extra traffic is added into the equation. The additional housing may be being proposed to meet Oxford's unmet housing needs however anybody living in the area will face real difficulties actually commuting into Oxford - even allowing for the proposed new transport infrastructure (if the recent updates to the traffic system around Wolvercote roundabout which have had no impact whatsoever are anything to go by). Cherwell District Council should be looking after the needs of its constituents and whoever has been involved in putting these plans forward should ask themselves if that is what they are truly doing and the impact of the legacy that they are leaving for future generations.

Object to the proposed development and consider the proposals unsound on the following grounds:

1. Increased traffic congestion, pollution and noise. These are all very serious issues for Oxford, and for this part of it. In Linkside Avenue we are surrounded by noisy roads. The impact of development on the golf course will be felt particularly badly. With recent research and mounting concern about the dangers of air pollution, it is becoming increasingly clear that the future must include proper planning to limit private traffic and road use. There appears to be no plan to manage the traffic for this development.
2. Loss of irreplaceable, irrecoverable Green Belt. This is not consistent with national policy.
3. Fear that the housing built will not increase the housing available to ordinary people in Oxford, key workers such as nurses and teachers, and people on average incomes, and that any quotas imposed for affordability will be a) not really affordable and b) not held to. Any plan should focus on alleviating demonstrated housing need by local people, and include a high proportion of housing for purchase and rent by people on low to average incomes. Instead it seems likely that the area will become a commuter suburb for London.
4. Fear that the development is being led by commercial interests rather than a rational coordinated overview of housing need in Oxford and the best way to meet it. For these reasons I think the proposed submission plan is unsound, not positively prepared, not justified and not effective.

Moved into the quiet village of Begbroke over 25 years ago. Begbroke was chosen because of its rural surroundings. Moving from central Witney with congested routes to Oxford, pollution and noise my new home was idyllic. Begbroke and its surroundings as part of the Green Belt was a forever home. Walk almost daily in the countryside around our village. All our beautiful walks through heath, woodlands and fields are tragically in danger. All the floral and fauna will disappear too. Over the years extra property both residential and non residential have been built. We already suffer from localised flooding which has increased to the extreme that some residents have to use sandbags to protect their property. Less Green Belt means less ground to take away the excess water exacerbating the flooding issues. Already there is or soon to be new housing in Woodstock, Long Hanborough. Also Banbury and Bicester have expanded rapidly. North Oxford Golf Course will soon also be disappearing under bricks, mortar and tarmac. Now here the Green Belt is under attack. Developers want to destroy the Green Belt for what is only financial gain. Derelict and redundant land needs to be used as an alternative. Urban Sprawl. Kidlington will become part of a vast urban sprawl encompassing north Oxford, Cutteslowe, Wolvercote, Begbroke, and Yarnton. Our beautiful green countryside will disappear forever! Unaffordable Houses. Very few of the new houses would be 'affordable' in reality. Developers across the country consistently default on their affordable housing quota. Predicted prices for so called starter homes at Barton Park are already beyond the reach of first-time buyers. Most of the new houses are likely to serve the London-commuter and buy-to-let markets, and Kidlington's young people and the county's key workers still won't get the truly affordable housing they need. Our green rural surroundings will be destroyed! Public services to get worse. Underfunded public services, already struggling, will deteriorate further: waiting times to see your GP will be even longer and school class sizes will rise. Our children's countryside heritage will no longer exist! Traffic Gridlock. Traffic congestion and air pollution will undoubtedly worsen due to thousands more vehicles on our roads. This is in addition to the extra traffic from the 22,000 houses already approved elsewhere in the District by Cherwell, and over 10,000 more houses to be built in the other Districts just for Oxford overspill. Construction traffic and road works will add to this chaos for years while the development takes place. The fabulous scenery that surrounds us gone! Please reconsider the submission of these ill thought out plans.

Comments

Consider that the proposed submission plan is Unsound, Not Positively Prepared, Not Justified and Not Effective for the reasons given below.

1. The plan proposes development that would merge the villages development that would merge the villages of Yarnton and Begbroke with Kidlington making a huge conurbation on land that is green field Green Belt in contravention of the whole aim of the Green Belt, and the policy on it endorsed by Cherwell District Council as recently as July 2015.
2. The plan purports to be for 'housing need' yet it includes a substantial area around the present Begbroke Science Park for business growth with neither explanation nor justification for this development. The area that has become Begbroke Science Park used to be a farm and ancillary old buildings and its current development as a science park is development on a brownfield site. There is no justification for extending this development into the neighbouring fields of the Green Belt around it. As it is Begbroke Science Park boasts that it is set in a 'rural idyll', and that would be destroyed. Quotes Begbroke website in the letter.

Proposed Submission Plan - General Comments

PR-C-1501 4704	09/10/2017	Cherry	Brougham					
Comments				4,400 new homes is only appropriate for current Local Plan preparation purposes and will need to be reviewed very soon not only as the Government has recently revised Oxfordshire's housing requirement downwards, but because of Oxford City's Local Plan which is being consulted on. Since any reduction in Oxford's requirement will come off the numbers sought outside the City such reductions would be heavily 'geared'. Need to specifically meet Oxford's needs in planning for the additional housing development - the additional housing is not required to meet Cherwell's housing needs which are covered by the Local Plan. The areas of search are appropriate, given that the intention is to meet Oxford's housing needs. Agree with minimum site size threshold of two hectares for the purpose of site identification, and that Cherwell District Council should not be seeking to allocate sites for less than 100 homes.				
Changes Sought				Reasons for Participation				
PR-C-1501 4713	09/10/2017	Cherry	Brougham					
Comments				It is difficult to see how the process can be completely unaffected by the knowledge that Oxfordshire's housing requirements have been revised downwards by the Government. Changes are required. The housing densities of sites PR6-7 are very low. A considerably smaller land-take could take 4,400 dwellings at urban densities. PR6a and PR6b should be removed from the proposals as their development would all but eliminate the 'Kidlington Gap'. PR6c should be used for housing instead of replacing the current golf course - it is close to the Northern Gateway. At appropriate densities PR7a & b, plus a greatly reduced PR8 and 9 could take the 4,400 dwellings. Nothing beyond careful monitoring of the indicators already identified to ensure that the final plan is delivered and sustainable development is achieved. One aim of monitoring must be to ensure that no development proceeds until the necessary transport and other infrastructure is costed, funded, and programmed. No further areas of search should be considered - those identified so far are close to Oxford and/or on transport corridors. For example, sites in Kidlington north of The Moors would add to traffic on the A4260. It should not be any sooner than 2021, given the uncertainties surrounding the number of dwellings that will be required until the Government's revised figures for housing requirements have been consulted on, and until Oxford City has completed its Local Plan. Agree with phasing of land release, but this should start with strategic sites nearest Oxford and in Kidlington (PR6a, PR6c, PR7a and PR7b) so as to delay the impact on Yarnton so that the impact of any reduction in the numbers of dwellings required can be concentrated there.

PR-C-1506	09/10/2017	Bryony	Thomas					N
4738	Comments							
Economics: it is not sound economics to add to Oxford's traffic and infrastructure issues. Firms will not be attracted to Oxford if our ring road is a frequent car park. Patients frequently miss appointments at hospitals because they are held up in the jams. Why do you not consider building up another centre in Oxfordshire such as Banbury, where the Horton can be expanded to take some of the pressure off the John Radcliffe hospital?								
Leisure: the areas proposed for building are mainly pleasant and unspoilt countryside with many footpaths and green spaces, heavily used by walkers and joggers and you will greatly detract from the pleasures of living in Kidlington, increasing the chances of mental and physical health issues.

PR-C-1509	09/10/2017	Mrs Dominique	Burford					
4749	Comments							
Very concerned by the building of the 4000+houses in the Begbroke/Yarnton area.Cannot believe Oxford City needs to use the land around us to meet their needs. Can pinpoint some areas in the City, which could be built on. The infrastructure around us is totally inadequate to cope with the proposed number of houses. The promises made are not sustainable. The problems we already face with sewage and flooding seem to have been disregarded. The idea the traffic will not be increased thanks to the creation or improvement of the cycling lanes is totally ludicrous. A lot of people will not consider cycling to work in Oxford an option as it will be much to far. We are struggling already with bad congestion on the A44 and A34 at peak times. The level of pollution will also increase. Appalled to think our Green Belt, which so far had been fiercely protected, is going to disappear to bereplaced by some kind of urban sprawl, destroying what is left of our countryside. Hope you will look very carefully into this rushed plan and consider better options.

Objections below.- The proposal contradicts Cherwell District Council's own 'Local Plan Policyon the Green Belt', which states that development should be minor, infillingand conversions only.- Yarnton, Kidlington and Begbroke are three distinct communities withimportant histories. This development would destroy these three identities,merging them into one unit, too large to have any community.- Destroying the Green Belt means the loss of high quality agricultural land,precious wildlife and recreational spaces. We plan to start keeping bees nextyear and cannot do so if houses are built on the field behind our house.- We have experienced flooding from the field behind Rutten Lane.Destroying the Green Belt would worsen flooding.- Proposed extra housing would be bought by those who can pay the most.This would be London commuters, effectively making Yarnton, Kidlington andBegbroke a sprawling suburb of Londoners, and destroying local villagecommunity. Oxford's housing problem would not be solved.- Oxford City would become an urban sprawl, expanding beyond itsboundaries.- The number of houses suggested is out of all proportion to the current sizeof the three villages.- Oxford City Council could consider building flats rather than houses to meetits housing needs.- Cherwell District Council could consider other sites within easy reach ofOxford by train e.g. Bicester.- The A44 is already congested and the increase in traffic would be anightmare.- Sandy Lane is a vital link road to Kidlington. Closing it would furtherincrease traffic on the A44 as well as being hugely inconvenient. We useSandy Lane several times a week. We have three young children so travellingby car is our only option. We also cycle to Summertown for work and will notcycle via Kidlington.- The A40 is also extremely busy and would become more so.

Having looked at these for extensive building between Yarnton & Begbroke, & between Kidlington & North Oxford, I wish to object based on a number of concerns: 1) the enormous change to Yarnton as a village, making it 3 times its current size & altering it beyond all recognition, 2) the virtual joining of Kidlington to Oxford, threatening the identity of the village, 3) the massive increase in traffic caused by so many more people living in these areas. These roads are already congested, especially the Sainsbury's roundabout & Cutteslowe roundabout at certain times each day, 4) although I appreciate that people need places to live & affordable homes are needed, I don't think it is reasonable to build them all in this small area of just a few miles. Surely there are other places in Cherwellwhich could accommodate many of these homes?

4755	Comments							
It appears to be the strategy of Oxford CC & or the Oxon Growth Board to increase the employment opportunities in & around Oxford using the consequential influx of people to justify building on the GB. There are other options available to increase employment opportunities & increase housing in a sustainable manner. For instance there is room for commercial development to the north of Kidlington & at Begbroke Science Park. New housing to the north of Kidlington, out of the GB would provide cheaper housing for those working at those sites. Furthermore housing at the Northern Gateway, rather than a commercial development will result in a morning south-north commute, against the existing prevailing north-south flow of traffic. The plan provides for affordable housing. However the definition, which is Oxford City's definition is too wide in some respects & too narrow in others. Key worker definitions don't contain sufficient constraints on key workers from outside the area. Therefore encouraging migration by key workers from London. Also it does not provide any facility for private sector 'key workers'. We need housing for local people, irrespective of what sector they work in. Only achievable by restricting price or the introduction of help to buy or other innovative ways of purchasing for first time buyers. For those unable to buy, we need social housing at affordable rents for local people. Exceptional reasons need to exist to justify building on the GB. Oxford CC's plans to build commercial premises creating 5,000 jobs, without having 5,000 people within reasonable commuting distance to take these jobs. That is not an exceptional reason to justify building on the GB. If Oxford CC have a housing shortage without the Northern Gateway, then they should use that space to satisfy the housing requirement, before there is any argument to justify building on GB. If Oxford CC believe there is sufficient people who can commute to take these jobs, then there is no reason to build on the GB. The Govt. has changed the calculation method for housing need. CDC have refused to suspend this process until the implications of those changes have been considered & applied to these proposals. CDC's view seems to be that if the plans need to be reviewed, they will do it & they can be trusted to decide which if any sites are rejected. The public should be consulted in the context of the plan as a whole. No one knows what the plan as a whole might conceivably be.

Comments

The underlying problem in Oxford and the surrounding area is the influx of people from outside the area to take advantage of employment opportunities in Oxford, the private schools of North Oxford, and the transport links, especially the new Oxford Parkway Railway Station into London. As a consequence property prices have increased to a point where local people are unable to afford properties either to let or to buy. They are being priced out by people moving out of London where salaries are much higher. The Oxfordshire Growth Board have determined Cherwell DC should provide an additional 4,400 houses to meet Oxford City's unmet housing need. Cherwell's proposals will; decimate the green belt, destroy Yarnton and Begbroke's environment and increase traffic chaos to the north of Oxford. Oxford City's commercial development in the Northern Gateway will create 5,000 new jobs.

According to the Office of National Statistics, Oxfordshire's unemployment rate is 0.7%, amounting to a claimant count of only 2,900 in the entire county. Take away those; between jobs, approaching retirement, the unemployable and Oxfordshire is close to full employment. The Northern Gateway will attract thousands of people more into the area, exacerbating the housing shortage. There are already other proposed commercial developments in and around Oxford. The problems above that have led to the 'unmet housing need' will therefore only be exacerbated by the introduction of a further 5,000 jobs on Oxford City's only remaining land for housing. The Northern Gateway development is not sustainable. In any event Oxford City's view that they cannot find any other land on which to build houses, is questionable. They should be building affordable housing on the site of the Northern Gateway site.

Ironically Cherwell's plan includes building on North Oxford Golf Course, while Oxford City Council consider Southfield Golf Course as being too important a facility to build on, despite it being in the middle of the City's major centres of employment. Traffic congestion in and around Oxford is extreme, especially in the north of Oxford and to the south of Kidlington. There are other areas around Oxford on which to build housing that would be closer to major employment areas. In particular along the Northern By-Pass (A40) between the existing new Barton Gate Development and the Marston Flyover. Such housing would be closer to Oxford's employment centres such as the hospitals, the BMW factory and its surrounding employment centres. It appears to be the strategy of Oxford City Council and or the Oxfordshire Growth Board to increase the employment opportunities in and around Oxford and use the consequential influx of people to justify building on the Green Belt. There are other options available to increase employment opportunities and increase housing in a sustainable manner. For instance there is substantial room for commercial development to the north of Kidlington and at the Begbroke Science Park. New housing to the North of Kidlington, out of the green belt would provide cheaper housing for those working at those sites. Furthermore housing at the Northern Gate, rather than a commercial development will result in a morning south-north commute, against the existing prevailing north-south flow of traffic. The plan provides for affordable housing. However the definition, which is Oxford City's definition is too wide in some respects and too narrow in others. The key worker definitions do not contain sufficient constraints on key workers from outside the area. Therefore it will only encourage more migration by key workers from London. On the other hand, it does not provide any facility for other private sector 'key workers'. We need housing for local people, irrespective of what sector they work in. That can only be achieved by restricting price or the introduction of help to buy or other innovative ways of purchasing for first time buyers. For those unable to buy, we need social housing at affordable rents for local people.

The Government has changed the method by which housing need is calculated. Cherwell have refused to suspend this process until the implications of those changes have been considered and applied to these proposals. Cherwell seem to be taking the view that if the plans need to be reviewed, they will do it and they can be trusted to decide which if any sites are rejected. The public should be consulted in the context of the plan as a whole. No one knows what the plan as a whole might conceivably be. In Cherwell's original options document Sites PR14 and PR27 (Behind The Moors, Kidlington) were suggested as possible sites for development. Cherwell have rightly discarded this site as unsuitable. It is rumoured that developers are to make an application to the Planning Inspector. If they do I would object on the following grounds:

1. The site is in the Green Belt and must be preserved for the same reasons that existed when it was declared as Green Belt.
2. Loss of the landscape and rural views towards the oldest part of the village would be destroyed.
3. There would be an increased risk of flooding. There has been significant flooding along Mill Street, the land behind the Moors and to the west of the cemetery in very recent years. A development will exacerbate that flooding.
4. There is inadequate local infrastructure, such as surface water and could water drainage.
5. The road network is not up to coping. The Moors and Mill Street are long straight roads that already have speed humps installed. They are close to a school, nursery and a conservation areas.
6. The local Primary schools are full. This single development would necessitate another school for which there is no provision.
7. The fields in question are heavily used as a recreational amenity for dozens of people every day, in the summer perhaps hundreds a day.
8. There would be a loss of habitat for Short Eared Owls, Great Crested Newts and Skylarks.

We believe that the plan will be a massive failure if it removes land from the green belt only to see insufficient delivery of affordable housing, or new development without supporting critical infrastructure, contrary to the plans objectives. We object to the revision of the local plan because it is unsound.

As a Yarnton resident I strongly object to CDC's plans to build 2,480 new houses on the GB land surrounding Yarnton, Begbroke & Kidlington. I understand that the 5 conditions for GB status are met. Therefore, it is only in very exceptional circumstances that such a building project can be permitted. If this plan was successful it would destroy the nature & quality of life in all 3 villages. Seriously harming the wildlife dependant on this area for survival. The impossible strain that would be placed on the infrastructure, which currently struggles, would have a major impact in the area.

Transport: The proposal provides limited insight/consideration to realistic improvements to the road networks. This would put unnecessary & impractical strain on the already overcrowded road system in & around Begbroke, Yarnton & Kidlington. The state of these roads are already of poor standard, increasing usage would only worsen this. Resulting in damage to vehicles & complaints to the council as well as unhappy motorists/voters/council tax payers being delayed in reaching planned destinations. Increasing traffic, particularly on the A44 Woodstock Rd between both Rutten Lane & Kidlington roundabouts, plays a crucial role for everyone. There is currently no bus service between Yarnton & Kidlington. If Yarnton residents wish to visit the main supermarkets in Kidlington they have to drive there. Thus, if the Sandy Lane link between Yarnton & Kidlington is closed to through access it would force residents onto the already overcrowded A44 Woodstock Rd, potentially increasing their journey length, adding to cost, pollution & the inevitable gridlock, already a regular feature on that road.

Health: Getting an appointment at Yarnton GP's is already a lengthy process. It's a min. 2 week wait for a regular appointment. Urgent, same day, appointments are limited & a question of luck. With potentially 2K new families to the area, the service would crumble under the strain leading to serious health implications for locals. Particularly impacting on vulnerable elderly & young people.

Quality of Life: The majority of residents who choose to live here do so because they prefer not to live in an overcrowded, under resourced urban sprawl. The plans would turn Yarnton, Begbroke & Kidlington into an urban sprawl, losing the village community. It would potentially become a dormitory town where those wishing an easy commute to London via Oxford Parkway increasing the risk of filling the area with people who have no real interest in it & no wish to integrate into the community. Parkway Station is already well used, especially during the week & would quickly become overcrowded with too few parking spaces, as would all the other car parks in Kidlington.

Summary: Concerned about the accuracy of the information this has been based on & the speed at which the council appear to be pushing this through. I don't feel well represented by my local council & given an option to provide a vote of no confidence I would happily do so. I don't believe the decisions taken for this so far have been well informed. Resulting in residents now distrusting the Council's motives. I would like to see evidence that thorough investigations have been made into using brown field sites & more appropriate locations within Oxford's boundaries. I appreciate more homes are needed, however, this plan appears excessive, doesn't address the increasing homeless concerns & shows little practical consideration to the supporting infrastructure. The council tax paying residents deserve more respect from CDC.

I hope that there is a satisfactory outcome to the consultation as many people in the area are concerned about the scale of development, the lack of infrastructure budgeting and where any funds would come from to pay for the infrastructure necessary, and the continued pressure in both Oxford and Cherwell to favour employment opportunities over housing.

Whoever placed this plan for new houses in Kidlington must either a not live here or is making a tremendous profit on the proposal. The complete lack of an integration program for the total proposal is sufficient to show that this project is not thought out. Somewhere someone is making a large profit for a minimal investment. Perhaps the councillors supporting this are in on this. Kidlington does not have to become part of the urban sprawl to get the City off the hook. Much disgust in reading the proposals, they should be put on hold for good.

Objection to the extent of the above development for the following reasons: At a public consultation in Kidlington an official from your department admitted that the proposed development was for the London overspill. Therefore the claim that it is to meet the needs of Oxfordshire residents is spurious. The National government have revised their projected housing needs for Oxfordshire reducing it to 68% and 50% for Oxford city. Therefore there is no need to build on the GB. The GB is an enlightened legacy from previous generations. With the current expansion of Oxford it is even more necessary for the well being of its population. Building within the city boundaries at a higher density would meet the projected housing needs. Our European neighbours show us how. The infrastructure of the city is strained already. At rush hour the main roads converging on the city are notoriously clogged. The proposed developments will exacerbate this.

As a resident of Begbroke Village, I am deeply saddened to see that the local councils and University is wilfully abandoning the GB to development. This finite resource serves many in the community as a their first contact with clean, fresh air and nature on a regular basis. Its trees and plants serve both functional purposes to feed and maintain vulnerable ecosystems, but also to absorb pollution from our already congested local roads that surround it. It is my concern that the air quality in this area will dramatically worsen by the increased numbers of cars on the local roads, whilst the wildlife that is already vulnerable to the traffic will be forced out of their safety within the GB land and onto the roads, leading to an increased number of road traffic accidents associated with wildlife. A wealth of wildlife including bats, deer, lizards and variety of other animal species are solely dependent on these limited areas where they can be safe from excessive human contact. However, it is the space that the green belt provides that allows people the opportunity to observe wildlife free from stress and free from interference that offer great benefits to peoples mental health. The benefits to the local community of such a space, must not be jeopardised for financial gain by the few, as it should be preserved for all in the current sense, as well as future generations- as it was intended. The documentation that has been presented to date emphasises that the proposed housing will account for Oxford's largely unmet quota, however, it is evident that Oxford has not utilised its vacant land and buildings within the city, as well as to the north, accordingly. Based upon the pricing of the recent housing developments at Barton, it is apparent that the implied 'affordable' homes will be not be suitable for those on the housing list to purchase, and subsequently will be restricted to a limited market. Releasing the GB from its protective status can not be justified for this application. The poor transport links that are currently in place will be worsened by proposed road closures, whilst local floodplains that surround the main through roads and proposed development sites are already vulnerable. This will be subject to worsened flooding as the current, burdened infrastructure struggles to support the new burden. It is for these reasons that I consider that the proposed submission plan is Unsound, Not Positively Prepared, Not Justified and Not Effective for the reasons given in my specific objections above. In addition to the representation made by the Begbroke & Yarnton Green Belt Campaign and would request that my Representation is considered in association with theirs.

Comments								
The plans are completely unrealistic to the transport problems caused by the new housing. The roads are already at full capacity, with a typical bus journey taking 40+ mins to travel 5 miles at peak time. Most of that journey time is spent before even arriving in Oxford. If an incident or accident happens on any of the other routes going into Oxford, then you can easily add another 60 mins to your journey time. The roads simply will not cope with the 4000+ homes that the plans are proposing, before even taking into account the addition homes in Yarnton. The new traffic plans would even make things worse closing down one lane on the dual carriage way. The proposed bike path would make no difference (already longer than the national average in terms of the distance people travel to work by bike) as it starts in Kidlington. The housing being proposed will not ease Oxford's crisis in terms of affordable housing. The new "affordable" houses in Barton cost £270-300k; these new houses will be the same price and not help out any first time buyers. The amount of housing, of the densest in Oxfordshire, would completely destroy Yarnton / Begbroke's identity as villages, as it would combine them with Kidlington, as well as increasing the village populations by 4 times. The number of houses that have been proposed to be needed, are predicted on the economic from 2011/2012; a growth no economist would now predict even before taking Brexit into account. The economic growth around Oxford, is based mainly around the South East of Oxford whereas these houses are going to be built the North West (again adding to the traffic).To top it all off, this housing is for Oxford city's housing shortage, and not Cherwell Council. Houses will be built on Greenfield sites, while brown field sites exist in Oxford itself (for instance around the mini plant) and ludicrously a golf course. How can a golf course be ranked above green fields?

Opposition to Cherwell's Local Plan and its decision to recommend the development of housing on the site of North Oxford Golf Club and neighbouring areas of the Kidlington GB gap. I absolutely recognise the housing crisis this country is facing and the need for each county and city to act in a responsible and proactive manner to address this. But we also have a collective responsibility to ensure that the plans we propose and implement not only address this capacity shortfall but also do so in a sustainable and responsible way. Our responsibility is not only to our current population but also to that of future generations. As a city Oxford is already facing very significant challenges associated with the management of a dense population, constrained by geographical and physical boundaries. We are also a city which has a well-documented problems with traffic congestion and associated pollution problems. As someone who has a personal and family history of respiratory disease and as a healthcare worker who has worked with respiratory conditions the issue of maintaining a 'green environment' and thus the health and welfare of not only the current population of Oxford but also that of future ones, is something I think we all should take very seriously. In making an assessment of how housing needs should be most appropriately addressed there are a number of important steps that should be taken: - ensuring the accuracy of the assessment of need - recent national and local re-assessments of housing need have raised questions about the accuracy of the estimate of the numbers of houses needed. - ensure that when housing solutions are proposed, that they meet the need for which they are intended- that is specifically low cost housing. - that the site and land selected offers a viable and appropriate short and long- term solution to meet these needs - that we take responsibility for determining the way to use our land assets in the most appropriate way and sustainable way. The Banbury Road is incredibly congested at any of the peak times of the day - this has both serious pollution and access implications both for day to day traffic and emergency access. That is not just a problem for today, but also has potentially incremental implications for the future. The Kidlington gap is designated as a strategic piece of the GB and the rationale for this has not changed. The golf course and the land surrounding it provides a very valuable leisure asset to not just golfers but walkers as well, and at a time when we are facing increasing challenges with our public health, retaining such a facility close to the city, accessible to all is such an important feature. It is for this reason, and those outlined in Gill Davidson's recent correspondence, that I urge you to oppose the planned development which includes the removal of North Oxford golf club; which currently provides a protected area of GB neighbouring the busy Banbury Road. Once this is lost it can be restored, so the long-term consequences of this decision need to be robustly considered. As a member of the golf club I naturally have a potentially biased perspective but I fail to see any advantage in using this site over any other proposed site around Oxford. And I fail to see how this Plan would contribute in a positive way to the interests of the community or to the national need for affordable housing and a healthy population. I strongly encourage you to re-appraise the options and the risks as well as benefits associated with these.

The council has a legal duty to support the views of its residents, who are strongly opposed to the proposed development. The plan ignores the views of the majority of residents who object to the proposal hence it is NOT POSITIVELY PREPARED. The proposal is out of scale for the sites listed. Infrastructure will be overwhelmed (especially schools and GP surgeries) i.e. the plan as prepared is NOT EFFECTIVE. Additional traffic on the roads will vastly overburden the infrastructure leading to additional congestion and pollution (traffic projections are based on models using false averaging). Congestion decreases worker efficiency, while pollution from busy roads leads to illness and death. The plan as proposed is therefore UNSOUND. The council is going against its own planning policy as it has not demonstrated compliance with the requirement to consider ALL alternatives to GB. The plan as proposed is NOT POSITIVELY PREPARED. The Kidlington gap and the Yarnton gap are crucial parts of the GB, preventing urban sprawl from Oxford and retaining the unique communities of Kidlington and Yarnton. GB is a permanent designation in planning legislation and unmet housing need is NOT a reason for building on the GB. There are no exceptional circumstances in this case so I object as the proposals are NOT JUSTIFIED and UNSOUND; they are also INEFFECTIVE and INCONSISTENT WITH NATIONAL POLICY. I am saddened by the apparent failure of local democracy in that the local community is very clearly against loss of our critical GB land, the imposition of unnecessary housing and the degradation of community that it would entail, while the council appears already to have made private agreements with developers to go ahead, as revealed in the public meeting at Exeter Hall on September 21st, and which the council were unable to refute. The fact that Cherwell District Council has ignored both Parish Councillors and our own MP, Leyla Moran, is of deep concern. A failure to properly follow its own and national guidelines on planning may constitute an infringement of the law concerning the roles and duties of officials in local government. For all these reasons, I am completely opposed to the Cherwell district council's plan to permit building of 4,400 houses on GB land and I call upon the council abide by its duty to respect the views of local residents and to reject the plans for this additional housing (Policies PR1, PR3 and PR11).

Deeply upset and angered by the plans set out to completely ruin our village of Yarnton. Moved to the village a year ago, largely to enjoy a more rural way of life, in a village with an identity and sense of community. From a very personal perspective, our properly backs on to the beautiful farmland of plot PR9. This was a major factor in why we purchased the property, and we regularly enjoy the views and walks that this offers, alongside many other Yarnton residents. Feel this plan will completely change the feel of the village and make it unrecognisable as it will become part of the 'Oxford sprawl' and essentially merge with Begbroke and Kidlington. Our beautiful countryside would be lost forever. The purpose of the Greenbelt is to stop these from happening. Feel that the justification to remove land for the Greenbelt is completely unfounded. It has already been established that the original SHMA figures did not accurately represent housing need, which were completely exaggerated. Only one third of the proposed housing is being fulfilled with the Oxford boundaries, and feels that much more need to be done in order to investigate how Oxford could meet its own housing needs, without forever eradicating our precious Greenbelt. Understand the 'need' for affordable housing in Oxfordshire, but does not believe that this plan will realistically achieve that. The SHMA (Clause 2.8) states that Oxfordshire household prices are 9x comparable incomes, meaning that in context an 80% market valuation is still out of the reach for many buyers. Aims to deliver affordable housing are rarely met, as Councils lack power to commit the builders who can make greater profit on the higher end properties. Believe that, the area will become increasingly popular with London commuters, and thus will not be serving the needs of Oxfordshire employees and families. Another major factor to consider is the impact that these plans will have on the roads and traffic. Do not believe that there is a sound plan for how our roads would cope with this enormous increased pressure. The restrictions of a railway bridge, canal bridge, and adjacent properties on the A44 would make it extremely unlikely that sufficient adaptations could be feasible or affordable. Current commute to Cowley is already significantly delayed, mainly due to the build up of traffic from Yarnton to the A34 - a situation would be clearly get much worse. Regarding traffic, would also like to object to the plans to close the access from Yarnton to Kidlington (Sandy Lane). This serves as a great alternative to the A44, and allows better access to the resources that Kidlington has to offer.

Changes Sought

Reasons for Participation

For the reasons given AND the Representations made by the Begbroke & Yarnton Green Belt Campaign support and adopt as part of my own Representation in this document, the Plan cannot be changed to make it legally compliant or sound and should therefore NOT be submitted for Inspection.

Member of the Begbroke and Yarnton Greenbelt (BYG) campaign, and wish for them to represent me in regards to the current Consultation and to speak on my behalf at any Examination in Public (or any other official meeting) in respect of the CDC Consultation on its Proposed Submission Plan. This representation is in addition to the response delegated to BYG.

Comments

The proposed submission plan is Unsound, Not Positively Prepared, Not Justified and Not Effective for the reasons given in my specific objections below

1. The proposal has been overtaken by events on a national scale. The whole basis on which the figures for Oxford's unmet housing needs and Cherwell's own needs have been calculated is rendered inappropriate by revised Government figures to be applied from 31st March 2018. These figures substantially reduce the amount of housing needed in Oxford (by 40%), thus hugely reducing the unmet need which might be met by neighbouring authorities, including Cherwell District Council. This reduction together with the reduction of Cherwell's own allocation (by 33%) means that the zones already allocated for housing within the Cherwell District Council will largely, if not entirely, meet this new reduced requirement without any need to sacrifice valuable Green Belt land such as that proposed around Yarnton & Begbroke.
2. No exceptional reason has been demonstrated for building on the Green Belt. There is no coherent argument why Green Belt land needs to be sacrificed for this additional housing. Every indication is given that this land has been chosen simply because of its proximity to Oxford. The whole purpose of Green Belt land is to prevent urban sprawl onto agricultural and forestry land around urban centres. As Oxford expands, the preservation of all existing Green Belt land, especially that closest to Oxford, is essential.
3. The proposed development is unlikely to impact on Oxford's unmet housing need. Electing to develop land around Kidlington, Yarnton and Begbroke will provide housing very conveniently close to the new Oxford Parkway railway station with its fast rail services to London. It is very likely that an appreciable amount of this housing will therefore be occupied by people commuting to London rather than by those working in Oxford and for whom the development is ostensibly being provided. Estate agents locally are already proudly boasting that housing in Kidlington and Yarnton is much in demand by such commuters to London with consequent increases in house prices. Houses on these proposed developments are therefore likely to be out of reach of a large proportion of those working in Oxford where the principal labour markets are education and health services which can not offer salaries to compete with those paid in the finance sector and the professions in London. If extra housing is really to service Oxford's unmet need, then it should be provided in locations where there is less easy access to commuting routes to London (for example West of Oxford) and certainly not so close to a fast rail link.

Have great pride living in a beautiful village like Kidlington. I love the access to green spaces and the community spirit of small place like we currently have. I think the extra houses would change the place in a hugely negative way. There would be far too much pressure on the current amenities including medical practices, schools, shops and transport. You would be destroying wildlife habitats that are so valued by the residents and would change the entire nature of the place to a small town or suburb of Oxford, which I'm sure all the residents would object to. We didn't choose to live in a larger town and I think the results of this development would be hugely detrimental and has been badly thought through. I consider that the proposed submission plan is unsound, not positively prepared, not justified and not effective for the reasons given in my specific objections above. Please reconsider for the sake of us all.

Effective and Deliverable

10. Table 4 of the Proposed Submission Plan set out the Council's intention to accommodate the entire requirement across eight strategic sites in the south of the district around Kidlington. All but two of these sites are larger than 400 dwellings, with the largest being 1,950 dwellings (Land East of the A44, Begbroke). Whilst there are advantages to strategic allocations, they typically require the provision of more strategic infrastructure to support their delivery. By way of example, Policy PR6a of the Proposed Submission Plan requires the allocation of Land East of Oxford Road, North of Oxford to include the provision of a primary school and a local centre. The development of Land West of Oxford Road, North of Oxford must not commence before the development of a replacement golf course (Policy PR6b). Development on Land East of the A44, in Begbroke for 1,950 includes the provision of a secondary school to incorporate a four court sports hall, the provision of a primary school and provision of a local centre (Policy PR8). To ensure this infrastructure comes forward, the Proposed Submission Plan requires a Development Brief to be prepared (a lengthy process in itself) jointly between the landowners and the Council in relation to each of the eight sites, before the submission of any planning application. Given these requirements, it is evident the delivery of these strategic sites will be more challenging and subject to much longer lead in times than when compared to the alternative of smaller scale extensions to existing towns and villages. Recent research by Lichfield's 1 found that the average lead in time for sites over 1,500 dwellings from identification to planning approval is around 10 years, plus 1 – 2 years before the first dwelling is even delivered. The complexity of these sites, and the need to allow for 'reasonable lead-in times' is recognised in the agreement between the five Councils of 2021 as a start date for the 5 year monitoring period (paragraph 5.162 of the Proposed Submission Plan). Overall, given the long timescales associated with the delivery of strategic sites, HSL contend the Council should instead be seeking to accommodate a greater portfolio of sites to include smaller and medium sites in the form of extensions to existing towns and villages alongside some strategic sites. This would provide a much greater degree of flexibility in sources of housing land supply and provide more confidence in the strategy as deliverable within the plan period and therefore 'effective' in accordance with paragraph 182 of the Framework. In effect, a dispersal approach would provide certainty in delivery.

The Apportionment of Oxfords' Unmet Housing Need. Table 3 of the Proposed Submission Plan sets out how the Oxfordshire Growth Board has established the apportionment of Oxford's unmet housing need for each of the 5 districts in the Housing Market Area (HMA) - Cherwell, Oxford, South Oxfordshire, Vale of White Horse and West Oxfordshire. The Partial Review of the Cherwell Local Plan (Part 1) is being progressed on the basis of an 'agreed' apportionment for Cherwell of 4,400 dwellings. HSL note with some concern however, that South Oxfordshire has not actually agreed to its apportionment as proposed by the Board (4,950 dwellings). Indeed in the Publication Version of its emerging Local Plan (due for consultation in October 2017), South Oxfordshire is committing to meeting only 3,750 dwellings of Oxford's unmet need.

Changes Sought

Reasons for Participation

3. In this context, it may well be that Cherwell is required to accommodate more than 4,400 dwellings through the Partial Review. This needs to be acknowledged by the 5 Council's and the Growth Board before the Partial Review of the Cherwell Local Plan progresses any further.

For reasons set out in the comments submitted, HSL are of the view that the Local Plan (Part 1) Partial Review does not address matters which run to the heart of Soundness and request the opportunity to make oral representations to this effect.

Comments

Spatial Strategy for North Oxford, Kidlington and the A44 corridor. The Proposed Submission plan focuses the 4,400 dwelling apportionment entirely within the south of the district – in the area extending north from Oxford to south Kidlington, along the A44 corridor to Yarnton and Begbroke, and up to Woodstock in West Oxfordshire. Hollins Strategic Land (HSL) are seriously concerned that this does not represent the most appropriate, ‘justified’ or ‘effective’ spatial strategy for meeting this need, and that it leads to a Proposed Submission Plan which is not ‘sound’ in accordance with the tests set out in paragraph 182 of the National Planning Policy Framework (‘the NPPF’). In explaining the rationale for the proposed spatial strategy, the Proposed Submission Plan (paragraph xiii.) states the Council are ‘planning for development in the area of the district that has the strongest economic and social relationships with Oxford...’. However, the whole of Cherwell district has a close functional, economic, social and spatial relationship with Oxford. This is the reason it is included within the Oxfordshire HMA, and is being expected to accommodate some of Oxford’s unmet needs. As described in the Oxfordshire Strategy Housing Market Assessment (SHMA) (April 2014, paragraph 1.24), the Oxfordshire HMA reflects the relationships between where people live and work and patterns of movement between homes. Accordingly, HSL contend that it is not necessary to direct the unmet needs towards that part of the district closest to Oxford. Development anywhere in the district would still contribute towards meeting Oxford’s needs, and in HSL’s view, proposing a more balanced spatial distribution of the 4,400 dwellings would result in a more effective, deliverable and justified strategy. The focus on the south of the district also comes at the expense of the Council’s duty to protect the GB, with the proposed strategy necessitating the release of a significant amount of the Oxford GB. Whilst HSL agree with the Council that exceptional circumstances exist to justify the release of some GB land within Cherwell, the majority of the district is in fact not within GB and as such, it is possible to accommodate a proportion of the unmet need elsewhere. National policy is explicit in stating that the Government attaches great importance to GB land (paragraph 79, the NPPF), and that GB should only be altered in exceptional circumstances (paragraph 83, the NPPF). Given the alternative opportunities that exist for directing development on less sensitive land outside of the GB, it therefore seems likely that the Inspector conducting the examination into the Partial Review will consider the amount of GB release the Council are currently considering to be unnecessary and unjustified when compared with the reasonable alternatives that exist, and that therefore the proposed strategy to be unsound with regard to the tests in paragraph 182 of the NPPF. Hollins Strategic Land consider the spatial strategy in the Proposed Submission Plan cannot be considered to be sound in accordance with paragraph 182 of the NPPF as it is not Justified – given the considerable amount of land within Cherwell which is not GB, exceptional circumstances do not exist to justify the amount of GB release proposed. Having reviewed the evidence base, HSL consider the Council have failed to properly and objectively consider ‘reasonable alternatives’ such that the proposed spatial strategy does not represent the most appropriate or justified. Effective – the proposed strategy is over-reliant on a few large scale sites, all within close proximity, coming forward over the plan period. For the reasons set out above, in HSL’s view, it is highly likely these sites will not deliver as anticipated. Accordingly, the Plan as proposed is not deliverable and therefore not effective Consistent with National Policy – as the intended housing distribution does not represent the most sustainable pattern of growth as advocated in the core planning principles set out in paragraph 17 of the NPPF, and fails to protect the GB in accordance with paragraphs 79 and 83, the proposed strategy is not consistent with national policy. The over-reliance on large sites also calls into question the flexibility of the plan and its ability to respond to changes in circumstance, as required by paragraph 14 of the NPPF.

Changes Sought

Reasons for Participation

For reasons set out in the comments submitted, HSL are of the view that the Local Plan (Part 1) Partial Review does not address matters which run to the heart of Soundness and request the opportunity to make oral representations to this effect.

Comments

Strong and formal objection to the planned development of 4,400 new houses in GB land near the villages of Kidlington and Yarnton. The proposed local plan for Kidlington and Yarnton is unsound on the basis of woefully insufficient infrastructure to cope with such an increase of population and traffic increase, especially in terms of demand for schools, GP surgery patient requirements and a vast increase in traffic both entering and leaving North Oxford, particularly during morning and evening commutes. The congestion will further be exacerbated. This is clear evidence that the proposal is both not positively prepared and also not effective in bringing commuters into the city of Oxford, when there is building space with the city confines. The traffic model on which Cherwell District Council proposes this Local Plan is shockingly flawed in the way that it has statistically manipulated the data it has gathered. Through only making reference to the projected average traffic increase across the day, the Council is deliberately hiding the impact of the vast and ever increasing amount of traffic at the morning and evening peak commuting times, both in entering and leaving Oxford city. This would further exacerbate a gridlock of traffic in the approach roads to both Cutteslowe and Wolvercote roundabouts, as well as endangering the health of residents within these affected areas (a) as a result of the increased pollution, and (b) particularly alarmingly, through increased difficulties faced by emergency ambulances in being blocked by stationary traffic on their routes to and from the JR Hospital. This serves to demonstrate that the proposal is not positively prepared. The Council Local Plan also proposes the development of unjustified housing in Kidlington and Yarnton which would also be very close to the Oxford Parkway Railway station. This would be a very attractive proposition to wealthy London commuters, who would be far more able to afford such houses than local people on whom the local economy and employment depends. This further justifies the total unsuitability for the location of the proposed Local Plan and is not effective (indeed destructive) in enhancing the essence of a local and binding community that Cherwell District Council should encourage and promote. Cherwell District Council is not consistent with national policy, nor its own policy, in its proposed building of homes on preserved GB land. Another point that demonstrates that this plan is not positively prepared and not justified is that on Oxford City Council's own website, there are a total of 65 Pilot Brownfield Sites across the city of Oxford that could be used on which to build houses, instead of needlessly sacrificing the countryside of the GB and the natural habitats and biodiversity that it is there to protect. Oxford City Council must do more to meet its own needs, rather than proposing a plan that is unsound for the surrounding communities and the city of Oxford itself. Also, it is unsound and not justified in relation to the government's own consultation, and not positively prepared in terms of the immense traffic chaos and safety concerns that it would cause residents of Oxford and villages to the north of the city, as well as not effective (indeed damaging) to the coherence of the local community, its economy and well-being.

Oxford Civic Society (OCS) would first like to congratulate Cherwell DC on the professionalism with which the consultation proposals have been prepared and express appreciation of the well-conducted and illustrated public consultation event at Cutteslowe Park which we attended. OCS is pleased to note that Cherwell DC’s proposals in general share much of the logic which we put forward in our response to the previous consultation, although Cherwell have chosen to further erode the ‘Kidlington Gap’ by moving the golf course further north and allocating housing land on both sides of the Oxford-Kidlington Road. One obvious benefit of the latter would be the opportunity to make proper pedestrian and cycle access from the Northern Gateway to Oxford Parkway. On the other hand, the development around Parkway Station would undoubtedly be highly attractive to London commuters, undermining the contribution to Oxford’s unmet housing need, as we pointed out in our last response. The concern in the proposals for preserving the attractions of Cutteslowe Park and expending it are welcome. The proposal for permanent agricultural land to be designated to safeguard the fine views from the park will, we hope, serve to maintain a beautiful public asset, albeit that there can be no permanent guarantee that the land will remain agricultural.

Noise and Air Pollution: Traffic congestion and air pollution will undoubtedly worsen due to thousands more vehicles on our roads, and the increase of pollution from car fumes will have a detrimental impact on our health, wildlife, & natural environment in the long term. This is in addition to the extra traffic from the 22,000 houses already approved elsewhere in the District by Cherwell, and over 10,000 more houses to be built in the other Districts just for Oxford overspill. Construction traffic and road works will add to this chaos for years while the development takes place.

Household waste: Statistics say that the average household in the UK produces more than a tonne of waste each year. With the proposal of 4400 new houses that means over 4400 tonnes of waste will be produced in this area each year. Implore that you carefully consider the long term implications of this.

Lack of amenities: Government cuts mean that many local amenities have had to close, and getting a doctor's appointment in both Yarnton and Kidlington practices is at minimum a three week long wait. It is just not feasible to allow the population to grow to this scale in this location.

Impact on wildlife: we need to protect them now more than ever before as their natural environment is reduced more and more every day. We often see deer in the fields. There are already many animals killed by cars on the road between Yarnton and Oxford, more cars and houses means less land for the local wildlife. Should this proposal go through we would have effectively gone back on our word to protect this land we allocated as Green Belt, and simultaneously, destroyed their natural habitat.

Cherwell District Council is right to exclude this site from any development at this present time or any development in the future. It is important GB land and GB status should be protected and preserved as stated in the Conservative manifesto. The Moors Road can stand any further development - it was never built to take the volume of traffic it is taking at present, let alone in the future. The fields behind the Moors play a very important part for the village and the people of Kidlington as it provides them with some of the best wild life for miles around where with deer and monk jacks; I have great crested newts in my garden. If this land is developed then Kidlington as a village will disappear and will just become an urban metropolis.

As a North Oxford resident and Council Tax payer, I wish to object very strongly to the proposals to build on Green Belt land to the north of the city, around Yarnton, Begbroke, Woodstock and Kidlington. The need for housing to be built on Green Belt is not at all proven, especially in view of the recently revised figures for the need for growth. There are plenty of brownfield sites which should be used and building on the Green Belt is a betrayal of current citizens and future generations, in terms of physical and mental wellbeing. These plans will increase traffic and pollution significantly. They will also cause irreparable destruction of wildlife habitat. Please ensure that the protests of local citizens are heeded and Green Belt land protected, as that was the whole point of Green belt in the first place.

Proposed Submission Plan - General Comments

PR-C-1555	10/10/2017	Nigel	Payne				
4885	Comments						
Object to the proposed construction of houses in the green belt adjacent to Kidlington and Yarnton. The continued erosion of green belt will eventually result in vast urban sprawls covering much of southern England, which is what green belt is supposed to prevent. It will result in the destruction of one of the most important factors in what makes a pleasant place to live. Add to this the increase in traffic on already congested roads, plus pressures on services and the whole plan should be rejected.

Question the logic behind the proposals and not convinced the Council will be able to deliver on its objectives. The main justification for the proposals is to meet the housing needs of Oxford but the housing numbers should be reviewed following recent Government recommendations of 762 houses for the Cherwell area until 20126. Another objective is to provide affordable housing and jobs (paragraph 4.1). Unless you plan to de-value current home-owners' properties, the jobs you create will need to have significant salaries to make the properties affordable. How will you encourage such employment opportunities into the city? Also concerned about the sustainability of the plan, with the additional traffic that will inevitably be created and the effect of air quality. Any traffic plan should include 24-hour access to Thornhill Park & Ride for daily commuters to London. If congestion increases between Kidlington and Thornhill, this will significantly reduce residents' quality of life.

Is more profoundly affected than most of your own residents. 1. Any development on Green Belt requires a test of exceptional circumstances to be met. This is not the same thing as arguing that a certain piece of Green Belt is already somewhat degraded and therefore the "cost" of their loss is not so great. It is the responsibility of the council to explain what those exceptional circumstances are. Don't think the council has figured out what the exceptional circumstance is. Certainly it has not been conveyed to residents .2. There have been several cases where development of office etc. spaces have been urged because of the need for employment space in Oxford to meet the needs of the resident population. Northern Gateway fell into that category. In this case, residential development is being urged to provide housing for people employed in Oxford. This is a tautological excuse and a fundamentally flawed and weak basis for planning. No effort has been made to resolve this tautology.Understand that actually the truth is the national economic development need is for areas like Oxford (and Cambridge, and London for example) to expand because they are so successful. But this is a different point and don't think that it is forming part of the planning discussion. Instead the plan relies on a tautology. The council should be clear to the residents.3. The proposed residential developments are wonderfully close to Oxford Parkway. As a result it is blindingly obvious that they will substantially be bought up (and / or rented) by Londoners who move out to Oxford and or residents of Oxford who are working in London for the wonderful location within an easy commute. Therefore the idea of providing housing for Oxford workers (flawed as it is because of the inherent tautology) is also fundamentally flawed in that it has no hope of achieving that dubious aim. If you want residential development to serve the local community it has to be located away from the magnet of the London commuter station.Therefore the development (if any were necessary) for Oxford workers should be located well away from a London commuter line station.4. The impact of this and other neighbouring proposed developments (Northern Gateway, Oxford council 's proposed neighbouring developments, South Oxfordshire council, Barton) on the levels of traffic congestion will be cumulatively enormous. As noted by the Oxford Times recently, the Wolvercote & Cutteslowe roundabout "improvements" have had little impact and do not justify / permit any increase in traffic. The level of traffic on Banbury Road has grown Significantly and is at or above capacity for much of the day all week. At the very least the proposed link Road from A40 on the west of A34 flyover to Freizeyway ought to be a precondition for anydevelopment (including Northern Gateway).5. The proposal to develop the golf course and move it across the road is completely absurd. The course performs a perfectly good job as a green belt barrier where it is and as anyone with experience of golf courses will know you can't simply move it and plonk it on a field. It depends on natural features such as quirky lie of the land, mature trees and water courses. Otherwise it's as much fun as a driving range and of little value to a club. In fact the rich farm soil of the land to the East of Banbury Road is probably particularly unsuitable - golf courses generally are best on marginal land such as heaths and sand dunes.If you remove North Oxford Golf course it will simply disappear - unless you endow it with an enormous fund to create something out of completely unpromising material.6. A more general point:- the gap between Oxford and Kidlington could be maintained north of the A34 but in that case it is a very small gap indeed on the Banbury Road and of no scenic value. We would be losing what is an absolutely enchanting view of Water Eaton and Wood Eaton and the lovely walks around the area. This is one of the most beautiful and historic parts surrounding Oxford - it should be protected at all costs for the benefit of the communities of Kidlington, Oxford and indeed the region as a whole.

The 'green corridor' that runs between the proposed new development and Begbroke almost exactly mirrors the area identified as having a high risk of flooding on the Government's long term flood risk map. This is a high risk area even when there are open fields to absorb water. If the open fields are built on this will significantly increase the risk of flooding to properties in Fernhill Road which back onto Rowel Brook, particularly the properties at the far end where the land is low lying.

"Objections to the whole "Land Grab" between Oxford and Kidlington1 The land being claimed for housing development is all in the Green Belt. Filling in the green belt between Oxfordand Kidlington is a ribbon development and will result in Kidlington being absorbed into Oxford. Leaving a derisorysmall gap between the two settlements is a cynical gesture.2 The land area being "grabbed" is much too large for the number of houses proposed, suggesting that many largedetached houses will eventually be built. This is not what is required by local young people who hope to beemployed in the Oxford area.3 Recent recalculation of housing need in the UK has shown that the calculation of number of houses planned in thisapplication is much too high.4 Houses in the area around Oxford Parkway Station are likely to be bought largely by London commuters, not bypeople who plan to work in the local area. This will not satisfy local housing needs, and will push up prices. Thereason for the housing that has been stated is to provide housing for people who are low paid and work in Oxford -this is not likely to happen and so the main reason for the housing is not likely to be met through this development5 Predicted house prices in the new Barton development near Oxford seem to be inflated by at least 50% aboveprices of existing comparable housing in the area. Artificial price inflation will result in any "low cost housing" beinginflated in price also, so there will eventually be very little "low cost housing" suitable for essential workers in theOxford area.6. Local traffic around the south end of Kidlington and around Oxford Parkway Station is already very heavy, andthere are very long delays in the morning rush hour. Very substantial re-planning of traffic flow would be required toaccommodate cars from hundreds of new homes. Substantial land would have to be set aside for bus and cyclelanes and the local rail station car park would have to be greatly enlarged. This would contribute to the ugliness ofthe ribbon development, and use up valuable agricultural Green Belt land."

<p>The GB serves to maintain the identity of settlements by preventing urban sprawl & merging of towns & villages. Without the GB Oxford city will expand without control consuming villages like Wolvercote, Yarnton, Begbroke, Kidlington & Woodstock. The villages will coalesce into single settlements rather than each being distinct & surrounded by or part of the GB. There is a 'Kidlington Gap' defined by GB east of Oxford/Banbury Rd & site 107 (OCC) and NOGC. Refers to & lists the 5 purposes of GB. CDC's plans will do exactly what the GB is designed to prevent, an urban conurbation from Oxford to Kidlington & beyond to Woodstock. CDC are not proposing to build on GB but to remove large areas of it, in order to enable developers to build on the land as they might on non GB land. Removing GB can only be undertaken through revision of the LP & only justifiable by demonstration of exceptional circumstances. We do not believe that CDC have demonstrated sufficient exceptional circumstances to justify removal of the GB & especially not the particular GB site proposed.</p>

<p>Consider the proposed submission plans put forward by Cherwell District Council to be Unsound, Not Positively Prepared, Not Justified and Not Effective. The title "Oxfords Unmet Housing Need" says it all. This isn't about Gosford, Water Eaton, Kidlington, Yarnton and Begbroke or even Cherwell District at all but solely for Oxfords City Councils benefit and those constituents you represent feel extremely let down by Cherwell Council. NONE of the reasons put forward by Cherwell or Oxford CC are believed by the majority of people living in these areas. There is NO guarantee that ANY of the homes would go to even Oxford people, let alone local people. It is a fact that house builders advertise any new homes in this area in London. It is perfectly obvious to everyone, including the Councillors of Cherwell that once ANY part of the Green Belt around Kidlington and district is built on, it will be the thin edge of the wedge. There will be no holding Oxford City Council back from further incursions onto Cherwell land and is amazed that Cherwell Council cannot see what will be on the horizon in that event. Oxford will lay claim to ALL the Kidlington area, with the loss of council revenues, etcetera to Cherwell DC. Object in the strongest terms to ANY of the proposals put forward in this plan but most especially to PR7a as this is the last barrier between Gosford/Water Eaton and North Oxford. Cherwell District Council are allowing Oxford City to ride roughshod over them and us, when Cherwell should be representing the people who elected them and pay their Council Tax. They should not be kowtowing to Oxford City, who we all know could well find housing spaces within the City boundaries if they so wished but, lets face it, it suits them very well to shove their problem onto Kidlington and District and they are doing so with the help of OUR OWN COUNCIL. Shame on you!</p>

<p>There is no provision of safe cycling routes for Islip or Noke. This doesn't deter keen cyclists but won't create many converts to cycling & no parent would let their child cycle on these roads. There is the possibility of creating direct cycle routes from both villages across agricultural land (or alongside the railway) to Oxford. These would be shorter & much safer than the existing routes and do much to encourage cycling from these villages. Unlike other communities, Noke has no public transport. Noke residents thus have no choice other than to use their cars or risk their lives cycling. Noke residents therefore deserve special consideration before any building takes place or any other measures which could increase danger & congestion on the B4027 or the Woodeaton- Marston road. Much of the transport strategy seems to depend on buses. These will inevitably be diesel powered (unless Cherwell insists upon electric) at a time when there are increasing concerns about the health impact of dieselparticulates Cherwell along with OCC & Oxford City should consider much more positive measures to encourage electric vehicle use & thus cut air pollution. Free parking & the use of bus lanes for such vehicles would make a significant difference. Oxford does not seem to have given serious consideration to a congestion charge. Such road pricing is the logical solution to congestion problems. Road space is allocated to those most willing to pay for it, rather than by rationing. There is a boost to the public purse, enormous savings in man hours & journey times & improvements to public health & pollution. The London congestion charge appears to work reasonably well. On the whole traffic moves in the congestion zone rather than being gridlocked and the scheme probably now commands public support. Oxford is ideal territory for a tram or rapid transit system, which it had in Victorian times only to be put out of business by the future Lord Nuffield . Two arterial routes running North South (from Kidlington) & East West would go a long way to actually solving Oxford's congestion and pollution problems."</p>

<p>Doesn't agree with the figures for Oxford's unmet housing need. There is no definition for unmet need. Kidlington has a population of some 14,000. The addition of 4,400 homes represents an increase in this figure of some 60% over a short period of time. This is hardly sustainable development. It is inconsistent that CDC is planning to sacrifice major portions of the GB in and around Kidlington whilst at the same time refusing small sustainable developments in villages such as Noke & Islip on the grounds of development in the GB. Such developments are essential to maintain the viability of these communities & to sustain local services & amenities. Much of the proposed housing is likely to be acquired by commuters to London rather than working locally. The existing transport infrastructure in & around Kidlington is already grossly inadequate before any of the houses associated with either Oxford's or Cherwell's housing plans are built. There are long traffic tailbacks driving into Oxford along all the major access routes every morning & the A34 is often at a standstill between Peartree & the M40 at any time of day. Has CDC calculated the cost in terms of lost man hours , pollution & human health of this existing congestion? Cherwell should ensure that OCC & the highways authorities solve the existing congestion problems BEFORE allowing any additional housing to be built. If further housing is to be built the transport infrastructure should be put in FIRST. None of the changes in the infrastructure Schedule (Appendix 4) are described as short term & many are described as long term (probably shorthand for being most unlikely to ever happen). Has CDC considered & quantified the impact & cost (time, pollution, heath) upon traffic flows through Islip on the B4027 & through Woodeaton to join the Oxford ring road at Marston? Many of the additional car journeys created by additional housing will inevitably either try to use the B4027 as an easier route to the A40 & M40 Junction 8 or to access Oxford via Woodeaton & Marston. The B4027 is already quite inappropriate for the traffic it currently carries through Islip & further South through Forest Hill. It is already hazardous & sometimes quite difficult to exit from Noke in the mornings because of an unbroken stream of 50mph (or more) southbound traffic approaching over the crest of a hill. There are long tailbacks every morning along the Woodeaton-Marston road often as far back as Sescut farm. The various transport measures aimed at improving provision for cyclist are welcome but risk being half hearted. The existing cycleways are poorly maintained (Road towards Woodstock, Marston Ferry road in Oxford) & whilst cycle ways often provide an efficient & relatively safe way of moving between major intersections, cyclists are usually left to take their lives into their own hands or encounter long delays at intersections (e.g.. Peartree, A40/Woodstock Road, A40 /Banbury Road, Sainsbury roundabout in Kidlington). Trying to reallocate existing road space between buses, cars and cycles in essentially a zero sum game. An improvement for one mode of transport will come at a cost to one or both the other modes. What is needed is more or wider roads & the opportunity should be taken to purchase additional land to make this provision wherever possible.</p>

Concerned about the proposed new house building between Cutteslowe Park & Oxford Parkway Rail Station, & on the current golf course site. Obviously it is easy for local residents to prefer that building take place anywhere but in their area, but it does seem that situating new houses so close to the new rail link to London particularly invites commuters to seek to buy in the area. Also the obvious blight that such building would impose on a rural setting. In particular the fields to the north of Cutteslowe Park, St Frideswide Farm, & the footpath over to Water Eaton. I understand that serious efforts have not been made to address the housing shortage by transforming currently unused centrally located land designated for businesses, into residential properties. It does seem that any housing being built for the use of Oxford residents should be located in places where they are not attractive to commuters. Thank you for taking people's concerns into consideration in this matter.

Objects to the planning proposals because: The plan to use GB for the development is not consistent with NP on the use of GB. I feel that the GB should be protected as it was originally intended, & that brown field sites should be fully utilised before GB is considered. The current proposal is to assist with the needs of Oxford. I think that Oxford has not sufficiently utilised all its own options before encroaching on the GB of the north of the county. Oxford could have & can still employ a higher density strategy in city areas, using the brown fields, having conversion from low rise to higher rise housing etc. A lot of the new plans are to support the university's plans for expansion & housing of staff. They could instead start a campus & associated resources in the north of England where there is empty housing & low employment. Oxford GB should be used before our GB in the solving of Oxford's problems. I have serious concerns about the loss of GB & the environment. Once it is gone, we will lose all sorts of good things: our ecology needs protecting, the plant life, the wildlife & the soil itself. In addition the current public transport supporting Begbroke is insufficient. No number 7 or number 500 bus coming here, & a cut to the S3 in recent weeks. How will sufficient transport networks & other infrastructure be made available when the current situation is not adequate.

Strongly opposes the LP which encroaches on the forever shrinking GB for the following reasons: 1. Oxford is in dire need of social & low cost housing. It loses some of the best brains & talents in the country as they either can't afford to move to Oxford or can't afford to stay there. Yet the houses planned, I believe a one bedroom flat is to be priced in the region of £300,000, are likely to be bought by people working in London who want to move to the country & will commute. This in no way helps to deal with Oxford's housing problem & only serves to line the pockets of the Colleges, whose land it is, & the developers. 2. The surrounding roads are already often at stand still in morning & evening rush hour as well as in term time when the same applies to morning & afternoon school traffic. The added traffic from the new development can only make the even problem worse.

Stop Oxford Sprawl. With the number of employment opportunities we have nationally, particularly centred on certain areas in the country, it is obvious that this nation has a huge commercial impact on the World economy. It is my personal experience that our country excels in detailed engineering & computing. E.g.. most F1 Teams are based in England, including Mercedes F1 in Brackley -current World Champions. We also design an awful lot of spacecraft & computing technology. There is a need to reduce the North/South employment divide. Therefore the Govt. should look at the Country as a whole & redevelop the areas that have 'brownfield' sites e.g.. most pit towns, & try to get technology firms to move/expand to these areas. The long term result being that migration will occur toward these more prosperous areas & some excellent education will also grow. This needs to be a long term plan & promise to the nation that will encourage these now unloved areas to become prosperous again in a different industry. It ought to be remembered that it is people that form a successful company not it's location. People can be educated therefore becoming more suited to available employment. It is my belief that green areas help to keep this world's atmosphere more tolerable to life forms so are extremely important & we should never approve destruction of green spaces.

4918	Comments							
The consultation document paras 3.6 and 3.7 state that the project team met from January 2015 to September 2016 to progress projects including an understanding of Oxford's unmet housing need, resulting in a decision on apportionment on 26 September 2016. The recent re-evaluation of Oxford's unmet housing need in August/Sept 2017 means that the decision referenced in para 3.7 is irrational, as are the housing proposals by the council based on that apportionment. This means the plan is not sound.

Very glad of extension to the consultation period, the original window was totally inadequate. Strongly object to proposed plans of building on the Green Belt between Oxford, Kidlington and Yarnton. This is a clear removal of the separation between then and will most certainly lead to both Kidlington and Yarnton becoming Oxford. This is exactly why Green Belts were created and the proposed plans are an unjustified use of Green Belt land which is not consistent with National Policy. One of the stated motivations of this proposed plan is for use of Oxford housing overspill, yet Oxford City has consistently failed to develop land for meeting its housing needs. There is so much land within the Oxford City ring road that has not been developed, especially brown field sites. Much of the housing needs in the area are for jobs within Oxford City. Huge numbers of people commute into Oxford to meet the demand of jobs. Yet housing has failed to keep pace. Housing should first be developed closer to where people work, which would be consistent with meeting emission targets set out by central Government. Thus these proposed plans are ineffective because Oxford City has failed to develop within the ring road. Believe that the District Council plans are inaccurate and have been prepared in such a way to present a biased view. Question the consultation process because it has been such a short period as if to get these plans passed without local residents noticing. Also because Cherwell District Council are not taking this consultation seriously - concern drawn from attending a Public Meeting on 21st September in which Cllr Barry Wood failed to answer questions. These plans should be rejected. Also deeply concerned to hear Cllr Barry Wood give such negative (and unprofessional) references to lawyers and implied that he and the Council are being forced into allowing developers to build in wholly inappropriate ways that will have a negative impact on Kidlington and Yarnton. projected growth and requirements for housing in the Cherwell District Council proposed plan should be reviewed given that revised figures are soon to be updated. It would be prudent to do so regardless of my objections outlined in this letter. The housing in these plans do not appear to be suitable for sustaining the affordability for local people and people on lower paid but essential jobs for Oxford's infrastructure are unable to live in the locality. Yet the plans appear to be targeting larger four to five bedroom houses at low density to supply demand for London based commuters. This is not a local plan for a local city, it is to supply demand for people to work in London and live some where less urban, whilst ruining vital Green Belt land between Oxford and Kidlington. The levels of congestion in Kidlington is very high and I do not believe it is correctly represented in the proposed plan. Considering that the road network is not able to cope with the level of traffic today and the proposed plans do not give any solid plans for improvement. Nor that recent "improvements" to Cutteslowe and Wolvercote roundabouts have had any impact on this. The plan is not positively prepared because it fails to provide the necessary infrastructure. Also the council has failed to show competence in addressing the existing problems in the area with recent road works, which further discredits the proposal plan. Strongly object to the proposed plans. With so much documentation to digest the District Council is failing to allow fair time to review them.

Please preserve this site in the Green Belt thereby preventing urban sprawl. Green belt must be protected and preserved, preventing loss of landscape and the wonderful rural views which are so loved and appreciated, especially towards the older part of the village. Development as suggested would undoubtedly exacerbate flood risk, also extra traffic increase on already very busy roads, for vulnerable children and families. The fields are so important to village residents who thoroughly enjoy the abundance of the wildlife we have there and I give thanks each day for the opportunity to walk in them? Do not want the development to take place, and wish this land to be left as a permanent green space.

PR-C-1596	14/09/2017	Teresa	Goss	Adderbury Parish Council	
4977	Comments				
While Oxford City and its surrounding areas have benefited from the five purposes of the Green Belt, it is equally clear that many villages in North Oxfordshire have suffered a corresponding detriment with the pressure for housing development beyond the Oxford Green Belt. In particular villages like Adderbury and Bodicote (in particular with the Longford Park development); loss of green fields on the edges of many North Oxfordshire villages (witness Adderbury, Bloxham & Bodicote to mention only three in proximity) and the setting and special character of historic villages spoiled by large urbanising housing estates on their perimeters (witness Adderbury, Bloxham & Bodicote). Adderbury Parish Council (APC) greatly welcomes the proposal to carry out a relatively minor adjustment to the Oxford Green Belt and not to seek to impose yet more housing towards the north of the Cherwell District. APC supports the proposals for housing development close to Oxford City and in the parishes of Kidlington, Begbroke, Thrupp and Woodstock. APC agrees with CDC that this is most sustainable in order to provide for residents who will work in Oxford and the industries situated near Oxford. The Begbroke Science Park demonstrates the ability of Oxford University to "leap" the ring road and to promote the science economy while the proximity of the airport at Langford Lane presents a golden opportunity for further economic development in the fields of science, technology and academic research. The new railway station at Oxford Parkway and the proposal for a further railstation at the Begbroke Science Park make for easy travel to Oxford and other destinations while established bus routes also support Oxford City's policy of reducing reliance on the private car. While the proposals include the loss of green fields that will undoubtedly provoke much local unhappiness, there are proposals for their replacement with what appears to be a well-balanced proposal (witness the "moving" of the North Oxford Golf Course to land at Frieze Farm). APC notes with some concern that South Oxfordshire District Council has not agreed its allocation of housing and is concerned that equity demands all councils around the Oxford Green Belt need to work together to meet the needs of Oxford's flourishing science and academic economy. In particular, the area around Grenoble Road is well suited to the sort of Green Belt adjustments proposed in this Cherwell plan and demands urgent attention.

5400	Comments				
Adderbury Parish Council strongly objects to Taylor Wimpey suggesting that building 250 houses on Milton Road, Bloxham, will address the issue of Oxford's Unmet housing need. However, Adderbury Parish Council has been very clear that it agrees with CDC's proposals that Oxford's unmet need should be met within easy reach of Oxford (for sustainability as new residents will work in Oxford) and a suitable area can be found. The Parish Council agrees with a change in the Green belt to enable some housing in that area.

Understand the well established and developing argument for a need for housing (thought question the statistics as there seems to be no explanation offered within the document) the need is most certainly within the City of Oxford, which as stated in this proposal is not coping with its need. Unfair that the University and City Council are trying to put pressure on all surrounding areas and on Cherwell in an attempt to cover up their own short sightedness and failings. As a family we are involved in preserving wildlife in Begbroke, looking after woodland taking great lengths (both financially and via employment) to reinstate the natural surrounding landscape. This document and the previous one show this as duplicitous and contradictory to these assertions and actions. Therefore questioning the motives for countenancing even the possibility for this development around Begbroke Science Park, changing the precious infrastructure for generations to come, and suggest that motive is financial gain rather than unmet housing need. "Affordable housing" itself currently a term in question, as the wider economic landscape renders the term redundant. Proposals in this plan are mistaken and would completely undermine the natural beauty and fabric of the area (documented in the Domesday Book). It places great strain and unnecessary pressures on its infrastructure, biodiversity and its unrivalled, unfettered views across ancient ridge and furrow land surrounding Begbroke Wood (which I am responsible for) containing beautiful rare untouched meadowland with hedges and streams for a huge variety of animals and wildlife, enjoyed by many local walkers. With regard to Begbroke being fully connected to Oxford, the cycle path from Begbroke to Oxford is woefully inadequate and dangerous, involving crossing the A34 (one of the most dangerous roads in the country). Even if it were to be updated, Begbroke is 8 miles from the centre of Oxford and travelling in each morning is extremely difficult. At present, the cycle path is largely unused. The A44 is Jammed each and every morning suggesting overwhelmingly that the area is not coping with traffic. Development of the scale suggested would place an even greater burden on what is already a great problem. Begbroke itself offers the first area outside of Oxford of complete protected GB. To develop on this land would set an unprecedented danger to the character of the landscape in such close proximity to Oxford. This beautiful, special and unique place should be vehemently protected. There is no other place like it and this is the wrong place to consider developing.

We object to Policy PR11 on infrastructure because it only sets out "an approach". It is wishful thinking. No costs are shown and in most cases no source of funding is identified. There are no projects to improve the already congested highway network for private vehicles and no indication of how it will cope with the additional vehicles owned by the occupiers of these new houses and the other developments planned for the area. The plan is not positively prepared because it is out of scale, not useful for the area and does not provide for necessary affordable infrastructure. We also strongly support Cherwell's rejection of previous sites considered for development such as The Moors area of Kidlington for the aforementioned reasons. We trust that Cherwell District Council will abide by its responsibilities to its residents, heed these objections, not accede to Oxford City Council, and use them as sound justification for rejecting the proposed development plans.

Strongly opposes your proposal for building 2,480 houses on the Green Belt around Yarnton and Begbroke. It seems that the CDC (from their comments) have already decided that this plan will go ahead. So this is hardly a consultation. More like a box-ticking exercise. The excuse that you have no choice but to agree to demands from Oxford City, highlights your failure to represent your voters, and to do the job you have been elected to do. There are so many flaws in the proposed planning, is hardly strategic, more like the quick patch option that benefits mostly the land owners, the builders and the councils but not the environment or the residents, old and new. None of the infrastructure steps proposed are binding or are substantial enough to cope with the number of houses involved, the increase in car traffic and pollution, medical care, flood prevention or policing. And infrastructure should come before any development (if it is strategic) not after. Most of the promises will disappear once the profits have been materialised. If you really believe that this plan will solve the Oxford housing problem, then maybe you can explain how you will stop the thousands of people exiting London from moving here and commuting, possibly by car every day. With regards to the location chosen, your own figures show that the housing problem is mainly for people working in Cowley and Headington, so choosing to build houses in the opposite part of Oxford to these locations does not make sense. If you destroy this valuable and critical Green Belt (according to your latest report) you deserve to go down in History for making Oxfordshire a worse place to live for generations to come. Hopes, somehow that common sense prevails.

Sirs, I am writing to express deep concern over the plans to build over 4,000 homes around Kidlington and Yarnton. I think the plans are flawed on several counts, but mainly in the lack of supporting infrastructure. Kidlington is already a traffic pinch point, and this will make it substantially worse. Also massive pressure on Doctors, Dentists, Schools. Finally, we should protect the green belt. Once its gone its gone forever.

Thank you for your emailed notification of the consultation on the partial review of the Cherwell Local Plan Part 1. Buckinghamshire County Council (BCC) is grateful for the opportunity to contribute to shaping the emerging Local Plan for Cherwell. BCC acknowledges the importance of a plan-led approach to managing housing growth and development across Cherwell District. BCC can confirm that there are no significant strategic issues arising between our two authorities. As neighbouring authorities, the focus of our review on the Cherwell Local Plan Part 1 was in relation to potential cross boundary impacts on education and transport. Our education team confirmed that there are no significant cross border movements in terms of education, so the local plan housing proposals will have little impact on education provision in Buckinghamshire. Similarly, due to the location of new development proposed in Cherwell Partial Review Proposed Submission Plan, BCC does not consider there to be significant strategic transport issues impacting on Buckinghamshire. However as the County Highways Authority, BCC are involved in the emerging discussions on the Oxford to Cambridge corridor and would support all future joint working between our authorities on the impacts of cross regional growth. Please continue to notify the County of any future consultations on the Local Plan.

We are deeply unhappy with the proposals from Oxford City Council to develop Oxford in such a way that there will be a need for so many more houses to be built around the city on green belt land. Infinite economic growth cannot be master. You cannot be slaves to developers simply because they have deep pockets. Do what is right and not what is expedient. I wish to add to my earlier contribution to this consultation by saying how disappointed I am to learn of the Council's response to residents at the Kidlington meeting at the end of last month. It really is not good enough to say that developer's pockets are deep and that boxes have been ticked. That is a pretty spineless response to such genuine and strongly held concerns as expressed at the meeting.

5657	Comments				
I object most strongly to the Plan's disregard for National Planning requirements on sustainability. All documents in the Evidence Base support the conclusion that Oxford City's housing problem is one of affordability, not availability. The proposed additional construction in Cherwell cannot be supported by the demographic and economic projections in the Evidence Base. It would therefore promote unsustainable commuting patterns as new residents would be working further afield, for e.g. in London and Birmingham. It would promote unsustainable demographic expansion, increase congestion and pollution and undermine Cherwell's ability to comply with NPPF sustainability requirements. The Plan is therefore unsound.

PR-C-1647 5631	11/10/2017	Mrs	Fowler						N
Comments									
It is completely unacceptable to wan t to build more than 4,400 in an area already over built, with no provision for health care, social care, school and Transport. The traffic is horrendous at the best of time so having more people on the road is clearly going to make things worse! It takes 4 weeks to have a routine appointment at the GP, so how much longer will it take where there are around 10,000 more people living around – What about the oversubscribed schools! These plans are not thought through carefully enough and should not go ahead.

Strongly applaud decision that land behind The Moors in Kidlington is unsuitable for development. Local infrastructure cannot bear much more, the road already has speed bumps and narrow sections that hold up traffic, the foul drain where Church St meets The Moors already needs frequent attention. GB is there to prevent urban sprawl which in this case helps provide a very congenial area for recreation for locals and visitors.

PR-C-0229 792	24/08/2017	Alys	Thomas	Cushman & Wakefield on behalf of Royal Mail Group					
Comments									
The protection of existing operations and amenity is a crucial issue for Royal Mail, particularly where there is potential for sanctions to be placed upon them when uses of a sensitive nature are introduced in close proximity to existing properties. For example, due to the nature of their delivery requirements and targets, Delivery Offices are operating early mornings and often late evenings, generating large volumes of vehicular movements and associated mail sorting and loading activity, all of which result in noise, light and other associated impacts that are not expected to be experienced in a residential environment. The issue of neighbouring land uses and their compatibility, including potential environmental / amenity impacts, is therefore fundamental to Royal Mail where Local Planning Authorities are assessing the suitability of future land use allocations and development sites. This particular issue is clearly recognised within the National Planning Policy Framework (NPPF) at paragraphs 123 and 109. These paragraphs support the protection of existing businesses and their operations, and paragraph 123 in particular states that planning policies and decisions should aim to recognise that existing businesses wanting to develop in continuance of their business should not have unreasonable restrictions put on them because of changes in nearby land uses since they were established. Since noise is inevitable from normal Delivery Office activities, Royal Mail has concerns about the juxtaposition of residential uses adjacent to an operational site, which could potentially lead to noise impact and complaints. The consequences of any noise-related complaints by neighbouring residents can be costly or disruptive for Royal Mail. We respectfully request that the Council places great emphasis on these issues when reviewing any future proposed allocations and sites located near Royal Mail assets referred to earlier in this correspondence. Royal Mail would welcome further engagement with the Council, particularly with regard to the expected significant growth within Cherwell over the plan period and beyond and the potential impact on their future operations within the area.

Prepared on behalf of the Oxfordshire Growth Board, of which CDC is a member, to review 36 different spatial options for accommodating Oxford's future unmet housing need. It is noteworthy that this language highlights a future unmet need and raises the question as to why Oxford City Council is not prioritising housing-led developments within the city boundaries (see response to exceptional circumstances 1 & 2). The note was updated to include refined housing number trajectories through until 2031 and a 30 minute travel time accessibility calculations for jobs in Oxford. As detailed in Table 2-1 of PR15, a total of seven sites were examined within the Cherwell district. By good fortune, six of these sites encompass Policy Sites PR6a to PR10 inclusive with the one exception being Shipton quarry. This allows a direct comparison to be made against subsequent RAG assessments made in the Transport Assessment (Evidence document PR52). Conclusions for the sites in Cherwell in the high-level Transport provided. There are also inaccuracies within PR15 related to the Cherwell sites being given incorrect ratings: The Land East of Yarnton is described as being able to access 97,550 jobs in Oxford within 30 minutes; in contrast two adjacent sites at Begbroke and Land West of Yarnton are only able to access 6,057 and 10,746 jobs respectively. This means Land East of Yarnton should have received an amber rating rather than the green rating it was apportioned. Land north of Oxford was given a green rating for proximity to future transport investment needed for other strategic developments. This should be rated amber as the rapid transit is unfunded and this would be consistent with the rating for the Land SE of Kidlington.

Changes Sought

For the reasons I have given above AND the Representations made by the Begbroke & Yarnton Green Belt Campaign which I additionally support and adopt as part of my own Representation in this document, the Plan cannot be changed to make it legally compliant or sound and should therefore NOT be submitted for Inspection.

Reasons for Participation

Would like the Begbroke & Yarnton Green Belt Campaign to represent me at the Examination should it take place.

Believes that approx. 4000 homes means on average an 15,000 more residents in the area. Currently the local GP practices are struggling to provide appointments for the excising population. Further increase in population will make this an safety issue. Understands that plans will be to recruit more GP's and provide more facilities, but there is an serious problem in recruiting more GPs, which is likely to get worse! Suggestions: 1. A formal plan that is sustainable and not simply "planned" to provide GP & community healthcare availability for old and new residents. 2. Reduce the number of houses to be built and re-distribute to other areas of Oxfordshire to allow fairer distribution to allow local resources to cope.

Strongly support Cherwell DC's decision not to include land behind the Moors (Options sites PR14 and PR27) in the Plan. The site is most historically important and should be protected. Exceptional circumstances needs to be demonstrated to release the site from the Green Belt. The sites constitute a landscape of the last remaining unspoilt corner of Kidlington with wide views across fields to the old village, the heart of the conservation area with its landmark St. Mary's steeple and many other listed buildings. Footpaths on the fields are much used by local walkers. The sites are also a haven for wildlife. Lack of appropriate access. The nearby North Kidlington Primary School also adds to the congestion at school peak times. The sites mostly able to absorb rain water and preventing flooding. Development will lead o the run off of more water from the area.

Much of the land proposed to be allocated to meet Oxford's unmet need is not located close to existing service centres. As a result new service centres are proposed to be created under the allocation policies for Begbroke (policy PR8) and land east of Oxford Road (policy PR6a). The effect of this is that these new developments will not be served by or support the important Kidlington Village Centre. This would conflict with the aspiration of the Cherwell Local Plan 2011- 2031 Part 1 policy Kidlington 2, which is entitled 'Strengthening Kidlington Village Centre,' which states that it is proposed in part 2 of the Local Plan to expand the geographical area defined as Kidlington Village Centre, with the aim of supporting the viability and vitality of the existing village centre and encouraging economic activity. This is also the aspiration of the adopted Kidlington Masterplan, Theme 3 of which is 'Strengthening Kidlington Village Centre,' with the objective being: 'To strengthen the Village Centre, increasing its mix of uses and vitality and its attractiveness to local residents, employees and visitors as a place to shop, work and spend leisure time during the day and evening.' None of the proposed allocations to meet Oxford's unmet need, which amount to a total of 4,400 dwellings, would help to achieve this objective, however, as they are all located well away from Kidlington Village Centre, with the most significant amounts of development being allocated on the northern edge of Oxford; and at Begbroke and Yarnton.

Changes Sought

Amend the strategy to remove, or at least minimise, the amount of land to be removed from the Green Belt in the 'Kidlington Gap' by instead removing other areas, such as the J A Pye (Oxford)Ltd land at Webb's Way, Kidlington (PR32), which the Cherwell Green Belt Study (April 2017) has identified would cause less harm to the Green Belt.

Reasons for Participation

J A Pye (Oxford) Ltd owns land at Webb's Way, Kidlington and wishes to ensure that the argumentis strongly made for the removal of this site from the Green Belt and its allocation for housingdevelopment, which would help to address Oxford's unmet need.

Appendix 4 of the council's HEELA states that the site (HEELA168) 'is considered to be unsuitable for development as the site is an important open space within the Church St Conservation Area & provides a rural setting for the church and its environment.' While it is accepted that this is the case with the outer fields which are not proposed for development, it is not the case with the inner field, which is screened by a continuous thick hedgerow on its eastern boundary. Aspect's comments on the potential impact on the Conservation Area are contained in paragraph 3.7 of the Landscape & Visual Appraisal of Land at Webb's Way (January 2017), where they state that: 'It is considered however that, on the ground, the south western part of the site is not readily perceived and does not appear to contribute to the setting of the Conservation Area, particularly when compared to the more open network of fields to the north east which are publicly accessible and from which views towards the church are available. This part of the site does not appear to be related to the listed buildings or the setting of the Church or Mill End. It is acknowledged that the proposals will change the character of the site, however, various post-war residential developments to the south east and north west of the site, immediately adjacent to the Conservation Area and the listed buildings of Mill Street have been integrated without harm to the setting of these buildings or the wider designation. It is considered that a sensitively designed development can be integrated without compromising the perceived landscape setting of the listed buildings or Conservation Area.'

Comments

In order to increase footfall to Kidlington Village Centre it is important that some of this development is located much closer to the village centre. One such site is the J A Pye (Oxford) Ltd land at Webb's Way (as indicated on the attached Site Location Plan L02) and there are also other potential sites that could be allocated, as indicated in the council's HEELA and Green Belt Study. Allocating the land at Webb's Way would also enable a significant contribution to be made towards providing green infrastructure in the area in accordance with proposed policy PR5, which requires development proposals meeting Oxford's unmet need to show how multi-functioning Green Infrastructure can be provided including the restoration or re-creation of habitats; biodiversity enhancements; informal and public open space and movement corridors. The Landscape & Visual Appraisal (January 2017) carried out by Aspect, which is submitted with these representations, indicates that the south western part of the site is well contained, being adjoined by residential development on three sides and a hedgerow on the other and has the capacity to accommodate sensitively designed residential development. The north eastern part of the site is more open and this part of the site would be a suitable location for landscaped public open space and wildlife habitats.

Comments

It is not considered therefore that the impact on the Conservation Area is a valid one for rejecting allocation of the Webb's Way site. The Council acknowledges that the Webb's Way site is located in a suitable location to accommodate Oxford's unmet need and has good access to services and facilities in Kidlington. Although the Webb's Way site is a relatively small site, it is important to allocate a mix of housing sites, as smaller sites have the benefit of enabling development to come forward at an early stage in the plan period as significant infrastructure provision would not be required, thereby enabling an early contribution towards meeting Oxford's unmet housing need. In addition, the impact of developing a small site adjoining the existing settlement of Kidlington would have a much smaller impact on the purposes of the Green Belt than the large areas which it is proposed to allocate under policies PR6a and PR6b, which are located in a critical location in the Kidlington Gap as set out in the accompanying Green Belt representations. It is therefore considered that the failure to allocate land at Webb's Way, Kidlington does not represent the most appropriate strategy when considered against the reasonable alternatives and the plan is therefore unsound in this respect.

Strongly supports the decision not to include the land behind The Moors in Kidlington (sites PR14 and PR27). Kidlington's schools and doctors surgery are already running at almost full capacity, and would not be able to manage with a major increase in the local population that this development would produce. Concerned for some time that this site may be developed. It is an area of great beauty and interest. One of our biggest concerns is the proposed entrance site being sited opposite Benmead Road. This is already a very busy junction with school traffic and young and older pedestrians. The additional traffic would pose a risk of vehicle accidents as well as risk of harm to pedestrians. A further concern would be the existing drainage system in the area as it is already at near maximum capacity as the fields behind the Moors flood regularly. This is a beautiful part of the village and we strongly object to any further attempts to be developed in any way.

Process: First I would like to comment on this form and the procedure which is unbelievably convoluted and not conclusive to democratic consultation about planning and development. As a councillor of the Gosford & Water Eaton Parish Council we had to employ a professional planning consultant to complete our response at considerable expense to document our collective and detailed response. Most objecting citizens would not be able to use this document format with convoluted references to a complex document. Very disappointing. General comment on PR-38 Greenbelt development: This plan crushes Oxford's northern GREEN BELT and in summary represents unreasonable overdevelopment to our parish - Gosford & Water Eaton - which is chopped-up into artificial sections by the document so that the unreasonable number of houses proposed for the Gosford and Water Eaton parish is camouflaged. At last count over 3000 homes were being proposed when all sites in the parish are added up. Our parish is erroneously referred to as either Kidlington OR North Oxford throughout your document which may be indicative of the political agenda to change the boundaries and conflate parishes but that is by no means a forgone conclusion! Very misleading and very disappointing. The plan creates an overdeveloped, unsightly, commuter community to London while destroying the recreational lungs of Oxford which the green belt provides for the benefit of residents in Oxford, Gosford & Water Eaton and Kidlington. In this personal submission I wish to concentrate on two specific aspects of the proposal and make practical positive proposals: (a) Site reference PR38 - North Oxford triangle in which my home and my neighbour's barns are situated bang in the middle (on the Oxford Road); and (b) Site reference PR 39 - Frieze Farm, Woodstock Road. Environmental impact horrendous: The Oxford Road cannot possibly absorb the volume of traffic that would be generated by development of approximately 1000 homes on each side of the road and the additional pollution generated by traffic would undermine the sustainability plan intentions. At last count there were over 2000 homes proposed to be built either side of my home which essentially destroys the GREEN BELT area where I have lived for 27 years. I heard a planning officer indicate that the housing density will be particularly high because of proximity to Oxford Parkways station/the Water Eaton Park & Ride. This is of particular concern as I believe locating many houses adjacent to the station will simply be used by London commuters and in fact drive UP the housing prices and in turn actually undermine the "Oxford's Unmet Housing Needs" purpose of the whole plan!

Changes Sought

1. More Parking given to the reservation placed on the fields adjacent to the Water Eaton Park & Ride, it is assumed that the car park will be extended alongside the railway line & gravel works. Go ahead and extend the car park which encourages more people across the county to use the Oxford Parkway train station to London. 2. Leave the golf course where it is. So many established and preservation order covered trees should remain, 140 years of local tradition and use, why disrupt a well maintained landscape only to relocate the golf course a few kilometres north. The infrastructure cannot cope as it is. 3. Develop PR39 Frieze Farm. Over 1000 houses could easily be built on site PR39 Frieze Farm where the owners actually want development, it is adjacent to a dual carriageway which has the scope for proper feeder lanes, bike lanes and pedestrian walkways. 4. Leave the Green belt between the farm track to Water Eaton Manor and the Park & Ride. Who an earth wants to live adjacent or under electricity pylons and within earshot of gravel works that are active from 5am - 11pm and passing trains. 5. Allow Christ Church to develop around St Frideswide Farm. That is a natural extension of current development, sewer infrastructure which would have to be put in place and is completely absent north of Jordan Hill/Cutteslowe.

Comments

Strong objection to any direct or back-door attempt by any developer to develop the land behind The Moors; specifically sites PR14 and PR27, currently excluded from the Unmet Housing Needs Plan and to argue that these areas should not be reassessed for development in the future. The proposed access is opposite Benmead Road which already suffers from congestion during daytime due to vehicles parked on both sides of the road. Benmead Road also provides access to a primary school and nursery. Local children will be at increased safety risk from the inevitable increased traffic flow resulting from further development in The Moors. The build site area is adjacent to areas of high flooding risk and as such will increase the risk of flooding to existing properties in the area and potentially cause flooding in those not currently subjected to it. The village is already struggling with infrastructure such as long delays to access health services, excess traffic through the village, pressure to develop vital retail areas (e.g. Co-op site) into residential use, inability of grown-up local residents to get onto the housing ladder etc.

Comments

Strongly supports the decision of Cherwell District Council that the land represented on Sites PR14 & 27 is not suitable for development. The fields west of the burial ground behind the Moors flood regularly and any development is certain to exacerbate the tendency to flooding. There would be a large increase of traffic on a narrow road which is already busy and subject to traffic calming. The fields are an important and well used resource for residents and visitors, providing much needed green space on this side of the village. The sites are in the Green Belt development which would cause damage to the surrounding countryside and loss of habitat for many species of wildlife including Short Eared Owls and Great Crested Newts.

1173

Comments

Strong support is given to Cherwell District Council's decision not to include green belt land behind The Moors (PR14, PR27) for development in their proposed submission plan to meet Oxford's perceived unmet housing needs based on inaccurate SHMA data. The Green belt must be preserved to prevent urban sprawl and the green belt status should be protected and preserved as stated in the Conservative Government's manifesto. PR14 and PR27 are located in the green belt, they are made up of ancient water meadows with a rich and diverse wildlife and flora. There are important populations of reptiles and amphibians, birds and insects including Short Eared Owls and Great Crested Newts. Skylarks nest in the fields in these areas every year and the skylark and other species are fully protected under the Wildlife and Countryside Act 1981.

Comments

The decision to exclude this site is also important because building on this green belt land would have a significant and damaging impact on the setting of the Grade 1 Listed St Mary the Virgin Church and the many listed properties in the conservation area. Within this general area there are 34 listed buildings, a scheduled monument and five conservation areas including Thrupp Cross (monument) and The Old Priest House (grade 2 listed building next to the church.) There is a serious risk of flooding in the adjacent Conservation area if the land should ever be developed in the future. There are existing drainage problems in Church Street due to damaged and inadequate Victorian drains. The Council's exclusion of this site recognises that there is inadequate local infrastructure to support development of this scale. There would be a detrimental impact on existing roads and services especially surface and foul drainage provision. One of the most important reasons for the Council rejecting and excluding this site and one with which I fully agree is that these fields are an important amenity for local residents and visitors. This land should be treated as a permanent local green space, essential in the well being and mental health of the inhabitants.

Proposed Submission Plan - Other Comments

PR-C-0561	09/10/2017	Andrew	Smith	Hampton Gay and Poyle Parish Meeting	N	N	N	N
1396	<p>Comments</p> <p>We do not support the vision contained within the plan document: - as it sacrifices local communities and their GB to accommodate the needs of Oxford city, without concern for the wishes of those communities. -by definition the development is to provide commuting homes for Oxford, no consideration is given to how that creates balance and sustainable communities in the villages affected. - we do not accept that development of this scale can be sympathetic to the historic context of the villages or their environment.-clearly development of this scale needs strong connections and transport infrastructure if it is to serve Oxford Commuters but that assumes the basic vision that the village should be sacrificed to help Oxford is accepted which it is not. Also the document does not give enough detail or commitment to developing already overwhelmed transport systems to accommodate this flawed vision. - we accept that development should be well connected to Oxford, if it is to serve the city, but do not accept that proximity is the only factor. Accordingly, investment in transport infrastructure can serve more outlying communities as well as those in the Kidlington/Yarnton/Begbroke area. - we do not believe the vision explains how social/affordable housing for lower paid, key workers for Oxford city will be delivered and reserved for those workers. - we envisage development of this scale will result in unforeseen transport consequences for our Parish, with increased 'rat running' in both directions through Hampton Poyle, worsening an existing congestion/speeding issue. We cannot therefore see how this adds to our Health and Well being.</p> <p>Changes Sought</p> <p>The plan is not justified or effective and should be reviewed as follows: - the assumption that communities in the Kidlington/Yarnton/Begbroke area should be scarified and their green belt destroyed to accommodate Oxford. - further consideration of outlying areas should be considered to dilute and disperse the scale of the development allied to developing transport infrastructure for those areas. - more detail needed to demonstrate that existing and new transport infrastructure will accommodate the development and will be in place on a timely basis before development is completed. - more detail on how new social/affordable housing can be reserved for the need of Oxford's key workers.</p> <p>Reasons for Participation</p>

Regarding page 14 of the summary booklet , we do not support the proposals outlined within the plan document for a number of reasons: Policy PR1 is flawed as it implicitly accepts without question the requirement to deliver these houses. However, the use of the term "sustainable development" is frustrating as there is no clear evidence that these developments will meet any nationally acceptable sustainability criteria. Policy PR3 is flawed as it sets out to allow for exceptional changes to the GB. 3. Most of the proposals violate a key GB purpose. On page 2, the second of these is stated to be 'to prevent neighbouring towns merging into one another'. Several of the sites, if developed, would directly contravene this purpose. Policy PR4a is somewhat bizarre. It is clearly a requirement that the proposed development should require the delivery of affordable and sustainable transportation into Oxford. However, those of us who have lived in villages and towns north of Oxford for tens of years see no evidence yet of any such delivery. Surely it should be incumbent on the Council to demonstrate its ability to provide a better system to fit current needs prior to promising a wonderful and untested and, as yet, unplanned system that will support the requirements after the new houses have been built. Policy PR5. The phrase to deliver "a consolidated and integrated approach to green infrastructure" is a wonderful but tenuous ambition. Please see below but we do not believe that CDC see this as a key aim and we find it hard to see how it will be achieved under the current proposals. In addition we note: Every proposal claims that 50% of the houses will be affordable. Experience elsewhere suggests that developers will undermine that proportion at every opportunity, to make more profit from their developments. I see no evidence that the Council will be able to enforce that proportion rigorously. Every proposal claims to involve net biodiversity gains. Across the eight sites this hardly seems credible. In every case building, often to quite high densities, will take place on open land, so notwithstanding the assumptions made as to biodiversity, it is hard to believe that there will be a net improvement at every site. Most of the proposals violate a key GB purpose. On page 2 of the Summary Booklet, the second of these is stated to be 'to prevent neighbouring towns merging into one another'. Several of the sites, if developed, would directly contravene this purpose. We note that the general arguments in relation to the various sites could apply equally, if not better, to building within Oxford.

Changes Sought

The plan is not justified or effective and should be reviewed as follows:
 -the assumption that communities in the Kidlington/Yarnton/Begbroke area should be sacrificed and their green belt destroyed to accommodate Oxford.
 -further consideration of outlying areas should be considered to dilute and disperse the scale of the development allied to developing transport infrastructure for those areas
 -more detail needed to demonstrate that existing and new transport infrastructure will accommodate the development and will be in place on a timely basis before development is completed
 -more detail on how new social/affordable housing can be reserved for the need of Oxford's key workers

As a small Parish, directly adjacent to the Kidlington/Yarnton/Begbroke area, we have major concerns about the submission plan in general: -about the scale of the development proposed. -a lack of confidence that local infrastructure (particularly in respect of transport systems which are already creaking under current load) will be built to match the development. -lack of detail about how social/affordable housing will be guaranteed to be built to meet the alleged housing need in Oxford for key workers. -concern that housing in the area will just become a dormitory for London Commuters using Oxford Parkway. - lack of confidence that Housing need across the City and Districts is accurately estimated in the plan.

In respect of Duty to Co-operate Cherwell's strategy for building 4,400 homes in North Oxford, Kidlington and the A44 corridor, options A and B fails to meet a well thought out and strategic plan. A number of points must be raised identifying serious concerns. Regarding page 10/11, the selected areas of search and reasons for selecting options A and B:1. The 4,400 homes is completely out of proportion in terms to the existing housing stock/numbers of Kidlington and Gosford, Begbroke and Yarnton. The villages will be swamped and lose the village characteristics that has been developed over many years.2. The current travel infrastructure from this area to Oxford City is completely inadequate with lengthy rush hour commute times to get to a city desk, hospital or university, etc. place of work. Adding additional housing stock with their associated transport medium to the existing chaotic road network will cause gridlock.3. Oxford City Council's, 'Oxford needs a gear change to tackle congestion' released last Wednesday 27th Sept. is late into the discussion arena and should have been released/discussed months ago. This is completely unacceptable and bad practice to release an initiative so close to the Cherwell deadline of 10th Oct.4. Instead of building homes including schools, GP practices, transport systems in areas A and B, focus must be reapplied to the City area and how to maximise the use of brown and greenfield sites.5. Oxford City must stop providing additional sites for businesses if it cannot provide enough space for the associated housing requirements.6. Oxford Parkway, a superb link into London Marylebone, will become a London Commuter station with many of the Cherwell planned developments for Oxford key workers being swamped by workers from the capital with greater spending power/salaries grabbing the local area A and B properties. In the Cherwell Local Plan of July 2017, it is stated on page 12 that this is "a coherent and joined-up plan." I COMPLETELY DISAGREE, this plan is anything but a coherent strategy and requires urgent reassessment. All of Oxford's six councils, not just from a Cherwell D.C. perspective, MUST sit down and discuss a way forward to resolve this housing and its associated transport issues as a matter of some urgency. This Cherwell Local Plan will NOT work as it stands.

Changes Sought

The plan is not justified or effective and should be reviewed as follows:
 -the assumption that communities in the Kidlington/Yarnton/Begbroke area should be sacrificed and their green belt destroyed to accommodate Oxford.
 -further consideration of outlying areas should be considered to dilute and disperse the scale of the development allied to developing transport infrastructure for those areas
 -more detail needed to demonstrate that existing and new transport infrastructure will accommodate the development and will be in place on a timely basis before development is completed
 -more detail on how new social/affordable housing can be reserved for the need of Oxford's key workers

In respect of Duty to Co-operate, our question is whereas the districts have clearly committed to contributing to a solution to Oxford's housing need, has the city really exhausted all possibilities to meet it's own needs? After all the best place for housing for the City is in the City-that possibility should be re-examined

Changes Sought

Regarding the Duty To Co-operate, we think the plan consultation should be delayed while that duty is discharged in respect of: - basic re-evaluation of the assumption that other communities and their GBs should be decimated to accommodate the city's needs. - re-assessment of housing needs across Oxfordshire and the south east. -requirement for Oxford City to fundamentally review their housing estimates.

SO16: clearly District, City and County Councils need to work together. However we do not agree with this objective as it makes no consideration of the needs and wishes of the Kidlington/Yarnton/Begbroke communities that are being fundamentally sacrificed in respect of their green belt and historical/environmental contexts. It makes no reference to the priority that should be attached to the city re-evaluating all opportunities to provide housing for key workers within the city itself.-SO17: as noted above, we do not accept that meeting Oxford's needs is the only consideration to support economic growth in Oxford and Cherwell. Developing local communities with local residents working in local businesses, or in the digital age utilising outlying operations of Oxford centric organisations, should be considered. That approach could consider sites across Cherwell (and Oxfordshire) not just the Kidlington/Yarnton/Begbroke area, representing a dilution and dispersal of the currently proposed intense developments.-SO18:clearly this is an important objective for meeting the needs of Oxford's key workers but we do not agree with it as drafted as it makes no consideration of a priority to re-evaluate opportunities within the city to house such workers, does not consider outlying areas for remote workers as suggested for SO17 above, nor has any reference to guaranteeing how new housing will be reserved for Oxford's key workers and not London commuters from Oxford Parkway.-SO19: this objective is ok as far as it goes but it does not consider developing transport strategy across Cherwell and Oxfordshire to make Oxford more accessible from developing existing transport links in outlying areas. Implicit is the assumption that transport development is by reference only to the proposed Kidlington/Yarnton/Begbroke developments.

Changes Sought

Specifically regarding Strategic Objectives:-SO16 should be amended to include a first priority that housing for Key workers for Oxford should be built in Oxford and only when those opportunities are exhausted should development in other areas be considered.-SO17:this should be amended to commit to the dilution and dispersal of housing developments across the district allied to developing remote working and district wide, integrated transport networks.-SO18:this objective needs to be amended to include a commitment to guarantee that new social/affordable housing will serve Oxford's key workers not London commuters. -SO19:this objective needs to be amended to recognise that developing existing transport infrastructure across the district will give opportunities to meet Oxford's housing need from further afield than just the Kidlington/Yarnton/Begbroke area.

We do not support the justification for Development in the GB contained on page 30 of the summary plan document for the following reasons: "Oxfords Urgent and Pressing Housing Need". It is fair to ask whether in the 21st century with fast internet access we require people to travel routinely into employment hubs to work. Clearly there are some workers (teachers, nurses etc.) who need to but there appears to have been little thought give to how a burgeoning high-tech centre like Oxford should source its work force. We note that the Oxfordshire Growth Board is supporting housing developments in the Didcot area as well as the West Oxfordshire Garden Village. Surely this makes the case that development close to Oxford is not necessary."The Clear Inability of Oxford to meet its own housing needs". The previous comment addresses part of this issue. But the other part is the extent to which Oxford can address this need itself without disturbing the GB. Building on Brown Field sites in Oxford will alleviate many of these issues as well as reducing the issues that relate to commuting. They would also provide a greener solution as people would be more likely to walk or cycle to work than those from outside the ring road. "The absence of sustainable, deliverable and alternative sites". This is simply not correct. There is a lot of land within the Oxford ring road system that could be developed. To say that it is GB ignores the fact that the land proposed for development is nearly all GB."The opportunity to create a sustainable joined up vision for the whole of the north Oxford/Kidlington/A44 corridor area" . This single statement effectively incorporates the seven statements which precede it - other than the one that relates to Woodstock. This key statement is thus repetitive and we address it here. Many of the statement leading into this key one are not actually the basis for Exceptional Development in the GB ("relationships between existing communities and the proposed development areas"; "relationship... to Oxfords Northern Gateway site..."; "unique place shaping of land in the vicinity of the ..Begbroke Science Park and the Oxford Canal"; "improvement to transport infrastructure in the north Oxford/A44/A4260 corridor"; "strengthening of Kidlington village centre related to sustainable transport improvements"; and " the opportunity for improvements to the quantity and quality of new public open space, green infrastructure and recreation facilities and in terms of access to the countryside"). Clearly this is an aspirational afterthought sought to partially justify the proposed development. The "unique place shaping" comment is especially risible. However, there are many ways that such a vision could be created without the proposed development. Piecemeal encroachment onto the GB in eight different locations seems a poor basis for such a vision.

Regarding rejected areas of search and rejecting areas C to I as page 10 of the summary booklet:- Oxford City suffers from an extremely poor transport infrastructure when it comes to ease of access for commuters travelling to their place of work within the city. It always has been the case and by building homes to satisfy the City's shortage remotely/outside of its boundaries will only compound the current and foreseeable travel situation. - It appears that Cherwell has 'cherry picked' areas, the A to I list, that could be considered for housing development and then rejected them as a way of saying that deep analysis has been completed to arrive at their conclusion and subsequently remove the areas C through I. These areas should never have been selected for consideration.- Cherwell's premise of building the additional homes in a dispersed manner will have a huge effect on existing mature villages and exacerbate the already poor travel infrastructure to Oxford City.-It must not be forgotten, it is the City that has a housing shortage especially for its 'key' workers and that for efficiency and cost, homes for these essential workers must be provided in close proximity to their place of work.- An Oxfordshire wide joined up strategy is clearly missing between housing requirements for key City workers and travel infrastructure systems. - To re-emphasize, Housing for 'key' workers supporting Oxford City's human resource requirements MUST be in close proximity to their place of work.

Protest to the proposals to build on green belt land to the north of the Moors in Kidlington. Not only is this land prone to flooding but it is used by hundreds of people for recreation. Over the last few years traffic in the Moors has increased because of in building and cannot see how this road will cope with an extra 300 houses.

Welcome that ecological scoping surveys were undertaken to inform the site allocation process and to highlight the need for further surveys. They give a useful indication of habitats and potential ecological interest but have to be treated with caution as they are subject to a number of considerable limitations, in particular access restrictions (done from Public Right of Way only) and sub-optimal survey timing, which might mean that some ecological interest might have been missed. Para. 158 of the NPPF requires Local Planning Authorities to base local plan policies "... on adequate, up-to-date and relevant evidence ..." As such surveys are required to inform judgements on suitability and capacity. The potential lack or inadequacy of ecological surveys could be in conflict with the NPPF and could potentially result in allocations being found unsound.

Although the development and use of active travel routes is integral to the overall vision of sustainable development the Monitoring Framework in Appendix 5 does not set out how the use of such infrastructure will be monitored and evaluated. As traditional fixed pedestrian and cycle counting equipment is expensive and only provides single point tallies (rather than an overall picture of how and why people are moving around), strongly recommend that the Partial Review seeks innovative new ways to measure and fund ongoing monitoring of pedestrian and cycle activity.

The document is flawed in its analysis in several places. It dismisses sites further away in a manner that suggests such sites should not have been included in the first place. It does not make a good case for the 'exceptional circumstances' that would justify GB development with several of the proposed sites violating one of the five principal purposes of GB. Many of the justifications put forward apply more strongly to building within Oxford. A further point is that the proposals make relatively sweeping statements about improvements to local transport infrastructure. The current situation in and around Oxford is dire. It is hard to believe that in the short term things would get better and even in the longer term massive infrastructure investments would be required just to get back to the current dire position. The failure to address adequately the impact of the proposals on transport infrastructure is a serious failure especially when set against the obviously lower infrastructure costs associated with building more houses within Oxford.

No agreement with reasons for GB development insofar as they apply to Cherwell. Whilst Oxford has an urgent and pressing housing need, there is no evidence that it is imperative that Cherwell should help meet this need. Three points made seem particularly egregious: - The clear inability for Oxford to fully meet its own needs; Oxford wants to preserve its GB, but that involves a clear trade-off, Cherwell's GB is sacrificed instead. Many more houses could be built on land within Oxford and the need for Cherwell to support Oxford is not proven. - The absence of sustainable, deliverable and appropriate alternative sites; Simply not correct. There is a lot of land within the Oxford ring road system that could be developed. To say that it is GB ignores the fact that the land proposed for development is nearly all GB. - The opportunity to create a sustainable joined up vision; There are many ways that such a vision could be created, piecemeal encroachment onto the GB in eight different locations seems a poor basis for such a vision.

Proposals as stated are generic, apart from PR4b. They could apply equally, if not better, to building within Oxford. I do not support the proposals. 1. Every proposal claims that 50% of houses will be affordable. Experience suggests developers will undermine this. No evidence that the Council will be able to enforce this rigorously. 2. Every proposal assumes houses will be occupied by people working in Oxford. With proximity of sites to Oxford Parkway there is a high risk that many will be occupied by London commuters. 3. Every proposal claims to involve net biodiversity gains. Across the eight sites this hardly seems credible. In every case building, often to quite high densities, will take place on open land, so notwithstanding the assumptions made as to biodiversity, it is hard to believe that there will be a net improvement at every site. 4. Most of the proposals violate a key GB purpose. On page 2, the second of these is stated to be 'to prevent neighbouring towns merging into one another'. Several of the sites, if developed, would directly contravene this purpose. 5. The general arguments in relation to the various sites could apply equally, if not better, to building within Oxford. A separate issue is that the analysis does not make any comments about the downsides of development at particular sites. These obviously exist and to ignore them is again flawed and partial, only presenting what it claims are positive benefits without any assessment of the problems that the proposals might create.

No agreement for reasons for rejecting areas C to I. This area of analysis is poorly conducted. To identify nine separate areas and then say, without any substantive analysis, that seven of them are too far away, smacks of window dressing. If they are too far away, they should not have been included in the first place. That said, some of the reasoning for rejection is specious: They are less well situated to build communities associated with Oxford. I do not agree. Go to Oxford Parkway any weekday morning and see how many people live in or near Oxford and work in London. Are Oxford and its surrounding areas less well situated regarding working in London? Practical evidence is they are not, so the argument that distance of a few miles is some sort of insuperable barrier is clearly flawed. They were more likely to result in a higher level of commuting to Oxford by private motor vehicle. Again. I do not agree. No argument is presented in support of this statement. People choose public or private transport for many reasons and a few miles distance seems not to be particularly relevant. Whether homes were built five or ten miles from Oxford it is very likely that they will choose public or private transport for reasons generally not associated with the difference in distance. They were likely to result in less affordable transport options for accessing Oxford for potential occupiers of affordable and low-cost housing. Again this is presented as evidence, when it is only an opinion. If good quality public transport were available for more distant sites, there is no reason why those in affordable and low-cost houses would be unable to afford the small addition in fares involved. More dispersed locations provided less opportunity for strategic infrastructure investment. No they do not, the other sites are in or near to other urban areas which each offer opportunities for strategic infrastructure investment. The entire basis for the proposals is flawed because the analysis presented is partial and flawed by the erroneous presumption that distance is somehow a major problem. If the Council insists that distance is an issue, then the argument that the houses should be built within Oxford becomes even stronger - the distances involved are less and the opportunities for strategic infrastructure investment are more localised and presumably less costly than the necessary investments to bring more people into Oxford.

No support for this vision. Not appropriate for Cherwell to support Oxford's unmet housing needs without careful consideration of whether or not Oxford can do that without encroaching on Cherwell's GB. Looking at various elements of the Vision, all of them could apply at least as well, and in some cases better, to Oxford building more houses on spare land in and around the city, that is within the ring road structure. For example: - creates balanced and sustainable communities: this would be better achieved within Oxford, given that the document talks extensively about people working in Oxford. - Is well connected to Oxford: by definition, housing built nearer to Oxford would be better connected. - Is supported by necessary infrastructure: clearly houses built nearer to Oxford will create less pressure on the wholly inadequate current infrastructure. If these Vision points are relevant, then the document should have stated clearly why they are more relevant for building to be conducted in Cherwell than in Oxford. Omitting such an analysis is a clear flaw in the document.

No agreement for reasons for selecting areas A and B. The reasoning rejecting the other areas is flawed on several grounds. The housing should be built in Oxford: - Proximity to Oxford; Building within Oxford involves even greater proximity than building outside it. - Opportunity to reduce reliance on private motor vehicles; Public do not like or accept the vision that planners put forward to discourage use of private motor vehicles, so will not follow planning dictate in this matter. Nevertheless, if they do, building in Oxford is better as by its very nature would encourage more cycling and walking to work than building outside of Oxford. - Delivery of sustainable transport improvements; Many people are sceptical that these improvements will make things better, especially with the huge problems the proposed new building will cause in relation to traffic and associated factors. However, building within Oxford would minimise these problems due to shorter home to work distances involved. - Relationship of existing communities to Oxford; There is resentment that Oxford is pushing its problems into surrounding areas. These proposals will not improve relationships. Building in Oxford would remove these tensions. - Existing economic relationship between the areas of search and Oxford; These can continue without the proposals. Building within Oxford will strengthen its economy more than building outside. - Affordable homes close to the source of that need; Building within Oxford is a better opportunity as the general home to work distances must be less than building outside.

Water has several dimensions, few of which are mentioned in the Partial Review. Firstly there's the issue of water supply, which is by no means guaranteed. There is no mention in the review document as to how the additional water supply infrastructure will be incorporated into such large developments and what impact the additional demand may have on other existing settlements and dwelling.

5317	Comments							
This is greenwashing at its worst. Houses do not provide biodiversity, they provide housing. Biodiversity requires large areas of untouched green space. Replacing that with a few bat boxes and some birdhouses is simply not a fair exchange. The areas around the locales encompassed in PR8 and PR9 are rich in wildlife and provide vital habitat to a number of species. Green infrastructure already exists in the green spaces encompassed by the green belt that these proposals place under threat. Large areas of animal habitat will be concreted over should these plans go ahead and that does not represent a net gain in green infrastructure. What is being proposed are small areas of green space that are intended to compensate for a contiguous landscape that is both essential to wildlife and of great value in terms of the health and well-being of Oxfordshire residents, as well as the many visitors it attracts. Once this resource is lost, we will never get it back."

The proposed submission is not justified and concern is expressed about the scope of the review. The Council's sole purpose in conducting this review should be to accommodate Oxford's unmet housing needs. This should have been handled very carefully, such that, after evaluating allocations outside the Green Belt, any residual allocation was such that 'very special circumstances' existed by virtue of the fact that the harm done to the Green Belt's purposes was minimised. This has not been the case. Too much importance has been attached to the relatively democratically unaccountable aims of the Oxfordshire Growth Board. Detailed comments are made in relation to Begbroke Science Park and Oxford Technology Park (PR8).

<p>Strongly support the decision of Cherwell District Council not to include The Moors Land, Kidlington for development. This site is in the Green Belt which must be preserved to prevent urban sprawl. The impact of the proposed development on the Green Belt is not modest as claimed by the developers. Green belt status should be protected and preserved as stated in the Conservative Government's manifesto. Loss of landscape and rural views towards the oldest part of the village. Development (including residential and business units) would affect the setting of St. Mary's Church - Grade 1 listed - and other listed buildings in the Church Street conservation area - a very much treasured part of this village that must be preserved for the enjoyment of future generations. Development will exacerbate the flood risk to all housing and adjoining land/conservation area. The fields behind the Moors and west of the burial ground already flood regularly. Inadequate local infrastructure to support development of this scale will undoubtedly have a detrimental impact on the existing roads and services especially for surface and foul drainage. Access to the proposed Moors development site is at the junction opposite Benmead Road, close to two Kidlington conservation areas. Development will create a great deal of extra traffic near to a school and nursery on a relatively narrow, busy residential road already the subject of traffic calming measures. The Moors is already overloaded with traffic and hold ups with drivers cutting round the village to avoid the severe main Banbury Road traffic tail backs at peak times. Damage to surrounding countryside and loss of the rich habitat for many wild rare wildlife species including Short Eared Owls, Great Crested Newts and Skylarks. The fields are an important and very well used amenity for all village residents and regular visitors providing excellent countryside walks. This land should never be developed and should be treated as Permanent Green space. Thank you for your decision of support to protect this much loved and unique part of our county!</p>

<p>Light Pollution: The spaces around Yarnton Begbroke and Kidlington benefit from dark skies. These are very important for wildlife, and also human wellbeing. The new proposed conurbation would destroy this, creating a huge amount of light pollution. The glare of lighting from the new station and its car park alone would be unacceptable in this location. This response though separate and my own should be read in conjunction with the Representations made by the Begbroke & Yarnton Green Belt Campaign "BYG".</p>

<p>Green spaces in Kidlington – those mentioned in the plan and other areas under threat by developers i.e. the area behind The Moors – are precious and should be retained for those currently living in the village and for our children. There is no need for the vast number of houses to be built in a village as a response to the problems identified within Oxford. The sites are in the Green Belt which must be preserved to prevent urban sprawl. This is not a modest development! Cherwell District Council was right to exclude this site. I strongly support their decision.</p>

<p>Particularly concerned about PR20 and PR 91. They are areas that create a green, clean air buffer between villages and Oxford. They counteract pollution from the major train line and canal traffic, along with car/industrial pollution. They are essential areas of public access to enjoy and benefit from the countryside. Concerns are for any of the green belt being developed on, which I think is unjustified and unsound. Also of particular concern are sites 14, 27 and 34 as I am worried about building on the floodplain and encroaching on the precious wildlife, and outstanding walks that can be found in the St Mary's fields area leading up to Thrupp.</p>

<p>Support the rejection by the Council of those Green Belt sites put forward at the options stage, and which the Council has not allocated in this draft plan. Aware that developers continue to promote these sites and are in regular contact with the Council. I therefore repeat my objections to any proposed development of the following three sites in the Green Belt with which I am particularly familiar. (Reference numbers are as in the options consultation). I support the Council's rejection of: Site PR14 (North of The Moors, Kidlington) This site is in open countryside beyond a clearly defined boundary to the village. It forms part of the Cherwell Meadows leading towards the river Cherwell. It is much used by residents for walks and peaceful enjoyment of the countryside as can be seen from the numerous footpaths that have been created across the site. There is considerable wildlife present. The site is adjacent to the Church St. Conservation Area and provides fine views of the historic Grade 1 listed St Mary's Church with its remarkable spire. For all these reasons the site, if it were not already protected as part of the Green Belt, would be a prime candidate for designation as Local Green Space. Kidlington does not have a public park and this countryside, readily accessible to the village, helps to make up for that deficiency. Access to this site would be from the Moors, a road which already suffers from traffic problems as can be seen from the traffic calming measures in place. Adding further to this traffic would be unacceptable. The eastern field on the site is subject to groundwater (water table) flooding which has occurred at least twice in the last six years (when the meadows closer to the river also flood) and can persist for at least a month. It is therefore unsuitable for any development. (Evidence can be provided separately if required) Development on the slightly higher portions of the site would be likely to add to this flooding as a result of runoff. The site is not suitable for development. Site PR27 (Further North of The Moors, Kidlington) This site is currently open countryside and completely surrounded by open countryside forming part of the Cherwell Meadows leading towards the river Cherwell. It is much used by residents for walks and peaceful enjoyment of the countryside as can be seen from the numerous footpaths that have been created across the site. There is considerable wildlife present. The site provides fine views of the historic St Mary's Church with its remarkable spire. Access to this site would be at least in part from the Moors, a road which already suffers from traffic problems as can be seen from the traffic calming measures in place. Adding further to this traffic would be unacceptable. The site is not suitable for development. Site PR32 (Adjoining Webbs Way, Kidlington) The site lies in an important historic part of Kidlington within the Church Street Conservation Area. There are listed buildings within close proximity including the Grade II Dovecote End and Old Rectory, the Grade II* Dovecote, Grade II* Vicarage and Grade II Church Street Farmhouse. Development would result in the loss of an important gap within the Church Fields Character Area and would adversely affect the setting of the Conservation Area. There would also be a detrimental impact on the character of the Mill Street area to the south. An important and well used footpath providing unique views of the conservation area passes close by and the site has wildlife interest. Access to this site would be from Mill Street, a road which already suffers from traffic problems as can be seen from the traffic calming measures in place. Adding further to this traffic would be unacceptable. The site should not be developed as was recognised in the 2014 SHLAA.</p>

<p>Strong objection to the land behind The Moors being included in the strategic plan at a later date. I understand a developer is trying to obtain this land for development in the future. (Sites PR14 and PR27). The fields are unsuitable for housing for a number of reasons: It is green belt. The infrastructure in Kidlington could not support such large levels of housing. The increased traffic would pose further problems to the very busy main road that runs through the middle of the village. Living on The Moors, we see deer and other wildlife everyday. The fields are used by many local residents who enjoy the rural views towards the oldest part of Kidlington, which also include conservation areas. The fields regularly flood, housing will exacerbate this problem. As a resident we have frequently experienced surface water flooding during heavy rain. Please do not allocate this area of Kidlington for development when there are other brown field sites available by Kidlington</p>

<p>I object to the development on the Moors. With reference to the above parcels of land behind The Moors in Kidlington, I would like to add my voice to the campaign to ensure that Cherwell DC maintains their objection to future development by Bloombridge or any other developer. The land is GB and helps support an abundance of wildlife including a thriving Roe deer population that are seen on the land several times a day. Additionally I would also have big concerns over drainage - surface water run off from the ridge into the rear gardens of properties on The Moors has been an issue in recent winters. Building on the land will only exacerbate the problem. There are a number of other potential development sites within the village and brownfield sites nearby that wouldn't create additional traffic on a road that is already used as a rat-run to avoid the village centre at peak times. I understand the pressure on housing in and around Oxford but it should not be an excuse to build on unsuitable land in a village with a limited infrastructure.</p>

Proposed Submission Plan - Consultation Process

PR-C-0006	17/07/2017	Stefan	Lutener				
6	Comments						
<p>Resident of Yarnton, exceptionally grateful to have been brought up in this wonderful part of Oxfordshire. Devastated that no prior consultation has taken place with local residents. People understand the need for more homes but not in the huge numbers and densities planned. The plans would destroy the historical identity of all three communities and cause irreplaceable damage to the wildlife environment and beauty of the GB surrounding these villages. Infrastructure is at breaking point with the A44 and A34 unable to cope with the amount of traffic. These proposals will make the situation considerably worse. New housing projects should be shared with all the Oxfordshire villages in the surrounding areas, not just the few closer to Oxford. For example, Islip and Long Hanborough have excellent train links to Oxford. You risk spoiling the GB for future generations. This area is the gateway to the Cotswolds. It is imperative that these villages keep their identities and grow in a linear approach and not mass building. The newly constructed Cresswell Close Development in Yarnton appears to have drainage problems. This is a fundamental lack of infrastructure planning which concern and fear that this lack of foresight could be replicated again. The Oxford GB is precious to local residents and should not be destroyed and lost forever on a whim.</p>

<p>Request to extend the consultation period on this proposal to 12 weeks. It is undemocratic to give such a brief time to consider such a complex matter potentially affecting the lives of so many. Six weeks in peak holiday time is of little value when there are so many documents to read and so many points of view to reflect on. Surely the District Council would want to demonstrate that they take some account of long-standing residents thoughts on these very important matters.</p>

Proposed Submission Plan - Consultation Process

PR-C-0029	31/07/2017	Jonathan	Mason					
857	Comments							
Frustrated that the consultation period for the "Cherwell Local Plan 2011-2031 (Part 1): Partial Review" has been set at the statutory minimum of 6 weeks, and that it has been timed to take place during the summer holidays, when the majority of people who will be significantly and adversely affected by this will be busy with childcare and/or on holiday, so are likely to have less time to consider the extensive planning documentation fully. It is as if the District Council is fully aware how unreasonable, unsustainable and unpopular these plans will be and is trying to sneak them through in the shortest, most inconvenient period. Urged to extend this period of consultation, to give people time to make to the representations based on reasoned considerations of the plans, rather than just knee-jerk reactions.

According to the Cherwell District Council Local Plan, "the essential characteristic of a Green Belt is its permanence" and "detailed Green Belt boundaries defined in adopted local plans should be altered only exceptionally". Nothing in the Plan or associated documents provides a convincing case that the current need can be considered as exceptional. It is an acute, temporary need that results from poor previous planning and failure to distribute employment and wealth throughout the country. Wider, long-term planning failures should not be mitigated by destruction of the Green Belt for short term and short-sighted gain. The housing requirement figures are at best debatable, insufficient consideration has been given to alternatives to meet Oxford's housing needs within Oxford itself, and Cherwell District Council's childish initial attempts to push this plan through with the minimum statutory consultation are a clear indication that what is being proposed here is not right.

Requests an extension of the consultation process for the removal of the green belt around Yarnton, Begbroke and Kidlington. Understands that the minimum time has been allowed and consider the timing of this to be far too short to allow a fair response. Other councils in similar situations have allowed far longer than the minimum Cherwell has decided. Please extend the time frame to allow residents a fair opportunity to respond.

Undoubtedly, the homelessness crisis in Oxford is acute. It is folly to think that the building of houses will address this. The Council needs to fight harder to reinstate some of the vital services which have been limited or closed, particularly as regards physical and mental health, the most significant causes of homelessness, Rep provides website to express the point. The speculative building of houses signifies nothing other than a means of salving the conscience of the CDC and the present government. The transport infrastructure is already under strain. The proposal to modify the A44 from Bladon to Pear Tree by making one lane of the dual carriageway into a bus lane, is absurd. Traffic is often slow or stationary at present; this measure would lead to gridlock along the A44. The plans include the proposal to close Sandy Lane. This will remove a key road link between Yarnton and Kidlington. This action will lead to further traffic congestion at both ends of Kidlington and increased pollution. The suggestion that the Sandy Lane link can become a wheel-chair access and cycle lane as part of a cycle 'superhighway' into Oxford is ludicrous! In any case, such a project would simply lengthen cycle journeys! The introduction of another secondary school in the area, in addition to two further primary schools will increase litter, traffic and, sadly, crime. Where are the plans for increased community support, generally? The consultation period of 17th July to 29th August is too short a time-frame; indeed, we think it is poor judgement from the Council to run the consultation period during the school holidays, and thereby strongly urge for a considerable extension to the deadline. In summary, there are no 'exceptional circumstances' that justify building on the GB and altering forever the nature and identity of our historic villages and their beautiful and unique surroundings. The plans cannot be considered 'sound', in the sense that they have not been positively prepared, justified, or are effective and consistent with national policy. There must be more 'joined-up' thinking, analysis of real rather than perceived future need, and together with Oxford City, the CDC must be more resourceful and creative about finding responsible solutions to housing issues.

<p>Objection to the Development proposals. Riding Roughshod through regulations: Why do we have regulations if the green belt can be thrown over for the very reasons stated for its existence. Why can Oxford impose development on Cherwell when Cherwell had its own plan completed and accepted as required. Who challenged the stakeholders over their wish list? Significant Conflict of interest: Very large windfall profits would be made by landowners who own the GB sites and who have recommended the development. Some of these landowners say they need affordable housing for employees. How will they contribute to that when the cost of residential land at more than a million an acre makes affordable housing pretty much impossible? Lack of Regulation: History shows that promised affordable housing does not get built and that land is released slowly to drive up value and returns to shareholders. This is perfectly correct from the point of view of the development companies and therefore it needs regulation to enforce what is required or it will not happen. The Oxford Council plan appears to be to hand over other councils' green-belt land to developers without any genuinely enforceable controls over what is built, or when, or whether the development will be properly supported by new infrastructure. They are not putting any money into this. There must be ways to set up suitable vehicles to ensure that this does not become a sprawl of opportunist developments. Lack of Trust: The appalling documentation which lacks executive summaries and can only be thought to be deliberately inaccessible. The timing of a consultation over the summer is either cynical or naive given that it is such a well-known ruse. The agreement between landowners and developers which is well ahead of any other consultation, leaving those who have had no say until now on the back foot. The marking out of additional green belt sites for nebulous use which can easily be seen as ring-fencing more green-belt for development as required. The sweeping lack of response to the objections received. Promises that joining all the villages up and then joining it all up to Oxford will not create a dormitory, with absolutely no response to the objections to this plan and no funded plan for the infrastructure that might prevent an infinitely worse quality of life for people in these villages. Out of date Data: The data being used is pre-Brexit. These are not sound data now. Cherwell Council appears to feel that it cannot refuse the demands of Oxford - but that is a nonsense. To what extent have they had an opportunity and the resources to test what is being demanded. There is a lack of any apparent enforcement of suitable infrastructure - are the people of Cherwell to pay for this too, one day, when life becomes impossible? • We need housing but more than anything else we need affordable housing for people who live and work here now - not for London commuters. We need to know exactly which sites will be used and to remove the soft land grabs proposed. We need to limit the amorphous mass proposed, maintaining some sort of separation from Oxford. We must limit the driving effect of windfall profits for one part of the community at the expense of others - and preferably direct some of them into reducing housing costs. We need better infrastructure now - let alone with additional housing. Oxford needs to help itself more and be seen to be doing so.</p>

	To build on the golf course will be very detrimental to wildlife. The narrow green belt to the north of the city of which the golf course forms part, is essential as a wildlife corridor for animals. The buffer between Oxford and Kidlington is essential and must be maintained. I believe that there is a golf course within the city boundaries that could be built on to help Oxford meet its own need. Kidlington has a right to maintain its own identity and not become part of a greater Oxford. The large estates do not include any open spaces for people to roam. This is already a problem in this area. Doubling the size of the population with nowhere for people to go without the need for long car journeys is a symptom of the greed which is underpinning these plans and will be detrimental to the well-being to the residents. There are continuing reports about the effects of pollution on the health of the population, yet there are plans for PR7a to build right next to the A34, one of the busiest roads in the country. Increase in development needs to be done in a gradual manner so that numbers can be absorbed naturally and the services needed for them to be provided. With no end to austerity in sight and continued cuts planned we know that no additional services will be provided and this will lead to many people being unable to access schooling, and medical services etc. Objection to the complexity of the consultation documents. They are not easy to find on the council website and there are so many. These are all wordy and complicated for lay people to read. Unable to find a summary of the plans and other relevant data anywhere to assist with understanding. This is a discourtesy to residents of Kidlington, Yarnton and Begbroke assuming this has been done purposefully to make it difficult for residents to understand and therefore discourage objections. This underpins our understanding that this massive development is almost certainly about greed, financial gain and reward for some rather than an honest assessment of the actual need.

<p>Objection to building 4400 homes in and around Kidlington, Yarnton and Begbroke.1. It cannot be possible that the population will increase so rapidly in the next 10 years that this number of housing will be needed in addition. Agree that Kidlington and the local area can take some housing but this must be in the hundreds not thousands, so that infrastructure and the well-being of existing residents is considered. If this many houses are needed just to cover Oxford's unmet need why is the City Council a) building industrial/commercial units at the northern gateway when there is no shortage of jobs in the area. This would be an ideal position for housing with its easy access to Oxford but will only now add to the problem when people have to move to the area to fill the jobs. b) allowing the development at Templars Square Cowley (within the city boundary) to only have 20% affordable housing? If genuinely trying to meet unmet need then all the new housing should be affordable, low rent or part rent part buy, and be occupied by those working in the area in low paid jobs as key workers or in other essential services. The houses that are proposed will not be affordable, they are purposefully being built around the new station to attract those who wish to move out of London but continue to work there. This is not Oxford's unmet need but an enormous commercial profit scheme and many of the properties will immediately be bought by 'buy to let' landlords thus removing them from the housing market and immediately pushing up prices. 2. Such huge numbers of new residents who will move to the area to buy these houses will have a catastrophic effect on existing residents. The roads are already so full there is no capacity for the 10,000 or so extra cars that will arrive. Housing estates will become clogged with traffic every morning trying to leave. The notion that all will get on a bus every day is ridiculous as for most people the bus does not go where they need to go. Will need at least 3 more primary schools and one more secondary school and triple the number of Doctors surgeries and dentists. Have not seen any mention of this, although all the documents associated with the consultation are so complicated and wordy it is very difficult to find any facts at all. There are few shops to the north of the city. This is unlikely to change and so traffic numbers on the ring road will soar. One of the car parks in Kidlington has already been earmarked for development, but the size of the town is to double with nowhere for cars to go when shopping.</p>

PR-C-0097	21/08/2017	Margaret	Smith						N
264	Comments								
This development is not justified or a proven requirement. It will change the nature of Kidlington as a village and is therefore undesirable. Already several dwellings have been rebuilt as flats, increasing the population, traffic and demand for services. The timing of the consultation is not good and although I have been able to read up I was not able to attend the public meetings/exhibitions. Please re-think these proposals.

Proposed Submission Plan - Consultation Process

PR-C-0163	20/09/2017	Mrs Stella	Job		
629	Comments				
<p>Glad you have extended the consultation period, since the August deadline was entirely inappropriate. However, we have only received leaflets from the SOS campaign & not from yourselves. The plan is helpful in providing much needed houses for the area, so primarily supports it. However: 1. The station at Sandy Lane would be helpful. While we have good links to Oxford centre from Kidlington, the links to Banbury & the north of the county are poor. It is difficult to get into Oxford Station in rush hour to get trains to the north via Banbury, so that would help. However, it is critical that it has good road access & plenty of parking. 2. The traffic at Sainsbury's roundabout & down through Yarnton needs to be addressed. 3. One major improvement to reduce traffic around the Wolvercote roundabout / Frieze Way would be to extend the A34/A44 junction to link directly with the A40. (See sketch provided) - (This is a very rough sketch, but a link such as this would be relatively cheap in highway construction terms, as it requires no grade separation/ bridges, etc., & would only require land purchase of a field. It would reduce the traffic at the Wolvercote Roundabout significantly, by providing a route for A40 traffic to access the A34 more directly. I think this would be much more cost effective than the alterations to the Wolvercote & Cutteslowe roundabouts which were recently carried out at vast expense in terms of construction, disruption to local business & stress to local people, & resulted in only an incremental improvement, if any.) . 4. Pressure needs to put on the relevant authorities for a major upgrade of the A34, probably to motorway status. 5. It's very important to keep GB corridors with some woodland/ wilderness area. My children have enjoyed playing in the area between Grovelands & Begbroke. This is such an important part of childhood, & it's also important for dog walkers & others. That sort of thing has an impact on encouraging an outdoor life which improves health. These areas are particularly important to maintain a firm GB status: a) between the railway & the canal, & generally keeping a green corridor between Begbroke / Yarnton & Kidlington. You seem to be proposing this, though it is rather thin by Grovelands near Harts Close. b) a green corridor at the Old Yarnton Lane track to keep that traffic free walk between the villages. c) around Frieze Way & between the A34 & Bicester Rd. You have provided reasonably well for this. 6. We need a high proportion of affordable housing. We desperately need local housing for local people to work in local jobs. We don't need to provide housing to make Kidlington / Yarnton a town for wealthy London commuters.</p>

Proposed Submission Plan - Consultation Process

PR-C-0189	25/09/2017	Susan	Oldfield		
730	Comments				
Wishes to add her voice to her MP, Layla Moran and calls on CDC to suspend immediately the consultation concerning the development proposed for the area around Begbroke, Yarnton and Kidlington. This is in the light of the requirement that Oxford City must review and reduce the figures on which that proposal is based.

Grave concerns as to the reasonableness and validity of the consultation process concerning the proposed new development in the Begbroke, Yarnton and Kidlington area. People have been offered only the minimum possible time in which to respond to the plans. Some documents crucial to the scrutiny process are missing. This prevents people from making a full and considered judgment on the proposals. Rep is asking to suspend the consultation process immediately, at least until the proper documentation is in place. Then Rep believes it would be reasonable for you to offer an eight week period, from that date, for residents and other concerned people to make their responses.

Concerns over Cherwell District Council's plans to build 4,400 houses to meet Oxford's so called "Unmet Needs" by building 3,990 of these houses on Green Belt land surrounding Oxford. Strenuously object to Policy PR3. The Plan purports that there are exceptional circumstances for building on the Green Belt, viz, "to help Oxford's needs. The reasons why the Green Belt exists are fivefold and the Government has said that it "attaches great importance to Green Belts" (NPPF para 79) except for one escape clause that in, "very special circumstances" it will allow inappropriate and harmful development to the Green Belt to be approved. (para 87) However, 'Very special circumstances' will not exist unless the potential harm to the Green Belt by reason of inappropriateness, and any other harm, is clearly outweighed by other considerations." (para 88) Furthermore, NPPF policy, (para 89) states definitively that, "A local planning authority (such as Cherwell District Council) should regard the construction of new buildings as inappropriate in Green Belt." Referring back to the fivefold reasons for the GB, the plan will actually:- cause and perpetuate the unrestricted sprawl of large built up areas; cause the melding of Yarnton and Begbroke into Kidlington and Kidlington being subsumed as a suburb of the city of Oxford; encroach extensively on open fields along the A44 "growth" corridor extending from North Oxford to Woodstock; cause the deterioration of the setting and approach to the Blenheim World Heritage site and the diminishing of the special character of local villages, in particular that of the historic town of Woodstock. The Plan should focus on regenerating and recycling of land within Oxford, e.g., the former Dog Racing Stadium, University Parks, Christ Church Meadow, Magdalen Deer Park, Oxpens Ice Rink, golf course, derelict farmland, increasing density and height of buildings, and prioritising affordable housing over employment sites. The Plan (PR 3) is excessive and unsound and now untenable and superfluous in the light of the national government's more reasonable calculation of housing needed by more than 30% i.e., from 100,000 to 68,000. The so-called "Unmet need" for Oxford would be reduced by about 50% thus neutralising the supposed "very special circumstances" upon which PR3 was concocted. These proposed reductions in housing need would also reduce the number of housing contributions required by local authorities for Oxford's "needs." Ex., Cherwell -33%, Oxford City -47%, South Oxfordshire -20%, Vale of White Horse -33%, West Oxfordshire -9%. Total for Oxfordshire -32%. We know that the these new national government housing projections are not yet official policy and will not be until at least March 2018 around which time there will be a public consultation on these projections. That is why some local authorities, despite these lower housing projections, prominent amongst them being the Cherwell District Council, have decided not to wait until these projections become policy and to rush ahead using current over-exaggerated figures. Why? Gross increases in taxable income? This makes this consultation nothing more than an expensive (to the tax payers) exercise in condescension and of placating the public. The Woodstock Action Group (WAG) in light of the national government's realisation that the current housing targets are flawed, over-calculated and in excess of those actually needed in Oxford, the Cherwell District and the other local authorities, calls for the deletion of policy PR3 from the CDC Local Plan.

Serious concerns about ponderous, heavily technically laden text of this Plan. Local residents will have had difficulty reading and understanding this excessive publication, no doubt, resulting in reducing the number of residents' representations, especially negative ones. The same trick of scheduling public consultations during holiday seasons. In attempting to negate local action groups' objections planning proposals offer sugar-coated proposals in the hopes of seducing potential residents into buying houses. E.g. Cherwell District Council says that a new railway station between Kidlington and Begbroke would support residents of the proposed housing in those areas. This is very doubtful. Affordable and sustainable transportation on the A44 to and from Oxford and Woodstock. CDC have not come forward with any up to date evidence of a traffic or planning assessment pertaining to the local Environment as related to forecasted transport requirements and their affects upon local residents and commercial interests who stand to be adversely affected by the additional housing along the "growth" corridor of the A44 from Oxford to Woodstock. The A44 through Woodstock and the A4095 in Bladon are operating at peak levels of around 70 to 75%. Major planned developments will substantially increase local traffic, private and otherwise, and this has not been factored into the overall Plan. Consequently, these local highway systems will not be able to cope with or sustain themselves with the massive combined developments planned in Cherwell and West Oxfordshire, specifically on good farmland at the SE quadrant of Woodstock and across the A4095 border in Cherwell. There is no timely register of just when and how these planning proposals will be delivered in the CDC Local Plan, i.e. suitable and sustainable plans to reduce and cope with the inevitable exponential surge of growth in all kinds of traffic on local area roads and specifically, the A44 "growth" corridor from North Oxford and sprawling out to Woodstock. Clarity is needed to warrant the acceptance of a multitude of traffic assessments as being realistic rather than optimistic. Morning and evening peak periods' traffic, already at saturation point, will increase as the number of 2-way daily journeys, private, public and essential, expands. Leading to more time spent on local highways at a much slower speed or gridlock. This will further increase the amount of noxious CO2 and NO2 gases spewed into the local surrounding atmosphere with resultant increases of disabling lung diseases and premature related deaths in the larger local areas.					
Changes Sought			Reasons for Participation		
WAG call upon the leaders of both the Cherwell and West Oxfordshire District Councils to do the right thing and reduce the number of proposed houses in line with the national government's recent and reasonable lowered calculations of actual housing need in both local areas.

BYG are concerned that CDC's consultation is not compliant with statutory framework, not procedurally fair & not reasonable as a matter of law for the following reasons: 1. Insufficient time for review of documents. There are vast numbers of documents to consider comprising thousands of pages & yet CDC have given only the bare statutory minimum period for the Consultation of 6 weeks. (Oxford CC provided 8 weeks for its consultation). This is unreasonable. 2. Consultation taking place over the Summer Holidays. The timing could not be worse as it coincides with the school Summer Holiday season when many people are away on holiday. Indeed we note that the Options Consultation on the proposed CDC PR also coincided with the Christmas holiday season. This is unreasonable & we conclude that both consultations were deliberately timed to avoid the maximum number of relevant residents who will be most affected by the Partial Review being able to participate in the process. 3. Very important documents are missing. As if points 1 & 2 were not serious enough it turns out that important documents which should have been made available by CDC are missing from its evidence base documents suite which has been put out as part of the Consultation. We are still identifying missing documents but at the very least the following important documents are not available when they plainly should be: (provided in table form) PR54 Housing and Economic Land Availability Assessment (HELAA). The HELAA provides important evidence for the development of a Local Plan. The HELAA is required by the NPPF. The HELAA enables planning policy to be devised on the basis of available sites. It is important to the Consultation because the HELAA should include detailed assessments of all sites considered within the Cherwell search areas & will enable a review of rejected sites in comparison with those put forward for development, which in turn is important to respondents in seeking to recommend alternative options. PR36: A44 & A4260 Corridor Study. This document was commissioned by Oxfordshire CC to review the A44 & A4260 corridor & key cross link roads bounded by the A4095 & the A4260 Frieze Way/Peartree Interchange. 5 of the 7 selected sites are either within this area or are located on the boundary. The study takes account of planned development in the area included in the CDC LP. At the time of writing, CDC is working on growth options for a partial review of the LP relating to Oxfords un-met housing need, some of which lie on the A44/A4260 corridor study area. Depending on the growth options taken forward from this partial review, some aspects of the proposals in PR36 may need to be revisited.					
Changes Sought			Reasons for Participation		
BYG demands that the CDC Submission Plan Consultation be suspended immediately. In order to ensure a reasonable and fair Consultation CDC must: 1. Provide to the general public the documents which we have identified as missing;2. Confirm that there are no other documents missing which are relevant to the Consultation; 3. If there are any such documents missing, in addition to the ones we have identified, provide to the general public those additional documents as well; 4. Upon the provision of all the missing documents; re-start the clock for the Submission Plan Consultation to run from the day after the provision of the missing documents for a period of 8 weeks to take account of the Summer Holidays which is consistent with Oxford City Council's Local Plan 2036 Options Consultation which started prior to the School Holidays and runs for 8 weeks. Please confirm by return that you will ensure as Leader of Cherwell District Council that the above entirely reasonable demands being made by BYG will be met.

Multiple documents have been submitted with this representation. These are summarised as follows. Appendix A: Baseline Data and Evidence. Relevant information gathered through the baseline review is presented on the plans provided in Appendix A. These plans provide a record of the issues & constraints that have guided the development of potential design options. The key points & themes to emerge are summarised in this section but the Appendix A is missing. Appendix B: Stakeholder feedback. The feedback & comments from stakeholders are provided in Appendix B. The key themes to emerge after analysis of the feedback are summarised in the report but are not available for review as Appendix B is missing. Appendix C & D: Design Overview. Plans showing the preferred corridor design are provided in Appendix C. It is unclear if this is the information provided in PR36b. The operation of selected junctions has been modelled for a future year scenario (2031). The findings are discussed in context below, & presented in detail in Appendix D. Appendix D is missing. Appendix E: Design decision. Further to the design notes provided in the report, a record of all design options considered throughout the corridor is provided in Appendix E. This appendix is missing & would seem relevant given the residents of the area may consider aspects of the other options more appropriate given local knowledge. Hard to achieve this if the information is not provided for review & comment. Appendix F: Full Cost Estimates. The main body of the report provides a summary of the total scheme costs. The full cost estimate calculations are provided in Appendix F which is omitted. The report acknowledges the proposed schemes are costly and therefore it would be appropriate to have access to these detailed costs to understand better which elements of the proposals could be cut. As the plans remain unfunded understanding these detailed costings is again very important. The relevance of the above is related to CDC alleged Exceptional Circumstance 9 on page 66 of the Proposed Submission Plan: "The improvement of transport infrastructure in the north Oxford / A44 corridor area." Document PR36 is also included in PR52, Transport Assessment in Appendix 6. The six appendices are again omitted. The inclusion of PR36 in PR52 further underscore its relevance & importance to the process. Without these documents the general public are simply not able to participate in a reasonable and meaningful Consultation as they should be. This is again plainly unacceptable and quite unreasonable & puts in doubt the genuineness of the Consultation. It is quite unreasonable & procedurally unfair for the CDC Submission Plan Consultation to proceed unless & until the missing documents are made available to the general public.

Request Cherwell District Council to suspend the consultation on Cherwell's Partial Review of its Local Plan on the following grounds:• Insufficient time for review of documents• Consultation taking place over the Summer Holidays• Very important documents are missingThere is very strong feeling at grassroots level about the unacceptable level of mass housing being proposed in Oxfordshire. It is a great disappointment the your Council, along with others, have conceded to the unverified demands of housing allocation being promulgated by Oxford City Council to meet their so-called 'unmet housing need'.On top of this scenario, it would appear that Oxfordshire is to bear the brunt of Central Government's 'vision' to develop the Cambridge – Milton Keynes – Oxford 'corridor' at the expense the quality of life and place currently experienced by those of us that live in Oxfordshire, and also at the expense of the depletion of wildlife and the natural environment. Your vision seems to be more concrete, more traffic, more pollution – the doom laden scenario of 'business as usual'. Instead of economic growth, you as a Council should be planning for 'sustainable growth / smart growth' where the qualities of the natural environment are placed at the heart of planning.I trust you will immediately respect the request / demand from the Begbroke and Yarnton Green Belt Group for the immediate suspension of the proposed submission Plan for Consultation.

PR-C-0251	05/10/2017	Antonio	Corbi		
1180	Comments Addresses Cllr Barry Wood & thanks him for attending the Kidlington Parish Council public meeting on 21/09/17 & for taking questions on the proposed changes to the LP. Your frank responses reinforced my view ,shared with many others, that CDC does not intend to take the public consultation seriously. That it is listening only to the development lobby & running scared of litigation. Tellingly, most of the reasons given in the LP for building on the GB North of Oxford read as if they have been copied & pasted from some Local Enterprise / Oxfordshire Growth Board strategy document for capitalising on cashing in the land value. You dismissed suggestions to wait on the outcome of the current Government consultation that could well show that the current SHMA housing targets are perhaps double what is needed. You seemed remarkably unconcerned by the possibility Cherwell is committed to many more homes than it really needs & seemed determined to compound the error by building homes that Oxford City doesn’t need in the most inappropriate and vulnerable part of the Green Belt. Your defence was twofold: that the SHMA target doesn’t need to be accurate so long as it has been approved via the correct process, if a new formula were introduced that slashes the existing target you were confident in the Council’s ability to find ways to keep housing need projections at the current level. Do you really think that this is an appropriate & professional response to serious & legitimate concerns? Never saw such a blatant display of official contempt for both the probity of the Council’s conduct of an evidence based process & for public scrutiny. It is most important to be sure the housing target is as accurate as possible. Recall the initial LP Examination in Public saw Cherwell’s case thrown out for not meeting newly revised SHMA targets. It had to go back to the drawing board to double the housing numbers. Is that not a clear pointer toward the need to stop & rethink – to apply your vaunted ingenuity to bring the numbers down? This requires making a clear separation between need (which is finite) and demand (which is massive & almost infinite). Cherwell already has a massive new build commitment & a LP in place. It need not rush to add more. It certainly should not progress a process designed to take land out of the GB against a background of heightened uncertainty magnified by Oxford City not having a LP in place. I urge you to take a principled stance in your role as Leader of the Council & our representative on the Growth Board. Please do everything in your power to apply the safety brake. I think the 400+ members of the public present at Exeter Hall on Thursday made their feelings clear & gave you a mandate to change direction. It is time our elected representatives acted to re-open the housing need question. CDC should work with the Growth Board to withdraw support for allocating Oxfords unmet housing pending an urgent review of the underpinning housing need projections. If you really are unwilling or powerless to Stop Oxford's Sprawl and save our GB then perhaps it is time to resign. No one of principle would want to preside over the urbanisation of Oxford's GB. History will not forgive you.

PR-C-0251	17/09/2017	Antonio	Corbi		
863	Comments Unhappy & concerned about short consultation period being held over the summer months. Oxford City Council should meet their own unmet needs, not their neighbours. Their needs have been overstated & the council will have all powers to cover these. Passing their responsibilities to other councils is a good strategy but it is irresponsible. It seems that CDC is more interested in meeting the request of Oxford CC than hearing its own people. An additional 4,400 houses for the district by 2031, over & above that allocated in the adopted part of its LP is outrageous! 1. The LP Review is intended to only accommodate Oxford’s “unmet need”, but this is substantially overstated & Oxford has not satisfactorily identified the amount of it they might not be able to meet. Oxford is capable of accommodating all or almost all of it by switching land earmarked for businesses to housing instead. It is premature for CDC to even start the process of accommodating it. 2. The Council’s LP Review is not just to build in the GB, but to attack the core principles on which GB's depend. Even if Oxford’s inability to accommodate its own housing need was real & had been properly quantified Oxford could and should meet it elsewhere than in the GB, which 3/4 of its own voters want to see protected. 3. Sustainability - Although you say the most sustainable option is to build on the GB, to it is the very definition of unsustainability. It should be located the sustainable sites it has identified elsewhere in the district. 4. Density - In the adopted part of its LP & in this Review you waste land by proposing to build at very low densities. This is an unsustainable waste of a vital resource, & higher densities would produce the more affordable houses people actually need. 5. Transport - You say the housing could be supported by a new railway station ‘between Kidlington & Begbroke’ but this is unlikely to be deliverable. The plans should be put on hold until the Oxford to Cambridge Expressway route is settled, the East-West railway is re-opened & the full extent of the expansion of Bicester is agreed, with its possible new transport infrastructure. 6. Any new high-tech employment sites in the district should be focused at Bicester where large numbers of houses are already being built/have been provided for on the basis that high-tech employment would be provided, but this has not yet been forthcoming. 7. The planned housing for Yarnton will put undue stress on the rather weak local infrastructure & services, which are practically non-existent & damage the rural environment. Many neighbours are already abandoning this area.				
	Changes Sought		Reasons for Participation		
	The Council should set much higher density targets on building properties.

840	Comments Requests an extension of time on the public consultation on the Cherwell Local Plan. The Begbroke and Yarnton Green Belt Campaign refers to missing documentation in the Local Plan Partial Review. These are important omissions, and residents have been in contact with their concerns about the shortness of the consultation period. There are over 200 pages of consultation documents, even without those omitted, residents will not have time to read, digest and respond to this in a satisfactory manner over this period. Fully support BYG's call for a suspension of the consultation period until the missing papers are made available. If the consultation can be extended, or begin again once all the documents are available.

<p>Complete and unequivocal objection to Cherwell District Councils plans to build Oxford City housing on the Yarnton and Begbroke GB. Objections to the threat to wildlife and creeping urbanisation of our cities and further objections to consultation process. Suggests approaches to ribbon development. The plan is based on flawed and out of date information (pre-Brexit data and a discredited SHMA). With regard to increase in traffic a CDC representative at the exhibition in Begbroke village hall felt that there would only be a 1.2% increase, there is simply no way that tripling the size of the village will lead to only a 1.2% increase in traffic. Objections are: 1. The loss of vast swathes of countryside and wildlife around Yarnton 2. Irreversible harm to the history and identity of the village 3. Traffic gridlock on the A44 – it already takes one hour to get from Yarnton to Cowley each morning and no amount of bendy buses will improve that because there is only room for one lane in each direction over the bridge. 4. Air pollution from said increased and gridlocked traffic 5. Lack of water supply – Thames Water has informed me that water will be brought in from Wales. The reservoir that South Oxford is trying to build is to support the water supply in London – only 20% of it, if it is ever actually built will be allocated to South Oxford. 6. Ironically then – this proposal would also lead to an increased flood risk. 7. Closure of Sandy Lane – this is a busy thoroughfare between Yarnton and Kidlington, its closure would require a 3 – 4 mile detour in either direction - leading to even more traffic on the A44 8. Since this is housing for Oxford City it should be said that this is just too far for public transport in to the city; it would take me more than 2 hours each way, by bus, to get to my office in Cowley. It takes 2 hours to get to London. This plan would end up being London housing, not Oxford City. Oxford City should be exploring other non-greenbelt sites closer to the city. As well as having higher density targets within the inner city or perhaps building where better infrastructure has already been provided, such as Bicester.</p>

<p>Consultation period is far too short. The 6 week period you have approved is the minimum that can be given and to apply this over the summer holiday period, strikes me as being unreasonable and undemocratic. You well know the volume of documents each resident must read through and absorb in order to appreciate the full extent of the proposed plans; estimates that there are nearly 2,500 pages of technical "stuff "(which would be a challenge to anyone let alone a lay person) and then there are a significant number of additional documents with supporting evidence which also have to be studied in order to reach a thoughtful conclusion. How can you reasonably expect that those residents ,who will be significantly affected by CDC's proposals, can deal with so much in such a short time and particularly when most have full time day jobs and many will have family commitments over the holiday period. One is driven to conclude that Cherwell District Council is behaving cynically and undemocratically. Despite the hand-ringing at the Council meeting when the Council approved this plan, there appears to be no intent or action by the Council to serve the best interests of its electorate; this is hugely disappointing! Urges the Council to put pressure on the planning department to extend the consultation period to the maximum. It is important that the electorate have faith in their elected representatives and that they have time to assess the plans that will have such a significant impact on their lives.</p>

<p>The 6-week deadline for responding to the Consultation is too short. Requests that it is extended. This is because: a) the consultation is being held over the Summer holidays when many people are away on holiday and unable to read and research the 2,000+ pages of information, much of which is written primarily for specialists and not ordinary people, and therefore requires considerable time to read and consider b) some vital documents are missing from the evidence base, these being (i) the PR54 Housing and Economic Land Availability Assessment, the publication of which is stated to be "imminent, but which (2 weeks into the consultation) has not yet appeared on your website, and (ii) the Appendices for the PR36 A44 & A4260 Corridor Study, which contain crucial diagrams and stakeholder feedback information (among other evidence) which is needed in consideration of a response to this document. Considers that, owing to the omission of the documents in (b), which are required in your consultation, and the extremely complex nature of the rest of the evidence base which has to be read, you should order the Consultation to be restarted on production of these documents and for a longer period than the statutory 6 weeks. Also asks why it is that the responses to practically every question in my last representation in this consultation the process was not summarised accurately, but instead were lazily curtailed with a comment along the lines of "a more detailed discussion of these issues is provided in the consultation"? Appreciates that officers' time is limited when dealing with these responses, but when comparing the summaries of my responses to the questions in this document with others', it is clear that many other responses have had longer summaries to the same questions and have not been censored in the same way. Raised many valid points in each of my answers; these have not been highlighted properly in your summary, and would appreciate an explanation for this.</p>

PR-C-0260	01/08/2017	Dr Rhian	Pye					
847	Comments							
<p>Insists that the Council increase the time allocated for the public consultation into the CDC partial review relating to the building of 4,400 houses in the vicinity of Begbroke, Yarnton and Kidlington in order to meet Oxford's so-called 'unmet housing need'. Should the proposed vast numbers of houses be built in this area it will undeniably have a large negative effect on the local communities of these three villages. Therefore it is clearly unreasonable, not to mention highly disrespectful to residents in these communities, to permit only the minimum time allowed for the public consultation process. Residents should be permitted eight weeks to study and respond to the vast number of documents included as part of this consultation, as is the case with the public consultation currently being carried out by Oxford City Council. Secondly, it is also unreasonable and unfair for CDC to conduct the partial review consultation at such a time as to exactly coincide with the school summer holidays when many residents of this area will be away on holiday and therefore unable to participate effectively in the consultation process. This is particularly unreasonable as CDC chose to run the previous consultation over the Christmas holiday season when again it would have been likely that some people would have been unable to effectively participate in the consultation process as is their right. It appears to me that CDC are actively working to limit the opportunities for local communities to respond to these proposals. This is clearly fully against the ideals of a democratically elected local council. In studying the documents related to this consultation it has come to my attention that certain documents, or appendices to documents, are not available for the public to review. These include PR54 - the Housing and Economic Land Availability Assessment (HELAA) which is required by the NPPF, and information relating to the transport infrastructure of the A44 corridor. Residents of Begbroke and Yarnton in particular have every right to have full access to the plans CDC have for attempting to limit the negative impact the additional houses will have on local transport routes such as the A44, particularly bearing in mind that these are already struggling to cope with the current levels of use.</p>

Proposed Submission Plan - Consultation Process

PR-C-0262	01/08/2017	Dr Richard	Pye						
849	Comments								
<p>Insufficient time for review of the documents- Proposed Submission Plan document is 198 pages long and is underpinned by a massive evidence base. Despite the wealth of information to review, Cherwell District Council has provided the minimum statutory period for the consultation of only six weeks. This is extraordinary. Oxford City Council who have provided eight weeks for their consultation process for their Local Plan 2036 Preferred Options. Unreasonable for Cherwell District Council to provide such a short review time period. The timing of the consultation coincides with the summer holidays - It is not acceptable. It is particularly frustrating that Cherwell District Council has not provided more consideration to the timing having run the first stage of this process to review the Options Consultation over the Christmas and New Year holidays. This latest poor judgement on when to time the current consultation process leaves one to assume that this is a deliberate tactic from Cherwell District Council to preclude its residents from being able to fully engage and respond meaningfully as part of this important process.) Incomplete evidence with documents missing - Further frustrated to find that key documents that should be available as part of the evidence base that underpins Cherwell District Council's plans are missing. Given the depth of information to wade through, concerned that other documents are missing including: a) A high-level Housing and Employment Land Availability Assessment, which is key to understanding how the new housing plans have been developed (PR54). B) Six appendices relating to infrastructure improvements in the north Oxford/A44 corridor area (PR36). Notes that PR36 is also included in PR52, Transport Assessment, in Appendix 6. Again the six appendices from PR36 are omitted. The inclusion of PR36 in PR52 further underscore its relevance and importance to the consultation process. Without access to the above documents, it is not possible to participate in a reasonable and meaningful manner to this important consultation process. It is therefore unreasonable for Cherwell District Council's Submission Plan Consultation to proceed until all of the missing documents are made available to the general public. To remedy this situation suggests the following reasonable demands: 1. Provide access to these missing documents to the general public. 2. Confirm that there are no other documents missing that are relevant to the consultation. If documents are missing, please make these available to the general public for review and consideration. 3. Once all documents are made public, re-start the clock for the Submission Plan Consultation to run from the day after all documents are provided, and that this consultation runs for a full eight weeks. Given the whole plan is considering Oxford City Council's unmet need, it seems fair and reasonable that Cherwell District Council act in a manner that is consistent with its neighbouring council.</p>

<p>The Proposed Submission Plan is 198 pages in length and is underpinned by an evidence base comprising 72 documents, many of which are in multiple volumes. Given the size of the development and requirement for the removal of land from the Oxford Green Belt, the length of the consultation is inadequate and should have been longer. It is not possible to fully review all of the evidence and provide the detailed response that this PSP warrants. Incomplete evidence base such as the Housing and Economic Land Availability Assessment (PR54) and the A44/A4260 Corridor Study (PR36, incorporated as appendix in PR52). These were not published until 25 August 2017. There are a large number of inaccurate details within the evidence base. This is notably with the RAG assessment metrics that were used in site selection.</p>

<p>Bitterly complain the way that Cherwell District Council has treated the whole process of the Partial Review of Oxford's Unmet Housing Need. There are a number of points to raise: 1. Both consultations have cynically been taken by CDC, have been held over periods when people are unlikely to have much time. The first consultation during Christmas holidays and this second one during Summer holidays. The consultations have been set at the minimum period of six weeks whereas other councils across the country including Oxford gave more time for the electorate to consult on such massive development. 2. The vast number of documents and their complexity require a lot time and effort to be able to be addressed and a lot of them are not available. With such an important and controversial consultation the Cherwell website should give prominent importance so that the public, across Cherwell District are aware of what is going on. There is no obvious link to the consultation process and this was even admitted by CDC staff and a district councillor that it was difficult to find the relevant location for the information. Have been informed that many of the documents relevant to the consultation process are unavailable or are missing. It must be noted that the six week consultation leaves very little time for the general public to comment if they only become aware when the public exhibitions are held in their parish, especially for Begbroke which is being held on 2nd August 2017, which leaves less than a month for Begbroke and only two weeks for Kidlington. Where are the democratic principles of CDC, and what is the purpose of CDC and its district councillors with their failure to properly consult with the parishes that very much affected? The impact of a vast development within the green belt is of such importance the public should have been made fully aware and therefore request that a deadline for closure of the consultation should be extended.</p>

853	Comments								
<p>Appreciate that this 6 weeks consultation is the minimum required by law. However, since it is being held over a period in which almost everyone is away on holiday, it is likely that consultation will be much less than it should be for a such a major issue. Moreover, the previous consultation happened over the Christmas period where again the ability of citizens to participate was likely to be less. Given the importance of the issue and the need for local citizens to not only be consulted, but to feel that they have been properly consulted, am writing to formally request that you extend the consultation period for at least a further month so that people can continue to put forward their views on the issue in September when far more people will have returned from holiday and will be able to focus on the issue.</p>

<p>Very disappointed to note that the MINIMUM 6 weeks has been given for consultation on this massive proposal to add Yarnton and Begbroke to the sprawl coming up from the Pear Tree junction Understand that you needed to kowtow to the City yet possibly make some limited effort to protect the Green Belt and save face....but NO. Your presentation to the council was a straightforward hands in the air surrender to the powers that be i.e. the cosy City & University elites. Please allow more time for the local people, who voted for you when you were a staunch protector of the Green Belt, to consider the full implications of this ruinous assumption-based plan. At least you owe us that.....don't you? What are you frightened of? I hope you might just read this email and think about the two villages that will be trashed and subsumed by this 3rd rate plan on the table.</p>

Resident of Yarnton. The proposed major developments on land both sides of the A44 between Yarnton and Begbroke will effectively merge Yarnton with its neighbouring villages Begbroke and Kidlington. Very surprised that you are expecting your constituents to read all the technical documents and respond in such a short time frame to the consultation for these developments. Residents have 3-4 weeks to consider and comment on a simple minor household planning application. This is a major development and the timescale and timing of this consultation is totally unrealistic for people to have chance to visit exhibitions and read all of the documents available, particularly in school/general summer holidays and then provide a considered response. Understand that 6 weeks is the minimum statutory consultation period required. Disappointed that Cherwell District Council have chosen not to provide a longer and more reasonable timeframe that reflects the complexity of such a development that includes major infrastructure changes to Yarnton and the local vicinity (or indeed should include major infrastructure changes). Request that Cherwell District Council extend their 6 week consultation period for a more realistic timescale of at least 10 weeks. Know that other residents of Yarnton and Begbroke would appreciate this extension.

This has been a sham. Consultation periods have been held over holiday periods. The second consultation period has only been extended in response to a legal threat concerning the lack of an important document in the evidence base. Cherwell have ignored the objections it received from the first consultation and will no doubt do the same from the second. Cherwell is only going through the process of these consultations because it is obliged to.

The briefest legal time for consultation on the proposed housing developments in Begbroke, Yarnton, & Kidlington – and at this time of year when many people are away on holiday – is not at all what residents of Cherwell District Council have the right to expect from their District Council officers. The timing elements noted in the Council for the Protection of Rural England’s comments on the proposals are well-considered, relevant, & important. Please, please, at the very least, extend the consultation time to ten weeks minimum to be more in line with more typical Council practice. Even better, postpone the whole process in line with CPRE’s comment: "The Local Plan Review is intended only to accommodate Oxford’s “unmet need” for housing but not only is Oxford’s total housing need substantially overstated, Oxford has not satisfactorily identified the amount of it they might not be able to meet. In CPRE’s view Oxford is capable of accommodating all or almost all of it by switching land earmarked for businesses to housing instead. It is therefore premature for Cherwell to even start the process of accommodating it.”

977	Comments							
The consultation period of six weeks for the Local Plan partial review is too short to allow the average individual time to read it, digest it, take a week’s holiday, and then respond. In the same vein choosing to run the consultation over the summer holiday period is a shoddy way to treat neighbourhoods that stand to be greatly affected by your proposals. While the Council may be fulfilling its statutory responsibilities it is not fulfilling its moral obligation to allow locals the opportunity to respond in a meaningful way. Appreciates that there are time issues with the plan but would urge CDC to extend the consultation period to allow residents time to respond.

Proposed Submission Plan - Consultation Process

PR-C-0344	22/08/2017	Prof John	Batchelor		N
5295	Comments With regard to the timing of the consultation process, it is symptomatic of the underlying cynicism implicit within the management of the Cherwell Local Plan that the timetable was originally timed to coincide with the school holidays. Am encouraged by the fact that Cherwell has been forced to back down over this and extend the deadline. In summary and underpinning my arguments above, is that the proposed use of Green Belt land is wholly unacceptable. Green Belt legislation in the south of England has been invaluable in protecting historic cities and villages and ensuring that there is NOT one huge urban sprawl with Oxford as its centre. The Green Belt area surrounding Kidlington is beautiful recreational land dotted with historic villages and ancient buildings, in particular St Mary's Church in Kidlington. The spire of St Mary's has been a landmark for hundreds of years and is visible standing within an uninterrupted green landscape from footpaths cycle tracks and fields to the north of Kidlington, through Hampton Poyle, Hampton Gay, Bletchington and beyond towards Kirtlington, and these areas harbour and conserve a wide variety of beautiful wildlife. The Green belt legislation is an essential safeguard in an overpopulated country. The policy states that it should be violated only in 'exceptional circumstances.' The present circumstances are not 'exceptional'. Kidlington is not part of Oxford, and there is no case for forcing Kidlington to help solve Oxford's problem. The Plan as a whole is not sustainable. I would like to add today, 22nd August, that I would echo George Osborne's fresh intervention this week in which he seeks to revive the pressure for improved transport and business stimulus in the north of England. If this wholly sane policy were to be adopted the present intolerable pressure on the south of England would be eased.

461	Comments Resident of Yarnton village, located in the centre of the proposed controversial development of over 2,500 new homes that will engulf my home, neighbours and village. This is a major development on designated green belt that will effectively merge Yarnton with its neighbouring villages Begbroke and Kidlington. Started to review the technical documents available online on the Cherwell District Council website and am astounded that you are expecting your constituents, hugely impacted by such a high density complex development, to read all the technical documents and respond in such a short time frame. A simple minor household planning application takes 8 weeks for your council to consider and respond. This is a major development and the timescale and timing of this consultation, exacerbated over the school summer holidays, is wholly unrealistic for myself we some knowledge of the planning industry and resources to hand, let alone a lay person to digest and provide a considered response. Understand that 6 weeks is the minimum statutory consultation period required. Astounded and disappointed that our County Council have chosen not to provide a longer and more reasonable timeframe that reflects the complexity of such a development that includes major infrastructure changes to Yarnton and the local vicinity. Respectively request that Cherwell District Council extend their 6 week consultation period for a more realistic timetable of at least 10 weeks.

848	Comments Very concerned Cherwell resident who lives in the middle of the PR8 parcel of land that is slated for the development of, 'a new urban neighbourhood'. Attempting to construct a review of the publicly available data to allow the submission of an evidence based objective assessment of CDCs plans to meet 'Oxford's Unmet Housing Need is a challenge due to the many thousands of pages of data and evidence to review and short period of time over the summer holidays, the timing of which seems to be somewhat of a co-incidence, and perhaps designed to minimise the number of observations and objections. Expresses surprise that several seemingly important reference documents are absent or simply missing from the data pack and online data room. The missing documents include but are not limited to PR54 Housing and Economic Land Availability Assessment (HELAA) and PR36: A44 & A4260 Corridor Study - None of the 6 Appendices (A to F) are provided; these are critical as the deal with Baseline Data and Evidence, Stakeholder Feedback, Design Overview, Design Decision, Full Cost Estimates.

The Consultation on the Proposed Submission Plan has, like its predecessor, been poorly publicised. Planning the consultation process for the main holiday period was very disappointing and the public (which the council exists to serve) only had the opportunity to comment due to intervention by our local MP and Kidlington Development Watch which forced Cherwell to extend the consultation period. Cherwell should have done more – via Cherwell Link article and all other means available, to raise public awareness of the possible loss of Green Belt via this proposed revision of the local plan. The consultation papers are over long and difficult to assimilate in a short time. It is understood that the Council does have discretion on the timing of a public consultation. Choosing to hold the consultation and public exhibition in Kidlington over the summer holiday period was unreasonable. Cherwell District Council appears to be more concerned with following the process of consultation than considering the views of local residents and acting on what people are telling them. This was borne out by Councillor Wood’s shameful performance at the Kidlington Parish Council public meeting on 21st September. Councillor Wood appears to have no regard for the probity of the Council’s conduct of an evidence based process and for public scrutiny. It is most important to be sure the housing assessment estimate is as accurate as possible. So much relies on it. The initial Local Plan Examination in Public saw Cherwell’s case thrown out for not meeting newly revised Strategic Housing Market Assessment targets. Not one of the Council’s twenty four questions mentioned the GB or asks about the acceptability of development in the GB – perhaps the most important matter of all. The Council must act professionally this time and take account of new lower government estimates of housing need. In conclusion wish to emphasise that object in principle to building on the Green Belt and consider that the excessive and overwhelming housing development proposed is unjustified, unsustainable and totally unacceptable. There are alternative sites available in Oxford which are more suitable for Oxford’s requirements and their development will have the benefit of assisting in urban regeneration in the city by encouraging the recycling of derelict and other urban land.

Objects to proposed plan & sustainability appraisal. It is inconsistent with the NPPF because it fails to provide sustainable development, ensuring a better life for current/future generations. It fails to: Promote realistic sustainable transport; Protect GB; Meet the challenge of climate change & resultant flooding; Conserve and enhance the natural and historic environments. The consultation process has been unreasonable. I object to the complexity of it, with the demand that representations are made on a specific form, and being timed over school holidays. CDC failed to give the public an opportunity to digest the proposals & make their views known. Considers the proposed submission plan, associated policy maps and sustainability appraisal to be unsound, not positively prepared, not justified and not effective for the reasons detailed in specific objections and comments.

Proposed Submission Plan - Consultation Process

PR-C-0595	09/10/2017	Mark	Behrendt	Home Builders Federation	Y
1495	<p>Comments</p> <p>Since the start of this consultation the Government has published its long awaited paper on the standard methodology for assessing housing needs. Given that this is still a consultation only limited weight can be given to its contents, however it clearly indicates the Government’s direction of travel with regard to the OAHN. The assessment of housing need for Oxford City Council set out in this consultation is 800 dwellings per annum, significantly lower than the current expectations. The HBF is yet to make any formal statement on the methodology however we would like to comment briefly on how the standard methodology might apply to Oxfordshire. Key to considering the standard methodology in relation to Oxfordshire is that the OAHN for Oxfordshire was based on either economic growth scenarios or the significant requirement for affordable housing in Oxford City. Consideration of both these scenarios sit outside of the standard methodology which focuses on the uplifts required to address market signals. As the consultation states in paragraph 28 “a reduction in their local housing need compared to the existing approach can be attributed to our method not making a specific adjustment to take account of anticipated employment growth” and goes on to confirm in paragraph 46 that local authorities are able to plan for a higher number than the one established by the standard methodology. Similarly, with regard to affordable housing provision Planning Practice Guidance in paragraph 2a-029 outlines that: “The total affordable housing need should then be considered in the context of its likely delivery as a proportion of mixed market and affordable housing developments, given the probable percentage of affordable housing to be delivered by market housing led developments. An increase in the total housing figures included in the local plan should be considered where it could help deliver the required number of affordable homes.” This is a separate assessment to the one for market signals and implies that where there are substantial affordable housing needs that are not addressed by the market signals uplift then an additional uplift to total should be considered. Given that the uplifts made in Oxfordshire related to either economic or affordable housing growth scenarios we consider that the assessed needs as set out in the partial review are a sound basis for planning across the County not just now but in future should the standard methodology be implemented. These growth scenarios are also important in relation to Cambridge – Milton Keynes – Oxford Growth Corridor. In order to support the ambitions for this area the National Infrastructure Commission suggested that there may need to be 23,000 new homes delivered per year across the corridor. This is significantly higher than the 15,000 homes required to meet projected population growth. As Government expects plans to be kept under review there will be opportunities to assess needs with its partner authorities in Oxfordshire in order to take account of any changes should these arise. We would therefore encourage Cherwell and all the authorities across Oxford to continue their approach to delivering new development that will meet the needs of the County.</p> <p>Changes Sought</p> <p>Reasons for Participation</p> <p>Expresses interest in attending any relevant hearing sessions at the Examination in Public</p>

1570	<p>Comments</p> <p>Objection to the consultation process which was unreasonable, unfair and unnecessarily complex. The council have produced a large number of documents in the hope that people won’t read all of them and constantly using legal terms, so that you need a law degree to understand what is actually being proposed. At the public meeting held at Exeter Hall 21st September, Councillor Wood managed to anger local residents by not answering their questions. He presented a monologue of why the Oxford had to do this and skirted round the topic as to why villages had to take on Oxfords housing needs. He repeatedly tried to twist what people had been saying (specifically the issue of affordable housing within the development). He has said this is non-negotiable, that they have decided we are having Oxfords housing requirement. This is not consultation; our views are not being listened to. As a single person who has lived in Kidlington all my life, with a well paid job and not on minimum wage, I am unable to afford a house or flat of my own (even affordable housing). What Oxford needs is to build affordable homes within the city boundaries. Instead they are building estates like Barton park with houses that have extortionate prices tags, appealing to people commuting to London with London weighting. The actual percentage of affordable housing built always ends up being lower than the proposed percentage, but is still unaffordable for local people. The main reason put forward for building these 4400 houses is to provide affordable housing for local residents - the proposed plan will not do this. More unaffordable homes built to take London's housing issues at the cost of the GB and local villages are not needed.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>

1710	<p>Comments</p> <p>Objection to the proposed submission plan and sustainability appraisal which are inconsistent with the National Planning Policy Framework in terms of failing to provide sustainable development which ensures a better life for both current and future generations, this is on the grounds that it fails to: • Promote realistic sustainable transport. • Protect green belt land. • Meet the challenge of climate change and resultant flooding. • Conserve and enhance both the natural and historic environments. The proposed submission plan, associated policy maps and sustainability appraisal are unsound, not positively prepared, not justified and not effective for the reasons detailed in specific objections. Throughout the proposal no mention is made of the requirements for increased utility provision in terms of electricity, gas, communication and water/sewage infrastructures, this is despite each of these being highlighted as an issue in the sustainability appraisal. Failure to give due consideration to such essential infrastructure needs suggests the proposal is unsound and not effective. The consultation process has been unreasonable. Objection to the complexity of the consultation, with the demand that representation submission be made using specific Council pro-forma and the initial timing over the school summer holidays. The Council failed to give members of the public an opportunity to read and understand the proposals and make their views known.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>

2160	Comments								
Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. The Green Belt is essential to break up the continuous development between Oxford and Kidlington. The current road system has no spare capacity and so further traffic will create major congestion. The local infrastructure; shops, car parks etc. cannot cope with more residents.

Very glad that there has been an extension to the consultation period, the original window was totally inadequate. Strongly object to the proposed plans. Would like to express more detail, but with such a short window for consultation it is not possible to fully explore issues within the plans. Also with so much documentation to digest the District Council is failing to allow fair time to review them.

Cherwell's key justification for development of the Green Belt is (item 1) to meet Oxford's urgent need for housing, and notably affordable housing. Not only does it not meet the definition of 'exceptional circumstances' but it is flawed in other important respects. The 2014 SHMA projections of future housing need for Oxfordshire continue to be challenged as overambitious and inflated estimates of future employment growth, measured against current trends and the economic uncertainty of Brexit. The proposed standard methodology for calculating housing need set out in the current NPPF review suggests Oxfordshire's current forecast should be reduced by about a third and Oxford's by a half – considerably lower than the SHMA estimates. The most-recent (2014) DCLG projections of an increase of around 10,800 households in Oxford between 2016 and 2036 is also substantially less than the 28,000 houses Oxford considers necessary to meet its unmet housing need over a comparable time span. Since a realistic and sustainable estimate of future housing need is the critical factor in determining the necessity for Cherwell to accommodate Oxford's unmet housing need, in light of the lower figures arising from the proposed NPPF standardised calculation of housing need, the justification and even legality of Cherwell's current Partial Review must be questioned and the SHMA forecast challenged and reviewed before the consultation process proceeds further.

1861	Comments								
The democratic validity of this and other public consultations is weak. No individual can reasonably respond to the avalanche (often concurrent) of Oxfordshire's public consultations which have the capacity to profoundly affect their quality of life, and on which they have the right to express their views, in the timescales (of which the three most recent have been over holiday periods) and by the consultation processes currently employ. Reiterate the very serious concerns, also expressed at previous consultations, that this current Partial Review consultation process is too short to allow proper scrutiny of the massive and complex documentation; that it is inadequately publicised (were it not for the efforts of Kidlington volunteers, who notified practically every household in the village, few residents would have been aware that the consultation was taking place); and that document presentation is difficult to access and hard to read. Very few hard copies of key documents are available, and only available to read in public buildings. Readers that can (and a large minority cannot) are forced to access documents on-line, where the list of documents gives little clue to their contents, and where the documents themselves are in double-column format, compounding the difficulty of reading them on a computer screen. The colour registers and hatching in the Key Site Proposals maps contained in the Summary Booklet are a poor match to the keys, the text of the keys is too small to decipher (for the elderly at least!), and the maps are inaccurate – for example in four out of the five maps where site PR6b (largely comprising the golf course) appears it is not labelled as such and is not in the cream colour used to indicate nearby sites, giving a misleading impression of the proposed scale of development.

Proposed Submission Plan - Consultation Process

PR-C-0778	10/10/2017	Sarah	Knox-Brown	Begbroke & Yarnton Green Belt Campaign	N	N
5661	<p>Comments</p> <p>Only a high level Options paper was published at the Reg 18 stage. The Options consultation failed to appropriately communicate that preferred areas of search (A and B) had been identified and that detailed work had been undertaken to assess sites within these two areas of search only. Apart from "guidance on representations" it is not clear that any comments made during the Reg 19 consultation will only be considered as part of the Inspector's examination process, and will not result in a revised plan prior to submission. There is lack of explanation within the plan of "where we are now" in the plan process or discussion of "next steps". This is a fundamentally misleading approach contrary to B.95 of the Local Plan which indicates that "Full public consultation will be central to a "sound" process and outcome." For consultation to be lawful, it must take place when proposals are at a formative stage. Options are already decided for this consultation which is unlawful. Reference made to a letter from Cllr Wood which refers to the Council having to deal with Oxford's unmet need as defined in the SHMA and proceed with the Partial Review as currently timetabled. This is misleading as the Inspector did not require the Council to commit to meet Oxford's needs as assessed in the SHMA, no local policy requires this and neither does the NPPF. The Local Plan has no punitive measures if the two year deadline for the partial review from adoption is not met, and as long as the 5 year housing supply remains there is no real risk of arguments based on failing to meet Oxford's housing need succeeding at appeal. If the Council proceeds as planned, we consider the Inspector will find the Plan unsound due to inadequacy of evidence base and failure to ensure effective consultation and participation by the public.</p> <p>Changes Sought</p> <p>The Council should reconsider its proposals and adapt the status of the Submission Plan to that of a draft local plan being consulted upon under regulation 18. The Council should then (a) take fully into account the consultation responses to date; (b) reassess its draft in light of the standardised OAHN and determination of Oxford's final housing figures.</p> <p>Reasons for Participation</p>

2030	<p>Comments</p> <p>Concerned that CDC has progressed with the current Plan despite an overwhelmingly negative response to the Options consultation. Reference made to the public meetings and exhibitions at Kidlington and concerned that public views carries less weight. Raised the issue on why consultations are short and carried out during the most inconvenient periods. The response forms are unclear and people were not be made aware that other forms of responses are acceptable. Concerns over the Statement of Consultation document and how it captured the public comments. Many objections to question 1 in the Options Paper however no change has been made to this. There were no questions on the release of the Green Belt therefore the public were not given an opportunity to express views on this earlier.</p> <p>Changes Sought</p> <p>The plan should be withdrawn and substantially rewritten to reflect the views expressed by the public during the consultation. The Council must rethink and improve it's policy for conducting important public consultations. It must provide information in a user friendly, non-coercive style. It must start listening to other voices than those of the development lobby.</p> <p>Reasons for Participation</p> <p>Would like to be represented by Kidlington Development Watch at the oral examination in public. For the reasons given in the Kidlington Development Watch representation.</p>

850	<p>Comments</p> <p>Frustration at the short period, over the summer holidays, given for the consultation concerning the Partial Review of the Local Plan. It is ridiculous that Cherwell District Council expect residents to consider and respond to over 2,000 pages of documentation. Assumes that Cherwell would not have released a document for consultation unless it was important. Furthermore there are 1000s more technical pages in the evidence base, many of which are crucial to evaluating the soundness of the Local Plan. Six weeks, in the summer holiday period, is entirely unreasonable to hold a true consultation. Therefore, requests that the Cherwell Planning Team is directed to extend the consultation to something more reasonable (e.g. 12 weeks or more). Otherwise asks whether we to conclude that the decisions around the Local Plan have been pre-determined and the consultation is simply a box-ticking exercise? Sincerely hopes that the profound and destructive impact that the proposals would have on Begbroke, Yarnton and Kidlington will not come fruition.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>

Object to PR1a, PR3, PR11, plus unreasonable consultation process. Object to CDC failing to commission and examine an environmental report. It is NOT good enough to leave it to contractors. Strongly Object to CDC not representing the people of Cherwell and choosing to give into pressure from Oxford. Not acceptable. On your website you have 4 priorities; 1. Sound budgets & customer focussed council. You are ignoring the customer. 2. Thriving communities. You are intending to smash the community to pieces. 3. District of Opportunities. Letting Oxford City Council pressure you makes this a ridiculous statement. 4. Safe, clean and green. You are proposing lots of traffic, fumes, getting rid of Green Belt. Why are you proposing to do the opposite of what you state on you website are your priorities?

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. I object to moving the golf course to Frieze Farm and building on its site. Its grounds are a positive community asset for future generations, with trees, wildlife, reducing global warming etc. The houses could be built on Frieze Farm instead. This wouldn't affect the occupants and their access to the Railway etc. Kidlington is a safe environment. The roads, infrastructure will be damaged. Sort Oxford spaces out better.

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. The leaflet suggests this is 'Oxford's' problem. I know government has set targets for the S E of England, so it's not specific to Oxford. We all have a responsibility to try to alleviate the problems. I am aware of housing shortages. However, councils need to ensure developers who state e.g. 40% of housing will be affordable, remains 40% or whatever they agree to, to obtain PP. Weak councils must not allow developers to change the goals once building starts or allow to sell affordable properties as Buy to Let. Councils must stay strong. Developers must agree to fund extra services e.g. Schools, GPs, roads etc. before completing stage 1, not once they're broken. Re plans, PR7(a) is preferable to building at PR6(b) and PR6(a) but not enough homes. If anything, allow PR8 and PR7(a), this may preserve Green Belt and keep a distance.

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. This has reached us during the summer holidays, showing a disregard for the electorate. When is Cherwell District Council going to stop doing what Oxford City Council wants it to do? Consider what your electorate want you to do. Kidlington and Yarnton are not a dumping ground for Oxford expansion. Kidlington has been treated like a dumping ground for decades. The roads are at gridlock. The services are poor, particularly the service provided by the Surgery. We want the community to remain and not to become a housing estate. We love our country walks nearby.

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. Such development makes a mockery of the foresighted decisions made by the inventors of the GREEN BELT. In law this is SACROSANCT. The whole area will turn into suburbia losing the community atmosphere of the different villages. Where will these people work? Plenty are already commuting/working in London, earning 'big bucks' and contributing little to the community. This will generate more traffic. Early morning traffic is already at gridlock heading to the Parkway Station & Oxford. Extra people will need all the local services putting even more strain on Schools, Doctors etc. Will the new homes have parking for the 2 cars most families find necessary now? There are already many cars parked on grass verges, paths and roads, especially at weekends. Also estate roads used as 'rat runs'.

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. The Green Belt will be eroded. Walks in the countryside are known to have mental and physical benefits to young and old alike. Increased housing means increased traffic congestion. No-one in Kidlington would like the A4260 to become like the A40 Oxford to Witney. Traffic jams would increase pollution and there will be fewer trees and shrubs to absorb the harmful gases, causing lung problems etc. GP Surgeries and schools will be overwhelmed and new residents will be unable to enrol in these. It happened in Derby where we moved from. The quality of drinking water, already very hard, will deteriorate. The JR hospital is already bursting at the seams. Can it take more patients in A & E, Maternity etc.? STOP THE SPRAWL.

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. 1. The plan is not consistent with national policy for Green Belt areas with no concern for wildlife. Once gone it cannot be recovered, becoming another urban sprawl. 2. Builders rarely include affordable housing as they are only concerned with builds that give them the biggest return, regardless of cost to consumers. 3. Public services, schools and roads are already overwhelmed. 4. Oxford City should use their own spare ground on affordable housing and not impose on local villages. Why build another business park? Oxford and surrounding areas already have an abundance. 5. Kidlington is already a large village. Is the council looking to make it a town, joining it with Cutteslowe, Begbroke, Yarnton?

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. I was born in Summertown and settled in Kidlington on marriage as we couldn't afford a house in Oxford. Kidlington is nice to live in. We do not want to be part of Oxford and lose the Green Belt between the two. Green spaces are important for health and well being. Kidlington traffic is congested in the mornings. Building houses will bring more cars. Oxford thinks they can take over Kidlington. When the airport became commercial it became London-Oxford. The promised railways station became Oxford Parkway. This development may not affect me as I am 83, however I hold Kidlington dear and I have volunteered in various Kidlington groups over many years. The national policy is to keep the Green Belt.

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. 1. The fact that Oxford house prices are very high does not justify building on the Green Belt and creating the urban sprawl that the Green Belt was designed to stop. 2. Cherwell has no need to agree to Oxford's unjustified request and should consider the interests of its own ratepayers first. 3. Any houses built on the Green Belt wouldn't help those working in the service industries, but would be for London commuters. 4. No provision has been suggested for infrastructure and no costing has been suggested. 5. The Green Belt around Kidlington is subject to flooding and is unsuitable for house building.

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. My points are; A. Deport all at Campsfield Detention Centre and build the houses on that land. B. I object to the Oxford City development. Oxford should find it own vacant land. i.e. West of Oxford between Botley Road and Wolvercote, next to the A34. C. Why move the Golf Course and pay for a new one next to Stratfield Frieze Way, move people from Jordan Hill to Barton (where these houses were being built for Oxford's overflow), I thought these houses were Council, not private, for them to be sold?

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. There is no need for an additional 4400 houses in this area. CDC need to refer this back to Oxford City. There is plenty of unused land and houses within the city, probably a lot owned by colleges, which could be utilised. More homes within the city would alleviate some of the enormous traffic problems the area already has. It is imperative that Green Belt land is protected and CDC must do this in line with Government policy. Infrastructure in this area is already stretched to breaking point. There is regular disruption on our roads due to accidents. Again, CDC should be protecting it's current residents who are paying Council Tax! CDC must see that housing proposed on such an enormous scale is merely to line the pockets of greedy developers and greedy landlords (e.g. Bicester Homes and latterly Barton new town - 3 bed houses at £600K!). There will not be affordable/social housing on a sensible scale without doubt! This proposal is not justified or proven - based on 40% increase in demand whereas 10-20% is actually expected.

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. The assumption that Brexit will have no effect on employment and housing needs is not justified. Building on the Green Belt is a major step and sets bad precedence both for other areas and for the rest of Oxford's Green Belt. It is already difficult to get to appointments at our Surgeries and Oxford hospitals. Closing Sandy Lane affects the former, 1 mile becomes 3 or 4 using either of the alternatives. No timings for travel to the hospitals appear to have been made by bus or car to predict journey times when houses are increased by 2/3. The information available is all but incomprehensible to ordinary people. Please explain - 'sustainable travel opportunities', 'pedestrian wheelchair & cycling connectivity' and 'green infrastructure network'. They SOUND good, but they tell us nothing.

4015	Comments				
<p>Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. This plan is unsound, poorly prepared, and almost certainly will be ineffective in dealing with the issue invoked as it's dubious justification, namely local housing need. Firstly, it is now clear that the evidence quantifying the latter requirement is completely unresolved, conflicting official figures mean the situation is confused and still disputed. It is manifest common sense that no plan should proceed until this fundamental question is properly decided. Secondly, if local housing need is indeed the motivation the key point to be considered is 'will people currently resident in and around Oxford, but in need of their own dwelling, be helped by this development, or not?' New build under plan, consisting largely of low density houses costing in excess of £300000, hardly seems likely to assist those unfortunate people referred to, such as the thousands said presently to be on Oxfordshire housing lists. But if the answer to the foregoing question is in fact 'no', then the whole case for the proposed plan is entirely spurious. There are many other severe drawback to the CDC plan, such as the appalling exacerbation of already serious traffic congestion in the area. In short, it seems a cynical attempt to exploit a lucrative commuter expansion based on new rail links to London at the expense, and against wishes of the existing communities.</p>

<p>Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. We are 100% against these proposals, but as local residents the Council just expects us to put up and shut up! It is vital that green open spaces are retained and protected, and that of the villages in the proposed development areas too. The opening of the Parkway Station has created an invitation for urban sprawl for London commuters, which will push the house prices up, preventing local families from staying in their home villages. The infrastructure would have to be improved ten fold, but the funding just isn't available with all the current Government cuts. Please listen to the people of this area not ignore their concerns. We live in a beautiful part of the country and want it to remain that way.</p>

<p>Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. I am not in favour of this development. I consider it to be unsound, not positively prepared, not justified and not effective, having seen the concrete deserts created in other parts of the country in the name of 'progress' and 'need'. What of the thousands of properties that lie empty left to rot? Old industrial sites? Brownfield sites? The Moors where I live is already a rat run. There are three homes for the elderly, each with insufficient parking. So the road outside each is a 'car park'. Another for dementia is in the final stages of construction, thus more traffic, more medics, more ambulances. Now the land behind the houses is to be built on. The infrastructure cannot take it. You are building to bring people to the area NOT for present need. What countryside will future children have? What will happen to the wild flora and fauna?</p>

<p>Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. Roads are already saturated, traffic, pollution, noise. The plan doesn't take into account these problems. If we really need more houses, these issues need solving first before adding even more. The concern is not preserving Green Belt just for pleasure, but to preserve the Green Belt and improve infrastructure. Making Oxford a place where people wish to live and work, and not to leave because of these issues being ignored in the first place. We need to create new Park & Rides with dedicated bus lanes all the way into the City Centre and safe cycle lanes suitable for children.</p>

Proposed Submission Plan - Consultation Process

PR-C-1245	20/08/2017	Mrs M H	Ford						N
4043	Comments								
Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. Although more housing is required, surely to join up the smaller villages with Oxford, building on Green Belt, would be a pity. Flooding must be a big issue and additional traffic would be a problem.

4047	Comments								
Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. In 1970 we moved to Benmead Rd, Kidlington. It was an ideal situation with all amenities close by, good bus service into Oxford and countryside a short walk away. I am still here and presently so are many of the aforementioned advantages, despite the enormous developments in and around Kidlington during the intervening years. Development has reached saturation point, with frequent congestion on the roads, waiting time to see one's doctor increasing etc. The provision of new housing on the proposed scale with all the extra need for services, power, water, transport etc. can't possibly take place without encroaching on Green Belt land. This is unacceptable. The character of Kidlington and surrounding areas will be changed beyond recognition. I herewith submit my objection to the current proposals.

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. Affordable houses are welcomed, but the so called affordable house are never built. Average families cannot buy the ones the builders put up. The infrastructure can't cope; roads, doctors, schools, dentists. You cannot get an appointment now.

4055	Comments								
Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. The object of a councillor is to serve the public who elected them and carry out their wishes. The building of these houses will cause more traffic chaos, overcrowded schools, and be even harder to get a GP appointment. I've no doubt most of these houses will be unaffordable to the general public. As for building on the Green Belt - absolutely unthinkable. What consideration is given to those of us who enjoy walking in the countryside? Leave Oxford to sort out their own problems. Leave Kidlington, Begbroke and Yarnton alone. Cherwell District Council, listen to those who elected you!

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. Once it took me 1.5 hours to travel from Kidlington to Cowley Road. Taking 45 minutes alone to reach Jordan Hill. The housing development will increase traffic congestion. It is already difficult to time a journey into Oxford. It's unpredictable depending on traffic congestion. The 'improvements' to the Cutteslowe and Wolvercote roundabouts haven't improved traffic flow. If there were around 8,000 more cars travelling our roads, it would become gridlocked. We would need more shops, more GP Surgeries and more schools. We would just become an extension of Oxford and lose our own village identities. We need to retain Green Belt areas to protect wildlife and conserve animals, plants and insects in the area.

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. I am concerned about the level of congestion this housing would cause around Kidlington, Yarnton and the A34. It would become unpleasant to move around. The A34 cannot cope at the moment and with the expansion of Bicester. Medical and educational facilities have not been mentioned either! I recognise a need for more housing but this proposal is worrying, especially the 'at risk' sites.

4071	Comments								
Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. Green Belt development is wrong. Local habitats, walks and views will be destroyed. They promote the wellbeing of local people, keeping them fit and active, in turn reducing the pressures on the NHS. They must be preserved for future generations. It's a human right to expect to live within in a pleasant green environment. Building this amount of new housing will have a huge impact on traffic problems in North Oxford and the A40, which is already under strain. Public services and infrastructure is unable to cope competently already, impacting the need to get to work, hospital or GP appointment in a reasonable time. Schools are already full. Cherwell is already prone to flooding. Concreting more of the countryside will make things worse. Green Belt is sacrosanct. That's Government Policy.

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. How has the figure of 4400 homes been reached? It's not sustainable in this already overcrowded area. The Green Belt must be kept and not used for building land. Our services are under strain. GP surgeries, hospital and schools all underfunded and stretched to breaking point. As are our roads. How will our water supplies cope if we have a dry spell? We will lose the natural flood plain surrounding us and consequently suffer more flooding. This is ill thought out and the number of houses planned appears to be unjustified. How many houses will be affordable? Where are the jobs for so many people?

Comments					
Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. It is already impossible to commute to Oxford in mornings due traffic volume. Commuter parking has increased on local roads due to the expensive park and ride scheme. Building a new Science Park in Langford Lane will add to traffic problems. No mention anywhere of schools, doctors or leisure facilities. It will destroy village lives. Don't see the need for a new railway station. The closure of Sandy Lane will affect us. No mention of local people buying these homes. It will just be for overspill from London commuters.

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. I object to the proposed submission plan. Where are the people supposed to go? We can't get on the roundabout at the moment. The traffic situation in Kidlington is horrendous. There are no shopping facilities. Three supermarkets covering the current population are stretched. Parking will be squeezed, access to the rail station will be compromised. The Green Belt, wild life and local church graveyards should be protected from building. The Green Belt is an area of outstanding beauty, used by walkers, dog walkers, children and bringing in visitors. There are more rural areas that could be used, rather than putting pressure on a squeezed community, increasing traffic and pollution and impacting health establishments. Strongly objects.

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. If Oxford City needs more housing due to unlimited immigration they should build on their land only and not forcibly take other Council's land. Especially Green Belt. If these plan go ahead, Kidlington and the surrounding villages will become a suburb of Oxford City. No more houses should be built in Kidlington as it is fully developed and the infrastructure is adequate for the population.

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. The infrastructure in an around Kidlington & Gosford is already insufficient for local needs. Currently the wait for a GP appointment is 1 month! In the morning I can hardly move from my home due to traffic, worsened when the overburdened schools are open. At this time people frequently drive on the path along Lower Cromwell Way. I can see no concrete plan to address the current problems, let alone plan for a further expansion. The Green Belt allows Kidlington/Gosford and other areas to remain distinct from the ever burgeoning Oxford metropolis. These plans go against the National Planning Policy Framework dated 27th March 2012.

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. I agree with all the objections above. Kidlington should be left as it is, a 'large village', not become part of Oxford. Underfunded public services are struggling and will deteriorate further. Waiting time to see a GP will be even longer if plans go ahead. I fear for my children and grandchildren who live in Kidlington. There will be a 'traffic gridlock' as there seems no plans to improve local road networks. Air pollution will be worse as more houses will mean more traffic. Closing Sandy Lane would also be a disaster.

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. While SOME expansion would be acceptable it is not appropriate to plan to build 4400 houses in Kidlington, particularly at the cost of Green Belt. There is no adequate justification for the destruction of Green Belt. Oxford should look within its boundaries and not destroy the small amount of open ground between Oxford and Kidlington. The infrastructure cannot cope with that number of additional dwellings. The schools the roads, the facilities and amenities in the area to say nothing of the GP Practices! Listen to what the people who LIVE in Kidlington are saying and scale down the proposed developments. You are elected by the people to represent the people, not the developers and certainly to Oxford City Council. So do the right thing & represent our views!

<p>Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. If the additional homes are required by Oxford, is Oxford going to provide the funding for the additional infrastructure? I would expect any homes built near the Kidlington Railway Station to fetch a top rate selling price so how are the needy going to afford them? The additional traffic is going to be too much for the road to cater for. The trees and wildlife around Kidlington will suffer.</p>

<p>Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. We must keep our Green Belt, which is designed to prevent urban sprawl. The proposed development around the new railway station will feed the high end of the market and will do little to address the housing crisis, or affordable housing - ref PR4a, PR7b, PR7a, PR6a, PR6b, PR6c. Have transport and other infrastructure projects been costed? Will Oxford pay for these? What about our wildlife? The proposals will harm habitats, flora and fauna irreparably. Will CDC & Oxford City Council ignore butterflies, lizards, snakes, great crested newts, wild flowers & deer, in breach of regulations? The Green Belt is important and irreplaceable environmental resource that helps promote locally grown food, supports wildlife and provides much loved breathing space. Villages want to keep their identity, but it seems local people are allowed little input.</p>

<p>Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. There is a problem with Thames Water telling everyone in Kidlington to save water at the moment. Also the sewage drains are at capacity. Where will all the extra produced by new houses go? No thought to extra traffic produced as the infrastructure has to be bid for. What happens if the money does not get allocated after the development has been built? Could the open spaces within Oxford ring road be used instead of Green Belt e.g. from Wood Farm to Marston? This development by Oxford is unacceptable. Oxfordshire County Council and Oxford City Council should be looking for capacity in Oxford. Once Green Belt has been built on and a precedence started, nothing will stop the developers. Making this area an urban sprawl, the promise of social housing is only a rouse as has been proved in other areas of the country. Cherwell District Council are being held to account over this, apparently thinking that they can do as they want. Hence how they gave so little time initially to allow people to comment on the plans. Please take notice of local opinions!</p>

<p>Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. I consider that the proposed submission plan is unsound, not positively prepared, not justified and not effective for the reasons given ; Our Green Belt and villages within them, so close to Oxford City must be protected from the proposed damaging major housing development for health reasons. This is to mitigate the effects of increasing harmful pollution levels and deteriorating air quality on the people that live in the villages, especially along the main arterial roads. My family and I have lived in Kidlington since 1981 and we have witnessed a dramatic increase in traffic volume and pollution in recent years. This is especially noticeable at peak times when the A34 and A40 roads are increasingly impassable due to high traffic levels and frequent accidents, resulting in locally clogged village roads. Our already congested and often gridlocked arterial roads through the villages of Kidlington, Yarnton and Begbroke cannot accommodate a further influx of high traffic volumes that a housing developments of 4400 homes would create. Our bus services are already under severe strain at peak times. Cherwell District Council has made no plans to improve the affected local road network, or a sustainable new infrastructure for further generations.</p>

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. I object to our area having to give up its Green Belt in order to solve the housing problems of Oxford. Particularly as the city has used land for Business Parks rather than housing. Public Services and roads in our area would be overwhelmed. I particularly object to the proposed closure of Sandy lane as this is our access to Yarnton Nurseries which is well loved and very well used.

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. I feel this is far too many houses. Where will all these people work? The roads into Oxford are far too congested already. More Schools? More GP Surgeries? We do NOT need Oxford overspill. Let them find places in and around Oxford that doesn't use the green Belt. It should be protected as has been done for hundreds of years.

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. I object on principle to building on Green Belt land. Once built on it is lost forever. The traffic through Kidlington is bad enough now, without exacerbating the problem by building many more houses. I also have great difficulty getting a GP appointment now (up to 3-7 weeks currently) without having to compete with many more people.

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. We don't think the GP Surgeries in this area will be able to handle the influx of new people, we have to wait up to 4 weeks to see a GP as it is. The roads are chaotic as it is, with the abortions of the Woodstock and Banbury Road roundabouts. Another 4,400 cars at rush hour? Get real. We should not be encroaching on our precious Green Belt land.

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. I believe that the submission plan is neither justified or sustainable. Building on the Green Belt should never be agreed to. Oxford City is far too big as it is. We in Cherwell should not have to give way to this. The policy on infrastructure is not costed and the present highway network is already far too weak for the current housing. The public has not had enough time to object or agree to this. Once the Green Belt is built on it is lost forever, and all areas will be covered by ugly urban sprawl. We neither asked for, or agree to this. I consider the proposed submission plan is unsound, not positively prepared, not justified and not effective for the reasons given in my specific objections.

Proposed Submission Plan - Consultation Process

PR-C-1302	22/08/2017	Mrs M	Duffield					N	
4261	<p>Comments</p> <p>Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. I wish to express my opposition to the proposed Cherwell Local Plan for the area including Yarnton, Begbroke and Kidlington. I would emphasise the areas which are designated "Green Belt" should not be desecrated by this development. The residents of this area will have their green lung permanently destroyed and the inheritance for future generations will be gone for ever. We have a right to breathe fresh air and should not have our environment, with the inevitable increase in traffic polluted by more and more vehicles. Furthermore we in Yarnton and Begbroke have been disadvantaged by the withdrawal of one of our regular Stagecoach buses from three to two per hour. We have no direct means of travelling to Kidlington via public transport and in the proposed plan it has been suggested that our direct route to Kidlington via Sandy Lane be closed to those who do have personal transport. The whole plan seems to have been conceived by a committee whose only interest is in financial gain for Cherwell with no consideration for the interests or well being of those who live there.</p>

4269	<p>Comments</p> <p>Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. The roads in North Oxford cannot cope with the current volume of traffic even after all the roundabout improvements. Building new houses will bring even more traffic as it is not just one per household but often two or three. Politicians need to be much more imaginative than they are at present e.g. restricting the number of cars per household to one as in the Channel Islands, re-opening the Oxford-Witney-Fairford railway line with stations and car parks at Yarnton, Cassington, Eynsham and Witney, re-opening the Banbury-Kingham-Cheltenham railway line. In other words get the traffic off the roads before there is gridlock.</p>

4273	<p>Comments</p> <p>Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. In addition to my wish to preserve some attractive Green Belt land, I have two concerns; 1. What provision will be made for the extra traffic which will result from the proposed development? Already the Kidlington roundabout is close to gridlock in the morning rush hour. Traffic lights at least will be needed there. Have you agreed this extra expense with OCC? 2. Part of the area which you propose to develop is low-lying and liable to flooding. What makes you think that people, especially those on lower incomes will be willing to buy houses in the new development if they cannot gain insurance, or if they can at an extortionate price?</p>

4277	<p>Comments</p> <p>Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. I grew up in Oxford and return to visit friends and family. With each return I see a little less countryside and a little more congestion. Building on the Green Belt is not justified when so much Brown Field is available. The plan is unsustainable, urban sprawl must be contained. One day I hope to return to Oxford. However these plans are not positively prepared and side-line the quality of life of existing residents, so I feel less inclined to return. Arranging to meet people in Oxford becomes more difficult with congestion issues. Building on the Green Belt is not effective, showing short termism. We should be leading the way with innovative, forward thinking solutions not based on unsound plans & quotas. Please give the Green Belt and Oxford the space & respect it deserves.</p>

The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. I object to plan PR1(a) as being untenable and now redundant in the light of the national government's revised calculations of the number of houses needed in the local area from 100,000 to 68,000. Although not official policy yet I find it deplorable that CDC is rushing ahead with the plan in flagrant repudiation of proposed national government policy. The cumulative and substantial effect upon local villages along the A44 growth corridor from Oxford to Woodstock are obvious; traffic congestion, safety, noise, unhealthy air quality, overwhelmed infrastructure and degraded local environment. Also the destruction of the integrity and special historic character of the small town of Woodstock and its cultural heritage in the almost frenzied pursuit of local authorities hungry for more and more tax revenue.</p>

4285	<p>Comments</p> <p>Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. We consider the proposed submission plan to build thousands of houses on the Green Belt in and around Oxford, unsound, not positively prepared, not justified and not effective. The proposal will impact on ourselves and the residents of North Oxfordshire & Oxford. It will raise pollution levels, our beloved countryside will disappear where people walk to relax and there are farms. It would be an atrocity to convert the golf course in North Oxford (the 1st and oldest course in Oxford) as it provides a space for young and old to exercise and socialise. Moving it elsewhere will require decades for trees to mature, and people will feel disengaged. The environment will be damaged by loss of habitat, deforestation, overpopulation and there will be an increase in CO2 due to an increase in vehicles. In turn this will cause a negative impact on health of us and future generations. Research indicates an increase in CO2 has a direct correlation with cancer, lung and neurological disorders. Quality of life will be impacted as traffic gridlock will occur on already overwhelmed roads, increasing noise and dust. Already strained local services like GP Surgeries, hospitals, schools, public transport will suffer. We all know the houses will be unaffordable for local people anyway, only benefitting profitable London commuters, Buy to Let and Foreign investors.</p>

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. I agree with objections, PR1(a), PR3 and PR11 and to help save the Green Belt, the local countryside and our rural villages in Cherwell and Oxford's unmet housing needs. I support the stance CPRE Oxfordshire have taken that the city could meet most, if not all of it's housing needs within its own boundaries by prioritising land for housing and making sure houses are genuinely affordable homes that people are hoping for. This could be achieved by making better use of brownfield sites and taking a step increase in density targets. Extra housing would require extra transport requirements, but there appears to be no proposals to cope with increased traffic and congestion. Plans should be put on hold until this is addressed. Also Sandy Lane should be improved, not closed to vehicles. I believe CDC can do better with regard to building the required houses without concreting very the Green Belt we require for future generations.

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. I have moved from a very rural area to Kidlington over 20 years ago. I was delighted that I don't have to walk far to find countryside and wildlife despite Kidlington's size and proximity to Oxford. My partner and I visit the fields under threat with a bat detector. As a birdwatcher I've heard many different species. Obesity is increasing and Public Health England are encouraging people to walk more, but you will be taking away easily accessible local walks, the lungs of the area. Residents will have to use their cars to go elsewhere, or walk on polluted concrete pavement. Once the land is built and under concrete it will be lost forever to future generations. Please do not go ahead but think of the environmental damage and loss.

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. I'm dismayed by the proposal to build 4000+ homes in and around Kidlington on effectively virgin farm land/green belt. Kidlington has thus far preserved its distinct identity rather than being an extension of Oxford. The proposal will double our population, merging us with Begbroke and Yarnton, whilst robbing them of their separate entities. I understand the need for new homes but this is an ill judged plan to deal with Oxford's housing issues by dumping its problems on its neighbours. No attempt has been made to consider the transport and infrastructure requirements for the 4000 new homes. Kidlington's roads are near gridlock at peak times and GP surgeries oversubscribed. A letter to the Oxford Mail summed up the prevailing attitude by suggesting Oxford's Housing needs could be solved by "building on land near the airport". Presumably justified on the basis that Kidlington's residents are too ill informed to object and thus deserving of their environment being blighted by a massive overspill building scheme. I reject CDC's proposals, an example of unabashed urban sprawl. We deserve better.

Objection. Consider that the plan is uncompliant and unsound because (a) it does not seriously take into account the public consultation response at the options stage and (b) the content of the plan was predetermined in advance of that consultation as evidenced, for example, by public statements made by the leader of the Council and the Council's senior officer during the consultation period. This predetermination has carried through to the consultation on this draft submission plan. The Statement of Consultation document is both misleading and inadequate. It is peppered with bland statements such as "The comments made on the consultation process have been noted." and "The consultation exercise has met all the requirements stipulated by the relevant planning regulations." It gives every impression that consultation is simply a process and the response can happily be ignored provided the process has been followed, an impression reinforced by the public comments of the Council Leader and Senior Officer. Question 1 on the Options Consultation asked "Is 4,400 homes the appropriate housing requirement for Cherwell?". The Statement of Consultation notes that "Overwhelmingly the representations objected to this figure." (p12). The Council has not made any change in response to that overwhelming response. Moreover, it is clear that the Council never had any intention of doing so. At the public meeting (attended by around 300 residents) in Kidlington on 4th January the Council Leader and Senior Officer stated that 4,400 houses figure was fixed and would not be changed, despite the very first question on the consultation asking if it was an appropriate figure. (When publicly challenged the response given was "It's the process"). We consider therefore that Cherwell Council has predetermined and invalidated the outcome of its consultation. This was reinforced by the many angry comments we heard from residents saying "it's all been decided, hasn't it?", an impression that some said was confirmed by their discussions with planning officers at Cherwell's public exhibitions. The options consultation had no question about the acceptability of development in the Green Belt. We consider that this was a very serious omission given that this is one of the most significant matters in the plan. It also means that the public was denied the opportunity to give its views on this major issue and the Council denied CDC. We consider that the Council has discouraged public comment on the plan, has ignored what comment has been made and has made a mockery of consultation by predetermining the outcome.

Changes Sought

The plan should be withdrawn or substantially rewritten to reflect the views expressed by the public during the consultation.

Reasons for Participation

"We (Kidlington Development Watch – KDW) consider this is necessary because of our extensive involvement with the consultations at all stages of the Cherwell Local Plan to date; the considerable work we have undertaken to publicise the consultation ourselves; of the feedback we have received from Kidlington residents; and, the large numbers of them who have responded as a result of our efforts. KDW is a voluntary organisation run by Kidlington residents with experience and interest in planning issues. We believe that effective, informed public participation in planning consultations is vital to democratic policy making. We publicise consultations that directly affect Kidlington and offer advice on how people can best make their views known. In relation to this and the previous options consultation we printed and distributed leaflets, put up posters, ran a stall on many Saturday markets and at other events, participated in public and parish council meetings, provided information on our website and responded to requests for information from Kidlington residents. As a result, we have gained a very good understanding of the views of Kidlington residents, a large number of whom have made representations because of our activities. KDW's representations therefore reflect the views of much of the Kidlington community."

Objection to the procedure used by Cherwell District Council which has not fulfilled its obligations under section 3.2 of its Statement of Community Involvement, which states that the Council will 'provide the community with balanced, clear and easily understood objective information.' Detailed criticism of documents available and procedures relating to Executive hearing on 19 June 2017. The decision was taken to approve the draft over 2 months before the publication of the Housing and Economic Land Availability Assessment (HELAA) on 25 August 2017, and this has resulted in the extension of the consultation period. However, in my view that is not in itself procedurally acceptable. Councillors will not have had the opportunity to see this key document prior to their decision to submit the proposed submission plan. Neither is this assessment taken into account in the exhibition material that was taken to various locations in Cherwell. Incorporates a number of criticisms of the HELAA. Principally, the number of houses deemed acceptable for each site correlates suspiciously well with the Council's own housing allocations made and prepared for the submission stage and for the preparation of the public exhibition display. Considers that the HELAA was influenced by decisions that the Council had already made. Detailed criticism of the HELAA. Detailed criticism of summaries in previous consultation statement relating to the Options Paper (also see Appendix 1 of representation).

Changes Sought

Reasons for Participation

Has spoken as a platform speaker at three public meetings in Kidlington and Gosford. Made a substantial representation at the Issues and Options stage. As a former parish councillor, has represented Kidlington Parish Council at the North Oxford Area Action Plan examination in public, and likewise was invited to the Examination in Public of the Local Plan. Has an MSc in Transport Planning, so part of representation covers that area. Also offers a distinctive perspective as a local resident, who agrees with the principle of a Green Belt review, but does not support the current planned site allocation. Has no interest in promoting a particular site, but only has some sympathy with those who would wish to preserve the Green Belt intact. Believe views represent many in Kidlington who recognise the need for local housing, but see these plans as strategically unacceptable. Representation contains primary research evidence which could be presented.

The Consultation has been very poorly publicised. Cherwell should have done more – via Cherwell Link article and all other means available, to raise public awareness of the possible loss of Green Belt via this revision of the local plan. It was very difficult to find the consultation details on your website. The consultation papers were long and difficult. Understand that the Council does have discretion on the timing of a public consultation. Choosing to hold the initial consultation and public exhibition in Kidlington over the Christmas period was not reasonable. Has family in the north and wasn't back in time for the consultation at Exeter Hall. This was a poorly chosen time for a consultation and it seems ingenuous in the extreme the way that the Council are seemingly trying to slip this through whilst people are otherwise occupied over the festive period. The second consultation was also short and badly advertised. If it weren't for non-profit groups campaigning, local people would again not have had chance to have their say and had the consultation period extended. The representation by Barry Wood was at the least disappointing, but also ill-prepared, showing a leaning to be persuaded by developers rather than local opinion or even reassessed housing needs figures. We have been let down by elected representatives who haven't backed up local opinion, other than Layla Moran who has been a keen advocate to address these issues. If a council can't listen to the MP for the region then there is something wrong with the system. Any encroachment on greenbelt shouldn't be driven by developers and should have to go through parliament.

Proposed Submission Plan - Consultation Process

PR-C-1583	01/10/2017	Daniel	Walrond					N
4941	Comments							
<p>Very glad of extension to the consultation period, the original window was totally inadequate. Strongly object to proposed plans of building on the Green Belt between Oxford, Kidlington and Yarnton. This is a clear removal of the separation between then and will most certainly lead to both Kidlington and Yarnton becoming Oxford. This is exactly why Green Belts were created and the proposed plans are an unjustified use of Green Belt land which is not consistent with National Policy. One of the stated motivations of this proposed plan is for use of Oxford housing overspill, yet Oxford City has consistently failed to develop land for meeting its housing needs. There is so much land within the Oxford City ring road that has not been developed, especially brown field sites. Much of the housing needs in the area are for jobs within Oxford City. Huge numbers of people commute into Oxford to meet the demand of jobs. Yet housing has failed to keep pace. Housing should first be developed closer to where people work, which would be consistent with meeting emission targets set out by central Government. Thus these proposed plans are ineffective because Oxford City has failed to develop within the ring road. Believe that the District Council plans are inaccurate and have been prepared in such a way to present a biased view. Question the consultation process because it has been such a short period as if to get these plans passed without local residents noticing. Also because Cherwell District Council are not taking this consultation seriously - concern drawn from attending a Public Meeting on 21st September in which Cllr Barry Wood failed to answer questions. These plans should be rejected. Also deeply concerned to hear Cllr Barry Wood give such negative (and unprofessional) references to lawyers and implied that he and the Council are being forced into allowing developers to build in wholly inappropriate ways that will have a negative impact on Kidlington and Yarnton. projected growth and requirements for housing in the Cherwell District Council proposed plan should be reviewed given that revised figures are soon to be updated. It would be prudent to do so regardless of my objections outlined in this letter. The housing in these plans do not appear to be suitable for sustaining the affordability for local people and people on lower paid but essential jobs for Oxford's infrastructure are unable to live in the locality. Yet the plans appear to be targeting larger four to five bedroom houses at low density to supply demand for London based commuters. This is not a local plan for a local city, it is to supply demand for people to work in London and live some where less urban, whilst ruining vital Green Belt land between Oxford and Kidlington. The levels of congestion in Kidlington is very high and I do not believe it is correctly represented in the proposed plan. Considering that the road network is not able to cope with the level of traffic today and the proposed plans do not give any solid plans for improvement. Nor that recent "improvements" to Cutteslowe and Wolvercote roundabouts have had any impact on this. The plan is not positively prepared because it fails to provide the necessary infrastructure. Also the council has failed to show competence in addressing the existing problems in the area with recent road works, which further discredits the proposal plan. Strongly object to the proposed plans. With so much documentation to digest the District Council is failing to allow fair time to review them.</p>

Object to any future development by Bloombridge, or any other developer, to permit future development on the land behind the Moors in Kidlington. This is land in the Green Belt, and should be preserved as such. The fields are in a wonderful area for the locals to go walking, in what is becoming a very built up area, and so is such an important amenity for the village which is well used. It is prone to flooding, and so is unsuitable for building on as well Please do protect this very special area.

Very concerned about Kidlington infrastructure and adding lots of traffic to an already congested system, as well as the cramming of new housing producing future ghettos. Why not spread housing to other sites in the District? The proposals will not produce affordable housing for anyone, especially young people. If schools are proposed in Kidlington where will the teachers come from as house prices are so high? Destroying so much green belt is morally wrong.

It is with great consternation that I read about the proposed plans to develop the land around this area with around 650 houses. The view across the fields towards Islip from the cricket pitch is one of my most treasured moments of the year, and the sense of openness that Cutteslowe offers is what makes this such a special outdoor space. Strongly oppose this plan, and respectfully urge that development opportunities be sought elsewhere, where there is more suitable land and where the impact would not be so great on the environment and experience of existing residents.

Strongest possible terms of objection to any building on land behind The Moors. It is an exceptionally beautiful area of heathland/countryside and is incredibly well-used by many local residents. There are plenty of other sites that have been earmarked for development and the last thing we need is for all green areas around Kidlington/Yarnton/Begbroke to disappear.

Strongly support Cherwell DC's decision not to include land behind the Moors (Options sites PR14 and PR27) in the Plan. The site is most historically important and should be protected. Exceptional circumstances needs to be demonstrated to release the site from the Green Belt. The sites constitute a landscape of the last remaining unspoilt corner of Kidlington with wide views across fields to the old village, the heart of the conservation area with its landmark St. Mary's steeple and many other listed buildings. Footpaths on the fields are much used by local walkers. The sites are also a haven for wildlife. Lack of appropriate access. The nearby North Kidlington Primary School also adds to the congestion at school peak times. The sites mostly able to absorb rain water and preventing flooding. Development will lead o the run off of more water from the area.

Disturbed to hear that these proposals are still in question for the Moors and there are many reasons why they should not be carried out. As an elderly resident walking is very important to maintain health. As the Moors is easily accessible it is possible to go there on my own and to walk for Cherwell DC set up weekly health walks.

GB is an irreplaceable public good, created with the distinct purpose of separating settlements and protecting historic landscapes. Land behind the Moors and Webbs Way is one of the most popular, accessible and necessary interfaces between town and country in Cherwell. It has for generations provided lungs for Oxford, and protected a unique medieval landscape which contains many Listed Buildings. Destruction of the landscape compromises them severely. Further damage would be done by light pollution inevitable from new housing. The fields and their ancient tracks and rights of way are high among the attractions that persuade people to choose to live in Kidlington, so it would be counter-productive to destroy this natural amenity by building on it. Indeed there is a case for making this landscape an amenity for all by formalising it as a 'reserve' akin to, or even part of, the National Trust. This is an amenity that is beyond price. If we are to provide more homes, then we must also provide amenity. The landscape with its central focus on the spire of St Mary's Church, 'Our Lady's Needle' – as featured in Simon Jenkins' book England's Thousand Best Churches (1999) - is just that. Build on it, and it's gone.

Having already made an earlier response to the planned new build in Kidlington on grounds of lack of infrastructure, crowded roads for people working within the ring road travelling from Kidlington to Oxford and reduction of Green Belt with effect on wildlife and local people. The points clearly apply in connection with the land behind the Moors also. However an added key point is the use of land which drains on to the Cherwell river flood plain, thereby exacerbating problems with flooding lower down in the more southerly reaches of the river within Kidlington. Any new housing reduces the capacity of the land which it stands on to absorb rain water and this is particularly difficult in such an area already vulnerable to flooding.

The plan proposed by Bloombridge Development Partners to develop land behind The Moors, Kidlington, is completely unacceptable, especially as the land is in the Green Belt, which should be preserved to prevent urban sprawl. Having moved to Kidlington in 1970 it was considered that this was an excellent place to bring up a family as it was close to shops, schools, medical care and other amenities as well as being able to walk across the fields, through the woods and along the river. To lose such an amenity does not bear thinking about. Much of the land is subject to flooding and extra development would surely increase the risk of this happening. The extra traffic from such a development would have a severe impact on the roads serving the area. Cherwell District Council must continue to exclude the area behind the Moors, Kidlington from any development plan and it is urged that you do so.

Confirms strong support for Cherwell's decision not to include the Moors land for development. It was the right decision for Kidlington. Is dismayed that Bloombridge still considers the land appropriate for development as it is not for the following reasons: The land is in Green Belt. This is an important landscape for the oldest part of the village. There is risk of flooding. The area is already has a stretched infrastructure. This area is rich with wildlife, putting them at risk. The area is well used by local residents and a reason why many of us choose to live there.

Objection made to Bloombridge's proposals to push for planning on the land behind The Moors. All the wildlife which is behind The Moors which includes the great crested newts etc. Also this area is renowned to flooding and it is therefore not practicable. The development would exacerbate the flood risk to adjoining housing and land. In particular objection made to Broadfields application to build housing and industrial units behind The Moors, (particularly behind us in Moorlands) this is absolutely ridiculous, the traffic congestion that this would create would be catastrophic.

1135	Comments			
The decision taken not to include the land behind the Moors (Sites PR14 and PR27) was correct. The number of houses and business units proposed would alter the general area and drastically increase the amount of traffic along The Moors Road. Over time The Moors and Mill Street had considerable work carried out installing larger pipework connected to the over worked and overloaded foul drainage system. The increase in volume from the proposed sites would once again increase the chances of having the overflow from the drainage system coming out onto the surface again. The sites that are also in the Green Belt which should be preserved to prevent the sprawl of urban development. The fields which would be used for these sites are a well used amenity by villagers and visitors and this area has long been looked on as a local green space.

Supports the Council's decision to exclude sites from the proposed submission plan. Strongly agrees land behind The Moors, Kidlington (Option sites PR14 & PR27) is unsuitable for development. Understands the developers wish to reverse the Council's decision & persuade the Planning Inspector at a later date. Strongly objects any request to allocate these sites for development. Reasons for objection: It is on Oxford GB. GB must be protected. It was created to preserve open spaces & prevent urban sprawl & are important to villagers for recreation & views to St Mary's church. Govt. policy states unmet housing need is NOT a reason to build on GB & development should only be considered if there was no alternative. It is inconsistent with NP. The impact would be severe, adversely affect the setting in Church St conservation area, damage the countryside & the habitat for wildlife. The local infrastructure is inadequate. The proposed access, via The Moors, close to 2 conservation areas, would detrimentally impact the road & create large traffic volumes near a school & nursery on a narrow & busy road already subject to speed ramps. It's proximity to the River Cherwell means this site floods regularly & development would exacerbate this. The proposed development by Bloombridge of PR14 & PR27 is unsound & unsuitable for the location.

Support for Cherwell District Council's decision that the land behind the Moors in Kidlington should not be developed on. This site is in GB which should be preserved for the wellbeing of residents and the countryside (thereby the wellbeing of the wider population, wildlife and climate). Fields are used by Kidlington residents for walking, cycling, enjoying the countryside. Have all seen the fields being the Moors flood regularly. Further development would increase the risk of flooding. The views need protecting (property developers are already guilty of putting up new rapid growing tall hedgerows to deliberately obscure views across the countryside). The area is one of natural beauty and a conservation area - with listed buildings including St Mary's Church. It must be conserved. It is not for this generation to spoil it for the next.

As developers are continuing to press for development on these sites I would like to restate previous objections. These sites are particularly unsuitable for development. They are in GB and abut the Kidlington Church Street Conservation Area. They are one of the most popular walking areas in Kidlington used by many people from near and afar for fresh air and recreation. They afford really attractive countryside and provide irreplaceable views of Kidlington's historic, Grade 1, listed parish church. The land is low-lying and development would increase the flood risk. Local roads have only small capacity and increased traffic would present a serious road safety risk.

Unsuitable for development. Part of GB and is wholly contained within the heart of the Church Street Conservation Area defined and protected by Cherwell District Council. It forms part of the "Church Fields Character Area" described in their document: "Kidlington Conservation Areas Appraisal May 2009". It affords views of the important listed buildings and old walls of the area. The unsuitability of this site for development is made clear in the following quote from P.34 of Cherwell District Council's "Kidlington Conservation Areas Appraisal May 2009". "5.12.4 Threats • The public right of way is an ideal place to see the rear of the properties on Church Street and Mill Street. The paddocks stretch right up to the high walls of the properties, and shows how easily inappropriate development to the rear can be detrimental to the conservation area. At present, the high walls and vegetation blends the line between fields and houses, and this symbiotic relationship should be protected."

<p>Comments</p> <p>Suggested sites in Oxford – many more could be listed.1. The “Northern Gateway” should be housing and not industry – near to city.2. Although in Green belt - Frieze farm would be better for housing (nearer to city than Begbroke or Yarnton)3. Build on North Oxford Golf course – nearer to Oxford.4. A planned golf course on Frieze Farm could be sited elsewhere – permitted in the green belt.5. Industrial City sites reserved for employment such as Blanchford’s in Headington (near to healthcare employment centres such as hospitals) and Blackwell’s in Marston Street could be used by moving the business to industrial parks out of residential areas.6. Southfield Golf Course could be built on to provide low cost housing – near to hospitals. This is a large site – recently permission has been granted to build on nearby land.7. Playing field at Meadow lane Donnington is an ideal site. Near to transport links/employment and has Iffley Meadows and Rivermead Nature park for residents enjoyment.8. Oxford Greyhound Stadium and The Kassam stadium areas are ideal for residential development and near to a science park.9. When Brookes campus relocates to Oxford – Wheatley campus would make good key worker accommodation.10. Eastwyke Farm is another site with potential. These sites could deliver the housing they say they need. (pictures and maps provided). Oxford can provide housing when it wants to - Bob Price in the Oxford Mail – September 2017, is quoted.</p> <p>Changes Sought</p> <p>Reasons for Participation</p> <p>Please review our PowerPoint presentation for the comments of Begbroke parish council. This is necessary as we believe Cherwell Executive will ignore any representations as they have already made their mind up. We believe that The Planning Inspectorate will take more notice of what we have to say.</p>								
PR-C-0537 1321	06/10/2017	Joan	Tossell				N	
<p>Comments</p> <p>Support for decision to exclude the area behind the Moors. Concerned that developers will continue to make representations. Main concern that this is a category 2 flood risk area. When this area of the GB was last under threat in the 1990s, the Ministry of the Environment Inspector ruled that, “I think that the fields and paddocks and even land in its rough state has a charm where it abuts, irregularly in places, the existing limits of development. I do not consider that the GB boundary hereabouts should be further out than that shown on the local plan. To my mind the GB should wash up to the existing development; for to leave pockets of ‘white land’ is to differentiate between pockets of this rural fringe area, which in their own way all contribute to the character of this area (and irregularity is a characteristic of the edges of this development). And were development ever to take place it would I fear be significantly harmful to this rural end of Kidlington. ... I feel, without question, that it would be most unfortunate if this north-eastern area of the village were ever to be seriously considered for development” (p7). If you are unfamiliar with the area, take a look at your own Kidlington Framework Masterplan. On page 16 you will see a photograph (figure 2.29) of the views enjoyed by our walkers which you label “distinctive views towards St Mary’s Church”. The same page describes the area as follows - “The River Cherwell meanders south from Thrupp and to the east of Kidlington, surrounded by a water meadow landscape with overhanging willows along the bank edge attracting herons and kingfishers. Within these meadows is an overgrown reed area attracting a wide range of bird species including warblers, bitterns and woodcocks. Between the River Cherwell and the north edge of the village are broad rolling fields which rise in height to the north west, these are known as Kidlington Fields. Footpaths across the fields provide links to Thrupp and Hampton Poyle. Views towards St Mary’s Church are particularly distinctive” - an excellent description in your own document and which only a few months later, you propose to trash to meet Oxford City’s housing needs</p> <p>Changes Sought</p> <p>Reasons for Participation</p>								
PR-C-0538 1335	29/09/2017	Lynn A	Bairstow-Fowler					
<p>Comments</p> <p>Strong support regarding decision not to include GB land behind The Moors in the Proposed Submission Plan. Land is not suitable for development now or any time in the future. Larger village and loss of green space would result in loss of good community feel. These fields with their landscape rural views have been enjoyed by many generations and should continue to do so. GB must be preserved and protected as stated in the Conservative Government's manifesto. The development is not modest and would have a direct impact especially within the setting of the conservation area of St. Mary's Church and other listed buildings. Access to the development site would be dangerous for schools and nurseries in Benmead Road. This land already floods considerably every winter and this development would exacerbate the flood risk not just to housing but adjoining land and the nearby conservation areas.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>								
PR-C-0543 1877	03/10/2017	Lynn	Pilgrim					
<p>Comments</p> <p>Strongly support Cherwell District Council’s decision not to include green belt land behind The Moors (Options sites: PR14, PR27) for development in the proposed submission plan to meet Oxford’s perceived unmet housing needs based on inaccurate SHMA data. One of the most important reasons for the Council rejecting and excluding this site and one with which I fully agree is that these fields are an important amenity for local residents and visitors alike. Throughout the year many thousands of walkers enjoy both the views of open countryside and views towards the Conservation area and St Mary’s Church. The importance of this area and setting was emphasised in the Planning Inquiry held in the mid 1990’s. This land should be treated as a permanent local green space, essential in the well being and mental health of the inhabitants. Comments provided on the following points: Green Belt, wildlife, heritage, flooding and infrastructure.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>

Strongly oppose development on land to the NE of the Moors/St Mary's Fields. This pushes the developed boundary into open land [as opposed to infill between Yarnton/Kidlington] & removes a linking community amenity to the Cherwell valley.					
Changes Sought			Reasons for Participation		
* Provision of an improved traffic-free, more direct cycle & walking route should be considered including bridges across the Bicester Road, the A34 & the railway & then on a new, dedicated route running east of Cutteslowe park before swinging round via a new bridge to join the A40 cycle route to Headington. A significant investment & focus on prioritising cycling will be required to truly change the transport choices made. * Improving rapid bus transit to the hospitals & Headington should be considered. I would suggest the current 700 bus route is re-routed directly from Cutteslowe, along the A40, leaving at the new junction, using the rear entrance into the JR, avoiding Summertown & Marston completely [already served by bus services]. A target journey time of 30 mins from Kidlington centre to the Churchill would not be unreasonable, even at peak times.

Object to any development planned behind The Moors, Kidlington. The first important factor to be considered is that this is GB and should be conserved as such. There are also Conservation Sites on the land proposed for development. The roads are much too narrow to take a big influx of traffic and the local schools and already full to overflowing. It is also well known that this part of the village is prone to flooding and any building development on the site would only make matters worse. There is much wildlife in this area, some of it rare and it should therefore be preserved for this reason, and also for the use of the residents of the village. I would therefore ask the Planning Inspector to reject robustly any requests put forward for future development of this important area of the village.

This county and country need more houses. This is an ideal location for a number of them. I have walk this land for over forty years and it has NEVER flooded. The drain down The Moors was enlarged a few years back and I would think it could more then cope with the extra houses. As for the green belt, this bit will not be missed. The countryside is more attractive closer to the river.Thanks to the post-war expansion of the village we have three Supermarkets, two Post Offices, a pool and much more. I suspect most of the NIMBYs behind the campaign to stop this development live and benefit from the earlier development and now want to stop others enjoying the same.This extra building will bring in more revenue for the council and may at least stabilise house prices. Think of the needs of the many not the selfish babbling few.

Objection to the development proposal PR-B-0847 of the land at The Moors, Kidlington (PR14 and PR27). Key reasons for the objection:1. The loss of landscape and rural views due to development, and the impact on the setting of St Mary's Church is a significant loss of amenity. 2. The proposed area acts as a natural area of drainage (the fields are frequently water logged during periods of wet weather); developing this area will increase risk of flooding in the surrounding land and houses etc. 3. Development (and consequent building use) will cause significant increase in traffic along The Moors and Benmead Road. Further, for this large size of development, most residents will need to use vehicles to commute to their employment, driving up amount of traffic and congestion. The area around the proposed development is NOT suited to more traffic and have school/nursery nearby. 4. Specifically the risk of congestion and road accidents given that the proposed entrance to the development is almost opposite the junction with The Moors and Benmead Road is a major concern. 5. Development will significantly impact a well used and valued amenity used by residents and regular visitors who enjoy walking, exercising, and the scenery.Cherwell DC has my strong support for their decision to NOT include the proposed area for development.

Support for CDC in their decision that the land off The Moors in Kidlington (Sites PR14 and PR 27) is unsuitable for development. This ruling meant that it was not included in the Proposed Submission Plan (July 2017) to meet the contentious "Oxford 's Unmet Housing Need " plan. As was apparent at the meeting at Exeter Hall discussing these proposals, the local residents are vehemently against any large scale development in the Kidlington area which is seems are not going to required anyway when Oxford rethink their real requirements. Objections :1. The site is an extensive area of Green Belt Land. These fields are an important asset to the local residents and should be retained as a permanent green space.2. The proposed access to the site is opposite Benmead Road which has a school and nursery and has become virtually a main road with vehicles cutting down to the Moors from Banbury Road. This area of the Moors has also had an increased volume of traffic plus parking problems since the Moorlands development. A huge development of this size (300 houses plus business units) would mean even more traffic chaos. 3. As Oxford City are having to rethink their true requirements under "Oxford's Unmet Housing Need" this area should definitely not be held in reserve and Bloombridge should forget about attempting to get it included.

<p>Strongly object to this proposal. Very concerned to hear about the possible planning permission for land behind The Moors in Kidlington. Lives on The Moors and regularly run and walks her children in this area. Green spaces are on such short supply in Oxfordshire and is concerned that children will grown up having been normalised to the complete absence of wild areas. Without this natural space in easy reach of our house we have to drive to Stratfield brake. We should be following the initiatives started in Bicester Healthy town by protecting these green spaces for physical activity - this area is busy daily with runners and dog walkers.Has seen a dramatic increase in the traffic since the new railway has been opened - this has made her commute to Bicester and back for work almost impossible at times. Needless to say the A34 is usually grid locked daily already. Can't imagine this area can sustain any further housing and a blurring of this precious green space between Oxford and Kidlington should be fought against at all cost.</p>

<p>Strong support for decision NOT to include The Moors Land (PR14/PR27) for development. Site is on GB which should be protected & preserved as stated in Conservative Government's manifesto. Damage to countryside and loss of habitat for many rare wildlife species is not acceptable. Loss of landscape around the oldest part of Kidlington would affect St Mary's Church (a Grade 1 listed building) as well as other listed buildings in the Church Street area. Increase in traffic & pollution from this proposed development would destroy this area and as generate a massive increase near a school, nursery & old people's residence. Inadequate infrastructure for development of this scale causing a detrimental impact on existing roads & services. The site entrance opposite Benmead Road is very close to two Kidlington Conservation areas which will be damaged by this development. Already a high risk flood area & any development will increase the risk of flooding to housing & the surrounding area. Surface & foul drainage would also be increased. The fields are also a very well used amenity for the village residents & regular visitors. The area should be treated as a permanent local green space & not be ruined by this unnecessary development when it has already been excluded by the Council as unsuitable for development.</p>

<p>Strong support for decision NOT to include The Moors Land (PR14/PR27) for development. Site is on GB which should be protected & preserved as stated in Conservative Government's manifesto. Damage to countryside and loss of habitat for many rare wildlife species is not acceptable. Loss of landscape around the oldest part of Kidlington would affect St Mary's Church (a Grade 1 listed building) as well as other listed buildings in the Church Street area. Increase in traffic & pollution from this proposed development would destroy this area and as generate a massive increase near a school, nursery & old people's residence. Inadequate infrastructure for development of this scale causing a detrimental impact on existing roads & services. The site entrance opposite Benmead Road is very close to two Kidlington Conservation areas which will be damaged by this development. Already a high risk flood area & any development will increase the risk of flooding to housing & the surrounding area. Surface & foul drainage would also be increased. The fields are also a very well used amenity for the village residents & regular visitors. The area should be treated as a permanent local green space & not be ruined by this unnecessary development when it has already been excluded by the Council as unsuitable for development.</p>

1506	Comments			
<p>Very strong support for decision that land behind The Moors, Kidlington (sites PR14 and PR27) is unsuitable for development. GB is in place to prevent urbanisation, therefore this current GB designation should be unaltered to provide protection against urban sprawl in direct support with current Government's Election Manifesto (Page 71) in favour of preserving GB land. Inclusion of small business units when there is already a high number of additional business property proposed around Kidlington, as well as unused existing units, makes it hard to see this as a benefit in an area that has better than full-employment. Presumably the labour supply will have to come from outside the village further exacerbating the inadequate transport infrastructure. This land should be treated as permanent local green space as it is a well used and important local amenity for village residents providing walks and views towards the Conservation Area of St Mary's Church. Additionally, it is a rich habitat for wildlife including rare species such as Short Eared Owls and Great Crested Newts. The area adjoining The Moors, St Mary's Fields, and land adjacent to the River Cherwell floods regularly and any development of this magnitude will adversely impact the flood plain. There is no doubt that the local infrastructure cannot support development on this scale. Traffic capacity, and surface and foul drainage are already stretched. The proposed access adjacent to Benmead Road is close to Kidlington Conservation Areas and will impact on narrow roads near to a primary school and nursery, already subject to traffic calming and blighted by "rat-running" that is a direct result of the overloaded village through route. The rural landscape setting of the listed St Mary's Church and the other listed buildings in the Church Street Conservation Area would be adversely affected by these proposals.</p>

<p>Objection to inclusion of land behind The Moors in Kidlington in the local development plan. Reasons: 1. Low-lying land on the flood plain, building there will only exacerbate the risk to other housing the area, even if the new houses are built sufficiently high to be safe from flooding. 2. Kidlington, Oxford and surrounding area already extremely crowded. The road network is inadequate for much more traffic - already traffic jams at peak times (much more than the "rush hour"). 3. Could be argued that there is a need for extra housing around Oxford to accommodate all those that work there, however further construction of more industrial units and offices which will create jobs and fuel the demand for more housing should not be allowed. The reverse argument is made in some quarters for more commercial building to provide jobs for local residents. It can't be the case that both arguments are true. They are both used interchangeably, resulting in insatiable demand for building space in an area that cannot take it. There are lots of parts of the country that could take it. 4. University of Oxford is developing businesses as hard it as it can within and just outside the city, whilst admirable this fuels the demand for more housing. This would be acceptable if the city could accommodate this demand, but it is not fair that outlying villages should be extended indefinitely as dormitories for the city.</p>

<p>Agreement with Cherwell District Council that the land behind the Moors Kidlington PR14 and PR27 is not suitable for development as per the Bloombridge proposals and therefore objection to this development. This is GB land on the edge of the Cherwell river floodplain and often floods in wet weather. It is a small rural pocket of land adjoining the oldest part of the village and should be preserved as such. It is within a short distance of listed St Marys church which has been there since 1220 with its surrounding peaceful graveyard in a conservation area and provides good wildlife habitat. The graveyard is on the water table and graves are often flooded when dug. Other land there must be very close to the water table. Light pollution from the new houses will also affect the Cherwell riverbank area and wildlife. Small developments have been allowed recently in keeping with the area but this has already added to the traffic on the busy Moors Road and a larger scale development with more traffic would create serious traffic problems. A large new care home is currently being completed at the northern end of the Moors which will open soon bringing additional traffic.</p>

Clear arguments in support of this: 1. Local roads, The Moors in particular, are already very busy and becoming increasingly busy despite calming measures. Any additional access for development would create additional hazards and be dangerous particularly to young children and the elderly in the area. There are a significant number of recreational cyclists in the area which is to be encouraged and they should not be subject to more unnecessary traffic movements and associated risks. 2. Development would be close to the old, original part of the village and its conservation areas which are vital to retaining the atmosphere of the village and its heritage. The conservation area (particularly the Church) would be compromised. 3. Development would be on a flood plain which does flood - this is not responsible. 4. GB is a sensitive area and must not be compromised. Kidlington has already expanded hugely and a stand must be made to avoid encroaching onto this special area. 5. Kidlington has already lost it's town green to development and the area behind The Moors has effectively become the replacement for that facility and is well used for recreation by the community. 6. Pressure would be put on habitats of rare wildlife species. 7. Kidlington is well-served by Exeter Hall and activities in local churches. There are plenty of employment opportunities, business parks and trading estates locally so no need for additional facilities. 8. HM Government recently published revised figures for Oxford's unmet housing need and there are other opportunities for meeting the significantly reduced need in other areas with less sensitivity. Please resist any attempt by the developer to overturn this decision.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>

<p>Regret that land behind The Moors which was earlier stated unsuitable for development is now at risk of having a development of 300 houses plus business units, in spite of being in the Green Belt. Does nobody consider future generations when proposing these plans? The pond at Holmwell House was restored by an Environmental Group and was then, and still is now, a habitat for Great Crested Newts. The proposed access for the site would certainly destroy the pond. How will The Moors and Mill Street cope with all the additional traffic? How will the local schools accommodate the extra children? Not to mention medical services already under pressure. It would be appalling to cover this beautiful rural landscape in concrete. Plea to the Planning Inspector to refuse these proposals in the interest of Kidlington residents.</p>

<p>Comments on Risk of Development by Bloombridge on land behind The Moors Kidlington. Strongly urge the committee not to agree to any development on this land. Whilst development looks likely in the GB at the southern end of Kidlington, the GB should be upheld at the northern end - no matter how small the proposal may be - any foothold is bound to lead to further development in future years. There are many footpaths here at "the edge of the village" and to change that would be a real blow to the people that use these footpaths. This area backs onto the oldest part of the village with timeless views of listed buildings and St Marys Church. This land should continue to be protected by the GB as a reminder that GB protection actually means something and should not be given up lightly. I already have housing development behind my house - so I am not protesting to protect the views from there, but as a resident of Kidlington. This is seen as a vital piece of countryside by many hundreds of residents and they would like to see it remain for as long as possible.</p>

<p>Strong support in decision NOT to allow the development of land behind The Moors. Many good arguments have been considered in coming to this decision, particularly: 1. Oxford does need affordable housing meaning housing that is affordable for families on median Oxford incomes - does this development promise houses that would be sold in that price range? Otherwise 'affordable housing' is merely a deliberately deceptive sound-bite. 2. Development such as this would increase the flood risk for The Moors and neighbouring areas. Major investment would be required on draining infrastructure to avoid this which developers will act to minimise, but they will no longer be around in the future to take responsibility. Please continue the opposition to any attempts by developers to circumvent our local democracy.</p>

Concerned that the Council has not undertaken a robust assessment of the options for accommodating Oxford City's unmet housing need, particularly within Yarnton. We believe that the Council's Sustainability Assessment is flawed and should have considered development on at least part of our client's land as well as the proposed allocation at Land West of Yarnton (draft Policy PR9). Paragraph 10.148 of the Sustainability Assessment confirms that significant positive effects, regarding development on the subject site ('Site 75 - Land adjacent to The Old School House, Church Lane, Yarnton'), are identified in relation to access to services and facilities. It has also been confirmed that no significant negative effects are identified. The Council has acknowledged that the site could link to, and integrate with, the existing village of Yarnton. However, concern is raised in relation to the potential impacts on the setting of the Registered Park and Garden and listed buildings to the south of the site, and as such the Council has concluded that the site, in its entirety, should not be taken forward for residential development. In doing this, the Council has not considered the potential to develop only the northern portion of the subject site, 'Site 75', rather than the whole of the site. Development on the northern portion, in particular, would form a logical extension to the village and would be sufficiently separated from the Registered Park and Garden and listed buildings to the south. The Proposed Submission Partial Review proposes to deliver 4,400 new homes within seven residential development areas. Paragraph 8.60 states that delivering all 4,400 homes, or significantly more, in close proximity to Oxford and the villages of Kidlington, Begbroke, Islip and Yarnton will ensure that the new homes are located in areas with good access to medical services and open spaces for recreation. This suggests that it would be more sustainable to deliver new homes within the villages mentioned above than other parts of the District, or even the County as a whole. Given that Yarnton has been designated a large Category A village which has access to a range of services and facilities, including a primary school which is proposed to be extended as part of the development on Land West of Yarnton (draft Policy PR9), it is considered that the village has the capacity to deliver more new homes than currently proposed within the Partial Review Local Plan. Development on the northern portion of the subject site would provide small scale, sustainable development which could come forward in the short term. We therefore urge the Council to consider the subject site, in whole or in part, for inclusion within the Local Plan Partial Review. If the subject site were to be developed, the existing landscaping and Yarnton Manor boundary to the south of the site would provide a clear, defensible and permanent boundary to the Green Belt as required by paragraph 85 of the National Planning Policy Framework (NPPF). Furthermore, if the northern portion of the site were to be developed, a comprehensive landscaping scheme would accompany any such development, both screening and protecting the settings of the nearby listed buildings and Registered Park and Garden and enhancing the site's/ Green Belt boundary to the south. The Local Plan Partial Review has not been positively prepared as there is additional capacity for the development of new homes at Yarnton, a sustainable large Category A village within close proximity to Oxford City, which is not currently being realised by the Council. Concerned that the Council has not undertaken a robust assessment of the options for accommodating Oxford City's unmet housing need, particularly within Yarnton. The Local Plan Partial Review is not justified as the Council has failed to fully consider all reasonable alternatives/ additional options as the whole of the subject site has been disregarded without considering the potential for partial development on the site.

Changes Sought

The Council should consider the northern portion of the site as a small scale, sustainable housing allocation at Yarnton.

Strong objection to Moors land development. Family born and bred in this area. Strived to make the Moors home as it is the finest part of the village. Will be spoiled by development. Over the past years already seen four care homes, blocks of flats and housing. Traffic has increased tenfold and is a rat run with ineffective speed bumps and no crossings for residents to use. An entrance opposite Benmead Road would be a disaster. Loss of relaxing walks down to the river, church yard would be surrounded by houses, ponds with preservation orders would be gone. Traffic and parking would get even worse. Don't let this happen.

Proposed Submission Plan - Omission/Alternative Sites

PR-C-0629	09/10/2017	Mrs Rosie	Lodwick		N		N	
1555	<p>Comments</p> <p>Written with particular reference to land east of the Moors (sites PR14 & PR27), and supports the omission of the sites from the Plan. Policy PR12b states that “Applications for planning permission for the development of sites ...that are not allocated in the Partial Review will not be supported unless...” I consider that this is not legally sound because it implies that development could still be allowed under certain circumstances. None of these include the “ exceptional circumstances” necessary to remove GB designation. The site is unsuitable for development. It lies on the western edge of St. Mary’s Conservation Area and would be detrimental to the setting of the church and historic houses nearby. The landscape is of particularly high value. The many footpaths are hugely popular used by many organisations and individuals from near and far. The GB should continue to safeguard this area. Development would generate traffic onto a narrow road that already has traffic calming measures. The land at the eastern end of PR14 is liable to flooding which does not show on Environment Agency maps, but there is photographic evidence. Development would be likely to result in an expansion of the current area of flooding.</p> <p>Changes Sought</p> <p>In order to make this Plan sound, it would need to add the requirement to PR12b for “ exceptional circumstances” to exist for development in all the unallocated sites in the Green Belt.</p> <p>Reasons for Participation</p>

None of these include the “ exceptional circumstances” necessary to remove GB designation. Site is unsuitable for development. It lies on the western edge of St. Mary’s Conservation Area and would be detrimental to the setting of the church and historic houses nearby. The landscape is of particularly high value. The many footpaths are hugely popular used by many organisations and individuals from near and far. The GB should continue to safeguard this area. Development would generate traffic onto a narrow road that already has traffic calming measures. The land at the eastern end of PR14 is liable to flooding which does not show on Environment Agency maps, but there is photographic evidence. Development would be likely to result in an expansion of the current area of flooding.</p> <p>Changes Sought</p> <p>In order to make this Plan sound, it would need to add the requirement to Policy PR12b for “ exceptional circumstances” to exist for development in all the unallocated sites in the Green Belt.</p> <p>Reasons for Participation</p>							
PR-C-0629	09/10/2017	Mrs Rosie	Lodwick		N		N	
1557	<p>Comments</p> <p>Written with particular reference to PR14 & PR27. Policy PR12b states that “Applications for planning permission for the development of sites ...that are not allocated in the Partial Review will not be supported unless...” I consider that this is not legally sound because it implies that development could still be allowed under certain circumstances. None of these include the “ exceptional circumstances” necessary to remove GB designation. Site is unsuitable for development. It lies on the western edge of St. Mary’s Conservation Area and would be detrimental to the setting of the church and historic houses nearby. The landscape is of particularly high value. The many footpaths are hugely popular used by many organisations and individuals from near and far. The GB should continue to safeguard this area. 1580	<p>Comments</p> <p>Agreement with submission document over the retention of GB designation on sites on the north-eastern side of Kidlington (between the village and the river Cherwell), and the absence of development allocations in these areas. These sites, which lie behind the houses on the north side of The Moors, are part of the GB countryside. It is a priority to retain these sites as undeveloped land that contributes to the recreational amenity of local residents and the setting of Kidlington. It forms one of Kidlington’s key countryside assets and helps to add an attractive rural dimension to Kidlington’s largely urban identity. These sites are well provided by footpaths and they have become important areas for countryside pursuits walking and jogging. St. Mary’s Fields is a conservation area on the eastern edge of these sites and would be damaged by development. Totally opposed to development of any kind on these sites.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							
PR-C-0642	06/10/2017	Ivor	Davies					
1581	<p>Comments</p> <p>Objection to the representation by Bloombridge for land behind the Moors, Kidlington. Key reasons for objection are: 1. The loss of landscape and rural views due to development, and the impact on the setting of St Mary’s Church is a significant loss of amenity. 2. The proposed area acts as a natural area of drainage (the fields are frequently water logged during periods of wet weather); developing this area will increase risk of flooding in the surrounding land and houses etc. 3. Development (and consequent building use) will cause significant increase in traffic along The Moors and Benmead Road. Further, for this large size of development, most residents will need to use vehicles to commute to their employment, driving up amount of traffic and congestion. The area around the proposed development is NOT suited to more traffic and have school/nursery nearby. 4. Specifically the risk of congestion and road accidents given that the proposed entrance to the development is almost opposite the junction with The Moors and Benmead Road is a major concern. 5. Development will significantly impact a well used and valued amenity used by residents and regular visitors who enjoy walking, exercising, and the scenery. Cherwell DC has my strong support for their decision to NOT include the proposed area for development.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							

Proposed Submission Plan - Omission/Alternative Sites

PR-C-0645	09/10/2017	Anne	Pearce	
1584	<p>Comments</p> <p>Objection to proposed development by Bloombridge. While there are community type elements promised there are fundamental reasons why this should not go ahead: Several years ago the site behind my home was earmarked for a proposed Stratfield Brake playing fields - the issue then was impact of the development on the flooding of the homes on The Moors. What is so different now? There is insufficient infrastructure in the area to manage the population as it is let alone a significant increase - not just the NHS but all public services - difficulties with appointments for Kidlington GPs, dentists, optician, and summoning help and support from the police, fire and rescue or the ambulance service - they are all missing deadlines , lacking in money and have disheartened staff. Then there is education. There is no spare money, no spare anything and it looks like it can only get worse. The trend currently seems to be to provide accommodation for the elderly - with developments at the top of The Moors and the bottom of Benmead Road - what extra is going in to the infrastructure pot in Kidlington to support our new elderly residents. It is utterly fantastic that the elderly of Kidlington are being provided for and they can stay local to friends and family but just providing accommodation is not sufficient. There are other issues to do with the environment, the loss of landscape and damage to the local environment. The site is on designated Green Belt. The Conservative manifesto it stated very clearly that Green Belt should be protected.</p>

5413	<p>Comments</p> <p>Objection to development on land behind The Moors. Agreement with decision Cherwell District Council have made and do not want this site reopened and reconsidered by the Planning Inspectorate. Site is not suitable for development because: 1. The site is in a GB which must be preserved to prevent urban sprawl. The impact of the proposed development on the GB is not modest as claimed by the developers. GB status should be protected and preserved as stated in the Conservative government's manifesto. 2. Loss of landscape and rural views towards the oldest part of the village. Development (including residential and business units) would affect the setting of St Mary's Church - Grade I Listed -and other listed buildings in the Church Street Conservation Area. 3. Development will exacerbate the flood risk to housing and adjoining land / conservation area. The fields behind the Moors and west of the burial ground floor regularly. Indeed, in times of flooding our back garden floods, which backs onto the development site. 4. Inadequate local infrastructure to support development of this scale. Detrimental impact on existing roads and services especially surface and foul drainage. The access to the proposed moors development site is opposite Benmead Road, close to two of Kidlington's conservation areas. Development will generate a lot of extra traffic near a school and nursery on relatively narrow busy road, already subject to traffic calming. 5. Damage to surrounding countryside and loss of a rich habitat for many rare wildlife species including Short Eared Owls, Great Crested Newts and Skylarks. 6. The fields are an important and very well used amenity for village residents and regular visitors providing walks and views of the village towards St Mary's Church. The land should be treated as permanent local green space.</p>

PR-C-0666	08/10/2017	Lucy	Loveridge					
1643	Comments							
<p>Objection relating to Kidlington, Yarnton and Begbroke on the following grounds: Development could be located on sustainable sites identified elsewhere in the district rather than GB which Government says should only be used as a very last resort. A high proportion of the new homes should be affordable for young people and families from the local area. Infrastructure such as roads and schools should be put in place, as well as adequate parking facilities for the new residents. Traffic congestion and parking is already a major problem in Kidlington and the surrounding area, especially in the rush hour. Support for Cherwell's decision not to include land behind the Moors for development, as this is GB land used for recreation by local people, and would cause yet more traffic problems. I am appalled at the prospect of Kidlington becoming simply another suburb of Oxford.</p>

<p>Land behind the Moors (sites PR14 & PR27), that have been rejected for development by Cherwell have been identified by Bloombridge developers as a site where they want to build 300 houses. These sites are particularly sensitive and I object very strongly to any suggestion of development here. They are in the GB. They are adjacent to the oldest, historic part of the village which is a conservation area. In the heavy 2007 summer rains the meadows flooded up to the back of the church, there is a serious risk that development here would cause that flooding to extend further south and west. The vehicular access is directly onto the Moors, a road that already has traffic calming. Much of the traffic created by the housing would flow down Benmead road directly onto the A4260. This is a small, winding, residential street with North Kidlington Junior School near the SW exit onto the A4260. It is already overloaded with through traffic and it would be both dangerous and unwelcome to add to flux of vehicles. These two sites are amongst the most valued in Kidlington for walking and wildlife. No proposal for development on PR14 & PR27 should be considered.</p>

<p>Developer,(Bloombridge) are appealing to Cherwell about areas that have already been rejected for housing development (PR14 and PR27). These areas behind The Moors in Kidlington are used by many residents for walking; they also flood most years. The flood risk to the historic area of Kidlington and surrounding houses would increase. Building on these areas would cause terrible damage to wildlife and their habitat. There is inadequate local infrastructure to support building in this area. It is near the most historic part of the village and would damage the setting of St Mary's Church and the area surrounding it; already a conservation area. These areas have been rejected already for these reasons. No appeal should be allowed to proceed.</p>

<p>The Begbroke Lane restricted byway is a delightful walk between sites PR20 and PR24 which are open fields in the GB. The byway is probably one of the most heavily used walks as it is easily accessible to dog walkers, cyclists, families, the elderly and disabled and leads from Begbroke to the canal then on into Kidlington. If the above two sites were built on it would no longer be a delightful country walk which is so beneficial to mental health. East Begbroke is a small peaceful, safe village with no through roads. It is surrounded on 3 sides by sites PR74, PR20 and PR24 (the fourth side being bound by the A44). It would be devastating if this was swallowed up by Oxford City. Proposed building would contravene Cherwell District Council's policies: - Protecting and respecting the identity of individual settlements and the loss of village identity. - The need to consider the impact of additional housing on the provision of open space. -The need to protect and enhance biodiversity more generally and avoid wildlife disturbance. - To improve the health and well-being of the population and reduce inequalities in health. -To reduce crime and the fear of crime. - To protect and enhance landscape character and quality, and make accessible for enjoyment, the countryside. Oxford City is protecting its own green spaces - how can it be right that it is insisting on destroying ours?</p>

Proposed Submission Plan - Omission/Alternative Sites

PR-C-0703	29/09/2017	Roger	Prince		
1750	Comments Previous objections are stated again in the reps letter: Sites 14 and 27 are very similar to the substantial site “KI081” identified as having potential for development under the 2013 (Strategic Housing Land Availability Assessment) SHLAA. Under the 2014 SHLAA, most of that land was discounted as being too large for development and a very much smaller site “KI104” replaced it. The reasons given were that the development of the land would adversely affect the “open space that protects the important relationship with the historic environment and countryside to the north”. These reasons still exist today. The land is, of course, all within the Green Belt and no part of it should be developed. In fact, the Government’s own manifesto made it clear that Green Belt status should be protected and preserved. Furthermore, the impact of the proposed development on the Green belt is not modest as claimed by Bloombridge. Any development of the land would take away some of the views towards the oldest part of the village. The proposed development, which includes business units as well as residential properties, would affect the setting of St Marys Church – a Grade 1 listed building - and other listed buildings in the Church Street Conservation Area. The fields are an important and very well used amenity for village residents and regular visitors providing walks and views of the village towards St Mary’s Church. The land should be treated as a permanent local green space. Any development would impact on wildlife including skylarks, short eared owls and great crested newts. There would probably be an additional risk of flooding to private properties and the surrounding land. The fields behind The Moors and to the west of the cemetery already flood regularly. The Moors is unsuitable for large volumes of traffic but is already used heavily as a “rat run”. Any additional traffic generated through development to the north of The Moors would make matters worse as well as increasing noise and air pollution.

PR-C-0703	29/09/2017	Roger	Prince		N
1745	Comments Land behind The Moors - Kidlington: fully support the decision to exclude them from your plan. However, believes that Bloombridge is still lobbying strongly for the land behind The Moors to be included in the final plans. The reasons why the land should not be developed have not changed and I would ask that Bloombridge’s proposals continue to be rejected. Previous objections are stated again in the reps letter: Sites 14 and 27 are very similar to the substantial site “KI081” identified as having potential for development under the 2013 (Strategic Housing Land Availability Assessment) SHLAA. PR-C-0729	02/10/2017	Christine	Kennell		
1839	Comments Support of the decision NOT TO INCLUDE The Moors land for development for the following reasons: 1 The site is in the Green Belt which should be preserved for the benefit of all Kidlington residents. 2 Development will increase the risk of flooding to houses in The Moors and adjoining land. This area already floods regularly, as the water table here is high. In fact many of the older houses on that side of The Moors have wells in their back gardens which were in use when we moved into the area some 50 years ago. 3 The local infrastructure will not support the development. The Moors is a narrow, busy road, with a retirement complex adjacent to the proposed entrance opposite Benmead Road, a care home next door to that and another care home within one hundred yards. Residents of the retirement complex have mobility problems, and use motorized wheel chairs to gain access to the local shops and already have to contend with increasing traffic problems on The Moors. To build another estate adjacent to the retirement complex is inviting road traffic accidents. There is also a new care home further up The Moors, and a primary school along Benmead Road which generates a large volume of traffic several times a day. 4 Development will damage the surrounding countryside and mean a loss of habitat for wildlife. 5 Many village residents enjoy the amenity of open fields for walks and views. Development would mean loss of landscape and views, particularly views of the Grade 1 listed church and famous spire.

PR-C-0732	02/10/2017	Bryan	Rugg		
1845	Comments Object to these two areas of land behind the Moors being developed. The Cherwell District Council is right to exclude this land from development should not be over-ruled for the following reasons: 1 The roads are already in a shocking state and more traffic will only make them worse. 2 The roads are just not capable of handling the increased traffic that any development would entail. 3 The roads currently have calming measures installed and any increase in traffic would mean more noise and noxious fume pollution. 4 The land is currently Green Belt and therefore should not be considered for development.

	The proposed planning behind the Moors Kidlington is impossible to imagine as the added traffic through the access route would create a cross road with Benmead road where there is also an access to a Pension residential home. The 300 homes and business units would increase the comings and goings to a level that would change the whole area. The traffic going to the business units would also add to the danger of heavier vehicles turning on a very difficult turning. Be aware of the amount of children going to and from the nearby schools would make this turning very dangerous and the council would be responsible for this added danger. Also anywhere along the Moors would increase the danger of accidents. The extra traffic turning off the A4260 Banbury road into the Moors where there is also a large dementia care centre would also increase the danger of accidents.

	Strongly object to any present or future building behind The Moors and indeed any where in Kidlington. Live in Kidlington for its village feel and while expected it to grow over the years, did not expect Green Belt areas to be built on as always thought this to be protected land. Protest in the strongest manner to land behind The Moors to be subject of building applications or future proposals. Love walking through the fields in question and end up at the canal, with the feeling that we were miles away from the rabble that is Oxford and hope nothing ever changes that. In Kidlington Benmead Road, there are already subject to many cars racing through to beat the many traffic lights installed on the main Oxford Road and fear more cars using the road, as it appears that the proposal to develop the land shows entry and exit of the building to be opposite Benmead Road. The road has a primary school and a nursery leading on to it, and at school picking up times, cars are parked along Benmead Road making it hazardous driving and an enormous accident risk for young children being small, not being seen by drivers, running across their path. Many years ago it was proposed to open up the rear exit, in Curtis Way, but it was turned down by a very caring council who decided it was too much of a risk with young children going to school. Are today's children not entitled to the same care and protection? More housing generates more children needing schooling, more people needing Doctors, more cars parking in the already full to overflowing car parks all of which will eventually reduce the quality of life for all of us Kidlington residents who chose to live in a quieter part of Oxfordshire. For many years The Moors has flooded in winter and any property built on this low lying land could be at risk, something that will not be common knowledge to outsiders. Spending no doubt big money on houses at risk.

	Object to the development to take place on land at behind the Moors in Kidlington (Options sites PR14 PR27). This is GREEN BELT which must be preserved, the development is not a modest one. Green Belt status should be protected and preserved as stated in the CONSERVATIVE GOVERNMENTS MANIFESTO. This would also effect the setting of ST MARYS CHURCH GRADE 1 LISTED, and many other LISTED buildings in church street CONSERVATION AREA. This area to the west of the burial ground FLOOD REGULARLY. This would also have a massive impact on the flood risk to housing and adjoining land /CONSERVATION area. Which is a haven for the short eared owl, GREAT CRESTED NEWTS, and SKYLARKS. The fields are an important and very well used amenity for village residents and regular visitor The land should be treated as permanent green space.

	Strongest support for the decision not to include The Moors land for development. Reasons of increased traffic it would make what is already a severely congested route travelling south towards Oxford almost constantly gridlocked. The impact on the environment would be enormous, both in terms of flooding and wildlife lost. The access to open space would be lost to many residents of the area, and the strain on the infrastructure of what calls itself a village would be significant.

	Most strongly oppose to Options Sites 14 & 27 (Land behind the Moors) as these sites make the least sense of all. They are: (i) In the Green Be. (ii) On a flood plain of the river Cherwell. The river often floods towards St Mary's Church, including the field immediately north of the church. Sites 14 & 27 contribute to a 'soakage barrier' protecting the existing settlement. The water table in the cemetery adjoining St Mary's Church is very high. Grave digging has been problematic due to saturated ground. The ground is unsuitable to build homes on, and to do so would compromise existing homes. (iii) Important recreationally as country walks. The 'Kidlington Circular Walk' (popularised by Oxfordshire County Council's Oxfordshire Circular Walks series) passes around this tract of land and takes in the uninterrupted open views across Sites 14 & 27. The network of walks through and around Sites 14 & 27 is a 'jewel in Kidlington's crown' for locals and visitors to the village. There is real amenity value in preserving it. (iv) Important to maintaining character and integrity of the historic conservation area around St Mary's Church. Seen from the footpath through the middle of Sites 14 & 27, St Mary's Church stands alone at the very edge of the settlement, surrounded by fields. The view is iconic, timeless and of historic significance. Developing 14 & 27 would obliterate it (v) A valuable wildlife habitat. They form an important ecosystem and wildlife corridor. (vi) At the wrong end of the village for Oxford, implying the worst impact on traffic flow through the village itself. Situated at the northern end of Kidlington, furthest from Oxford, vehicles would have to pass right through the village on every journey to Oxford City, Oxford Parkway rail station or major road links (A34, Ring Road, A420). (vii) To have access off a neighbourhood road that is already subject to traffic calming. The Moors, from which the new sites would be entered, has for many years had speed bumps along its entire length. These were put in to deter additional traffic from what was becoming an over-used 'rat run'. What the speed bumps tell you is that traffic volume on this road has already been assessed and deemed unreasonably high. For the seven reasons above believes that Sites 14 & 27 make the least sense of all.

Support the decision of the Council to exclude the land behind The Moors, Kidlington, (Options sites PR14 and PR27) as unsuitable for development - as mentioned in the representation, this is both a local amenity and a wildlife area, and in the Green Belt. Any proposed development would also have a high impact on the local primary school, with a large increase in traffic around it.

1983	Comments						
Wholeheartedly with Cherwell in supporting their decision not to include The Moors land for development. With the plans put forward by Bloombridge I cannot see how our roads can possibly cope with the increasing traffic as we have huge problems with traffic in the mornings and evenings without the extra houses and business premises. Also sewage and storm water is a big issue here, as The Moors is very much prone to flooding.

Strong support of Cherwell's decision that the land behind the Moors is unsuitable for development and should be retained as green space. This area is Green Belt and should be protected and preserved, it is also prone to flooding and development would exacerbate the flood risk. Local roads and services (particularly surface drains and sewers) are already under strain. Developer Bloombridge is lobbying for land behind the Moors to be included in the Submission Plan and we wish to reiterate support for the decision not to include this land.

The land behind the Moors in Kidlington (Options sites PR14 and PR27 referred to in the Proposed Submission Plan (July 2017) to meet Oxford's unmet housing need) may continue to be subject to potential development even though it was removed from the above mentioned plan earlier this year. It should NOT be included as land for development for the following reasons. 1. It constitutes a significant section of green belt area and should therefore be protected as stated in the Conservative manifesto. 2. It provides a community amenity, important for the health and wellbeing for residents of Kidlington, Hampton Poyle and Thrupp, as well as those from further afield in North Oxford and Marston and Islip. Loss of this green area will also mean loss of habitat for wildlife and the inevitable decline of songbirds and small animals. 3. It is an area which has been subject to seasonal flooding. 4. Proposed access as detailed in the Bloombridge proposals indicate a road to join the Moors. This is already subject to potential increased traffic from new housing at the north end of the Moors, and will be likely to lead to local congestion along the Moors and Mill Street and Benmead Road.

Objection in the strongest terms to any development on land behind the Moors in Kidlington (Options sites PR14 and PR27. It is a valuable local green belt amenity which is used regularly to enjoy the richness of the natural habitat. This valuable resource should be protected permanently. It is essential to protect Lambs Close, St Mary's Close and surrounding streets from increased Flood Risk. Already one major incident in recent years from the near proximity to the River Cherwell. Climate change can only make matters worse. Construction on what is effectively a flood plain would endanger the properties of local residents, posing threats to both surface water and foul drainage. The local roads are already busy, the Moors subject to traffic calming measures, and becoming more difficult to negotiate because of increased parking. Please ensure that land behind the Moors is not included in any development plans either now or in the future.

Objection to the Bloombridge proposals for land behind the Moors. I strongly support Cherwell District Council in their decision to exclude this site from development. It is an important amenity area for all the residents of Kidlington and supports much local wildlife. It is also an area of land that acts as a repository for water at times of flooding. The land should be treated as a permanent green space. We cannot afford to lose areas like this from our neighbourhood.

Support for decision to exclude land behind the Moors (Options sites PR14 and PR27) from development. Should a further application be made, please stand by earlier rejection of the Bloombridge scheme. Objection to use of Green Belt land on principle. Re The Moors traffic: - 300 households will increase daily traffic movements, private, commercial, everyday deliveries, this will be hugely detrimental to The Moors. - Sites open onto a narrow street to busy cross-roads. - Traffic calming humps are already installed with bus services being withdrawn as a result. Although this encourages care usage, I am NOT calling for buses to be reinstated in The Moors. - The Moors should remain as a 'neighbourhood' road. Re The Moors drainage: Concern about drainage in the immediate area, potential threats downstream and effects on the level of the water table. Experience of a pet burial was hampered one winter by water only 18 inches down and that a further distance from the Cherwell than the Bloombridge site is. Re The immediate area: The area behind The Moors, Church Street and Mill Street should remain as an area for the quiet recreation of all Kidlington households and, with the spire as a landmark, adding a sense of stability and history.

Strong support for Cherwell District Council's decision not to include the land between the rear of the Moors and the River Cherwell Kidlington (Options sites PR14 and PR27) in the proposed submission document July 2017. Reasons: • Site is in the GB which must be preserved to prevent urban sprawl. The impact of the proposed development on the GB is not modest as claimed by the developers. GB status should be protected and preserved as stated in the Conservative Government's manifesto. • Loss of landscape and rural views towards the oldest part of the village. Development (including residential and business units) would affect the setting of St Marys Church - Grade 1 listed - and other listed buildings in the Church Street Conservation Area. • Development will exacerbate the flood risk to housing and adjoining land/conservation area. The fields behind The Moors and west of the burial ground flood regularly. • The foul drainage in The Moors regularly floods at storm times and has inadequate capacity for the additional development. • Inadequate local infrastructure to support development of this scale. Detrimental impact on existing roads and services especially surface and foul drainage. The access to the proposed Moors development site is opposite Benmead Road close to two Kidlington Conservation areas. Development will generate a lot of extra traffic near a school and nursery on a relatively narrow, busy road already subject to traffic calming. • Damage to surrounding countryside and loss of a rich habitat for many rare wildlife species including Short Eared Owls, Great Crested Newts and Skylarks. • The fields are an important and very well used amenity for village residents and regular visitors providing walks and views of the village towards St Mary's Church. The land should be treated as a permanent local green space.

Strong support Cherwell District Council's decision not to include the land between the rear of the Moors and the River Cherwell Kidlington (Options sites PR14 and PR27) in the proposed submission document July 2017. The land is in the green belt, which is designed to prevent urban sprawl. The NPPF states that only in exceptional circumstances should the GB be allocated for development. These have not been fully demonstrated. The scale of the development is unsustainable in transport terms with access at a busy residential junction. The roads in this area are fully utilised for the existing residential area and many of the roads are used for parking. The site is close to a two elderly peoples accommodations. There is no scope for transport improvement works in a tight residential area. This site can only be accessed from The Moors, as it is landlocked by the floodplain, The Moors and the railway. This will result in unacceptable levels of traffic passing through residential roads with the detrimental affect on air quality and the general environment. The general pressure on vehicular movement in this area and through the north east part of the village will be significant. The access shown is very narrow passing through a village pond, which acts as a natural soakaway to drain the fields and rear gardens of part of the Moors. This pond has an overflow to the highway drain. This demonstrates that there are potential natural drainage problems to large areas of the site and the Environment Agency indicate that the Cherwell Level 1 Strategic Flood Risk Assessment Update identifies that the area contains flood zone 2 and areas susceptible to surface water and ground water flooding incidents. The Moors has very limited foul drainage capacity and currently has two tank sewers to hold storm drainage in the foul sewer as the system regularly surcharges and floods. The site is close to the village conservation area and will have significant detrimental impact on Grade 1 Listed St Mary the Virgin Church, 34 other listed buildings, and a scheduled ancient monument. The land in question consists of open farmland made up of ancient water meadows with rich form of wildlife and fauna. There is a large population of a variety of wildlife species some of which are protected under the Wildlife and countryside Act 1981. The land has a number of footpaths crossing and serves as a significant opportunity to access the countryside, is of high landscape value and provides valuable amenity land to the village. The Green Belt status of this land should be protected and preserved.

Agrees with the CLPPR submission over the retention of Green Belt designation on sites on the north-eastern side of Kidlington (between the village and the river Cherwell), and the absence of development allocations in these areas. It is a priority to retain these sites as undeveloped land that contributes to the recreational amenity of local residents and the setting of Kidlington. It forms one of Kidlington's key countryside assets and helps to add an attractive rural dimension to Kidlington's largely urban identity. These sites are well provided by footpaths and they have become important areas for walking and jogging. It is also an important area in terms of biodiversity. Gives detailed list of wild life. The parts of these sites closest to the houses along the Moors occupy a river terrace only just above flood plain, which provides an important "sponge" at times of heavy rainfall. There is a history of flooding problems in The Moors and after prolonged rainfall these areas are waterlogged. There would be considerable impact upon the residential amenity of houses backing onto this site and increased traffic pressure on The Moors, already over-used as a rat run. This is green belt countryside of exceptional value to Kidlington In the Inspectors Report 1991 it was described as an "area of High Landscape Value".

Very pleased to see that Cherwell DC's Proposed Submission Plan does not propose any housing development on Options sites PR14 and PR27 (land behind the Moors, Kidlington). The two sites are entirely unsuitable for development and any proposal to build on them would be unsound and unjustified for the following reasons: 1. The two sites are both within the Green Belt, within which development is permitted only in entirely exceptional circumstances. They also border the Kidlington Conservation Area, near the parish church and many other listed buildings, where any further modern development would be insensitive and deleterious to the setting of this protected part of the old village. 2. The two sites are widely used for recreational purposes by many Kidlingtonians - by dog-walkers, other walkers, cyclists and joggers. In an average week it is probable that well over a hundred people make use of this land, which is criss-crossed by many permissive footpaths. It would be entirely wrong to remove this land, at present a pleasant piece of open country, from effective public use. 3. Building on these two sites would generate a quite unacceptable volume of extra traffic. Since road access to the site is to be gained from opposite the junction of Benmead Road and the Moors, the entire volume of additional traffic will be directed along Benmead Road and the Moors. These are both relatively narrow roads which already carry continuous traffic. In addition, Benmead Road is close to a primary school and nursery, sites where safety may well be jeopardised by any increased traffic flow. From these two roads traffic will pass on to the main Oxford-Banbury road through Kidlington, a road which is already subject to extreme congestion at peak times, to which additional building on these sites can only add.

Strongly support your decision of July 2017 not to develop land behind the Moors. Trust that this decision is final and that this site will not be used for housing development at a later date. The site is quite unsuitable. There is frequent flooding in the fields behind the Moors and behind the church. The church is a Grade 1 listed building and dates from 1220. The steeple is one of the finest in the country (mentioned by Simon Jenkins in his book the Thousand Best Churches.) It is a wonderful sight when viewed from across the fields behind the Moors. The building of houses would obliterate this view. Of particular concern is the fact that the plan for the access to and from any new development would be opposite the Benmead Road junction with the Moors, very close to housing for the elderly. The Moors is narrow and the traffic is heavy. The limited number of parking spaces within the grounds of Homewell House and Moorside Place results in many visiting cars being parked on the road. The road becomes difficult to negotiate and quite dangerous for the elderly people of the aforesaid residences. The additional amount of traffic created by additional housing would only add to these hazards. Benmead Road would also experience a huge increase in traffic and this is a road that leads directly to North Kidlington Primary School. The pond alongside the footpath behind Homewell House would cause considerable foundation problems for any firm building. Local people who have extended their houses can verify this. This is an area crossed by public footpaths and used by the large numbers of Kidlington's residents on a daily basis. It is the equivalent of their "local park". There are wonderful views, and an abundance of wild life, particularly deer. To build on this area would be to rob Kidlington of one of its most attractive features.

Strong objection to Bloombridge developing land behind the Moors, and fully agree with Cherwell District Council's decision to exclude this site from future development. 1. GB should be preserved and not eroded away depriving local residents of the rural landscape with it's views of our local church. 2. Infrastructure has already been put at risk by infilling down the Moors and further demands, coupled with the possibility of flooding, could result in major problems in the future. 3. Inclusion of allotments is no guarantee that they won't be built on in the future. 4. There will be negative effects on the local school as they are hemmed in on all sides with little room for expansion. The prospect of more children using the school and more traffic on the road means that safety becomes an important issue. The speed limit is often not observed. 5. Land is a valuable local amenity used by many people and should remain as part of the GB.

The possible development should be rejected for the following reasons :-It's in the green belt, which once lost can never be restored. Increased chance of flooding in a location which already has difficulties. Access to the site is restricted. The increase in traffic will exacerbate the existing problems caused by all day, on street, commuter parking, and the busy times at the beginning and end of the school day.

Object to Policy PR3 to remove land from the Oxford Green Belt. The Green Belt around Kidlington provides enjoyment and health benefits to local residents. Government guidance says that Green Belt is a permanent designation and that unmet housing need is not a reason for building on it. The plan is therefore ineffective and not consistent with National Policy. If the proposal goes ahead, Kidlington would become part of a vast urban sprawl encompassing north Oxford, Cutteslowe, Wolvercote, Begbroke and Yarnton with a consequent loss of identity for all these communities. The walks and physical and mental health benefits of the Green Belt's open countryside would be lost for good and important natural habitats and wildlife would be destroyed. Sites rejected at this stage by Cherwell DC are still vulnerable and I strongly support the decision of Cherwell DC not to include Options sites PR14 and PR27 (Land behind the Moors) for development. This would entail the loss of a rich habitat for many rare wildlife species including Short Eared Owls, Great Crested Newts and Skylarks as well as a valuable amenity for village residents and visitors providing walks and historic views of the village toward St. Mary's Church. The land should be treated as a permanent green space. Any development would also exacerbate the flood risk to housing and adjoining land/conservation area. There is inadequate local infrastructure to support such development and it would have a detrimental impact on existing roads and services especially surface and foul drainage. Development would generate a lot of extra traffic near a school and nursery on a road already subject to traffic calming.

Support decision to exclude this area from development. Any development of fields to the north of the Moors would undoubtedly cause unacceptable flooding to the rear gardens of the properties. The water table in this area is quite high and there have been many instances of lots of surface water laying in the gardens for some time following rain. Should Bloomfield make direct representation to the Planning Inspector, the Council should make a very strong argument against any such proposal. (Photos supplied as part of representation).

There are other sites that could be considered such as north of the Peartree interchange, although these may still encroach on Green belt and wouldn't solve the transport problems with roads such as the A34. Other suggested locations are nearer to Langford Lane. Both sites are closer to existing infrastructure and public transport (with Peartree being adjacent to the Northern Gateway development. Neither of these locations would be within a strategic space, such as the 'Kidlington gap'."

Site PR41 occupies the land the other side of Loop Farm, and shares the same advantages as the Frieze Farm site being close to the Peartree Park & Ride, within easy walking or cycling distance from the Northern Gateway site, and not close to a rail station that would jeopardise the ability to deliver genuinely affordable housing. There is a high quality bus service to the area, and to and from the nearby Peartree Park & Ride. This site operating in tandem with the Frieze farm site would require the need for the primary school I have proposed for the Frieze Farm site. The Green Belt Study (PR40) assesses this site as having high harm, and separates it into two parcels, and a total of 37.71 hectares. Most of the harm cited relates to the issue of integration with an existing settlement, the problem with the A34, and the harm to the canal side walk on the western boundaries. This site is highly likely to have a link road from the A40 to Loop Farm roundabout running right through the middle of it, which already introduces an urbanising feature, so it is, in my view easy to overstate the countryside location of this site, part of which also lies under the protective lee of the A34 flyover. My proposed us would be to use the link road as a spine road connecting to Loop farm, with development located primarily to the north and away from the canal side and screened from the noise of the A34. Not all of this site would need to be used. An allocation of 575 at 35dph would result in a land use of 16.42 hectares, and at 45dph the developed portion of land would be 12.78 ha. Either of these would allow for the creation of a generous buffer zone. A direct subway link could provide ready access to the Northern Gateway employment area, and this could form part of a green walkway.									
Changes Sought					Reasons for Participation				
To develop 12.78 ha for 575 houses, to include access and Green walkway through to Northern Gateway, layout to link with proposed link road, extensive protection of canal side.					Has spoken as a platform speaker at three public meetings in Kidlington and Gosford. Made a substantial representation at the Issues and Options stage. As a former parish councillor, has represented Kidlington Parish Council at the North Oxford Area Action Plan examination in public, and likewise was invited to the Examination in Public of the Local Plan. Has an MSc in Transport Planning, so part of representation covers that area. Also offers a distinctive perspective as a local resident, who agrees with the principle of a Green Belt review, but does not support the current planned site allocation. Has no interest in promoting a particular site, but only have some sympathy with those who would wish to preserve the Green Belt intact. Believe views represent many in Kidlington who recognise the need for local housing, but see these plans as strategically unacceptable. Representation contains primary research evidence which could be presented.

Comments									
Object to PR9, where exceptional circumstances have not been demonstrated. This is a particularly poor site, the wrong side of the A44, with an impact on the Green Belt recorded by LUC as high. It is unsound and should be deleted from the draft Plan. The principles proposed are similar to The Moors, but our site offers better accessibility, a proper relationship with Kidlington (and its regeneration), and a low to moderate impact on the Green Belt (according to LUC). The proposed density of PR8 at 35 dph is too high.									
Changes Sought					Reasons for Participation				
Development west of the A44 (PR9) is acknowledged by LUC as having a high impact on the Green Belt, it has no defensible boundary, and it is remote from Kidlington and offers this village no regeneration benefits. This allocation should be deleted.					We confirm that we wish to attend the examination in public.				
PR-C-1409 5349	10/10/2017	Richard	Cutler	Bloombridge Development Partners			N	Y	
Comments									
Proposes the inclusion of 300 houses on 21 hectares at The Moors (PR14) as a sustainable development option that offers the draft Plan flexibility and early delivery in meeting Oxford's unmet housing needs. Refers to the LUC Green Belt Study (April 2017) and the Statement of Consultation (April 2017) in relation to this site.									
Changes Sought					Reasons for Participation				
On the assumption that the draft Plan would otherwise be held to be unsound, The Moors (PR14) should be included as an omission site for c300 houses, linked to a regeneration package for the village centre & a new 10 hectare 'country park'. In the alternative, it could be specifically listed as a 'safeguarded site' in Policy PR12b, or this policy could be amended to provide for localized Green Belt reviews for housing where planned for sites are not being delivered by 2021. Proposes the inclusion of 300 houses on 21 hectares at The Moors (PR14) as a sustainable development option that offers the draft Plan flexibility and early delivery in meeting Oxford's unmet housing needs.					We confirm that we wish to attend the examination in public.				

Proposed Submission Plan - Omission/Alternative Sites

Rep Number	Date Received	First Name	Surname	Organisation	Legally Compliant	DtC Compliant	Sound	Participate
PR-C-1409 5604	10/10/2017	Richard	Cutler	Bloombridge Development Partners			N	Y
<p>Comments</p> <p>In terms of defensible Green Belt boundaries, we OBJECT to Policy PR5 on green infrastructure because it defers (at Point 7) the consideration of the permanence of the Green Belt. This is an important part of the 'exceptional circumstances' test and needs to be applied at the point of site selection. The draft Plan is therefore unsound because the proposed allocations have not clearly demonstrated how the permanence and integrity of the Green Belt can be maintained into the future. In contrast, the defensible boundary for The Moors is readily apparent and not pending or in dispute (see the Thematic Maps at Appendix 6 of the draft Plan)</p>								
<p>Changes Sought</p> <p>Following the precautionary principle, the Plan should start from the assumption that key strategic components of the Green Belt are considered sacrosanct. These components are identified by LUC (i.e. high impact) and include the Kidlington Gap and Begbroke Gap; acknowledging that some development may be acceptable where there are special locational advantages that only the Gaps offer (e.g. for the University or inward investment), or where the resultant development does not significantly impact on the integrity of the Gaps or their permanence.</p> <p>We note that paragraph 1.19 of the draft Plan records the LPP1 Inspector's advice that Oxford's unmet need must be considered within the context of a "countywide housing market area". It is difficult to see the case for the loss of strategically important Green Belt given this context. Cherwell need to repackage and represent the need for a strategic review of the Green Belt and also take a comprehensive approach to include University and inward investor needs given that the prospect of a further Green Belt review is unlikely for a generation.</p>				<p>Reasons for Participation</p> <p>We confirm that we wish to attend the examination in public.</p>				
PR-C-1409 5608	10/10/2017	Richard	Cutler	Bloombridge Development Partners			N	Y
<p>Comments</p> <p>OBJECT to Policy PR11 as there is no certainty here that the proposed housing allocations are able to support the massive infrastructure requirements associated with development along the A44 and in close proximity to the A34 and A40, comprising some of the most congested roads in the country. The draft Plan does not identify any reserved funding. Infrastructure problems have been holding back the Northern Gateway for years. A rapid solution to support the scale of housing proposed is not available to start delivering housing in 2021. In contrast, The Moors can be delivered free of any linkage to major infrastructure pre-requisites. This goes to the heart of the soundness of the draft Plan, requiring omission sites to be considered.</p>								
<p>Changes Sought</p> <p>On the assumption that the draft Plan would otherwise be held to be unsound, The Moors (PR14) should be included as an omission site for c300 houses, linked to a regeneration package for the village centre and a new 10 hectare 'country park'. PR-C-1409 5348	10/10/2017	Richard	Cutler	Bloombridge Development Partners			N	Y
<p>Comments</p> <p>OBJECT to Policy PR12b as it should be more specific about safeguarded sites (which could list The Moors, if it is not allocated directly as an omission) as this modification will aid certainty and deliverability in the context of maintaining a five year housing land supply. In a similar vein, this same policy could provide for further housing sites based on localized Green Belt reviews, akin to the approach taken for Oxford Technology Park in LPP1.</p>								
<p>Changes Sought</p> <p>On the assumption that the draft Plan would otherwise be held to be unsound, The Moors (PR14) should be included as an omission site for c300 houses, linked to a regeneration package for the village centre & a new 10 hectare 'country park'. In the alternative, it could be specifically listed as a 'safeguarded site' in Policy PR12b, or this policy could be amended to provide for localized Green Belt reviews for housing where planned for sites are not being delivered by 2021.</p>				<p>Reasons for Participation</p> <p>We confirm that we wish to attend the examination in public.</p>				
PR-C-1409 5609	10/10/2017	Richard	Cutler	Bloombridge Development Partners			N	Y
<p>Comments</p> <p>SUPPORT the proposal in Policy PR12a to deliver 1700 houses in the period 2021 to 2026, but there is no chance that PR6, PR8 and PR9 will deliver in this timeframe. In contrast, The Moors, which is less complicated and of a smaller scale, could assist – and our recent community-led project at Swinderby (Lincolnshire) demonstrates our place-making capabilities.</p>								
<p>Changes Sought</p> <p>On the assumption that the draft Plan would otherwise be held to be unsound, The Moors (PR14) should be included as an omission site for c300 houses, linked to a regeneration package for the village centre and a new 10 hectare 'country park'. Proposed Submission Plan - Omission/Alternative Sites

PR-C-1409 10/10/2017 Richard Cutler Bloombridge Development Partners N Y

5601

Comments

Explains that in terms of the exceptional circumstances listed at paragraph 5.17 of the draft Plan, there is nothing here that would not also justify The Moors (PR14). Contest the following exceptional circumstances listed at paragraph 5.17:

- Circumstances 1 & 2 – These are not exceptional circumstances in the context of the proven alternative case for development that is University-related or by a major inward investor. 4,400 houses (in the context of the Oxford housing stock) is not of a scale that will assist affordability (i.e. create a substantial supply-side price shift). It is also highly unlikely that the people most in need of new housing will be able to afford to live in these new houses.
- Circumstances 3 to 6. These are not exceptional circumstances. They could equally be applied to justify the continuing existence for the Green Belt and its strategic importance between the built up area of Oxford and South East Kidlington (see the first three points at paragraph 5.32 of the draft Plan).
- Circumstance 7. Begbroke does not have any more exceptional place shaping potential than The Moors, but its scale (at 1,950 houses) is totally out of proportion to the environmental sensitivities and landscape and village character in this area, including the strategic need to protect the Begbroke Gap.
- Circumstances 8 & 9. These are just general statements, not part of the exceptional circumstances test, noting the acknowledged importance in Green Belt terms of the ‘rural setting’ along the A44 between Woodstock and Peartree.
- Circumstances 10 & 11. These are relevant, but none of the proposed sites acts to strengthen Kidlington village centre or provide additional facilities that will benefit Kidlington/Gosford, Begbroke and Yarnton.
- Circumstance 12. A joined up Vision is an output from an assessment process (i.e. requirement if the test is passed) not an input or a reason to justify the loss of Green Belt land in itself.

They are based on the false premise that housing need is a compelling exceptional circumstance. It is not, given some of the 4,400 housing units could be sited in Cherwell outside of the Green Belt, as illustrated by West Oxfordshire’s proposals at Eynsham. There is also the need to safeguard land close to Oxford for the University and major inward investors, thus competing away the capacity of PR6 and PR8. Moreover, it is normal for the exceptional circumstances test to address the reasons for allocating land as GB (i.e. paragraph 5.32 of the draft Plan) as well as how the development proposals would ensure a long-term defensible GB boundary, thereby grounding the case for a GB release in the special characteristics and value of the particular part of the GB. This seems to have been omitted, noting that it is particularly tough for development to be supported in strategic gaps given the first three points listed at paragraph 5.32. The whole of the draft Plan fails on this point (and also because of the false premise) and is therefore unsound. There is a need for an alternative strategy (and thereby omission sites).

Changes Sought

Following the precautionary principle, the Plan should start from the assumption that key strategic components of the Green Belt are considered sacrosanct. These components are identified by LUC (i.e. high impact) and include the Kidlington Gap and Begbroke Gap; acknowledging that some development may be acceptable where there are special locational advantages that only the Gaps offer (e.g. for the University or inward investment), or where the resultant development does not significantly impact on the integrity of the Gaps or their permanence.

We note that paragraph 1.19 of the draft Plan records the LPP1 Inspector’s advice that Oxford’s unmet need must be considered within the context of a “countywide housing market area”. It is difficult to see the case for the loss of strategically important Green Belt given this context. Cherwell need to repackage and represent the need for a strategic review of the Green Belt and also take a comprehensive approach to include University and inward investor needs given that the prospect of a further Green Belt review is unlikely for a generation.

Reasons for Participation

We confirm that we wish to attend the examination in public.

Comments

Object to PR7a, where exceptional circumstances have not been demonstrated . The scale of this site is too large, it is separated from Kidlington by the Bicester Road, and it is poorly located in terms of access to the village centre relative to The Moors. Part of the site has a ‘high’ impact on the Green Belt.

Changes Sought

Following the precautionary principle, the Plan should start from the assumption that key strategic components of the Green Belt are considered sacrosanct. These components are identified by LUC (i.e. high impact) and include the Kidlington Gap and Begbroke Gap; acknowledging that some development may be acceptable where there are special locational advantages that only the Gaps offer (e.g. for the University or inward investment), or where the resultant development does not significantly impact on the integrity of the Gaps or their permanence.

We note that paragraph 1.19 of the draft Plan records the LPP1 Inspector’s advice that Oxford’s unmet need must be considered within the context of a “countywide housing market area”. It is difficult to see the case for the loss of strategically important Green Belt given this context. Cherwell need to repackage and represent the need for a strategic review of the Green Belt and also take a comprehensive approach to include University and inward investor needs given that the prospect of a further Green Belt review is unlikely for a generation.

OBJECT to the proposals in Policy PR3 in particular. In our opinion, a better outcome would be achieved by reverting to the original Alan Baxter work, with a localized review of the Green Belt for housing, combined with a master plan for the village that funds and delivers regeneration, place-making and other community benefits. Our proposals at The Moors (PR14) are consistent with this, and this would also protect the villages of Yarnton and Begbroke, as well as urban sprawl in the Kidlington Gap.

Changes Sought

Following the precautionary principle, the Plan should start from the assumption that key strategic components of the Green Belt are considered sacrosanct. These components are identified by LUC (i.e. high impact) and include the Kidlington Gap and Begbroke Gap; acknowledging that some development may be acceptable where there are special locational advantages that only the Gaps offer (e.g. for the University or inward investment), or where the resultant development does not significantly impact on the integrity of the Gaps or their permanence.

Proposed Submission Plan - Omission/Alternative Sites

PR-C-1412	10/10/2017	David & Adele	Smith					
4526	Comments							
<p>Strongly support the decision of Cherwell District Council not to include The Moors Land, Kidlington for development. This site is in the Green Belt which must be preserved to prevent urban sprawl. The impact of the proposed development on the Green Belt is not modest as claimed by the developers. Green belt status should be protected and preserved as stated in the Conservative Government's manifesto. Loss of landscape and rural views towards the oldest part of the village. Development (including residential and business units) would affect the setting of St. Mary's Church - Grade 1 listed - and other listed buildings in the Church Street conservation area - a very much treasured part of this village that must be preserved for the enjoyment of future generations. Development will exacerbate the flood risk to all housing and adjoining land/conservation area. The fields behind the Moors and west of the burial ground already flood regularly. Inadequate local infrastructure to support development of this scale will undoubtedly have a detrimental impact on the existing roads and services especially for surface and foul drainage. Access to the proposed Moors development site is at the junction opposite Benmead Road, close to two Kidlington conservation areas. Development will create a great deal of extra traffic near to a school and nursery on a relatively narrow, busy residential road already the subject of traffic calming measures. The Moors is already overloaded with traffic and hold ups with drivers cutting round the village to avoid the severe main Banbury Road traffic tail backs at peak times. Damage to surrounding countryside and loss of the rich habitat for many wild rare wildlife species including Short Eared Owls, Great Crested Newts and Skylarks. The fields are an important and very well used amenity for all village residents and regular visitors providing excellent countryside walks. This land should never be developed and should be treated as Permanent Green space. Thank you for your decision of support to protect this much loved and unique part of our county!</p>

<p>A summary of the most pertinent matters raised in the consultation response is provided below:</p> <ol style="list-style-type: none"> 1. The site was previously considered a major developed site within the Green Belt under Planning Policy Guidance 2, 1995 and therefore should be considered a previously developed site in the Green Belt as described in the National Planning Policy Framework. 2. Shipton Quarry is an active mineral site with permitted after-uses that will result in a large part of the site being redeveloped regardless of the outcome of LP1 PR or GB designation. These uses include a concrete batching plant and asphalt coating plant. It is likely that residents of Shipton-on-Cherwell would prefer housing to such uses. Further detail of the planning history and current status of the site is provided on pages 4 to 6 of the consultation response enclosed. 3. The Planning Authority's evidence base gives significant weight to the ecological value of the quarry without justification. Any ecological value of the site must be considered in context of an active quarry. This is discussed in further detail on pages 18 and 19 of the consultation response enclosed. 4. The site is located on the boundary of the Green Belt and its redevelopment for housing would not impact on openness as demonstrated by the representative viewpoints included at Appendix 4 of the response. 5. As shown on the Illustrative Masterplan at Appendix 2 of the consultation response, an allocation in the LP1 PR would allow for: <ul style="list-style-type: none"> • Up to 1,000 homes within the quarry site; • The creation of over 28 hectares of land to be used for ecological enhancement • With public access and provide for flood alleviation along the River Cherwell; • Employment land; • Highway improvements (which already benefit from planning permission); • Site for park and ride facility; • Site for school should the need be identified (a government-owned property • Company, responsible for buying and developing school sites in England has • Already expressed interest in the site); • Laying fields; • A new rail station (at the location of the already approved railhead); and • Increased access to geological features on the site. 								
Changes Sought				Reasons for Participation				
<p>Requests that CDC reconsider the exclusion of Shipton Quarry from the Local Plan Partial Review. Shipton Quarry offers an opportunity to provide a housing site which meets all the search requirements set out in the consultation phase of the local plan and therefore merits further consideration as an allocation in the Local Plan Partial Review. A number of key considerations have been overlooked or misinterpreted in the Sustainability Appraisal which was relied heavily upon by Cherwell District Council for site selection.</p>				<p>As outlined, a number of inaccuracies relating to the site exist in the evidence base, that need to be addressed. Following a review of the evidence base and the scoring of the sites in the Sustainability Appraisal, it is considered that further assessment work is likely to result in the site receiving a more favourable outcome to the extent that it should be considered a potential strategic development site. Should Cherwell District Council disagree and continue to use the inaccurate evidence base to exclude the site then it considered necessary to participate in the Examination.</p>

<p>"It is considered that 'Land at no. 40 and to the rear of 30-40 Woodstock Road East' would make a more suitable allocation, either as a replacement to this allocation or as an allocation in its own right. The site has an area of 4.39 ha, and could accommodate anywhere between 130 dwellings @ 30dph and 220 dwellings @ 50 dph. The site is situated to the north of Begbroke to the east of properties fronting Woodstock Road East. The Village Hall and paying fields are to the south. The Kidlington immigration Centre is to the north east. The site is well contained by trees and hedgerows along the boundaries. The part of the site closest to the Woodstock Road East frontage is classified as brownfield land which has the benefit of an Established Use Certificate granted on 15 May 1990 for the use of the site as a builder's yard. A further part of the site to the east of that subject to the 1990 EUC has a lawful use certificate (CLUED) for the use of land for the storage of builder's materials ancillary to the use of the EUC land as a builder's yard (05/01042/CLUE refers). The site is well located in terms of being able to contribute to Oxford's unmet housing need, and has performed well in the various studies forming the evidence base that has supported the partial review of the Local Plan. The site is located in close proximity to a number of open spaces and public rights of way which may encourage new residents to make use of these facilities as part of the a more physically active and healthier lifestyle. There are a number of amenity greenspaces within 800m of the site, including Begbroke BC, Begbroke Sports Club Play Area and Begbroke Sports Ground. There are two sports facilities nearby including Vida Health and Fitness and Begbroke Sports and Social Club. There is a public footpath approximately 440m to the south west linking Begbroke with Kidlington, and a cycle route approximately 50m to the west along Woodstock Road (part of route 5 the National Cycle Network linking Reading, Oxford and Birmingham). site. There are no listed buildings within or immediately adjacent to the site, or indeed within the area defined by the built up area of Begbroke to the south, the A44 to the west, Langford Lane to the north and the Oxford-Birmingham railway line to the east. The site is not within or adjacent to a conservation area, although the original part of Begbroke to the west of the A44 is designated as such. The site is located on a principal (or 'premium') bus route into Oxford City Centre, with frequent services to Woodstock, Middle Barton, Chipping Norton and Charlbury. The site would also be in close proximity to the proposed northern terminus of Rapid Transit Line 1 which will provide fast and frequent service to the City Centre and other employment centres in the north of the City. As it is only 9km to the centre of Oxford (this is closer than the Land South East of Woodstock allocation, for example), cycling can be considered a reasonable mode of transport for those wishing to access jobs and services in the City Centre. The site is in reasonable cycling and walking distance of the Oxford Airport Science Park to the north, Kidlington Industrial Estate to the east and Begbroke Science park to the south. As a stand-alone site it performs very well in this regard, being in such close proximity to the jobs at Oxford Airport Science Park, Kidlington Industrial Estate and Begbroke Science Park. This accessibility to jobs and facilities provides strong support to the allocation of this site as an extension to Begbroke, rather than as part of a larger allocation. There are two access options for the site. One is to improve the existing access from Woodstock Road East. The other is to provide an access from Begbroke Close, which runs right to the site boundary with no ransom strips. There are no known ecological constraints on the site and it falls within Flood Zone 1 (less than a 0.1 per cent (1 in 1000) chance of flooding occurring each year). Map is provided." RPS would be happy to work with the Council to develop the evidence base specifically in relation to this site should this be helpful.</p>

Proposed Submission Plan - Omission/Alternative Sites

PR-C-1450 5204	10/10/2017	Mark	Rose	Define Planning & Design Ltd on behalf of William Davis Ltd	Y	Y	N	Y
<p>Comments</p> <p>Whilst Policy PR1 identifies the scale of Oxford's unmet housing need to be provided for in the District, the Submission Plan does not actually include a policy that clearly sets out the proposed development strategy that will be implemented in order to address that need. The Submission Plan simply jumps to the allocation of specific sites, and consequently there is no clear demonstration that the housing requirement referred to in Policy PR1, which itself should be regarded an absolute minimum, will indeed be met within the plan period. William Davis are firmly of the view that a District wide approach that reflects the development strategy embedded within the extant Part 1 Local Plan is needed to complement the release of sites from the Green Belt close to Oxford and maximise the contribution the District makes to accommodating Oxford's unmet housing needs. Moreover, as part of that strategy, Bloxham could and should accommodate further growth within the plan period, and the land to the east of South Newington Road would be an entirely appropriate site option to deliver the required housing. A detailed Transport Assessment and Flood Risk Assessment have been submitted together with a comprehensive justification for the allocation of this site within the Local Plan. For the reasons set out above, William Davis Ltd, therefore, object to Policy PR1, which is considered unsound on the basis that it:</p> <ul style="list-style-type: none"> - has not been positively prepared and does not ensure that the unmet development requirements arising in Oxford will be met within the plan period; - is not justified in that it is not the most appropriate strategy and has not properly considered reasonable alternative strategies; and - is inconsistent with national policy in that it does not fully reflect the Government's priorities and policies in terms of boosting the supply of housing to meet identified needs. - is not effective in that some allocations sites cannot be delivered in their entirety within the plan period as the Submission Plan currently assumes, and the identified needs will not therefore, be met. <p>Changes Sought</p> <p>Add a new policy that sets out the development strategy and the sites to be allocated to meet the minimum level of Oxford's unmet need identified in Policy PR1 based on a robust housing trajectory. The strategy should provide for the allocation of a portfolio of sites at sustainable settlements, notably the Service Villages. The sites to be allocated for residential development should include:</p> <ul style="list-style-type: none"> - Land to the East of South Newington Road to the south of Bloxham for the delivery of 150-175 dwellings. <p>Also refer to objection to Policy PR1.</p> <p>Reasons for Participation</p> <p>This matter is critical to and a key element of the development strategy that underpins the Proposed Submission Plan.</p>

PR-C-1453 4617	10/10/2017	Chris	Dodds	Planning Prospects	N	N	N	Y
<p>Comments</p> <p>Proposes site south of Tadmarton Rd, Bloxham for residential development. Site is 9.67 hectares and approximately 1.5km west of Bloxham. Site location plan attached. Detailed outline of development plan context. Objects to the proposed strategy as its unnecessarily restrictive approach would result in a Plan that is not positively prepared, not effective and ultimately will fail to deliver the housing needed for Oxford or Cherwell. The suggested strategic allocations require significant loss of Green Belt and rely too heavily on large strategic sites, which are often faced with substantial difficulties and delays in delivering the homes required of them. In contrast, development of the site at Tadmarton Road, Bloxham will meet the requirements of sustainable development set out in the NPPF, in respect of the social, economic and environmental aspects of sustainability. It has limited constraints and it is not covered by any restrictive policy designations (including Green Belt). Moreover, and contrary to the Council's reasoning for discounting Options C to I, the allocation of this site will directly assist the Council(s) in their commitment to meet Oxford's full allocation of unmet housing need in a location that is highly accessible and well related to Bloxham and other urban centres, and is readily accessible to Oxford by public transport (including by fast and regular train service), thereby enabling people to affordably live in Bloxham and to work in Oxford. We believe the site at Tadmarton Road, Bloxham should be allocated for residential development within the Partial Review. It represents a logical extension to Bloxham and forms a sustainable development proposal that can contribute towards Cherwell and Oxford's housing needs going forward, and it does not require the loss of Green Belt. Any potential adverse impacts are minor and can be readily mitigated through the development management process.</p> <p>Changes Sought</p> <p>Reasons for Participation</p> <p>Planning Prospects represent the landowner in promoting the allocation of land at Tadmarton Road, Bloxham for residential development, and have detailed comments with regard to its suitability and deliverability to meet Oxford's unmet housing needs. We also have detailed comments with regard to the suitability and deliverability of the Partial Review, including those options put forward by Cherwell District Council.</p>								
PR-C-1456 5558	10/10/2017	Nicky	Brock	Carter Jonas on behalf of Mr M Smith	Y	N	N	Y
<p>Comments</p> <p>Act of behalf of Mr M Smith, the owner of land east of Water Eaton Park & Ride, Oxford Road, who is promoting the site as an additional housing allocation. The subject site has previously been promoted through the Cherwell Local Plan Part 1 Partial Review. The subject site adjoins the proposed allocation at land east of Oxford Road (draft Policy PR6a), the red line of PR6a adjoins the subject site in the north east corner (Map attached). The site is currently not allocated for any other use and Mr Smith would like the site to be considered for residential development in the form of a logical extension to the allocated site at Policy PR6a. If the site is not seen as a suitable housing site then other uses compatible with its location adjacent to a transport hub such as a commercial use in the form of a hotel should be considered. In any event the site should be removed from the green belt to enable the site to be developed in the future for any one of the uses referred to above.</p> <p>Changes Sought</p> <p>Amend the boundary of Land East of Oxford Road Neighbourhood Centre (Policy PR6a) so as to include the land east of the Water Eaton Park and Ride in the allocated site for residential development or a mix of residential and other uses. Remove the land east of the Water Eaton Park and Ride from the Oxford Green Belt. (Map attached)</p> <p>Reasons for Participation</p> <p>As drafted, and in so far as it relates to land East of Oxford Road the Plan has not been positively prepared, is not justified and is not effective. This goes to its soundness and raises issues that should be explored fully at the oral part of the Examination.</p>

Comments

Act of behalf of Mr M Smith, the owner of land east of Water Eaton Park & Ride, Oxford Road, who is promoting the site as an additional housing allocation. The subject site has previously been promoted through the Cherwell Local Plan Part 1 Partial Review. The subject site adjoins the proposed allocation at land east of Oxford Road (draft Policy PR6a), the red line of PR6a adjoins the subject site in the north east corner (Map attached).

The site is currently not allocated for any other use and Mr Smith would like the site to be considered for residential development in the form of a logical extension to the allocated site at Policy PR6a. If the site is not seen as a suitable housing site then other uses compatible with its location adjacent to a transport hub such as a commercial use in the form of a hotel should be considered. In any event the site should be removed from the green belt to enable the site to be developed in the future for any one of the uses referred to above.

Refers to Paragraph 8.60 of the LP1 PR noting this paragraph suggests that it would be more sustainable to deliver new homes within the villages than other parts of the District, or even the County as a whole. Given that the need arises in Oxford, and is a city with a wide range of services and facilities, it is considered that the areas has the capacity to deliver more new homes than currently proposed within the Partial Review Local Plan.

Development on land east of Water Eaton P&R and the Oxford Parkway Station would further help meet Oxford's unmet housing need due to the site's close proximity and accessibility to the City.

In summary, we are concerned that the Council has not undertaken a robust assessment of the options for accommodating Oxford City's unmet housing need within North Oxford area. It is not considered that the draft Local Plan Partial Review is justified as the Council has failed to fully consider all reasonable alternatives/ additional options as land south of Sandy Lane is clearly a sustainable location given its relationship with land proposed to be allocated for development at Begbroke (PR8).

Changes Sought

Amend the boundary of Land East of Oxford Road Neighbourhood Centre (Policy PR6a) so as to include the land east of the Water Eaton Park and Ride in the allocated site for residential development or a mix of residential and other uses. Remove the land east of the Water Eaton Park and Ride from the Oxford Green Belt. (Map attached)

Reasons for Participation

As drafted, and in so far as it relates to land East of Oxford Road the Plan has not been positively prepared, is not justified and is not effective. This goes to its soundness and raises issues that should be explored fully at the oral part of the Examination.

It seems that most of the 4,400 homes that CDC has been asked to provide are proposed to be built on the Green Belt (GB) between Oxford & Kidlington. The GB was set up to prevent the urban sprawl of Oxford City & protect the smaller out-lying communities from being absorbed into the city as had already happened with Cutteslowe, Headington Marston, Cowley, Islip, Wolvercote, etc. The GB has been faithfully preserved & together with it areas of natural beauty which can be enjoyed by all. It is protected by law & can only be released in 'exceptional circumstances'. Does not regard this as an exceptional circumstance. Kidlington has been chosen as being near to Oxford. However, since the new Oxford Parkway station opened the prices of houses in North Oxford & Kidlington have soared. Oxford wants 'affordable housing'. This is not likely to happen. With easy access to London now, new houses will be sought after by London commuters as well as people who work in Oxford. 4,400 new homes would nearly double the size of Kidlington. This would put an enormous strain on schools, health services, & transport. People working in Oxford would all have to travel south, increasing the already serious traffic congestion in the Banbury Road. The new Cutteslowe roundabout designed to improve the situation would once again be swamped. Some of the sites proposed are particularly unsuitable. Those in the northern part of Kidlington, particularly 27 & 14, which are near the river, & liable to flooding. This would mean people having to travel through the village in order to get to Oxford, & is totally unacceptable. The Banbury Rd through Kidlington is already a nightmare during the rush hour. Kidlington is a large village but is blessed with the GB, providing pleasant countryside, nature reserves, footpaths & walks. To destroy this would remove these benefits of village life for ever. Oxford has agreed to provide only 500 new homes compared with Kidlington's 4,400 & the other District Councils' allocations. Yet the Northern Gateway area, in Oxford's domain, is scheduled for industrial development, not houses. This will surely aggravate the housing situation rather than help it. The North Oxford Golf Course is a proposed building site (38 and 50) but why not the Southfield Golf Course in Oxford. Objects strongly to the proposals as they stand, & urge the CDC to reconsider its position.

Proposed Submission Plan - Omission/Alternative Sites

PR-C-1476	10/10/2017	Peter	Frampton	Framptons on behalf of E P Barrus	Y	Y	N	Y
5231	<p>Comments</p> <p>Refers to Policy Villages 5 and submits that this landholding displays similar physical and environmental characteristics to the adjoining site, which has a resolution to grant planning permission (albeit acknowledged that the site does not lie within the potential development area as shown on the Proposals Map).</p> <p>Refers to The Upper Heyford LSCA assessments of the land holding of Lone Star and EP Barrus to support their submission. The EP Barrus land is considered to have a capacity of some 127 dwellings applying the same place making principles to the scheme approved under planning application 15/01357/F. The EP Barrus and Lone Star land holdings could suitably accommodate 245 new homes. The EP Barrus land is considered a sustainable location for housing which would be consistent with the development principles for RAF Upper Heyford.</p> <p>A separate submission has been made on behalf of Lone Star, which controls the land hatched blue on the plan.</p> <p>The two landowners are in discussions for a planned release of the two landholdings. The land held by EP Barrus extends to some 6.1 hectares. The land identified (red and blue) has a gross site area of some 11.7 hectares. Assuming a 70% gross to net development area to allow for green infrastructure, the dwelling capacity would be 245 new homes (density 30 dph). Developer interest in the land exists. There are no known physical constraints to development. This submission propounds that the allocation of the land edged red on the accompanying plan –as a parcel of land, or in conjunction with the land edge blue at Upper Heyford for housing development would:</p> <p>-Promote a sustainable pattern of development consistent with ‘the most sustainable strategy for the District (IR 212) including new homes at RAF Upper Heyford’ to meet some of the displaced housing need from Oxford.</p> <p>- Reduce the extent to which Green Belt land may be required for housing to meet displaced housing need from Oxford, and hence - Comprises a reasonable alternative to the loss of Green Belt. (See attached the representation site plan)</p>

To participate in the Examination as to whether the Council has properly applied Green Belt Policy.

PR-C-1480	09/10/2017	Justin	Scroggie					
4644	<p>Comments</p> <p>Support in the strongest terms your decision not to include The Moors land for development by Bloombridge LLP. The site lies in within the Green Belt. This must be preserved to prevent urban sprawl. The developers claim that the impact of their proposed development is modest, but this is not true. 1. There will be an unavoidable increase in air pollution, driven by extra local traffic which is already slow and dangerous, which will affect local health, including that of our children. There is a direct correlation between the health and well-being of Kidlington residents of all ages, present and future, and the green spaces to which they have daily and easy access by foot. Fresh air, regular walks, keeping healthy and happy pets, understanding how the land provides food to our supermarkets, an appreciation of nature - all of these are under threat by the Bloombridge plans. 2. Education and health services will put under even more strain, meaning larger classes, less teacher attention, longer waiting times for doctors and dentists, and therefore poorer health and education for Kidlington residents, at the expense of Oxford residents. 3. Kidlington will cease to be a village, or any kind of rural environment, as countryside is lost, green belt built over etc. This is a loss that cannot be recovered, and again, the material effect on our children is to create an increasingly urban-only generation with no direct knowledge or experience of the country. 4. Since we have lived in Kidlington, it is clear from personal experience that these sites are prone to severe flooding, and that the drainage they afford existing housing along the Moors and Mill Street would be severely compromised. There are old streams and aquifers beneath this land, which would also adversely affect any new homes built upon them. 5. Finally, the historic church of St. Mary's, which stands at the bottom of Church Street is a Grade 1 listed building dating back to 1220. In 3 years it will celebrating its 800th anniversary, with national press coverage, and royal visits. It is unconscionable that the such a building, and the local community it serves, should by this time be engulfed by new buildings that destroy the surrounding habitat, nature, peace and quiet which has there for eight centuries. You have decided rightly that this land (sites PR14 and PR27) is unsuitable for development. Please do not allow these developers to persuade the Planning Inspector otherwise.</p>

PR-C-1535	10/10/2017	Layla	Vidal-Martin	Lichfields on behalf of Taylor Wimpey (Oxfordshire)	Y	Y	N	Y
5415	<p>Comments</p> <p>Taylor Wimpey (TW) considers the Submission Plan is not sound as it is not “justified” or “consistent with national policy”. This is because : 1. CDC acknowledge (Submission Plan Executive Summary para XV) that “under national policy Green Belt boundaries should only be altered in exceptional circumstances through the preparation or review of a Local Plan”. The Submission Plan (para 5.17) sets out why CDC consider that exceptional circumstances exist for the release of these sites from the Green Belt & their allocation for residential development. TW contend that CDC have not thoroughly explored “all other reasonable options” &, where they have sought to do so, there are flaws in their evidence base (regarding their assessments of sustainability, transportation & alternative development locations). They have not demonstrated the “exceptional circumstances” required for the proposed release of the sites identified in Table 1 from the Green Belt; 2. CDC’s approach is predicated on an assumption that “Oxford’s Housing Needs” form a bespoke & identifiable source of housing need. This conflicts with the recognition in the Oxfordshire SHMA (2014) (para 9.2) that “the SHMA identifies an Oxford-focused Housing Market Area which extends across much of the County, reflecting the economic influence of the City. The county still remains the most appropriate geography for analysis of housing markets in terms of the ‘best fit’ of local authority boundaries to a functional housing market area.” More recently the Inspectors Report into the Vale of White Horse Local Plan emphasised that (para 45) “it is not the role of, or possible for, the plan to prescribe where people live and work;” and; 3. CDC compound this assumption (Policy 12a) by seeking to pursue a “separate five year housing land supply . . . For meeting Oxford’s needs.” This, in conjunction with proposals not to support Sites Not Allocated in the Partial Review (policy PR12b) are not consistent with the NPPF’s presumption in favour of sustainable development & risk substantially harming housing delivery in the District in the coming years. Scope of response (See Detailed 4 Section Report). This response amplifies TW’s concerns regarding the soundness of the Submission Plan, & their view that their site at Bloxham (Site PR35) forms a “reasonable option” for residential development prior to the release of the proposed allocations from the Green Belt. Specifically • Section 2: Summarises the appropriateness of residential development on the TW site; (Section 2 encloses * Sustainability Analysis by Calibro, * Residential Potential of Site, * Assessment of site against constraints, * SHLAA Analysis) • Section 3: Summarises TW’s concerns regarding the inadequacy of the evidence base, whilst emphasising their support for the level of residential development proposed. This underpins their contention that the Submission Plan does not establish “exceptional circumstances” for the proposed release of these sites from the Green Belt; • Section 4. Sets out TW’s comments on emerging policies and the changes that they consider are necessary to make the plan sound.</p>							

Changes Sought

Reasons for Participation

The Plan proposes that around 55 % of the housing proposed should be targeted within the Green Belt (GB). Para 3.26 “approximately 14 % of Cherwell lies within the Oxford GB”. Thus CDC need to demonstrate “exceptional circumstances” as to why this housing cannot be located within non GB locations comprising 86 % of the District. The provisions of PR12b states that residential development proposals, across the District, where they are not allocated in the Partial Review, will not be supported except where a number of criteria are met. These include :

- CDC “has taken a formal decision that additional land... is required to ensure the requisite housing supply.” This requires a decision by CDC – it is not the same as failing to demonstrate a 5 year land supply;
- The proposed development accords with Policy PR1 – which in turn requires it to “accord with the Vision, Objectives and Policies of this Partial Review.” This serves to limit development to the geographical area proposed by the Submission Plan following a strategy which we have highlighted is not supported by the evidence base10;
- Identified in the HELAA as a potentially developable site – with no provisions for locations where part of a comprehensive site has been allocated and / or there is scope subsequently for a wider development bringing appropriate benefits;
- Requiring prior consultation with the Local Community & having the “demonstrable support of the local community” an approach which has no basis in planning policy & would be extremely difficult to achieve; &
- Requiring a series of reports – the requirement for which is unclear at this stage – & which is more appropriately addressed through the development management process.

Proposed Submission Plan - Omission/Alternative Sites

Comments

Taylor Wimpey (TW) considers the Submission Plan is not sound as it is not “justified” or “consistent with national policy”. This is because : 1. CDC acknowledge (Submission Plan Executive Summary para XV) that “under national policy Green Belt boundaries should only be altered in exceptional circumstances through the preparation or review of a Local Plan”. The Submission Plan (para 5.17) sets out why CDC consider that exceptional circumstances exist for the release of these sites from the Green Belt & their allocation for residential development. TW contend that CDC have not thoroughly explored “all other reasonable options” &, where they have sought to do so, there are flaws in their evidence base (regarding their assessments of sustainability, transportation & alternative development locations). They have not demonstrated the “exceptional circumstances” required for the proposed release of the sites identified in Table 1 from the Green Belt; 2. CDC’s approach is predicated on an assumption that “Oxford’s Housing Needs” form a bespoke & identifiable source of housing need. This conflicts with the recognition in the Oxfordshire SHMA (2014) (para 9.2) that “the SHMA identifies an Oxford-focused Housing Market Area which extends across much of the County, reflecting the economic influence of the City. The county still remains the most appropriate geography for analysis of housing markets in terms of the ‘best fit’ of local authority boundaries to a functional housing market area.” More recently the Inspectors Report into the Vale of White Horse Local Plan emphasised that (para 45) “it is not the role of, or possible for, the plan to prescribe where people live and work;” and; 3. CDC compound this assumption (Policy 12a) by seeking to pursue a “separate five year housing land supply . . . For meeting Oxford’s needs.” This, in conjunction with proposals not to support Sites Not Allocated in the Partial Review (policy PR12b) are not consistent with the NPPF’s presumption in favour of sustainable development & risk substantially harming housing delivery in the District in the coming years. Scope of response (See Detailed 4 Section Report). This response amplifies TW’s concerns regarding the soundness of the Submission Plan, & their view that their site at Bloxham (Site PR35) forms a “reasonable option” for residential development prior to the release of the proposed allocations from the Green Belt. Specifically • Section 2: Summarises the appropriateness of residential development on the TW site; (Section 2 encloses * Sustainability Analysis by Calibro, * Residential Potential of Site, * Assessment of site against constraints, * SHLAA Analysis) • Section 3: Summarises TW’s concerns regarding the inadequacy of the evidence base, whilst emphasising their support for the level of residential development proposed. This underpins their contention that the Submission Plan does not establish “exceptional circumstances” for the proposed release of these sites from the Green Belt; • Section 4. Sets out TW’s comments on emerging policies and the changes that they consider are necessary to make the plan sound.

Changes Sought

The Plan proposes that around 55 % of the housing proposed should be targeted within the Green Belt (GB). Para 3.26 “approximately 14 % of Cherwell lies within the Oxford GB”. Thus CDC need to demonstrate “exceptional circumstances” as to why this housing cannot be located within non GB locations comprising 86 % of the District. We do not consider that CDC have appropriately addressed “reasonable alternatives” & therefore cannot be considered to have demonstrated “exceptional circumstances” for the release of all of these sites from the GB. * Combined with the inadequacy of the evidence base, these concerns are amplified by the fact that the Submission Plan appears to prejudge the proposed development strategy irrespective of the evidence base. This is reflected in the fact that the (Executive Summary para xiv) states that the Plan “focusses development on a geographic area extending north from Oxford to south Kidlington, along the A44 corridor” & earlier iterations of the evidence base acknowledged that only sites within two of the nine areas of search have been assessed, * Conversely TW have established that the TW site at Bloxham does form a “reasonable alternative” for development within a sustainable location which is capable of meeting housing need. This is consistent with CDC’s analysis within the HELAA (albeit that TW’s technical analysis is that the site is capable of accommodating a higher level of residential development). * Accordingly the TW site should be allocated for residential development (under this or an additional policy) prior to CDC moving on to consider the need for any Green Belt release. * Without the amendments sought above our clients do not consider that the Submission Plan can be considered “sound”, particularly with regards to being “positively prepared” or “justified.”

Comments

Taylor Wimpey (TW) considers the Submission Plan is not sound as it is not “justified” or “consistent with national policy”. This is because : 1. CDC acknowledge (Submission Plan Executive Summary para XV) that “under national policy Green Belt boundaries should only be altered in exceptional circumstances through the preparation or review of a Local Plan”. The Submission Plan (para 5.17) sets out why CDC consider that exceptional circumstances exist for the release of these sites from the Green Belt & their allocation for residential development. TW contend that CDC have not thoroughly explored “all other reasonable options” &, where they have sought to do so, there are flaws in their evidence base (regarding their assessments of sustainability, transportation & alternative development locations). They have not demonstrated the “exceptional circumstances” required for the proposed release of the sites identified in Table 1 from the Green Belt; 2. CDC’s approach is predicated on an assumption that “Oxford’s Housing Needs” form a bespoke & identifiable source of housing need. This conflicts with the recognition in the Oxfordshire SHMA (2014) (para 9.2) that “the SHMA identifies an Oxford-focused Housing Market Area which extends across much of the County, reflecting the economic influence of the City. The county still remains the most appropriate geography for analysis of housing markets in terms of the ‘best fit’ of local authority boundaries to a functional housing market area.” More recently the Inspectors Report into the Vale of White Horse Local Plan emphasised that (para 45) “it is not the role of, or possible for, the plan to prescribe where people live and work;” and; 3. CDC compound this assumption (Policy 12a) by seeking to pursue a “separate five year housing land supply . . . For meeting Oxford’s needs.” This, in conjunction with proposals not to support Sites Not Allocated in the Partial Review (policy PR12b) are not consistent with the NPPF’s presumption in favour of sustainable development & risk substantially harming housing delivery in the District in the coming years. Scope of response (See Detailed 4 Section Report). This response amplifies TW’s concerns regarding the soundness of the Submission Plan, & their view that their site at Bloxham (Site PR35) forms a “reasonable option” for residential development prior to the release of the proposed allocations from the Green Belt. Specifically • Section 2: Summarises the appropriateness of residential development on the TW site; (Section 2 encloses * Sustainability Analysis by Calibro, * Residential Potential of Site, * Assessment of site against constraints, * SHLAA Analysis) • Section 3: Summarises TW’s concerns regarding the inadequacy of the evidence base, whilst emphasising their support for the level of residential development proposed. This underpins their contention that the Submission Plan does not establish “exceptional circumstances” for the proposed release of these sites from the Green Belt; • Section 4. Sets out TW’s comments on emerging policies and the changes that they consider are necessary to make the plan sound.

Changes Sought

The Plan proposes that around 55 % of the housing proposed should be targeted within the Green Belt (GB). Para 3.26 “approximately 14 % of Cherwell lies within the Oxford GB”. Thus CDC need to demonstrate “exceptional circumstances” as to why this housing cannot be located within non GB locations comprising 86 % of the District. We do not consider that CDC have appropriately addressed “reasonable alternatives” & therefore cannot be considered to have demonstrated “exceptional circumstances” for the release of all of these sites from the GB. Taylor Wimpey are concerned that this draft policy is too prescriptive and fails to allow sufficient flexibility for specific circumstances that may apply. They consider that additional text should be added at the end of the first paragraph stating “except where such provision is not feasible or viable.”

Reasons for Participation

We consider it necessary to participate at the part of the Examination to amplify the concerns and points raised within the representations.

Proposed Submission Plan - Omission/Alternative Sites

Sets out TW’s comments on emerging policies and the changes that they consider are necessary to make the plan sound.

Changes Sought

The Plan proposes that around 55 % of the housing proposed should be targeted within the Green Belt (GB). Para 3.26 “approximately 14 % of Cherwell lies within the Oxford GB”. Thus CDC need to demonstrate “exceptional circumstances” as to why this housing cannot be located within non GB locations comprising 86 % of the District. Their fundamental concern with this draft policy is not appropriate when, as established above, the housing need originating in Cherwell and the unmet housing originating in Oxford CC cannot, in reality, be differentiated. Indeed the Foreword to the Submission Plan notes. "there are many interdependencies between Cherwell and Oxford". The Submission Plan suggests that the objective of maintaining a separate five year land supply of housing sites to specifically meet Oxford's unmet need within Cherwell is to 'ensure that the necessary housing supply will be maintained' (Executive Summary para xxi). TW consider that the opposite outcome will be achieved as any shortfall in supply originating within either area of demand will not engage the provisions of the NPPF (para 49) across Cherwell. In fact, in a situation where District wide housing supply is providing a five year land supply but the unmet housing need housing supply is not it is entirely unclear how the latter under supply would be remedied – beyond the provisions for a Partial Review of the Local Plan (Policy PR12b) – with which TW also have substantial concerns (see below). It is important that the Submission Plan does not constrain the “safety valve” such that under supply is capable of being accommodated through the provisions of the NPPF (paras 14 and 49). This is not reflected in the current policy approach and does not therefore reflect national planning policy.

Reasons for Participation

We consider it necessary to participate at the part of the Examination to amplify the concerns and points raised within the representations.

Changes Sought

The Plan proposes that around 55 % of the housing proposed should be targeted within the Green Belt (GB). Para 3.26 “approximately 14 % of Cherwell lies within the Oxford GB”. Thus CDC need to demonstrate “exceptional circumstances” as to why this housing cannot be located within non GB locations comprising 86 % of the District. We do not consider that CDC have appropriately addressed “reasonable alternatives” & therefore cannot be considered to have demonstrated “exceptional circumstances” for the release of all of these sites from the GB. * Whilst, as noted above, TW consider that it is appropriate to continue to plan to provide 4,400 homes to help meet Oxfords unmet housing needs by 2031 they consider that the references to the “vision,” “objectives” and “policies” within the Submission Plan inappropriate and unsound. * Specifically the vision focusses on connectivity to Oxford instead of seeking sustainable locations for development. TW consider that this approach is based on the erroneous view that Oxfords unmet housing needs form a distinct and identifiable housing need. Conversely the evidence is that the County forms a single HMA and the resident population displays more fluid habits than assumed within the vision.

Reasons for Participation

We consider it necessary to participate at the part of the Examination to amplify the concerns and points raised within the representations.

Thank you for putting together a comprehensive local plan. It is not currently in the plan however we would object to any direct or back-door attempt by any developer to develop the land behind The Moors. This land is unsuitable as the access is terrible for a large development and this would cause traffic issues with a vast amount of traffic leaving through the rush hour. I hope this would remain out of the local plan. The build site area is adjacent to areas of high flooding risk and as such will increase the risk of flooding to existing properties in the area and potentially cause flooding in those not currently subjected to it. The village is already short on green space and loss of further amenity space, especially with proposed development elsewhere, is unacceptable. Additionally with regards to the "Retail Centre" of Kidlington it is important to retain existing retail space; developing across A4260 would create a divided shopping area. Retailers currently operating in Kidlington should not be allowed to reduce the shopping footprint and any development should increase not decrease the availability of shop space. For example if the Coop do want to build flats then the whole of the car park area could be turned into shops at street level and with flats above. This would create a fantastic retail area and connect the whole block. This area must be protected especially if there is an influx of more homes in the area

Strong opposition to any building application for houses/business units on the land to the rear of The Moors in Kidlington. The council has already listened to the residents of Kidlington who voiced their concerns when CDC looked and discounted this site as being unsuitable for housing. This is a GB area and as such is used by many residents and is the habitat for numerous wildlife, which must be protected. The traffic in Kidlington is at saturation point with the existing roads barely able to cope at certain times of day. An additional 300 houses plus industrial units in North Kidlington would likely generate another 450+ vehicles a day through Kidlington causing it to grind to a halt.

4971	Comments			
It is with great regret to read the risk of having a development of 300 houses plus business units at land behind the Moors. This is in spite of the area being in the green belt. An expert from Brooke's confirmed that the pond at Holmwell House is still a habitat for great crested newts. Understand that access for a building development would be opposite Benmead Road and this would certainly destroy the pond. In addition, how would the Moors and Mill Street cope with all the additional traffic from such a plan and how would the local schools place all the extra children, not to mention medical services which already seem to be under pressure? This part of Kidlington provides a delightful rural landscape and it would be appalling to cover this beautiful area in concrete. Implore the Planning Inspector to make a wise decision and refuse Bloombridge's proposals in the interests of Kidlington residents.

(This rep was sent by email as an attachment by Elizabeth Holdak PR-C-1462 on behalf of her neighbour as a separate representation). Strongly object to the proposal of Bloombridge to development of the land behind the Moors. Development will increase the risk of more flooding. The ditch that runs along the rear of the houses to the pond will not be able to take the extra rain water which the field absorbs. The entrance and exit which is proposed to join the Moors close to Benmead Road which is the narrowest part of the Moors. Benmead Road is an extremely busy road with an infant and a junior school plus a nursery. More houses and business units would increase the traffic on the Moors even further. Since the new flats have been built cars and vans are parked all day making the road very congested.

Am writing to make Cherwell DC aware that I support their decision not to include the land behind The Moors (PR14 and PR27) as suitable for development and do not think that decision should be reversed. My main concerns are: 1 it is in the green belt whose whole purpose is to prevent urban sprawl. 2 it would increase the flood risk to established properties. 3 it would remove a valuable green space for local residents' recreation - walking with or without dogs, jogging, children's play etc. 4 it will have a negative impact on local roads, schools, congestion etc.

PR04a-c Strategic Housing Market Assessment 2014

PR-C-1408	10/10/2017	Andy	Pearce	Barton Willmore on behalf of A 2 Dominion Housing Group Ltd	N	N	N	Y
5491	Comments							
Paragraph 15828 of the NPPF requires Local Planning Authorities to use a proportionate evidence base. Whilst A2D do not question whether a proportionate evidence base supports the Partial Review, we note that the Oxfordshire Strategic Housing Market Assessment (SHMA) (April 2014) is out-dated and should be revisited.								
Changes Sought				Reasons for Participation				
Changes Sought				Our objections in part relate to the proposed growth strategy to address Oxford City's unmet need, which we consider to be unsustainable and inconsistent with national policy. This is contrary to the adopted Growth Strategy set out in the Cherwell Local Plan 2011-2031 (Part 1), which focuses new development at key settlements, as identified in Cherwell's settlement hierarchy. The Council has not discharged its duty to demonstrate exceptional circumstances to release the identified sites from the Green Belt, pursuant to paragraph 82 of the National Planning Policy Framework. Further, there is insufficient evidence to suggest that opportunities to increase capacity at existing allocated housing sites have been robustly tested. Finally, there should be a single housing requirement for the Cherwell Local Plan. There is no justification for a separate figure to be applied to meet Oxford City's unmet need, as is currently proposed.				

PR22 Interim Transport Assessment (October 2016)

PR-C-0237	15/09/2017	Karen	East	TMP Planning Ltd on behalf of Gosford and Water Eaton Parish Council	N	N	N	Y
823	Comments							
The Transport Assessment is a large complex document that is difficult for residents to understand. It would have greatly benefited from a Non-Technical Summary which explained the work carried out and the conclusions. The Transport Assessment notes in 2.42 -2.45 the existing congestion problems which exist in north Oxford and the road network leading to it in terms of delays and journey time unreliability along Oxford's Outer Ring Road and the A34. Paras. 2.46 – 2.48 sets out the poor air quality which exists and the AQMAs designated in Oxford and at Bicester Road within the Parish. In para. 2.54 congestion on public transport is highlighted with crowded services and buses contributing to congestion. The above information which is supported by the Parish Council's own experiences and those of its residents show that there are major problems with the transport infrastructure. An additional 4400 houses (of which 1410 are within the Parish) will make this situation worse. Not convinced that there is evidence of properly costed and funded infrastructure improvements to deal with these problems and certainly no evidence that this will be addressed in advance of development or within a reasonable timeframe to support proposed development. The key findings from the evidence base on p.139-140 confirm many of our concerns about the impact of development namely: <ul style="list-style-type: none"> • New residents will want to commute into Oxford for jobs. Whilst this is inevitable it will undoubtedly lead to increased problems on already congested roads. • Cherwell's boundary is at least 5.9km from most of the city's major employment areas and this is higher than the average national cycle trip length (4.8km). Encouraging increased cycle traffic will be a major challenge even with new cycleways (current cycleways share the road with the bus lanes which creates different issues). Reliance on the car for commuters is still very likely. • Affordable public transport investment is require2. Whilst proposed housing may help fund this have concerns about if and when this will be delivered and how it will be implemented without adverse effects on existing residents. Remain extremely concerned as to whether adequate funds will be secured to deliver the critical infrastructure required to cope with this development. If key elements of this are left out then this could have major impacts in terms of worsening delays, congestion and air pollution. 								
Changes Sought				Reasons for Participation				
Concerned about some of the impacts on congestion and air pollution highlighted in the TA. These are compounded by uncertainties around infrastructure delivery (timing and funding). Request that the TA is reviewed with these issues in mind.				The Parish Council would wish to take part in order to explain the potential impact of the proposed development on local communities and why this should be better reflected in the draft vision.

5577	Comments							
What is notable is the changes in some of the RAG metrics used in the Interim Transport Assessment ('ITA') compared to those used in the High-level Transport Assessment. Detailed comments and a list of observations provided. It is clear that the changes in RAG metrics provide more favourable assessments for the option Areas A and B. Changes to some of the arbitrary metrics would have provided more favourable outcomes for the other option Areas C to I. It is notably that the original RAG metrics used in the High-level Transport Assessment did not provide favourable ratings for the sites in south Cherwell. These RAG assessments are showing a high degree of bias towards the selected policy sites and are therefore unsound.								
Changes Sought				Reasons for Participation				
For the reasons I have given above AND the Representations made by the Begbroke & Yarnton Green Belt Campaign which I additionally support and adopt as part of my own Representation in this document, the Plan cannot be changed to make it legally compliant or sound and should therefore NOT be submitted for Inspection.				Would like the Begbroke & Yarnton Green Belt Campaign to represent me at the Examination should it take place.				

PR-C-1326	10/10/2017	Victoria	Masey		N	N	N	Y
4345	Comments							
With regard to transportation infrastructure, the Transport Assessment (TA 2.28), based on Oxford city's prevailing commuter patterns, cannot be applied to the rural environment of Begbroke and Yarnton. When commuting along the A44 on a daily basis there are very few buses, pedestrians or cyclists whilst in the stationary traffic. Application of an urban commuting model onto a clearly rural site is unrealistic, and the impact of approximately 1000 more cars using the already over-congested roads is totally unfeasible. Any proposed development of the A44 will result in months of severe congestion on the 2 alternative routes - A40 and A4260. From a personal point of view I have no choice but to drive into Oxford and due to severe current levels of congestion have to leave by 7.15 am in order to ensure my daughter is dropped off at breakfast club a mere 3 miles away by 08.00. If I do not take advantage of this school service I am unable to get to work in East Oxford for 08.30.								
Changes Sought				Reasons for Participation				
For the reasons I have given and the Representations made by The Begbroke & Yarnton GB Campaign which I additionally support and adopt as my own Representation in this document, the plan cannot be changed to make it legally compliant or sound and should therefore not be submitted for inspection. PR22 Interim Transport Assessment (October 2016)

PR-C-1333	10/10/2017	James	Masey		N	N	N	Y
4372	<p>Comments</p> <p>Understands that key requirement to make proposals PR8 & PR9 sustainable is to alleviate congestion along the A44 to Loop Farm roundabout. Peak time congestion currently exists each working day and an additional >1000 cars will exacerbate an already overburdened situation yet further. - The proposed density of housing between Begbroke and Yarnton suggests 2,000+ more cars (87% of households own a car per TA 2.23) where if only 50% commute (currently 69% commute by car per TA 2.32) that's potentially 1,000 more cars on the A44 at peak times. - The cycle 'superhighway' only frees up to 60 cars at peak (7.55). Just this section of road Yarnton to Loop Farm roundabout - has a canal bridge and a railway bridge, together with established residential and business properties, reducing the likelihood that additional infrastructure can be provided due to high cost and disruption in order for the bridges to be rebuilt. Without this critical investment, the proposals are unsustainable. On a personal impact level, with travel balance changed by an increase of this magnitude, I anticipate increased travel times ranging from >90 minutes or I will need to leave home at least an hour earlier than currently.</p> <p>Changes Sought</p> <p>For the reasons I have given and the Representations made by The Begbroke & Yarnton GB Campaign which I additionally support and adopt as my own Representation in this document, the plan cannot be changed to make it legally compliant or sound and should therefore NOT be submitted for Inspection.</p> <p>Reasons for Participation</p> <p>I would like the Begbroke and Yarnton GB Campaign to represent me at the Examination should it take place.</p>							

PR-C-1333	10/10/2017	James	Masey		N	N	N	Y
4371	<p>Comments</p> <p>The Transport Assessment (TA) emphasises sustainability (TA 9.7) by stating "locating these homes further from the {Oxford} City would not provide scope for higher levels of walking, cycling and public-transport trip making from new residential developments". However, in an attempt to look sustainable, the TA assumes that its model of urban commuting is being applied to an urban environment, which is incorrect because while the OCC and CDC refer to the proposals for Yarnton and Begbroke as "the creation of an urban neighbourhood", both these villages are within rural (GB) environments and neighbourhoods - not only because of the social composition of each, but also the availability of appropriate infrastructure. Not forgetting that both villages are more than three miles outside the city limits of Oxford. Therefore, by association, the imposition of an urban commuting ideology is inappropriate: - The TA model draws on Oxford City's commuter patterns (25% walk, 25% cycle, 20% use buses per TA 2.28) and seeks to mimic this urban experience in the rural environment. As such, it appears that by referring to the rural villages of Yarnton and Begbroke as 'urban' is no more than a veiled attempt to try and made a case for sustainable urban planning. In reality and in order to be sustainable it is apparent that the TA's Figure 6-3 (p.85) has not been taken into account since the bulk of the affected areas for PR8 and PR9 have a majority Red or Amber status..?</p> <p>Changes Sought</p> <p>For the reasons I have given and the Representations made by The Begbroke & Yarnton GB Campaign which I additionally support and adopt as my own Representation in this document, the plan cannot be changed to make it legally compliant or sound and should therefore NOT be submitted for Inspection.</p> <p>Reasons for Participation</p> <p>I would like the Begbroke and Yarnton GB Campaign to represent me at the Examination should it take place.</p>

PR-C-1502	09/10/2017	Henry	Brougham					
5140	<p>Comments</p> <p>Incorrect consultation form used. Comments relate to proposed submission plan. Concern that the transport proposals are unposted and unfunded and therefore only aspirational. No development should proceed until the appropriate transport infrastructure has been costed, funded and firmly programmed. One specific point: to close Sandy Lane at Yarnton would effectively cut off PR8 from Kidlington, the nearest centre.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							

PR32 Cherwell Level 2 Strategic Flood Risk Assessment May 2017

PR-C-0778	10/10/2017	Sarah	Knox-Brown	Begbroke & Yarnton Green Belt Campaign				N
5678	<p>Comments</p> <p>It is not clear that work was completed in time to inform consideration of options/formulation of the preferred strategy. The study makes it clear that Begbroke is more constrained by flood risk than Islip, yet the SA report finds the 2 areas to be of comparable flood risk, referencing only the Level 1 SFRA.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							
PR-C-1402	10/10/2017	Michelle	Kidd	The Environment Agency				N Y
4508	<p>Comments</p> <p>Paragraph 3.3.1 'Updated Climate Change Allowances' of the Strategic Flood Risk Assessment (SFRA) states that the most up-to-date climate change allowances have not been used. Therefore this evidence document is not consistent with national planning policy. Specifically where it says that "planning policies and decisions will need to be based on up-to-date information about the natural environment." This may impact on the deliverability of potentially allocated sites within the sequential test. The sequential test may have to be revisited in order to incorporate the updated evidence. For example there could be two sites in Flood Zone 2 one of these may be affected by Climate Change and the other is not. The council should be promoting the site that is not affected by the climate change allowances over the one that isn't. We have highlighted this issue to you previously in our letter dated 07 March 2016.</p> <p>Changes Sought</p> <p>In order to make the local plan sound the latest climate change allowances will need to be used as part of the evidence base in the SFRA.</p> <p>Reasons for Participation</p> <p>To ensure that the flood risk evidence is adequately addressed during the examination.</p>							

PR32 Cherwell Level 2 Strategic Flood Risk Assessment May 2017

PR-C-1413	10/10/2017	Peter	Wilsdon	David Jarvis Associates on behalf of Shipton Ltd	N	Y	N	Y
5597	Comments				Reasons for Participation			
The site was not one of the 8 sites put forward for the Level 2 Strategic Flood Risk Assessment (SFRA). It is assumed that the site was 'sieved out' following the Level 1 SFRA. As can be seen from the Environment Agency's Flood Mapping for Planning, the area to the east of the railway line is partially located in Flood Zone 2 and 3. The majority of the developable area if the site is located in Flood Zone 1. The site offers opportunities for flood alleviation through the ecological enhancement scheme proposed on the lands along the River Cherwell.					As outlined, a number of inaccuracies relating to the site exist in the evidence base, that need to be addressed. Following a review of the evidence base and the scoring of the sites in the Sustainability Appraisal, it is considered that further assessment work is likely to result in the site receiving a more favourable outcome to the extent that it should be considered a potential strategic development site. Should Cherwell District Council disagree and continue to use the inaccurate evidence base to exclude the site then it considered necessary to participate in the Examination.			
Changes Sought				Reasons for Participation				
Plot PR7a is unsuitable for development. An alternative plot should be identified for the 200 house proposed here.								

PR-C-1431	10/10/2017	Mrs Malini	Perera				N	N
4562	Comments				Reasons for Participation			
PR32 Flood Report indicates that areas of proposed plot PR7a lie within flood zone 3. The report recommends that development should ideally be restricted to outside modelled flood zone 3 to provide "blue corridors". It is also important to note that these flood maps do not necessarily account for future climate change. The map also does not indicate fields that were historically submerged in water in the heavy rains a few years ago. PR7a indicates that the proposed residential area will lie within flood zone 3 in direct contravention to the flood report.								
Changes Sought				Reasons for Participation				
Plot PR7a is unsuitable for development. An alternative plot should be identified for the 200 house proposed here.								

PR34 Ecological Advice - Cumulative Impacts - June 2017

PR-C-0778	10/10/2017	Sarah	Knox-Brown	Begbroke & Yarnton Green Belt Campaign				
5685	Comments				Reasons for Participation			
Questions the recommendation which is taken forward by the Council as proposed policy: "Within the proposed Local Nature Reserve (LNR), it is recommended that habitats be restored to SSSI quality which will enhance the value of the LNR as mitigation for any potential negative impacts on the SSSI." There is no reason to suggest that it will be possible to create a SSSI.

PR38 Oxford - Cambridge Expressway Strategic Study

PR-C-0778	10/10/2017	Sarah	Knox-Brown	Begbroke & Yarnton Green Belt Campaign				N
5688	Comments				Reasons for Participation			
The implication of the Expressway Strategic Study is that there is a 1 in 3 chance of a major new Expressway passing between Bicester and Oxford, along the A34. The study is referred to in the Proposed Submission Plan and SA, but the implications for the Partial Review are not drawn out.

PR40 Cherwell Green Belt Study (April 2017) and Addendum (June 2017)

PR-C-0262	10/10/2017	Richard	Pye		N	N	N	Y
5574	Comments				Reasons for Participation			
The review appraises strategic development sites within the Cherwell district against the five nationally defined purposes of the Green Belt as set out in the NPPF. It also draws conclusions on the relative harm (or otherwise) to the Green Belt that may result from their potential release for development. The review informed the ongoing preparations of the Partial Review of Cherwell Local Plan Part 1 and the Cherwell Local Plan Part 2. Detailed comments on the site assessments provided. Given that CDC is proposing to release land from the Green Belt, these outline policy guidance or masterplans should be in preparation as part of the Partial Review of the Local Plan process. No such documents have been produced to date and therefore makes this review process unsound. In conclusion, the six sites play an important Green Belt role and can be construed as fragile Green Belt land. If any of the six sites are removed from the Green Belt, it will result in the urban sprawl of Oxford and coalescence of three villages.					Would like the Begbroke & Yarnton Green Belt Campaign to represent me at the Examination should it take place.			
Changes Sought				Reasons for Participation				
For the reasons I have given above AND the Representations made by the Begbroke & Yarnton Green Belt Campaign which I additionally support and adopt as part of my own Representation in this document, the Plan cannot be changed to make it legally compliant or sound and should therefore NOT be submitted for Inspection.								

PR40 Cherwell Green Belt Study (April 2017) and Addendum (June 2017)

PR-C-0436	05/10/2017	Steve	Pickles	West Waddy ADP on behalf of JA Pye (Oxford) Ltd	Y	Y	N	Y
1098	<p>Comments</p> <p>For parcel PR38c which represents the land on the eastern side of the A4165 the Cherwell Green Belt Study states that: 'The parcel occupies most of the gap between Oxford and Kidlington to the east of the A4165, any development is likely to be very exposed in this visually open landscape. There is a moderate slope down northwards from the road to Water Eaton Manor which currently prevents intervisibility between the northern and southern parts of the parcel and strengthens its settlement separating role; development encroaching on this slope would have a significant impact on reducing the settlement gap,' (Purpose 2, p 121 of Appendix 1 Cherwell Green Belt Study, April 2017). The overall assessment of the harm to the Green Belt resulting from release of site 38 in its entirety (i.e. land east and west of the A4165) is that 'The site as a whole is critical to the maintenance of separation between Oxford and Kidlington, and would represent significant sprawl of the large urban area of Oxford.' (p123) Yet this is precisely what the Council is proposing to do.</p> <p>Changes Sought</p> <p>Amend the strategy to remove, or at least minimise, the amount of land to be removed from the Green Belt in the 'Kidlington Gap' by instead removing other areas, such as the J A Pye (Oxford)Ltd land at Webb's Way, Kidlington (PR32), which the Cherwell Green Belt Study (April 2017) has identified would cause less harm to the Green Belt.</p> <p>Reasons for Participation</p> <p>J A Pye (Oxford) Ltd owns land at Webb's Way, Kidlington and wishes to ensure that the argument is strongly made for the removal of this site from the Green Belt and its allocation for housing development, which would help to address Oxford's unmet need.</p>							
PR-C-0436	05/10/2017	Steve	Pickles	West Waddy ADP on behalf of JA Pye (Oxford) Ltd	Y	Y	N	Y
1097	<p>Comments</p> <p>The harm to Green Belt purposes of removing those areas which, under Policy PR3, the Council is proposing to remove from the Green Belt at the North Oxford Triangle; Begbroke and Yarnton is assessed as being high. The Cherwell Green Belt Study (2017) states that the North Oxford Golf Club site (PR38b) 'is a principal element in the gap between Oxford and Kidlington. Its size, extensive tree cover and topography - the southern half of the course is located on a hill - makes it a physical and visual barrier between the settlements, the development of which would leave a gap offering very little physical or perceptual separation. It therefore plays a critical role in settlement separation,' (Purpose 2 on page 118 of Cherwell Green Belt Study, April 2017). In the section on harm to the Green Belt resulting from its release, it states that: 'The physical prominence of the golf course makes it an important buffer feature on the urban edge, limiting perception of the city before entering the built-up area and therefore playing an important role in maintaining the 'Kidlington Gap'.This release would result in the A34 becoming the Green Belt boundary from the Northern Gateway up to Oxford Parkway station, leaving only the width of a single field to separate Oxford from Kidlington.' (p118 -119).</p> <p>Changes Sought</p> <p>Amend the strategy to remove, or at least minimise, the amount of land to be removed from the Green Belt in the 'Kidlington Gap' by instead removing other areas, such as the J A Pye (Oxford)Ltd land at Webb's Way, Kidlington (PR32), which the Cherwell Green Belt Study (April 2017) has identified would cause less harm to the Green Belt.</p> <p>Reasons for Participation</p> <p>J A Pye (Oxford) Ltd owns land at Webb's Way, Kidlington and wishes to ensure that the argument is strongly made for the removal of this site from the Green Belt and its allocation for housing development, which would help to address Oxford's unmet need.</p>							
PR-C-0778	10/10/2017	Sarah	Knox-Brown	Begbroke & Yarnton Green Belt Campaign			N	
5675	<p>Comments</p> <p>Questions the assessment of Shipton-on-Cherwell quarry, which assigns it high sensitivity (page 50) yet on the other hand proposes it as a location to be removed from the Green Belt. Main concern is in relation to the Addendum, which is a very brief study with little systematic analysis. The study is not referenced anywhere else in the current consultation materials and as such consultees will be unaware of the Council's reasons for defining precise boundaries.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							
PR-C-1413	10/10/2017	Peter	Wilsdon	David Jarvis Associates on behalf of Shipton Ltd	N	Y	N	Y
5296	<p>Comments</p> <p>The Study included a GB harm assessment which gives Shipton Quarry a rating ranging from High to Moderate. However it is noted that the area to the east of the railway line which has received a 'high' harm rating is not proposed to be part of the development and will instead be used for ecological enhancement and mitigation. The rating for this should therefore be no greater than moderate. A number of the GB sites selected for inclusion in the Local Plan Review received similar ratings. It is unclear as to what extent the GB Study has considered the permitted uses (please refer to para. 1.8 for list of uses) of the quarry following restoration. The continued industrial use of the site increases the argument for removal of the site from the GB. In comparison to the other strategic sites within the heart of the Oxford GB Shipton Quarry is on the extreme periphery of the green belt and as such would provide a logical option to the re-designation of land from the GB.</p> <p>Changes Sought</p> <p>The Study included a GB harm assessment which gives Shipton Quarry a rating ranging from High to Moderate. PR-C-1436	10/10/2017	Patsy	Dell	Oxford City Council				
5592	<p>Comments</p> <p>Notes that in the Cherwell Green Belt Study, Figure 1 in the Addendum indicates an area for removal from the GB that extends across the boundary in Oxford's administrative area. This approach is generally helpful in the context of the work currently also underway on a new Oxford Local Plan & showing that both councils are considering the wider picture, although it is noted that the site area does not align exactly with the area in the Oxford Local Plan Preferred Options Document. The City Council is proposing to remove two small parcels from the GB in this vicinity, the first being site reference 590: Pear Tree Farm, which aligns with the area shown in Figure 1. The second parcel however is more limited in area than that shown in Figure 1 of the Cherwell study.</p> <p>Changes Sought</p> <p>Proposes that both the Banbury Road North Sports Club and the sports ground at Cutteslowe Park will remain in the Green Belt, and the only parcel of land the City Council is proposing to remove from the Green Belt is site reference 107: Green Belt land at St Frideswide Farm. We would request that this minor change to the map (Figure 1 Cherwell Green Belt Study Addendum) is updated in future iterations to align more closely with the City Council's latest proposals as set out in the Preferred Options of the Oxford Local Plan, whilst also noting that this may change further as the Oxford Local Plan 2036 progresses.</p> <p>Reasons for Participation</p>							

PR40 Cherwell Green Belt Study (April 2017) and Addendum (June 2017)

PR-C-1443	10/10/2017	Alice	Fitton	Turley on behalf of Bovis Homes Ltd	Y	Y	N	Y
5270	<p>Comments</p> <p>Whilst Bovis acknowledge that some of the Oxford Green Belt may need to be released to meet the residual housing need within the HMA, the allocated sites are not considered to present the most appropriate strategy & as such the Plan cannot be considered to be justified by evidence (contrary to the NPPF). Figure 4.2 of the Cherwell Green Belt Study (April 2017) illustrates the harm to Green Belt resulting from release of sites. The Figure clearly shows that there will be high/ moderately high impacts should the majority of the sites in & around Kidlington be released to meet housing needs. This impact is further established within LUC's Addendum to the Study (June 2017) within which comments have been provided on each of the proposed releases. In particular, for the sites west & north of Yarnton, the Addendum states at paragraph 1.24 that the hedgerow boundary to the north is not a strong feature but is consistent with the proposed new settlement edge to the east of the A44. Commentary such as this within an evidence base is not convincing when considering how to manage further growth because it has already been recognised that the proposed boundary does not present a strong feature & as such opens up the possibility for challenges in the future. It is recommended that the Council seek to utilise sustainable sites outside of the Green Belt in the first instance, yet where this cannot be achieved, then the Council at least need to present development allocations that accommodate strong defensible boundaries to ensure development comes forward in accordance with the adopted strategy in the future. Furthermore, it is considered that the exceptional circumstances for the removal of land from the OxfordGreen Belt (as presented in paragraph 5.17 of the Proposed Submission Local Plan Partial Review) are ineffective due to the repetitive nature of each point. It is recommended that these exceptional circumstances are summarised referring to each key issue in turn, such as the need to meet Oxford's housing needs, the opportunity to provide improvements to the quantity and quality of new public open space and green infrastructure etc., and the need to ensure a cautious approach at Woodstock. It is not considered that the distance/ proximity to Oxford can present an exceptional circumstance to support Green Belt release."</p> <p>Changes Sought</p> <p>Reasons for Participation</p> <p>"To explain further the rationale behind the suggested changes and be given the opportunity to respond to any changes the Council proposes to make and any further evidence that is presented."</p>							

PR43 Proposed Submission Sustainability Appraisal

PR-C-0018	24/07/2017	Philip	Skipp					
18	<p>Comments</p> <p>Would like to draw attention to the specific observations and findings regarding the SA (Sustainability Appraisal) Objectives 7, 8, 9, 10 & 13. The report begins by saying, 'In combination, the adopted Local Plan Part1 and the Local Plan Part 1 Partial Review ... are likely to have significant negative effects' Referring to SA 10 (air quality and road congestion) it says the development would see 'increasing greenhouse gases from the construction and operation of the new communities as well as air pollution from increases in the number of vehicles'. In regard to SA Objective 7 (biodiversity) it notes, 'there is potential for pollution run off, dust, noise, light spillage and changes to water levels'. It goes on to say there is, 'the potential for habitat fragmentation and loss of connectivity, habitat and species loss, habitat disturbance and degradation and species population' Referring to SA Objective 8 (landscape) it observes, 'Most of the homes are to be provided on greenfield land of varied landscape character and sensitivity. In combination, the loss of such a significant area of countryside has the potential to generate significant negative effects'. Similarly, SA Objective 9 (historic environment) notes, 'Most of the homes are to be provided on greenfield land of varied historic value and sensitivity. In combination, a significant area of development has the potential to generate negative effects on heritage assets'. It concludes by saying of SA Objective 13 (efficient use of land) 'Most of the homes are to be provided on greenfield land of varied agricultural value, including some of the District's best and most versatile agricultural land'. When one reads other sections of the submission, it quite clear that the concerns raised above have already been anticipated by planners.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							
PR-C-0018	06/10/2017	Philip R	Skipp					N
2385	<p>Comments</p> <p>Comments regarding the specific observations and findings of SA Objectives 7-10 and 13. 22,800 homes already committed in Cherwell and the additional 4,400 homes will mean no amount of mitigation is going to lessen the huge impact it will have on the environment and existing communities. Oxford's unmet need is based on the SHMA and should be treated with caution. Government's view of protecting the Green Belt. Five guiding principles of the Green Belt quoted. CDC can not demonstrate any of the five guiding principles. There is a need for affordable housing and the creation of jobs but there is also a duty on those of us who care to speak up for the British countryside.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							
PR-C-0107	20/08/2017	Mr Jeffrey	Lyes		N	Y		N
5827	<p>Comments</p> <p>The Plan is inconsistent with the National Policy as it treats the Green Belt (GB) with contempt. The national Planning Policy Framework (NPPF) only permits loss of GB in "very special" circumstances. Ref refers to government policy on GB in his letter. Unmet housing is not one of these. The Plan depends on the destruction of a significant portion of Green Belt. The NPPF states " The fundamental aim of the Green Belt is to prevent urban sprawl by keeping land permanently open; the essential characteristics of Green Belt are their openness and permanence". The identities of the three villages of Kidlington, Begbroke and Yarnton are characterised by open settings. They will be destroyed and become subsumed in a piece of what Cherwell Council calls "space shaping" - basically the urban sprawl the Government claims it wants to prevent. Cherwell seem to have a political approach to sustainability and have decided to simply offset the environmental loss of Green Belt by saying in Para 1.206 of their Sustainability Assessment: The overall impact on the Green Belt and its purposes, including the amount of land that needs to be removed to effectively implement the Plan, has been considered by the Council in the context of the outcomes of the SA for example in relation to the significant positive effects for affordable housing provision in locations which best help to meet Oxford's unmet housing needs." On that basis the Green Belt might as well not exist. It becomes by definition unsustainable.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							

PR43 Proposed Submission Sustainability Appraisal

PR-C-0237	15/09/2017	Karen	East	TMP Planning Ltd on behalf of Gosford and Water Eaton Parish Council			N	Y
------------------	------------	-------	------	--	--	--	---	---

822

Comments

Whilst it is noted that Area A - Kidlington and the surrounding area - appears to perform well against some of the criteria, notably access to services, the assessment also highlights number of potential negative effects, notably on landscape, biodiversity and heritage. Given the scale of development proposed, the benefits to health and well being (objective 2) (measured by proximity to existing public services e.g. doctor's surgeries, sports facilities and open space etc.) is overstated. These facilities are provided to serve existing communities, and will not be able to cater for new residents as well, without significant expansion/investment. Any large scale development would need to provide new services for new residents. The SA sets out that for Area of Search A, Kidlington, there is potential for both negative and positive effects on air quality and congestion (Objective 10). Negative effects caused by increased traffic, given how close the area is to existing AQMAs, is of considerable concern. This further emphasises the need to deliver public transport, cycling and walking links to minimise this impact. The Parish is very concerned about the potential impacts on congestion arising from such large-scale development. On objective 5 (creating and sustaining vibrant communities), the potential for negative effects on existing communities is significant, and not just through the construction phase, but also once built through increased noise, light and traffic pollution, for example. At a high level of assessment as that used in the SA, there should be a recognition that significant adverse effects are possible, and that careful consideration needs to be given to help minimise these given planned development will increase the current local housing by over 208%. Noted there is some recognition of the impact of settlements coalescing under Objective 8 (landscape), believe that this is understating the impact. In terms of sustainability, the potential that existing settlements will lose their identity and merge together, is a major consideration for current and future generations. It should be given greater weight. Site Options within Areas of Search A and B Appraisals: Concerns in relation to the Sustainability Appraisal as applied to the Areas of Search are carried through to the appraisal of site options. Strategic Policies and Preferred Site Allocations Appraisal: Again, many of the concerns outlined above are carried through to the Preferred Site Allocations Appraisal. It is noted that Policy PR1 shows mixed positive/negative effects on Pollution and Congestion. Not convinced that there are positive effects on this objective given that increased road traffic will be generated in areas already suffering from pollution. This comment also applies to the housing site allocation which perform the same against this objective. In terms of the site allocations, also note that the housing sites within the Parish are shown to have potential negative effects on biodiversity, landscape, historic environment, efficient use of land and resource consumption. This reiterates concerns that there are significant environmental consequences arising from these allocations. Page 54 of the SA looks at cumulative effects and again highlights the negative effects of all development proposed.

Changes Sought

Parts of the Sustainability Appraisal should be reviewed and revised.

Reasons for Participation

The Parish Council would wish to take part in order to explain the potential impact of the proposed development on local communities and why this should be better reflected in the draft vision.

PR-C-0416	14/09/2017	Theresa	Goss	Milcombe Parish Council

Comments

With regard to these reasons the Council has recorded a significant negative effect with regard to the efficient use of land with regard to nearly all of the sites it has allocated. This because the sites are located on greenfield land and Agricultural Land Quality Grade 3 or above. This does not therefore mean that the land in Webb's Way is any worse than the other greenfield sites under consideration. As the site is only small, comprising 3.447 ha and a large part of it would be retained as open space as set out in the accompanying Landscape & Visual Appraisal (January 2017) in order to protect the character of the Cherwell Valley and Kidlington Conservation Area, there would not be a significant increase in traffic through the village and the high quality setting to the north and east of Kidlington would be protected. DTA have prepared a Transport Statement for the Webb's Way site, (submitted with these representations) which indicates that for a development of 30 dwellings, which is what would be likely to be accommodated on this site, 'the proposed use could generate in the order of 16 two-way vehicle movements during the peaks,' i.e. 8.00 - 9.00 & 17.00 - 18.00 or '1 trip every 4 minutes'. This would have a negligible impact on traffic movements through the village. For these reasons it is not considered that the reasons for rejection given in the council's Sustainability Appraisal are valid.

Changes Sought

Amend the strategy to remove, or at least minimise, the amount of land to be removed from the Green Belt in the 'Kidlington Gap' by instead removing other areas, such as the J A Pye (Oxford)Ltd land at Webb's Way, Kidlington (PR32), which the Cherwell Green Belt Study (April 2017) has identified would cause less harm to the Green Belt.

Reasons for Participation

J A Pye (Oxford) Ltd owns land at Webb's Way, Kidlington and wishes to ensure that the argument is strongly made for the removal of this site from the Green Belt and its allocation for housing development, which would help to address Oxford's unmet need.

Comments

The Council has decided that the most sustainable locations for accommodating development to meet Oxford's unmet need are in Areas of Search A and B. The Webb's Way site is in Area A and so is in a sustainable location to meet Oxford's unmet need. The Council has given its reasons for rejecting the site (Site ref 32) in paragraphs 10.124 - 10.126 of the Sustainability Appraisal where it states that: '10.124 Significant positive effects are identified in relation to access to services and facilities. Significant negative effects are recorded for the efficient use of land. 10.125 The site's location to the north of Kidlington centre means that increased traffic through the village could be expected. The site lies within a Conservation Area comprising the original historic core of the village but this in itself would not preclude high quality, sensitively designed development. The Kidlington Framework Masterplan (2016) highlights the need to protect the high quality setting to the north and east of Kidlington. In view of the likely traffic generation and the Masterplan's aspiration, the site is not considered to represent the best way to achieve sustainable development to meet Oxford's needs. 10.126 The Council considers that site should not be taken forward for residential development.'

Changes Sought

Objects to proposed plan & sustainability appraisal. It is inconsistent with the NPPF because it fails to provide sustainable development, ensuring a better life for current/future generations. It fails to: Promote realistic sustainable transport; Protect GB; Meet the challenge of climate change & resultant flooding; Conserve and enhance the natural and historic environments. The consultation process has been unreasonable. I object to the complexity of it, with the demand that representations are made on a specific form, and being timed over school holidays. CDC failed to give the public an opportunity to digest the proposals & make their views known. Considers the proposed submission plan, associated policy maps and sustainability appraisal to be unsound, not positively prepared, not justified and not effective for the reasons detailed in specific objections and comments.

With regard to the Proposed SSA, we note the 3 scenarios which have been tested, in terms of the 4400 homes apportionment & significantly less & significantly more than this. However, we would like more clarity on what is “significant” as it is not clear at present? The testing of the higher & lower numbers also does not appear to relate to any spatial strategy so the implications of this are also unclear.

Concerned that the Council has not undertaken a robust assessment of the options for accommodating Oxford City's unmet housing need, particularly within Yarnton. The Council's Sustainability Assessment is flawed and should have considered development on at least part of our client's land as well as the proposed allocation at Land West of Yarnton (draft Policy PR9). Paragraph 10.148 of the Sustainability Assessment confirms that significant positive effects, regarding development on the subject site ('Site 75 - Land adjacent to The Old School House, Church Lane, Yarnton'), are identified in relation to access to services and facilities. It has also been confirmed that no significant negative effects are identified. The Council has acknowledged that the site could link to, and integrate with, the existing village of Yarnton. However, concern is raised in relation to the potential impacts on the setting of the Registered Park and Garden and listed buildings to the south of the site, and as such the Council has concluded that the site, in its entirety, should not be taken forward for residential development. In doing this, the Council has not considered the potential to develop only the northern portion of the subject site, 'Site 75', rather than the whole of the site. Development on the northern portion, in particular, would form a logical extension to the village and would be sufficiently separated from the Registered Park and Garden and listed buildings to the south. The Proposed Submission Partial Review proposes to deliver 4,400 new homes within seven residential development areas. Paragraph 8.60 states that delivering all 4,400 homes, or significantly more, in close proximity to Oxford and the villages of Kidlington, Begbroke, Islip and Yarnton will ensure that the new homes are located in areas with good access to medical services and open spaces for recreation. This suggests that it would be more sustainable to deliver new homes within the villages mentioned above than other parts of the District, or even the County as a whole. Given that Yarnton has been designated a large Category A village which has access to a range of services and facilities, including a primary school which is proposed to be extended as part of the development on Land West of Yarnton (draft Policy PR9), it is considered that the village has the capacity to deliver more new homes than currently proposed within the Partial Review Local Plan. Development on the northern portion of the subject site would provide small scale, sustainable development which could come forward in the short term. We therefore urge the Council to consider the subject site, in whole or in part, for inclusion within the Local Plan Partial Review. If the subject site were to be developed, the existing landscaping and Yarnton Manor boundary to the south of the site would provide a clear, defensible and permanent boundary to the Green Belt as required by paragraph 85 of the National Planning Policy Framework (NPPF). Furthermore, if the northern portion of the site were to be developed, a comprehensive landscaping scheme would accompany any such development, both screening and protecting the settings of the nearby listed buildings and Registered Park and Garden and enhancing the site's/ Green Belt boundary to the south. The Local Plan Partial Review has not been positively prepared as there is additional capacity for the development of new homes at Yarnton, a sustainable large Category A village within close proximity to Oxford City, which is not currently being realised by the Council. Concerned that the Council has not undertaken a robust assessment of the options for accommodating Oxford City's unmet housing need, particularly within Yarnton. The Local Plan Partial Review is not justified as the Council has failed to fully consider all reasonable alternatives/ additional options as the whole of the subject site has been disregarded without considering the potential for partial development on the site.

Changes Sought

The Council should consider the northern portion of the site as a small scale, sustainable housing allocation at Yarnton.

This was incredibly difficult to understand and make sense of. Have no doubt this was also deliberate. Have read through the parish council's response which I do understand and I attach that here: The Sustainability Appraisal (SA) is based on considering areas against a range of economic, social and environmental objectives. It is a high level study, based on a number of assumptions and subjective judgements, and therefore can only have limited value in assessing the suitability of locations for development. Our comments below relate to the different stages of the process. Areas of Search Appraisal (1.93 – 1.113) The points below repeat out concerns expressed at the Option Consultation Stage. Whilst I note that Area A - Kidlington and the surrounding area - appears to perform well against some of the criteria, notably access to services, the assessment also highlights a number of potential negative effects, notably on landscape, biodiversity and heritage. Given the scale of development proposed, the benefits to health and well being (objective 2) (measured by proximity to existing public services e.g. doctor's surgeries, sports facilities and open space etc.) is overstated in our view. These facilities are provided to serve existing communities, and will not be able to cater for new residents as well, without significant expansion/investment. Examples include doctor surgeries and hospital services. Any large scale development would need to provide new services for new residents. The SA sets out that for Area of Search A, Kidlington, there is potential for both negative and positive effects on air quality and congestion (Objective 10). Negative effects caused by increased traffic, given how close the area is to existing AQMAs, is of considerable concern. This further emphasises the need to deliver public transport, cycling and walking links to minimise this impact. As stated elsewhere, the Parish is very concerned about the potential impacts on congestion arising from such large-scale development. On objective 5 (creating and sustaining vibrant communities), the potential for negative effects on existing communities is significant, and not just through the construction phase, but also once built through increased noise, light and traffic pollution, for example. At a high level of assessment as that used in the SA, there should be a recognition that significant adverse effects are possible, and that careful consideration needs to be given to help minimise these given planned development will increase the current local housing by over 108%. Whilst I note there is some recognition of the impact of settlements coalescing under Objective 8 (landscape), I believe that this is understating the impact. In terms of sustainability, the potential that existing settlements will lose their identity and merge together, is a major consideration for current and future generations. It should be given greater weight. Site Options within Areas of Search A and B Appraisal. I set out above our concerns in relation to the Sustainability Appraisal as applied to the Areas of Search and many of these concerns are carried through to the appraisal of site options. Strategic Policies and Preferred Site Allocations Appraisal. Again, many of the concerns outlined above are carried through to the Preferred Site Allocations Appraisal. It is noted that Policy PR1, a key policy for the Plan shows mixed positive/negative effects on Pollution and Congestion. Not convinced that there are positive effects on this objective given that increased road traffic will be generated in areas already suffering from pollution. This comment also applies to the housing site allocation which perform the same against this objective. In terms of the site allocations we also note that the housing sites within the Parish are shown to have potential negative effects on biodiversity, landscape, historic environment, efficient use of land and resource consumption. This reiterates our concerns expressed in other parts of our responses that there are significant environmental consequences arising from these allocations. Page 54 of the SA looks at cumulative effects and again highlights negative effects as highlighted above when you look at the effects of all development proposed.

Comments

The appraisal of alternative apportionment figures in Chapter 8 of the SA is high level to the point of being meaningless. There is no consideration given to the spatial implications of accommodating different apportionment figures and hence no potential to conclude on effects. Specific reference made to paragraphs 8.25 and 8.26. Discussion in paragraphs 7.69 to 7.91 of the SA report, which deal with the Council's reasons for focusing on Areas A and B, is long winded and unhelpful. Paragraphs 7.71 to 7.72 reference the Council's reliance on an overly simplistic metric. Reference is made to the Local Plan Expert's Group concerns regarding reliance on the regulation 19 stage, which suggests that consultation on the SA Report alongside a "true" draft plan, under Regulation 18, is necessary to meet with the requirements of the SEA Directive and the Aarhus Convention. Reference made to inaccuracies in paragraph 10.102 on Shipton on Cherwell quarry. General concerns over analysis being overly mechanistic, the report being too long, repetition of 2016 analysis rather than refining of options, and little to indicate new evidence/understanding was taken into account. Specific points raised with reference to access to a train station, agricultural land, air quality, economic objectives, flood risk, landscape, and Shipton-on-Cherwell and Whitehill Farm Quarries SSSI. Various concerns on the adequacy of the SA report focussing on the Non Technical Summary, including its length, reference to positive effects for air quality and biodiversity, no suggested recommendations/mitigation measures as required by the SEA Regulations, and no analysis presented to justify the conclusions.

The allocation of site PR6c for the potential construction of a golf course, should this be required as a result of the development of Land to the West of Oxford Road under Policy PR6b, is not justified by the evidence base and is an inefficient use of a sustainably-located parcel of land, which is well-related to Oxford. Despite being stated by Cherwell District Council to be unsuitable for allocation as housing in its justification for policy PR6c, the Sustainability Appraisal demonstrates that the site performs equally with sites PR6b and PR7a, and better than sites PR9 and PR10 in terms of impacts on Oxford City, and equal to PR6a, PR6b, PR9 and PR10 in terms of impacts on Cherwell District.

Comments

This representation and its accompanying evidence base demonstrate that there is a basic failure of approach in the Proposed Submission Plan Sustainability Appraisal's analysis of allocated sites and alternatives. The Sustainability Appraisal assesses Site PR6c not against the purposes of the Local Plan Review, i.e. to meet Oxford's unmet housing need in a sustainable way that is spatially-relevant to Oxford, but rather against the allocation of the site as a golf course. The reasons for this approach are not set out in the SA, nor are they evidenced in the Submission Local Plan. This therefore results in a lack of assessment of Site PR6c in terms of its suitability to provide housing. This failure to undertake a robust and comparable assessment of the site's suitability for allocation for housing, coupled with a lack of justification in the Sustainability Appraisal and Proposed Submission Plan for this approach, results in an evidence base which is flawed, unsubstantive and does not conform to the requirements of Paragraph 158 of the National Planning Policy Framework (NPPF). It further does not provide a direct comparison of the advantages and disadvantages of the site compared to the other allocations and does not permit a third-party to understand the conclusions of the Sustainability Appraisal, nor the rationale behind them.

Comments

The Pre-Submission draft of the Local Plan Partial Review is not legally or procedurally compliant as a result of the approach undertaken to identifying first, broad Areas of Search Options and secondly, specific sites within those options that were taken forward (Options A and B). Bloor Homes currently control land at Dover Avenue and Thornbury Rise (Site PR 45), which lies immediately to the south of the existing allocation within the adopted Local Plan, BAN 3 – West of Bretch Hill. In line with previous representations submitted in relation to land at Dover Avenue and Thornbury Rise, it is considered that the site offers a logical and sustainable extension to the settlement of Banbury, which would not necessitate the removal of Green Belt Land. Furthermore, it is considered that the Local Plan Partial Review fails the tests of soundness set out within Paragraph 182 of the National Planning Policy Framework. 4.5 It is therefore considered that significant amendments to the Local Plan Partial Review are required before the plan can be found sound or legally compliant. Appendix 1 - Site Location Plan. Appendix 2 - Site Sustainability Appraisal.

Specifically with relation to Option H, the SA considers that the alternative options would have a greater detrimental impact on the existing spatial strategy within the existing Local Plan. The sole reason for this conclusion with respect to Option H is that "additional significant development in the Banbury area would provide unwarranted competition for private and public investment potentially hindering the delivery of existing Local Plan policies by 2031." However, no evidence is provided that supports this assertion. Moreover, as the LPAs within Oxfordshire form a single, strategic HMA, housing need within one LPA can be appropriately accommodated within the other. As the additional development required to satisfy Oxford's unmet housing need (ca. 15,000 dwellings) is identified as part of the wider need for ca. 100,000 homes during 2011-2031 in Oxfordshire, as a whole, locating this development in another district within the same HMA is unlikely to adversely affect the viability or delivery of housing within Cherwell itself. This is supported by the Oxfordshire Growth Board Post-SHMA Strategic Work Programme (SWP), which states that "...the evidence indicates good levels of demand for new homes and residential development land in Oxford and surrounding areas, particularly those with good transport connections to the City" while "...generally, large scale residential sites in close proximity to Oxford will be viable unless there are exceptional levels of abnormal costs or expensive strategic infrastructure requirements which are unlikely to be funded." Indeed, the SA concludes that Option H scores the most positive, significant effects on Cherwell, as well as the least significant, negative effects on both Cherwell and Oxford, alongside other options, including Option A (SA Paragraph 7.71). Furthermore, as well as supporting the Area of Search H, consideration needs to be given to opportunities to increase the amount of dwellings, where appropriate, on existing Strategic Sites or as extensions to existing, Strategic Sites (including Banbury 3: West of Bretch Hill). A similar approach was recommended by the OGB's SWP report, which stated: "When deciding which, if any, sites to include in their Local Plans to meet Oxford's unmet housing needs, consideration should be given to the merits or otherwise of bringing forward a combination of sites in order to provide a coordinated approach to the planning and delivery of development."

Comments

As part of the 2014 Proposed Modifications Consultation of the Local Plan a Sustainability Assessment (SA) for the site was specifically produced. The attached assessment provides a positive assessment of the site and is still considered relevant in terms of this consultation. The SA identifies that the site would contribute towards reducing poverty and social exclusion, as new development would be required to provide affordable housing. Although the definitive level of affordable housing provision would be a matter for future planning applications, the importance of any additional affordable housing in Banbury cannot be understated. The site would also positively contribute towards the Council's regeneration objectives of Bretch Hill. Furthermore, an analysis of environmental impacts, sustainable transport as well as appropriate landscaping were undertaken as part of the planning process for the application to the north (13/00444/OUT and 17/00189/F). This found that any negative impacts resulting from the northern development could be sufficiently mitigated. Given the congruity of the site, it is felt that the same conclusions can be appropriately drawn. Overall it is evident that the site (PR 45) is suitable for approximately 150-200 dwellings and would provide a logical and sustainable extension to the settlement of Banbury as well as the submitted Core Strategy Banbury 3 Allocation and planning applications 13/00444/OUT and 17/00189/F. It is therefore considered that in bringing forward development on this site, at the present time, Bloor Homes intend for it to make a positive contribution to the wider housing needs of Cherwell District, particularly given that there is a requirement for the Council to accommodate some of the unmet housing need and the housing land requirement from Oxford City Council.

Changes Sought

Suggests inclusion of PR45 would assist with meeting Oxford's unmet housing need.

Reasons for Participation

It is considered necessary to ensure that the Local Plan Partial Review is legally and procedurally compliant, positively prepared, justified, effective and compliant with national policy.

PR43 Proposed Submission Sustainability Appraisal

PR-C-0842	10/10/2017	Duncan	Chadwick	David Lock Associates on behalf of University of Oxford, Merton College and a private landowner	Y	Y	N	Y
-----------	------------	--------	----------	---	---	---	---	---

5021

Comments

The Sustainability Appraisal suggests a ‘significant negative effect’ in relation to Sustainability Objective No. 13 “to improve efficiency in land use through the re-use of previously developed land and existing buildings and encouraging urban renaissance”. The justification is based upon the site being entirely greenfield. This ignores the inclusion of the Yarnton Nurseries Garden & Shopping Village within the proposed Policy PR8 allocation. This extends to approximately 5 hectares and is clearly an extensively developed site. The Tripartite therefore considers that the Sustainability Appraisal and its assessment is (in this respect) ineffective, incorrect and misleading as a sizeable part of the site is and should be considered to be previously developed land in the Sustainability Appraisal. The location of the allocation is driven [in large part] by the proximity to, and inclusion of, the University of Oxford’s Begbroke Science Park and potential relationship between 1,950 new homes and the jobs, research, innovation and commercial activity associated with the Science Park, which is recognised in the Plan as being of ‘international significance’ and ‘of great importance to the local and Oxfordshire economy. The site was chosen, inter alia, as an efficient and sustainable way to deliver homes, jobs and infrastructure together, reducing the need to travel by car. Policy PR8 proposes an ‘urban neighbourhood’ with homes constructed at an approximate average net density of 45 dwellings to the hectare. This will ensure efficient use of the land available. Its co-location, close to Oxford and Kidlington, next to a railway halt and possible P&R and close to Oxford Airport brings an exceptional or unique opportunity to meet Oxford’s needs in association with the growth of the Science Park, the expansion of which has already been accepted to be an ‘exceptional circumstance’ justifying a Green Belt Partial Review (Cherwell Local Plan 2011-2031 Part 2). The SA also suggests that the majority of the land is predominantly Grade 2 and 3 agricultural land, which the Tripartite consider is not based upon proportionate evidence (Paragraph 182 of the NPPF). The only information on agricultural land quality available for this site is provisional (1:250,000) mapping from the 1970s. This information is both insufficiently accurate in scale and uses an obsolete system of classification (the current guidelines for ALC are from 1988). Natural England (the statutory consultees on land quality) make clear in their Technical Guidance Note (TIN 049) that these maps should not be relied upon for individual sites and detailed survey is needed. Such a survey is being undertaken by the Tripartite’s agricultural land consultants and the results/report/assessment will be available to inform discussion and further representations to the Inspector appointed to examine the Plan. Therefore, the statement that “the majority of the site (approximately 45%) is classed as Grade 2 Agricultural Land, while the remainder is classed as Grade 3 (approximately 40%) Agricultural Land and urban (approximately 5%)” is inaccurate; it will not be known what proportion of the land is within each grade until it has been surveyed in detail. Detailed comments on the SA assessment for Policy PR8 provided.

Changes Sought

Proposed changes suggested - SA Objective No. 9 to be amended to show a ‘negligible effect’. SA Objective No. 13 to show a ‘negligible effect likely’ or ‘likely effect uncertain’. SA Objective No. 14 to be amended to show a ‘minor positive effect’.

Reasons for Participation

The land owned and controlled by the Tripartite comprises some 86% of the largest draft allocation within the Plan and as such, occupies a unique and vitally important role in meeting Oxford’s Unmet Housing Needs. As such, the Tripartite consider it is essential that it is present [and/or represented] and participates at the Examination in order to assist the Inspector by responding to any queries that may arise and supporting the assessment of the soundness of the Plan.

PR-C-1399	10/10/2017	Ms Jennifer	Mitter	Lichfields on behalf of The Church Commissioners for England (CCE)	N		N	Y

Comments

The CDC Local Plan Part 1 and the NPPF (Para 34) support a strategy whereby growth should be directed towards the most sustainable locations, encouraging travel by non-car modes. The County Council’s Oxford Transport Strategy is also clear in its objectives for achieving a meaningful modal shift for those travelling into Oxford City away from the private car and towards public transport. In this context, the justification for the Council’s approach in pursuing growth at sites such as PR7, PR8, PR9 and PR10 which propose concentrated levels of development (circa 3,220 dwellings) is unclear. The development as proposed is concentrated along the already very congested A44 corridor and around Kidlington which is a known congestion hotspot. While some development in this area may be appropriate, the concentration of sites will lead to significant issues of congestion given that the sustainable modes being pursued (with the exception of cycling) are all road based Park & Ride, Bus and RTP routes. The Sustainability Appraisal (June 2017) recognises that new development around the Kidlington area ‘may increase congestion but the Local Plan Part 1 Partial Review allocates new housing sites that encourage the use of sustainable transport and are allocated following consideration of their impacts on transport patterns through the SA’. Notwithstanding assessment of the proposed allocations through the SA, the impact of congestion has not been sufficiently weighed in the balance when considering reasonable alternative sites and a broader distribution across the District. For example, locating development on the rail network at locations such as Islip would assist in removing some traffic movement from the road entirely. It’s recognised that there is the potential for a new railway station at Yarnton, but this is a long term strategy with no immediate proposals for delivery. CDC does not consider this necessary infrastructure to support the proposals and simply consider it a potential future benefit. Therefore, all focus for this plan period under this strategy will be on the road, contrary to the conclusions of the Sustainability Appraisal and to which our client objects. Overall, the various transport evidence base documents prepared to date have not robustly assessed the opportunities to improve rail usage despite current work being undertaken to develop the East-West rail link. East-West rail Phase 1 works saw an upgrade of Islip station which is on the new Oxford – London Marylebone line. The Western Section of East-West Rail will also see the introduction of three new passenger services, for direct services within the region and connections to national mainline services. These services are due to start operating in the early 2020s. Despite this significant rail investment, no development is proposed within Islip which is just a 3 minute train ride from Oxford Parkway, 7 minutes from Bicester, 11 minutes from Oxford and under an hour to London Marylebone. Our client is of the view that Policy PR4a (and by association policies PR6-PR10) focuses too strongly on improvements to and mitigations for the highway network rather than considering options for removing traffic from the road network and towards more sustainable modes such as rail. The proposed locations for the additional housing are known areas of congestion and the transport proposals do not go far enough to solve the existing issues, with the proposed levels of development in this location likely to compound matters further. Our client objects to these policies which will lead to increased levels of congestion and the strategy will not achieve a step change in modal split. Soundness - The evidence base prepared to support Policy PR4a (and by association policies PR6-PR10) is not sufficiently robust to justify the approach to allocate this level of housing in an area of existing traffic congestion without an effective strategy to achieve a step change in modal split. The Council needs to justify its approach for focusing so much of the new development in one area which is already known to suffer issues relating to road congestion. Rail has not been considered as a reasonable alternative within the evidence base documents and consequently the draft plan is not justified. The draft Plan is not Effective, as it focuses too much of the housing requirement in one, focused area. The Plan is not consistent with national Policy as the proposed development is not located where the need to travel will be minimised and the use of sustainable transport modes can be maximised.

Changes Sought

The evidence base has failed to sufficiently consider investment in rail / exploitation of existing rail assets despite recent investment in the East-West Rail project. A thorough exploration of the reasonable alternatives is required. More detailed consideration needs to be given to the potential for locating new development at Islip within proximity to the existing railway station. This location would be sustainable and would support the existing local community. It has been demonstrated that there are no overriding physical constraints, in terms of highway impact, flooding and ecology, to the development of this land.

Reasons for Participation

Due to the complexity of the matters discussed in relation to PR4a

The development as proposed is concentrated along the already very congested A44 corridor and around Kidlington which is a known congestion hotspot. While some development in this area may be appropriate, the concentration of sites will lead to significant issues of congestion given that the sustainable modes being pursued (with the exception of cycling) are all road based Park & Ride, Bus and RTP routes. The Sustainability Appraisal (June 2017) recognises that new development around the Kidlington area 'may increase congestion but the Local Plan Part 1 Partial Review allocates new housing sites that encourage the use of sustainable transport and are allocated following consideration of their impacts on transport patterns through the SA'. Notwithstanding assessment of the proposed allocations through the SA, the impact of congestion has not been sufficiently weighed in the balance when considering reasonable alternative sites and a broader distribution across the District. For example, locating development on the rail network at locations such as Islip would assist in removing some traffic movement from the road entirely. It's recognised that there is the potential for a new railway station at Yarnton, but this is a long term strategy with no immediate proposals for delivery. CDC does not consider this necessary infrastructure to support the proposals and simply consider it a potential future benefit. Therefore, all focus for this plan period under this strategy will be on the road, contrary to the conclusions of the Sustainability Appraisal and to which our client objects. Overall, the various transport evidence base documents prepared to date have not robustly assessed the opportunities to improve rail usage despite current work being undertaken to develop the East-West rail link. East-West rail Phase 1 works saw an upgrade of Islip station which is on the new Oxford – London Marylebone line. The Western Section of East-West Rail will also see the introduction of three new passenger services, for direct services within the region and connections to national mainline services. These services are due to start operating in the early 2020s. Despite this significant rail investment, no development is proposed within Islip which is just a 3 minute train ride from Oxford Parkway, 7 minutes from Bicester, 11 minutes from Oxford and under an hour to London Marylebone. Our client is of the view that Policy PR4a (and by association policies PR6-PR10) focuses too strongly on improvements to and mitigations for the highway network rather than considering options for removing traffic from the road network and towards more sustainable modes such as rail. The proposed locations for the additional housing are known areas of congestion and the transport proposals do not go far enough to solve the existing issues, with the proposed levels of development in this location likely to compound matters further. Our client objects to these policies which will lead to increased levels of congestion and the strategy will not achieve a step change in modal split. Soundness - The evidence base prepared to support Policy PR4a (and by association policies PR6-PR10) is not sufficiently robust to justify the approach to allocate this level of housing in an area of existing traffic congestion without an effective strategy to achieve a step change in modal split. The Council needs to justify its approach for focusing so much of the new development in one area which is already known to suffer issues relating to road congestion. Rail has not been considered as a reasonable alternative within the evidence base documents and consequently the draft plan is not justified. The draft Plan is not Effective, as it focuses too much of the housing requirement in one, focused area. The Plan is not consistent with national Policy as the proposed development is not located where the need to travel will be minimised and the use of sustainable transport modes can be maximised.

Changes Sought

The evidence base has failed to sufficiently consider investment in rail / exploitation of existing rail assets despite recent investment in the East-West Rail project. A thorough exploration of the reasonable alternatives is required. More detailed consideration needs to be given to the potential for locating new development at Islip within proximity to the existing railway station. This location would be sustainable and would support the existing local community. It has been demonstrated that there are no overriding physical constraints, in terms of highway impact, flooding and ecology, to the development of this land.

Reasons for Participation

Due to the complexity of the matters discussed in relation to PR4a

The appraisal and choice of sites due to the weighting attached to the criteria in both the Green Belt Study and the Sustainability Appraisal result in skewed assessments that place heavy weighting on access to transport infrastructure and employment potential, and very little emphasis on harm to the Green Belt. Representations to Issues and Options stage included in references made. The allocation of sites has been made based very largely on the results of the sustainability appraisal, backed up by a very flawed Transport Assessment (see my Appendix 1 and below). This therefore supports my contention that neither the policy purposes nor the value of the Green Belt in contributing intrinsically to the sustainability of places for people to live have been adequately taken on board as part of a more complete assessment. Given that CDC accept the importance of local landscape, then that should have featured in a supplementary document of some sort, and weightings should have been given and sites reassessed. None of the criteria used in the latest assessment vary from the initial assessment, but applying my separate criteria, and using the rather blunt '+' and '-' scale used in the SA, the scores of each of the key sites are changed radically (see Appendix 1).

Changes Sought

Rewrite to reflect impact on Green Belt in the local areas.

Reasons for Participation

Has spoken as a platform speaker at three public meetings in Kidlington and Gosford. Made a substantial representation at the Issues and Options stage. As a former parish councillor, has represented Kidlington Parish Council at the North Oxford Area Action Plan examination in public, and likewise was invited to the Examination in Public of the Local Plan. Has an MSc in Transport Planning, so part of representation covers that area. Also offers a distinctive perspective as a local resident, who agrees with the principle of a Green Belt review, but does not support the current planned site allocation. Has no interest in promoting a particular site, but only have some sympathy with those who would wish to preserve the Green Belt intact. Believe views represent many in Kidlington who recognise the need for local housing, but see these plans as strategically unacceptable. Representation contains primary research evidence which could be presented.

Main objection to the use of this very large tract of land is that the theoretical capacity of the site was established at 8,731 dwellings in the Initial Sustainability Appraisal Report, which is not dissimilar to the 7,000 put forward by the developer at the time of the Local Plan. At that time, the proposal was rejected, and the Inspector ruled that the small scale local review for employment purposes (at Langford Lane and Begbroke Science Park) was reasonable, while strategic housing was to be located in Bicester, Banbury and Heyford which catered for the expected employment growth. It is not appropriate to use the pretext of meeting Oxford's unmet housing need to source new housing for Cherwell generated employment. This undermines the agreed strategy of the Local Plan. The Kidlington Masterplan deals with minor non-strategic housing to meet local needs. Detailed analysis provided. The closure of Sandy Lane to motorised traffic is undesirable. In 100 interviews conducted in Kidlington High Street, 8% of visitors came from Yarnton, and the closure of Sandy Lane would inhibit this trade. At the time of the Sainsbury's extension around 10 years ago, the Inspector accepted that Kidlington High Street's anchor stores were underperforming relative to average store floor spaces by £5m/year, and the Co-op anchor store has recently received planning permission to reduce its floor space. It is not the case that Kidlington has a thriving centre in which the loss of some trade from Yarnton would be unnoticed. For Yarnton Nurseries, 26% of their trade comes via Sandy Lane from Kidlington. This is unlikely to be made up for by allocations in the Yarnton area, as Kidlington would still be a far larger settlement. Other than the purely trading links, Sandy Lane provides a valued communal link which would not otherwise exist if such a direct link were severed. Would be happy to accept a much smaller scale of development on this site, one that reflects the originally sanctioned small scale 2ha increase in the Begbroke Science Park, with one primary school. But in terms of meeting the bulk of Oxford's needs, believes that there are better alternatives closer to the Northern Gateway that are less damaging in terms of the near coalescence of settlements, and more sustainable.

Changes Sought

Retain allocation of nature conservation areas, one primary school, remove allocation of 1,950 dwellings and secondary school. Remove existing proposed expansion of Begbroke Science Park. Remove references to and indicative map of station. Insert new policy with retained secondary school, and allocation of 200 houses, permitted 2ha expansion of Begbroke Science Park. Insert new station proposal linked by cycleway from a location at Lyne Road.

Reasons for Participation

Has spoken as a platform speaker at three public meetings in Kidlington and Gosford. Made a substantial representation at the Issues and Options stage. As a former parish councillor, has represented Kidlington Parish Council at the North Oxford Area Action Plan examination in public, and likewise was invited to the Examination in Public of the Local Plan. Oxford City Unmet Needs - Paragraph B.95 of the adopted Cherwell Local Plan (2015) committed the Council to undertaking a partial review of the Local Plan in the event that the work of the Oxfordshire Growth Board concluded that Cherwell and other Districts needed to meet additional need for Oxford. The current consultation document is the latest stage in the Council seeking to fulfil this commitment. The Partial Review Plan makes provision for the delivery of 4,400 new homes to meet Oxford City's identified needs. The 4,400 homes target represents the agreed apportionment by the members of the Oxfordshire Growth Board, with the exception of South Oxfordshire District Council, at its meeting on 26th September 2016. The proposed apportionment had been determined on the basis of a report from Land Use Consultants (LUC), which provided a spatial assessment of options for accommodating the unmet needs of the City, as well as other evidence relating to economic, education and transport considerations. It had been expected that the authorities would confirm a Memorandum of Cooperation at the meeting on the 26th September 2016 to the effect that the six authorities 'agree' that the apportionment figures "represent the agreed apportionment." However SODC was unwilling to agree to the Memorandum on the basis that the areas of search within their administrative area included in the LUC report had not been put forward by the District Council. Although the recognition by CDC of the need to make provision to assist in meeting Oxford City's unmet needs is supported, there remains significant uncertainty as to whether the 4,400 dwellings proposed to be provided for is in fact the correct level of development to be planning for. Since the Growth Board Meeting in September 2016, agreement has still yet to be reached with South Oxfordshire District Council in particular, although the emerging SODC Local Plan does make some provision of 3,750 dwellings towards meeting the needs of the City. The 4,400 dwellings figure is based upon an assumption that the unmet needs of Oxford City totals 15,000 dwellings. Notably, the Oxford City First Steps consultation (August 2016) itself appears to identify a shortfall of 22,000 rather than the 15,000 which was planned for by the Growth Board. There therefore remains a question as to whether the high level apportionment figure is correct, and consequently what implications there may be for the Local Plan Partial Review. The matter was the subject of discussion at the West Oxfordshire Local Plan Examination in Public however the Inspector's findings on this matter have yet to be published. In refusing to agree the apportionment proposed by the Growth Board, South Oxfordshire did raise that in their view Oxford City may be able to accommodate more of its own needs than is currently being allowed for. Whether this would equate to the additional 7,000 dwellings which appear to potentially be unaccounted for at this stage, and additionally reduce the currently proposed apportionment figures would appear to be unlikely. At this stage therefore, as a minimum, there are 1,250 dwellings (the proposed apportionment for South Oxfordshire excluding the level of provision they are currently planning for) for which provision is not currently being made for within Oxfordshire, and this could potentially increase to 8,250 dwellings, if the unmet need is ultimately determined to be 22,000 dwellings rather than 15,000. Following the Growth Board meeting on 26th September 2016 there has been no published update as to how matters are to be progressed following the failure to agree the apportionment figures with all authorities. As such it is unclear, leaving aside the question of the true scale of Oxford City's unmet needs, how the additional 1, is to be provided for. Notably the Growth Board papers for the 26th September meeting themselves highlighted that "it remains for individual authorities to test the SHMA results and its application in their respective local circumstances and to determine whether their Local Plans can sustainably accommodate development to meet the housing need identified." The proposed apportionment has not been subject to Sustainability Appraisal and as such there remains uncertainty that having agreed to the apportionment figures whether these authorities will in fact be able to deliver these requirements. As such, whilst we commend Cherwell for agreeing to accommodate 4,400 dwellings of Oxford City's unmet needs and consider it to be a pro-active response which potentially complies with the Duty to Cooperate, due to the remaining uncertainties sufficient flexibility should be built in to allow the Plan to respond to changing circumstances in order to make the Plan sound. The proposed requirement should be treated as a minimum figure and no phasing restriction should be applied to the delivery of the sites.

Changes Sought

Reasons for Participation

Our client has important land interests in the District and has raised matters important to the delivery of the Local Plan Partial Review which it would benefit the Inspector to discuss further at the Examination in Public.

Paragraph 2.12 of the Partial Review sets out the 9 'Areas of Search' across Cherwell which were considered as potential broad locations for growth as set out in the supporting Sustainability Appraisal (June 2017). Section 7 of the Sustainability Appraisal sets out the broad locations for growth. Paragraph 7.12 of the Sustainability Appraisal 10 states that the Areas of Search have been "identified having regard to the location of urban areas, the potential opportunities to develop on previously developed land, received site submissions and 'focal points' or nodes that might be developable". As set out above, the Local Plan Review should address the need to provide a balanced housing supply in locations which are both sustainable and meet the needs of Oxford City Council. This does not necessarily mean sites in closest proximity to Oxford City. There should be a single comprehensive approach to meeting Cherwell and Oxford City Councils' needs. The adopted spatial strategy within the adopted Local Plan is to focus the build of the proposed growth in and around Bicester and Banbury (Local Plan Part 1, page 10). The identification of reasonable alternatives should have commenced with a review of settlements with good socio-economic and transport links to Oxford City, the capacity of existing strategic allocations in these locations (i.e. NW Bicester – Policy Bicester 1), and whether they can accommodate additional housing. 'Areas of Search' A, B and C are all found in Kidlington. A2D acknowledge Kidlington is located in close proximity to Oxford, however, the settlement is classed as a 'Village Centre' under the Council's existing settlement hierarchy (Policy SLE211). The adopted Local Plan settlement hierarchy focuses development in Bicester and Banbury. In accordance with the Council's settlement hierarchy, development should be directed towards Bicester and Banbury as the top tier settlements and all sites within these settlements should be exhausted before considering alternatives and directing development to the second tier settlements which include Kidlington. Growth at Bicester has not been rigorously tested. The Council acknowledge at Paragraph 7.8912 of the Sustainability Appraisal that: "...Areas of Search A and B would be inconsistent with the existing Local Plan strategy of mostly avoiding development in the Green Belt". Paragraph 83 of the NPPF (2012) states that Green Belt boundaries should only be reviewed in exceptional circumstances. We question whether exceptional circumstances have been demonstrated, on the basis that Oxford City's unmet need could be met elsewhere in the District outside of the Green Belt, in keeping with CDC's adopted growth strategy. Opportunities to intensify development at existing allocations should be explored to ensure continued sustainable patterns of growth in accordance with Paragraph 84 of the NPPF13. There is insufficient evidence put forward that accompanies the Partial Review to suggest that opportunities to increase capacity at existing allocated housing sites, such as NW Bicester (Policy Bicester 1), have been robustly tested. 'Option E: Bicester and Surrounding Area' includes the strategic allocation at NW Bicester, the boundary of which is defined by the Masterplan Site Area in the NW Bicester SPD (February 2016). As stated in Paragraph 2.1814 of the Partial Review, 'Option E: Bicester and Surrounding Area' was discounted on connectivity and transport links to Oxford (reasons 1-4), strategic investment (reason 5) and concerns that additional development could not be accommodated (reason 6). A2D dispute all these reasons. In response to reasons 1-4, we argue that Bicester is situated in a prominent location within the Oxfordshire 'knowledge spine' and the wider 'Oxford Cambridge Arc'. The Site benefits from its close proximity to the M40 and the major strategic link road (Application 3: reference 14/01968/F dated February 2016), which will improve site connectivity and support the major scale proposed development at NW Bicester. Bicester also has good rail access. Bicester North and Bicester Village Stations are located on the Chiltern Main Line with regular train services to Oxford, London Marylebone, Banbury, Birmingham Snow Hill and Stratford-upon-Avon. There are also further significant planned infrastructure improvements that will enhance Bicester's connectivity including the future phases of the East West Rail (also referred to as the Varsity Line). Considering the scale, quality and type of existing and planned infrastructure, as well as its existing strong transport links to Oxford City, we consider Bicester to be the ideal location to accommodate housing to meet both Cherwell and Oxford City's needs, rather than smaller settlements such as Kidlington, which have limited infrastructure. Significant infrastructure development is required at Kidlington to support the level of growth envisaged in the Partial Review. The timescales, costs and land use implications of this require consideration. In response to reason 5, there is significant planned strategic infrastructure investment as part of the NW Bicester Masterplan. Most notably, A2D secured resolution to grant in February 2016 for a major strategic link road and railway bridge (Application 3: reference 14/01968/F) that will improve connectivity within Bicester. In response to reason 6, A2D considers additional development could be accommodated at NW Bicester. Our client can demonstrate that land controlled by A2D at NW Bicester is capable of accommodating additional housing need. We consider there to be an opportunity to review the efficiency of the NW Bicester Master Plan and its ability to meet additional housing need. In addition to the above reasons for discounting Growth Option E, Paragraph 7.80 states: "Additional significant development in the Bicester area would provide unwarranted competition for private and public investment potentially hindering the delivery of existing Local Plan policies by 2031". We refute this reason as it is not a valid reason in respect of Bicester. Whilst we accept that the Council must consider market signals, there is no evidence to support such a restriction. Strategic Allocation (Policy Bicester 1) has identified NW Bicester as being able to deliver 6,000 homes, 3,293 of which are anticipated to come forward within the plan period (up to 2031). The trajectory for NW Bicester, as set out in CDC's Annual Monitoring Report (March 2017) which covers the period 1 April 2015 – 31 March 2016, anticipates the delivery of 2,998 total homes at NW Bicester including 393 homes at the Exemplar site and 2,605 homes at NW Bicester (Phase 2) up to 2031. A2D considers further housing can be delivered at NW Bicester within the plan period and the Site can make a significant contribution to Oxford's unmet housing need and Cherwell's housing need.

Changes Sought

Reasons for Participation

Our objections in part relate to the proposed growth strategy to address Oxford City's unmet need, which we consider to be unsustainable and inconsistent with national policy. This is contrary to the adopted Growth Strategy set out in the Cherwell Local Plan 2011-2031 (Part 1), which focuses new development at key settlements, as identified in Cherwell's settlement hierarchy. The Council has not discharged its duty to demonstrate exceptional circumstances to release the identified sites from the Green Belt, pursuant to paragraph 82 of the National Planning Policy Framework. Further, there is insufficient evidence to suggest that opportunities to increase capacity at existing allocated housing sites have been robustly tested. Finally, there should be a single housing requirement for the Cherwell Local Plan. There is no justification for a separate figure to be applied to meet Oxford City's unmet need, as is currently proposed.

Comments

The release of land from the Green Belt generates in our view a comparative assessment of alternatives. A2D urge CDC to explore all alternative sites and existing allocated sites to assess if all or some of the unmet housing need can be met in these locations, in line with the sustainability principles set out in Paragraph 17 of the NPPF. These opportunities have not been fully explored. The Sustainability Appraisal (June 2017) only appraised for effects on Oxford City and not the impact on wider Cherwell District. As stated in these representations housing need for Oxford City and Cherwell should not be viewed in isolation from one another, and the adopted Local Plan and Partial Review need to be consistent with one another.

PR43 Proposed Submission Sustainability Appraisal

PR-C-1409 10/10/2017 Richard Cutler Bloombridge Development Partners N Y

5343

Comments

Our key OBJECTION to the SA is that it underplays the role played in sustainability terms by the strategic components of the GB, notably the Kidlington Gap and Begbroke Gap, and the rural setting of Oxford as viewed from the A44. Summarises: In short, there is nothing in the SA that would suggest that The Moors is not suitable for development. When combined with the landscape character (the same as urban Kidlington) and the modest Green Belt impact, it is hard to see why other sites have been selected in favour to The Moors, especially as our option land is fully controlled and available for development to meet the 2021 target date. We conclude that there are no references in the SA that would preclude development or even explain why The Moors has not been allocated, as originally envisaged by the Alan Baxter work.

Provides detailed SA comments on The Moors (PR14) at page 423 et seq. We note the following comments:
 SA Objective 16 – we have previously advised that The Moors could accommodate some employment for SMEs as part of the development mix. We clearly have a reputation in employment land delivery nearby, so we feel a +/- score here should be a +.

- The write up on sustainable transport is good, noting that The Moors is within 500m of a premium bus service.
- On biodiversity criteria, The Moors has a medium/low sensitivity, which our 10 hectares of ‘country park’ and green space can fully off set or mitigate.
- Similarly, on landscape character grounds, the site is recorded as a ‘minor negative’ effect, but with some uncertainty (i.e. there is scope for mitigation and improvement) depending on the master plan treatment.
- The site contains no designated heritage assets.
- There is no flood risk.
- The land is Grade 3 agricultural and has deteriorated recently owing to an unsatisfactory agricultural tenant.

Changes Sought

Following the precautionary principle, the Plan should start from the assumption that key strategic components of the Green Belt are considered sacrosanct. These components are identified by LUC (i.e. high impact) & include the Kidlington Gap & Begbroke Gap; acknowledging that some development may be acceptable where there are special locational advantages that only the Gaps offer (e.g. for the University or inward investment), or where the resultant development does not significantly impact on the integrity of the Gaps or their permanence. On the assumption that the draft Plan would otherwise be held to be unsound, The Moors (PR14) should be included as an omission site for c300 houses, linked to a regeneration package for the village centre and a new 10 hectare ‘country park’. In the alternative, it could be specifically listed as a ‘safeguarded site’ in Policy PR12b, or this policy could be amended to provide for localized Green Belt reviews for housing where planned for sites are not being delivered by 2021.

Reasons for Participation

We confirm that we wish to attend the examination in public.

PR-C-1413 10/10/2017 Peter Wilsdon David Jarvis Associates on behalf of Shipton Ltd N Y N Y

5298

Comments

Considers that the SA appraisal of Shipton on Cherwell Quarry needs further consideration and/or correction. The SA (and the assessments that informed it) have overlooked the fact that the site has a permitted use following restoration which includes a railhead aggregates depot, concrete batching plant, asphalt coating plant, rail storage depot, B8 storage use with two storage buildings and further temporary buildings and uses. While the SA recognises that the site is brownfield in the context of a former quarry, it should be considered in the context of the above permitted uses. Provides an alternative SA appraisal matrix for Ship ton on Cherwell Quarry (Table 4) and Summary of Effects (Table 3) A revised restoration scheme for the site is provided(Appendix 5), the majority of the site is to be restored to a state that will accommodate development/the permitted uses in any case. Notes that it would appear from the SA that this has not been taken into consideration.

Changes Sought

Shipton Quarry’s scoring is comparable to, and in some cases scores better than, the sites provisionally selected for allocation. On this basis it should therefore be allocated for development in the Local Plan Partial Review. Provides an alternative table to the SA’s Summary of Effects of Residential Options and a SA detailed appraisal matrix for Shipton on Cherwell Quarry.

Reasons for Participation

As outlined, a number of inaccuracies relating to the site exist in the evidence base, that need to be addressed. Following a review of the evidence base and the scoring of the sites in the Sustainability Appraisal, it is considered that further assessment work is likely to result in the site receiving a more favourable outcome to the extent that it should be considered a potential strategic development site. Should Cherwell District Council disagree and continue to use the inaccurate evidence base to exclude the site then it considered necessary to participate in the Examination.

PR-C-1443 10/10/2017 Alice Fitton Turley on behalf of Bovis Homes Ltd Y Y N Y

Comments

The representation provides a detailed critique of elements of the Sustainability Appraisal & concludes by stating; Banbury is a location which is proven to be sustainable through the Council’s adopted spatial strategy & a location which is well connected to Oxford via public transport. This is supported throughout the baseline information & supporting text of the SA, however it is not relayed in that manner due to the unknown thresholds and segregation of effects that have been reviewed, rather than assessing the effects as a whole on both Oxford and Cherwell.

Changes Sought

Reasons for Participation

"To explain further the rationale behind the suggested changes and be given the opportunity to respond to any changes the Council proposes to make and any further evidence that is presented."

PR43 Proposed Submission Sustainability Appraisal

PR-C-1450	10/10/2017	Mark	Rose	Define Planning & Design Ltd on behalf of William Davis Ltd	Y	Y	N	Y
-----------	------------	------	------	---	---	---	---	---

Comments

In terms of Cherwell District 4,400 dwellings has been proposed (approx. 30% of the total 15,000 dwellings). The Submission Plan refers to the collective work that has been undertaken to come to that figure, and it is apparent that the apportionment is based on an assessment of the capacity of specific development opportunities in a Spatial Options Assessment that was then further developed by Officers. That assessment, however, only considered potential opportunities in the southern part of Cherwell District close to Oxford. Whilst the Submission Plan suggests that the District Council have considered options across the whole District to accommodate Oxford's unmet need, the actual assessment of the capacity of the District to contribute to addressing the unmet need was undertaken on a restricted basis. The District Council subsequently published a Partial Review of the Sustainability Appraisal Report that looks at wider opportunities, but that assessment was not taken into account in the Growth Board's decision making process. The approach taken has, therefore, inevitably suppressed the quantum of additional development to be accommodated in the District that was agreed by the Growth Board, and subsequently the development strategy and specific allocations that are now proposed in the Submission Plan. William Davis Ltd are, therefore, very concerned that the District Council are not seeking to meet the full objectively assessed need in accordance with the NPPF to support the expected level of economic growth, and critically to ensure that the high level of affordable housing need identified in the Housing Market Area is addressed. A broader (but still sustainable) development strategy and with a higher level of overall provision would provide the essential flexibility in the strategy to accommodate for any shortfalls arising in the District (see objection to paras. 5.1-5.13 & Table 4), or in the wider HMA, to ensure that the identified development needs are actually met in accordance with the NPPF. That is particularly important given the uncertainty in relation to Oxford's true development capacity (as referred to above), and that South Oxfordshire District Council have now determined to only accommodate 3,750 of the 4,950 dwellings attributed to them to address Oxford's unmet need (resulting in a shortfall of 1,200 dwellings)

Changes Sought

Amend: "(a) a minimum of 4,400 homes to ..."
 Add: "The Council has committed to a further review of the Local Plan should the need arise following the preparation of the new Oxford Local Plan if that identifies a higher level of unmet need than is currently being provided for to which Cherwell will need to make an appropriate contribution and/or the monitoring of housing delivery demonstrates a shortfall arising within the District and/or the wider Housing Market Area."
 Also refer to objection to Paragraphs 5.1-5.13 & Table 4.

Reasons for Participation

This matter is critical to and a key element of the development strategy that underpins the Proposed Submission Plan.

Comments

It is asserted that in only assessing sites within areas A & B, the Council has not considered all reasonable other options & has effectively dismissed sustainable & suitable sites within other Areas of Search without subjecting them to the Sustainability Appraisal process. The evidence base for the Local Plan Part 1 Review is therefore considered to be incomplete. Our clients therefore consider that in order to maximise the delivery of housing across the District it is important that a range of different sites, delivered continuously through the Plan period, is provided for. Consideration should therefore be given to including sites falling within other Areas of Search which perform well in sustainability terms, particularly sites within Area of Search E. The land at Grange Farm, Station Road, Launton, as promoted by our clients for housing development, falls within Area of Search E, & is readily available to meet housing needs throughout the Plan period. This is demonstrated by the attached Illustrative Masterplan for the site. Reference is also made to the HELAA assessment for this site. Representation includes 3 x Appendices: 1: Five year housing land supply report, August 2017, Turley, 2: Site location plan, 3: Illustrative Masterplan.

Comments

The Council's Sustainability Appraisal acknowledges that the site has significant positive effects in relation to employment opportunities, access to services and facilities and reducing air pollution. Land east of the Water Eaton Park and Ride is rejected on the basis that the site is being considered through the Local Transport Plan and supporting P&R study as potential for an extension to the park and ride. It is considered that the Local Plan Partial Review has not been positively prepared as there is clearly additional capacity for the development of new homes Land East of Oxford Road which is in close proximity to Oxford City, which is not currently being fully realised by the Council. We are concerned that the Council has not undertaken a robust assessment of the options for accommodating Oxford City's unmet need in the immediate area of the allocated site PR6a.

Changes Sought

Amend the boundary of Land East of Oxford Road Neighbourhood Centre (Policy PR6a) so as to include the land east of the Water Eaton Park and Ride in the allocated site for residential development or a mix of residential and other uses. Remove the land east of the Water Eaton Park and Ride from the Oxford Green Belt. (Map attached)

Reasons for Participation

As drafted, and in so far as it relates to land East of Oxford Road the Plan has not been positively prepared, is not justified and is not effective. This goes to its soundness and raises issues that should be explored fully at the oral part of the Examination.

Comments

OPT was established in 1927 as a charity & local amenity society with the principal aim of conserving & enhancing Oxford in its setting. OPT understands the pressure that Oxford faces in terms of unmet housing need & the commitment of the surrounding districts to help alleviate this pressure. Heritage Assessment - One of the five purposes of the Green Belt is "to preserve the setting and special character of historic towns". If there is acceptance that Oxford is an historic town of some importance, & its setting & special character are a fundamental part of this, then it is necessary to understand what is significant in heritage terms & how to use such findings to inform the development plan process. Historic England's advice note "The Historic Environment & Site Allocations in Local Plans" (October 2015) provides good practice advice for those involved in the Local Plan site allocation process. This can ensure that site allocations avoid harming the significance of heritage assets & their settings. The process has 3 stages: evidence gathering, site selection & site allocation policies, & contributes to ensuring that the Plan complies with legislation & national policy requirements. The evidence gathering process (which should begin before work on the Local Plan itself) is a screening process, which creates a baseline to identify heritage assets (both designated & no designated) which might be affected by site allocations & highlights where more research may be needed. We note that the Sustainability Appraisal carried out by LUC as part of this Partial Review does include a high level assessment of the proposed sites against an objective to "protect, enhance & make accessible for enjoyment, the historic environment." (Sustainability Objective 9). All the tables in the report would suggest that the development of housing in Cherwell has the potential for either a negative or unknown impact on the historic environment. Moreover, the report concludes that "All nine areas of search are considered to have the potential to generate significant adverse effects against SA objective 9". The effects of new housing development in the proposed areas are difficult to predict without any baseline evidence on the significance of the affected heritage assets & the extent & contribution of their settings to that significance. It is therefore surprising given the potential to generate significant adverse effects on the setting & special character of statutory cultural heritage assets, as well as local cultural heritage assets (LUC paragraph 7.59) that there has been no more detailed assessment of such matters to inform decisions. It is too late to perform such analysis as a part of any development management process, as seems to be suggested. This places an unacceptable risk to the delivery of the council's statutory duties relating to the historic environment & risks a lack of clarity & certainty on being able to deliver housing developments. In addition, this report does not appear to include an assessment of the significance of specific assets that may be affected by development proposals or by the infrastructure that will be required to support them. The lack of assessment of significance means that it has not been established how any harmful impact could be mitigated & thus built into the relevant policy advice. Despite this, it appears that, the benefits of developing these areas have been assessed as outweighing the harm, in all cases.

Issue of soundness

The LPA contend, in the advancing of exceptional circumstances (5.17), that: 'The consideration of all other reasonable options did not suggest that a sustainable deliverable alternative could be provided without unacceptable harm to the existing Cherwell Development Strategy'

The Review at Section 2 refers to what options were considered, stating: 'The Sustainability Appraisal supporting the Plan tested the likely environmental effects for 4,400 homes and the effects of providing significantly more or less'.

Nine areas of search are identified in the Partial Review. The SA defined three options for quantities of additional housing growth (SA 8.5), namely:

- '4,400 homes (the Growth Board figures)

- Significantly more than 4,400 homes -

-Significantly less than 4,400 homes'

Refers to the Sustainability Appraisal and Section 9 of the NPPF (Protecting Green Belt Land) and NPPF Paragraphs 6 and 84 to support the submission.

This submission does not seek to suggest that meeting the un-met housing needs of Oxford can be achieved without altering the Green Belt boundary. Rather, the conclusion is reached that the Council has not established exceptional circumstances to alter Green Belt boundaries within the clarification provided by the Government – and the alleged approach taken by the Council (LPP1 Review 5.17 3).

If there is an exceptional circumstance to release land from the Green Belt, the overriding policy imperative for protection of the Green Belt – which is valued by communities (WP1.37) – would be served by minimising the extent to which land is taken from the Green Belt .

The Sustainability Appraisal at 7.13 explains the approach to the appraisal when considering 'reasonable alternatives' – having identified 'areas of search across the whole district to help identify the most sustainable locations for accommodating housing for Oxford' (SA 7.11).

At paragraph 2.23 of the SA it is evident that the consultants considered the GB stands outside the issue of sustainability. Only matters relating 'spatial relevance to Oxford's social and economic criteria and environmental criteria' have been assessed.

The assumptions applied in the SA (Appendix 2) identify a range of planning interests, including protecting and enhancing landscape character, and the protection of the historic environment. The appraisal that has been undertaken is entirely silent on the GB constraint. In effect, options have been considered without any regard to the existence of land within the GB where boundaries have been established in a development plan.

The SA states at paragraph 2.7: 'Providing sufficient homes to meet Oxford's needs, and the constraints to development presented by Oxford's natural and historic assets as well as the GB, is a significant challenge for the five local planning authorities in Oxfordshire'.

Refers to NPPF Section 9 (Protecting Green Belt land), paragraph 6 on GB and NPPF paragraphs 18 to 219 as a whole to support the submission.

Section 9 Protecting GB land has not featured within the Council's SA – where a fundamental purpose is to examine whether land other than taking GB is suitable to meet development needs taking account of the need to promote sustainable patterns of development (Framework 84).

This omission occurs notwithstanding the recognitions at Table A1.1 that a 'key objective relevant to Local Plan and SA' (emphasis added) is 'Protecting GB land'. The implications for the SA are referred to as 'a sustainability objective'. 'Relating to the coalescence of towns, preserving the setting of historic towns and promoting use of brownfield land'

Such objectives do not include all the purposes of including land within the GB, and fail to address the significance of the fact the land is within the GB in a statutorily adopted development plan. The consultants to the Council contend (SA P147) that the 'purposes of the GB set out in the NPPF are not all relevant to SA'. Such a contention is flawed in the context of meaning of sustainable development (Framework 6). "

This submission does not seek to suggest that meeting the un-met housing needs of Oxford can be achieved without altering the GB boundary. Rather, the conclusion is reached that the Council has not established exceptional circumstances to alter GB boundaries within the clarification provided by the Government – and the alleged approach taken by the Council (LPP1 Review 5.17 3).

The exercise in the consideration of 'all other reasonable alternatives' does not mean that the land search necessarily has to identify large scale tracts of land to accommodate new housing building of a substantial scale. Rather, in the consideration of 'all reasonable alternatives' the appraisal should consider areas of land suitable for housing – within the areas considered the most sustainable development within the District.

Where there are reasonable alternative sites which are suitable for housing – and their release would be consistent with the development strategy of the Part 1 Plan – these areas should be allocated for housing in preference to the release of land from the GB. It is acknowledged that this assessment would be more onerous to the LPA than the appraisal which has been undertaken. GB policy is purposefully intended to be a 'high bar' to new development – and an exceptional justification is required for the release of all land from the GB – not simply satisfying the principle of allocating land for housing within the existing GB.

To participate in the Examination as to whether the Council has properly applied Green Belt Policy.

PR43 Proposed Submission Sustainability Appraisal

PR-C-1481	10/10/2017	Anthony	Sanderson		Y	Y	N	Y
5458	<p>Comments</p> <p>SA Submission Report Chapter 3 - Section 3.112 Transport. The Plan is unsound for the following reasons:A. The 4,000 plus homes will significantly worsen the traffic congestion at the Pear Tree roundabout, the Wolvercote roundabout and the Banbury Road roundabout. It is a fantasy to suggest otherwise. The A40 has already ceased to function effectively as part of a ring road and this extra traffic will cause massive delays.B. North Oxford is a poor generator of extra employment being very largely residential. Those employed from these 4,000 plus homes will for the most part have to travel round the ring road, adding significantly to other traffic congestion points. If instead they work further out from Oxford then their housing is in the wrong place, pointlessly damaging the green belt. There is no attempt in this Plan to identify where employment is growing or should grow and develop housing accordingly.C. The entire Plan is unsound because Oxford should have an accepted planned maximum population with either a new town or new villages outside Oxford created to manage the growth in population.</p> <p>Changes Sought</p> <p>To make the Local Plan sound it is necessary to abandon the building of 4,000 plus homes on the green belt as set out and to plan for extra housing either east of Oxford beyond the green belt and nearer to employment possibilities or in a completely new village outside of Oxford with good communications.</p> <p>Reasons for Participation</p> <p>I wish to discuss the poor positioning of the proposed housing for employment and the necessity of planning for an upper limit to Oxford's population with development beyond the green belt.</p>							

PR-C-1489	10/10/2017	Nick	Alston	GVA on behalf of Oxford Aviation Services Ltd	Y	Y	N	Y
4672	<p>Comments</p> <p>Enclosed with the representation is: Updated Planning/Development Proposition, Comments on Sustainability Appraisal, Economic Report, Representations, March 2016, Representations, July 2016, Representations, January 2017 (Enclosures 1-7). Believes the Sustainability Appraisal (SA) is flawed & doesn't provide a robust evidence base to underpin the policies set out in the draft plan. Consequently we are concerned that the draft Plan is not properly justified nor capable of being effective, bringing into question its soundness. Concerned specifically to how the London Oxford Airport (LOA) site has been considered in the SA. The SA appears to assume that any development at the LOA site will encompass the site as a whole & involve the closure of the airport. This is not the case. In order to accurately appraise the sustainability potential of the site it should be subdivided into separate parcels in line with LOA's planning/development proposition (see previous representations). The SA currently produces unrealistically negative results for the site which consequently led to the decision not to select the site for allocation in the draft plan. Our view is that the site offers one of the most sustainable site options to meet Oxford's unmet housing needs, on the following grounds: * It is suitable & achievable (deliverable). * It is of low value in Green Belt & landscape terms (based of the Council's evidence), * It will arguably become the most accessible site option in the preferred area of search (A/B) on account of the proposed transport interchange facility (3 Rapid Transit lines plus regular buses - akin to a rail or tram station), alongside a national cycle route, plus road connections on the A44, * It will realise significant & unique economic benefits that otherwise would not be achieved. Not allocating the site for development will be a significant lost opportunity for the Council. We have raised this matter in our previous representations but this has not been addressed satisfactorily. London Oxford Airport – Planning /Development Proposition: We are concerned that CDC & its sustainability consultants may have misunderstood the planning/development opportunity at the LOA site. Therefore we have enclosed an updated explanation (Enclosure 2) which should be read in conjunction with Enclosure 4 which sets out the economic case for mixed use development here. The owners aim is to keep the airport open, with no intention to close it. However its future viability is dependent on generating additional value from the airport estate. The owners aim to achieve this via developing surplus land (& intensification of existing land) for aviation & complementary uses including a park & ride transport interchange. The south eastern part of the site (the 'Eastern Development Zone') - see provided plans, is earmarked for a mixed use aviation/employment cluster comprising employment uses (B1, B2, B8) & aviation related development, with supporting uses such as a hotel &/or residential accommodation for pilot training school students. Strategic policy support for this is already established in Local Plan Part 1 (LPP1), with detailed policies to be set out in the emerging Local Plan Part 2 (LPP2). This does not therefore need to be considered further in the partial review of LPP1.</p> <p>Changes Sought</p> <p>In order to make the plan sound, firstly we recommend that the SA is revisited & revised in respect to the LOA site. To assist, we have provided our own sustainability appraisal of the LOA site (using the Council's SA framework) at Enclosure 3. This clearly indicates that development being promoted at LOA would comprise a particularly sustainable option for the Council which would offer the opportunity to realise unique economic benefits alongside satisfying Oxford's unmet housing needs. Secondly, and on the assumption that the Council's updated SA reaches similar conclusions to those at Enclosure 3, we recommend amending the plan to establish a policy position that supports the development of part/all of the Western Development Zone of the LOA site for housing, employment and a transport interchange (park and ride) facility. Refer to Enclosure 2 for further details. Specifically this would include: * Amending Policy PR3 to remove part/all of the Western Development Zone from the Green Belt,* Amending Policy PR4a to include specific reference to a transport interchange (park and ride facility) in the Western Development Zone of LOA, * Insert a new policy (PR10a) to allocate part/all of the Western Development Zone for housing, employment, & transport interchange uses.</p> <p>Reasons for Participation</p> <p>LOA is a significant economic asset which has a functional relationship with Oxford and ingenerating/meeting its unmet housing needs. Our concerns go to the heart of the soundness of theplan, therefore we request to participate.</p>

Comments

Enclosed with the representation is: Updated Planning/Development Proposition, Comments on Sustainability Appraisal, Economic Report, Representations, March 2016, Representations, July 2016, Representations, January 2017 (Enclosures 1-7). Believes the Sustainability Appraisal (SA) is flawed & doesn't provide a robust evidence base to underpin the policies set out in the draft plan. Consequently we are concerned that the draft Plan is not properly justified nor capable of being effective, bringing into question its soundness. Concerned specifically to how the London Oxford Airport (LOA) site has been considered in the SA. The SA appears to assume that any development at the LOA site will encompass the site as a whole & involve the closure of the airport. This is not the case. In order to accurately appraise the sustainability potential of the site it should be subdivided into separate parcels in line with LOA's planning/development proposition (see previous representations). The SA currently produces unrealistically negative results for the site which consequently led to the decision not to select the site for allocation in the draft plan. Our view is that the site offers one of the most sustainable site options to meet Oxford's unmet housing needs, on the following grounds: * It is suitable & achievable (deliverable). * It is of low value in Green Belt & landscape terms (based of the Council's evidence), * It will arguably become the most accessible site option in the preferred area of search (A/B) on account of the proposed transport interchange facility (3 Rapid Transit lines plus regular buses - akin to a rail or tram station), alongside a national cycle route, plus road connections on the A44, * It will realise significant & unique economic benefits that otherwise would not be achieved. Not allocating the site for development will be a significant lost opportunity for the Council. We have raised this matter in our previous representations but this has not been addressed satisfactorily. London Oxford Airport – Planning /Development Proposition: We are concerned that CDC & its sustainability consultants may have misunderstood the planning/development opportunity at the LOA site. Therefore we have enclosed an updated explanation (Enclosure 2) which should be read in conjunction with Enclosure 4 which sets out the economic case for mixed use development here. The owners aim is to keep the airport open, with no intention to close it. However its future viability is dependent on generating additional value from the airport estate. The owners aim to achieve this via developing surplus land (& intensification of existing land), for aviation & complementary uses including a park & ride transport interchange. The south eastern part of the site (the 'Eastern Development Zone') - see provided plans, is earmarked for a mixed use aviation/employment cluster comprising employment uses (B1, B2, B8) & aviation related development, with supporting uses such as a hotel &/or residential accommodation for pilot training school students. Strategic policy support for this is already established in Local Plan Part 1 (LPP1), with detailed policies to be set out in the emerging Local Plan Part 2 (LPP2). This does not therefore need to be considered further in the partial review of LPP1.

Changes Sought

In order to make the plan sound, firstly we recommend that the SA is revisited & revised in respect to the LOA site. To assist, we have provided our own sustainability appraisal of the LOA site (using the Council's SA framework) at Enclosure 3. This clearly indicates that development being promoted at LOA would comprise a particularly sustainable option for the Council which would offer the opportunity to realise unique economic benefits alongside satisfying Oxford's unmet housing needs. Secondly, and on the assumption that the Council's updated SA reaches similar conclusions to those at Enclosure 3, we recommend amending the plan to establish a policy position that supports the development of part/all of the Western Development Zone of the LOA site for housing, employment and a transport interchange (park and ride) facility. Refer to Enclosure 2 for further details. Specifically this would include: * Amending Policy PR3 to remove part/all of the Western Development Zone from the Green Belt,* Amending Policy PR4a to include specific reference to a transport interchange (park and ride facility) in the Western Development Zone of LOA, * Insert a new policy (PR10a) to allocate part/all of the Western Development Zone for housing, employment, & transport interchange uses.

Reasons for Participation

LOA is a significant economic asset which has a functional relationship with Oxford and ingenerating/meeting its unmet housing needs. Our concerns go to the heart of the soundness of the plan, therefore we request to participate.

PR-C-1489	10/10/2017	Nick	Alston	GVA on behalf of Oxford Aviation Services Ltd	Y	Y	N	Y
-----------	------------	------	--------	---	---	---	---	---

5258

Page 2887

Comments

Land in the western part of the site (the 'Western Development Zone') - see provided plans, is surplus to the airport's requirements. It has been earmarked by LOA for housing, employment, & a park & ride facility (the latter being a key piece of infrastructure referred to throughout the draft Local Plan, but for which land is not allocated). The adopted LPP1 does not provide a policy basis to support development in this part of the site. It is relevant to addressing Oxford's unmet housing needs therefore is a relevant matter for consideration as part of the partial review of LPP1. The airport has further areas of surplus land to the north west & north east of the site, however developing these areas is of a lower priority for the airport at present. Other Evidence: The same concern applies to other evidence base documents, including the draft Housing & Economic Land Availability Assessment (August 2017). Again this assumes that it is the entire LOA site being promoted for non-airport development (as opposed to just surplus land parcels). Accordingly the site is assessed to be not suitable or achievable for housing (due to the assumed loss of the airport) & not considered further. Assessing the site as a whole is too blunt an assessment & produces inaccurate results. The Western Development Zone is, in our opinion, suitable & achievable (see Enclosure 2 in full representation).

Changes Sought

In order to make the plan sound, firstly we recommend that the SA is revisited & revised in respect to the LOA site. To assist, we have provided our own sustainability appraisal of the LOA site (using the Council's SA framework) at Enclosure 3. This clearly indicates that development being promoted at LOA would comprise a particularly sustainable option for the Council which would offer the opportunity to realise unique economic benefits alongside satisfying Oxford's unmet housing needs. Secondly, and on the assumption that the Council's updated SA reaches similar conclusions to those at Enclosure 3, we recommend amending the plan to establish a policy position that supports the development of part/all of the Western Development Zone of the LOA site for housing, employment and a transport interchange (park and ride) facility. Refer to Enclosure 2 for further details. Specifically this would include: * Amending Policy PR3 to remove part/all of the Western Development Zone from the Green Belt,* Amending Policy PR4a to include specific reference to a transport interchange (park and ride facility) in the Western Development Zone of LOA, * Insert a new policy (PR10a) to allocate part/all of the Western Development Zone for housing, employment, & transport interchange uses.

Reasons for Participation

LOA is a significant economic asset which has a functional relationship with Oxford and ingenerating/meeting its unmet housing needs. Our concerns go to the heart of the soundness of the plan, therefore we request to participate.

PR-C-1537	10/10/2017	Helen	Hartley	Nexus Planning on behalf of Hollins Strategic Land LLP	N	N	N	Y
-----------	------------	-------	---------	--	---	---	---	---

4824

Comments

Hollins Strategic Land consider the Council has failed to properly consider the reasonable alternative locations for development. Through the evidence base supporting the emerging Partial Review the Council has considered nine 'Areas of Search' – coming to the conclusion that Option A (Kidlington & Surrounding Area) and Option B (North & East of Kidlington) are the preferred locations for development. Paragraph 182 of the NPPF states that local plans should be the most appropriate strategy, when considered against the reasonable alternatives. HSL are concerned that some of the 'areas of search' are extremely focussed such that individually, they do not represent realistic or 'reasonable alternatives' to assess against the plan objectives. Area of Search H for example solely relates to development in Banbury. Area of Search G is centred on the small area around Junction 10 of the M40. Whilst the Proposed Submission Sustainability Appraisal (SA) (June 2017) provides a cursory consideration of potential combinations of several of the areas of search, these combinations should have been systematically assessed against the SA objectives. Instead the 9 Areas of Search were assessed against the objectives on an individual basis. In this way, it is considered the Council has over-simplified the 'other options' and not undertaken a meaningful assessment of other 'reasonable alternatives'. Of particular concern in this regard is the inclusion of all the 'rural area' within Area of Search I. This prevents any consideration of the vast differences in the sustainability of the various rural settlements, and in their connectivity with higher order settlements. For example, settlements in close proximity to Banbury, such as Adderbury, Wroxton and Bloxham, benefit from good public transport links to Oxford. This is ignored however, by their inclusion within the wider Area of Search I, which scores poorly in the SA against accessibility to services and facilities and reducing air pollution (as a result of assumed reliance on the private car).7. When the given justification for the proposed spatial strategy in the Proposed Submission Plan centres strongly on connectivity to Oxford and the need to reduce dependence on the private car, these limitations in the Council's methodology and its failure to properly consider reasonable alternatives lead to fundamental flaws in the overall strategy.

Changes Sought

Reasons for Participation

For reasons set out in the comments submitted, HSL are of the view that the Local Plan (Part 1) Partial Review does not address matters which run to the heart of Soundness and request the opportunity to make oral representations to this effect.

PR43 Proposed Submission Sustainability Appraisal

PR-C-1577	09/10/2017	Jane	Irving		N	N	N	N
4919	<p>Comments</p> <p>In the Proposed submission = Sustainability appraisal - non technical summary, the monitoring indicators for SA objective 10 in Table 1.17 concern air pollution and road congestion. The second and third bulleted indicators are I assume aimed at road congestion, and refer to access to services etc. by public transport etc. and "completed transport improvement schemes". A transport improvement scheme may well be completed but have little/no effect on congestion. I suggest you include an additional indicator measuring journey times from various points, including points on the boundaries of Cherwell District Council, to ensure that those commuting times are maintained at current 2017 levels. Many residents living in neighbouring districts work in Oxford and are currently helping to meet Oxford's unmet housing need by living outside Oxford. If current commuting times from our residences are not maintained, living closer to Oxford is the only viable solution. This will increase pressure on housing closer to Oxford e.g. in CDC and Oxford, and have the opposite effect of reducing the housing needs identified.</p> <p>Changes Sought</p> <p>Please see suggestion for monitoring journey times - a suggested indicator might be something like "Journey times at specified points of the day between specified points within CDC and Oxford to be maintained at October 2017 levels".</p> <p>Reasons for Participation</p>							

PR-C-1603	10/10/2017	Gordon and Helen	Henning		Y	Y	N	N
5828	<p>Comments</p> <p>The prediction for the number of houses needed (Oxford City Council's "unmet need" for housing) is questioned and is to be re-evaluated. It does not take into consideration the intrinsic value of the Green Belt for current and future generations and the irreplaceable nature of the Green Belt. It is difficult to see how this development can be sustainable, given the lack of realistic plans for providing necessary infrastructure (e.g. transport, health care etc.) - and these are already significant, longstanding problems in Oxford and Oxfordshire (which are likely to be seriously exacerbated by the Northern Gateway development nearby). It is likely to provide housing for London commuters rather than people employed in Oxford and local areas, and hence exacerbate many of the problems that Oxford and Oxfordshire already have such as traffic and very high demand on schools, healthcare etc. The considerable uncertainty over many financial and economic matters after Brexit mean that there is considerable uncertainty about whether the plan could be "deliverable over its period". Have seen little real evidence in recent years of effective co-operation between local authorities e.g. the Jack of solution to the traffic problems in Oxford/Oxfordshire (particularly relevant here as the planned development would inevitably generate more traffic). Not consistent with the National Policy Framework for Green Belts, and has an indistinct border. Not justified or effective in terms of SA Objective 10 (air pollution/road congestion). Whatever pedestrian, cycle or public transport provision is available, increased vehicular traffic will inevitably be associated with any development on this site (for personal reasons for many users e.g. disability, but also for delivery vehicles as more and more shopping is done online. Climate change may well also increase the frequency and severity of adverse weather conditions making cycling etc. not only very unpleasant but also more often dangerous (e.g. in high wind).</p> <p>Changes Sought</p> <p>This policy should be withdrawn completely. There are other alternatives for increased availability of housing including:-(i) use of land within Oxford city for housing instead of employment - Oxford city appears to be planning for employment to outstrip its housing need even more than is now the case and, in particular, there is already a major development (the Northern Gateway) very close to the area covered by policy PR 6a) (ii) increased housing density on sites already used or designated for housing within Oxford city.</p> <p>Reasons for Participation</p>							

PR-C-1621	09/10/2017	Rufus	Nicholson		N		N	Y
559	<p>Comments</p> <p>Questioning the exceptional circumstances listed against the 5 purposes of the Green Belt, and duty to cooperate. Detailed comments provided on Green Belt. Area of Search H ("Banbury and surrounding area") attracts an additional positive benefit for SA Criteria 3 ("To reduce poverty and social exclusion") in Table 7.2 of the SA, with the result that this area of search scores the highest of any for positive benefits arising from development. This evidence contradicts argument 3 in Section 5.17, which claims that CDC had no other sustainable option for the proposed housing outside of Area of Search A "without causing unacceptable harm to the existing Cherwell development strategy." CDC must also be obliged to show how this last statement is true before any credence whatsoever can be attached to it. This statement is all the more suspicious given that the housing target (28,000 houses) in the Local Plan is now likely to be exaggerated due to the influence of BREXIT and new government methodology for calculating housing need; future housing and employment growth previously predicted in the Local Plan may now not materialise, meaning that there would be no conflict with reassigning OCC's imagined unmet need in its place.</p> <p>Changes Sought</p> <p>Proposed changes suggested on 6 points: Strategic Economic Plan; unmet housing need; SHMA; Oxford's housing capacity; apportionment; and options.</p> <p>Reasons for Participation</p> <p>Would like the Begbroke & Yarnton Green Belt Campaign to represent me at the Examination should it take place.</p>							

PR44 Habitats Regulations Assessment Screening Report - June 2017

PR-C-0766	10/10/2017	Haidrun	Breith	Berks, Bucks & Oxon Wildlife Trust				Y
513	<p>Comments</p> <p>The comments on the previous option consultation raised concerns about the cumulative impacts of developments on the natural environment. Welcome that these comments have been taken on board and that a cumulative impact assessment has been carried out to inform this stage of the process. Note that it only assesses the impact of seven site allocations at North Oxford, Kidlington, Begbroke and Yarnton but does not include other allocations sites in the area such as the Northern gateway and Wolvercote Papermill allocations in the Oxford City boundary. Understand that consideration of sites outside the district boundary might go beyond the remit of this plan but we are concerned that no strategic overview of potential cumulative ecological impacts in the area is taken considering the amount of development taking place. Welcome that scoping surveys were carried out but they are high level and subject to considerable limitations. The report gives a timeframe for surveys between June '16 and February '17, which is rather unspecific and might mean that surveys might not have been done at the optimum survey time and that some ecological interest might have been missed. This potential limitation is exacerbated by the fact that surveys were only conducted from Public Rights of Way, which again might mean that important ecological interest could have been missed. Whilst welcome that efforts have been made to take account of biodiversity we feel the survey information cannot be fully relied upon and more comprehensive surveys might reveal additional ecological interest that will need to be taken into account in the next stage of the site allocation process. Aerial photos suggest that some of the meadows proposed for development might comprise grassland of higher conservation value. Also note that impacts on Port meadow SAC and other designated sites downstream is not considered in the report but we assume that this is covered in the Habitats Regulation Assessment (HRA) and Sustainability Appraisal. Not reviewed these documents in any detail but expect that Natural England (NE) will be commenting on potential impacts on the SAC and other SSSI and are guided by their judgement.</p> <p>Changes Sought</p> <p>Reasons for Participation</p> <p>Potential biodiversity impacts as outlined in the representation.</p>							
PR-C-0778	10/10/2017	Sarah	Knox-Brown	Begbroke & Yarnton Green Belt Campaign				N
5674	<p>Comments</p> <p>Chapter 6 provides no explanation of why proposed allocations will not lead to an impact on Oxford Meadows SAC, and does not reference the potential for in-combination effects. It relies on mitigating effects of the plan, rather than avoiding them, contrary to the mitigation hierarchy (NPPF para 152).</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							

PR48 Equalities Impact Assessment Screening

PR-C-0778	10/10/2017	Sarah	Knox-Brown	Begbroke & Yarnton Green Belt Campaign					N	
5689	Comments The study does not reference proposed allocations or even a single location within Cherwell. It simply references thematic development management policies.									
	Changes Sought				Reasons for Participation					

PR51 Landscape Character Sensitivity and Capacity Assessment

PR-C-0778	10/10/2017	Sarah	Knox-Brown	Begbroke & Yarnton Green Belt Campaign					N	
5671	Comments Quality of analysis is questionable. The various conclusions are not tabulated, and hence the step wise process is opaque. Analysis often goes beyond analysis of landscape capacity with little or no justification. There are numerous seemingly contradictory statements. Maps presented in Appendix E are highly inaccessible. The quality of the ecological assessment is questionable. No account is taken of nearby sensitivities.									
	Changes Sought				Reasons for Participation					

PR-C-1413	10/10/2017	Peter	Wilsdon	David Jarvis Associates on behalf of Shipton Ltd	N	Y	N	Y		
5595	Comments The LCSCA refers to the linear nature of the railway line not lending itself to residential development. This linear part of the site is intended to work with the remainder of the Ship ton Quarry and as such provides a potential boundary, travel route, recreation area etc. Any potential housing development is likely to be approximately 5 metres below the level of the railway line. Distance of dwellings from the railway line could be addressed at a planning application stage. Illustrative masterplan (included at Appendix 2) demonstrates how the whole site can accommodate residential development in a manner that is sympathetic to its surroundings.									
	Changes Sought Requests that CDC reconsider the exclusion of Shipton Quarry from the Local Plan Partial Review.				Reasons for Participation As outlined, a number of inaccuracies relating to the site exist in the evidence base, that need to be addressed. Following a review of the evidence base and the scoring of the sites in the Sustainability Appraisal, it is considered that further assessment work is likely to result in the site receiving a more favourable outcome to the extent that it should be considered a potential strategic development site. Should Cherwell District Council disagree and continue to use the inaccurate evidence base to exclude the site then it considered necessary to participate in the Examination.

PR52 Transport Assessment - July 2017

PR-C-0262	10/10/2017	Richard	Pye		N	N	N	Y		
5578	Comments A comparison of the RAG metrics used in this assessment with those used in the High-level Transport Assessment is provided in Table 2-5. This allows for a direct comparison to be made between the two reports of specific sites within the south Cherwell district. Detailed comments provided. Inaccuracies in how the RAG matrices in the TA have been applied to Policy PR6a and PR10. A list is provided. Confirms the sensitivity of the metrics to changes in journey times. It is bizarre that Site ID51, which encompasses Policy Site PR9 provides access to zero jobs by public transport and yet was still selected. broader point is that the Policy Sites PR8, PR9 and PR10 score badly in the TA RAG assessment (there is a working assumption that the errors highlighted above have been corrected - Site ID20 currently has for green ratings that are incorrect). Despite these poor ratings, these sites have still been proposed as for strategic housing development. This aspect of the transport evaluation highlight huge inconsistency in how metrics were defined across different reports. This leads to certain sites receiving higher ratings than would have otherwise been the case. There are also a number of errors that result in the Policy Sites receiving more favourable ratings than otherwise would have been the case. These assessments are therefore unreliable and makes this part of the proposed submission plan unsound.									
	Changes Sought For the reasons I have given above AND the Representations made by the Begbroke & Yarnton Green Belt Campaign which I additionally support and adopt as part of my own Representation in this document, the Plan cannot be changed to make it legally compliant or sound and should therefore NOT be submitted for Inspection.				Reasons for Participation Would like the Begbroke & Yarnton Green Belt Campaign to represent me at the Examination should it take place.					

PR52 Transport Assessment - July 2017

PR-C-0778	10/10/2017	Sarah	Knox-Brown	Begbroke & Yarnton Green Belt Campaign					N
5673	Comments								
<p>Timing is of concern; it was completed only in July 2017 with missing Appendices to Appendix 6 then added in August 2017. There is little or no evidence to suggest that it was available in time to inform consideration of options/ formulation of the preferred strategy. The SA report does not draw upon its analysis, as evidenced by no consideration of the four "development scenarios" that are a focus of the TA. Instructed Bruce Bamber, a transport consultant, to prepare a report on the transport implications of the allocation of sites PR8 and PR9 for housing purposes. Although his technical review has focused on these areas, the broader methodology to identify potential development locations has also been assessed for its soundness. The report has been provided as Appendix B. Key conclusions from the report includes: the Sustainability Appraisal Report was published before the Transport Assessment and therefore cannot properly take into account the transport impact of development options. The SAR fails to report the adverse traffic congestion impact from the proposed development around Begbroke and Yarnton and is therefore flawed. Transport evidence base and the associated environmental assessment work is fundamentally unsound and cannot be relied upon. Criticisms include assumptions for car driver mode share, accessibility to sustainable transport and jobs, and lack of modelling to test the effects of closing Sandy Lane.</p>									
Changes Sought					Reasons for Participation				

PR-C-0841	10/10/2017	Catherine	Newman						N	N
2277	Comments									
<p>The Transport Assessment (July 2017) has modelled its scenario on the successful delivery of ALL the proposed critical investments listed in Table 8-2, assuming for example that a full bus lane is achievable from Begbroke to Loop Farm roundabout Yarnton where it admits there is no feasibility study and that it has a very high cost. This would not be possible given that there is a railway bridge, a canal bridge and residential properties before Loop Farm Roundabout and therefore the Plan is unsustainable and unjustified. Closure of Sandy Lane should not be closed to traffic at the level crossing. Sandy Lane is a well-used road, I myself use it several times a week saving me several miles by not using the A44 via Langford Lane or Stratfield Brake. When the A44 is clogged up due to an incident at Pear Tree Roundabout or one on the A34 it is also an alternative route to reach Oxford and the hospitals. The queues into Oxford are very often horrendous especially at peak times and can reach back to Langford Lane.</p>

<p>The Shipton on Cherwell site should have scored higher in terms of its potential for sustainable transport links. The site is located in close proximity to a range of the proposed future transport investments and due to its size has the viability to provide suitable infrastructure to capitalise on these. Responses relating to transport have been included in Table 4. Refers to the RAG assessment and testing scenarios (A1-A5) in the Transport Assessment July 2017 and Oxfordshire CC A44& A4260 Corridor Study and LTP4.</p>

PR54 Housing and Economic Land Availability Assessment - August 2017

PR-C-0413	17/09/2017	Theresa	Goss	Bloxham Parish Council							
1066	Comments										
<p>Bloxham Parish Council's Comment on the Taylor Wimpey blog relates to land North and South of Milton Road. This site is a significant distance from Oxford and does not provide easy access to sustainable public transport options which will lead to an unacceptable reliance on private cars. A reliance on private cars will exacerbate pollution and congestion problems in Bloxham. In response to the initial consultation on meeting Oxford's housing need BPC commented that this site 'will lead to additional traffic at the over capacity mini roundabout on the A361, and would add further congestion to the Milton Road'. It is proposed to release a very small percentage of Green Belt lying within Cherwell's boundaries for housing to meet Oxford's need. We support the view that there are exceptional circumstances that warrant this release of Green Belt. Development of this site would result in the loss of another green field on the edge of Bloxham and negatively impact the landscape and historic setting of the village. The draft HELAA has assessed this site as suitable for 'approximately 61 dwellings subject to more detailed consideration'. However, it notes that it lies outside the area of search for development sites to meet Oxford's need. Taylor Wimpey's blog suggests the site could accommodate 250 homes and also offers delivery of space for a primary school not a primary school. Bloxham has a made Neighbourhood Development Plan and this proposal would be contrary to Policy BL1 of that plan.</p>											
Changes Sought					Reasons for Participation						

PR-C-0778	10/10/2017	Sarah	Knox-Brown	Begbroke & Yarnton Green Belt Campaign							N
5670	Comments										
<p>Despite what is said in paragraphs 1.1 and 7.2, the HELAA has not been applied as an initial first step to inform site selection, but instead as the site selection process itself, as evidenced from analysis on PR8 and PR9. This explains why it was only made available subsequent to the start of the consultation and in draft form only. The role of the HELAA has not been communicated well and has caused considerable confusion.</p>

PR54 Housing and Economic Land Availability Assessment - August 2017

PR-C-0789	10/10/2017	Colin	Smith						N			
4524	<p>Comments</p> <p>This Draft Cherwell Housing & Economic Land Availability Assessment Aug 2017 (HELAA) was published circa 25/08/17 & not publicised to Fritwell Parish Council (FPC). Concerned over the publicity and consultaiton of the draft HELAA. This response relates to Appendix 4 - summary of assessments, with regard to the Fritwell HELAA sites and identifies them as suitable, available and achievable for residential assessment. Reference to comments from a CDC Planning Officer in relation to a planning application. Reference to paragraphs 7.4, 7.5, 7.6 in HELAA 132. Believes HELAA 131, part of HELAA 132 and 133 are not suitable for development. Specific reasons are; Part of HELAA 132 : would be harmful to the character of the area, HELAA 135: unsuitable because it would encroach into the open countryside, HELAA 132: development would have a significant impact on Fritwell Conservation Areas' rural setting. Believes HELAA 132 (part of) being designated as 'available' is not correct. Supports HELAA 274 as fitting with reasonable and sympathetic development. Reference to the Government's consultation document on lower housing need.</p> <p>Changes Sought</p> <p>Unlike urban areas with Green Belt safeguards through legislation, surrounding rural communities have no such protection against expansion despite the countryside being hugely important. Urges the report to be more protective of rural settlement areas with a wording change where 'Should additional greenfield land be required at Fritwell to meet Cherwell's housing needs,' should be followed by 'and only when all existing infill and brownfield opportunities have been utilised,' at each occurrence.</p> <p>Reasons for Participation</p>											
PR-C-0789	10/10/2017	Colin	Smith						N	N		
2028	<p>Comments</p> <p>Concerned over the publication of the draft HELAA document as was not made aware of this. Questioning the Fritwell HELAA sites identified in Appendix 4 as being suitable, available and achievable for residential development. Reference to CDC's comments to a planning application which includes reference to the HELAA site HELAA132. Detailed comments provided on specific HELAA sites in Fritwell (HELAA131, 132, 133 and 274). HELAA should be more protective of rural settlement areas. Reference to the Government's consultation document on housing needs and its suggestion of greater than 30% reduction to 762 dwellings required instead of 1142.</p> <p>Changes Sought</p> <p>HELAA to be more protective of rural settlement areas with a wording change where 'Should additional greenfield land be required at Fritwell to meet Cherwell's housing needs,' should be followed by 'and only when all existing infill and brownfield opportunities have been utilised,' at each occurrence.</p> <p>Reasons for Participation</p>											
PR-C-1408	10/10/2017	Andy	Pearce	Barton Willmore on behalf of A 2 Dominion Housing Group Ltd					N	N	N	Y
5492	<p>Comments</p> <p>We note that the Council has published its Draft Housing and Economic Land Availability Assessment (August 2017) (HELAA). NW Bicester (reference HELAA275) is identified as a strategic allocation (Policy Bicester 1) and able to deliver 6,000 dwellings, 3,293 of which within the plan period. The Site is identified as suitable, available and achievable. Appendix 4 states that the Site can deliver up to 15 dwellings per hectare. This is too low and does not reflect extant planning permissions at NW Bicester, or resolutions to grant. There is an opportunity to review the efficiency of the NW Bicester Master Plan and its ability to meet additional housing need. We note that the Draft HELAA also states that there is no further potential for development in this location to meet Oxford City's unmet need as Bicester lies outside 'Areas of Search' A and B. As stated, there is insufficient evidence put forward that accompanies the Partial Review to suggest that opportunities to increase capacity at existing allocated housing sites, such as NW Bicester (Policy Bicester 1), have been robustly tested before 'Search Areas' A and B, which involve Green Belt release, were chosen.</p> <p>Changes Sought</p> <p>Reasons for Participation</p> <p>Our objections in part relate to the proposed growth strategy to address Oxford City's unmet need, which we consider to be unsustainable and inconsistent with national policy. This is contrary to the adopted Growth Strategy set out in the Cherwell Local Plan 2011-2031 (Part 1), which focuses new development at key settlements, as identified in Cherwell's settlement hierarchy. The Council has not discharged its duty to demonstrate exceptional circumstances to release the identified sites from the Green Belt, pursuant to paragraph 82 of the National Planning Policy Framework. Further, there is insufficient evidence to suggest that opportunities to increase capacity at existing allocated housing sites have been robustly tested. Finally, there should be a single housing requirement for the Cherwell Local Plan. There is no justification for a separate figure to be applied to meet Oxford City's unmet need, as is currently proposed.</p>											
PR-C-1413	10/10/2017	Peter	Wilsdon	David Jarvis Associates on behalf of Shipton Ltd					N	Y	N	Y
5299	<p>Comments</p> <p>Notes that Shipton Quarry is assessed to be suitable, available and achievable in terms of both residential and employment development in Appendix4 of the HELAA and that it is important to take the assessment's outcomes into consideration when allocating sites. Refers to the Housing and Planning Act 2016 and its provision for local authorities to prepare and maintain registers of brownfield land and notes the site was not included in the 2016 pilot register. Refers to the NPPF's definition of brownfield land and explains that Shipton Quarry is unique in the fact that it formerly included a cement works which was demolished in 2015. The approved restoration plan allows for development on the site of the former cement works. It is therefore considered that at least this part of the overall site is included in Part 1 of the register, if not the entire site. It is further noted that various evidence base documents refer to the site as brownfield. Makes a deliverability case noting the site could easily be restored to a state that could accommodate a mixed use development within 8 to 12 years. The aggregate recycling use onsite has permission until 2025. However Earthline Ltd could accommodate this use at one of its other locations in the area if necessary to bring forward the date the site could be realistically developed. A revised restoration scheme is provided in Appendix 5. The majority of the site is to be restored to a state that will accommodate development/the permitted uses in any case. It would appear from the SA that this has not been taken into consideration.</p> <p>Changes Sought</p> <p>Shipton Quarry offers an opportunity to provide a housing site which meets all the search requirements set out in the consultation phase of the local plan and therefore merits further consideration as an allocation in the Local Plan Partial Review.</p> <p>Reasons for Participation</p> <p>As outlined, a number of inaccuracies relating to the site exist in the evidence base, that need to be addressed. Following a review of the evidence base and the scoring of the sites in the Sustainability Appraisal, it is considered that further assessment work is likely to result in the site receiving a more favourable outcome to the extent that it should be considered a potential strategic development site. Should Cherwell District Council disagree and continue to use the inaccurate evidence base to exclude the site then it considered necessary to participate in the Examination.</p>											

PR54 Housing and Economic Land Availability Assessment - August 2017

PR-C-1429 10/10/2017 Emily Daly Lower Heyford Parish Council

4557

Comments

Objection raised to the HELAA set out in Appendix 4 that is part of the evidence base for CLP 2011-2031 (Pt 1) PR. Refers to sites 216, 221 & 217. These are green field sites & in the case of 216 & 221, wholly outside the allocated strategic area of Heyford Park as set down in Local Plan Part 1. Despite being contrary to adopted policy, all are considered "developable for housing / employment - suitable, available & achievable" in the summary of assessments. Site 217 refers to 180 houses. Any further expansion to Heyford Park would be unsustainable in terms of its rural location & rural road network. Lower Heyford should be listed as a Category B rather than Category A village in para 1.5 of the Draft HELAA study.

Fritwell Parish Council wrote to CDC asking how to respond to HELAA report over three weeks ago. The reply was received less than 24 hours ahead of today's deadline which could mean that some who wish to comment will not be able to do so. Regarding sites deemed suitable for development: HELAA 131, part of 132, 133, it is my view that the same reasons stated for exclusion of other near-by areas can apply directly to these sites too, specifically: From HELAA 132 (part deemed not suitable): be harmful to the character of the area From HELAA 135: The site is considered to be unsuitable for development as it would encroach into the open countryside From HELAA 134: Development on the site would inevitably have a significant impact on the rural setting of the Fritwell Conservation Area feel HELAA 132 (part of) being designated as 'available' is not correct. The parcel of land has been discussed previously and opinions canvassed. In light of those responses, the landowner wrote to Fritwell St. Olave's PCC stating 'we have no intention of submitting a planning application based on the feedback provided'. I would also point out that although 'surrounding' density could be measured at 30 dph, the 'adjacent' building density is nowhere near that."

Changes Sought

Reasons for Participation

Unlike urban areas with Green Belt safeguards through legislation, surrounding rural communities have no such protection against expansion despite the countryside around us being hugely important. I would therefore urge the report to be more protective of rural settlement areas with a wording change where 'Should additional greenfield land be required at Fritwell to meet Cherwell's housing needs,' should be followed by 'and only when all existing infill and brownfield opportunities have been utilised,' at each occurrence. The numbers of dwellings listed far exceeds the villages current obligation, in total by nearly 4:1. To add more local context to the report, may I suggest a wording change to HELAA 132 and HELAA 133 to point this out: After 'This reflects the density of the surrounding developments' add 'but would exceed to current proposed building obligation for the village'

Comments

Land in the western part of the site (the 'Western Development Zone') - see provided plans, is surplus to the airport's requirements. It has been earmarked by LOA for housing, employment, & a park & ride facility (the latter being a key piece of infrastructure referred to throughout the draft Local Plan, but for which land is not allocated). The adopted LPP1 does not provide a policy basis to support development in this part of the site. It is relevant to addressing Oxford's unmet housing needs therefore is a relevant matter for consideration as part of the partial review of LPP1. The airport has further areas of surplus land to the north west & north east of the site, however developing these areas is of a lower priority for the airport at present. Other Evidence: The same concern applies to other evidence base documents, including the draft Housing & Economic Land Availability Assessment (August 2017). Again this assumes that it is the entire LOA site being promoted for non-airport development (as opposed to just surplus land parcels). Accordingly the site is assessed to be not suitable or achievable for housing (due to the assumed loss of the airport) & not considered further. Assessing the site as a whole is too blunt an assessment & produces inaccurate results. The Western Development Zone is, in our opinion, suitable & achievable (see Enclosure 2 in full representation).

Changes Sought

Reasons for Participation

In order to make the plan sound, firstly we recommend that the SA is revisited & revised in respect to the LOA site. To assist, we have provided our own sustainability appraisal of the LOA site (using the Council's SA framework) at Enclosure 3. This clearly indicates that development being promoted at LOA would comprise a particularly sustainable option for the Council which would offer the opportunity to realise unique economic benefits alongside satisfying Oxford's unmet housing needs. Secondly, and on the assumption that the Council's updated SA reaches similar conclusions to those at Enclosure 3, we recommend amending the plan to establish a policy position that supports the development of part/all of the Western Development Zone of the LOA site for housing, employment and a transport interchange (park and ride) facility. Refer to Enclosure 2 for further details. Specifically this would include: * Amending Policy PR3 to remove part/all of the Western Development Zone from the Green Belt, * Amending Policy PR4a to include specific reference to a transport interchange (park and ride facility) in the Western Development Zone of LOA, * Insert a new policy (PR10a) to allocate part/all of the Western Development Zone for housing, employment, & transport interchange uses.

LOA is a significant economic asset which has a functional relationship with Oxford and ingenerating/meeting its unmet housing needs. Our concerns go to the heart of the soundness of the plan, therefore we request to participate.

Enclosed with the representation is: Updated Planning/Development Proposition, Comments on Sustainability Appraisal, Economic Report, Representations, March 2016, Representations, July 2016, Representations, January 2017 (Enclosures 1-7). Believe the Sustainability Appraisal (SA) is flawed & doesn't provide a robust evidence base to underpin the policies set out in the draft plan. Consequently we are concerned that the draft Plan is not properly justified nor capable of being effective, bringing into question its soundness. Concerned specifically to how the London Oxford Airport (LOA) site has been considered in the SA. The SA appears to assume that any development at the LOA site will encompass the site as a whole & involve the closure of the airport. This is not the case. In order to accurately appraise the sustainability potential of the site it should be subdivided into separate parcels in line with LOA's planning/development proposition (see previous representations). The SA currently produces unrealistically negative results for the site which consequently led to the decision not to select the site for allocation in the draft plan. Our view is that the site offers one of the most sustainable site options to meet Oxford's unmet housing needs, on the following grounds: * It is suitable & achievable (deliverable). * It is of low value in Green Belt & landscape terms (based on the Council's evidence), * It will arguably become the most accessible site option in the preferred area of search (A/B) on account of the proposed transport interchange facility (3 Rapid Transit lines plus regular buses - akin to a rail or tram station), alongside a national cycle route, plus road connections on the A44, * It will realise significant & unique economic benefits that otherwise would not be achieved. Not allocating the site for development will be a significant lost opportunity for the Council. We have raised this matter in our previous representations but this has not been addressed satisfactorily. London Oxford Airport – Planning /Development Proposition: We are concerned that CDC & its sustainability consultants may have misunderstood the planning/development opportunity at the LOA site. Therefore we have enclosed an updated explanation (Enclosure 2) which should be read in conjunction with Enclosure 4 which sets out the economic case for mixed use development here. The owners aim is to keep the airport open, with no intention to close it. However its future viability is dependent on generating additional value from the airport estate. The owners aim to achieve this via developing surplus land (& intensification of existing land) for aviation & complementary uses including a park & ride transport interchange. The south eastern part of the site (the 'Eastern Development Zone') - see provided plans, is earmarked for a mixed use aviation/employment cluster comprising employment uses (B1, B2, B8) & aviation related development, with supporting uses such as a hotel &/or residential accommodation for pilot training school students. Strategic policy support for this is already established in Local Plan Part 1 (LPP1), with detailed policies to be set out in the emerging Local Plan Part 2 (LPP2). This does not therefore need to be considered further in the partial review of LPP1.

Changes Sought

In order to make the plan sound, firstly we recommend that the SA is revisited & revised in respect to the LOA site. To assist, we have provided our own sustainability appraisal of the LOA site (using the Council's SA framework) at Enclosure 3. This clearly indicates that development being promoted at LOA would comprise a particularly sustainable option for the Council which would offer the opportunity to realise unique economic benefits alongside satisfying Oxford's unmet housing needs. Secondly, and on the assumption that the Council's updated SA reaches similar conclusions to those at Enclosure 3, we recommend amending the plan to establish a policy position that supports the development of part/all of the Western Development Zone of the LOA site for housing, employment and a transport interchange (park and ride) facility. Refer to Enclosure 2 for further details. Specifically this would include: * Amending Policy PR3 to remove part/all of the Western Development Zone from the Green Belt,* Amending Policy PR4a to include specific reference to a transport interchange (park and ride facility) in the Western Development Zone of LOA, * Insert a new policy (PR10a) to allocate part/all of the Western Development Zone for housing, employment, & transport interchange uses.

Reasons for Participation

LOA is a significant economic asset which has a functional relationship with Oxford and ingenerating/meeting its unmet housing needs. Our concerns go to the heart of the soundness of the plan, therefore we request to participate.

Comments

I am a resident of Fritwell (and have been since 1997) and my comments are concerning the document "2017 Draft HELAA Appendix 4 – Summary of Assessments" and the village of Fritwell. I disagree with the assessment that the Fritwell sites listed in this section of the document are suitable or achievable for residential development. The site HELAA 133 in particular was recently (October 2016) subject to a 34-house residential development planning application (reference 16/01594/F) which was firmly rejected by Cherwell District Council's Planning Officer on no less than 9 separate grounds and the developer withdrew the application before the Planning Committee was due to meet. The site was formerly known as SHLAA FR017. I strongly believe that development of this greenfield site which is outside the settlement boundary should not be supported. At the very least I would suggest that the report is especially protective of rural villages and should permit development of greenfield sites only when all existing infill and brownfield development options have been explored. I suggest that Fritwell should be re-assessed on the criteria needed for a Category A village. The village was last categorised many years ago and I believe that Fritwell should not be a Category A village as the village would not meet those criteria today and has not done for some time. Fritwell is a small village and has limited amenities – a village shop (limited opening hours), a primary school and village hall. There are no employment opportunities and no health facilities, has no public house and no longer has a bus service. New residential development will therefore be dependent on the use of private vehicles and I am concerned that the roads in and out of the village cannot support further traffic from medium to large scale development. We also already have problems with our services such as limited BT (phone, broadband) provision and a routine problem with sewerage. I believe that any developer of sites of more than 10 houses in Fritwell should be made subject to a Grampian Condition to ensure that they are committed to maintain or improve the village services. Development of the other sites that are outside of the existing settlement boundary in my opinion will have a significantly detrimental effect on the visual impact and character of the area and will encroach into the open countryside. The Government has recently published the results of a consultation into the formula for calculating local authority housing needs and this appears to indicate that a reduction of some 30% in housing numbers applies to the Cherwell District.

PR71 Draft Cherwell Water Cycle Study

PR-C-0778 10/10/2017 Sarah Knox-Brown Begbroke & Yarnton Green Belt Campaign

5684

Comments

It is not clear that the study was completed in time to inform consideration of options/formulation of the preferred strategy. It clearly identifies certain Wastewater Treatment Works as more constrained than others, yet the SA report ignores this evidence.

Comments

Have referred to two parts of the Water Cycle Study evidence document but they are related. These are paragraph 5.2.2.2 and Appendix C. Paragraph 5.2.2.2. Suggested that for Bicester Sewage Treatment Works (STW): ""For phosphate, the results show that the current phosphate quality condition (1.0mg/l) would be sufficient to ensure the 10% deterioration limit is adhered to and therefore also ensures nodeterioration in phosphate status"". It is unclear how this is the case as the results table in Appendix C suggests a deterioration of 12-15% would occur. According to the methodology in Appendix C.5 for 10% deterioration target it suggests that if the future growth scenario exceeds the 10% target at the mixing point concentration a permit needs to be set to limit the deterioration to 10%. In this case there appears to be a deterioration of 12%-15%. However it is suggested that the current permit is ok. Appendix C - In the results table in Appendix C, for Banbury STW, it is suggested that the current discharge ammonia concentration is not already causing a status deterioration at the mixing point. However looking at the concentrations provided it appears there is already a deterioration. If this evidence is unclear and we are not certain that there won't be a detrimental impact on waterquality of the receiving watercourses as a result of the planning growth in housing number then the local plan is not consistent with national planning policy paragraph 109 and is not justified in soundness terms and paragraph 182 of the NPPF. We have highlighted this issue to you previously in our letter dated 23 June 2017.

Changes Sought

We suggest a revised permit should have been assessed to ensure there is no more than a 10% deterioration. There needs to be clarification on the above points and assurances that there will be nodeterioration in the water quality for the receiving watercourses as a result of the extra growth in housing numbers.

Reasons for Participation

To ensure that the flood risk evidence is adequately addressed during the examination.

Addendum to Statement of Consultation – 26 February 2018

(as orally presented to Council by the Lead Member for Planning)

Additional representation not included within published consultation summary:

PR-C-1650 - Mrs Joy D Weedon

Summary of Representation:

- Concerned about traffic, parking, pollution and noise especially during rush hour and school traffic
- Concerned about proposed bus lane and removal of grass verge and trees
- Concerned about lack of space to improve shops

These issues have been taken into account and are contained within the consultation statement.

1. Introduction

1.1. Background to this Addendum

A Habitat Regulations Assessment Stage 1 (Screening) was completed on the four previous iterations of the adopted Cherwell Local Plan¹²³⁴ The Cherwell Local Plan 2011-2031 (Part 1) was adopted in July 2015.

The Council is undertaking a Partial Review of the adopted Local Plan to address Oxford's unmet housing need, and published an Options Consultation document in November 2016 to seek views on how the unmet housing need should be addressed. A Habitats Regulations Assessment (HRA) report on the Options Consultation document concluded that, depending on the options taken forward, the sites in the Options Paper might lead to likely significant effects on the qualifying features of Oxford Meadows SAC.

A HRA Screening Report was therefore undertaken (June 2017) to assess the Proposed Submission Partial Review Plan (July 2017). A HRA Addendum was undertaken in February 2018 to assess Focused Changes and Minor Modifications proposed to the Plan. The Submission Partial Review Plan (July 2017) incorporating the Focused Changes and Minor Modifications (February 2018) was submitted to the Secretary of State for Housing, Communities and Local Government for examination on 5th March 2018. The Submission Plan was supported by the HRA Screening Report (June 2017) and the HRA Addendum (February 2018).

Following the Court of Justice of the European Union ("CJEU") judgment in April 2018 *People Over Wind and Sweetman v Coillte Teoranta (C-323/17)*, the HRA was updated to reflect the implications of the judgement and incorporate a Stage 2 Appropriate Assessment. The Habitats Regulations Assessment Stage 1 Screening Report and Stage 2 Appropriate Assessment was published in August 2018.

Examination Hearings took place in February 2019. The Inspector's Post-Hearing Advice Note was received by the Council on 12th July 2019, The Inspector's preliminary conclusions include the deletion of site PR10 and contained suggested approaches as to how the 410 dwellings from the PR10 allocation could be redistributed.

The Council has prepared proposed Main Modifications and Minor Modifications to the Submission Plan in response to the Inspector's preliminary findings (these include the Focused Changes and Minor Modifications February 2018 as appropriate) This Addendum to the HRA August 2018 considers the proposed modifications to assess whether the findings of the HRA 2018 are still pertinent.

2. Findings

The proposed amendments to the Partial Review Proposed Submission Plan were sent in tabular form to Atkins to make clear the proposed amendments. Each proposed amendment was then checked to assess whether the amendments would change the findings of the August 2018 HRA report. The findings of this process are provided in Table 1 below.

¹ Cherwell District Council's Options for Growth: Consultation on Directions of Growth and Strategic Sites – Core Strategy Development Plan Document (September 2008). The HRA report, Options for Growth - Consultation on Directions of Growth and Strategic Sites: Core Strategy Development Plan Document Habitats Regulations Assessment (Stage 1), was produced by Atkins in October 2009

² Cherwell District Council's Draft Core Strategy (February 2010). The HRA report, Draft Core Strategy (February 2010): Habitats Regulations Assessment, Stage 1 – Screening, was produced by Atkins in February 2011

³ Proposed Submission Cherwell Local Plan (August 2012). Screenings of the draft Plan and proposed changes to it were produced by Atkins in August 2012, March 2013 and October 2013

⁴ Submission Cherwell Local Plan incorporating Proposed Modifications (October 2014). Habitats Regulations Assessment: Stage 1 – Screening, October 2014

Main 22	Page 64 Table 4 Policy PR10 – Land South East of Woodstock		Delete Woodstock row from Table 4.	No	Does not change the findings of the HRA.
Main 23	Page 65 Paragraph 5.16		Amend to read: Figure 10 illustrates our strategy for accommodating growth for Oxford. It shows the geographic relationship between Cherwell, Oxford and West Oxfordshire and specifically the proximity of north Oxford with Kidlington, Yarnton, and Begbroke and Woodstock along the A44 corridor.	No	Does not change the findings of the HRA.
Main 24	Page 66 Paragraph 5.17		Amend to read: All of the sites we have identified other than land to the south east of Woodstock lie within the Oxford Green Belt. We consider that there are exceptional circumstances for the removal of these sites (either in full or in part) from the Green Belt.	No	Does not change the findings of the HRA.
Main 25	Page 66 Paragraph 5.17		Delete as follows: 8. the need to ensure a cautious approach at Woodstock (in terms of the number of new homes) due to the presence of international and national heritage assets while responding to the proximity and connectivity of a growing town to both Oxford and the growth areas on the A44 corridor.	No	Does not change the findings of the HRA.
Main 26	Page 66 Paragraph 5.17		Renumber point 9 as point 8, point 10 as point 9, point 11 as point 10 and point 12 as point 11.	No	Does not change the findings of the HRA.
Main 27	Page 67 Paragraph 5.18		Delete as follows: Land to the south east of Woodstock lies outside but next to the Oxford Green Belt. Land at Frieze Farm is to remain in the Green Belt as we consider that its possible use as a replacement Golf Course would be compatible with the purposes of Green Belts.	No	Does not change the findings of the HRA.

Main 28	Page 69 Policy PR1 - Achieving Sustainable Development for Oxford's Needs		Amend to read: Cherwell District Council will work with Oxford City Council, West Oxfordshire District Council , Oxfordshire County Council, and the developers of allocated sites to deliver:	No	Does not change the findings of the HRA.
Main 29	Page 69 Policy PR1 - Achieving Sustainable Development for Oxford's Needs, Point (a)	Minor text change	Cherwell District Council will work with Oxford City Council, West Oxfordshire District Council, Oxfordshire County Council, and the developers of allocated sites to deliver: a. 4,400 homes to help meet Oxford's unmet housing needs and <u>necessary supporting infrastructure</u> by 2031	No	Does not change the findings of the HRA.
Main 30	Page 73 Policy PR2 – Housing Mix, Tenure and Size		Change point 2 to read: '...Provision of 80% of the affordable housing (<u>as defined by the NPPF</u>) as affordable rent/social rented dwellings and 20% as other forms on intermediate affordable homes'	No	Does not change the findings of the HRA.
Main 31	Page 76 Paragraph 5.38	Consequential change to numbers	The Oxford Green Belt in Cherwell presently comprises some 8409 hectares of land. Policy PR3 sets out the area of land for each strategic development site that we are removing from the Green Belt to accommodate residential and associated land uses to help meet Oxford's unmet housing needs. In total it comprises 253 275 hectares of land – a 3 <u>3.3%</u> reduction. Consequently, the total area of Cherwell that comprises Green Belt falls from 14.3% to 13. 98 %.	No	Does not change the findings of the HRA.
Main 32	Page 77 Paragraph 5.39: PR3 (e)	Minor text change	Amend penultimate sentence to read, 'The potential extension of the Science Park, <u>provided for by Policy Kidlington 1 of the Local Plan</u> , will be considered further in Local Plan Part 2...'	No	Does not change the findings of the HRA.
Main 33	Page 77 Policy PR3: The Oxford Green Belt		Amend the sentence to read: Policy PR7a – removal of 40.8 <u>21</u> hectares of land as shown on inset Policies Map PR7a	No	This policy will lead to development by informing other policies. This policy is considered to have no likely significant effects on the European site. Does not change the findings of the HRA
Main 34	Page 77 Policy PR3: The Oxford Green Belt		Amend sentence to read: Policy PR7b – removal of 4.3 <u>5</u> hectares of land as shown on inset Policies Map PR7b	No	This policy will lead to development by informing other policies. This policy is considered to have no likely significant effects on the European site. Does not change the findings of the HRA
Main 35	Policy PR3: The Oxford Green Belt		Amend sentence to read: Policy PR9 – removal of 47.7 <u>27</u> hectares of land as shown on inset Policies Map PR9	No	This policy will lead to development by informing other policies. This policy is considered to have no likely significant effects on the European site. Does not change the findings of the HRA
Main 36	Page 82 Para 5.65		Amend last sentence to read: Site specific transport measures are identified in Policies PR6a, PR6b, PR7a, PR7b, PR8, <u>and PR9, and PR10.</u>	No	Does not change the findings of the HRA.
Main 37	Page 82 Policy PR4a: Sustainable Transport		Amend to read: The strategic developments provided for under Policies PR6 to PR9 <u>10</u> will be expected to provide proportionate financial contributions directly related to the development in order to secure necessary improvements to, and mitigations for, the highway network and to deliver necessary improvements to infrastructure and services for public transport.	No	Does not change the findings of the HRA.
Main 38	Page 85 Paragraph 5.67 point 5	Minor text change	Amend sub-point v. to read ' creating high- quality built and natural environments <u>that can be sustained in the long term.</u> Re-number sub-point vi. as sub-point vii.	No	Does not change the findings of the HRA.

			Add new sub-point vi. 'the construction of sustainable urban drainage systems'		
Main 39	Page 86 Paragraph 5.69 New point	Minor text change	Add new point 11 to read 'enhance health and well-being'	No	Does not change the findings of the HRA.

Main 41	Page 86 Policy PR5: Green Infrastructure (point 1)	Minor text change	Applications will be expected to: 1. Identify existing GI and its connectivity and demonstrate how this will, as far as possible , be protected and incorporated into the layout, design and appearance of the proposed development	No	Does not change the findings of the HRA.
Main 42	Page 86 Policy PR5: Green Infrastructure (point 8)	Minor text change	Amend to read 'Demonstrate where multi-functioning GI can be achieved, including helping to address climate change impacts and taking into account best practice guidance. '	No	Does not change the findings of the HRA.
Main 43	Page 86 Policy PR5: Green Infrastructure (point 9)	Minor text change	Amend to read: 'Provide details of how GI will be maintained and managed in the long term. '	No	Does not change the findings of the HRA.
Main 44	Page 88 Paragraph 5.85 2 nd sentence	Minor text change	Amend to read' ...It will be necessary to have regard to adopted Development Plan policies for design and the built environment for both Cherwell and Oxford, to the emerging Cherwell Design Guide Supplementary Planning Document (SPD), and to Oxford City Council's SPD - High Quality Design in Oxford - Respecting Heritage and Achieving Local Distinctiveness, and Oxfordshire County Council's Cycling and Walking Design Guides... '	No	Does not change the findings of the HRA.
Main 45	Page 89 Policy PR6a – Land East of Oxford Road - Policies Map		Reduce land allocation for primary school use from 3.2 hectares to 2.2 hectares. Allocate 1 hectare to residential use.	No	Reducing the area of land given to primary school use does not change the findings of the HRA.
Main 46	Page 90 Policy PR6a – Land East of Oxford Road Point 1		Amend to read 'Construction of 690 650 dwellings (net) on approximately 25 24 -hectares of land (the residential area as shown). The dwellings are to be constructed at an approximate average net density of 40 dwellings per hectare.	No	<p>Policy PR6a was taken forward to Stage 2 in respect of recreation, water quality, groundwater flow and air quality.</p> <p>Recreation Although there is an increase in housing at PR6a it is not considered a significant increase and the findings of the HRA Stage 2 assessment still apply.</p> <p>Water Quality The provision of policies ESD8 and ESD9 of the adopted plan mean that development at PR6a will not have an effect on the integrity of the Oxford Meadows SAC.</p> <p>Groundwater Flow The location and extent of PR6a has not changed and therefore the site is considered to not have a significant contribution to groundwater recharge.</p> <p>Air Quality The amendments to the plan do not change the overall housing allocation and therefore the findings of the air quality assessment.</p>

					Therefore, the change in housing numbers does not change the findings of the HRA
Main 47	Page 90 Policy PR6a (point 3)	Minor text change	Amend to read 'The provision of a primary school with at least three two forms of entry on 32.2 hectares of land in the location shown'	No	Does not change the findings of the HRA.
Main 48	Page 90 Policy PR6a (point 7)	Minor text change	Amend first sentence to read, '...pedestrian, wheelchair and all-weather cycle route along the site's eastern boundary within the area of green space shown on the policies map. '	No	Does not change the findings of the HRA.
Main 49	Page 91 Policy PR6a - Land East of Oxford Road		Add a second sentence to point 10 (a) to read: ' Minor variations in the location of specific uses will be considered where evidence is available. '	No	Does not change the findings of the HRA.
Main 50	Page 91 Policy PR6a (point 10(b))	Minor text change	Amend to read ' Two points of vehicular access and egress from and to existing highways, primarily from Oxford Road'	No	Does not change the findings of the HRA.
Main 51	Page 91 Policy PR6a (point 10(c))	Minor text change	Amend to read 'An outline scheme for public vehicular, cycle, pedestrian and wheelchair connectivity within the site, to the built environment of Oxford, to Cutteslowe Park, to the allocated site to the west of Oxford Road (policy PR6b) enabling connection to Oxford City Council's allocated 'Northern Gateway' site, to Oxford Parkway and Water Eaton Park and Ride, and to existing or new points of connection off-site and to existing or potential public transport services. Required access to existing property via the site should be maintained. '	No	Does not change the findings of the HRA.
Main 52	Page 92 Policy PR6a (point 13)	Minor text change	Amend to read 'The application(s) shall be supported by a phase 1 habitat survey including habitat suitability index (HSI) survey for great crested newts, and protected and notable species surveys as appropriate, including for great crested newt presence/absence surveys (dependent on HSI survey), surveys for badgers, breeding birds and reptiles, an internal building assessment for roosting barn owl, a tree survey and an assessment of the watercourse that forms the south-eastern boundary of the site and Hedgerow Regulations Assessment"	No	Does not change the findings of the HRA.
Main 53	Page 92 Policy PR6a (point 15)	Minor text change	Amend to read 'The application shall be supported by a Heritage Impact Assessment which will identify measures to avoid or minimise conflict with the identified heritage assets within the site, particularly the Grade 2* Listed St Frideswide Farmhouse. These measures shall be incorporated or reflected, as appropriate, in any proposed development scheme. '	No	Does not change the findings of the HRA.
Main 54	Page 92 Policy PR6a (point 17)	Minor text change	Amend to read 'The application should demonstrate that Thames Water and the Environment Agency have been consulted regarding wastewater treatment capacity, and agreement has been reached in principle that foul drainage from the site will be accepted into the drainage network.'	No	<p>The previous iteration assessed in the HRA was that 'the application should demonstrate that Thames Water has agreed in principle that foul drainage from the site will be accepted into its network'.</p> <p>The updated HRA Stage 1 concluded that Policy PR6a may lead to a likely significant effect on the Oxford Meadows SAC. The Stage 2 assessment concluded that policies ESD8 and ESD9 of the adopted plan provided the measures required to protect the Oxford Meadows SAC.</p> <p>This main modification improves the protection of potential water quality issues and therefore the amendment provides additional protection of the Oxford Meadows SAC.</p>

Main 55	Page 93 Policy PR6a (point 18)	Minor text change	Amend to read'...mitigation measures. <u>The outcomes of the investigation and mitigation measures shall be incorporated or reflected, as appropriate, in any proposed development scheme.</u>	No	Does not change the findings of the HRA.
Main 56	Page 93 Policy PR6a (new point)	Minor text change	Add new point 20 to read ' <u>The application shall include a management plan for the appropriate re-use and improvement of soils</u> ' Re-number subsequent points	No	Does not change the findings of the HRA.
Main 57	Page 93 Policy PR6a - Land East of Oxford Road Point 21		Amend the final sentence to read: 'The Delivery Plan shall include a start date for development, demonstration of how the development would be completed by 2031 and a programme showing how <u>the site will contribute towards maintaining</u> a five year supply of housing. <u>(for the site) will be maintained year on year.</u> '	No	Does not change the findings of the HRA.
Main 58	Page 94 Policy PR6a (point 28)	Minor text change	Amend to read 'The location of archaeological features, including the tumuli to the east of the Oxford Road, should be <u>incorporated and</u> made evident in the landscape design of the site.'	No	Does not change the findings of the HRA.
Main 59	Page 96 Policy PR6b (point 1)	Change relates to density of building	Amend to read: 'Construction of 670 dwellings (net) on 32 hectares of land (the residential area as shown). <u>The dwellings are to be constructed at an approximate average net density of 25 dwellings per hectare.</u> '	No	Policy PR6b was taken forward to Stage 2 in respect of recreation, water quality, groundwater flow and air quality. Recreation Although there is an increase in housing at PR6b it is not considered a significant increase and the findings of the HRA Stage 2 assessment still apply. Water Quality The provision of policies ESD8 and ESD9 of the adopted plan mean that development at PR6b will not have an effect on the integrity of the Oxford Meadows SAC. Groundwater Flow The location and extent of PR6b has not changed and therefore the site is considered to not have a significant contribution to groundwater recharge. Air Quality The amendments to the plan do not change the overall housing allocation and therefore the findings of the air quality assessment. Therefore, the change in housing numbers does not change the findings of the HRA
Main 60	Page 96 Policy PR6b – Land West of Oxford Road		Add a second sentence to point 8 (a) to read: ' <u>Minor variations in the location of specific uses will be considered where evidence is available.</u> '	No	Does not change the findings of the HRA.
Main 61	Page 96 Policy PR6b (point 8(b))	Minor text change	Amend to read ' <u>Two</u> points of vehicular access and egress from and to existing highways, <u>primarily from Oxford Road, and connecting within the site.</u>	No	Does not change the findings of the HRA.

Main 62	Page 98 Policy PR6b (point 11)	Minor text change	Amend to: 11. The application(s) shall be supported by a phase 1 habitat survey including habitat suitability index (HSI) survey for great crested newts, <u>and protected and notable species surveys as appropriate, including</u> great crested newt presence/absence surveys (dependent on HSI survey), surveys for badgers, breeding birds and reptiles, an internal building assessment for roosting barn owl, a tree survey and an assessment of water bodies	No	Does not change the findings of the HRA.
Main 63	Page 98 Policy PR6b (point 13)	Minor text change	Amend to read 'The application(s) shall be supported by a desk-based archaeological investigation which may then require predetermination evaluations and appropriate mitigation measures. <u>The outcomes of the investigation and mitigation measures shall be incorporated or reflected, as appropriate, in any proposed development scheme.</u> '	No	Does not change the findings of the HRA.
Main 64	Page 98 Policy PR6b (point 15)	Minor text change	Amend to read 'The application should demonstrate that Thames Water <u>and the Environment Agency have been consulted regarding wastewater treatment capacity, and agreement has been reached</u> in principle that foul drainage from the site will be accepted into <u>the drainage</u> network.'	No	The previous iteration assessed in the HRA was that 'the application should demonstrate that Thames Water has agreed in principle that foul drainage from the site will be accepted into its network'. The updated HRA Stage 1 concluded that Policy PR6b may lead to a likely significant effect on the Oxford Meadows SAC. The Stage 2 assessment concluded that policies ESD8 and ESD9 of the adopted plan provided the measures required to protect the Oxford Meadows SAC. This main modification improves the protection of potential water quality issues and therefore the amendment provides additional protection of the Oxford Meadows SAC. Does not change the findings of the HRA.
Main 65	Page 98 Policy PR6b (new point)	Minor text change	Add new point 16 to read ' <u>The application shall include a management plan for the appropriate re-use and improvement of soils</u> ' Re-number subsequent points	No	Does not change the findings of the HRA.
Main 66	Page 98 Policy PR6b – Land West of Oxford Point 17		Delete point 17 and renumber subsequent points accordingly	No	Does not change the findings of the HRA.
Main 67	Page 99 Policy PR6b - Land West of the Oxford Road Point 19		Amend the final sentence to read: 'The Delivery Plan shall include a start date for development, demonstration of how the development would be completed by 2031 and a programme showing how <u>the site will contribute towards maintaining</u> a five year supply of housing. (for the site) will be maintained year on year. '	No	Does not change the findings of the HRA.
Main 68	Policy PR6c – Land at Frieze Farm	The original policy required a development brief to be produced. The amended text provides the detail of what the	Amend to read: Land at Frieze Farm will be reserved for the potential construction of a golf course should this be required as a result of the development of Land to the West of Oxford Road under Policy PR6b. <u>Planning Application Requirements</u> 1. The application will be expected to be supported by, and prepared in accordance with, a Development Brief for the entire site to be jointly prepared and agreed in advance between the appointed	No	Does not change the findings of the HRA.

		<p>brief and the planning application should include</p>	<p>representative(s) of the landowner(s) and Cherwell District Council and in consultation with Oxfordshire County Council.</p> <p>The Development Brief shall include:</p> <p>(a) A scheme and outline layout for delivery of the required land uses and associated infrastructure</p> <p>(b) Points of vehicular access and egress from and to existing highways</p> <p>(c) An outline scheme for public vehicular, cycle, pedestrian and wheelchair connectivity within the site, to the built environment, and to existing or new points of connection off-site and to existing or potential public transport services.</p> <p>(d) Protection and connection of existing public rights of way</p> <p>(e) Design principles that respond to the landscape, canal-side and Green Belt setting and the historic context of Oxford</p> <p>(f) Outline measures for securing net biodiversity gains informed by a Biodiversity Impact Assessment in accordance with (2) below</p> <p>(g) An outline scheme for vehicular access by the emergency services</p> <p>2. The application(s) shall be supported by the Biodiversity Impact Assessment (BIA) based on the DEFRA biodiversity metric (unless the Council has adopted a local, alternative methodology), to be agreed with Cherwell District Council</p> <p>3. The application(s) shall be supported by a proposed Biodiversity Improvement and Management Plan (BIMP) informed by the findings of the BIA and habitat surveys and to be agreed before development commences. The BIMP shall include:</p> <p>(a) measures for securing net biodiversity gain within the site and for the protection of wildlife during construction</p> <p>(b) measures for retaining and conserving protected/notable species (identified within baseline surveys) within the development</p> <p>(c) demonstration that designated environmental assets will not be harmed, including no detrimental impacts through hydrological, hydro chemical or sedimentation impacts</p> <p>(d) measures for the protection and enhancement of existing wildlife corridors and the protection of existing hedgerows and trees</p> <p>(e) the creation of a green infrastructure network with connected wildlife corridors</p> <p>(f) measures to minimise light spillage and noise levels on habitats especially along wildlife corridors</p> <p>(g) a scheme for the provision for bird and bat boxes and for the viable provision of designated green walls and roofs</p> <p>(h) farmland bird compensation</p> <p>(i) proposals for long-term wildlife management and maintenance</p> <p>4. Measures for the retention of the Grade II listed Frieze Farmhouse and an appropriate sensitive setting</p> <p>5. The application shall be supported by a Heritage Impact Assessment which will identify measures to avoid or minimise conflict with identified heritage assets within and adjacent to the site, particularly the Grade II Listed Frieze Farmhouse. These measures shall be incorporated or reflected, as appropriate, in any proposed development scheme'</p> <p>6. The application(s) shall be supported by a desk-based archaeological investigation which may then require predetermination evaluations and appropriate mitigation measures. The outcomes of the investigation and mitigation measures shall be incorporated or reflected, as appropriate, in any proposed development scheme</p> <p>7. The application(s) shall be supported by a Transport Assessment and Travel Plan including measures for maximising sustainable transport connectivity, minimising the impact of motor vehicles on existing communities and actions for updating the Travel Plan during the construction of the development</p> <p>8. The application will be supported by a Flood Risk Assessment, informed by a suitable ground investigation and having regard to guidance contained within the Council's Level 1 Strategic Flood Risk Assessment. The Flood Risk Assessment should include detailed modelling of watercourses taking into account allowance for climate change. There should be no ground raising or built development within the modelled flood zone.</p> <p>9. The application shall be supported by a landscaping scheme including details of materials for land modelling (to be agreed with the Environment Agency), together with a management plan for the appropriate re-use and improvement of soils</p> <p>10. The application should demonstrate that Thames Water has agreed in principle that foul drainage from the site will be accepted into its network.</p>		
--	--	--	---	--	--

			<p>11. A single comprehensive, outline scheme shall be approved for the entire site. The scheme shall be supported by draft Heads of Terms for developer contributions that are proposed to be secured by way of legal agreement. The application(s) shall be supported by a Delivery Plan demonstrating how the implementation and phasing of the development shall be secured comprehensively and how the provision of supporting infrastructure will be delivered. The Delivery Plan shall include a start date for development and a programme showing how and when the golf course would be constructed to meet any identified need as a result of the development of Land to the West of Oxford Road (Policy PR6b)</p> <p>The Development Brief shall incorporate design principles that respond to the landscape and Green Belt setting and the historic context of Oxford.</p>		
Main 69	Page 103 Paragraph 5.90		<p>Amend last sentence to read: A clearly defined field boundary partially marks the extent of the area that is identified for development , and the remainder of the southern boundary follows a former historic field boundary.</p>	No	Does not change the findings of the HRA.
Main 70	Page 104 Paragraph 5.95		<p>Delete first two sentences and replace with the following: The farmhouse looks south across land planted as an orchard. To the west of the farmhouse is an area of trees and a traditional orchard which forms an important part of its historic setting.</p>	No	Does not change the findings of the HRA
Main 71	Page 104/105 Paragraph 5.96 (new point and points 5 to 8)	Minor text change	<p>Re-number points 5 to 8 as 6 to 9</p> <p>Insert new point 5. To read: 'Retention and renovation of the Grade II Listed Stratfield Farmhouse and the protection of its historic setting.</p>	No	Does not change the findings of the HRA.
Main 72	Page 106 Policy PR7a – Land South East of Kidlington Policies Map		<p>Increase extent of residential area Reduce extent of Outdoor Sports Provision Amend revised Green Belt boundary</p>	No	Does not change the findings of the HRA.
Main 73	Page 106 Policy PR7a – Land South East of Kidlington Policies Map		Amend the policies map to include 'new green space/parks' notation over (in addition to) 'Outdoor Sports provision' on the policies map (see attached).	No	Does not change the findings of the HRA.
Main 74	Page 107 Policy PR7a (point 1)	Change relates to density of building	<p>Amend to read: 'Construction of 430 230 dwellings (net) on 21 44 hectares of land (the residential area as shown). The dwellings to be constructed at an approximate average net density of 35 dwellings per hectare.'</p>	No	<p>Policy PR7a was taken forward to Stage 2 in respect of recreation, water quality, groundwater flow and air quality.</p> <p>Recreation Although there is an increase in housing at PR7a it is not considered a significant increase and the findings of the HRA Stage 2 assessment still apply.</p> <p>Water Quality The provision of policies ESD8 and ESD9 of the adopted plan mean that development at PR7a will not have an effect on the integrity of the Oxford Meadows SAC.</p> <p>Groundwater Flow The location and extent of PR7a has not changed and therefore the site is considered to not have a significant contribution to groundwater recharge.</p>

					Air Quality The amendments to the plan do not change the overall housing allocation and therefore the findings of the air quality assessment. Therefore, the change in housing numbers does not change the findings of the HRA
Main 75	Page 107 Policy PR7a – Land South East of Kidlington Point 4		Amend to read: The provision of 24.5 11 hectares of land to provide formal sports facilities for the development and for the wider community and green infrastructure within the Green Belt	No	Does not change the findings of the HRA.
Main 76	Page 107 Policy PR7a – Land South East of Kidlington Point 9 (a)		Add a second sentence to point 9 (a) to read: <u>‘Minor variations in the location of specific uses will be considered where evidence is available.’</u>	No	Does not change the findings of the HRA.
Main 77	Page 109 Policy PR7a (point 12)	Minor text change	Amend to: ‘ The application(s) shall be supported by a phase 1 habitat survey including habitat suitability index (HSI) survey for great crested newts, <u>and protected and notable species surveys as appropriate, including</u> great crested newt presence/absence surveys (dependent on HSI survey), surveys for badgers, breeding birds and reptiles, an internal building assessment for roosting barn owl, a tree survey and an assessment of water bodies.	No	Does not change the findings of the HRA.
Main 78	Page 109 Policy PR7a (point 14)	Minor text change	Amend to read ‘The application should demonstrate that Thames Water, <u>Natural England and the Environment Agency have been consulted regarding wastewater treatment capacity, and that agreement has been reached</u> in principle that foul drainage from the site will be accepted into <u>the drainage</u> network.’	No	The previous iteration assessed in the HRA was that ‘the application should demonstrate that Thames Water has agreed in principle that foul drainage from the site will be accepted into its network’. The updated HRA Stage 1 concluded that Policy PR7a may lead to a likely significant effect on the Oxford Meadows SAC. The Stage 2 assessment concluded that policies ESD8 and ESD9 of the adopted plan provided the measures required to protect the Oxford Meadows SAC. This main modification improves the protection of potential water quality issues and therefore the amendment provides additional protection of the Oxford Meadows SAC.
Main 79	Page 109 Policy PR7a (point 16)	Minor text change	Amend to read ‘The application(s) shall be supported by a desk-based archaeological investigation which may then require predetermination evaluations and appropriate mitigation measures. <u>The outcomes of the investigation and mitigation measures shall be incorporated or reflected, as appropriate, in any proposed development scheme</u> ’	No	Does not change the findings of the HRA.
Main 80	Page 109 Policy PR7a (new point)	Minor text change	Add new point 17 to read <u>‘The application shall include a management plan for the appropriate re-use and improvement of soils’</u>	No	Does not change the findings of the HRA.

			Re-number subsequent points		
Main 81	Page 110 Policy PR7a – Land south east of Kidlington Point 19		Amend the final sentence to read: 'The Delivery Plan shall include a start date for development, demonstration of how the development would be completed by 2031 and a programme showing how the site will contribute towards maintaining a five year supply of housing. (for the site) will be maintained year on year. '	No	Does not change the findings of the HRA.
Main 82	Page 111 Policy PR7b – Land at Stratfield Farm Policies Map		Increase Residential area Reduce Nature Conservation Area Amend Revised Green Belt boundary Amend Green Space boundary	No	Does not change the findings of the HRA.
Main 83	Page 112 Policy PR7b – Land at Stratfield Farm Point 1		Amend to read: 'Construction of 120 400 homes (net) on 5 4 hectares of land (the residential area). The dwellings to be constructed at an approximate average net density of 25 dwellings per hectare. '	No	<p>Policy PR7b was taken forward to Stage 2 in respect of recreation, water quality, groundwater flow and air quality.</p> <p>Recreation Although there is an increase in housing at PR7b it is not considered a significant increase and the findings of the HRA Stage 2 assessment still apply.</p> <p>Water Quality The provision of policies ESD8 and ESD9 of the adopted plan mean that development at PR7b will not have an effect on the integrity of the Oxford Meadows SAC.</p> <p>Groundwater Flow The location and extent of PR7b has not changed and therefore the site is considered to not have a significant contribution to groundwater recharge.</p> <p>Air Quality The amendments to the plan do not change the overall housing allocation and therefore the findings of the air quality assessment. Therefore, the change in housing numbers does not change the findings of the HRA</p>
Main 84	Page 112 Policy PR7b – Land at Stratfield Farm Point 7		Amend to read: 'Creation of a nature conservation area on 6.3 5.3 hectares of land as shown on the inset Policies Map, incorporating the community orchard and with the opportunity to connect to and extend Stratfield Brake District Wildlife Site.'	No	Does not change the findings of the HRA.
Main 85	Page 112 Policy PR7b (point 9)	Minor text change	Amend last sentence to read 'The Development Brief shall be prepared in consultation with Oxfordshire County Council, Oxford City Council and the Canal and River Trust '	No	Does not change the findings of the HRA.
Main 86	Page 112 Policy PR7b – Land at Stratfield Farm Point 10 (a)		Add a second sentence to point 10 (a) to read: ' Minor variations in the location of specific uses will be considered where evidence is available. '	No	Does not change the findings of the HRA.

Main 87	Page 113 Policy PR7b – Land at Stratfield Farm Point 10 (b)		Points of vehicular access and egress from and to existing highways with, <u>unless otherwise approved</u> , at least two separate points:	No	Does not change the findings of the HRA.
Main 88	Page 113 Policy PR7b – Land at Stratfield Farm Point 10 (c)		The scheme shall include an access road from the Kidlington roundabout to the easternmost development parcels and the Stratfield Farm building complex only, as shown on the inset Policies Map.	No	Does not change the findings of the HRA.
Main 89	Page 114 Policy PR7b (point 13)	Minor text changes	Amend to read: 'The application(s) shall be supported by a phase 1 habitat survey including an habitat suitability index (HSI) survey for great crested newts, <u>and protected and notable species surveys as appropriate, including</u> great crested newt presence/absence surveys (dependent on HSI survey), hedgerow and tree survey, surveys for badgers, water vole, otter, invertebrate, dormouse, breeding birds and reptiles, an internal building assessment for roosting barn owl, and an assessment of water bodies'	No	Does not change the findings of the HRA.
Main 90	Page 115 Policy PR7b (point 16)	Minor text changes	Amend to read 'The application should demonstrate that Thames Water, <u>Natural England and the Environment Agency have been consulted regarding wastewater treatment capacity, and that agreement has been reached</u> in principle that foul drainage from the site will be accepted into <u>the drainage network.</u> '	No	The previous iteration assessed in the HRA was that 'the application should demonstrate that Thames Water has agreed in principle that foul drainage from the site will be accepted into its network'. The updated HRA Stage 1 concluded that Policy PR7b may lead to a likely significant effect on the Oxford Meadows SAC. The Stage 2 assessment concluded that policies ESD8 and ESD9 of the adopted plan provided the measures required to protect the Oxford Meadows SAC. This main modification improves the protection of potential water quality issues and therefore the amendment provides additional protection of the Oxford Meadows SAC.
Main 91	Page 115 Policy PR7b (point 17)	Minor text change	Amend to read '...a Heritage Impact Assessment which will <u>identify</u> measures to avoid or minimise conflict with identified heritage assets within <u>and adjacent to</u> the site, particularly Stratfield Farmhouse. <u>These measures shall be incorporated or reflected, as appropriate, in any proposed development scheme</u> '	No	Does not change the findings of the HRA.
Main 92	Page 115 Policy PR7b (point 18)	Minor text change	Amend to read '...a desk-based archaeological investigation which may then require predetermination evaluations and appropriate mitigation measures. <u>The outcomes of the investigation and mitigation measures shall be incorporated or reflected, as appropriate, in any proposed development scheme</u> '	No	Does not change the findings of the HRA.
Main 93	Page 115 Policy PR7b (new point)	Minor text change	Add new point 19 to read ' <u>The application shall include a management plan for the appropriate re-use and improvement of soils</u> ' Re-number subsequent points	No	Does not change the findings of the HRA.
Main 94	Page 115 Policy PR7b – Land at Stratfield Farm Point 21		Amend the final sentence to read: 'The Delivery Plan shall include a start date for development, demonstration of how the development would be completed by 2031 and a programme showing how <u>the site will contribute towards maintaining</u> a five year supply of housing. (for the site) will be maintained year on year.'	No	Does not change the findings of the HRA.

Main 95	Page 121 Policy PR8 (point 1)	Minor text change	Amend to read: 'Construction of 1,950 dwellings (net) on approximately 66 hectares of land (the residential area as shown). The dwellings are to be constructed at an approximate average net density of 45 dwellings per hectare '	No	Does not change the findings of the HRA.
Main 96	Page 121 Policy PR8 (point 4)	Minor text change	Amend to read 'The provision of a primary school with at least three forms of entry on 3.2 hectares of land in the location shown'	No	Does not change the findings of the HRA.
Main 97	Page 121 Policy PR8 (point 5)	Minor text change	Amend to read 'The provision of a primary school with at least two forms of entry on 2.2 hectares of land in the location shown if required in consultation with the Education Authority and unless otherwise agreed with Cherwell District Council.'	No	Does not change the findings of the HRA.
Main 98	Page 122 Policy PR8 (point 17)	Minor text change	Amend last sentence to read 'The Development Brief shall be prepared in consultation with Oxfordshire County Council, Oxford City Council, <u>Network Rail and the Canal and River Trust</u> '	No	Does not change the findings of the HRA.
Main 99	Page 122 Policy PR8 – Land east of the A44 Point 18 (a)		Add a second sentence to point 18 (a) to read: ' <u>Minor variations in the location of specific uses will be considered where evidence is available.</u> '	No	Does not change the findings of the HRA.
Main 100	Page 122 Policy PR8 (point 18(b))	Minor text change	Amend to read: 'Points of vehicular access and egress from and to existing highways with at least two separate, <u>connecting</u> points from and to the A44 <u>and</u> including the use of the existing Science Park access road.'	No	Does not change the findings of the HRA.
Main 101	Page 123 Policy PR8 (point 18(f))	Minor text change	Amend to read: 'In consultation with Oxfordshire County Council <u>and Network Rail</u> , proposals for the closure/unadoption of Sandy Lane, the closure of Sandy Lane to motor vehicles...'	No	Does not change the findings of the HRA.
Main 102	Page 123 Policy PR8 (point 19)	Minor text change	Amend to read, 'The application(s) shall be supported by the Biodiversity Impact Assessment (BIA) based on the DEFRA biodiversity metric (unless the Council has adopted a local, alternative methodology), prepared in consultation and agreed with Cherwell District Council. The BIA shall <u>be informed by a hydrogeological risk assessment to determine whether there would be any material change in ground water levels as a result of the development and any associated adverse impact, particularly on Rushy Meadows SSSI, requiring mitigation. It shall also be informed by</u> investigation of any above ground hydrological connectivity <u>with the SSSI and</u> Rowel Brook.'	No	Does not change the findings of the HRA.
Main 103	Page 124 Policy PR8 (point 21)	Minor text change	Amend to read: 'The application(s) shall be supported by a phase 1 habitat survey <u>and protected and notable species surveys as appropriate, including and</u> surveys for badgers, nesting birds, amphibians (in particular Great Crested Newts), reptiles and for bats including associated tree assessment, hedgerow regulations assessment.'	No	Does not change the findings of the HRA.
Main 104	Page 124 Policy PR8 (point 22)	Minor text change	Amend to read: 'The application(s) shall be supported by a Transport Assessment and Travel Plan including measures for maximising sustainable transport connectivity, minimising the impact of motor vehicles on new residents and existing communities, and actions for updating the Travel Plan during construction of the development. <u>The Transport Assessment shall include consideration of the effect of vehicular and non-vehicular traffic on use of the railway level crossings at Sandy Lane, Yarnton Lane and Roundham.</u> '	No	Does not change the findings of the HRA.
Main 105	Page 125 Policy PR8 (point 23)	Minor text change	Amend to read '23. The application shall be supported by a Flood Risk Assessment informed by a suitable ground investigation, and having regard to guidance contained within the Council's Level 2 Strategic Flood Risk Assessment. A surface water management framework shall be prepared to maintain run off rates to greenfield run off rates and volumes, with use of Sustainable Drainage Systems in accordance with adopted Policy ESD7, taking into account recommendations contained in the Council's Level 1 and Level 2 SFRAs. <u>Residential development must be located outside the modelled Flood Zone 2 and 3 envelope.</u> '	No	Does not change the findings of the HRA.
Main 106	Page 125 Policy PR8 (point 24)	Minor text change	Amend to read 'The application should demonstrate that <u>Thames Water, Natural England and the Environment Agency have been consulted regarding wastewater treatment capacity, and that agreement has been reached</u> in principle that foul drainage from the site will be accepted into <u>the drainage</u> network.'	No	The previous iteration assessed in the HRA was that 'the application should demonstrate that Thames Water has agreed in principle that foul drainage from the site will be accepted into its network'. The updated HRA Stage 1 concluded that Policy PR8 may lead to a likely

					significant effect on the Oxford Meadows SAC. The Stage 2 assessment concluded that policies ESD8 and ESD9 of the adopted plan provided the measures required to protect the Oxford Meadows SAC. This main modification improves the protection of potential water quality issues and therefore the amendment provides additional protection of the Oxford Meadows SAC.
Main 107	Page 125 Policy PR8 (point 25)	Minor text change	25. The application shall be supported by a Heritage Impact Assessment which will identify measures to avoid or minimise conflict with the identified heritage assets within the site, particularly the Oxford Canal Conservation Area and the listed structures along its length. <u>These measures shall be incorporated or reflected, as appropriate, in any proposed development scheme.</u>	No	Does not change the findings of the HRA.
Main 108	Page 125 Policy PR8 (point 26)	Minor text change	'...mitigation measures. <u>The outcomes of the investigation and mitigation measures shall be incorporated or reflected, as appropriate, in any proposed development scheme.</u>	No	Does not change the findings of the HRA.
Main 109	Page 125 Policy PR8 (new point)	Minor text change	Add new point 28 to read <u>'The application shall include a management plan for the appropriate re-use and improvement of soils'</u> Re-number subsequent points	No	Does not change the findings of the HRA.
Main 110	Page 125 Policy PR8 – Land east of the A44 Point 30		Amend the final sentence to read: 'The Delivery Plan shall include a start date for development, demonstration of how the development would be completed by 2031 and a programme showing how <u>the site will contribute towards maintaining</u> a five year supply of housing. (for the site) will be maintained year on year.'	No	Does not change the findings of the HRA.
Main 111	Page 127 Paragraph 5.121		Amend to read: 'We are also seeking to enhance the beneficial use of the Green Belt within the site by requiring improved <u>informal</u> access to the countryside and significant ecological and biodiversity gains primarily through the establishment of publicly accessible informal parkland between the proposed built development and the retained agricultural land to the west. There will also be opportunities for significant ecological and biodiversity gains. The Council's priority will be the creation of a new Local Nature Reserve at the southern end of the site with good access to the primary school and the existing public rights of way.'	No	Does not change the findings of the HRA
Main 112	Page 129 Policy PR9 – Land West of Yarnton Policies Map		Extend residential area to 25.3 hectares Delete Public Access Land Amend Revised Green Belt boundary Add 24.8 hectares of new green space/parks Add 39.2 hectares of retained agricultural land	No	Does not change the findings of the HRA.
Main 113	Page 130 Policy PR9 (point 1)	Minor text change	Amend to read, 'Construction of 540 530 dwellings (net) on approximately 25 16 hectares of land (the residential area as shown). The dwellings are to be constructed at an approximate average net density of 35 dwellings per hectare'	No	Policy PR9 was taken forward to Stage 2 in respect of recreation, water quality, groundwater flow and air quality. Recreation Although there is an increase in housing at PR9 it is not considered a significant increase and the findings of the HRA Stage 2 assessment still apply. Water Quality The provision of policies ESD8 and ESD9 of the

					<p>adopted plan mean that development at PR9 will not have an effect on the integrity of the Oxford Meadows SAC.</p> <p>Groundwater Flow</p> <p>The location and extent of PR9 has not changed and therefore the site is considered to not have a significant contribution to groundwater recharge.</p> <p>Air Quality</p> <p>The amendments to the plan do not change the overall housing allocation and therefore the findings of the air quality assessment.</p> <p>Therefore, the change in housing numbers does not change the findings of the HRA</p>
Main 114	Page 130 Policy PR9 – Land West of Yarnton Point 3		Amend to read: 'The provision of 4.6 1.8 hectares of land for use by the existing William Fletcher Primary School to enable potential school expansion within the existing school site and the replacement of playing pitches and amenity space'	No	Does not change the findings of the HRA.
Main 115	Page 130 Policy PR9 – Land West of Yarnton Point 5		Amend to read: 'Public access within the 74 hectares of land The provision of public open green space as informal parkland on 24.8 hectares of land to the west of the residential area and a new Local Nature Reserve accessible to William Fletcher Primary School'	No	Does not change the findings of the HRA.
Main 116	Page 130 Policy PR9 – Land West of Yarnton Point 7		Insert ' The retention of 39.2 hectares of land in agricultural use in the location shown '	No	Does not change the findings of the HRA
Main 117	Page 130 Policy PR 9 - Land east of the A44 Point 8(a)		Add a second sentence to point 8 (a) to read: ' Minor variations in the location of specific uses will be considered where evidence is available. '	No	Does not change the findings of the HRA.
Main 118	Page 130 Policy PR9 (point 8(b))	Minor text change	Amend to read: ' At least two separate points of vehicular access and egress to and from the A44 with a connecting road between.	No	The updated HRA Stage 1 concluded that Policy PR9 may lead to a likely significant effect on the Oxford Meadows SAC. The Stage 2 assessment concluded that with the policies in the adopted plan and further assessment in respect of air quality there would be no effect on the integrity of the Oxford Meadows SAC. Does not change the findings of the HRA.
Main 119	Page 132 Policy PR9 (point 11)	Minor text change	Amend to: "11. The application(s) shall be supported by a phase 1 habitat survey including habitat suitability index survey for great crested newts, and protected and notable species surveys as appropriate, including great crested newt presence/absence surveys (dependent on HSI survey), for badgers, breeding birds, internal building assessment for roosting barn owl, dormouse, reptile, tree and building assessment for bats, bat activity, hedgerow regulations assessment and assessment of water courses"	No	Does not change the findings of the HRA.

Main 120	Page 132 Policy PR9 (point 14)	Minor text change	Amend to read 'The application should demonstrate that Thames Water and the Environment Agency have been consulted regarding wastewater treatment capacity, and that agreement has been reached in principle that foul drainage from the site will be accepted into the drainage network.'	No	The previous iteration assessed in the HRA was that 'the application should demonstrate that Thames Water has agreed in principle that foul drainage from the site will be accepted into its network'. The updated HRA Stage 1 concluded that Policy PR9 may lead to a likely significant effect on the Oxford Meadows SAC. The Stage 2 assessment concluded that policies ESD8 and ESD9 of the adopted plan provided the measures required to protect the Oxford Meadows SAC. This main modification improves the protection of potential water quality issues and therefore the amendment provides additional protection of the Oxford Meadows SAC.
Main 121	Page 132 Policy PR9 (point 16)	Minor text change	Amend to read '...mitigation measures. The outcomes of the investigation and mitigation measures shall be incorporated or reflected, as appropriate, in any proposed development scheme. '	No	Does not change the findings of the HRA.
Main 122	Page 132 Policy PR9 (new point) (page 132)	Minor text change	Add new point 17 to read ' The application shall include a management plan for the appropriate re-use and improvement of soils ' Re-number subsequent points	No	Does not change the findings of the HRA.
Main 123	Page 133 Policy PR9 – Land west of Yarnton Point 18		Amend the final sentence to read: 'The Delivery Plan shall include a start date for development, demonstration of how the development would be completed by 2031 and a programme showing how the site will contribute towards maintaining a five year supply of housing. (for the site) will be maintained year on year.'	No	Does not change the findings of the HRA.
Main 124	Page 135 to 137 Woodstock – Paragraphs 5.124 to 5.139		Delete paragraphs 5.124 to 5.139.	No	Does not change the findings of the HRA.

Main 127	Page 145 Paragraph 5.143	Minor text change	Amend to read: 'The Council's Supplementary Planning Document provides guidance on Developer Contributions associated with new development. The Council has consulted on a draft Charging Schedule for a possible Community Infrastructure Levy, a potential complementary means of acquiring funds for infrastructure. However, it has not yet been determined whether the Council will introduce CIL, particularly as the Government is reviewing how CIL functions, and its relationship with securing developer contributions through 'Section 106' legal obligations and options for reform.	No	Does not change the findings of the HRA.
Main 128	Page 146 Paragraph 5.148		Amend to read:	No	Does not change the findings of the HRA.

			'...liaison on infrastructure issues will be required with partner authorities including the County Council, <u>and</u> Oxford City Council and West Oxfordshire District Council ..'		
Main 129	Page 146 Paragraph 5.148		In delivering the developments identified in this Plan, liaison on infrastructure issues will be required with partner authorities including the County Council <u>and</u> Oxford City Council and West Oxfordshire District Council . for example to ensure a joined-up approach to the provision of additional school places and public open space where there are cross-boundary implementation matters to consider.	No	Does not change the findings of the HRA.
Main 130	Page 147 Policy PR11 – Infrastructure Delivery Point 1		The Council's approach to infrastructure planning to contribute in meeting Oxford's unmet housing needs will be to ensure delivery by: 1. Working with partners including central Government, the Local Enterprise Partnership, Oxford City Council, West Oxfordshire District Council , Oxfordshire County Council and other service providers to:...	No	Does not change the findings of the HRA.
Main 131	Page 147 Policy PR11 (point 1(a))	Minor text change	Amend to read 'provide <u>and maintain</u> physical, community and green infrastructure'	No	Does not change the findings of the HRA.
Main 132	Page 148 Policy PR11 – Infrastructure Delivery Point 2	Minor text change	Amend point 2 of the Policy to read: Completing and k 'Keeping up-to-date a Developer Contributions	No	Does not change the findings of the HRA
Main 133	Page 148 Policy PR11 – Infrastructure Delivery (point 3)	Minor text change	Amend to read ' <u>Ensure that</u> development proposals demonstrate that infrastructure requirements can be met including the provision of transport, education, health, social, <u>sport</u> , leisure and community facilities, wastewater treatment and sewerage, and with necessary developer contributions in accordance with adopted requirements <u>including those of the Council's Developer Contributions SPD</u> .	No	Does not change the findings of the HRA.
Main 134	Page 148 Policy PR11 - Infrastructure Delivery		Add new point 4: <u>'4. All sites are required to contribute to the delivery of Local Plan infrastructure. Where forward funding for infrastructure has been provided, for example from the Oxfordshire Growth Board as part of the Oxfordshire Housing and Growth Deal, all sites are required to contribute to the recovery of these funds as appropriate.'</u>	No	Does not change the findings of the HRA.
Main 135	Page 150 Paragraph 5.165 Point 2		Delete point 2	No	Does not change the findings of the HRA.
Main 136	Page 150 Paragraph 5.165 Point 3		Amend paragraph 5.165 as follows: '3. we are requiring developers to clearly show that they can maintain <u>contribute towards maintaining</u> a five year supply. for their own sites .	No	Does not change the findings of the HRA
Main 137	Page 150 Policy PR12a - Delivering Sites and Maintaining Housing Supply		Delete the following: Land South East of Kidlington (Policy PR7a – 230 homes) and Land South East of Woodstock (Policy PR10 – 410 homes) will only be permitted to commence development before 1 April 2026 if the calculation of the five year land supply over the period 2021 to 2026 falls below five years.	No	Does not change the findings of the HRA.
Main 138	Page 150 Policy PR12a (5 th paragraph)	Minor text change	Amend to read: 'Permission will only be granted for any of the allocated sites if it can be demonstrated at application stage that they will <u>contribute in delivering</u> a continuous five year housing land supply (i.e. measured against the <u>local plan housing trajectory</u>). <u>This will be achieved via the Delivery Plans required for each strategic development site.</u>	No	Does not change the findings of the HRA.
Main 139	Page 151 Policy PR12b - Sites Not Allocated in the Partial Review (point 3)	Minor text change	Amend as follows: 'the site has been identified in the Council's Housing and Economic Land Availability Assessment as a <i>developable</i> site'	No	Does not change the findings of the HRA.
Main 140	Page 151 Policy PR12b - Sites Not Allocated in the Partial Review (point 5(a))	Minor text change	Amend to read 'A comprehensive Development Brief <u>and place shaping principles for the entire site</u> to be agreed <u>in advance</u> by the Council in consultation with Oxfordshire County Council and Oxford City Council	No	Does not change the findings of the HRA.
Main 141	Page 151 Policy PR12b – Sites not allocated in the Partial Review	Minor text change	Amend the second sentence of the paragraph to read: 'The Delivery Plan shall include a start date for development, demonstration of how the development would be completed by 2031 and a programme showing how <u>the site will contribute towards</u> maintaining a five year supply of housing. (for the site) will be maintained year on year. '	No	Does not change the findings of the HRA.

Main 142	Page 152 Policy PR12b - Sites Not Allocated in the Partial Review (point 5(h))	Minor text change	Amend to read 'a Heritage Impact Assessment which will identify measures to avoid or minimise conflict with identified heritage assets within and adjacent to the site. <u>These measures shall be incorporated or reflected, as appropriate, in any proposed development scheme</u> '	No	Does not change the findings of the HRA.
Main 143	Page 152 Policy PR12b - Sites Not Allocated in the Partial Review (point 5(j))	Minor text change	Amend to read 'a desk-based archaeological investigation which may then require predetermination evaluations and appropriate mitigation measures. <u>The outcomes of the investigation and mitigation measures shall be incorporated or reflected, as appropriate, in any proposed development scheme</u> '	No	Does not change the findings of the HRA.
Main 144	Page 152 Policy PR12b – Sites Not Allocated in the Partial Review (new point)	Minor text change	Add as new point (3) <u>'50% of the homes are provided as affordable housing as defined by the National Planning Policy Framework.'</u> Renumber Existing points 3 to 5 as 4 to 6.	No	Does not change the findings of the HRA.
Main 145	Page 155 Policy PR13 – Monitoring and Securing Delivery (3 rd paragraph)	Minor text change	Amend last sentence to read, 'This will include the implementation of Local Plans and County wide strategies such as the Local Transport Plan and the Oxfordshire Infrastructure Strategy <u>and associated monitoring</u> .'	No	Does not change the findings of the HRA.

3. Conclusion

The Inspector's preliminary conclusions as contained in his Post- Hearing Advice Note indicated that site PR10 should be removed and that the allocation of 410 houses be re-distributed. Cherwell District Council has prepared proposals to re-allocate the 410 houses allocated for PR10 within the remaining sites and is proposing a number of Main Modifications and Minor Modifications to the Submission Plan.

HRA is required by Regulation 63 the Conservation of Habitats and Species Regulations 2017 (the Habitats Regulations) for all projects and plans which may have likely significant effects on a European site and are not directly connected with or necessary to the management of the European site.

This HRA has assessed whether the Main Modifications and Minor Modifications proposed to determine whether the findings of the HRA August 2018 are still valid. No new sites are proposed in the modifications and the overall number of dwellings proposed remains unchanged.

This addendum has concluded that the Main and Minor modifications do not change the findings and conclusions of the HRA Stage 1 and Stage 2 Appropriate Assessment of the Partial Review of the Cherwell Local Plan 2011 – 2031 (Part1): Oxford's Unmet Housing Need Proposed Submission Plan August 2018.

An aerial photograph showing a rural landscape. The foreground is dominated by large, brownish-tan agricultural fields, some of which are separated by green hedgerows. A road with a roundabout junction runs diagonally across the middle of the image. To the right, there is a residential area with many houses and a larger building complex. The background shows more green fields and a line of trees.

Report Overview

1. This report assesses in landscape terms, the potential westward extent of an allocation for site PR9.
2. Under the transitional arrangements, the Partial Review is being examined against the NPPF 2012. One of the purposes of Green Belt is to assist in safeguarding the countryside from encroachment. Once defined, local planning authorities should plan positively to enhance the beneficial use of the Green Belt. Green Belt boundaries should be clearly defined, “using physical features that are readily recognisable and likely to be permanent”.
3. The LSCA51 area, defined in the Landscape Character Sensitivity and Capacity Assessment Study (LCSCA), borders Begbroke Wood, an Ancient Woodland and Local Wildlife Site, and within the area are Important Hedgerows and other strong hedgerows with mature and veteran trees. There are heritage features in the vicinity of the site: the Grade 2 listed Springhill Farm, Begbroke conservation area, the historic routes along Dolton and Frogwelldown Lanes, and ridge and furrow earthworks still extant in some fields.
4. The LCSCA identified the factors contributing to Site LSCA51’s landscape character, its sensitivity and capacity for residential development. The important characteristics of the site were identified as the ‘domed’ landform, the access or views across the landscape of the site provided by the footpath network, the mix of arable and pastureland, Important Hedgerows, linear woodland features and other hedgerows with mature trees.
5. The capacity of LSCA51 for residential development was judged to be ‘medium to low’ for most of the site.
6. Landowners, Merton College, submitted a representation to the Local Plan EIP which proposed a larger site, extending into fields to the west of those allocated by the Council, because it would allow for a central open greenspace, “create a stronger sense of place”, restore former hedgerow boundaries and provide “a robust and enduring Green Belt boundary”. The greater depth of development would “enable a higher standard of design”. Development could be phased so that advance landscape works could be implemented.
7. Main findings:
 - Factors influencing the westward extension of site PR9 include: the landform relationship of the low surrounding hills and ridges to the broad low-lying vale, where settlement is concentrated; the progression of shallow lower slopes to steeper mid-slopes, generally above the 75m contour, and the strong vegetation pattern, which reinforces the sense of enclosure of the landform, adding a sense of maturity to the landscape.
 - Effects on the landform and vegetation characteristics of the site could be mitigated by limiting the westward extent of built development so that it respects this landform relationship.
 - A buffer of publicly accessible greenspace would take the pressure off active agricultural land and protected woodland, with connections out into the wider countryside.

- Visual amenity considerations include views of the development and views within the development; the visual relationships with the road frontage to the A44, to the existing urban edge of Yarnton, and the existing footpath network.
- The future built development could be permeated by a substantial green infrastructure, accommodating surface water management, retention and enhancement of hedgerows, habitats and habitats linkages, an access network and amenity open space, and providing a setting to the new residential areas.
- A long-term management plan will be needed if the green infrastructure within the development is to achieve its objectives.

8. Review against policy:

- Following the guidance in NPPF and CDC's Green Belt Study, the revised Green Belt boundary should be drawn along the edge of the built development to provide a "strong boundary", with road frontage to the greenspace beyond rather than rear garden boundaries.
- The buffer of accessible greenspace would provide a defensible transition to the land retained in agricultural use.

9. Conclusions:

- The landscape of LSCA51 could accommodate residential development on the lower slopes in the east of the area, avoiding rising up the steeper mid-slopes, so that the enclosing function of the landform to the lower-lying broad vale would be retained.
- The westward extent of development should be related to the 75m AOD contour, although the strong vegetation structure to the large central field could accommodate development to about the 78m contour.
- A substantial green infrastructure for the development and the outer buffer of accessible greenspace will need to be secured through a development brief and a long-term management plan.

1.0 Introduction

1.1.1 WYG is instructed by Cherwell District Council (CDC) to assess, in landscape terms, the potential westward extent of an allocation for site PR9, and advise on the possible treatment of the new urban edge. A proposal for a school playing field in the south of the area is also to be evaluated.

1.1.2 At the Examination in Public (EIP) Hearings in February 2019, CDC site proposals included part of the study area for the Landscape Character Sensitivity and Capacity Assessment Study (LCSCA)¹ identified as site LSCA51. This was an area along the

¹ WYG Environment Planning Transport Limited for Cherwell District Council, Local Plan Part 1 Partial Review, Landscape Character Sensitivity and Capacity Assessment June 2017:

eastern edge of LSCA51, identified as PR9. A more extensive site was put forward by the Merton College, the Proposers, supported by a landscape and urban design study by Define, known in this report as the “530 dwelling site” or “530 scheme”.

1.1.3 In his Post Hearing Advice Note, the Inspector had some sympathy with the points made by the site promoters in relation to the depth of development allowed for in the overall allocation. He considered that there was scope for the developable area to extend westward and this might well provide the scope for a development more interesting in its design and layout. This report sets out:

- The factors influencing the possible extension of site PR9 westward into LSCA51, that could accommodate residential development in a way that would fit with its landscape context and relate well to the settlement of Yarnton;
- An assessment, in landscape terms, of the Proposers’ ‘530 dwelling site’ proposal, as shown on the plans prepared by Define on behalf of the Proposers;
- Analyses to identify key features of the site to be protected and mitigation measures for the potential allocation;
- Advice on the possible treatment of a new urban edge to the new Green Belt boundary.
- Comment on the school playing field proposal.

1.1.4 This report provides part of the evidence base for CDC’s assessment of the alternative options and modifications proposed. It is illustrated by plans and photographs included within **Appendix 4**, as follows:

- Figure 01 LSCA51 Site Plan
- Figure 02 Site Plan - Aerial
- Figure 03 Landscape Designations
- Figure 04 Topographic analysis: wider context
- Figure 05 Topography & vegetation - Site
- Figure 06 Landform, Vegetation & PR9 Boundaries

1.2 Policy & Designations

National Planning Policy Framework 2012 (NPPF)

1.2.1 The NPPF “sets out the Government’s planning policies for England and how these should be applied”. It was first published in 2012 and revised in 2018, with “minor clarifications to the revised version” in 2019. Section 13 is titled “Protecting Green Belt Land”. Under the transitional arrangements, the Partial Review is being examined against the NPPF 2012.

<https://www.cherwell.gov.uk/downloads/download/388/landscape-character-sensitivity-and-capacity-assessment-june-2017-part-1> [accessed 190909]

1.2.2 Under the heading 'Achieving sustainable development', section 9 deals with 'Protecting Green Belt land'.

1.2.3 Paragraph 79 is introductory and 80 sets out five purposes of Green Belt:

79. The Government attaches great importance to Green Belts. The fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open; the essential characteristics of Green Belts are their openness and their permanence.

80. Green Belt serves five purposes:

- to check the unrestricted sprawl of large built-up areas;
- to prevent neighbouring towns merging into one another;
- to assist in safeguarding the countryside from encroachment;
- to preserve the setting and special character of historic towns; and
- to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

1.2.4 Of these, the 3rd purpose is most relevant to landscape considerations of potential development proposals. Paragraph 81 provides further guidance relevant to landscape and visual amenity:

81. Once Green Belts have been defined, local planning authorities should plan positively to enhance the beneficial use of the Green Belt, such as looking for opportunities to provide access; to provide opportunities for outdoor sport and recreation; to retain and enhance landscapes, visual amenity and biodiversity; or to improve damaged and derelict land.

1.2.5 Paragraph 85 advises local planning authorities on defining Green Belt boundaries, including that boundaries should be clearly defined, "using physical features that are readily recognisable and likely to be permanent".

Local Plan

1.2.6 In preparing its draft local plan, Cherwell District Council carried out a Green Belt Study and the LCSCA .

CDC Green Belt Study, 2017²

1.2.7 This study appraised strategic development sites against the five purposes of Green Belt set out in NPPF, and "the relative harm (or otherwise) to the Green Belt that may result from their potential release for development".

1.2.8 §5.9 states: "Should the District decide to release land from the Green Belt, we recommend that outline policy guidance or masterplans are prepared as part of the

² LUC for Cherwell District Council, [Cherwell Green Belt Study Final Report](https://www.cherwell.gov.uk/downloads/download/375/cherwell-green-belt-study-april-2017-and-addendum-june-2017-part-1), April 2017: <https://www.cherwell.gov.uk/downloads/download/375/cherwell-green-belt-study-april-2017-and-addendum-june-2017-part-1> [accessed 190909]

Local Plan process. These masterplans should draw on the findings of this Green Belt Study to indicate precise development areas, new defensible Green Belt boundaries (existing or new features) and appropriate development heights and densities. Such an approach, together with specific policies for the development of the land, would help to engender public confidence and support, as well as mitigate harm to the remaining Green Belt”.

- 1.2.9 §3.32-3.33 of the study report considered beneficial uses of Green Belt land and mitigation measures to reduce harm to the Green Belt where areas are removed from it.

LCSCA, 2017

- 1.2.10 This study analysed the landscape and visual sensitivity and capacity of a range of areas for different kinds of development, including area LSCA51: see §2 below for a summary of its findings.
- 1.2.11 The LCSCA study was carried out by WYG on behalf of Cherwell District Council (CDC), as part of the evidence base for the Partial Review of the adopted Cherwell Local Plan Part 1. It considered 41 sites in the south of Cherwell District, around the settlements of Kidlington, Yarnton, Begbroke, Islip and Shipton on Cherwell. The study area for this site was identified as site LSCA51 for the purposes of the study.
- 1.2.12 The evaluation of the study site LSCA51, of which PR9 is a part, is provided in section 23 of the report. The LSCA51 study area extends westward from the A44 and the western edge of Yarnton to fields to the west of Frogwelldown Lane, south to Cassington Road and north west to a field beyond Springhill Road, bordering Bladon Heath. The study site encircles Begbroke Wood, but does not include it.
- 1.2.13 The area under consideration for Policy PR9 lies to the west and north-west of Yarnton, bounded to the east by the A44 Woodstock Road and extending into fields to the west of those allocated by the Council in the submission Local Plan (Policy PR9). To the north and east of the A44 Begbroke Policy site PR8 extends from the eastern side of the A44 between Begbroke, Yarnton and Kidlington further to the east.
- 1.2.14 The site is within National Character Area 108: Upper Thames Clay Vales, Regional Character Area Upper Thames Vale, Wooded Estate Lands landscape type, and Local Character Area Lower Cherwell Floodplain, landscape types R2: Large Scale Undulating Farmland/ R2b Rolling Arable Landscape with Strong Field Pattern, Copses & Hedgerow Trees, and type R3: Large-Scale Enclosed Farmland/ R3a Large-Scale Arable Farmland Enclosed by Woodland Belts³.

³ LCSCA, §23 LSCA51 (see Appendix 2)

1.2.15 Key characteristics identified in these landscape character assessment, relevant to the site and its landscape context include:

- At National level: low-lying clay-based flood plains ... the large river system of the River Thames drains the Vales, their headwaters flowing off the Cotswolds to the north;
- At Regional level: rolling topography with localised steep slopes; large blocks of ancient woodland and mixed plantations; regularly shaped field pattern dominated by arable fields.
- At Local level: arable farming facilitated by improvements in drainage resulting in large flat fields used for cereal crops; major roads are dominant features including the A44.

1.2.16 The area under consideration for Policy PR9 reflects these landform characteristics. It is in agricultural land use both arable and pastureland, and borders Begbroke Wood, which is an Ancient Woodland and a Local Wildlife Site. Within the area are Important Hedgerows and other strong hedgerows with mature trees. The arable fields are large and on the higher land to the west, and the southern arable field slopes distinctly eastwards towards the edge of Yarnton. The southern arable field was enlarged through hedgerow removal between 1955 and 1981⁴.

1.2.17 The PR9 area is on land rising from a broad lowland vale, generally below the 75m AOD contour, which is surrounded by low hills and ridges rising to about 120m, with a few higher points, such as Wytham Hill, 3.5-4km to the south, at about 160m AOD. These give a sense of edge definition to the broad vale.

1.2.18 Settlement in the near and wider landscape context, including Yarnton, Begbroke and Kidlington, is generally located in the lowland, below the 70m AOD contour.

1.2.19 The LCSCA identified the factors contributing to Site LSCA51's landscape character, its sensitivity and capacity for residential development as:

- Domed landform, the land gradually climbing to a high point immediately to the north-west of Begbroke Wood;
- Good footpath network crossing the site enabling either access to most areas or views across the agricultural landscape of the site;
- Land use a mix of arable and pasture divided by mature hedgerows and fences with hedgerow trees and 'linear woodland features';
- Drainage ditches following several field boundaries, draining generally to the south;

⁴ See historic maps 1811-2018 in Gerald Eve, [Partial Review of the Cherwell Local Plan 2011-2031, Hearing Statement in respect of Matter 7: Yarnton, on behalf of Merton College Oxford](https://www.cherwell.gov.uk/download/downloads/id/6247/pr-c-1397-gerald-eve-on-behalf-of-merton-college.pdf) (Gerald Eve Hearing Statement): <https://www.cherwell.gov.uk/download/downloads/id/6247/pr-c-1397-gerald-eve-on-behalf-of-merton-college.pdf> [accessed 190909]

- Springhill Farm, a Grade2 listed building immediately south of Begbroke Wood, prominent in views from within the site;
- Variety of views from different parts of the site: long and short distance, panoramic and confined views, depending upon location and direction of view, for example:
 - From centre of the site, long distance panoramic views to the south, west and north-west over the rolling landscape to the distant landscape horizon and, to the south-east, towards Yarnton;
 - From lower lying land in the north-east of the site, more constrained views, filtered by vegetation within the site and the wider landscape.

Landscape character sensitivity

- 1.2.20 The LCSCA judged landscape character sensitivity from a combined consideration of landscape sensitivity and visual sensitivity. Landscape sensitivity in turn comprised judgements of 'natural', 'cultural', 'aesthetic' and 'landscape quality and condition' factors. Visual Sensitivity comprised judgements of 'general visibility', 'sensitivity of population' and 'mitigation' factors.
- 1.2.21 The combined landscape sensitivity of the site was assessed as 'medium', and the combined visual sensitivity of the site was also assessed as 'medium', together giving an overall sensitivity of 'medium'.
- 1.2.22 In addition, landscape value was assessed, taking into account valued natural elements present in the site or environs, cultural elements, scenic value and tranquillity, as well as perceived value, as expressed in, for example, recreation value. The combined landscape value of the site was assessed as 'medium'.
- 1.2.23 In relation to the capacity of the study site (LSCA51) for residential development, the study concluded it to be 'medium to low' for most of the site, the main reason being that "the land rises to a localised plateau making it highly visible within the surrounding area" (LCSCA §23.8). It also advised that there may be "localised opportunity in the south east of the site adjacent to the existing urban edge of Yarnton".
- 1.2.24 The study identified potential for the existing green linkages and footpath network to be enhanced and potential for woodland development, through "enhancement of the green linkages already present within the site area and connecting to the Local and District Wildlife Sites beyond the site area".
- 1.2.25 In relation to future management and maintenance of the area, it recommended enhancement of the network of mature hedgerows and providing connection to the Local Wildlife Site.

Additional description

- 1.2.26 The LSCSA considered the area of LSCA51, a considerably more extensive area than being considered for allocation in the Local Plan. Additional appraisal was carried out for the purposes of the EIP, focussed more on the specific characteristics of the area that could inform allocation decisions.
- 1.2.27 The important characteristics of the site have been identified as the landform, the access or views across the landscape of the site provided by the footpath network, Important Hedgerows, linear woodland features and other hedgerows with mature trees. There are also heritage features in the vicinity of the site: the Grade 2 listed Springhill Farm, Begbroke conservation area, the historic routes along Dolton and Frogwelldown Lanes, and ridge and furrow earthworks still extant in some fields⁵.
- 1.2.28 The footpath network includes the footpath and bridleway route along the historic Dolton Lane in the north of the area and Shakespeare Way long distance footpath along Frogwelldown Lane, from Yarnton and continuing north around Begbroke Wood.
- 1.2.29 Landform is the defining characteristic of the area under consideration. The site is located on slopes rising to one of these enclosing ridges, from about 70m AOD at the A44 to a broad plateau between about 96m – 100m AOD, open in the south, corresponding with Frogwelldown Lane to the west, and wooded at Begbroke Wood to the north-west. The lower slopes are gentle, shallower than 1:20; the mid-slopes are steeper at between 1:20 and 1:12 and steeper in part of the south; the plateau is shallower than 1:50. The steeper mid-slopes are generally between the 75m and 93m AOD contours in the southern part of the area and between 79m and 101m AOD (within Begbroke Wood) in the north of the area.
- 1.2.30 The shallow lower slopes relate well with the landform pattern of the built up area of Yarnton and Begbroke (and allocation PR8), and with the A44 corridor. The open plateau and the wooded part of the plateau are contrasting features, and their enclosure of the lower slopes is emphasised by the relative steepness of the mid-slopes.
- 1.2.31 The historic maps also show that the large arable field occupying much of the south of the site (LSCA51) was created by the removal of hedgerows defining an irregular field pattern, between 1955 and 1981.
- 1.2.32 The remaining hedgerows and linear woodland features augment the enclosing function of the landform, with many large and veteran trees⁶ adding a sense of maturity to the landscape. This is a landscape structure that development proposals can be related to. It can provide a sense of place, as ready-made mature landscape features and a skeleton on which to build a green infrastructure: habitats and habitats linkages, cultural heritage, greenspaces and corridors along which an access network for existing

⁵ Historic maps 1811-2018 in Gerald Eve Hearing Statement

⁶ Gerald Eve Hearing Statement, pp44-47

and future residents could be developed. It can also provide a backdrop and setting to the new residential areas.

2.0 CDC's allocation of land for Draft Policy PR9

- 2.1.1 The Council's Written Statement for the EIP7 focuses on site specific issues relating to the allocation of land at Yarnton proposed by Policy PR9.
- 2.1.2 Section 10 of the Statement states: The Council considers that the landscape constraints and lack of clear features immediately to the west of the proposed allocation are such that it would not be acceptable to revise either the site or proposed Green Belt boundary.
- 2.1.3 Section 14: The Cherwell Green Belt Study (CD PR40) considered the larger area as site PR51 (equivalent to LSCA51), and assessed it in three parcels:
- PR51a: between Begbroke, Begbroke Wood and the A44;
 - PR51b: between Yarnton, the Frogwelldown Lane track and Begbroke Wood;
 - PR51c: the hilltop and land sloping away to the west, north and south.
- 2.1.4 The Study concluded that the release of PR51a and PR51c would have high harm to the purposes of the Green Belt, and PR51b would have from moderate to high harm (p.163-169).
- 2.1.5 Section 18 refers to the larger area of site LSCA51 and noted the assessment of capacity for residential development, and the conclusion of 'medium capacity' in the south-east of the site adjacent to Yarnton. The Council considered (Section 18) that, in landscape terms, "there is a strong sense of distinction between the elevated farmland to the west, north and south and the low lying situation of Yarnton to the east. There is the opportunity for some residential development on the lower slopes immediately to the north and west of the village without undue harm to the purposes of the Green Belt in that location and the wider landscape more generally. The development in that area could be integrated with Yarnton but would take a broadly linear form along the A44. However, it would have strong visual link with the land to the east of the A44 – the approach to Begbroke Science Park – particularly if development is also taken forward in that location".
- 2.1.6 The proposed submission allocation was limited to lower-lying land adjacent to Yarnton, entirely below the 75m AOD contour and mainly below the 73m contour. The area is

⁷ Examination of the Partial Review of the Cherwell Local Plan 2011-2031: Oxford's Unmet Housing Needs Hearing – 12 February 2019 Written Statement by Cherwell District Council: Matter 7 – Yarnton (CDC Hearing Statement): <https://www.cherwell.gov.uk/download/downloads/id/8685/matter-7-written-statement-%E2%80%93-cherwell-district-council.pdf> [accessed 190909]

bounded by existing hedgerows that would define the revised Green Belt boundary. Other considerations were: protecting the setting of Begbroke Conservation Area, identifying opportunities for improving access to the countryside and informal recreation while protecting important landscape, a new Local Nature Reserve proposed near the existing school, a new community woodland close to Begbroke Wood, and opportunity for enhanced green infrastructure within the Green Belt, with connected wildlife corridors.

- 2.1.7 The Written Statement concludes that “the development of site PR9 would be reasonable and sustainable to help meet Oxford’s pressing housing needs, deliver the Plan’s vision and achieve its objectives”, that “high quality development can be achieved while avoiding unacceptable harm to interests of acknowledged importance and maintaining the overall integrity of the Green Belt and its essential characteristics”, and would offer the opportunity to “provide benefits for the local community and achieve positive use of land within the Green Belt”.

3.0 Review of Proposer’s Representation

- 3.1.1 Landowners, Merton College, submitted a representation to the Local Plan EIP regarding potential residential development on part of LSCA51, under Matter 7, Policy PR9 Yarnton⁸. They propose a larger site than the Council, extending into fields to the west of those allocated by the Council.
- 3.1.2 Appendix A of the Representation was a “Design Quality and Delivery Statement”, prepared by Define and dated January 2019, in the Introduction to which it is described as assessing “Merton College’s preferred development scenario against Cherwell District Council’s (CDC) policy preference for 440 dwellings over a gross site area of around 16 hectares (which delivers just under 10 hectares of net development area)”. The 440 homes figure was proposed by the Council as a focussed change thereby reducing the submission proposed capacity of 530 homes. This change was proposed in response to objections received and to “improve the deliverability of the site and achieve a high quality of design”.
- 3.1.3 It presents a ‘Framework Plan’ as Figure 05, with a Summary: “... having assessed and mapped technical site constraints including ecology, drainage, arboricultural, acoustic, transportation, landscape and visual and utilities, development scenario PR9 can deliver 530 dwellings and a home work/ community hub at around 35 dwellings per hectare (with a net developable area of just over 15 hectares). The ‘development scenario PR9’ referred to in the document is a larger site than the Council’s proposed submission allocation, extending it westwards beyond the existing hedgerows that defined the allocated Draft Policy PR9 site.

⁸ Gerald Eve Hearing Statement

3.1.4 The justification for the larger site included that it would allow for a central open greenspace, which could be overlooked from the housing areas, that it would be possible to “create a stronger sense of place”, to restore hedgerow boundaries along lost historic alignments for “a robust and enduring Green Belt boundary”, and development could be phased so that it need not take place adjacent to the new Green Belt boundary for 5 years, allowing “implementation of advance landscape works, which creates sufficient time for this boundary to mature and be robust”.

3.1.5 It also concludes that the development envisaged on the extended site would deliver “high quality design” and a more cohesive relationship with Yarnton, connected by “a well overlooked route to the existing Primary School”, and the “greater depth of development [would allow] for increased variety and facilities within the scheme, enabling a higher standard of design”.

4.0 Analysis

4.1 Factors influencing the westward extension of site PR9

4.1.1 From the landscape analysis of the site in LCSCA, discussions with CDC and from observations and analysis on site, the following criteria or guidelines for locating a possible development area within the LSCA51 site were derived:

- The existing relationship of built up areas to the landform of the area is that development is located on the lower land of the broad vale, generally below the 70m AOD contour;
- It is important to the landscape character of the area that the edges of the broad vale, defined by low hills and ridges, rising to about 120m AOD, are not breached by built development;
- As noted in the landscape description, the steeper mid-slopes of the LSCA51 area are generally above the 75m AOD contour (or 79m in the north of the site). The objective of keeping the built development in the lower landform can be judged in relation to the 75m contour, as a starting point;
- The vegetation pattern may offer a structure to define both the character of a new residential area and a boundary to the Green Belt, and has potential for enhancement by restoring weak or gappy hedgerows, restoring some of the former smaller-scale fieldscape, and managing and maintaining the mature/ veteran trees.

4.1.2 Taking the 75m AOD contour as a baseline, the ‘530 scheme’ would be largely below this level and below the steeper mid-slopes of the LSCA51 area. The part that would extend above the 75m contour (to about 76m) would be on gentler lower slopes of a spur of land contained within the large central field which is strongly enclosed by important hedgerows and ‘linear woodland features.

4.2 Key features of the site and mitigation measures

4.2.1 The key features or characteristics of the site identified in the LCSCA are summarised in §1.3.9 and §1.3.17 above.

4.2.2 Features of the site to be considered in relation to the proposals include:

- The rising landform;
- Mix of arable and pasture land use;
- Good footpath network;
- Mature hedgerows with mature and veteran trees, and 'linear woodland features';
- Variety of views from different parts of the site.

4.2.3 CDC's Hearing Statement also noted that "there is a strong sense of distinction between the elevated farmland to the west, north and south and the low lying situation of Yarnton to the east".

4.2.4 In addition, ridge and furrow earthworks occur in the large central field and the hedgerows on the western, southern and eastern sides of this field are Important Hedgerows.

Mitigation measures

4.2.5 Effects on the landform characteristic of the site can be mitigated by limiting the westward extent of built development so that it respects the relationship of the rising landform to the pattern of settlement in the lower land.

4.2.6 Development for housing would inevitably take land out of agricultural land use. A buffer of open spaces formed as fields of pasture (or, potentially, meadow) as publicly accessible greenspace, would take the pressure off potential desire to access what would be active agricultural land. It would also relieve pressure to access the protected woodland, especially if woodland were developed within or close to the new residential areas.

4.2.7 The footpath network available can provide the basis for connectivity from the development area out into the wider countryside, while providing a local network within the new residential areas, integrated with its green infrastructure.

4.2.8 Visual amenity considerations apply both to views of the development and views from within the development and will need to be addressed in the design of the development. There will be visual relationships with the road frontage to the A44 and to the existing urban edge of Yarnton, as well as the existing footpath network.

4.2.9 Views from within the development may be close views of the development and its landscape infrastructure as well as out to the landscape setting, both the countryside and local settlement.

- 4.2.10 Westward extension of the proposed development area could result in up to half the central field being built over, with permanent loss of some ridge and furrow earthworks. The remaining ridge and furrow earthworks could be retained within the proposed buffer green spaces and peoples' appreciation and knowledge could be boosted by interpretive material.
- 4.2.11 The design approach of laying out a residential development in this area could place emphasis on permeation of the built development areas with a substantial green infrastructure. Surface water management via a SuDS approach could be accommodated, as well as retention and enhancement of existing hedgerows with their mature and veteran trees, habitats and habitats linkages, an access network and connections into the wider surroundings, amenity open space and providing a setting to the new residential areas.
- 4.2.12 A long-term management plan will be needed if the green infrastructure within the development is to achieve its objectives, and especially for the publicly accessible greenspace in the fields bordering the built development and providing a buffer to the agricultural countryside beyond.

4.3 Treatment of a new edge to the Green Belt

- 4.3.1 NPPF advises that boundaries should be clearly defined, "using physical features that are readily recognisable and likely to be permanent".
- 4.3.2 The Green Belt Study considered how new boundaries to the revised Green Belt should be determined, in "Task 4: Assessment of Potential Alternative Boundaries". These included the contribution of boundary features to Green Belt purposes, as separating or connecting features and noted:

3.32 Features considered to constitute **strong potential Green Belt boundaries** include **natural features such as substantial watercourses and water bodies**, and **man-made features such as motorways, A and B roads and railway lines**. Less prominent or less permanent features such as **walls, woodland, hedgerows, tree lines, streams and ditches are considered to constitute moderate strength boundaries**, and edges lacking clear definition on the ground will form weaker boundaries.

3.33 The suitability of an alternative Green Belt boundary also depends on its **relationship with existing boundaries** in terms of the resulting form. **An overly extended or convoluted shape is likely to cause greater harm** than a simpler, more direct alignment in terms of its impact on the relationship between built development and open countryside. For each of the assessment parcels, commentary is provided on the nature of the existing boundary and any suggested alternatives.

- 4.3.3 Following NPPF §85 that new boundaries should be physical features that are readily recognisable and likely to be permanent, and §3.32 of the Green Belt Study, the revised Green Belt boundary would be drawn along the edge of the built development. To

provide a “strong boundary”, this should preferably have road frontage to the greenspace beyond, rather than rear garden boundaries.

- 4.3.4 The buffer of accessible greenspace as fields bound by hedgerows would be in the Green Belt and would provide a defensible transition to the land retained in agricultural use, and would both reinforce and soften the “harder” boundary at the edge of the built development. As noted already, this will need to be secured through the development brief and a long-term management plan.

5.0 Summary and Conclusions

- 5.1.1 The Inspector at the Examination in Public hearings considered that there was scope to extend the PR9 site westwards to accommodate development in a “more interesting design and layout”. The landscape and visual factors that would support setting the extent of a westward extension of site PR9 were examined. The establishment of a clearly defined new boundary to the Green Belt was considered, and ways of “enhancing the beneficial use of the Green Belt land”, as sought by NPPF 2012.
- 5.1.2 Cherwell District Council had carried out a Green Belt Study and a Landscape Character Sensitivity & Capacity Assessment (LCSCA) in preparing the Draft Local Plan.

Main findings

- 5.1.3 Site PR9 is part of study site LSCA51 of the LCSCA. Factors contributing to its landscape character, sensitivity and capacity for residential development included: the landform, rising westwards; good footpath network; mixed arable and pasture land use; mature hedgerows (some ‘Important’) and hedgerow trees; variety of views from different parts of the site, Begbroke Conservation Area to the north and Spring Hill Farm Grade II listed building.
- 5.1.4 The capacity of the study site for residential development was judged to be ‘medium to low’ for most of the site, as the land rising to a local plateau to the west makes it highly visible from the surrounding area. Potential for enhancement of the access network and woodland development was identified, and for enhancement of the network of mature hedgerows.
- 5.1.5 Additional detailed appraisal for this report identified landform as the defining characteristic of the area under consideration. The wider area is a broad vale enclosed by gentle hills and ridges, on one of which area LSCA51 is located. Within LSCA51, the land rises westward from about 70m at the A44, first in shallow slopes, then more steeply to a plateau at about 100m.

- 5.1.6 The strong hedgerows and linear woodland features augment the enclosing function of the landform. The southern open arable field is the product of hedgerow clearance between 1955 and 1981.
- 5.1.7 These features provide a landscape structure that development proposals can be related to: a skeleton on which to build a green infrastructure, provide a sense of place, and access and greenspace network for existing and future residents. It can also provide a backdrop and setting to the new residential areas.
- 5.1.8 CDC's submission land allocation for Policy PR9 was limited to lower-lying land adjacent to Yarnton, below the 75m contour, and existing hedgerows would define the revised Green Belt boundary. Other considerations were: protecting the setting of Begbroke Conservation Area, improving access to the countryside and informal recreation, protecting important landscape, a new Local Nature Reserve and new community woodland close to Begbroke Wood, and enhanced green infrastructure within the Green Belt, with connected wildlife corridors.
- 5.1.9 The Council's Written Statement states that "high quality development can be achieved while avoiding unacceptable harm to interests of acknowledged importance ..." and would "provide benefits for the local community and achieve positive use of land within the Green Belt".
- 5.1.10 Landowners, Merton College, submitted a representation to the Local Plan EIP regarding potential residential development on part of LSCA51, but a larger site extending into fields to the west of those put forward by the Council.
- 5.1.11 A 'Framework Plan' was presented with the justification for the larger site that it would allow for a central open greenspace, "a stronger sense of place", restoration of hedgerow boundaries along lost historic alignments for "a robust and enduring Green Belt boundary". Development could be phased so that "advance landscape works" could be carried out. It also concludes that the "greater depth of development [would allow] for increased variety and facilities within the scheme, enabling a higher standard of design".

Analysis and potential for mitigation

- 5.1.12 The landform relationship of the low surrounding hills and ridges to the broad low-lying vale, where settlement is concentrated, is one of the main considerations when locating development within LSCA51. This is emphasised by the progression of shallow lower slopes to steeper mid-slopes, generally above the 75m contour. The strong vegetation pattern reinforces the sense of enclosure of the landform,⁹ adding a sense of maturity to the landscape.

⁹ Gerald Eve Hearing Statement, pp44-47

- 5.1.13 Effects on the landform and vegetation characteristics of the site could be mitigated by limiting the westward extent of built development so that it respects the relationship of the rising landform to the pattern of settlement in the lower land.
- 5.1.14 A buffer of publicly accessible greenspace would take the pressure off what would be active agricultural land as well as the protected woodland, with a local network within the new residential areas, integrated with its green infrastructure, and connections out into the wider countryside.
- 5.1.15 Visual amenity considerations apply both to views of the development and views from within the development, the visual relationships with the road frontage to the A44, to the existing urban edge of Yarnton, and the existing footpath network.
- 5.1.16 The future built development could be permeated by a substantial green infrastructure, accommodating surface water management, retention and enhancement of existing hedgerows, habitats and habitats linkages, an access network and connections into the wider surroundings, amenity open space, as well as providing a setting to the new residential areas.
- 5.1.17 A long-term management plan will be needed if the green infrastructure within the development is to achieve its objectives, and especially for the accessible greenspace in the fields put forward as bordering the built development and providing a buffer to the agricultural countryside beyond.
- 5.1.18 There is some ridge and furrow earthworks in the large central field, up to half of which could be lost, but the remainder could be retained within the proposed buffer green spaces and peoples' appreciation and knowledge could be boosted by interpretive material.

5.2 Policy considerations

- 5.2.1 The 3rd purpose set out in NPPF 2012 paragraph 80 is most relevant to landscape considerations of potential development proposals. Paragraph 81 provides further guidance, to "plan positively" to enhance the beneficial use of the Green Belt; opportunities for access, for outdoor sport and recreation, and to retain and enhance landscapes, visual amenity and biodiversity.
- 5.2.2 Following the guidance in NPPF paragraph 85 and the Green Belt Study, the revised Green Belt boundary should be drawn along the edge of the built development. To provide a "strong boundary", this should preferably have road frontage to the greenspace beyond, rather than rear garden boundaries.
- 5.2.3 The buffer of accessible greenspace would provide a defensible transition to the land retained in agricultural use, and would both reinforce and soften the "harder" boundary at the edge of the built development.

5.3 Conclusions

- 5.3.1 The landscape of LSCA51 could accommodate residential development on the lower slopes in the east of the area, avoiding rising up the steeper mid-slopes, so that the enclosing function of the landform to the lower-lying broad vale would be retained.
- 5.3.2 The westward extent of development should be related to the 75m AOD contour, although the strong vegetation structure to the large central field and the shallower slopes continuing to about the 78m contour here could accommodate development to about that level.
- 5.3.3 A substantial green infrastructure for the development and the outer buffer of accessible greenspace will need to be secured through the development brief and a long-term management plan.

Appendix 1 Landscape Character¹⁰

<p><u>National Character Area 108: Upper Thames Clay Vales</u></p> <p>Key Characteristics</p> <ul style="list-style-type: none"> • Low-lying clay-based flood plains encircle the Midvale Ridge. • The large river system of the River Thames drains the Vales, their headwaters flowing off the Cotswolds to the north or emitting from the springline along the Chilterns and Downs escarpments. • Woodland cover is low at only about 3 per cent. • Wet ground conditions and heavy clay soils discourage cultivation in many places, giving rise to livestock farming. • In the river corridors, grazed pasture dominates, with limited areas of historic wetland habitats including wet woodland, fen, reedbed and flood meadow. • Gravel extraction has left a legacy of geological exposures. • Wetland habitat attracts regionally important numbers of birds including snipe, redshank, curlew and lapwing and wintering wildfowl such as pochard. • Blenheim Palace World Heritage Site, including its Capability Brown landscape, is the finest of many examples of historic parkland in this NCA. • Brick and tile from local clays, timber and thatch are traditional building materials across the area. • Settlement is sparse on flood plains, apart from at river crossings, where there can be large towns. 	<p><u>(OWLS) Regional Character Areas:</u></p> <ul style="list-style-type: none"> • Upper Thames Vale <p><u>(OWLS) Landscape Type: Wooded Estatelands</u></p> <p>Key Characteristics</p> <ul style="list-style-type: none"> • Rolling topography with localised steep slopes. • Large blocks of ancient woodland and mixed plantations of variable sizes. • Large parklands and mansion houses. • A regularly shaped field pattern dominated by arable fields. • Small villages with strong vernacular character.
<p>Cherwell District Landscape Assessment</p>	
<p><u>Character Area: Lower Cherwell Floodplain</u></p> <p>Key Characteristics</p> <ul style="list-style-type: none"> • Fringe landscapes associated with Kidlington. • Surface geology of terrace gravels and alluvial deposits associated with the River Cherwell and River Thames. • Arable Farming facilitated by improvements in drainage resulting in large flat fields used for cereal crops. • Influence of Oxford is substantial. • Pylons and overhead cables radiate from a substation at Yarnton which dominate the skyline. • Major roads are dominant features including the A40, A44, A4260 and the A34. • Around Kidlington the visual influence of the urban edge extends over considerable distances resulting in an urbanised effect. 	<p><u>Landscape Type: Rural Type R3a Large-scale arable farmland enclosed by woodland belts</u></p> <ul style="list-style-type: none"> • A landscape of level or gently rolling arable land with large fields and a weak hedgerow structure. Unlike the other large-scale arable farmland types, views are interrupted and contained by strong belts of trees and woodland which also provide a definite structure to the landscape. <p><u>Landscape Type: Rural Type R2b Rolling arable landscape with strong field pattern, copses and hedgerow trees</u></p> <ul style="list-style-type: none"> • The topography of this type is as variable as for type R2a, but the landscape is more clearly defined. Dense hedges and lines of hedgerow trees provide a good structure, and small copses and coverts puncture views over rolling arable fields; Many of the hedgerow trees are still in very good condition, although mature.

¹⁰ WYG Environment Planning Transport Limited for Cherwell District Council, Local Plan Part 1 Partial Review, Landscape Character Sensitivity and Capacity Assessment June 2017

Appendix 2 LSCSA, June 2017 - §23 LSCA51

23. LSCA51 Land to West of A44/Rutten Lane, North of Cassington Road, surrounding Begbroke Wood

23.1 Site Overview

23.1.1 The site is located to the west of Begbroke and Yarnton, immediately west of the A44 Woodstock Road and approximately 0.5 km north of Worten. The site area comprises approximately 230.80 ha of agricultural land which is in a mix of arable and pastoral use; the land in the south west primarily being arable land and in the north east pastoral. Immediately north east of the site is Begbroke and to the east is Yarnton with the site boundary bordering the village of Yarnton. To the south and west the land is primarily a rolling arable landscape. To the north-west beyond the site and District boundary there are large areas of woodland which are Ancient and Semi-Natural woodland and Ancient Replanted woodland.

23.1.2 The site is located within National Character Area 108: Upper Thames Clay Vales. At a regional level, OWLS identifies the site as being located within the Upper Thames Vale character area and the Wooded Estatelands landscape type. At a local level the site is identified in the Cherwell District Landscape Assessment as being within the Lower Cherwell Floodplain character area and landscape type R2: Large Scale Undulating Farmland/R2b Rolling arable landscape with strong field pattern, copses and hedgerow trees; and Rural type R3: Large-Scale Enclosed Farmland/R3a Large-scale arable farmland enclosed by woodland belts.

23.2 Key Features and Site Visit Information

23.2.1 A site walkover was carried out on 8th September 2016; a copy of the site record sheet is contained within Appendix B of this report. Refer to Figure LSCA51-L for the landscape context and Figure LSCA51-L-P1 for site record photographs.

23.2.2 The site area is generally domed in its landform with localised areas of arable land in the south; the land gradually climbs to a high point located immediately to the north west of Begbroke Wood which is encompassed by the site area although excluded from it. There is a good footpath network crossing the site enabling either access to most areas or views across the agricultural landscape of the site. The land use is a mixture of arable and pasture divided by a combination of mature hedgerows and fences with hedgerow trees; there are also isolated and groups of trees, and shelterbelts within the site area. Following several the field boundaries there are drainage ditches which appear to drain generally to the south. There is an isolated property located immediately south of Begbroke Wood which although beyond the site boundary is prominent from within the site area. Views available within the area comprise long and short distance, panoramic and confined views depending upon location and direction of view. From within the centre of the site there are long distance panoramic views to the south, west and north-west over the rolling landscape to the distant landscape horizon.

To the south east views are available towards existing properties within Yarnton. On the lower lying land in the north east of the site views are more constrained and filtered by vegetation

within the site on field boundaries and within the wider landscape which restrict long distance views to the east. Although the site almost borders the edge of Begbroke, there is limited visual connection between the eastern core of Begbroke and the site area.

23.3 Landscape Sensitivity

23.3.1 The southern area of the site is dominated by arable land surrounded by well-established hedgerows and land in the north is generally semi-improved pasture surrounded again by mature hedgerows. The site surrounds Begbroke Wood and is adjacent to Bladon Heath. These areas of mixed woodland are excluded from the site. Frogwelldown Lane and Dolton Lane cross the site and are both important wildlife corridors containing mature trees and established hedgerows. Because of the varied habitats the site is likely to support protected and notable animals. The sensitivity of natural factors is medium.

23.3.2 The land has remained in agricultural use since at least the 19th century and has strong hedgerow boundaries, some of which reflect Parish and District boundaries; these are therefore considered Important under the Hedgerow Regulations. There is a medium potential for previously unrecorded archaeological remains within the site because of the presence of three Archaeological Constraint Priority Areas within the site boundary. Although not forming part of the site area, the Begbroke Conservation Area is located to the north and the agricultural landscape of the site forms part of the setting of the conservation area. The site also forms the setting of the Grade II listed Spring Hill farmhouse which is located adjacent to Begbroke wood in the centre of the site but excluded from the site area. The overall sensitivity of cultural factors is medium.

23.3.3 Due to the site topography, there is a sense of exposure in much of the area, this is partly due to the long distance views available through the site to the wider landscape. The site is crossed by utility routes however these are carried on low level timber poles and are not intrusive within the area. The sensitivity of aesthetic factors is medium.

23.3.4 The landscape is in reasonably good condition and is representative of the wider landscape that visually connects with the areas located to the north and west of the site. The field boundaries are in most locations in a good state of repair, containing a relatively large number of mature hedgerow trees and the areas of shelter belts appear maintained. The overall landscape quality and condition sensitivity is considered to be medium.

23.3.5 The combined landscape sensitivity of the site is medium.

23.4 Visual Sensitivity

23.4.1 The site is highly visible within the local landscape and wider landscape context as the land rises to a high point immediately north of Begbroke Wood located in the north of the site. The site area forms part of the visual resource of Begbroke and Yarnton however in some locations the views are foreshortened by mature field boundary vegetation. The general visibility sensitivity is considered to be medium to high.

23.4.2 There are views into the site area from surrounding villages and the local road network. There are also prolonged views of the site when passing through it on the local footpath

networks and from the footpath network within the wider landscape. There is a range of viewers with varied sensitivities affording views into the site area and as a result the sensitivity of population is considered to be medium.

23.4.3 Due to the varying nature of the site there is potential to implement landscape and visual mitigation without altering the overall character of the site. The topography of the site would not result in the noticeable foreshortening of views into and out of the site or alter the overall landscape character of the area. The sensitivity to mitigation is therefore considered to be low.

23.4.4 The combined visual sensitivity of the site is considered to be medium.

23.5 Landscape Character Sensitivity

23.5.1 The landscape character sensitivity has been derived using 'Table 3 Overall Landscape Character Sensitivity' as set out within Section 3 Scope and Methodology.

23.5.2 The landscape sensitivity has been assessed as medium and the visual sensitivity assessed as medium. Using the matrix in Table 3 this results in a medium landscape character sensitivity for site LSCA51.

23.6 Landscape Value

23.6.1 There are no landscape designations within the site area however Begbroke Wood located within the centre of the site comprises areas of ancient semi-natural woodland and ancient replanted woodland. Bladon Heath located to the north west of the site is also identified as ancient and semi-natural woodland. There are no statutory ecological designations located within the site area. Frogwelldown Lane District Wildlife Site non-statutory designation follows a woodland corridor leading north west from Cassington Road which passes through Yarnton. Located within the site but not forming part of the site is Begbroke wood which is ancient woodland and a Local Wildlife Site. There are also large areas of ancient woodland at Bladon Heath to the north west of the site which is also a Local Wildlife site. There are no statutory designations located within the site area. Adjacent to Begbroke Wood in the centre of the site however is Spring Hill, a Grade II listed farmhouse and to the north of the site is Begbroke Conservation Area; the site is considered to provide the landscape setting for both of these designations. There are also three non-statutory designations located within the south of the site area within the arable fields. The overall sensitivity of designations is medium to high.

23.6.2 Although there are no recognised views within the site, the site area forms the landscape setting to the east of Begbroke and Yarnton and intervisibility exists to varying extents between the villages and the site area depending upon existing mature vegetation. Along the east boundary of the site where it borders the A44 Woodstock Road the passing traffic disrupts the tranquillity of the site however elsewhere in the site there is a sense of calm and peace. The sensitivity of scenic value and tranquillity is generally therefore considered to be medium to high.

23.6.3 Although much of the land is inaccessible as it is in agricultural use, there is a reasonably good footpath network throughout the site area which in many areas appears well trodden and therefore demonstrates some value placed upon the site area. The perceived value sensitivity is therefore considered to be medium to low.

23.6.4 The combined landscape value of the site is considered to be medium.

23.7 Landscape Capacity

23.7.1 The Landscape Character Sensitivity and Landscape Value are combined as shown in Table 5 to arrive at the potential Landscape Capacity. In general, the potential Landscape Capacity of LSCA51 is medium for some types of development. The potential for each considered development type is discussed further below.

23.8 Capacity for Residential Development

23.8.1 Although the site has a medium capacity for development, the capacity for residential development is considered medium to low within most of the site as the land rises to a localised plateau making it highly visible within the surrounding area. There may however be localised opportunity in the south east of the site adjacent to the existing urban edge of Yarnton which is considered to have a medium capacity.

23.9 Capacity for Employment Development

23.9.1 The site is considered to have a medium to low capacity for either commercial or industrial development as the topography of the land would result in the development of this kind being highly visible from surrounding areas. There may be localised opportunity within the south of the site adjacent to the edge of Yarnton although this is also considered to have a medium to low capacity.

23.10 Capacity for Recreational Development

23.10.1 This site is considered to have a medium capacity for informal recreation using the existing green linkages and footpath network which has the potential to be enhanced. There may be isolated areas of opportunity for formal recreation on the edges of Begbroke and Yarnton but not within the wider site area and therefore a low capacity for formal recreation exists.

23.11 Capacity for Woodland Development

23.11.1 The site has a medium capacity for woodland development which has the potential to be provided through enhancement of the green linkages already present within the site area and connecting to the Local and District Wildlife Sites beyond the site area.

23.12 Future Management and Maintenance

23.12.1 The site has a good network of mature hedgerows however these are gappy in place and should be enhanced if possible; in particular providing connection to the Local Wildlife Site at Begbroke Wood in the centre of the site.

Appendix 3 The proposed school playing field

A3.1 An "Illustrative Draft" plan has been prepared by Oxford County Council (OCC) to show how playing field could be accommodated within the land identified " to facilitate the potential expansion of William Fletcher Primary School" (see below).

A3.2 The plan shows:

- a dimensioned area of 110m east to west by 154m north to south;
- "assumed" existing levels and the assumed 70m AOD contour;
- proposed levels to accommodate a playing field of 110x76m with cross falls of 1:100 north to south and 1:50 west to east;
- an access road within a corridor along the west of the site to Yarnton Residential and Nursing Home, which is to the south-west of the playing field;
- an access to the playing field from the north and a car park in the south-east corner of the site, accessed from an existing lane along the northern boundary of the school;
- a footpath along the eastern edge of the playing field connecting the northern access to the car park.

A3.3 The existing land is sloping down approximately west to east to rear boundaries of existing houses on Rutten Lane. The levels at the rear boundaries to the houses are indicated as close to the existing levels, within about 0.5m. Cutting into the landform would be needed to achieve the proposed levels. This is indicated on the plan by banking "no greater than 1:3 with 1m wide level area" to the fence between the playing field and the access road corridor.

Comment

A3.4 The playing field area would be separated from the rear boundaries of the existing houses by a narrow strip and footpath. Boundary treatments are not indicated, but it is likely a ball-stop fence would be required along this boundary. Consideration needs to be given to the potential effects on the visual amenity of the residents and whether screening vegetation can be incorporated into the proposal.

A3.5 The cut bank to the north and western sides of the playing field may need to be reinforced by retaining structures, as the difference between the "assumed existing level" and the proposed level is between 2m and 3.25m, and space for a level strip beyond the edge of the pitch ("runout area") is not indicated.

A3.6 As the ground modelling would all be cutting and not balanced by filling on site, the cut material would need to be disposed of off-site. A cutting of the depths indicated by the proposed levels may also encounter rock.

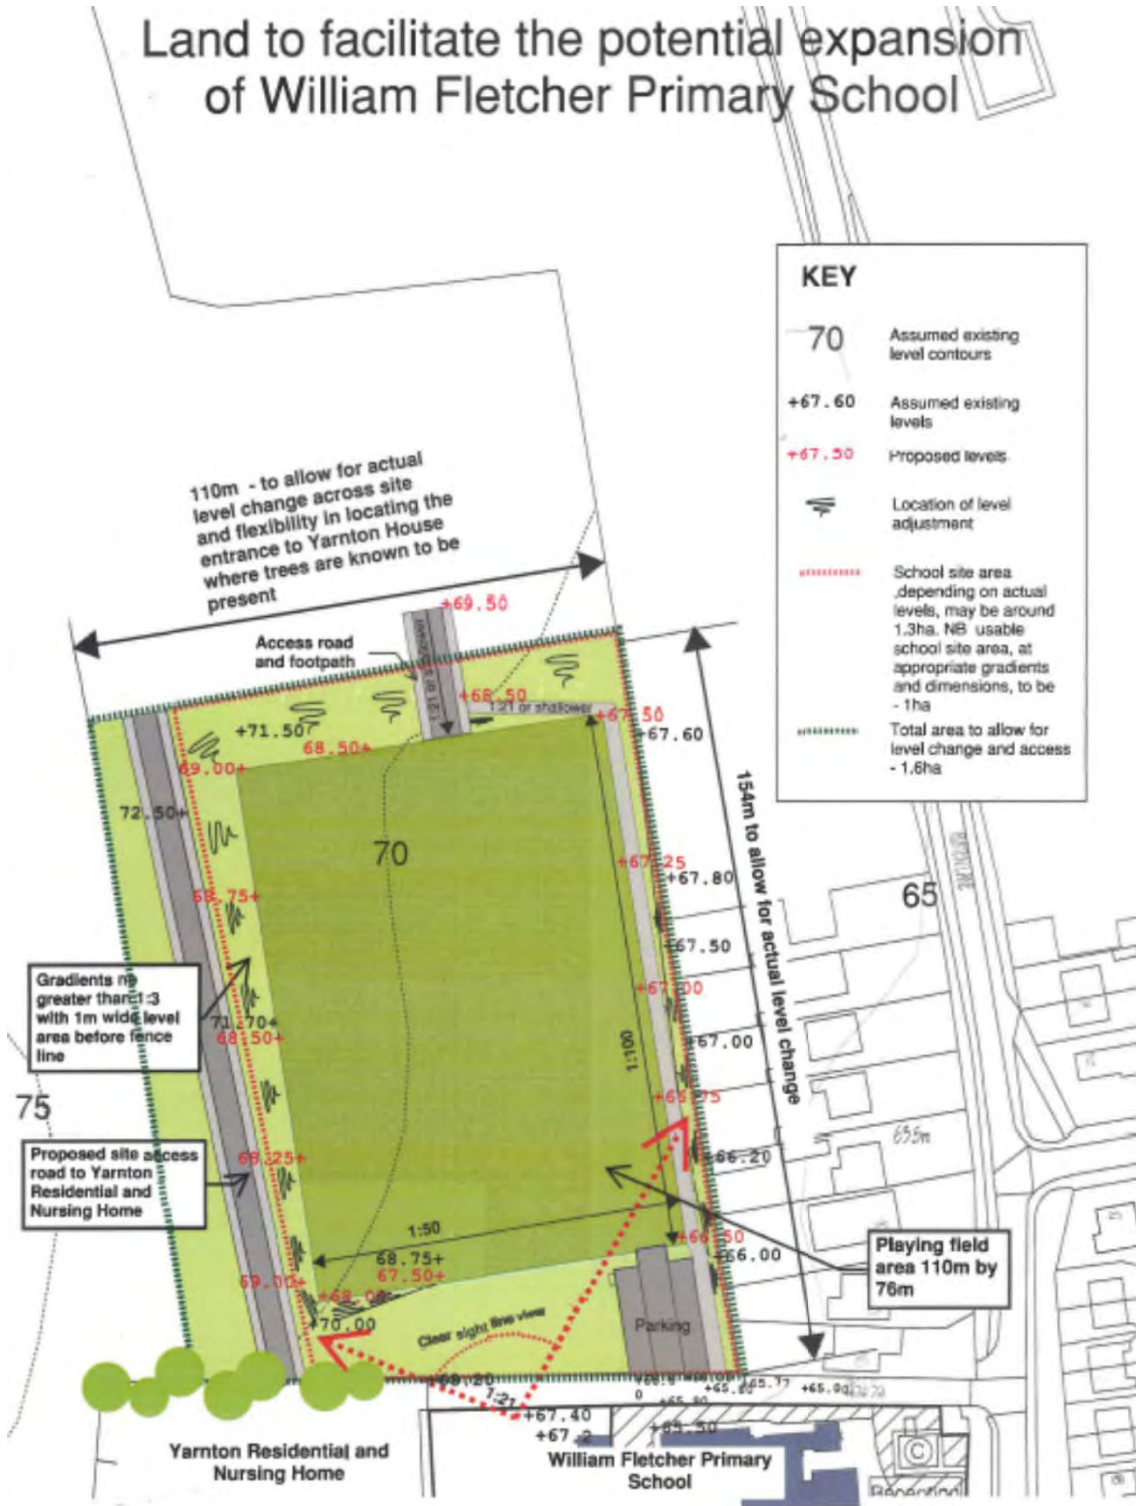

A3.7 Any access road corridor in the location suggested is also likely to need ground modelling to achieve appropriate long and cross gradients. A very narrow strip is indicated between the road edge and the boundary to the playing field, which itself would be the top of the cut slope to the playing field. There would be insufficient space

for any e.g. tree planting between the road and playing field, although greater space is allowed to the west of the road where planting could take place. Given the continuous boundary between the road and the playing field, and the overall road corridor being rather narrow, this element of any scheme would need careful consideration. The personal safety of pedestrians using the footways also needs to be considered. Street lighting is likely to be required.

A3.8 The recommended main playing direction is approximately north (between 285° and 20°) / south, to minimise the effect of a setting sun on the players¹¹. The illustrative plan shows an approximate orientation of a little west of north, and within the recommended range.

Cherwell LPPR, Proposed Main Modifications

Site capacity sense check

Prepared for

Cherwell District Council

September 2019

Alan Baxter Ltd

Cherwell Local Plan Partial Review, Proposed Main Modifications Site capacity sense check

1 Introduction

Alan Baxter Ltd (ABA) has been asked to provide further support to Cherwell District Council (CDC) on site housing yields in response to the Inspector's advice note. Support has previously been provided to CDC on strategy development and with the peer review of site capacities.

CDC's methodology for calculating site capacity is set out in [HEAR 2 - CDC Housing Figures Note](#). The Inspector has described the Council's approach as a 'broadly sensible balance'.

The Inspector has invited CDC to propose Main Modifications for the redistribution of 410 homes arising from the suggested deletion of site PR10.

In the context of the Inspector's preliminary conclusion that a broadly sensible balance has been achieved, CDC has asked ABA to support its work in examining any changes in circumstances that might justify modification of its original proposals in the interest of accommodating 410 homes.

2 PR6a – Land East of Oxford Road

2.1 Proposed Submission Plan, July 2017

CDC's initial site capacity calculation of 650 dwellings assumed a net residential density of approximately 39 dwellings per hectare (dph) and a net residential area of 16.8 hectares (ha). Policy PR6a's place shaping principles note the intended development character as "a contemporary urban extension to Oxford City that responds to the 'gateway' location...".

2.2 New information and changes of circumstance

Oxfordshire County Council has previously advised (representation PR-C-0832) that a two Forms of Entry (2FE) Primary School was required on the site rather than a 3FE school, thereby reducing the land area requirement from 3.2 ha to 2.2 ha. This change was not reflected in CDC's original capacity assessment. CDC advises that it has re-engaged with the County Council on this issue in the context of Main Modifications and that it remains the case that a 2.2 ha school site is needed.

2.2.1 Constraints information

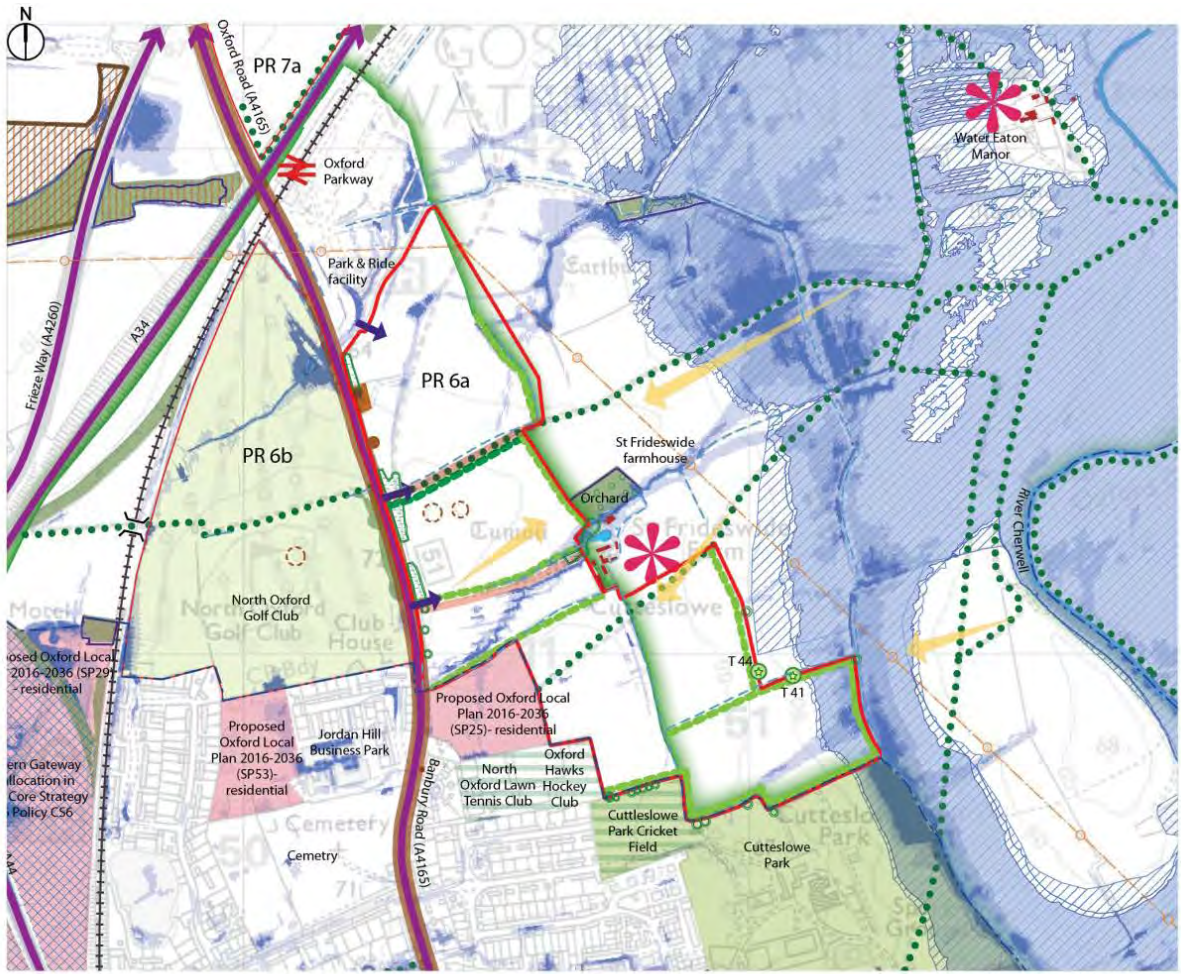

The site presents a number of east-west constraints relating to farm access routes, species-rich hedgerows and drainage corridors. It is expected that these linear features will be reflected in the eventual site layout, but are unlikely to significantly affect the site capacity at the densities proposed. They do not preclude housing development on the additional hectare of land. Key constraints are indicated on figure 1 below.

2.3 Conclusion on CDC's initial working figure for proposed Main Modifications

CDC has suggested that the 1 ha of land no longer required for primary school use, could be reallocated to residential use at a density consistent with the rest of the site, delivering 40 homes (690 in total). This would appear to be an appropriate response to the change in circumstances.

There are no other known significant changes in circumstance that would warrant a wider reconsideration of the 'balance' struck by CDC. A number of linear constraints across the site will reduce the efficiency of layout. Therefore a density of 39-40 dph would appear to be appropriate to both the constraints of the site and the proposed character in line with Policy PR6a place shaping principles.

It is understood that at the Local Plan hearings CDC advised that it was content to introduce a modification which would allow for minor variation in the location of specific uses where evidence is available. This would provide for some flexibility around the location of community and school uses within the developable area and the consideration of an integrated approach to sites PR6a and PR6b. It might also optimize the viability of local facilities.

Figure 1: PR6a constraints, Cherwell District Council

3 PR6b – Land West of Oxford Road

3.1 Proposed Submission Plan, July 2017

CDC's initial site capacity calculation of 530 dwellings assumed a net residential density of 24 dph and net residential area of 22.4 ha. This relatively low density is a response to the heavily treed landscape within the area identified for residential development, reflecting its current use as a golf course. The low density allows for larger plots / wider streets to retain the majority of trees, creating a mature landscape character as the setting for development. The proposed well-treed character, within a gateway location is reflected in Policy PR6b place shaping principle 25.

3.2 New information and changes of circumstance

The Council's landscape and tree officers visited the site and carried out an assessment of the significance of the trees on this site which resulted in the identification of important and moderate groups of trees shown in figure 2. This identifies that the majority of the trees on the site are of moderate quality and could potentially be removed (subject to appropriate compensatory planting). However there are native and ornamental trees which should be retained and incorporated within the landscape structure. The latter have been identified as 'important groups of trees'.

3.2.1 Constraints information

There are a number of key constraints to be considered in re-examining the capacity of the site (as shown in figure 2):

- additional information on the significance of trees
- Surface water drainage: west – north east corridors to be incorporated within the site wide SuDS strategy

3.2.2 Savills Submission of 30 August 2019 on behalf of the North Oxford Consortium

Savills' submission compares the extent of net developable land assuming all trees are retained, with the extent of net developable land if only the 'important groups of trees' are retained. In the latter scenario, around 1.1 ha of additional land is developable, giving an overall net residential area of 18.5ha (58% of the total site area). (See figure 3). The constrained areas identified broadly accord with CDC's constraints plan, although it omits some smaller constraints such as TPOs and an intact species-rich hedgerow.

Savills note that "the retention of (*only the important groups of trees*) provides a mature setting whilst not compromising the size of potential development parcels to deliver efficient, well designed development blocks..."

The latter point highlights that in addition to the release of 1.1 hectares of developable land, the overall layout efficiency and therefore site density could reasonably be expected to increase, resulting in a further increase in the site capacity. To that end, Savills proposes a net density of 40dph across 18.5ha, which would generate 740 dwellings.

3.3 Conclusion on CDC's initial working figure for proposed Main Modifications

CDC has suggested that approximately 600 homes might now be deliverable; an increase in residential density. This responds to:

- An understanding of the significance of trees which provide flexibility for the potential removal of a number of linear tree bands. This has the potential to increase the gross to net efficiency of the site, and the efficiency of the site layout.
- Support for a higher density scheme in this gateway location.

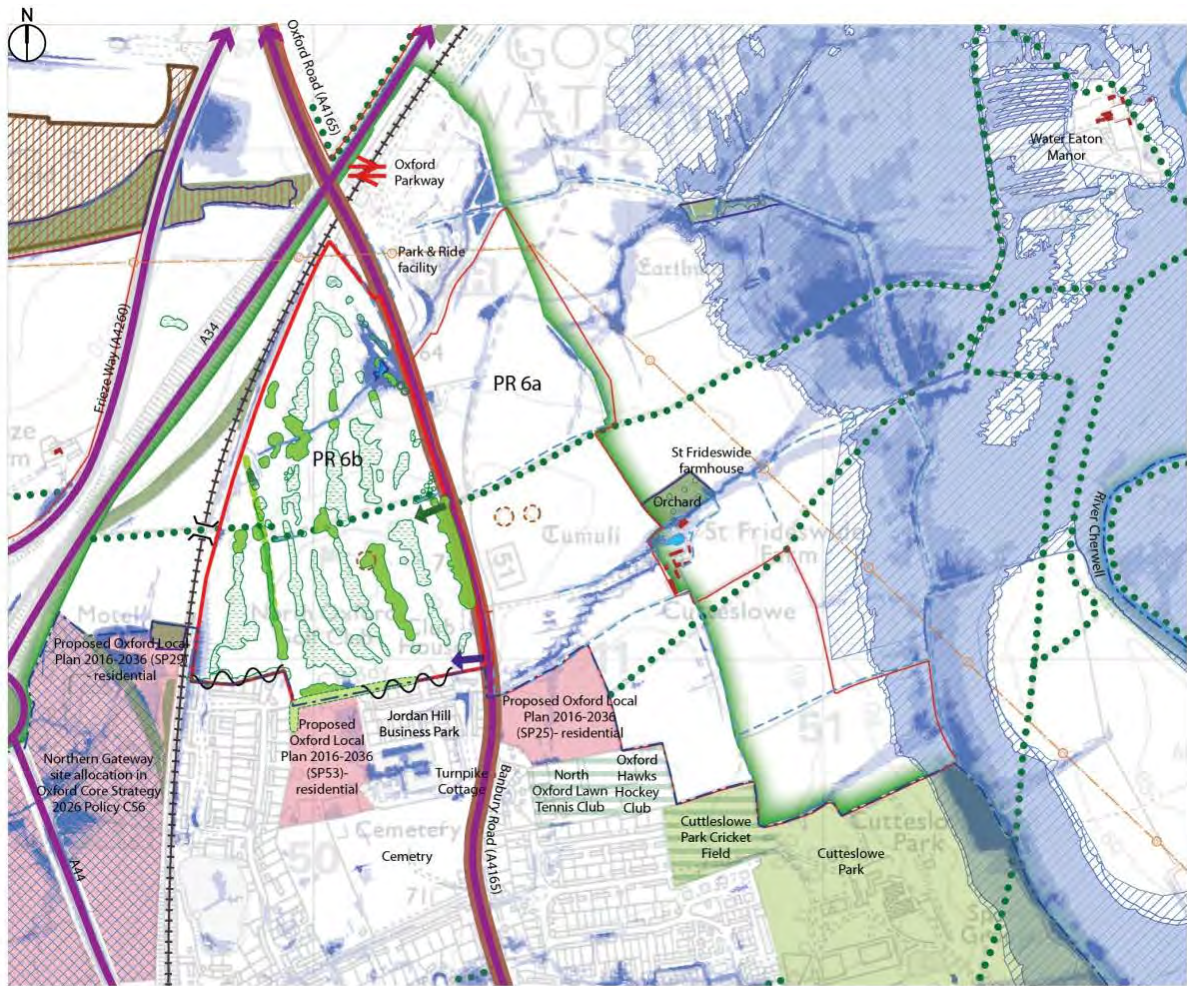

The delivery of 600 homes would involve an increase in the net residential density from 24 to 27 dph. This remains a relatively low density, enabling delivery of the character envisaged under place shaping principle 25.

However, considering the site's integration with adjacent sites and having regard to the additional information now available, CDC may wish to consider a further increase in density to approximately 30 dph, resulting in 672 homes. Taking the 18.5 ha 'net, net' developable area indicated by Savills, the density would be 36 dph.

As the density increases, the character of the development would begin to shift away from large individual detached / semi-detached housing plots, to include higher density typologies including terrace blocks and apartment buildings. The latter could work well, with blocks set within a generous, green landscape incorporating the tree belts, and would therefore remain in keeping with the principle established in place shaping principle 25.

Updated CDC position

We understand that following receipt of draft consultant advice on a range of topics, CDC is proposing an updated housing allocation for PR6b of 670 homes, at a net density of 30 dph. This is in line with the findings of the capacity sense check.

Figure 3: Extract from Savills submission, August 2019, showing the potential development areas assuming only important groups of trees are retained.

4 PR7a – Land South East of Kidlington

4.1 Proposed Submission Plan, July 2017

CDC's initial site capacity calculation of 230 dwellings assumed a net residential density of 30 dph and net residential area of 7.7 ha. The development is to function as an extension to the existing built up area of Kidlington/Gosford and Water Eaton.

4.2 New information and changes of circumstance

There are no known significant changes in circumstances but CDC has suggested the inclusion of additional land for testing.

4.2.1 Constraints information

The County Council has indicated that there will be a need to take account of the emerging Oxfordshire Growth Deal public transport corridor improvements to Kidlington Roundabout, which may affect the western boundary of the site.

Although not a recent change, it is noted that the need for strategic sports provision was defined with the publication of CDC's Playing Pitch Strategy in November 2018. Approximately 4.4 hectares of land is needed for sports use (the Council's wider objectives relating to green infrastructure and maintaining separation from development to the south are noted).

To help inform the preparation of proposed Modifications, further information has been received from the site promoter including a noise and vibration assessment and transport assessment. It is noted that there is medium to high risk in relation to noise levels but that this can be mitigated by good acoustic design.

4.2.2 Pegasus and Hill Submissions of August 2019

Submissions on behalf of the landowners promote the southward extension of the residential development area of PR7a, proposing a revised draft boundary following a strong existing field boundary in part, and a historic hedge-line which is proposed to be restored.

The historic hedge-line does not appear to be evident on aerial photographs, and further west has been entirely lost as Kidlington has been developed. The Pegasus/Hill boundary broadly aligns with the southern boundary of the Sainsbury's development and it is worth noting that it is further north than the proposed residential development area on adjacent site PR7b.

The gross residential area which is promoted, as shown on figure 4, is approximately 20.55 ha (our measurement). The net residential area noted on their concept masterplan (figure 5) is approximately 11.4 ha and they propose approximately 430 dwellings at a density of 37.5 dph.

4.3 Conclusion on CDC's initial working figure for proposed Main Modifications

A working proposal was suggested by CDC for testing. CDC suggested an increase in the gross residential area to 20 ha (20.08 ha our measurement based on Figure 4) by incorporating the additional field to the south bordered by the existing hedgerow and land adjacent to Bicester Road (an additional 9ha of land). The proposed boundary in the western part does not extend as far south as the boundary promoted by Pegasus/Hill. The difference is approximately 0.47 ha (our measurement).

4.3.1 Density and overall number

The proposed net residential area is increased to 14 ha, with a net density of 31 dph (30.59dph) to deliver 430 dwellings.

The proposed net density of 31 dph appears to be appropriate to the site's location and the level of detail currently available in relation to site constraints.

If the additional expansion promoted by Pegasus / Hill was adopted, the net density to deliver 430 homes using the same gross to net assumption would be marginally decreased to 29.9 dph.

At these densities it would be reasonable to expect building heights of 2-3 storeys, with mix of predominantly houses and a small element of apartments.

4.3.2 Southern boundary considerations:

In determining the appropriate southern boundary in the western part of the site, urban design considerations include the impact/ benefits of an extended development frontage to Bicester Road in terms of physical and visual connectivity with the existing built up area of Kidlington / Gosford and Water Eaton; the potential to create a frontage to Bicester Road while retaining existing hedgerows and trees; retention of the Kidlington/Oxford green gap; and opportunities to improve the design and efficiency of the overall site layout.

Connectivity

There is an existing signalised pedestrian crossing on Bicester Road close to Sainsbury's, which connects to a footpath linking with Oxford Road and the local retail centre. The site promoters have emphasised the importance of connecting the site with this crossing and footpath to provide a good walking link to local shops on Oxford Road.

In either boundary scenario the routing of a footpath within the site towards this crossing point, could be run within the development area, enabling passive surveillance from development frontage.

Visibility

Much of the western boundary is bordered by a hedgerow and trees limiting visibility into the site. However towards Kidlington roundabout, south of the pedestrian crossing, the vegetation appears to thin and there could be a greater opportunity to provide development fronting Bicester Road. This opportunity would be increased if the Pegasus / Hill boundary were taken. This would be positive in marking the entrance to Kidlington, and visually connecting the site towards the west. With regards to the sense of openness and the Green Gap in this area, the development of this parcel would not extend the built form further south than the existing edge of Kidlington.

Layout

In either boundary scenario, the western parcel of land is triangular, which will lead to some inefficiency in the layout. CDC's proposed boundary meets Bicester Road at nearly 90 degrees, while the site promoter's boundary is angled and this may lead to further inefficiency in the site layout.

In conclusion, the increase in numbers appears to be appropriate. Either southern boundary could result in an acceptable design, subject to detailed masterplanning. The southern boundary should therefore be determined by other considerations such as the appropriate Green Belt boundary.

Updated CDC position

We understand that following receipt of draft consultant advice on a range of topics, CDC is proposing to revise the boundary to reflect the former field boundary. This increases the site area to approximately 21 ha resulting in a reduction in net density to 29 dph. This is in line with the findings of the capacity sense check.

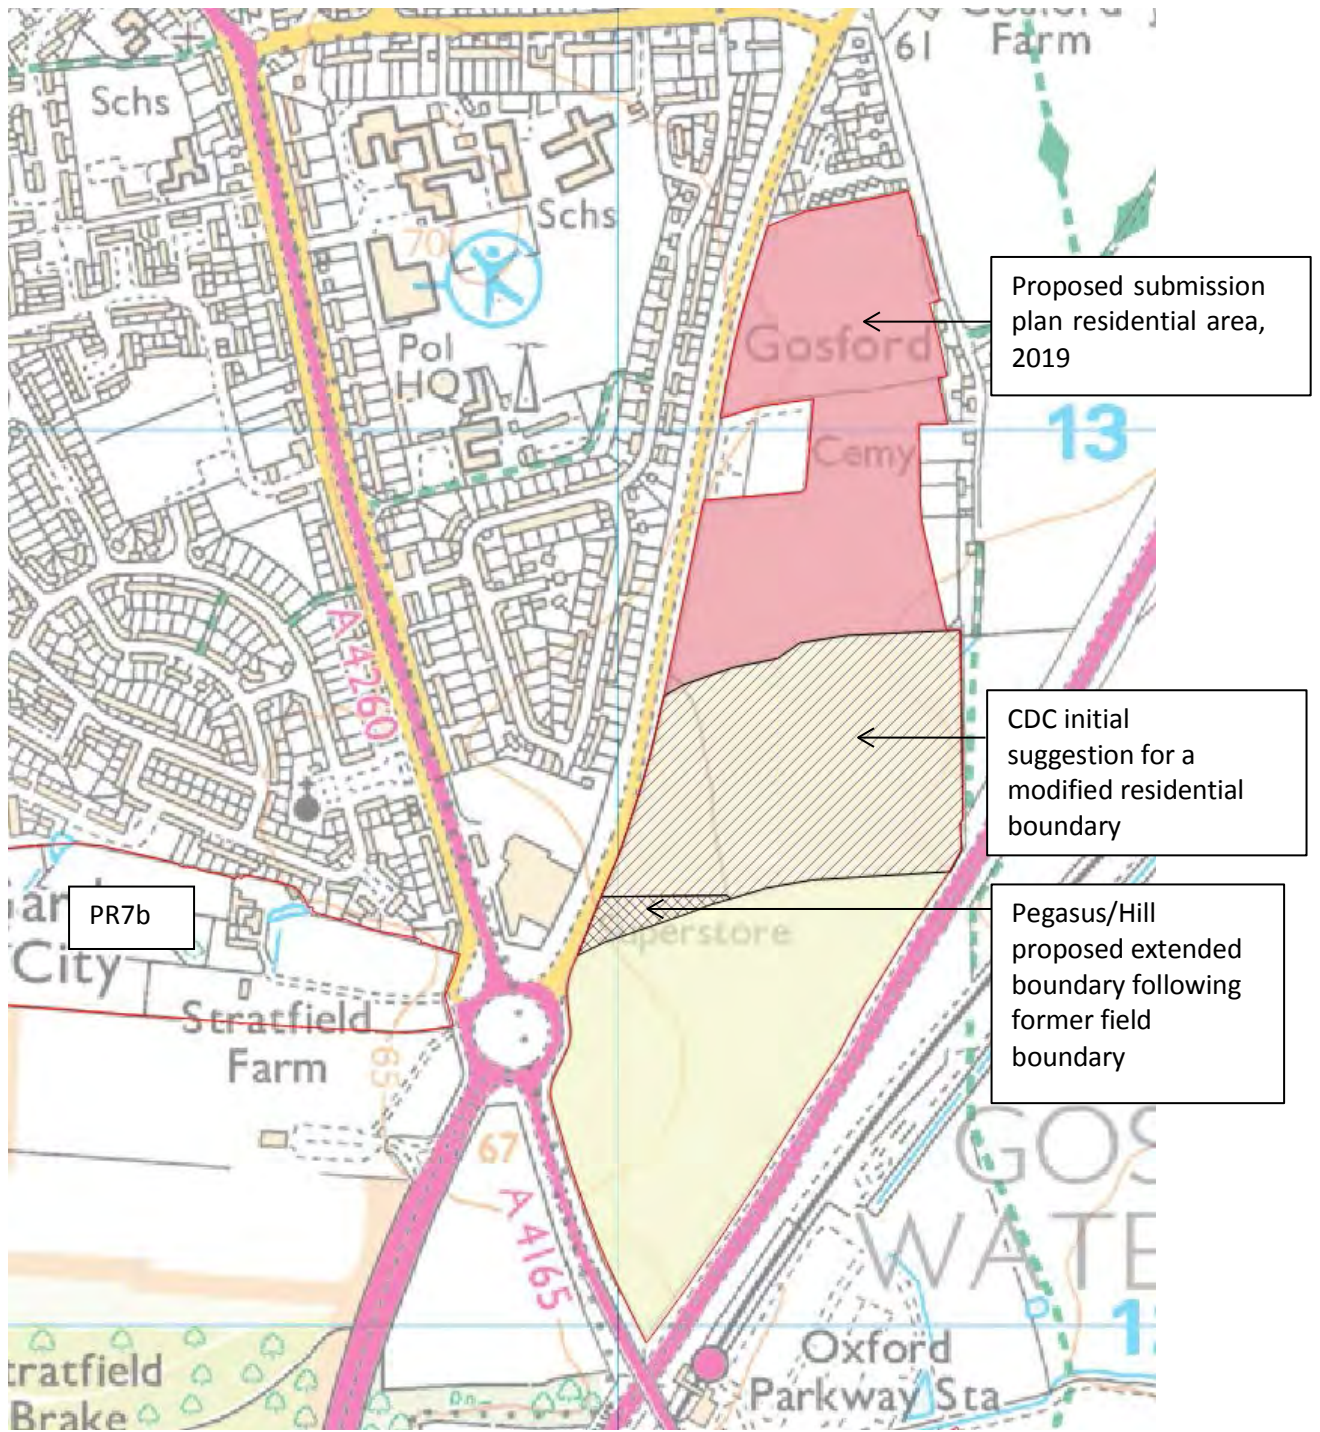

Figure 4 Map showing CDC's initial suggestion for a modified boundary and the Pegasus / Hill proposed boundary

Figure 5 Concept Masterplan by CSA Environment, extract from Pegasus submission on behalf of Barwood Development Securities, January 2019.

5 PR7b – Land at Stratfield Farm

5.1 Proposed Submission Plan, July 2017

CDC's initial site capacity calculation of 100 dwellings assumed a net residential density of 36 dph and net residential area of 2.8 ha. The development is to be an extension to the existing built up area of Kidlington.

5.2 New information and changes of circumstance

CDC advises that further discussions have taken place with the County Council as Highway Authority on the capacity of the site from a highway perspective (the number of homes that could be served from Kidlington roundabout). Highway officers had originally advised that 100 homes could be served. The advice now is that there is some further tolerance but the option (already proposed) of a secondary access from the north (Croxford Gardens) to a limited number of homes should be kept open to help mitigate traffic impact.

CDC is considering whether an additional field parcel to the south west of the proposed development area could be allocated should this be necessary.

5.2.1 Constraints information

There are a number of key constraints to be considered in re-examining the capacity of the site in the context of the additional information and CDC's consideration of an additional field parcel. The key constraints are indicated on figure 6.

- High and moderate value woodlands and trees and the presence of hedgerows.
- The need to consider the relationship to Stratfield Brake in the site layout.
- Curtilage listed buildings associated with Grade II Stratfield Farmhouse, and the need to retain the relationship between the farmhouse and adjacent orchards, in particular the traditional orchard to the west. This has a potential impact on the location of east-west site access for vehicles with the conservation preference being to follow the existing track alignment between the farmhouse and the modern orchard.
- The likelihood of changes to the eastern boundary of the site to facilitate vehicular access.

5.2.2 Manor Oak Homes submission, August 2019

A capacity testing layout has been prepared by the site promoter illustrating that around 158 homes could be delivered on an expanded site (see figure 7). Their written comments promote a figure of 165 homes.

The development area shown by the promoter's site layout is greater than the extension which CDC is currently testing and takes development to the southern boundary with Stratfield Brake, on the western part of the site. Two east-west vehicle accesses are proposed, to the north of the farmhouse and on the southern boundary. The layout assumes the existing curtilage listed farm outbuildings will be demolished and the existing track serving the farmhouse will be realigned in response to OCC's potential site access location. This may not be acceptable on Conservation grounds. One of the two hedgerows crossing the western part of the site has been removed.

Counting only those houses which fall within CDC's proposed modified development boundary, and excluding 3 homes which are located on the site of the existing outbuildings, a total of 119 units appear to be shown.

The layout is based on a mix of semi-detached, detached and terrace houses.

5.3 Conclusion on CDC's initial working figure for proposed Main Modifications

CDC suggested a total of 130 homes for testing; an increase in the residential development area through the inclusion of an additional field in the western part of the site. The proposed modified net residential area is 3.5ha which at a net density of 37 dph equates to 130 homes.

To test the capacity assumptions, we have prepared a high level sketch plan based on standard block depths for 3-4 bed houses of a range of typologies and 3 storey apartments (see figure 8). Although it takes a different design approach, it broadly supports the conclusions of the Manor Oak Homes capacity testing.

- The layout shown would deliver in the region of 125-130 homes, assuming 24 flats in three storey blocks at the site entrance (or around 115 homes, assuming all houses).
- The layout assumes access to the site is via OCC's preferred site access location, which serves the entirety of the site (with potential for a secondary access via Croxford Gardens). The farmhouse track alignment is retained in part, to maintain the historic approach to the farmhouse.
- Vehicle access to the western part of the site is via a lane to the south of the farmhouse (and potentially also Croxford Gardens). This aligns with the southern edge of the western part of the development, and enables an unbroken green corridor to extend into the centre of the farmhouse from the canal.
- Discussions between the site promoter and conservation officers are yet to take place to establish the use of the Farmhouse and its outbuildings and we have assumed that renovation of the Farmhouse and curtilage listed barns for residential use is outside the site capacity calculation.

Testing the layout has confirmed that the narrow north-south dimension of the site is challenging to the delivery of an efficient block structure in the eastern part of the site. In the western part of the site, there will need to be a balanced view on the retention of hedgerows, in order to maximise development potential.

The site capacity could be increased further with the introduction of additional apartments in the eastern part of the site.

A small further increase could (in principle) be assumed if play facilities were located in the proposed open space to the west of the modern orchard, rather than within the residential area boundary.

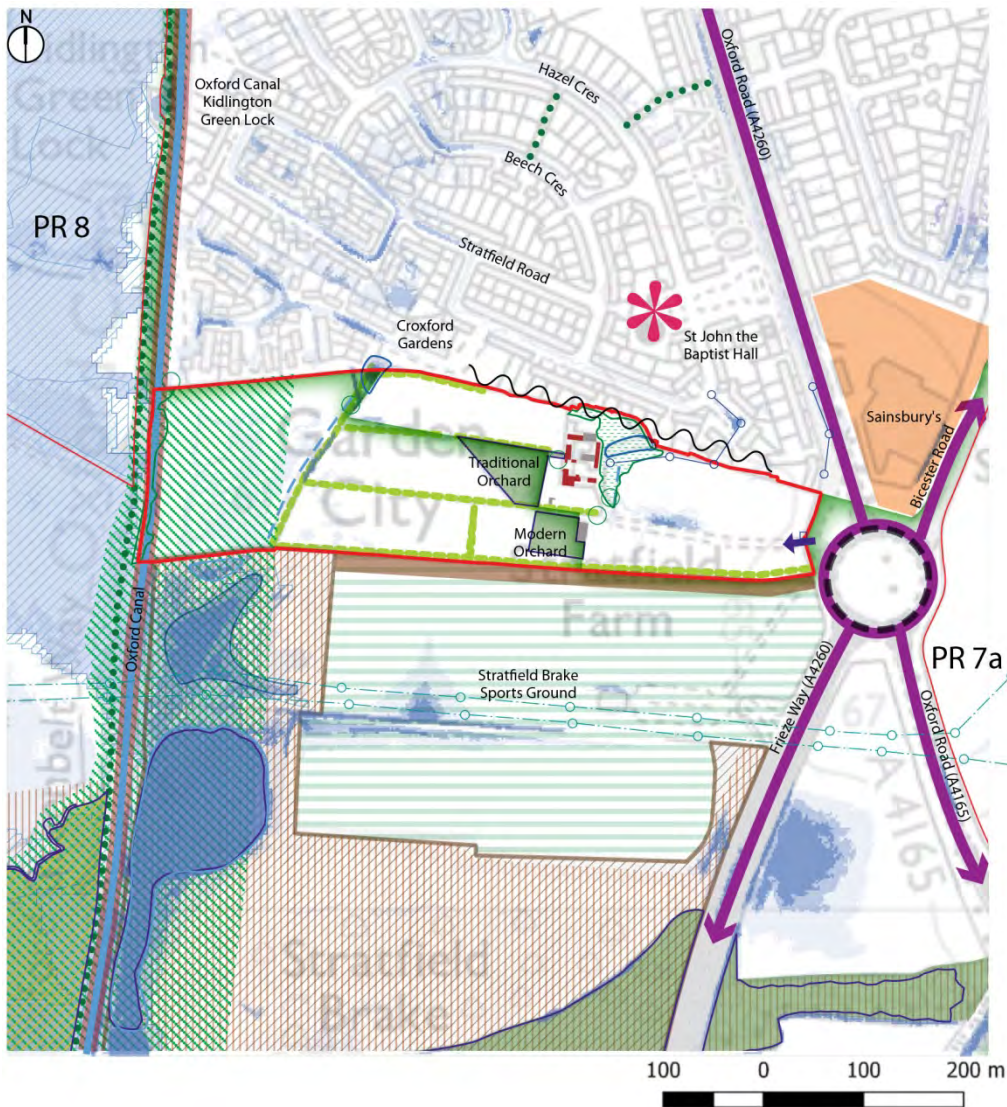

Capacity testing supports the increase in housing numbers within the site to around 130 units. However, given the constraints of the site it reveals that to achieve this density of development it is likely that some apartment units will be required. Located at the entrance to the site, 3 storey blocks could in our view be an appropriate scale to mark the entrance to Kidlington (subject to their detailed design).

It is worth noting that around 50 units are located in the western part of the site, therefore requiring access from the east in addition to (or potentially instead of) access from Croxford Gardens.

CDC may wish to allow flexibility within the revised PR7b policy for the required play space to be provided outside the residential development area to assist in creating an efficient layout.

Updated CDC position

We understand that following receipt of draft consultant advice on a range of topics, CDC is proposing an updated housing allocation for PR7b of 120 dwellings, at a net density of 34 dph. This slight reduction allows greater flexibility to accommodate known site constraints fully, and create a layout which is appropriate to the historic farmhouse and its setting.

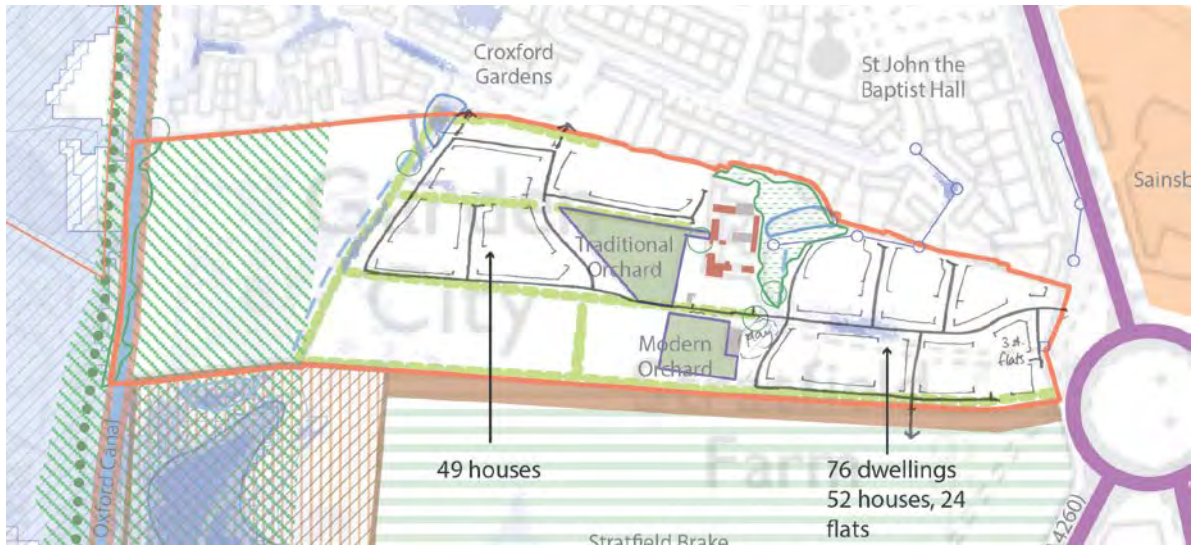

Figure 8: High level capacity test sketch, Alan Baxter (not to scale)

6 PR9 – Land West of Yarnton

6.1 Proposed Submission Plan, July 2017

CDC's initial site capacity calculation of 530 dwellings assumed a net residential density of 47 dph and net residential area of 11.2 ha. The development is intended to be an extension to Yarnton Village with frontage to the A44.

6.2 New information and changes of circumstance

CDC advises that the Inspector's preliminary findings prompt a review of the site's developable area "there is scope for the developable area to extend westward and this might well provide the scope for a development more interesting in its design and layout."

CDC is considering whether additional land to the west of the proposed development area could be allocated, should this be necessary, subject to a review of overall site capacity.

CDC advises that further discussions have taken place with the County Council as Education Authority, regarding the allocation of playing fields for William Fletcher School. The County Council has advised that the allocation for primary school use should accommodate a playing field of 110m x 76 m within a 1.6 hectare area. In response, CDC is considering an amendment to the boundary of the school allocation site.

6.2.1 Constraints information

There are a number of key constraints to be considered in re-examining the capacity of the site in the context of additional information and CDC's consideration of amendment to the development boundary. The key constraints are indicated on figure 9:

- High and moderate value trees including veteran trees and the presence of important hedgerows situated along field boundaries, which divide the site into smaller parcels.
- The need for an appropriate design response in relation to the A44.
- Surface water drainage catchments falling towards the low lying land in the eastern part of the site and the associated land take for sustainable drainage features (SuDS).
- Landform rising westwards from the A44 creating level changes to a high point north west of Begbroke. Higher ground parcels form part of the ring of hills forming a key element of Oxford's historic setting and special character.
- Absence of field boundaries in the centre of the site
- Historic landscape features

6.2.2 Gerald Eve/Define on behalf of Merton College submission, August 2019

A series of capacity testing options have been prepared by the site promoter, which consider revised development boundaries incorporating land to the west. See figure 10. Three options are presented:

- 536 dwellings at 35 dph with development extended to the west.
- 690 dwellings at 40 dph on a larger, extended site.
- 760 dwellings at 40 dph on a larger, extended site.
- A separate development parcel is promoted off Cassington Road for a further 30 homes.

An accompanying Landscape Appraisal Addendum compares the impact on viewpoints.

6.3 Conclusion on CDC's initial working figure for proposed Main Modifications

CDC has previously proposed an amendment to the number of dwellings on the site from 530 to 440 (Focused Change FC64, [Focused Changes and Minor Modifications, February 2018](#)). The proposed reduction in density was in response to new information relating to drainage and landscape constraints, but did not look to alter the development boundary. In this scenario, the net density is 39 dph based on a net residential area of 11.2 ha.

In response to the Inspector's preliminary findings CDC is now re-examining the western boundary of the developable area, and re-examining the residential density in response to site constraints.

A working proposal was suggested by CDC for testing. This comprises an increase in the residential area to around 26 ha, giving a net residential area of 18.2 ha, and a new housing total of 600 dwellings. This gives a net residential density of 33 dph, which we note is a reduction in density from both the Proposed Submission Plan, 2017 and the proposed Focused Change, 2018.

Boundary

CDC's is proposing a revised development boundary which broadly follows the 75m AOD contour, in response to landscape and Green Belt advice to minimise general visual impact on the countryside, but has a more geometric alignment in keeping with nearby field boundaries.

CDC's approach to the boundary revision is generally consistent with the extent of development proposed by the site promoter for 536 units, but we understand it will incorporate the revised land area for school playing fields in line with OCC's advice.

We understand that the suggested extension will be wide enough (approximately 85-200m from the hedge line) to accommodate a range of typical residential block dimensions and supporting drainage and access.

Net residential area

CDC's proposed net residential area is 18.2 ha, based on a 70:30 gross to net ratio.

The site promoter, working broadly to the same gross residential area, identifies a smaller residential area of 15.3 ha. This highlights the potentially significant land take associated with constraints including hedgelines and buffers, and drainage attenuation on the site.

Density

CDC's proposed reduction in density is a response to the known site constraints which have an impact on the efficiency of the layout and divide the site into a number of smaller parcels.

The extended portion of the site will be separated from the parcels of land to the east by an established hedge line which is to be retained. The site promoter's layout suggests the western parcels will be served by additional SuDS infrastructure and access roads. As a result there is a limited cumulative benefit to the site layout efficiency as a result of extending the site to the west.

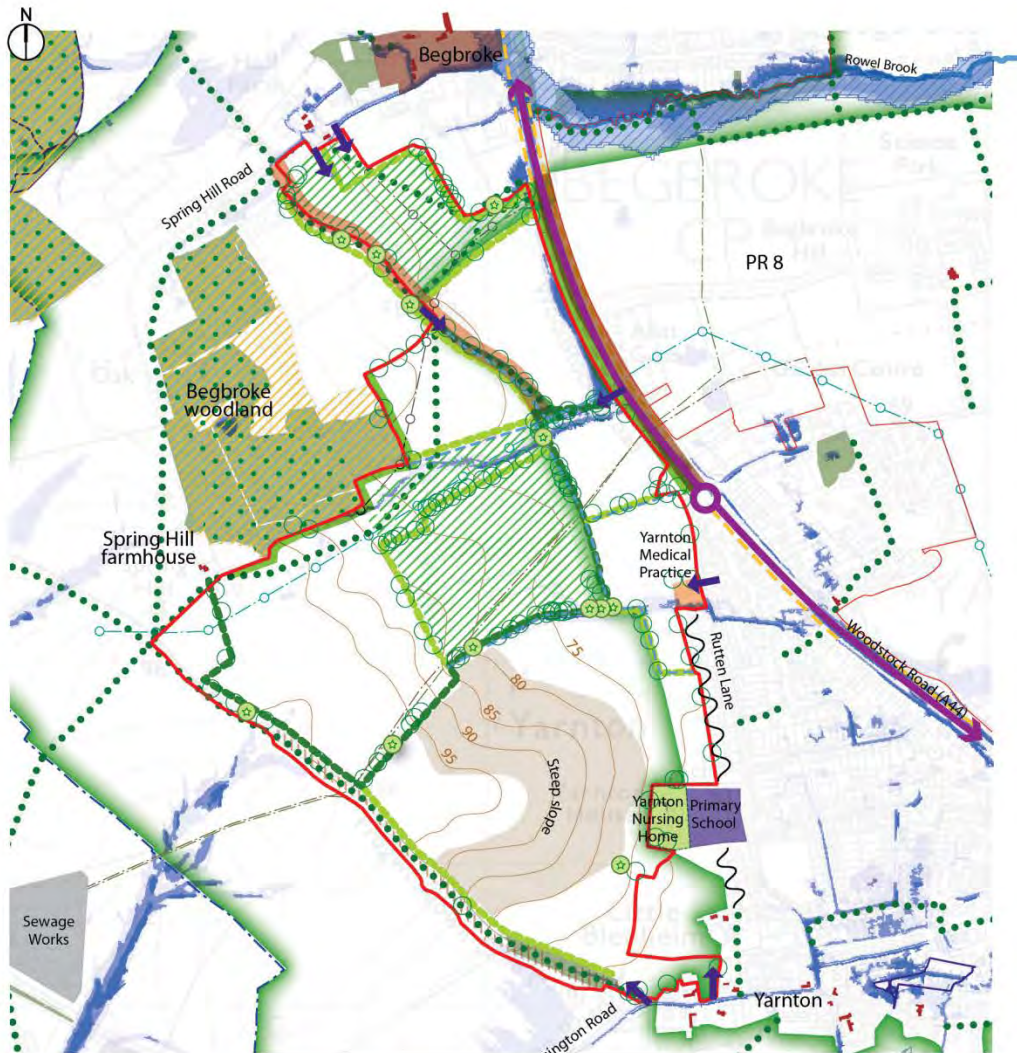

In contrast to PR8, which is of a scale to develop its own distinctive character incorporating innovative and higher density typologies, the character of PR9 is to be complementary to the scale of the existing village of Yarnton while addressing both the frontage onto the A44 and the rural edge. The appropriate overall density should allow for a mix of character areas across the site responding to the varied edge relationships.

A reduction in density and increase in developable area would therefore appear to be an appropriate response to both constraints and character considerations. However, given the

potentially significant land take associated with the site's constraints CDC may wish to consider a further reduction in density to around 30 dph.

Updated CDC position

We understand that following receipt of draft consultant advice on a range of topics, CDC is proposing a refinement to the residential development boundary for PR9 giving a gross residential area of 25 ha and a net area of 17.5ha. An updated housing allocation of 540 dwellings, at a density of 31 dph is proposed. This slight reduction in density allows greater flexibility to accommodate known site constraints fully.

Addendum to Cherwell Green Belt Study

**Response to the Council's suggested Green Belt changes
subsequent to the Partial Review Plan Inspector's Post-Hearings
Advice Note**

Prepared by LUC
September 2019

Project Title: Response to the Council's Suggested Green Belt Changes subsequent to the Partial Review Plan Inspector's Post-Hearings Advice Note

Client: Cherwell District Council

Version	Date	Version Details	Prepared by	Checked by	Approved by Director
1	16.9.19	Draft	Richard Swann	Sarah Young	Sarah Young
2	19.9.19	Final	Richard Swann	Sarah Young	Sarah Young
3	26.9.19	Amendment to PR7a	Richard Swann	Sarah Young	Sarah Young

Context

- 1.1 Informed by the Cherwell Green Belt Study (LUC, April 2017), Addendum to Cherwell Green Belt Study (LUC, June 2017), and other evidence – including material relating to sustainability, environmental effects and housing need – Cherwell District Council published a Proposed Submission Local Plan in July 2017. This document, which constitutes a Partial Review of the adopted Cherwell Local Plan, identified proposals for the release of Green Belt land to accommodate housing need associated with the City of Oxford. The Submission Local Plan also included a document issued in February 2018 setting out Focused Changes and Minor Modifications to the July 2017 issue.
- 1.2 An Examination on the Local Plan Partial Review (Oxford's Unmet Housing Need) took place in February 2019. The Local Plan Examination Inspector's Post-Hearings Advice Note, issued in July 2019, accepted that Oxford's housing need provides the exceptional circumstances necessary to justify alterations to Green Belt boundaries; however, the proposed allocation for 410 homes to the south east of Woodstock (policy PR10) was found to be unsound. This has given rise to a necessity to assess the potential for alternative provision for these homes elsewhere.
- 1.3 Cherwell District Council has commissioned LUC to produce a further addendum to the Cherwell Green Belt Study, to comment on the positioning of revised Green Belt boundaries associated with three allocation policies:
 - PR7a – Land South East of Kidlington.
 - PR7b – Land at Stratfield Farm.
 - PR9 – Land West of Yarnton.
- 1.4 LUC was provided with draft plans identifying locations for development and for associated green infrastructure. Our comments on the boundaries for each of these proposed releases, with accompanying plans to show suggested boundary revisions, are set out in the following report.
- 1.5 The 'PR' references noted in brackets in the subheadings below are the reference numbers used for assessment parcels in the Cherwell Green Belt Study.

PR7a – South East of Kidlington (PR202 and part of PR178)

- 1.6 **Figure 1** below shows the proposed revised Green Belt boundaries which set out Cherwell District Council's suggested development area south-east of Kidlington, alongside those boundaries indicated in the Submission Local Plan.
- 1.7 The revised proposals suggest release of an additional hedged field to the south of the boundary indicated in the Submission Local Plan, together with a triangle of land to the west which forms part of the large field extending south to the Kidlington Roundabout. The hedged field was identified in the Green Belt Review as part of an area (within parcel PR178) which would, if released, result in *moderate-high* harm to the Green Belt purposes, whereas release of all the land down to the roundabout was assessed as *high* harm. The key consideration in identifying this reduced level of harm was that the impact on the settlement gap between Kidlington and Oxford would be lessened – i.e. by not extending the inset settlement any further south than the current edge of Kidlington. The hedgerow now proposed as the Green Belt boundary is no different in strength to the hedgerow proposed in the Submission Local Plan.
- 1.8 The triangle of land to the west was, along with the rest of the large field of which it forms part, rated at *high* harm, the boundary of the *high* harm area reflecting the presence of field boundaries. However it is recognised that if the hedged field to the east was released the triangle of land would be largely contained by inset development, and would therefore make a weaker contribution to the Green Belt purposes. The release of this area, with creation a new planted boundary, would not therefore significantly affect the remaining gap between Kidlington and Oxford.

- 1.9 Our addendum of June 2017 noted that the strength of remaining open land in PR178 as Green Belt would be reduced by release of land to the east of Bicester Road (i.e. in PR202 and PR178), with containment by inset development and major roads limiting connectivity with the wider countryside. The additional release of land would further erode the size of this contained area of open land but would not represent a step-change in Green Belt harm. As also noted in the 2017 addendum, it would be important to maximise openness and minimise urbanising elements (such as high fences), and to consider use of landscaping to assist with this. Material changes in land use such as for outdoor sport and recreation are identified in the latest version of the NPPF (at paragraph 146) as “not inappropriate in the Green Belt provided they preserve its openness and do not conflict with the purposes of including land within it”.
- 1.10 Subsequent to producing our comments in relation to PR7a the Council considered an alternative boundary and produced a revised plan which shows a slightly altered course for the proposed Green Belt boundary to the west of the existing hedgerow (which would follow the alignment of a former field boundary, removed during the 20th century). The Council’s plan is shown in **Figure 2** below - the pink shaded area represents land to be released, with the green shaded and hatched area remaining in the Green Belt. This represents some further incremental erosion of the remaining Green Belt in this area, but the additional expansion of the development area is too small to make any significant difference to the level of harm to Green Belt purposes that would result from the release shown on **Figure 1**.

PR7b – Stratfield Farm (PR49)

- 1.11 **Figure 3** below shows the proposed revised Green Belt boundaries which set out Cherwell District Council’s suggested development area at Stratfield Farm, alongside those boundaries indicated in the Submission Local Plan.
- 1.12 The additional field proposed for Green Belt release is located in the central part of parcel PR49 that was rated at *low-moderate* for harm. The field boundary hedgerow would mark a clear Green Belt edge, and although the advancement of the inset settlement edge by c.70m would not lead to a significant change in harm, either in terms of impact on the Green Belt purposes or strength of the Green Belt boundary, increased containment of the small block of trees and grassland alongside Stratfield Farm would weaken its role as a boundary feature.
- 1.13 **Figure 4** indicates a suggested minor amendment to the proposed Green Belt boundary that reduces the degree to which the block of trees and grassland would be enclosed by inset development. Increasing connectivity between this area – which was identified in NERC Act S41 habitat data as a traditional orchard and possible priority grassland – and adjacent remaining open land in PR49 would also be beneficial in terms of biodiversity and would provide a buffer to the woodland edge.

PR9 – West of Yarnton (PR51a and PR51b)

- 1.14 **Figure 5** below shows the boundary for PR9 indicated in the Submission Local Plan. **Figure 6** (supplied by Cherwell District Council) shows the Council’s proposed amended boundary and also indicates an adjacent area to the east, proposed for retention in the Green Belt, which would form a zone of parkland between the urban edge and agricultural land beyond, and an area of woodland which would similarly provide a buffer to the north.
- 1.15 The Submission Local Plan’s proposed western boundary for the PR9 Green Belt release followed existing field boundaries (other than a short stretch where a new school was proposed) contained between the more clearly defined area to the north and existing inset development to the south. Within PR51b, these boundaries also mark a distinction between areas closer to the inset settlement of Yarnton, rated at *moderate* and *moderate-high* harm, and land to the west which was rated at *high* harm.

- 1.16 The rising landform and absence of field boundaries in the area into which further settlement expansion is proposed are the reason for the higher harm rating, but some gradation can be identified. There is a distinction between the more gentle lower slopes on which development is proposed and the steeper hillside beyond, which is more clearly countryside separate from the inset settlement edge. The Cherwell Green Belt Study also noted that higher ground in parcel PR51b formed part of the ring of hills that constitutes a key element in Oxford's historic setting, contributing to the preservation of the City's setting and special character (the 4th Green Belt purpose), but that the lower slopes were also significant in this respect.
- 1.17 The change in slope is not dramatic, so the precise location of a new boundary would make little difference in Green Belt terms, but a new Green Belt edge approximating to the lower end of this topography (at around the 75m contour) would nonetheless define an area in which harm to the Green Belt purposes, although greater than that associated with the formerly proposed release, would be lower than the harm associated with the release of the higher slopes.
- 1.18 Ideally the new Green Belt boundary should represent a clear distinction between the inset residential area and adjacent Green Belt land. It should lie outside of residential curtilages, so that it can be managed in a way that serves this purpose. It is appropriate that the proposed parkland and woodland areas should remain as Green Belt, where they have the potential to provide improvements to environmental quality and accessibility to help offset the impact of release of land (a requirement noted at paragraph 138 of the NPPF).
- 1.19 Any smaller areas of open land that lie between the suggested parkland and new built development, and which would be likely to have a stronger physical association with the developed area than with the wider countryside, could form part of the Green Belt release, in preference to the creation of a more convoluted boundary following property curtilages. Any proposed woodland blocks should remain within the Green Belt, so that their contribution to preventing countryside encroachment has greater protection. Any land identified for potential outdoor sports should also remain in the Green Belt, but urbanising elements should be minimised, so as to preserve Green Belt openness.

Examination into the Oxford Local Plan 2036

IC9 - Inspectors' interim conclusions

We are writing to set out in brief our interim conclusions on some of the key issues arising in the examination into the Oxford Local Plan 2036, principally in respect of the housing requirement and overall housing need. We feel that clarifying the position at this stage would assist the City Council and those neighbouring authorities, residents and stakeholders who are interested in the planning issues arising in the city and region. It should be emphasised that these are our interim conclusions; our final report will be published in due course after we have considered all the representations made in response to the consultation on the Main Modifications.

Housing need, housing capacity and housing provision, and their various components, formed the basis of detailed discussion in the first week of the Examination hearings which took place from 3 December to 17 December 2019. We should like to thank the Council and, through this letter, all the participants, for their helpful and well-researched contributions to the hearings.

On the subject of housing need, it is our preliminary view that no main modifications are required in respect of the plan's assessments of overall housing need or affordable housing need, or in respect of the annual need figure of 1,400 dwellings per annum over the plan period from 2016 to 2036 which is referred to in section 3 of the plan. This figure is based on substantial and sound evidence and on tried and tested methodologies which accord with Government guidance. The approach is justified in the context of the circumstances which include serious unaffordability in the housing market and unusually marked inequalities in the city.

The plan's overall housing need figure is aimed at meeting the very substantial level of affordable housing need. Affordable housing need has been properly calculated within an up-to-date SHMA update (2018) (HOU.5) in accordance with government guidance and takes into account all relevant inputs and appropriate adjustments. There is an agreed approach with neighbouring districts in respect of growth and the accommodation of unmet need which addresses the question of delivery. We have come to the interim conclusion that the scale of the overall housing need and the other significant factors, which we will detail in our final report, constitute exceptional circumstances for the release of Green Belt to accommodate the identified housing need.

In terms of the housing requirement, in other words the amount of housing to be accommodated within Oxford itself over the plan period, the submitted plan's housing requirement was 8,620 dwellings from 2016 to 2036 but the Council have proposed a modification to Policy H1, as set out in its statement on Matter 4, which provides an updated figure and establishes the total housing requirement at a minimum of 10,884 dwellings from 2016 to 2036 within the city's boundaries. Our view at this stage is that this proposed main modification is required to make the plan sound, and also that the stepped trajectory as proposed to be modified is realistic and should ensure the maintenance of a rolling 5 year supply of housing land.

We have looked at the wider implications of this modification and the issues arising from the different time periods in the submitted plan compared with those used by the assumptions of the Oxford Growth Board. The Board's assumptions, and hence the working figure used by other LPAs, was 10,000 dwellings in Oxford from 2011 to 2031. The calculations in the Council's paper OCC.1B seek to resolve the issues raised by the different time periods. Adding completions between 2011 and 2015 to the annualised capacity-based housing requirement for 2016-2031 gives a figure of 9,588 dwellings for 2011 to 2031, ie the period on which the Growth Board's figures are based. This is very close to the Growth Board's assumed capacity figure for Oxford of 10,000 dwellings.

We have therefore come to the preliminary conclusion that the calculation of overall housing need set out in the Plan and supporting documents is sound and that the annualised figure of need established in the plan, taken together with the capacity-based housing requirement as proposed to be modified, and the known rate of completions from 2011 to 2015, do not give rise to any meaningfully different implications for planning in the wider Oxfordshire area compared with the assumptions used by the Growth Board, and do not raise any significant new issues in respect of the unmet need set out and discussed in paragraphs 3.10 to 3.12 of the submitted plan.

We discussed in the hearings the need for the Council to maximise opportunities to deliver housing within the city and especially on brownfield land in accordance with the NPPF. Clearly the Council need to ensure that urban land is brought forward where possible, and during discussion at the

hearings it proposed a main modification which would add minimum housing numbers to the site allocations. This would create certainty for all concerned and would give assurance that a certain minimum number of homes can be achieved, with the potential for higher levels of delivery subject to compliance with plan policies. The Council also proposed a main modification which will allow for complementary uses to the designated uses on the allocated sites to ensure that the plan is positively-prepared and enables site allocations to be developed flexibly but in acceptable ways. We consider that these proposed main modifications are required for soundness.

Throughout the examination we have borne in mind the imperative of providing housing and affordable housing, and this has led us generally to find sound the proposed balance of land uses in the plan and support the individual site allocations, subject to certain main modifications which have been discussed with the Council. We do not need to go through all of those modifications in this letter; they have already been included in the Council's preliminary modifications schedule which is on the website. We would however draw attention to the main modification that followed discussions in writing, where we recommended the Council remove the requirement to make affordable housing contributions on sites of less than 10 homes to ensure that the plan is sound and in accordance with national policy, and the Council subsequently proposed this modification.

We believe it is right for the plan to continue to exercise careful management over the locations for student housing and employer-linked affordable housing so as, among other things, not to impair the delivery of housing to meet wider needs. And in the interests of helping to meet affordable housing needs, and to deliver a balance of types of housing, we also consider it right as a general principle for the plan to seek affordable housing contributions from the development of student accommodation over the threshold size. But we consider that a main modification is required exempting the development of certain forms of student accommodation on campus and university redevelopment sites from those contributions, in recognition of the onus to provide for additional student accommodation which is specifically placed on the universities by the effect of the Policy H9 cap. The Council have put forward a main modification to this end.

Whilst some of these main modifications are intended to create opportunities for boosting the supply of housing from within Oxford in accordance with the NPPF, their overall effect will be essentially to bolster the supply of windfalls and potentially, by introducing some flexibility, to add to the anticipated housing numbers on certain allocated sites. In other words they are important in reinforcing the robustness of the plan's housing delivery and its resilience in meeting its 5 year housing land supply, but on the evidence we believe that they are very unlikely to be of a scale to make a significant difference to the level of the city's unmet need for housing that cannot be accommodated within its boundaries and needs to be accommodated by Oxford's neighbours.

On non-housing matters, we have had extensive discussions in writing on a range of policies prior to the hearings, a number of which have given rise to suggested main modifications. These include, for example, modifications to the employment, transport and heritage policies in response to our earlier written questions. These will be included in the finalised Schedule of Main Modifications in due course and we do not intend to go into them here. The reasons behind them are all documented and are on the examination website, in correspondence between ourselves and the Council.

Our assessment of the evidence base, plan preparation and plan contents have led us to conclude that the plan meets the requirements for legal compliance, and we have not found it necessary to devote hearing sessions to this subject.

Finally, the Schedule of Main Modifications will be published and will be subject to consultation in due course, and we will consider the results of that consultation before reaching conclusions in our final report.

EQUALITY IMPACT ASSESSMENT SCREENING

**PARTIAL REVIEW OF THE CHERWELL LOCAL PLAN 2011 - 2013 (Part 1):
Oxford's Unmet Housing Needs**

Proposed Main Modifications

February 2020

Equality Impact Assessments

CONTENTS

INTRODUCTION.....	2
CONCLUSIONS OF EQUALITY IMPACT ASSESSMENT....	2-3
APPENDIX 1 STAGE 1 INITIAL SCREENING DETAILS.....	4
STAGE 1 INITIAL SCREENING ASSESSMENT.....	5
STAGE 1 NARRATIVE QUESTION NARRATIVE.....	8

1. INTRODUCTION

- 1.1. This Equality Impact Assessment reviews the Proposed Modifications to the Submission Draft Partial Review of the Cherwell Local Plan 2011-2031 (Part 1): Oxford's Unmet Housing Needs. The assessment includes the policies contained within the proposed submission plan to provide Cherwell's share of the unmet housing needs of Oxford to 2031. Equalities Impact Assessments were undertaken as an integral part of the preparation of the adopted Cherwell Local Plan.
- 1.2. The purpose of this Equality Impact Assessment (EQIA) is to assess what impact the Local Plan Submission Draft Partial Review policies will have on different sections of the community referred to as the 'protected characteristics' which include:
- Age
 - Disability
 - Gender reassignment
 - Sexual orientation
 - Race
 - Religion
 - Gender
- 1.3. Equality Impact Assessments systematically assesses and records the actual, potential or likely impact of a service, policy or project – or a significant change in the same – on different groups of people. The consequences of policies and projects on particular groups are analysed and anticipated so that, as far as possible, any negative consequences can be eliminated or minimised and opportunities for ensuring equality can be maximised. This EQIA will be deposited with the Proposed Modifications to the Submission Partial Review of the Cherwell Local Plan (Part 1): Oxford's Unmet Housing Needs during the consultation period.
- 1.4. The EQIA was prepared in liaison with the Council's Policy and Projects Officer. This EQIA highlights the steps that have been undertaken to evaluate the potential impact of Local plan policies on those in the community with protected characteristics, and what steps have been taken to address any negative impacts. The assessment follows the Council's standard methodology as outlined below:

Stage 1 involves the Initial Screening of the assessment and is intended to check whether the Partial Review of the Cherwell Local Plan Part 1 has an adverse impact on equality groups and identify relevant actions and likely costs/resources associated with any proposed improvement. **Appendix 1** contains the initial screening of the Proposed Modifications to the Submission Partial Review of the Cherwell Local Plan Part 1.

Stage 2 of the Council's EQIA requires the completion of an In Depth (Full) Assessment if the answer is yes to more than one of the Initial Screening questions.

- 1.5. The initial screening of the Proposed Modifications to the Submission Draft Partial Review of the Cherwell Local Plan resulted in a YES response to the Initial Screening question: Is the proposed policy or actively likely to have a negative effect on our relations with some sections of the local community?

Some of the policies contained within the Submission Draft Partial Review may have a negative effect on our relations with some aspects of the local community. However, this is not necessarily an equality issue. The Plan proposes changes to the area and allocates sites to provide housing and infrastructure. The proposed changes include new housing including affordable housing, improved accessibility to the countryside in particular for disabled and wheelchair users, new services and facilities and public transport infrastructure.

- 1.6. Following the initial screening of the Submission Draft Partial Review for the Cherwell Local Plan Part 1 it is concluded that an In Depth (Full) Equality Impact Assessment is not required.

Equality Impact Assessment

APPENDIX 1 STAGE 1 - INITIAL SCREENING DETAILS ASSESSING POLICIES AND ACTIVITIES - GUIDANCE FOR STAFF

Notes:

1. As a result of this exercise, you will have checked that your policy or activity does not have adverse impact on equality groups and you will have identified relevant action that you need to take, and the likely costs/resources associated with any improvement. The equality groups covered are at present: Race, Gender, Disability, Sexuality and Religion in employment by 2003 and Age by 2006. **Note. This is not simply a paper exercise - it is designed to make sure that your policy or activity is delivered fairly and effectively to all sections of our local community.**
2. Please note that the Council is required to publish the results of these assessments, and updates, therefore **your completed Appendices may be public documents.**
3. Appendix 1 questionnaire (**to be completed for each relevant Strategy, Policy or Service Development**) is for use regardless of whether your policy or activity is aimed at external customers or internal staff.

Please tick/delete as appropriate: Is this EIA for a,

Strategy	<input checked="" type="checkbox"/>	Existing	<input type="checkbox"/>

Name of Strategy, Policy or Service Development:

Submission Draft Partial Review of the Cherwell Local Plan Part 1: Oxford's Unmet Housing Needs incorporating proposed main modifications.

AIMS, OBJECTIVES & PURPOSE OF THE POLICY OR ACTIVITY:

The Local Plan is a statutory requirement and is the main document of the Local Development Framework. The Partial Review of the Local Plan contains proposals for helping to address Oxford's unmet housing need to 2031 and will form an addendum to the adopted Cherwell Local Plan 2011-2031 (Part 1) when finalised.

All the other Development Plan Documents produced by the Authority and Neighbourhood Plans must be in general conformity with the Local Plan.

PLEASE LIST THE MAIN STAKEHOLDERS/BENEFICIARIES IN TERMS OF THE RECIPIENTS OF THE ACTIVITY OR THE TARGET GROUP AT WHOM THE POLICY IS AIMED:

The Main Modifications to the Submission Draft Partial Review Plan includes development proposals in the District until 2031 and could have an impact on all those that live and work in the District. The main stakeholders are, therefore, the Cherwell community and those with an interest in the Cherwell District. These include residents, local businesses, stakeholders, staff, and partners.

IF THE ACTIVITY IS PROVIDED BY ANOTHER DEPARTMENT, ORGANISATION, PARTNERSHIP OR AGENCY ON BEHALF OF THE AUTHORITY, PLEASE GIVE THE NAMES OF THESE ORGANISATIONS/AGENCIES:

N/A

ASSESSMENT REVIEW DATE: 12 February 2020

Equality Impact Assessment

STAGE 1 – INITIAL SCREENING ASSESSMENT

Q	Screening Questions	Y/N
1.	Does the policy or activity knowingly prevent us in any way from meeting our statutory equality duties under the 2010 Equality Act?	N
2	Is there any evidence that any part of the proposed policy or activity could discriminate unlawfully, directly or indirectly, against particular equality groups?	N
3	Is there any evidence that information about the policy or activity is not accessible to any equality groups?	N
4	Has the Council received any complaints about the policy or activity under review, in respect of equality issues?	N
5	Have there been any recommendations in this area arising from, for example, internal/external audits or scrutiny reports?	N
6	Will the proposed policy or activity have negative consequences for people we employ, partner or contract with?	N
7	This Strategy, Policy or Service Development has an impact on other council services i.e. Customer Services and those services have not yet been consulted.	N
8	Will there be a negative impact on any equality groups? If so please provide brief details below.	N
	<p>Equality Impact: Evidence:</p> <p>The Submission Draft Partial Review Plan incorporating proposed main modifications sets out the strategy for how Cherwell District will help meet Oxford's unmet housing need to 2031. It indicates how much growth and broadly where the growth will take place, and how it will be delivered, and will form an addendum to the adopted Cherwell Local Plan Part 1 when adopted.</p> <p>The Vision of the Partial Review for meeting Oxford's unmet housing needs in Cherwell is:</p> <p>"To provide new development that meets Oxford's agreed, identified housing needs, supports the city's world-class economy, universities and its local employment base, and ensures that people have convenient, affordable and sustainable travel opportunities to the city's places of work, study and recreation, and to its services and facilities". This development will be provided so that it:</p> <ol style="list-style-type: none"> i. creates balanced and sustainable communities ii. is well connected to Oxford iii. is of exemplar design which responds distinctively and sensitively to the local built, historic and environmental context iv. is supported by necessary infrastructure v. provides for a range of household types and incomes reflecting Oxford's diverse needs vi. contributes to improving health and well-being, and vii. seeks to conserve and enhance the natural environment <p>The Partial Review contains four additional Strategic Objectives to those contained in the adopted Local Plan:</p> <ul style="list-style-type: none"> • SO16: To work with Oxford City Council and Oxfordshire County Council, and other neighbouring authorities as required, in delivering Cherwell's contribution to meeting Oxford's unmet housing needs with its required infrastructure by 2031. • SO17: To provide Cherwell's contribution to meeting Oxford's unmet housing needs so that it supports the projected economic growth which underpins the agreed Oxfordshire Strategic Housing Market Assessment 	

2014 and the local economies of Oxford and Cherwell.

- SO18: To provide housing for Oxford so that it substantively provides affordable access to new homes for those requiring “affordable” housing, new entrants to the housing market, key workers and those requiring access to oxford’s key employment areas, and to provide well designed development that responds to both needs and the local context.
- SO19: To provide Cherwell’s contribution to meeting Oxford’s unmet housing needs in such a way that it complements the County Council’s Local Transport Plan, including where applicable, its Oxford Transport Strategy and so that it facilitates demonstrable and deliverable improvements to the availability of sustainable transport for access to Oxford.

The Submission Draft Partial Review, incorporating main modifications, proposals are based on a range of evidence documents which use population forecasts and need assessments. These include breakdowns of gender, age, race/ethnicity and disability. Such documents include the Oxford City Council’s Housing Strategy 2015-2018 (as the Plan proposals seek to meet Oxford’s unmet housing need), Census 2011, and the Strategic Housing Market Assessment (SHMA) 2014), which considers the housing needs of specific groups such as older people, minority groups and people with disabilities. The Partial Review evidence base is available to view on the Council’s website link: <https://www.cherwell.gov.uk/info/112/evidence-base/369/local-plan-part-1-partial-review---evidence-base>

Development proposals set out in the Partial Review will guide land use, and the provision of physical infrastructure. However, the delivery of services is dealt with by service provider Departments in Cherwell DC, Oxfordshire County Council, health authorities and utility providers. The Partial Review will affect everyone in the areas where it is delivered because its policies are land-use based. The SHMA takes into account the needs of all sections of the community including the elderly and the disabled. It is not considered that it will have a negative impact on race, gender, disability, sexual orientation or religion.

The Submission Draft Partial Review of the Cherwell Local Plan (Part 1) – Oxford’s Unmet Housing Need has been prepared following extensive public consultation. There were three stages of consultation. They are:

- Issues Paper Consultation was held for six weeks from 29 January 2016 to 11 March 2016.
- Options Consultation Paper was held for eight weeks from 14 November 2016 to 9 January 2017.
- The Proposed Submission Plan Consultation was held for fourteen weeks from 17 July 2017 to 10 October 2017.

The representations have been taken into account in preparing the Submission Draft of the Partial Review of the Cherwell Local Plan 2011- 2031.

The Partial Review is prepared in accordance with the Town and Country Planning (Local Planning) (England) Regulations 2012, and the Council’s Statement of Community Involvement (SCI) July 2016 <https://www.cherwell.gov.uk/info/33/planning-policy/383/statement-of-community-involvement>, which sets out how and when people can be involved in the preparation of Local Plans.

These two documents ensure that in the preparation of a Local Plan, the Council

	<p>consults with individuals and bodies which represent the interests of different age, disability, gender reassignment, pregnancy and maternity, race, religion and belief, sex and sexual orientation, local or national groups, religious groups, and the elderly.</p> <p>Cherwell District Council Statement of Community Involvement Adopted on 18 July 2016 contains a list of the groups who should be engaged with in Appendices 1, 2 and 3.</p> <p>The results of consultation during the different stages of Local Plan preparation are reported in the Statement of Consultation. The statement has been kept up to date when consultation on Local Plan documents is carried out. An addendum statement detailing consultation on the Proposed Main Modifications to the Submission Partial Review has been produced to supplement the Consultation Statement.</p> <p>The SCI July 2016 and Statement of Consultation can be viewed on the Council's website.</p>	
9	<p>Is the proposed policy or activity likely to have a negative effect on our relations with certain equality groups or local community? If so please explain.</p> <p>Some of the policies contained within the Partial Review may have an impact on the local communities. However, this is not necessarily an equality issue. The Plan proposes changes to the area and allocates sites to provide housing and infrastructure. The proposed changes include new housing including affordable housing, improved accessibility to the countryside in particular for disabled and wheelchair users, new services and facilities and public transport infrastructure.</p>	Y
10	<p>There has been no consultation with equality groups about this policy or activity? Answer yes if you agree with this statement. If there has been consultation, please list the equality groups you have consulted with:</p> <p>Cherwell District Council considers that all sectors of the community have the opportunity to have their say in how their community is planned and developed, irrespective of age, sex, ability, ethnicity, background or disability.</p> <p>Cherwell District Council Statement of Community Involvement adopted in July 2016 addresses a number of changes to the planning system, including the statutory Duty to Co-operate with the prescribed bodies and Neighbourhood Planning introduced by the Localism Act 2011. It sets out how the Council will engage with the community in the preparation of Local Development Plan Documents.</p> <p>Extensive structured consultation has taken place during the preparation of the Submission Partial Review with the wider general public, community representatives, other public and private sector organisations and the voluntary sector. All comments and representations have been taken into account and have helped in influencing the formation of the policies of the Partial Review. In particular, efforts are made to ensure people who traditionally have not been involved with planning policy have the opportunity to have their view heard. Each stage of plan preparation is accompanied by public participation and consultation on the proposed plan, inviting comments and representations on the plan. These are summarised in the Consultation Statement.</p>	N
11	<p>Has this assessment missed opportunities to promote equality of opportunity and positive attitudes? No. The Council will continue to encourage the participation of all sectors of the community in the preparation of the Partial Review of the Local Plan.</p>	N

**Proceed to In Depth (Full) Assessment (complete Appendix 2) if the answer is YES to more than one of the above questions.
For any YES answers include an improvement action in your Equality Improvement Plan.**

Declaration

I am satisfied that an initial screening has been carried out on this policy or activity and an In Depth (Full) Equality Impact Assessment is not required. I understand that the EIA is required by the Council and take responsibility for the completion and quality of this assessment.

Completed by: Planning Policy

Date: 12 February 2020

Countersigned by Assistant Director Planning and Development: David Peckford

Date: 12 February 2020

Equality Impact Assessment

Please detail below your evidence which has determined whether you have answered either Yes or No to the initial screening questions.

Screening Questions	Screening Narrative
Does the policy or activity knowingly prevent us in any way from meeting our statutory equality duties under the 2010 Equality Act?	<p>There is no evidence that the Partial Review of Local Plan Part 1 prevents us in any way in meeting the equality duties.</p> <p>The Statement of Community Involvement, which sets out how we will engage our community in the preparation of planning documents, actively seeks involvement in planning from all aspects of the community.</p>
Is there any evidence that any part of the proposed policy or activity could discriminate unlawfully, directly or indirectly, against particular equality groups?	<p>There is no evidence to suggest that any of the protected groups have been disadvantaged through the Local Plan preparation process or will be negatively affected by policies contained in it.</p>
Is there any evidence that information about the policy or activity is not accessible to any equality groups?	<p>There is no evidence that information about the Partial Review of the Cherwell Local Plan Part 1 is not accessible to any equality groups.</p> <p>The Submission Partial Review Local Plan, incorporating the main modifications, and all supporting documents are available on CDC's website.</p> <p>Hard copies of the relevant Local Plan documents are also available to view at all Council offices and public libraries. The Council has placed advertisements in the local press.</p> <p>The preparation of the Partial Review Plan has been the subject of widespread publicity including in newspapers and through exhibitions and meetings.</p> <p>During the previous stages of the preparation of the Partial Review Plan, as some of the consultation documents have been quite large documents, we have also produced leaflet summaries to enable a wider audience to understand the Plan proposals.</p>

	We also offer translator services for all our publications
Has the Council received any complaints about the policy or activity under review, in respect of equality issues?	No. There is no evidence to suggest that any equality issue related complaints have been received. We have received many comments at each consultation stage to the various issues under consideration within the Partial review of the Local Plan. These are discussed within the report on consultations.
Have there been any recommendations in this area arising from, for example, internal/external audits or scrutiny reports?	No recommendations received
Will the proposed policy or activity have negative consequences for people we employ, partner or contract with?	There are no negative outcomes identified. The Local Plan is for land use development in the District and all communities will continue to be involved.
This Strategy, Policy or Service Development has an impact on other council services i.e. Customer Services and those services have not yet been consulted.	Internal teams have been consulted in the preparation of the Partial Review of the Cherwell Local Plan – Part 1, and none have highlighted equality impacts. Consultation has taken place at the service, directorate and working with the Council, District Council and City Council during the preparation of the Partial Review.
Will there be a negative impact on any equality groups?	No. However, for clarity, we have set out how planning and the Local Plan may impact on the various equality groups Age: <ul style="list-style-type: none"> • Design and Accessibility in the physical environment (e.g. relationship of housing to social and community facilities and ease of access by public transport) • Specific housing and community facilities provision for older people (e.g. changing demographics requiring homes for life and care home facilities). Disability: <ul style="list-style-type: none"> • Design and Accessibility in the physical environment. Gender (including Transgender): <ul style="list-style-type: none"> • Design and Accessibility in the physical environment. Race (including Gypsy and Traveller): <ul style="list-style-type: none"> • Can affect provision of land and facilities to meet specific lifestyle needs. Religion or belief: <ul style="list-style-type: none"> • Can affect provision of special facilities to meet needs for worship and lifestyle

	<p>Sexual Orientation</p> <ul style="list-style-type: none"> • Can affect provision of land and facilities to meet specific lifestyle needs. <p>Other groups</p> <ul style="list-style-type: none"> • Regeneration and/or land use and facility related provision targeted to meet the needs of communities in particular locations that have special needs (e.g. rural deprivation or areas of high unemployment and socio-economic deprivation) • Text modification to provide more support for the provision of housing which better meets the needs of the elderly and disabled people.
<p>Is the proposed policy or activity likely to have a negative affect on our relations with certain equality groups or local community? If so please explain.</p>	<p>Yes. Some of the policies contained within the Partial Review of the Cherwell Local Plan Part 1 may have a negative effect on our relations with some aspects of the local communities. However, this is not necessarily an equality issue. Some local communities will not support the housing requirements and strategy for delivering the houses, for example large strategic site locations</p>
<p>There has been no consultation with equality groups about this policy or activity? Answer yes if you agree with this statement. If there has been consultation, please list the equality groups you have consulted with:</p>	<p>Cherwell District Council intends that all sectors of the community have the opportunity to have their say in how their community is planned and developed, irrespective of age, sex, ability, ethnicity, background or disability. As part of the Local Plan preparation the Council has produced a Statement of Consultation, which was adopted on 18 July 2016. This is a plan for how the Council will engage with the community in the preparation of the key planning policy documents.</p> <p>In particular, efforts are made to ensure people who traditionally have not been involved with planning policy have the opportunity to have their view heard.</p> <p>Full details of all consultation on preparation of the Partial Review of the Local Plan have been outlined in the Consultation Statement. It includes analysis of the representations from the consultations. The Consultation Statement will continue to be updated as the subsequent stages of the Partial Review of the Plan are completed.</p>
<p>Has this assessment missed opportunities to promote equality of opportunity and positive attitudes?</p>	<p>No</p>
