Strong objection to the proposed erection of 1950 dwellings in Begbroke and 530 dwellings in Yarnton. Both Yarnton and Begbroke are dispersed settlements: infilling could ruin the character of the village while estate development would overwhelm it. The protection of Begbroke and Yarnton's visual, historic and archaeological qualities is also supported by the National Planning Policy Framework, which states that permission should be refused for development of poor design that fails to take the opportunities available for improving the character and quality of an area and the way it functions. Building what amounts to be the largest high density development in the area; merging the sizeable town of Kidlington with the villages of Begbroke and Yarnton will destroy the unique character of these villages entirely, with the loss of the surrounding GB areas which give the villages their identity, rather than becoming part of yet more urban sprawl. Whilst pressure from Oxford DC for the development in Cherwell DC is considerable, mainly for housing city commuters, it has been successfully resisted in similar cases by Vale of the White Horse DC re the large area of brown field land adjacent to the BMW plant, amongst other areas. The reasons for rejecting those schemes included the inadequacy of the local lanes to accommodate even small increases in traffic, and because road widening would destroy ancient field boundaries. There is concern about Cherwell DC's proposals to increase bus services in order to facilitate the proposed developments by closing one lane of the already busy dual carriageway (note: traffic surveys have been averaged over a 12 hour period, ignoring the rush hour bottlenecks that occur at the Turnpike roundabout / following bridge and roundabout on the A44 prior to Pear Tree interchange) as a dedicated bus route. As cyclists, we are increasingly aware of the poor quality of both the road surfaces in the area due to volume of traffic and poor repairs, and the badly maintained cycleways. Increasing traffic through already congested roads will not improve this, and will most likely lead to more RTA's in the area. The proposed siting of the developments are particularly ill-considered: they are on greenfield sites used by many villagers and tourists for recreation and walking dogs. Building here would both diminish the striking views available to locals and new developments would be prominent from many areas of the village. Furthermore, there is no need for this kind of 'open market' housing in the village, which has already seen several 'new' estates being built in recent years. Cherwell DC has more than five years' supply of housing land in other larger areas (Bicester, Banbury, Kidlington etc.) to meet the requirements of its emerging Local Plan's policy. The villages of Begbroke and Yarnton already have enough housing developments: the only identified need is for affordable housing for residents who work locally, as recently confirmed by your Housing Department's Housing Needs Survey. As an alternative to this proposal, we would support the construction of further housing developments for both Oxford and London commuters (making use of Oxford Parkway Station) on, or near to the proposed Northern Gateway site, or other brown field areas which could be identified within the Oxford area, rather than build on GB land merging villages in to greater conurbations.

Object to Policy PR1(a) to build 4,000 houses in this area for Oxford overspill. This is not a proven requirement and not justified. The impact on traffic and services would be immense. No thought appears to have been given to the significant impact on local schools and healthcare provision, both of which are already overstretched.

Object to Policy PR1(a) to build 4,400 houses in this area for Oxford overspill. This is not a proven requirement and not justified. It is based on a highly inflated estimate of housing need in the county. It is unsustainable. It would hugely worsen traffic problems and pollution, particularly around the Kidlington Roundabout and slip road which are often congested even with the current level of housing. Schools and health services would be overstretched which would apply to both the primary schools that my children attend and the secondary school which they would attend when older. The Green Belt's open countryside in which nearly 4,000 of the houses would be built would be sacrificed for ever and its walks and views lost. Natural habitats and wildlife would be destroyed. Oxford City Council has been allocating land in the city for employment instead of for housing. It has ignored the impact on surrounding Districts and failed in its duty to cooperate. The City Council should do more to meet its own needs.

Objects to PR1(a). This is not a proven requirement & is not justified. It is based on highly inflated estimate of housing need in the county and is unsustainable. Existing traffic problems would become much worse, traffic would grind to a halt. Schools locally are already full & cannot accommodate the numbers of pupils that would result. Health services are already overstretched & could not cope. The houses would be built primarily in Green Belt open countryside. Oxford CC has been allocating land for employment instead of housing, buildings designated for commercial use stand empty all over the city. Oxford CC is pushing its housing obligations onto surrounding areas. Oxford CC could & should do more to meet its own needs.

<p>Objection to Policy PR1(a) to build 4000 houses in the Kidlington and surrounding areas for the Oxford overspill. 4000 is not a justified or proven requirement. It is unsustainable. In particular, Oxford doesn't have a need to fill jobs; employment is high in Oxford. There is every chance houses in these areas will be bought up by commuters who work in the London area and who can take advantage of the railway link from Oxford Parkway. The housing developments will not support local young people who are already working in key posts in Oxford, e.g. in the hospitals, universities, and schools. They're the ones who really need help with housing. Have you any proposals for ensuring housing goes to local people in key jobs?</p>

<p>Strong objection on grounds that City's housing requirement has not been proven and is based on over estimated growth figures which rely on assumptions of very high growth of employment in Oxford. Oxford Council has chosen to use land for business development as opposed to providing affordable housing. As there is negligible unemployment in Oxford the job vacancies created by the new business parks will be filled by new workers from elsewhere. Surrounding council areas are expected to sacrifice their quality of life and vast areas of GB to house the new workers. The vision that 50% of houses will be 'affordable' to meet Oxford's needs is unlikely to be achieved. Oxford itself accepted just 20% affordable units in it's Templar Square development and is not going to achieve 50% affordable housing on Barton Square development. Proposed market prices for the rest of the latter development are well above the city average, inevitably driving house prices higher beyond the reach of young people and lower paid workers. Quality of life for residents of Kidlington, Yarnton and Begbroke will be impacted on immensely. Countryside, landscapes and walks will disappear. The environment will be damaged by loss of habitat and pressures on what little green space remains. There will be increased traffic congestion and air pollution, noise and light pollution. The population of Yarnton and Begbroke will increase by more than 100%. Health and education services already struggling will deteriorate even further.</p>

<p>Object to Policy PR1 (a) to build 4,000 houses in an area surrounding Oxford. The new calculation of housing need demonstrates that this figure is grossly inflated. If about half of that figure were to be built (following the revised calculation of housing need in the county) those developments could be accommodated in Oxford itself, within its ring road. There is absolutely no justification for destroying the villages round Oxford in order to suit the convenience of the citizens of Oxford. Let the city of Oxford solve its own problems.</p>

Objection made to Policy PR1(a) to build 4,400 houses in this area for Oxford overspill. This is not a justified or proven requirement and is unsustainable. Objection made to Policy PR3 to remove land from the Oxford Green Belt, we should not lose our Green Belt to meet Oxford's needs. The Green Belt preserves open spaces which are proven to benefit people and nature. The Government has stated that Green Belt is a permanent designation and therefore the plan is not consistent with National Policy. It is believed that the development cannot be guaranteed to provide truly affordable housing to the local community's young people and key workers, and that the vision of the council to make half of the development "affordable" will not be honoured due to previous developments failing to deliver this. An objection is also made to Policy PR11 on infrastructure because it is unsound. No costs are shown on the schedule. There is no indication of how the already congested roads will cope with the additional vehicles from these new houses and the other developments planned for the wider area. A further objection is made to the complexity of the consultation and its timing over the school summer holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known.

Object strongly to building 4400 houses in this area to meet the needs for Oxford's City overspill. Where are the proposals from Oxford to use their brownfield sites and tackle the problem with high numbers of existing houses that have sat empty for years! Oxford City Councils failure to meet the 50% target for affordable homes at the Westgate development is a clear indication that they are not concerned with maximising the number of places in their own developments, their intention clearly is to offload the problem to the Cherwell District.

PR1(a) refers to the justification of building such a large amount of housing. However, from the recent report of housing needs in England, and its figures, it appears that the number previously assessed will now not be needed. Therefore the Council need to relook at their assessment of need and whether they will be able to accommodate their own need rather than expecting the county to use land which has been designated green belt land.

Oxford's Local Plan has not yet been prepared so Cherwell's allocation of homes is premature and is not an appropriate strategy. The government has recently produced a new method for calculating housing need. This indicates that the housing need is much lower than indicated by the Strategic Housing Market Assessment. This needs to be assessed and housing allocations adjusted accordingly. It is believed this proposal is unjustified and unsustainable.

Object to Policy PR1(a) to build 4,400 houses in this area for Oxford overspill. A large part of Oxford's requirement is to provide affordable accommodation for the many who work in Oxford but are forced to travel considerable distances to do so. From our experiences working respectively at an Oxford college and as a part-time medical practitioner, there are many key personnel who cannot afford to live anywhere near their place of work. With the recent completion of Oxford Parkway Station, a housing development on NOGC as proposed in PR 6b is likely to attract many people who wish to commute from the Oxford area to London and other centres on that railway line. This should not be the purpose of even 250 houses on the site. It is to be hoped that affordable housing would be priced to be truly affordable to the sort of people who currently cannot live near their place of work in Oxford.

Why can't Oxford meet its perceived housing needs? Oxford City has golf courses, ancient meadows and GB - jut like Kidlington. Why are Kidlington's assets of less importance than Oxford City's? Oxford City, unlike Kidlington, has a 60% under occupancy, many owned by overseas and UK investors, which are regarded as capital assets and not homes. Has this issue been considered and addressed? With the weak pound, post Brexit, property investment, especially from foreign investors, in Oxford will be even more appealing. The need for housing is based on the discredited SHMA report. Previous developments have not provided enough affordable housing and have attracted investors and people to the area who can afford these expensive properties. 'Buy-to-let landlords' have been allowed to stockpile the very properties that used to be affordable and available for first time buyers, families and young people. These landlords generally hold on to property for many years resulting in many smaller houses and flats rarely becoming available on the market to buy. Young people and families are forced to rent at high and excessive rents (no rent controls now) with no prospect of being able to buy a home. The rental market fails to offer secure long term tenancies at affordable rents forcing the young people and families to move regularly when leases expire and rents are hiked up. Many people have lost the opportunity of living in one area as part of a community and their children are obliged to move schools on a regular basis. Oxford has failed to look rigorously at potential sites for development in the City. Cherwell's vision that half the house built on the GB will be "affordable" is likely to fail. Oxford has recently agreed to developer's demands that just 20% affordable housing units will be built at Templars Square not 50% as required by Oxford's own social housing policy. Developer driven GB sites will not provide the required affordable housing.

Objection to build 4,400 houses in this area for Oxford overspill. Figure based on calculations obtained from the Strategic Housing Market Assessment which has been heavily criticised, is not an independent objective assessment, and relies on assumptions of very high growth in jobs around Oxford. Current Government consultation could well show that the discredited developer driven targets are perhaps double what is needed. Proposed submission plan based on fatally flawed calculations undertake 3 years ago - pre Brexit - by non independent consultants who work for developers. Recent report in the Oxford Mail states:- "A new Government method for calculating housing need has revealed the county, which had been planning for 100,000 homes over the next 20 years, actually needs to build around 68,000". Each district's required need has been reduced. To quote Oxford West and Abingdon MP Layla Moran said: "These figures prove what I and others have been saying for years: that the SHMA figures have always been way out of kilter with both need and deliverability. I hope, off the back of this report, all councils will look again at their housing allocations, especially any sites on Green Belt land, and adjust accordingly. Serious existing traffic problems will get much worse - there are no plans to improve local road network - plan relies wholly on people using public transport cycling or walking. Schools and health services will be even more stretched when already experiencing recruitment difficulties. GB will be sacrificed. Countryside walks and views will be lost. Natural habitats will be destroyed. Quality of life in Kidlington will suffer, air, noise and light pollution will increase. With low unemployment building of extra developments and creation of jobs is not need for Oxford and Kidlington. Alternative solutions are: • The fire station should be relocated into the Northern Gateway area and the land in Rewley Road within the city released for affordable housing for families and young people to purchase or for shared ownership. • Why, following the introduction of more park and ride car parks, isn't the Peartree site redeveloped for affordable housing? This site is contiguous with residential development forming part of the proposed Northern Gateway development. • Land allocated for business and retail use in the 'Northern Gateway' site should be used for residential development. Business and retail development should be located in the north of the UK in areas of high unemployment where it is needed - where the existing local population needs jobs. The Northern Gateway land allocated for commercial use could be better used for residential purposes and is contiguous with Oxford's built-up area. • Has the land at Southfield Golf course been considered as a potential site for "affordable housing" in the centre of Oxford? If not, why not? Oxford should do more to meet its own needs.

4,400 houses is neither a justified nor a proven requirement. Moreover, it is unsustainable. Oxford's total overspill housing target is based on a discredited 'Strategic Housing Market Assessment' (SHMA) which was neither prepared by a truly independent organisation nor subjected to proper critical assessment by CDC – to the great detriment of Cherwell residents. New Government guidance shows that the former basis for assessing housing needs is fundamentally flawed. In view of this, CDC should insist on a comprehensive review of the SHMA. In the words of Oxford West and Abingdon MP, Layla Moran, "These figures prove what I and others have been saying for years: that the SHMA figures have always been way out of kilter with both need and deliverability. I hope off the back of this report all councils will look again at their housing allocations, especially any sites on GB land, and adjust accordingly." Recent public comments by the CDC Leader Barry Wood have simply brushed this aside, claiming that any revised approach required by the Government will "come too late" for the present Local Plan. He also suggested that the new methodology could lead to an assessment for greater housing need! Initial calculations suggest that Oxford City's own housing need may be as little as half that of the existing SHMA. If the basis for the proposed additional housing is now considered at the highest level to be incorrect, then CDC should have proper regard to that – not plough on regardless. It is expected that the new methodology may come into effect as soon as March 2018. A pause for review of Oxford's true housing needs is therefore essential. Once the local environment is damaged, it will never be restored? Oxford City Council (OCC) has neglected to provide adequately for its own housing needs over many years, and is now simply demanding that neighbouring District Councils shoulder the vast majority of the burden of making up its shortfall. OCC has consistently chosen to use land for business development, rather than allocating it for housing of e.g. key workers. There is no satisfactory explanation why CDC simply capitulated to OCC's demands in this respect. Instead, CDC should have (and should still) demand to see (and be allowed to critically assess) the basis for OCC's claims that it has room for only a few new homes – including evidence that all possible brownfield sites in the city have been properly and independently assessed. OCC has not even finalised a Local Plan, which throws into further doubt the basis for OCC's housing demands. If OCC has not yet properly established how many homes it can build, then CDC certainly does not know what Oxford's 'unmet housing need' is. There can be no doubt that Oxford would be capable of accommodating all or most of its housing need if it stopped reserving its spare land for commercial use and instead designated it for housing.

4. NOGC is a biodiverse landscape. Containing different tree species & 55 recorded bird species & pond life. The NPPF states this is important for health & wellbeing. It is much valued by locals. Land N of Cutteslowe Park is also important in this respect, changing the open nature the Parks. It is a well used facility. 5. The development will put further pressures on transport & other infrastructures. Seemingly funding bids for infrastructure are being made to cater for growth, but funding has not been secured. Growth shouldn't be approved until infrastructure can be provided & it's demonstrated that any proposed measures will be effective. Traffic in the N Oxford area is already severe. Work on the 2 roundabouts hasn't improved this. More housing will add to congestion & air pollution. Oxford has good public transport provision, but not all who work/live locally will use this. Increased housing & employment levels will add to congestion with its health implications. It will reduce Oxfords' attractiveness as a business location & place to live. Putting more housing & employment in this area cannot be viewed as sustainable. There are also severe existing pressures on other services including health and education.

1. The sites are on Oxford GB. GB's remain Govt. policy. Land between N Oxford & Kidlington is unique as it fully accords with the 5 GB purposes as per para 80 of the NPPF. GB's are designated to manage the location of new development, they would not exist were there not pressure to develop on them. Such pressures cannot be considered exceptional circumstances. As per para 84 of the NPPF there's no evidence of alternatives being considered i.e.. using allocated, undeveloped employment land in Oxford for housing & promoting employment growth outside Oxford, creating a better balance between where people live & work. Have the LA's co-operated in looking at alternatives? This land being GB also complies with para 81 of the NPPF. It is used for sport & recreation, is biodiverse & visually pleasing. 2. The identified housing needs rely on an outdated study which has never been independently assessed. Revised Govt. figures indicate a reduced requirement. It now seems there is no need to build on GB. Even if there is a need on this scale, it is a poor location to meet Oxford's needs, being adjacent to a London commuter rail line & in the expensive part of Oxford. The private housing will likely attract London commuters & wont provide affordable homes for people with jobs in Oxford. It is evident that many house buyers in N Oxford are those moving from London & continuing to work there. 3. Unsound in allocating NOGC for housing & not taking into account NPPF para 74. Understand NOGC weren't involved in discussions prior to this. NPPF Para 74 says existing sports facilities shouldn't be built on unless it assessed as surplus to requirements or replaced by equivalent or better provision. No such assessment has been made. NOGC, a well established & thriving club with 475 members & 3000 visitors p.a. Its clubhouse is used by the wider community. As a flat course, it is especially suitable for seniors. NOGC is needed. It is not sound practice to propose allocating land for housing & to carry out a retrospective assessment of the need for a golf course. We need this space for the health & wellbeing of locals. The land at Frieze Farm as a replacement GC, appears to be an afterthought. It is too small. Building a new GC on a similar sized site to NOGC would cause H & S issues unless mature trees were in all the right places. No indication shown on how it could be financed or developed. Apparently the landowners have stated to NOGC that they have no intention of providing another GC or providing the level of funds that would be needed. The mature landscape central to the current GC couldn't be replace in reasonable time & therefore the 2nd criterion of para 74 cannot be met.

Reasons for Participation

The housing allocations in the Kidlington Gap should be removed from the Plan & the Green Belt designation of the Killington Gap retained.

Proposed Submission Plan - Policy PR1 - Achieving Sustainable Development for Oxford's Needs

PR-C-0500	30/09/2017	Gill	Oliver		N	N		
1191	<p>Comments</p> <p>1. The sites are in the Oxford GB. GBs remain Government policy. The Kidlington Gap land is in GB and fully meets all 5 of the purposes of GB set out in para. 80 of the NPPF. GB's are designed to manage the location of new development and would not exist were there not pressure to develop within them. The existence of such pressures cannot therefore be considered exceptional circumstances. There is no evidence (as per para 84 National Planning Policy Framework) that serious consideration and cooperation by local authorities has been given to alternatives such as using allocated and underdeveloped employment land in Oxford for housing and promoting employment growth outside Oxford to create a better balance between where people live and work. This land is also used positively for outdoor sport, recreations and has value for biodiversity and visual amenity. 2. The identified need is based on an outdated study and revised Government figures indicate a much reduced requirement. This is a poor location to meet Oxford's needs as it is adjacent to a commuter rail line to London and in the most expensive part of Oxford for housing. Therefore will likely cater for London commuters rather than provide the required affordable housing. 3. Para. 74 of the National Planning Policy Framework says that existing sports facilities should not be built on unless an assessment is undertaken showing it is surplus to requirements of replaced by equivalent or better provision. No such assessment as been made. It is understood that the Golf Club were not involved in discussions prior to the allocation. The Golf Club is well established, thriving club whose facilities are also used by the wider community. As a flat course it is particularly suitable for senior members. This facility is clearly needed for the health and well-being of residents. The allocated land at Frieze Farm as a replacement golf course is seemingly an afterthought with no indication of how it could be developed or financed. The mature landscape central to the current course could not be replaced within a reasonable timescale. This creates major health and safety issues and does not meet the second criterion of Para 74. 4. The golf course is valuable in terms of biodiversity and landscape, containing 25 different tree species and 55 regularly records bird species as well as pond life. There would also be a negative impact on the open nature of the land to the north of Cutteslowe Park. 5. Further pressures will be put on transport and other infrastructures. No funding has been secured for further infrastructure and growth should not be approved until it can be demonstrated that any proposed measures will be effective. It has been reported that the recent works on the 2 roundabouts have not improved queue times. More housing will add to congestion and air pollution, put pressure on health and education services, as well as reduce the attractiveness of Oxford. It is difficult to understand that putting more housing and employment in this area can be viewed as sustainable.</p> <p>Changes Sought</p> <p>Housing allocations in Kidlington Gap should be removed from the Plan and GP designation of Kidlington Gap retained.</p> <p>Reasons for Participation</p>							
PR-C-0505	08/10/2017	Charlotte	Christie					
1199	<p>Comments</p> <p>Wish to object to Policy PR1 (a) to build 4,400 houses on this area. Congestion and pollution caused by traffic around Oxford is notorious and none of the recent works have alleviated it. Adding this number of houses will only increase the strain on local access points and destroy natural habitats. This development is likely to attract purchasers looking for 'executive homes' from which to commute to London. It is wasteful to sacrifice land for 'Low density' which means 'expensive houses'. This is not what is needed. These will not be affordable for local people and the council should be working with Oxford City to find sites within the ring road for affordable family housing rather than being used for business purposes.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							
PR-C-0506	07/10/2017	David	Blowers					N
1202	<p>Comments</p> <p>Objection as 4,400 houses in this area for Oxford overspill is not a proven requirement and not justified. Based on highly inflated estimate of need. Unsustainable. Would hugely worsen traffic problems and pollution. Schools and health services would be overstretched. GB would be sacrificed for ever with walks and views lost. Natural habitats and wildlife would be destroyed. The countryside is important for wellbeing. The growth paradigm fuelling such irrevocable decisions will leave finite resources depleted - this is illogical. Oxford City Council has been allocating land for employment instead of housing. It has ignored the impact on surrounding Districts and failed in it's duty to cooperate. It should do more to meet it's own needs.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							
PR-C-0507	08/10/2017	Bridget	Atkins					N
1207	<p>Comments</p> <p>Objection to building 4,400 houses in Cherwell area for Oxford overspill. This is not justified or a proven requirement. It is unsustainable. Very few of the houses will be affordable for the local population. The traffic is already at saturation point. Even with any re-organisation of the road system, there is no getting round the fact that there will be far more cars on the road and the system will seize up. There is no doubt that the health services would be far too overstretched. - the JR is already struggling to cope with the current population. Health services will deteriorate further. Objection to removing land from GB. The GB is specifically for leisure, recreation, wildlife and if built on is irreversibly ruined for future generations. Reducing it's size has many long term effects on health, wellbeing, climate and local ecologies that often take a while to be apparent but are cumulative. GB has been designated by this conservative government as permanent. Unmet housing needs are not a reason to build on it. The plan is ineffective and not consistent with national policy. Oxford City Council should do more to meet Oxford needs.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							
PR-C-0509	06/10/2017	Laura, John & Benito	Wainwright					
1211	<p>Comments</p> <p>Objection as the case for 4400 homes to meet Oxford's housing needs is totally unproven. Wildly exaggerated figure being drawn up from Strategic Housing Management Assessment by property consultant closely connected to the development sector and so was far in excess of previous estimates. Figure now further discredited by new government figures for local housing needs which almost halves previous estimate. Therefore proposal to build almost 4000 homes in the GB around Kidlington, Begbroke and Yarnton is not justified and should be abandoned.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							
PR-C-0510	08/10/2017	Rachel	Walton					N
1216	<p>Comments</p> <p>Objection as 4,440 extra homes in Cherwell are not justified to meet Oxford's unmet housing need. This was calculated using Strategic Housing Market Assessment 2014 which is now outdated as it used predictions based on pre-Brexit data, now not truly reflective of future growth in Oxford. New Government method for calculating housing need suggest this is too high and could even be halved. It is therefore unsound for Cherwell to go forward while these figures are in doubt. The Local Plan needs to be put on hold pending the outcome of the Governments Right Homes in Right Places white paper consultation. An extra 4,400 house north of Oxford city will worsen the already chronic traffic problems and increase pollution. It is well documented that the A4260, A44 and A34 are regularly gridlocked north of Oxford during rush hour. More housing will lead to more commuters travelling to Oxford and probably London due to the Oxford Parkway train service. Kidlington by bus in rush hour already takes 45 minutes on buses that full before they have even left Kidlington. Local Schools and health services will be even more stretched. Oxford City should do more to meet its own housing needs by seeking to develop land within it's own boundaries and prioritising residential development before creating new business and employment opportunities. Unemployment is relatively low in Oxfordshire compared to the need for affordable housing. It is unjustifiable to build homes in neighbouring Councils if Oxford City hasn't fully exploited its own land.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							

Proposed Submission Plan - Policy PR1 - Achieving Sustainable Development for Oxford's Needs

PR-C-0518	25/09/2017	Zoe	Christodoulou						N
1236	Comments								
<p>Objects to PR1(a), it is unjustified & unproven. The most recent Govt. calculations have nearly halved the number of houses the City needs (Planning for homes consultation, 14/09/17). This may be further reduced in the coming years, as it is likely Brexit will lead to a significant number of EU nationals returning home. This should be put on hold until the outcome of this is known. Oxford City Council (OCC) must, & can do more to increase the number of houses they build within the city boundaries. Lack of housing in the City is their problem, which they continue to exacerbate, by encouraging business development. Sites such as the Northern gateway & expanding Oxford Science Park, increase employee numbers working in the City, yet OCC know there is not enough housing. These sites should be solely housing developments (with appropriate facilities) to meet the current need. Until they can provide housing within the City, they must be prevented from large scale business growth. The student population is an issue and student numbers must be restricted & the Universities encouraged to build more accommodation to alleviate the private sector. OCC could do more to use brownfield sites & increase the density of housing. Many residential areas of the City have been altered due to the large number of HMOs. Higher density housing of studio & small apartments (in higher blocks) would be most useful in Oxford, especially as the area has a high transient population working on short term contracts in the universities. The City are against higher blocks because of the "dreaming spires", but if they are not prepared to lose their view, why should we have to lose our rural view just for their benefit? Your plan document states: "3.7 The first Oxfordshire Structure Plan was approved by the then Secretary for State for the Environment in 1979. The Secretary of State endorsed the need for a GB of about 6.5 to 10 km wide & expressed the view that the growth of Oxford should not be allowed to continue indefinitely. 3.8 A similar view was stated when the Secretary of State approved alterations to the Structure Plan in 1987: "...The unique historic character of Oxford & its setting in its natural environment should be conserved & protected, &...the growth of the City should not continue indefinitely...there is now only very limited scope for further development in & around Oxford" (Central Oxfordshire Local Plan, 1992)." Clearly, allowing for the development of sites PR6a & b & PR7a & b, will contravene this, as they directly adjoin the City. This land grab by OCC will forever remove the village status & atmosphere of Kidlington, Yarnton & Begbroke, & we will become another suburb of Oxford.</p>

<p>Object to PR1(a) in connection with the proposal to build 4,400 homes in the GB on the grounds that it is not a justified or proven requirement. New Govt. methods for calculating housing need indicates that 30% fewer houses are required in Oxfordshire than previously forecast. Thus the basis used for Cherwell's & Oxford City's housing requirements are no longer valid. Less land will be required to accommodate development. There are no exceptional circumstances to warrant the release of land from the GB. Without prejudice to the above point, any proposals by Cherwell to release land from the GB to meet Oxford's needs are premature & unjustified given that Oxford City is in the process of reviewing its LP & has not yet determined how much housing development can be accommodated on land within the City's boundaries.</p>

<p>Building 4,400 houses in Kidlington and the surrounding area for Oxford's overspill is not a proven requirement and therefore not justified. It is based on an outdated, suspect and highly inflated estimate which recent Government figures have disproved. Their new targets could be met by policies attracting the already resident unemployed job seekers in the county and by utilising unoccupied dwellings in the city. Furthermore any housing need in the city could be met by allocating land to high density low-cost housing rather than retail, commercial and low density high-cost housing. By continuing to follow the latter course, the city has failed in its duty to cooperate because it has ignored the potential unsustainable impact of its policies on surrounding councils. Now is the time to halt the Northern Gateway plans and use the land more appropriately.</p>

Proposed Submission Plan - Policy PR1 - Achieving Sustainable Development for Oxford's Needs

PR-C-0543	03/10/2017	Lynn	Pilgrim		
1342	Comments				
<p>Strong objection to build 4,400 houses in the Kidlington area for Oxford overspill. 4,400 houses north of the city is not sustainable and will mean that: • Current appalling traffic problems will increase • schools/health services will be even more stretched • open countryside in the GB will be sacrificed • countryside walks/views will be lost • natural habitats will be destroyed • quality of life will suffer, air, noise and light pollution will increase. The 4,400 figure is based on heavily criticised dubious calculations, and has recently been revised. The figures rely on assumptions of very high growth in jobs around Oxford requiring many people to move into the county. What gives Oxford City Council (OCC) the right to allocate Oxfords 'perceived' housing needs in Cherwell District Council (CDC) and in particular Kidlington? Oxford and Kidlington are areas of high employment and low unemployment – extra developments and creation of jobs are not needed. Much land that is proposed for the creation of new jobs is owned by landowners with a vested interest. Alternative solutions- • Fire station should be relocated into the Northern Gateway area and land in Rewley Road within the city released for affordable housing for families and young people to purchase/shared ownership. • Following the introduction of more park and ride car parks, Peartree site should be redeveloped for affordable housing. This site is contiguous with residential development forming part of the proposed Northern Gateway development. • Land allocated for business/retail use in the 'Northern Gateway' site should be used for residential development. It appears that, greed/money are fuelling the proposals for development in the Oxford/Kidlington area– it is nothing to do with the needs of the communities of OCC and CDC. Why can't Oxford meet its perceived housing needs? Oxford City has golf courses, ancient meadows and GB – just like Kidlington. Why are Kidlington's assets of less importance than Oxford City's? Oxford City, unlike Kidlington, has a 60% under occupancy – with significant numbers of empty, unoccupied houses in Oxford many owned by overseas and UK investors, regarded as capital assets, not homes where people should live. Has this issue been considered/addressed before allocating developer friendly and more profitable greenfield sites for development? With the weak pound, post Brexit, property investment, especially from foreign investors, in Oxford will be even more appealing. The 'need' for housing is based on the discredited SHMA report, which relies on assumptions of very high growth in jobs around Oxford, an area of low unemployment. New jobs would require many people to move into the county. This makes no sense and will only make the housing shortage worse. The SHMA is fatally flawed. It was undertaken over 3 years ago – pre Brexit -by non independent consultants who also work for developers. The SMHA has not been the subject of consultation with residents nor challenged or questioned by the local councils. It is based on the false/spurious assumption that thousands of new jobs are required locally for people in the area. This is an incorrect assumption and due to high employment levels in Oxfordshire it is inevitable that people will have to move to the area to fill these jobs. Proposals will not help the shortage of housing for local people in Kidlington/Oxford. How can it be assumed/guaranteed that people who buy/rent these houses will be working in newly created jobs and not buy to let investors serving London commuters?</p>

<p>Objects to building 4,400 houses for Oxford overspill. Brownfield & GB areas are available within the northern limits of city boundaries (Harcourt Hill , Farmoor, Cumnor). The housing numbers are based on inflated estimations, with a significant number of houses targeted towards Oxford University employees and students. The scale is unsustainable: it would result in increased traffic, air pollution and loss of natural environment. Loss of natural environment is in direct conflict with NPPF and damage natural habitats and protected wildlife. Overstretched schools & health services would become unacceptably pressured. Oxford City Council has increasingly allocated land to commercial development without considering the housing needed for increased employment. It has ignored the impact on surrounding districts, failing its duty to co-operate. It is excessive that CDC is expected to take on 30% of OCC's unmet housing need, supporting my assertion that Oxford City has failed it's duty to co-operate, whilst CDC has failed to ensure the proposal effective, positively prepared & justified.</p>

<p>Objects to building 4,400 houses on GB around Kidlington, Gosford & Water Eaton to meet Oxford City's unmet housing need. The need for that number is not proven or justified. Central Govt. is suggesting revised methodology for calculating housing need, & is likely to reduce the number of homes required, possibly by half. Oxford & its surrounds has negligible unemployment. Proposed developments like Northern Gateway is likely to draw new workers into the area to fill jobs that cannot be filled by locals. Increasing the population contradicts the objective of meeting existing housing need. Oxford should re-designate land allocated for business use to housing use. Removing land from GB is inconsistent with the NPPF . Govt. states GB is a permanent designation. Overspill from Oxford is not an 'exceptional circumstance' to release GB from this permanence. Although I am expressing my concern about the impact of removing land around Kidlington and Gosford from the GB, I am nevertheless mindful that GB exists as much to protect the city of Oxford City from overdevelopment as it does to preserve the integrity of the surrounding rural settlements.</p>

Reasons for Participation

OGBN was established in 1997 to help to protect the Oxford GB and to support those wishing to resist proposals for inappropriate development within it. It comments regularly on planning applications in the GB and in planning policy consultations, particularly on matters affecting the GB. OGBN has made representations on all stages of the Cherwell Local Plan Part 1 and participated in the Public Examination in December 2014. We have also commented on earlier stages of this Partial Review. The membership of OGBN includes many of the Parish Councils whose areas include GB land. The OGBN fully supports the aims of GBs as set out in the NPPF and earlier planning guidance and in particular it strongly endorses the fundamental principle that GB is a permanent designation. We consider that our participation in the examination is necessary and justified because of our longstanding interest and understanding of the Oxford GB. T.

Comments

OGBN considers that 4,440 homes is not a correct housing requirement. We have argued over 3 years and during all stages of Cherwell's LP Part1 that housing requirements in the Oxfordshire SHMA are hugely exaggerated. Our previous representations have noted that - the SHMA makes many dubious adjustments to official statistics which add over 20,000 houses to its forecast for Oxfordshire. - much assessment of need is based on a forecast that 85,000 new jobs will be created in Oxfordshire as a result of implementing the Oxfordshire Strategic Economic Plan and that this will result in substantial in-migration. Much of this figure is aspirational, simply derived from proposals for new commercial floor space development. - when published, the SHMA was heavily criticised. A report by the respected planning consultant Prof Alan Wenban Smith concluded that the SHMA's estimate of housing need is likely to be "grossly overstated" by a factor of over two. The only response to substantive criticisms contained within the Wenban-Smith report is that the correct procedure was followed which is completely unsatisfactory. If the calculations are wrong then the housing requirement is wrong. We conclude that this plan is unsound because it is not justified by robust evidence. The indicative figures from the proposed methodology from new Government guidance suggest a need for Oxfordshire of about 3400 houses per annum, including a substantial upward adjustment to address affordability, compared with the 5000 given in the SHMA. A national analysis shows generally that the need has been overestimated in the north of England and underestimated in the south. There are some exceptions for individual authorities, but Oxfordshire represents a glaring anomaly where all the authorities are shown as having previously overestimated need. This confirms that the SHMA is a grossly exaggerated assessment. An additional 4400 houses over ten years means that Cherwell's alleged housing need has now increased from 670 per annum to 1140 in the approved plan and now to almost 1600 per annum from 2021. Problems related to capacity of the building industry and market saturation are likely to occur. Building rates proposed appear to be over three times what has been achieved in the past. In addition to being unnecessary and undesirable, the proposed levels of housebuilding are undeliverable and the plan is ineffective. The requirement is based on plans for ever increasing employment in, and travel to, the city and is unsustainable. The plan is not therefore positively prepared or consistent with national policy. It will be highly damaging and end up destroying the very things that make Oxford an attractive location in the first place. It will be damaging to the environment and quality of life of the communities in the Oxford GB. Oxfordshire authorities should continue with their previous approach of actively encouraging further employment and housing growth away from Oxford. Oxford's own need has not yet been accurately or fully defined, nor has its ability to meet that need, because the City Council has not yet prepared its own Local Plan. The SHMA asserts that it is between 1200 and 1600 houses per annum, but draft Government guidance calculates it at 746 houses including the maximum increase to reflect affordability. It is unreasonable to proceed with the review and remove land from the GB given this level of uncertainty.

Changes Sought

Reasons for Participation

The plan should be withdrawn pending the establishment of the housing need for Oxford (and the redefinition of the need for the other Oxfordshire authorities) and the establishment of a joint spatial strategy covering all the Oxfordshire authorities.

OGBN was established in 1997 to help to protect the Oxford GB and to support those wishing to resist proposals for inappropriate development within it. It comments regularly on planning applications in the GB and in planning policy consultations, particularly on matters affecting the GB. OGBN has made representations on all stages of the Cherwell Local Plan Part 1 and participated in the Public Examination in December 2014. Totally opposed to 4,440 homes in this area. More use needs to be made by Oxford City of empty property, brownfield sites and other land in meeting it's housing need. The proposal has no justification, there is no proven requirement and it is unsustainable in this area.

Proposed Submission Plan - Policy PR1 - Achieving Sustainable Development for Oxford's Needs

PR-C-0620	08/10/2017	Alison	Haigh						N
1538	Comments								
<p>Objection to PR1(a) on grounds they are unsound, not justified and not effective. Most important objection is removal of GB. This preserves open space used by local residents and others, providing necessary counteraction to urban air pollution. Government guidance states that GB is permanently set aside, providing a buffer against urban sprawl and preserving the distinct communities of Kidlington, Begbroke and Yarnton. The areas proposed for development should be preserved for the welfare of present and future generations, not sacrificed to Oxford's housing demands. Cherwell District Council has a duty to preserve the interest of it's own residents , not give in to pressure from Oxford and developers.</p>

<p>Oxford's housing needs not yet fully tested. Their Local Plan is not sufficiently advanced. A new method of assessment of housing need will be used in Oxford's plan, therefore it is necessary to wait for these figures. SHMA figures have been criticised by many people and there is sufficient doubt for them to be rejected. They were not scrutinised at the Local Plan Part 1 examination. For the plan to be sound it should be deferred until the SHMA figures have been re-examined. Oxford City's policies allocate employment rather than housing to available sites. There has therefore been a failure in its own Duty to Cooperate with surrounding Districts by failing to satisfy its housing need within its own boundaries. Plan is not consistent with National Planning Policy Framework. The possibilities of joint cross boundary working (Aylesbury Vale for example) have not been fully exploited.</p>

<p>Very strong objection to build 4400 houses for Oxford City overspill. This is not a proven requirement and not justified. It is based on a highly inflated estimate of housing need in the county. It is unsustainable. It would hugely worsen traffic problems and pollution. Schools and health services (already all overstretched) would become even more overstretched. Kidlington sewerage system is also overstretched as for the last few winters lorries have been used to move sewerage from Moreton Avenue elsewhere. The GB's open countryside would be sacrificed for ever and its walks and views lost. Natural habitats and wildlife would be destroyed. Oxford City Council has been allocating land in the city for employment instead of for housing? It has ignored the impact on surrounding districts and failed in its duty to cooperate. The City Council should do more to meet its own needs, for example by building houses on the city golf-course and on brown field sites within the city before it even considers using the GB outside it. Could this be because this would be more cost efficient for developers?</p>

PR-C-0641	09/10/2017	Carole	Pack							N	
1576	Comments										
<p>Objection to build 4400 houses in this area for Oxford unmet housing need. Not a proven requirement and not justified. Based on a highly inflated estimate of housing need in the county. New Housing methodology indicates that the Oxford unmet need would shrink to about 9,000 (instead of 15,000) and that in Cherwell it reduces to 2000. Arguments for exceptional circumstances to release high grade GB land are founded on inaccurate figures. Premature in terms of the accuracy of Unmet Housing Need and therefore Not Justified in terms of scale of proposed development across a small area damaging the key functions of GB.</p>

<p>Objection to build 4400 houses to satisfy Oxford's alleged "unmet housing need" because: • Oxford's Local Plan has not yet been prepared so Cherwell's allocation of homes is premature and cannot be an appropriate strategy for a problem which is not yet known in any detail. • The government has recently produced a new method for calculating housing need. This indicates that the "housing need" is much lower than indicated by the Strategic Housing Market Assessment. This needs to be assessed and housing allocations adjusted accordingly. Only then can the number of extra houses actually be known. • Proposal is unjustified and unsustainable because it puts the building of houses before any sensible action to understand what the need really is.</p>

Proposed Submission Plan - Policy PR1 - Achieving Sustainable Development for Oxford's Needs

PR-C-0671	08/10/2017	Matthew	Simpson						N
1650	Comments								
<p>Unsound and Not Justified for following reasons: (a) Recent revision of housing estimates seems certain to reduce the projected need in Oxon. (b) For all the Review's very proper references to sustainability, this huge development would be imposed upon a part of the city's margins already marked down for drastic exploitation as the 'Northern Gateway'. An unmanageable strain would be put on the transport system and on other public services. These are already under excessive pressure. (c) The proximity to Parkway Station, and to the suggested new railway station (par. 5.113, p.121), would mean that at least some of the new housing would go to London-bound commuters and not to the intended Oxford workers. (d) Oxford City Council should do more to satisfy its own housing demand, for instance by building at higher densities, by making better use of vacant flats above shops/businesses, and by checking the University's policy of turning residential buildings into faculty offices.</p>

PR-C-0675	04/10/2017	Gill	Davidson						N
1656	Comments								
<p>Recent reports have reduced the estimates for housing in this area and these figures need to be revised. Oxford City has not done enough to address the issues of affordable housing, choosing instead to focus upon commercial/employment opportunities on sites that could have been used for housing. With almost full employment this simply adds to all the problems the City faces. They have failed to ensure that there is affordable housing built. Choosing to pander to wealthy developers who have a vested interest in providing high value properties. The Sunday Times reported recently that directors of companies like Berkeley Homes are making personal fortunes from these developments. Councils should manage housing developments to meet the needs of people rather than developers.</p>

<p>Your plans contradict the existing Development Plan and are not consistent with the National Planning Policy Framework. This level of development cannot be delivered with the necessary transport and other infrastructure and without detrimental impact on both existing residents and those of the new communities. You will be destroying the visual impact of the local landscape as well as irreparably harming it. You are not respecting this area's unique built, natural and cultural context. Development on the scale proposed which will increase the number of houses within the Parish by 108% and will not secure this goal. I'm on page 69 and you have still not justified the need for the additional level and numbers of houses.</p>

<p>Objection to policy PR1(a) to build 4400 houses for Oxford overspill. Not a proven requirement and is not justified – the figure of 4400 has never been tested and was suggested before huge changes in the political and economic landscape. Based on a highly inflated estimate of housing need in the county. It is unsustainable. It would hugely worsen traffic problems and pollution. Schools and health services would be overstretched – public services, already struggling and underfunded, will deteriorate further. The GB's open countryside would be sacrificed for ever and its walks and views lost. Natural habitats and wildlife would be destroyed. Oxford City Council has been allocating land in the city for employment instead of housing. It has ignored the impact on surrounding districts and failed in its duty to cooperate. The City Council should do more to meet its own needs. The plan would be detrimental for existing residents of Gosford and Water Eaton (and the area around Kidlington more generally). The plan will not meet Oxford's existing housing need, and is likely to serve the London commuter and buy-to-let markets. Kidlington's young people and the county's key workers wouldn't get the genuinely affordable housing they need.</p>

1711	Comments								
<p>Objection to the proposed building of 4,400 houses in this area for overspill of Oxford City, it is not a proven requirement and is not justified, given availability of both brownfield and GB areas within the northern limits of the city boundaries (e.g. Harcourt Hill, Farmoor, Cumnor). The housing numbers are based on inflated estimations, with a significant number of the houses being specifically targeted towards employees and students of Oxford University. The scale of the development is unsustainable, resulting in significant degradation to the existing communities in terms of increased traffic flows, air pollution and loss of natural environment. Local education and health services, which are currently overstretched, would be placed under an unacceptable level of pressure. Loss of the natural environment is in direct conflict with National Planning Policy Framework, with significant and irreparable damage to natural habitats and loss of endangered/protected wildlife species. Oxford City Council has over recent years allocated increasing amounts of land to commercial development with little or no consideration of the need for additional housing to support increased employment. In doing so it has chosen to ignore the impact upon surrounding Districts and failed in its Duty to co-operate. Furthermore, the sustainability appraisal indicates that Cherwell District is expected to accept an allocation of 30% of the unmet housing need for Oxford City, which in comparison to other neighbouring districts is excessive. This is supportive of the assertion that Oxford City Council has failed in its duty to co-operate, whilst Cherwell District has failed to ensure the proposal is effective, positively prepared and justified.</p>

1718	<p>Comments</p> <p>Objection to the overall amount of housing proposed (PR1) and references to the SHMA (pages 15-16,19,34-35, 43-44 and elsewhere). Objection to Oxford utilising its own land stocks for economic development (e.g. Northern Gateway) while demanding that local communities provide housing for the new residents that will be attracted to the jobs they are creating. Oxford has high levels of employment and does not need to attract more businesses, on the contrary it needs to utilise its resources to house the current residents. The proposal involves building significant numbers of houses close to Oxford Parkway station. This will provide a convenient route into central Oxford but also a fast service to Marylebone and will simply attract London commuters. They will not contribute to the relief of Oxford's supposed unmet need. Strong objection to scale of proposed development - 500 - 1000 houses specifically targeted at the affordable end of the housing market could be assimilated by the Kidlington community providing affordable housing for some of Oxford's essential workers. However, 4400 is over a 50% rise in the number of dwellings and this jeopardises the countryside, the health of the local population (through air pollution), it puts at risk social cohesion and flouts the sacrosanct nature of the GB. It is neither needed nor justified and is unsound. Development on this scale will affect the social cohesion of the community and local infrastructure is inadequate to support it.</p>

PR-C-0697	07/10/2017	Ioana	Davies		N
1723	<p>Comments</p> <p>Strong objection to build 4400 houses in Kidlington, Yarnton, Begbroke and in the Kidlington Gap. The amount of housing is unjustified and is based on figures that the government have now agreed are wrong. Any decision to continue with these plans would therefore be premature and unjustified. Natural habitat and leisure areas that are well used by local residents would be destroyed. There has been minimal consultation about the plans with publicity meetings organised and paid for by local residents with only minimal response from the Council. There are sites in Oxford that could be used for Oxford's unmet need. It is not sensible to build further science parks to the north of the city instead of using that land for housing. Low unemployment in the city so more employment opportunities are not needed. If the land near Oxford Parkway is built on, it is likely to be used by commuters to London. It is very unlikely to be "affordable housing". More and more developers begin projects and then indicate that they cannot build the affordable housing that they promised. Private landlords who buy to let charge unaffordable rents. The housing needs for young people will not be met by these developments.</p>

<p>Consider that the proposed submission plan is unjustified and unsound for the reasons given in my specific objections. Object to Policy PR1(a) to build 4,400 houses in this area for Oxford City's alleged unmet housing needs. The figure comes from the Strategic Housing Market Assessment (SHMA) which was prepared without any public consultation and contains many questionable assumptions. They rely on predictions of unrealistically high jobs growth around Oxford and assumes that this will require a large influx of people into the county. As the SHMA was put together by private consultants working on behalf of property developers, it is reasonable to take the view that figures are likely to be biased in favour of the developers. The SHMA was not subjected to any independent validation although an independent planning expert has concluded that the estimated figures in the SHMA are likely to be "grossly overstated". The only people who seem still to be giving the SHMA any credibility are the commercial property consultants who prepared it, property developers and landowners who see an opportunity to make some significant profits and, regrettably, some members of the local councils who seem to think they should be supporting the developers rather than listening to the people who elected them to office. The fact that the Inspector has accepted the figures should be no barrier to local politicians disputing the validity of the SHMA on behalf of the people they represent. At the very least, the plan should be put on hold until the outcome of the current Government consultation on the subject has been concluded as it could well show that the current SHMA housing targets are perhaps double what is needed.</p>

Proposed Submission Plan - Policy PR1 - Achieving Sustainable Development for Oxford's Needs

PR-C-0709 09/10/2017 Victoria Campbell N

1769

Comments

Object to Policy PR1(a) to build 4,400 houses in this area for Oxford overspill for three reasons. First, the evidence underlying the estimate of additional housing which Oxford apparently requires is significantly overstated and has attracted much criticism. It is not a proven requirement and not justified. Second, Oxford has not done enough to meet its own needs. It has prioritised commercial developments and employment sites over housing, which in turn has and will exacerbate its own housing need. Developments such as the Northern Gateway should have prioritised housing rather than just "providing an element of housing". Oxford must do more to meet its own housing need first prior to allocating this to neighbouring councils. Third, this scale of development is unsustainable and will have a significant detrimental impact on existing local traffic problems and poor air quality. Local services are currently at capacity and would be overstretched if these proposals go ahead.

Consider that the proposed submission plan is Unsound, Not Positively Prepared, Not Justified, and Not effective for the reasons given in my specific objections. Object to Policy PR1(a) to build 4,400 houses in this area for Oxford overspill. This is not a proven requirement and not justified. It is based on a highly inflated estimate of housing need in the county, which according to the press will soon be reduced. The Green Belt's open countryside in which nearly 4,000 of the houses would be built would be lost forever, destroying natural habitats and corridors for wildlife, and denying many more people easy access to the natural environment, which has been proven to have benefits for health and wellbeing. Oxford City Council has been allocating land in the city for employment instead of for housing. The City Council should do more to meet its own needs.

Object to Policy PR1(a) to build 4,400 houses in this area for Oxford overspill because:- This is not a proven requirement and not justified. It is based on a highly inflated estimate of housing need in the county - the Strategic Housing Market Assessment (SHMA). This predates and is made obsolete by recent events such as Brexit, and the publication on 14 September 2017 of a government housing white paper ('Planning for the right homes in the right places: consultation proposals') which decreases previous estimates of housing need in Oxfordshire by a third. It would hugely worsen traffic problems. Recent schemes to reduce the impact of road traffic between Kidlington and Oxford, specifically the opening of Oxford Parkway railway station and the £10m works to Wolvercote and Cutteslowe roundabouts, have had extremely limited benefits, and long rush hour queues are the norm on the main Banbury/Oxford Road towards Oxford during rush hour, often reaching near standstill, from as far north as St. Thomas More School in Kidlington all the way into Oxford. This slow moving or stationary traffic belches out pollution and slows down emergency vehicles. Rep often cycle (at around 15mph), finding this frequently quicker than bus or car travel on this route. The scheme to route A34 traffic directly to Water Eaton Park & Ride has been abandoned it seems, and existing cycle paths are overgrown and in a poor state of repair - much work is needed before the area can cope adequately with existing commuting journeys, let alone with further growth. - Local health services are already overstretched, with weeklong delays for routine appointments typical. They cannot cope with increased need. - The Green Belt's open countryside in which nearly 4,000 of the houses would be built would be sacrificed for ever and its walks and views lost. Natural habitats and wildlife would be destroyed. - The proposal to build housing on the area of North Oxford Golf Course and move it to the Frieze Farm area has apparently not been agreed with the owners of the Course. The farmland, featureless and surrounded by pylons, is unsuitable for a golf course, and in fact already has a plan for further housing, including a link bridge over Frieze Way between the two new areas of housing. It is hard to escape the conclusion that despite what the plan states, the actual result will be these two areas of housing, rather than the promised one, and the amenity of a golf course will be lost.- Oxford City Council has been allocating land in the city for employment (e.g. 'Northern Gateway') instead of for housing. As Oxford has a lack of housing rather than a lack of employment, it should be the other way around. Oxford City Council has ignored the impact on surrounding Districts and failed in its duty to cooperate. The City Council should do more to meet its own needs, including working harder to identify and convert long-term empty housing.

Object to Policy PR1(a) to build 4,400 houses in this area as a contribution to Oxford city's "unmet housing need". This is not a proven requirement and not justified. It is based on a highly inflated estimate of housing need in the county. It is unsustainable. It would hugely worsen existing traffic problems and pollution particularly for those people in houses planned to be located close to busy roads. Schools and health services would be overstretched. The Green Belt's open countryside in which nearly 4,000 of the houses would be built would be sacrificed for ever and its walks and views lost. Natural habitats and wildlife would be destroyed. Oxford City Council has been allocating land in the city for employment instead of for housing. It has ignored the impact on surrounding Districts and failed in its duty to cooperate. The City Council should do more to meet its own needs. In addition it has been revealed recently in the Oxford Times that the Government is planning to revise the basis of housing need calculations, but Cherwell District have made clear they will not amend their plans – the implication of this is that this plan is to support Oxford's economic expansion. It is clear that very few of the new houses would be 'affordable' in reality. Developers across the country consistently default on their affordable housing quota. Most of the new houses are likely to serve the London-commuter and buy-to-let markets, and Kidlington's young people and the county's key workers still won't get the truly affordable housing they need. The new Oxford Parkway station has already resulted in increased interest in Kidlington properties from potential London commuters and has pushed up existing prices. The plan will exacerbate that trend.

Object to Policy PR1(a) to build 4,400 houses in this area for Oxford overspill. This is not a proven requirement and not justified. The numbers are disputed and are based on a highly inflated estimate of housing need in the county. Is extremely concerned about the environmental and social impacts of such a development. Is it sustainable? It would hugely worsen traffic problems and air pollution. Schools and health services would be overstretched. The Green Belt's open countryside, where nearly 4,000 of the houses would be built, would be sacrificed for ever, its walks and views lost, its natural habitats and wildlife destroyed. Oxford City Council has been allocating land in the city for employment instead of for housing. It has ignored the impact of this on surrounding Districts and failed in its duty to cooperate. Oxford City Council should do more to meet its own needs and examine the benefits of high-density housing. (Look, for example, at the work of Neave Brown, a pioneer of quality public housing, who has just been awarded the Royal Gold Medal for architecture.)

Comments

Policy PR1(a) - 4,000 houses in the Kidlington area for Oxford over spill are not justified because this not a proven requirement. It is based on an inflated estimate of housing in the county. The current infrastructure is not adequate for current needs let alone 10- 15,000 more people. Traffic problems will be impossible, and local services. Both health and education will be vastly overstretched. There will be much less access to the countryside and valuable habitats would be destroyed.

Proposed Submission Plan - Policy PR1 - Achieving Sustainable Development for Oxford's Needs

PR-C-0715	30/09/2017	Dr Victoria	Slater		N
1793	Comments Object to Policy PR1(a) to build 4,400 houses in this area for Oxford overspill. In the light of recent government revisions of the number of houses needed, this is a highly inflated estimate of need which is unsustainable. Support Leyla Moran MP's call at the parish council meeting for the whole consultation to be stopped until an accurate estimate of need has been made. The current plan would hugely worsen already unmanageable traffic congestion. It would increase air pollution and therefore be directly detrimental to the health and wellbeing of residents in the area. No funding has been identified for infrastructure and essential public services and already underfunded and struggling health and education services will deteriorate further. Oxford City Council has been allocating land for employment instead of housing in a county where there is very low unemployment and no urgent need to create new jobs. It has ignored the impact on surrounding Districts and failed in its duty to cooperate. The City Council could and should do more to meet its own needs which would obviate the need for the proposed development. Moreover, very few of the houses would be affordable in reality given the track record of developers (witness prices at Barton Park). It is likely that most of the new houses will serve London commuters and that Kidlington's young people and the county's key workers still won't get the affordable housing they need.

1812	Comments Most people agree that there is a housing crisis in the Oxford area. House prices are so high that local first time buyers now have very little chance of buying their first house in the Oxford area and rents are too high. Oxford City Council regard the housing crisis as one of their top priorities. But the SHMA and the Oxford Growth Board seem determined to exacerbate the problem by proposing high economic growth, favouring the use of land within Oxford for commercial and industrial development rather than housing, and thereby requiring even greater levels of housing requirement to be met. An example of this is the Northern Gateway development which is billed to provide 5000 jobs at a time when employment in the county is at an all time high. Surely, to alleviate the problem, land for housing should be prioritised over land for commercial/industrial development. The proposed submission is therefore unsound

Does not consider the Partial Review of Cherwell Local Plan to pass the 'tests' of soundness, in terms of being positively prepared, justified, effective and consistent with National policy. This is because the Partial Review does not make reference to the need for C2 units (residential institutions, including care homes), nor to care/nursing homes more generally. Policy PR2 deals with C3 uses only. Further limitations on current local planning policies (adopted and emerging) are outlined in the accompanying Note prepared by Lichfield's. In terms of National policy, the Government's National Planning Practice web-based resource in the section on 'Housing and economic development needs assessments' provides guidance to the plan-making process on how to deal with 'housing for older people'. Failure of the Partial Review to meet the care needs of the District will clearly have significant implications on housing options for Cherwell's increasingly ageing population. The accompanying Note prepared by Lichfield's quantifies that like the rest of the UK there is a clear need for care homes in Cherwell. Examples are found in the Oxfordshire SHMA, which projects the number of people with dementia and mobility issues in Cherwell and Oxfordshire will roughly double by 2031 (end of this Plan period). The latest DCLG figures project the number of people in Cherwell living in communal establishments to double by 2031. The Lichfield's' Note sets out the care need for Cherwell as follows: • In Cherwell District itself, the latest DCLG projections show growth in the number of people over age 75 living in communal establishments of 565, i.e. this is the number of care home bed spaces needed (2011 – 2031). However, as the Council are planning for housing growth well in excess of demographic trends, which will lead the population growth in excess of demographic trends, 565 bed spaces should be considered a minimum to plan for up to 2031. • In terms of Oxford City's need, the DCLG projections suggest a need for a further 305 bed spaces by 2031, and (as with its housing need) a proportion of this may well go unmet. Cherwell will inevitably import some of Oxford's care home needs, as those additional residents (who otherwise would have lived in Oxford) age and move into care homes. This further justifies the use of the 565 figure for Cherwell as a minimum, which may need to be increased if unmet care home need for Oxford is identified. Lichfield's' Note on Care Home Need provided.

Changes Sought

Greenlight asserts that it in order for this clear 'need' for care bed spaces to be met in Cherwell over the Plan period, specific policies are required to:(a) Set the delivery of this need over the Plan period as a requirement - this requirement being a minimum of 565 bed spaces by 2031; and(b) To identify and allocate sites to accommodate this need in the Plan and on the Policies Map.To this end, Greenlights' land interest at Skimmingdish Lane, Bicester, which is currently subject to planning application 17/01428/F, provides an opportune site to be allocated for a 64-bed care home; thus accommodating some 11.3% of the bed space requirement (based on a total requirement of 565 bed spaces) over the Plan period (by 2031).To demonstrate how the site at Skimmingdish Lane, Bicester can accommodate a 64-bed care home, and therefore to assist in informing its allocation as a care home site in the Plan, enclosed with this letter is the site location plan and proposed site layout plan, both of which form part of the current planning application on the site.

Reasons for Participation

The matters raised in these representations are of a strategic nature to the plan.

Object to the scale of the proposed housing developments in the Kidlington and Yarnton area. Aware that more housing is needed, spent several years hoping to find 'affordable' housing within Oxford, before deciding that this was not possible and had to buy elsewhere, with a lot of assistance from family. Does not think it is sensible that Oxford be allowed to dictate terms to the surrounding area, rather that it should be made to put its own house in order. Extremely alarmed by the plans to sacrifice Green Belt land for housing, in defiance of Government and Cherwell District Council's own policies. Not only will this permanently sacrifice open spaces to housing, it will set a precedent for further development. Particularly concerned by the possibility of development of land behind The Moors, Kidlington – this is a valuable open space much used by local people, and acts as a vital habitat reservoir for wildlife. It is particularly appreciated by the local deer herd – I have seen up to 14 visible at one time in a single space – but much smaller wildlife depends on this rarely cultivated land for winter food and shelter. A quick fix for Oxford's woes now will result in the loss of this amenity and habitat for ever. Much of the proposed development area is also low-lying and prone to flooding – new houses are already being built near Yarnton on floodplain land – with the rise in rainfall and extreme weather events this can only lead to more and worse flooding events. Building on this low-lying land will remove space which flood water could spread onto to prevent it from causing flooding further downstream in Oxford and other communities. Does not believe that there will be a meaningful amount of 'affordable' housing in the proposed developments. The Oxford area is bleeding talent at one end because young people cannot afford to live here, and increasing traffic at the other as those who can at least afford to live nearby commute in (aware of people commuting to Kidlington from Swindon, Didcot, and Aylesbury, despite relatively low wages by the area standards), and if situations such as that at Templar Square with just 20% of "affordable" units are allowed, this will not only continue but get much worse.Utterly astonished by the lack of plans to improve the road network. Traffic already regularly backs up well through Kidlington in the morning, and it only takes a single incident to cause major traffic problems through the area. Without major investment in infrastructure, the extra vehicles from the proposed developments will cause traffic chaos of the sort we have seen recently with the works at the Wolvercote and Cutteslowe roundabouts on a daily basis, clogging the Northern routes into the city, and causing gridlock on the roads feeding them. I know from long experience the effect this has on the A34 which is supposed to be a major transport artery bringing goods North and South across the country, but it seems is likely to become one huge traffic jam if these developments are allowed to go ahead. The growth in traffic they will cause is utterly unsustainable.

Support with amendments. The consortium supports the objective of achieving sustainable development in meeting Oxford's housing needs and the commitment of the Council to work with the other authorities of Oxfordshire to achieve this objective.

Changes Sought

It is requested in addition that the Council should commit to work with other relevant agencies and authorities, as well as to ensure the participation of residents in defining the strategy. Also, the landowners of allocated sites will, in addition to the developers, be key participants in the process and contributors to a sustainable outcome. The consortium that has participated in preparing these representations has interests as landowners in the allocated sites and confirm their willingness to actively engage in the ongoing plan-making process and subsequent planning application process when appropriate.

Reasons for Participation

On behalf of the consortium, given the significance of their land interests, would wish to participate in the oral examination.

Policy PR1 of the Local Plan Partial Review proposes to make provision for 4,400 new dwellings. This apportionment forms part of a figure of 15,000 new dwellings, which would be distributed between each of the Local Authorities in Oxfordshire in order to contribute towards Oxford's unmet housing needs until 2031. Each of the authorities have agreed to their respective apportionments, with the notable exception of South Oxfordshire District Council, which was recommended to identify sites to provide 4,950 new dwellings towards Oxford's needs. This is the largest, single apportionment of each of the Oxfordshire authorities. Paragraph 64 of the Oxfordshire Growth Board report to Committee dated 30 November quoted. Given the above and in order to achieve the objectively assessed needs and ensure the soundness of the emerging Cherwell Local Plan Part 1 Addendum, the evidence base needs to be sufficiently up to date and robust to enable agreement on the unmet housing need to be reached and for the unmet need to be properly planned within the Housing Market Area. On the basis of the evidence provided, it is clear that the working figure of 15,000 is not a true indication of unmet need with Oxford City now anticipating need to be in the region of 22,000. On this basis, it is clear that the apportionment of housing between the Oxfordshire Authorities is likely to need to be increased and therefore the apportionment of 4,400 to Cherwell District Council can only be treated as a minimum in order to ensure the soundness of the plan.

Changes Sought

Reasons for Participation

It is considered necessary to ensure that the Local Plan Partial Review is legally and procedurally compliant, positively prepared, justified, effective and compliant with national policy.

Proposed Submission Plan - Policy PR1 - Achieving Sustainable Development for Oxford's Needs

PR-C-0790	10/10/2017	Chris	Shaw	Bloor Homes Western	N	Y	N	Y
2029	<p>Comments</p> <p>Object to the assumed housing requirement for the Local Plan Partial Review of 4,400 dwellings to be provided towards Oxford's need by 2031. The Preferred Options for the Oxford Local Plan 2036 (June 2017) confirms that this figure does not represent the "true unmet need figure that needs to be met outside of Oxford", which would need to be further updated following adoption of the Oxford Local Plan (Table Opt. 9). Accordingly, the Oxfordshire Strategic Housing Market Assessment (SHMA) (March 2014) identified an Objectively Assessed Need (OAN) for Oxford of between 24,000 and 32,000 new dwellings between 2011-2031. Given the estimated capacity of sites, including commitments, within Oxford (ca.10,000 dwellings) set out by the Housing and Economic Land Availability Assessment (HELAA) (October 2016), this indicates that Oxford's true unmet need that needs to be met elsewhere in Oxfordshire is closer to around 22,000 new dwellings. Indeed, the Post-SHMA SWP clarifies that the apportionment represents an assessment of the capacity of shortlisted 'green areas' (Appendix 5, Post-SHMA SWP) and is only a recommendation that "should only be viewed as an input to the process rather than an output" (Paragraph 132, Post-SHMA SWP).</p> <p>Changes Sought</p> <p>Reasons for Participation</p> <p>It is considered necessary to ensure that the Local Plan Partial Review is legally and procedurally compliant, positively prepared, justified, effective and compliant with national policy.</p>							
PR-C-0791	10/10/2017	Keiron	Ward				N	Y
2032	<p>Comments</p> <p>The Plan is based on the discredited calculations of the Oxfordshire SHMA which have been heavily criticised since they were made public in early 2014. Reference to a report by Prof. A Wenban-Smith. Calculations suffer from numerous errors including projections of jobs growth that are exaggerated in order to support funding bids from the (unelected and unaccountable) Local Enterprise Partnership. Regardless of whether or not the SHMA is accurate the Council have failed to considered the existence of Green as a reason not to meet the assessed need. This option is not even included in its assessment of alternatives. CDC not reviewing the SHMA despite the publication of the Government's consultation document on housing needs. Reference to the consultation document. Reference to Oxford's emerging Local Plan. Paragraph 1.20 of the adopted Local Plan Part 1 quoted. Oxford's housing need has not been "fully and accurately defined" as required by the Inspector. Cherwell may NOT make substantial amendments to the Green Belt boundaries as proposed in this partial review without conducting a joint review as required by the Inspector. This further evidences that the plan is premature. Reference to a letter from Cllr Barry Wood.</p> <p>Changes Sought</p> <p>Reasons for Participation</p> <p>The plan should be withdrawn as premature until there is a "full and accurate definition" of Oxford's needs, and its ability to meet them, taking into account the new DCLG methodology.</p> <p>Would like to be represented by Kidlington Development Watch at the oral examination in public. For the reasons given in the Kidlington Development Watch representation.</p>							
PR-C-0791	10/10/2017	Keiron	Ward				N	Y
2033	<p>Comments</p> <p>The plan for 4,400 houses in the Green Belt is not sustainable because it would mean that - traffic problems would get much worse (separate representation on PR4a) - public services and other infrastructure would be even more stretched (see also separate representation on PR11) - open countryside in the green belt, which is intended to be permanent, would be sacrificed for ever. Countryside walks and views would be lost to local residents in Kidlington, Begbroke and Yarnton who do not have the benefit of local parks, and for whom the countryside is currently a substitute. - Natural habitats would be destroyed. The natural environment will be a major causality. Loss of habitat and increased recreational use of the green spaces that remain will stress and endanger wildlife. The Council's contention that the development will result in a net increase in biodiversity is implausible and not supported by evidence. - Environmental quality and quality of life for existing residents will suffer as air, noise and light pollution would increase.</p> <p>Changes Sought</p> <p>Reasons for Participation</p> <p>The plan is not sustainable and is unsound. Cherwell need to withdraw it, decide what is meant by 'sustainable' and rethink accordingly.</p> <p>Would like to be represented by Kidlington Development Watch at the oral examination in public. For the reasons given in the Kidlington Development Watch representation.</p>							
PR-C-0809	02/10/2017	Philip	Kemp					
2197	<p>Comments</p> <p>Objection to proposed new housing on Kidlington Green Belt. Kidlington would just become part of Oxford losing its identity. Not enough thought has gone into the infrastructure required (health facilities, schools and shops). Roads will not cope with extra traffic, already bad enough. The need for more housing needs careful and sensitive planning. Oxford is off loading its responsibility onto Cherwell which is totally unacceptable.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							
PR-C-0813	08/10/2017	Jennifer	Betts				N	
2201	<p>Comments</p> <p>This policy is unsound as it prematurely makes decisions about allocating Green Belt land in advance of properly identifying the need (still pending the outcome of Oxford City Local Plan and the new formula in "Planning for right Homes in Right Places" substantially reduces the unmet need) and has not proven that there is a clear deliverable infrastructure plan. 4400 houses cannot possibly be reasonably built in this part of the district. If the land is allocated at the proposed densities there will be an overprovision and unnecessary destruction of Green Belt.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							
PR-C-0814	07/10/2017	David	Betts				N	
2217	<p>Comments</p> <p>4400 is an unproven figure. Oxford City Council have rejected many sites that could be used for housing and is allocating more land for employment at a time when they are unable to meet the housing need. New formula in "Planning for right Homes in Right Places" substantially reduces the unmet need and the Oxford Local Plan needs to be taken into account before allocating valuable Green Belt land to large swathes of housing which almost joins Kidlington, Begbroke and Yarnton with Oxford in one large urban sprawl. The plan does not demonstrate the ability of the area to accommodate such large scale development, is weak on infrastructure proposals that can be delivered, and does not make the case for adequate affordable housing that can be accessed by people who live in Cherwell and work in Oxford. Objection that this plan is unsound as it prematurely makes decisions about allocating Green Belt land in advance of properly identifying the need and has not proven that here is a clear deliverable infrastructure plan. Furthermore the land allocated is more than is needed to meet the housing numbers proposed at the densities proposed with unnecessary destruction of the Green Belt.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							

Proposed Submission Plan - Policy PR1 - Achieving Sustainable Development for Oxford's Needs

PR-C-0820	10/10/2017	Richard	House	Gladman Developments	Y	Y	N	Y
------------------	------------	---------	-------	----------------------	---	---	---	---

5077

Comments

The figure of 4,400 homes to help Oxford meet its housing needs should be regarded and referred to in the Plan as a minimum housing requirement for Cherwell to provide. This is because the total figure for the unmet need for Oxford being 15,000 homes is at present a working assumption agreed by the Oxfordshire Growth Board. This figure may increase as work progresses on the Oxford City Local Plan and the capacity of the City to accommodate new housing development crystallises. * It is also the case that South Oxfordshire District Council has not signed up to its apportionment of the unmet need for Oxford and in its Submission Local Plan to be consulted on in October this year, it proposes to accommodate only 3,750 dwellings of its Growth Board apportionment of 4,950 dwellings of the unmet need. If the Local Plan is adopted in that format following examination, it may be necessary for the balance to be redistributed between the other Oxfordshire Districts including Cherwell. * Gladman considers that in order to be found sound, sufficient flexibility needs to be built into the Local Plan Partial review to provide for contingency to ensure that the Objectively Assessed Need for the Oxfordshire Strategic Housing Market is met in full. The need to address the substantial unmet housing need is urgent bearing in mind that the Strategic Housing Market Assessment period began in 2011 and that six years of that unmet need has already elapsed. Failure to address that need urgently will have severe repercussions on the local economy. The evidence draws on the advice of the NPPF and the NPPG & SHMA.

Changes Sought

Reasons for Participation

Gladman requests that it is given the opportunity to discuss the significant objections contained within these representations at the Examination in Public. These issues and concerns are identified in table 1 of the attached representations.

Comments

PR1 seeks to satisfy Oxford's "unmet housing need" yet Oxford's own Local Plan has not yet been prepared and in recent weeks a Government Consultation has suggested a change in the formula used for calculation of housing need which would make a significant change to the figures suggested by the SHMA. The contention that Oxford cannot be met within its own boundaries is disputed as is the number of houses required. Oxford needs to put housing before reserving sites for employment. Oxford has very low unemployment and so Oxford's drive to locate employment in the city centre is unnecessary. This strategy is unsustainable, leads to more commuters and more transport problems. The Cherwell process needs to pause and await the finalisation of these two processes. The current proposal is unjustified and unsustainable.

Changes Sought

Reasons for Participation

The process should be restarted once the Oxford Local Plan has been completed and thus when any unmet housing need of Oxford is known. When Cherwell does this it should correct the errors made in this process and take account of the importance of the Green Belt and provide solutions which do not impact the Green Belt.

Do not agree with the councils statement of the "unmet housing need". It is overstated and relies on an increase in employment that may not happen (particularly as the employment plans are based on a projected growth that may well be too optimistic). The UK government has recently proposed a different calculation for housing need (The strategic housing market assessment). This is much less than the councils calculation of "need". Oxford city councils view that the growth of employment takes precedence over the governments re-calculation cannot be proved and is opinion not fact. Secondly: Oxford has plenty of land within its city limits but chooses to allow this land to be developed for employment in a city where, frankly, employment is not a problem. The employment need is not in Oxford but outside it. The housing shortfall of existing employment could be met by building on land currently earmarked for "employment" within the city. Adding employment to Oxford and then building houses on its edge and asking other authorities to build houses just beyond its edge will create more transport problems, more congestion and more pollution with real risks to health and wellbeing of its citizens.

Changes Sought

Reasons for Participation

The local plan should be scrapped and the investigation and research started again. The local plan should recognise the importance of the Green Belt. The Green belt isn't an inconvenient anachronism to be discarded. It is essential to the wellbeing of the citizens of Oxford and surrounding towns and villages. It is evident that the UK government values its green belt more than this local plan does. The Government national planning policy framework states that the Green belt exists to prevent urban sprawl, prevent neighbouring towns merging, safeguard countryside from encroachment, preserve setting and character of historic towns (such as Oxford!), assist in urban regeneration (by forcing entities such as the Oxford city Council, the University and its colleges to consider land in the city for housing and not more unnecessary jobs).

Comments

The plan for 4,400 houses in the Green Belt is not sustainable because it would mean that - traffic problems would get much worse (separate representation on PR4a) - public services and other infrastructure would be even more stretched (see also separate representation on PR11) - open countryside in the green belt, which is intended to be permanent, would be sacrificed for ever. Countryside walks and views would be lost to local residents in Kidlington, Begbroke and Yarnton who do not have the benefit of local parks, and for whom the countryside is currently a substitute. - Natural habitats would be destroyed. The natural environment will be a major casualty. Loss of habitat and increased recreational use of the green spaces that remain will stress and endanger wildlife. The Council's contention that the development will result in a net increase in biodiversity is implausible and not supported by evidence. - Environmental quality and quality of life for existing residents will suffer as air, noise and light pollution would increase.

Changes Sought

Reasons for Participation

The plan is not sustainable and is unsound. Cherwell need to withdraw it, decide what is meant by 'sustainable' and rethink accordingly.

Wish to be represented by Kidlington Development Watch at the oral examination in public.

The Plan is based on the discredited calculations of the Oxfordshire SHMA which have been heavily criticised since they were made public in early 2014. Reference to a report by Prof. A Wenban-Smith. Calculations suffer from numerous errors including projections of jobs growth that are exaggerated in order to support funding bids from the (unelected and unaccountable) Local Enterprise Partnership. Regardless of whether or not the SHMA is accurate the Council have failed to consider the existence of Green as a reason not to meet the assessed need. This option is not even included in its assessment of alternatives. CDC not reviewing the SHMA despite the publication of the Government's consultation document on housing needs. Reference to the consultation document. Reference to Oxford's emerging Local Plan. Paragraph 1.20 of the adopted Local Plan Part 1 quoted. Oxford's housing need has not been "fully and accurately defined" as required by the Inspector. Cherwell may NOT make substantial amendments to the Green Belt boundaries as proposed in this partial review without conducting a joint review as required by the Inspector. This further evidences that the plan is premature. Reference to a letter from Cllr Barry Wood.

Changes Sought

Reasons for Participation

The plan should be withdrawn as premature until there is a "full and accurate definition" of Oxford's needs, and its ability to meet them, taking into account the new DCLG methodology.

Wish to be represented by Kidlington Development Watch at the oral examination in public.

Proposed Submission Plan - Policy PR1 - Achieving Sustainable Development for Oxford's Needs

PR-C-0836	09/10/2017	Chris	Pack					N	
2264	<p>Comments</p> <p>Objection to Policy PR1 to build 4,400 houses in this area for Oxford overspill. This is not a proven requirement and not justified. It is based on a highly inflated estimate of housing need in the county. The review was carried out by a property company -GL Hearn Ltd. They can hardly be called independent when they state that their purpose is to " provide property advice to the public sector, developers, investors and occupiers" No wonder we have little trust in the SHMA. The shortcomings of the SHMA forecasts have been shown by recent changes from Government in the way in which housing need is calculated. The new housing methodology does indicate that the Oxford unmet need would shrink to about 9,000 (instead of 15,000), and that in Cherwell the 4400 proposed should be cut to about 2200.The whole basis for arguments demanding Cherwell supply 4400 new homes, and the case for exceptional circumstances justifying a release of high grade GB land is founded upon inaccurate figures. Therefore it is premature to make decisions on the CLPPR until accurate figures are available for unmet housing need in Oxford City. Once Green Belt land is released it can never return.Furthermore the sheer scale of the proposal to build 4400 houses in a relatively small part of the Cherwell closest to the city cannot be justified by the evidence base for the CLPPR showing GB land affected being of high or moderate value. Irreparable damage would be caused to the functions of the Green belt, individual identities of communities including Oxford itself, loss of open land separating communities and increased traffic congestion and pollution. Objection: premature in terms of the accuracy of Unmet Housing Need and therefore Not Justified in terms of the scale of proposed development across a small area damaging the key functions of Green Belt.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>								
PR-C-0837	05/10/2017	Dr James	Jocelyn					N	
2272	<p>Comments</p> <p>The Plan promises to deliver unsustainable growth in housing supply and promote unsustainable commuting patterns. The Plan has considered housing development in isolation as the one and only solution to Oxford's need for affordable housing. It has only considered various housing development schemes in this 'all or nothing' context, when the proportionate evidence suggests that wider policy responses may present more justifiable strategies for addressing the Unmet Need identified by the SHMA. Paragraph 1.11 reads: "Oxford has a high level of housing need and problems of affordable access to the housing market." This bland but no doubt carefully considered sentence encapsulates the Plan's overall lack of integrity. It immediately establishes an erroneous context for all that follows. It seeks to establish the level of housing need as the primary issue with the question of affordability as secondary. It is immediately followed by Table 2, which notes that is "adapted" from the source document, the 2014 SHMA. "Adapted" indeed: most grievously, this table defines its figures for Housing Need as "net" numbers. Thus Oxford is presented in Paragraph 1.14 as having an "objectively assessed" net need for 28,000 new homes for the period 2011-2031. This is a serious misrepresentation of the data presented by the SHMA - a misrepresentation that underpins every argument and conclusion in the Plan. The Plan and the Sustainability Assessment both lack integrity because every part of them proceeds from this misrepresentation. Detailed comments provided on the SHMA. The policy seems entirely self-serving and moreover is in no way consistent with the government's guidance on defining sustainable development. The development proposed in the Partial Review, by imposing a minimum of 2,200 surplus market homes on Cherwell, will cause harm to the delivery of the Cherwell Local Plan by rendering its outcomes unsustainable (for e.g. in terms of commuting patterns, increased congestion and pollution). Thus even by its own definition, the Partial Review is unsustainable and thus Unsound.</p> <p>Changes Sought</p> <p>Reasons for Participation</p> <p>The Plan can only be made Sound by addressing the issue of sustainability - and that means addressing the issue of housing affordability in a wider context than that of new construction. This approach would deliver thousands of unnecessary market homes to Cherwell - a result that flatly contradicts the guiding principle of sustainability in National Planning Policy. The Plan can only be made Sound by recognising the whole range of data in the Evidence Base and basing action upon a reasonable interpretation of that data, rather than cherry picking and misrepresenting data in the tendentious fashion of the Plan as currently presented. It must be noted that certain documents in the Evidence Base, notably the Sustainability Appraisal, are compromised by the fact they explicitly proceed from such tendentious misrepresentations.</p>								
PR-C-0842	10/10/2017	Duncan	Chadwick	David Lock Associates on behalf of University of Oxford, Merton College and a private landowner	N	Y	Y	Y	
2275	<p>Comments</p> <p>The Tripartite supports Policy PR1. Also supports the reference in paragraph 5.20 that development 9(via the Partial Review) must not adversely affect the delivery of the Council's spatial strategy in the adopted Local Plan Part 1, which also contains policies relevant to development proposed via the Partial Review (also if necessary via Policy PR12b). However, as drafted, the Tripartite considers that the Policy is not consistent with Section 70(2) of the Town and Country Planning Act 1990 and Section 38 (6) of the Planning and Compulsory Purchase Act, 2004 (as amended), which provide that in dealing with any planning application the Council shall have regard to, inter alia, any other material considerations, which would include the National Planning Policy Framework, other national policy guidance and other considerations.</p> <p>Changes Sought</p> <p>Reasons for Participation</p> <p>Proposed changes suggested to PR1:Development proposals to meet Oxford's needs will be supported if they: (1) Accord with the Vision, Objectives and Policies of this Partial Review; (2) Comply with other relevant Development Plan policies; (3) Pay regard to other material planning considerations (e.g. NPPF); and (4) Demonstrate that they will achieve sustainable development</p> <p>The land owned and controlled by the Tripartite comprises some 86% of the largest draft allocation within the Plan and as such, occupies a unique and vitally important role in meeting Oxford's Unmet Housing Needs. As such, the Tripartite consider it is essential that it is present (and/or represented) and participates at the Examination in order to assist the inspector by responding to any queries that may arise and supporting the assessment of the soundness of the Plan.</p>								
PR-C-0846	10/10/2017	Alison	Noel					N	
2283	<p>Comments</p> <p>Object to policy PR1(a) to build 4,400 houses in this area to satisfy Oxford's alleged "unmet housing need"because:• Oxford's Local Plan has not yet been finalised so Cherwell's allocation of homes is premature and is not an appropriatestrategy • The government has recently produced a new method for calculating housing need. This indicates that the "housingneed" is much lower than indicated by the Strategic Housing Market Assessment. This needs to be assessed andhousing allocations adjusted accordingly • Believes this proposal is unjustified and unsustainable.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>								
PR-C-0847	10/10/2017	Dr Michael	Fraser		N	N	N	Y	
5289	<p>Comments</p> <p>The local planning process is sovereign and this includes not only the Cherwell Local Plan review but also the development of Oxford City's Local Plan. Given that the Partial Review concerns Oxford City's unmet housing need it would seem illogical that Cherwell may proceed with accepting the SHMA recommendation and determining the development sites whilst Oxford City has only just completed a consultation on the options for its Local Plan. This unreasonable situation is compounded by Cherwell's selection of Green Belt sites for the vast majority of the 4,400 houses. Our view is that exceptional circumstances will, of necessity in this context, have little basis in the absence of Oxford City's Local Plan. Partial Review should wait until Oxford City Council has confirmed their unmet housing need. Oxford City Council should explore all options including capacity. Detailed comments provided on the Housing and Economic Land Availability Assessment (HELAA).</p> <p>Changes Sought</p> <p>Reasons for Participation</p> <p>For the reasons given above AND the Representations made by the Begbroke & Yarnton Green Belt (BYG) Campaign which are additionally supported, the Plan in its current form cannot be changed to make it legally compliant or sound and should therefore be withdrawn and NOT be submitted for Inspection.</p> <p>Would like the Begbroke & Yarnton Green Belt (BYG) Campaign to represent meat the Examination should it take place.</p>

Referenced the 5 purposes of the Green Belt and NPPF paragraphs 82-84. Quotes provided on the Elmbridge Local Plan and Poole Local Plan. Quotes provided on NPPG's guidance on the Housing and Economic Land Availability Assessment (HELAA). Reference to Policy ESD14 of the adopted Local Plan Part 1. It is reasonable to conclude that whilst local districts may have accepted an apportionment of Oxford's unmet housing need the actual number is not absolute and the Local Plan process may determine that Cherwell, for example, is unable to accommodate the apportioned figure due to existing national policies, such as Green Belt. Conversely, Oxford City, through the development of its own Local Plan and consideration of urban density, re-allocation of land previously earmarked for employment use, etc. may determine that the total unmet housing need is lower than that recommended by the SHMA and post-SHMA work. The latter point will especially apply should Oxford City seek to justify exceptional circumstances to remove Green Belt land that falls within its own jurisdiction. Reference to Oxford's Preferred Options document.

Changes Sought

For the reasons given above AND the Representations made by the Begbroke & Yarnton Green Belt (BYG) Campaign which I additionally support and adopt as part of my own Representation in this document, the Plan in its current form cannot be changed to make it legally compliant or sound and should therefore be withdrawn and NOT be submitted for Inspection.

Object to policy PR1(a) to build thousands of houses in this area to satisfy Oxford's alleged "unmet housing need" because:- The chosen area is not justified. With reference to the National Planning Policy Framework (NPPF), (Para 7) removing a gap between Oxford and Kidlington does NOT 'support strong, vibrant and healthy communities'. The facts are :- it reduces the Green Belt (by ignoring 'healthy'); provide houses for commuters (not to local people in need) to London (ignoring 'vibrant'); higher population and density do not automatically bring strength (ignoring 'strong'); it brings tension, because of the noise, traffic, pollution, inequality.- Merging cities (in this case Oxford and Kidlington) and making megacities is against the government policy.- Does not show a robust understanding of housing requirements in Oxfordshire.- Does not take into account any changes in population projections, migration and demographic trends after Brexit.- Does not take into account the new methodologies produced by the Government for calculating house needs, as a result the assessment if house needs is not objectively assessed and it is not based on fact (i.e. against the National Policy).- The proposal is unjustified, unsustainable and irreversible, by providing quick win for authorities and bringing long term damage for the community, present and future generations.

PR-C-0882 2382	05/10/2017	Carl	Smith		N	N	N	Y
Comments								
Objects based on the fact that the proposed number of 4,400 additional homes in Kidlington & surrounding area by 2031 has not been democratically assessed & scrutinised through public consultation. It is hoped that this will be addressed through any resulting public examination which should consider reducing the number of planned dwellings. The new Government method for calculating housing need has thrown doubt into the number of homes required to be built in Oxfordshire over this period. Particularly the need to build so many dwellings in the Green Belt (GB). Thus, a review of housing need, including an examination listening to local peoples concerns when making planning decisions is currently taking place. The results from this consultation is not scheduled to come into force until March 2018. It is therefore hoped that the proposals in the Cherwell Local Plan can be deferred until new directives have been published, along with revised housing numbers. It is also hoped that a redesign of the CDC proposals has taken place in order to preserve/protect as much of the GB as possible. However, in the event that CDC's proposed plan proceeds, then objections are made on the grounds that the partial review does not comply with national & local planning policies & will not meeting the proposed future visions & objectives. Increasing housing densities could reduce the amount of GB land taken and cause less degradation to the countryside. Concern is also expressed about CDC's proposals overwhelming the local infrastructure & overloading various public services. This would create risk to those who use them in Kidlington & surrounding area. The additional housing will also lead to increased congestion, pollution & accidents on the local road network.

PR-C-0885 2385	06/10/2017	Don	Manley					N
Comments								
The homes Oxford "needs" should be found within Oxford's boundaries. The "needs" assessment in terms of numbers have not been convincingly proved. Moreover, there is no guarantee that the houses built between Oxford and Kidlington would be occupied by people working in Oxford - for whom they may well be too expensive. More likely the houses would be brought by London commutes.

Object to PR1 (a). Not convinced that there is a real need for the 4,400 houses as proposed. This is based on two criteria. Firstly property prices in Kidlington are already inflated beyond the reach of many people. Cannot believe that, unless Cherwell DC will be effectively legislating for and controlling the selling price of the houses that are built, then this will be any different under the proposals. Secondly there are already vacant homes in Kidlington, -largely because they are over priced for local people.

PR-C-0895 2409	10/10/2017	Mrs Joyce	Morris					
Comments								
Object to Policy PR1(a) to build 4000 houses in this area for Oxford overspill. The figures quoted in the estimate of Oxford's future housing needs have been highly inflated and is not justified. Little effort has been made to find areas within the City of Oxford where there could be new housing. Consider it unsustainable for Cherwell District to seek to build 4,400 homes to meet Oxford's housing need. The already considerable traffic problems on the roads leading to Oxford will become even worse. The main road through Kidlington, the A 4166 is already extremely slow moving in the rush hour. There will be pressure on the schools, the health centres and all local amenities. Building 4,400 houses will result in the destruction of many country walks and natural habitats. The pleasure and health benefits that local people experience by having access to these areas will be replaced by a less healthy, noisier and crowded environment.

2416	<p>Comments</p> <p>Object to Policy PR1a to build 4400 houses in this area for Oxford overspill. The 4400 houses requirement is based on a "Guesstimate" of future growth which has been heavily criticised as being unreliable and not justified. Oxford City has been prioritising business premises over housing for years and has ignored the impact on surrounding districts and failed in its duty to cooperate. The City Council should do more to meet its own needs. The roads leading into Oxford are already congested and the extra traffic would make matters worse with increased air and noise pollution. Local Health facilities and schools which are already under pressure would be overwhelmed. The Green Belt's open countryside in which nearly 4400 houses are to be built would be lost for ever. The walks through the countryside in open air, so essential for the health and wellbeing of the population would disappear.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>				
PR-C-0899	10/10/2017	Prof John	Morris		N
2419	<p>Comments</p> <p>Strongly object to Policy PR1 (a) to build 4000 houses in this area for Oxford's overspill. The figures quoted in the estimate of Oxford's future housing needs have been inflated and the proposal not justified. Little effort has been made to find areas within the City of Oxford where there could be new housing. New housing should be provided as close as possible to where the jobs are and there is a good city bus service. It is unsustainable for Cherwell District to seek to build 4,400 homes to meet Oxford's housing need. The already considerable traffic problems on the roads leading into Oxford will become even worse. The main road through Kidlington, the A 4166 is already extremely slow moving in the rush hour. There will be pressure on the schools, the health centres and all local amenities. Building 4,400 houses will result in the destruction of many country walks and natural habitats. The pleasure and health benefits that local (and Oxford) people experience by having access to these areas, will be seriously eroded by a less healthy, noisier and crowded environment.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>				
PR-C-0900	10/10/2017	Kieran	Brooks		N
2422	<p>Comments</p> <p>Object to Policy PR1(a). The construction of 4,400 homes in this area for overspill from Oxford is not a justified or proven requirement. Oxford City should do more to meet its own housing needs. I don't believe that the duty to cooperate under the NPPF should be invoked to the proposed scale without further evidence that Oxford City cannot support further housing development within its own boundaries. The proposals place an unfair emphasis upon surrounding areas which will not benefit from their expansion in any way. The development & it's location will serve London Commuters, especially given the proximity to Oxford Parkway. The proposals are unsustainable. Oxford's "unmet housing needs" seem a convenient vehicle for Developers to service the 'Buy to Let' market & London Commuters.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>

2528	Comments Object to PR1a, PR3, PR11, plus unreasonable consultation process. Object to CDC failing to commission and examine an environmental report. It is NOT good enough to leave it to contractors. Strongly Object to CDC not representing the people of Cherwell and choosing to give into pressure from Oxford. Not acceptable. On your website you have 4 priorities; 1. Sound budgets & customer focussed council. You are ignoring the customer. 2. Thriving communities. You are intending to smash the community to pieces. 3. District of Opportunities. Letting Oxford City Council pressure you makes this a ridiculous statement. 4. Safe, clean and green. You are proposing lots of traffic, fumes, getting rid of Green Belt. Why are you proposing to do the opposite of what you state on you website are your priorities?

Comments :Object to Policy PR1(a) to build 4,400 houses in this area for Oxford overspill. In the light of recent government revisions of the number of houses needed, this is a highly inflated estimate of need which is unsustainable. Quotes Leyla Moran MP's call at the parish council meeting for the whole consultation to be stopped until an accurate estimate of need has been made. The current plan would hugely worsen already unmanageable traffic congestion. It would increase air pollution and therefore be directly detrimental to the health and wellbeing of residents in the area. No funding has been identified for infrastructure and essential public services and already underfunded and struggling health and education services will deteriorate further. Oxford City Council has been allocating land for employment instead of housing in a county where there is very low unemployment and no urgent need to create new jobs. It has ignored the impact on surrounding Districts and failed in its duty to cooperate. The City Council could and should do more to meet its own needs which would obviate the need for the proposed development. Moreover, very few of the houses would be affordable in reality given the track record of developers (witness prices at Barton Park). It is likely that most of the new houses will serve London commuters and that Kidlington's young people and the county's key workers still won't get the affordable housing they need.

PR-C-1132	10/10/2017	Sonya	Willoughby						N
4358	Comments								
Objection to building 4,400 houses in this area for Oxford overspill. This is not a proven requirement. It is based on a highly inflated estimate of housing need in the county. It is not sustainable. Consultation should be deferred until true figure known. Currently property is not selling locally as people cannot afford it - why build more unaffordable houses - this will only attract London commuters.

PR-C-1231 2150	17/08/2017	Kim	Lee				N
Comments Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. I object to Policies, PR1(a), PR3, PR11 and it is an unreasonable consultation process. Countryside, landscape and walks will disappear. The current infrastructure will not cope with increased population. Traffic congestion during peak periods will be much worse.

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. I object to Policies PR1(a), PR3, PR11 and the unreasonable consultation process. What is proposed is rash and ill advised. Please reconsider. Prudence is paramount.

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. I agree with objections, PR1(a), PR3 and PR11 and to help save the Green Belt, the local countryside and our rural villages in Cherwell and Oxford's unmet housing needs. I support the stance CPRE Oxfordshire have taken that the city could meet most, if not all of it's housing needs within its own boundaries by prioritising land for housing and making sure houses are genuinely affordable homes that people are hoping for. This could be achieved by making better use of brownfield sites and taking a step increase in density targets. Extra housing would require extra transport requirements, but there appears to be no proposals to cope with increased traffic and congestion. Plans should be put on hold until this is addressed. Also Sandy Lane should be improved, not closed to vehicles. I believe CDC can do better with regard to building the required houses without concreting very the Green Belt we require for future generations.

Objects to building 4,400 houses to satisfy Oxfords alleged "unmet housing need" because: Oxfords LP has not yet been prepared so Cherwell's allocation of homes is premature & is not an appropriate strategy. The Govt. has recently produced a new method for calculating housing need. This indicates that the "housing need" is much lower than indicated in the SHMA. This needs re-assessment & housing allocation adjusted accordingly. It is unjustified & unsustainable

PR1(a) to build 4,400 houses in this area under the argument that such a measure will provide affordable housing to Oxford City. Such view is based on a highly inflated estimate of housing needs as recognized by a recently released national government study which shows that the current SHMA housing targets are perhaps double of what is needed. It is therefore, unjustified and unsound. The plan has also not been positively prepared and as a result is not effective and unsustainable. Far from helping Oxford City, the present plan seems designed to satisfy London's housing and leisure demand – and in the process, it may well put many lives at risk. Practically all the areas selected for development are located near the newly opened Oxford Parkway railway station which offers a direct link to London Marylebone station and to the so-called 'London-Oxford Airport', a vast brown site surprisingly overlooked by this development plan, yet Oxford's need of a commercial airport is highly questionable considering that the city is located within easy reach of Heathrow, Birmingham and Gatwick airports. Instead, the Green Belt's open countryside will be sacrificed for ever and its walks and views lost. Natural habitats and wildlife will be destroyed. Locating 4,000 houses in its place and under the flight-path of a growing number of private jets and helicopters taking off and landing in the vicinity seems to be tempting providence. The name of the village of Begbroke ('Beg-broke') and those of its streets ending on 'Quarry' and 'Spring' are not accidental. The fields surrounding them are areas known for suffering occasional flooding and were once the site of a quarry (thus liable to subsidence). Home insurance there – if provided at all – could be very costly. Additionally, the present proposal will turn the relatively peaceful historic villages of Yarnton and Begbroke into an anodyne London commuting suburb (the north of Oxford City will become part of a vast urban sprawl encompassing Kidlington, Cutteslowe, Wolvercote, Yarnton, Begbroke and Bladon) that will become breeding grounds for social discontent. Developers across the country consistently default on their affordable housing quota. Predicted prices for so called starter homes at Barton Park, for example, are already beyond the reach of first-time buyers. Most of the new houses are likely to serve the London-commuter and buy to-let markets. Oxford City young people and the county's key workers still won't get the truly affordable housing they need.

PR-C-1368 4449	09/10/2017	Helen	Allen					
Comments		<p>The justification for building 4,400 homes in the GB cannot be proved, and Oxford could build houses on the Northern Gateway development instead of making it a business development and thereby increasing the need for housing. Surely the problem is that too many local jobs cannot be filled due to a lack of affordable housing. Oxford City Council is putting economic development before the retention of the GB, which is not consistent with government guidance. Oxford could do more for its housing problem by reducing and enforcing the cap on the number of Oxford Brookes' students in private rented accommodation, which would release housing for families and could even be bought by the Council to provide another option. They could also ensure that the Oxford Brookes development for 800 students in Cowley is used to house students currently occupying Oxford's housing stock and not enable it to recruit more students. Oxford Council should also enquire as to why neither Oxford University nor Oxford Brookes was interested in student flats for several hundred students being built at West Way in Botley. Oxford is too small to accommodate two universities. Building on the GB area north of Oxford will not solve Oxford's housing problem but, with its proximity to Oxford parkway station, will create housing for London commuters.</p>

Comments		<p>Objection to building of 4,400 homes in this area for Oxford overspill. This is not a proven requirement, not justified and is based on a highly inflated estimate of housing need in the county. It is unsustainable, would worsen traffic problems and pollution and would overstretch schools and health services. The walks and views of the GB sacrificed for the building of nearly 4,00 of the houses would be lost forever and natural habitats and wildlife destroyed. Oxford City Council has allocated land in the city for employment instead of housing; it has ignored the impact on surrounding districts and failed in its duty to cooperate. The city Council should do more to meet its own needs.</p>

Comments		<p>SUPPORT the policy. With regard to meeting Oxford City's objectively assessed housing need (OAN), it is evident that the vastmajority of travel demands arising from this, wherever it is located, will by definition be seeking destinations within the City. It would be a great deal easier to provide attractive public transport options if housing were to be located adjoining the City. Nearby high-frequency bus routes could be made available to early and successive phases by incremental extensions with journey time advantages over private car use can be achieved owing to existing bus priority. Some of the locations closer to the existing edge of development will better enable this than some of the distant sites in transport terms. This approach is reflected in our response.</p>

Comments

Until the Oxford CC LP has been Examined & completed, the exact level of unmet need is uncertain, due to the mismatch between the 2031 date in the SHMA, & the 2036 date in the Plan. The Government's recent "Planning for the Right Homes in the Right Places" document on how OAN should be calculated means both Oxford & CDC's Partial Review Plans (CPRLP) will be subject to the new guidance. Thus, revisions may be required to update the 2014 SHMA. The Government indicate that both CDC & Oxford have overestimated the level of new housing required, & significantly less growth is needed. It is premature to make decisions on the (CPRLP), which only concerns accommodating Oxfords unmet need, until the Authorities have progressed to accurate conclusions on an updated OAN for Oxford, & tested this through the Examination into the Oxford CC LP. Only then can the scale of unmet need be established. KPC notes that the emerging Oxford Plan continues to allocate land for economic growth within its boundaries, thus reducing land available for housing growth. Representations have been made to Oxford CC, requesting a review of this strategy. It is not considered that sufficient priority is given to accommodating urgent housing need, in preference to further employment growth which will further exacerbate housing need. The distribution of unmet need between the neighbouring Authorities is currently guidance by the Oxfordshire Growth Board, to be tested in individual LPs against the reality of whether it can be accommodated. It states this is 'a working figure', within which CDC has been 'asked to consider 'accommodating 4400 units as its share. KPC do not consider the apportionment to CDC is reasonable, considering the short length of common boundary & adopted policies which seek to protect the separation of settlements close to the Oxford City boundary. The evidence base for the CPRLP demonstrates the scale of development proposed can't be accommodated in this area without harm to important interests, & is therefore unsustainable. I.e.. (i) Unacceptable harm to the integrity, functions & scale of the Green Belt (GB), (ii) Unacceptable congestion & worsening of air quality on local roads, (iii) Unacceptable damage to the individual character of local settlements, (iv) Unacceptable loss of open land which preserves a separation between settlements & is valued open land. PR1 confirms that development will only be sustainable if it 'does not cause harm to the delivery of the Cherwell Local Plan 2015'. It should also take account of the 2016 Kidlington Masterplan, which has as its core the essential need to preserve the separate identity of Kidlington. We considers PR1 does not represent sustainable development, & thus conflict with NPPF advice. The proposals are inconsistent with policies of the existing Development Plan including Policy ESD13 of the adopted Local Plan in terms of the impact on local landscape character, & ESD14 regarding separation of settlements. By increasing visual intrusion & harming the local landscape, development on this huge scale would be contrary to these policies. ESD15 seeks to respect an area's unique built, natural & cultural context. Development on this scale is incompatible with adopted Policy in the Cherwell LP. We object on grounds of prematurity. It is not possible to take the enormous & irreversible step of releasing land from the GB for development until it is demonstrated: (a) that exceptional circumstances exist to justify development in the GB, & (b) that the scale of 4,400 new homes in CDC is proven to be necessary.

Changes Sought

More detailed work is essential to determine the up to date OAN for Oxford City, & to maximise the use of land within the City boundary for new housing. The scale of unmet need can then be properly established. The Oxford Growth Board needs to consider afresh the distribution of newly calculated unmet need between the neighbouring Authorities, giving greater weight to the importance of avoiding the release of Green Belt (GB) land in Cherwell in particular, where studies have confirmed that existing GB land performs an essential GB function in terms of the NPPF. Until these processes have been completed, PR1 cannot be proven to be justified or in accordance with the NPPF in relation to the permanence of GB. PR1 provides an unacceptable starting point for the remainder of the Plan, & is premature in advance of up to date research. The scale of growth proposed at 4400 dwellings is too high & needs to be reduced in order to better achieve sustainable development. The Parish Council considers that any further development will lead to detrimental effects on the community and environment. However, if development has to be accepted then the quantum of growth should be restricted to a capacity which does not significantly adversely impact on the separation & separate identity of settlements, valued landscapes, local character and local transport congestion. If adopted PR1 should include an additional requirement that all new allocated development makes adequate provision for all relevant infrastructure, unless other arrangements have been secured. Development should not proceed in advance of certainty about the delivery of off-site infrastructure.

Reasons for Participation

KPC is an elected body, representing the views of a large number of people in the part of the District which will be most affected by the proposed alteration to the Development Plan. In addition to having a statutory role in the Planning process, the Parish Council has an in depth understanding of the local area where new development is proposed, and is well placed to contribute to the Local Plan process. It is essential for the KPC to be actively involved in the Examination, in order to be able to represent local views, fully respond to submissions made by others, and to address any modifications discussed in advance of the Examiners report.

Object to the proposal for 4,400 homes in Cherwell to meet Oxford's needs. The 4,400 figure is not justified because it is based on the discredited calculations of the Oxfordshire SHMA which have been heavily criticised since they were made public in early 2014 (see objections to the Local Plan Pt 1, including the report by Prof. A Wenban-Smith). We contend that these calculations suffer from numerous errors including projections of jobs growth that are exaggerated in order to support funding bids from the (unelected and unaccountable) Local Enterprise Partnership. 3.4 By relying on the full SHMA figures, the plan overemphasises economic considerations at the expense of social and environmental considerations and the outcome of this will be an unbalanced, unsustainable and unsound plan. By accepting the full figures without taking into account constraints such as Green Belt—as indicated by the NPPF—the plan is not consistent with national policy and guidance. The existence of Green Belt, as provided for in the NPPF, is a reason not to meet assessed need and the Council should have considered this in its assessment of alternatives. 3.5 The criticisms of the SHMA referred to above would appear to be borne out by the figures calculated using the proposed methodology in the recent (Sept 2017) Government consultation "Planning for the right homes in the right places". 3.6 The method proposed by DCLG in the consultation, which includes uplifts to account for affordability, results in an annual housing need for Cherwell of 762 (compared with 1142 in the SHMA) and for Oxford City of 746 (compared with range of 1200-1600 in the SHMA). We note that the Oxfordshire SHMA deemed that no uplift for economic growth was necessary for Oxford City even on the most optimistic scenario. The new DCLG figures indicate that the SHMA numbers for both Districts are excessive as we, and others, have consistently argued since they were published. 3.7 Oxford's need and its ability to accommodate it, has not yet been tested through a local plan examination. Its local plan is under preparation and is due to be submitted in December 2018. The new DCLG method is intended to apply to plans submitted after March 2018, so should apply to Oxford's local plan. It would clearly be premature for Cherwell to plan now to meet Oxford's unmet need on the basis of any number higher than 746 per annum. To plan for more would run the serious risk of over-allocating land and unnecessarily damaging the Green Belt. 3.8 Indeed, an examination of Oxford's proposals, taking into account the Council's over allocation of employment land, might conclude that Oxford is capable of accommodating all of its need for housing. Furthermore, as Cherwell's own provision in its approved Part 1 plan is considerably higher than the new DCLG figures, it may well be that Cherwell's approved plan will also require review in order to reduce its housing provision. We consider therefore that Cherwell's Partial Review is now clearly rendered premature because it is not justified and therefore unsound. Any consideration of it should be deferred until after the Inspector's report into Oxford's plan is available. 3.9 In further support of this we note that the proposed submission document quotes from the Pt 1 Inspector's requirement to "Add a formal commitment from the Council, together with other relevant Councils, to undertake a joint review of the boundaries of the Oxford Green Belt, once the specific level of help required by the city of Oxford to meet its needs that cannot reasonably be met within its present confines, is fully and accurately defined" (para 1.20, p17). As outlined above, the "level of help" referred to has not yet been "fully and accurately defined" as required by the Inspector. It also cannot be appropriate for Cherwell to make substantial amendments to its Green Belt boundaries as proposed in this partial review, in advance of the joint review referred to by the Inspector. This plan is premature

Changes Sought

"The plan should be withdrawn as premature pending the "full and accurate definition" of Oxford's needs, and its ability to meet them, taking into account the new methodology proposed by DCLG."

Reasons for Participation

"We (Kidlington Development Watch – KDW) consider this is necessary because of our extensive involvement with the consultations at all stages of the Cherwell Local Plan to date; the considerable work we have undertaken to publicise the consultation ourselves; of the feedback we have received from Kidlington residents; and, the large numbers of them who have responded as a result of our efforts. KDW is a voluntary organisation run by Kidlington residents with experience and interest in planning issues. We believe that effective, informed public participation in planning consultations is vital to democratic policy making. We publicise consultations that directly affect Kidlington and offer advice on how people can best make their views known. In relation to this and the previous options consultation we printed and distributed leaflets, put up posters, ran a stall on many Saturday markets and at other events, participated in public and parish council meetings, provided information on our website and responded to requests for information from Kidlington residents. As a result, we have gained a very good understanding of the views of Kidlington residents, a large number of whom have made representations because of our activities. KDW's representations therefore reflect the views of much of the Kidlington community."

The Council's definition of "Sustainable Development" is elastic. It means whatever the Council chooses it to mean. Interestingly it is not defined in the glossary. In policy PR1 the Council even chooses to say what is included in the definition "for the purpose of the Partial Review". The use of the phrase in this plan is meaningless. 4.4 We object to the proposal for 4,400 houses in the Green Belt as it is not sustainable because it would mean that:- traffic problems would get much worse (separate representation on PR4a)- public services and other infrastructure would be even more stretched (see also separate representation on PR11)- open countryside in the green belt, which is intended to be permanent, would be sacrificed for ever. Countryside walks and views would be lost to local residents in Kidlington, Begbroke and Yarnton who do not have the benefit of local parks, and for whom the countryside is currently a substitute.- Natural habitats would be destroyed. The natural environment will be a major casualty. Loss of habitat and increased recreational use of the green space that remain will stress and endanger wildlife. We think that the Council's contention that the development will result in a net increase in biodiversity is implausible and not supported by evidence.- Environmental quality and quality of life for existing residents will suffer as air, noise and light pollution would increase.

Changes Sought

The plan should be withdrawn because it does not constitute sustainable development and is therefore unsound. A co-ordinated, balanced and sustainable spatial strategy should be developed co-operatively by the Oxfordshire authorities.

Reasons for Participation

We (Kidlington Development Watch – KDW) consider this is necessary because of: our extensive involvement with the consultations at all stages of the Cherwell Local Plan to date; the considerable work we have undertaken to publicise the consultation ourselves; of the feedback we have received from Kidlington residents; and, the large numbers of them who have responded as a result of our efforts. Oxford City Unmet Needs - Paragraph B.95 of the adopted Cherwell Local Plan (2015) committed the Council to undertaking a partial review of the Local Plan in the event that the work of the Oxfordshire Growth Board concluded that Cherwell and other Districts needed to meet additional need for Oxford. The current consultation document is the latest stage in the Council seeking to fulfil this commitment. The Partial Review Plan makes provision for the delivery of 4,400 new homes to meet Oxford City's identified needs. The 4,400 homes target represents the agreed apportionment by the members of the Oxfordshire Growth Board, with the exception of South Oxfordshire District Council, at its meeting on 26th September 2016. The proposed apportionment had been determined on the basis of a report from Land Use Consultants (LUC), which provided a spatial assessment of options for accommodating the unmet needs of the City, as well as other evidence relating to economic, education and transport considerations. It had been expected that the authorities would confirm a Memorandum of Cooperation at the meeting on the 26th September 2016 to the effect that the six authorities 'agree' that the apportionment figures "represent the agreed apportionment." However SODC was unwilling to agree to the Memorandum on the basis that the areas of search within their administrative area included in the LUC report had not been put forward by the District Council. Although the recognition by CDC of the need to make provision to assist in meeting Oxford City's unmet needs is supported, there remains significant uncertainty as to whether the 4,400 dwellings proposed to be provided for is in fact the correct level of development to be planning for. Since the Growth Board Meeting in September 2016, agreement has still yet to be reached with South Oxfordshire District Council in particular, although the emerging SODC Local Plan does make some provision of 3,750 dwellings towards meeting the needs of the City. The 4,400 dwellings figure is based upon an assumption that the unmet needs of Oxford City totals 15,000 dwellings. Notably, the Oxford City First Steps consultation (August 2016) itself appears to identify a shortfall of 22,000 rather than the 15,000 which was planned for by the Growth Board. There therefore remains a question as to whether the high level apportionment figure is correct, and consequently what implications there may be for the Local Plan Partial Review. The matter was the subject of discussion at the West Oxfordshire Local Plan Examination in Public however the Inspector's findings on this matter have yet to be published. In refusing to agree the apportionment proposed by the Growth Board, South Oxfordshire did raise that in their view Oxford City may be able to accommodate more of its own needs than is currently being allowed for. Whether this would equate to the additional 7,000 dwellings which appear to potentially be unaccounted for at this stage, and additionally reduce the currently proposed apportionment figures would appear to be unlikely. At this stage therefore, as a minimum, there are 1,250 dwellings (the proposed apportionment for South Oxfordshire excluding the level of provision they are currently planning for) for which provision is not currently being made for within Oxfordshire, and this could potentially increase to 8,250 dwellings, if the unmet need is ultimately determined to be 22,000 dwellings rather than 15,000. Following the Growth Board meeting on 26th September 2016 there has been no published update as to how matters are to be progressed following the failure to agree the apportionment figures with all authorities. As such it is unclear, leaving aside the question of the true scale of Oxford City's unmet needs, how the additional 1, is to be provided for. Notably the Growth Board papers for the 26th September meeting themselves highlighted that "it remains for individual authorities to test the SHMA results and its application in their respective local circumstances and to determine whether their Local Plans can sustainably accommodate development to meet the housing need identified." The proposed apportionment has not been subject to Sustainability Appraisal and as such there remains uncertainty that having agreed to the apportionment figures whether these authorities will in fact be able to deliver these requirements. As such, whilst we commend Cherwell for agreeing to accommodate 4,400 dwellings of Oxford City's unmet needs and consider it to be a pro-active response which potentially complies with the Duty to Cooperate, due to the remaining uncertainties sufficient flexibility should be built in to allow the Plan to respond to changing circumstances in order to make the Plan sound. The proposed requirement should be treated as a minimum figure and no phasing restriction should be applied to the delivery of the sites.

Approach to meeting Oxford City Unmet Needs - In determining the appropriate spatial strategy to meet the needs of Oxford City, the Council have considered nine areas of search across the District as broad locations for accommodating the additional growth. Within these areas of search were 147 possible sites. Clearly the Council have undertaken a comprehensive review of potential areas to meet the needs of Oxford City. Importantly the Council has not sought to simply rely on the work undertaken on behalf of the Oxfordshire Growth Board which led to the proposed apportionment across the authorities. Whilst the work on behalf of the Growth Board did consider the availability of potential sites to accommodate development across the authorities and identify some potential locations, the report to the Growth Board made clear that it was for the individual authorities to test and conclude on suitable sites to meet the apportionment. Indeed, as noted above, the Growth Board papers made clear that it is for the individual authorities to test whether the agreed apportionment could be accommodated in a sustainable manner, thereby allowing for a circumstance when individual authorities identified that they were ultimately unable to accommodate the agreed apportionment figures. In narrowing the areas of search, Cherwell have set out at paragraph 2.14 the six reasons why Options C to I were discounted. Importantly, proposed areas of search, and subsequently the sites themselves, must have a functional relationship with Oxford City in order for the new homes to actually make a contribution to the unmet needs of the City. This is reflected in the Council's recognition that the areas of search, amongst other matters, needed to build communities associated with Oxford and have good transport connections to the City. Importantly the Kidlington/Begbroke area also a functional economic relationship with Oxford given the location of the London-Oxford Airport, the University of Oxford's Begbroke Science Park, Oxford Spires Business Park and other commercial development along Langford Lane (north Kidlington). In light of this, the two options which the Council determined to proceed with were: Option A Kidlington & Surrounding Area and Option B North & East of Kidlington. This conclusion is supported by the Sustainability Appraisal of the Plan which identifies that: "Areas of Search A and B perform best in sustainability terms; ... SA objectives related to sustainable transport and access to Oxford's employment areas are most influential in the differences between options. Areas A and B benefit from sustainable transport factors and access to services and facilities and jobs." Support is given for the proposed spatial strategy which reflects the importance of the interrelationship of the allocations with Oxford city whilst also not prejudicing the existing spatial strategy to meet the needs of Cherwell District as set out in the adopted Local Plan Part 1. A total of seven sites are proposed for allocation within the two areas of search in order to meet the unmet needs of Oxford City which have been apportioned to Cherwell District. The merits of the proposed allocation of the client's site as part of the wider South East of Kidlington allocation (Policy PR7a) are provided.

Please note that this response, though separate and my own, should be read in conjunction with the Representations made by the Begbroke & Yarnton Greenbelt Campaign "BYG" In my view the case for building 4,400 houses in this area of Cherwell District for Oxford overspill (Policy PR1) has not been adequately proved and it would now appear that the accuracy of the figures quoted in the Plan are in doubt, thereby making this policy unsound and not justified. It is also unsustainable as it will exacerbate existing traffic problems and put local services and amenities, which are already overstretched and struggling, under even greater pressure.

Changes Sought

Reasons for Participation

I would like the Begbroke and Yarnton Green Belt Campaign to act as my representative during the Examination by the Planning Inspector.

Objection to Policy PR1(a) to build 4,400 houses in this area for Oxford overspill. This is not a proven requirement and not justified. It is based on a highly inflated estimate of housing need in the county. Oxford have not even produced their Local Plan so no housing need has yet been established by them in order for the surrounding authorities to address. The level of housing being proposed by Cherwell is unsustainable. It would hugely worsen traffic problems and pollution. Recent works to both the Wolvercote & Cutteslowe Roundabouts have not improved the morning congestion from Kidlington all the way through to Summertown along the Banbury Road. Traffic gridlock and air pollution will undoubtedly worsen due to thousands more vehicles on our roads. This is in addition to the extra traffic from the 22,000 houses already approved elsewhere in the District by Cherwell, and over 10,000 more houses to be built in the other Districts just for Oxford overspill. Construction traffic and road works will add to this chaos for years while the development takes place. The current road infrastructure is poor and, despite the modifications to the roundabouts on the ring road, without major investment and new relief roads adding more houses onto a system that cannot cope with existing levels of traffic is unsound. Health services would be overstretched. Waiting times to see your named GP in Kidlington – currently 3 to 4 weeks. This will only get worse with a further 4,400 households to accommodate and puts intolerable strain on current services. The Green Belt's open countryside in which nearly 4,000 of the houses would be built would be sacrificed for ever and its walks and views lost. Natural habitats and wildlife would be destroyed. Oxford City Council has been allocating land in the city for employment instead of for housing. It has ignored the impact on surrounding Districts and failed in its duty to cooperate. The City Council should do more to meet its own needs.

Building 4,400 houses is not a justified or proven requirement (but a projection). It is not sustainable. Insufficient detail has been provided as to why Oxford's population increased by 13% compared to 8% in Cherwell in the decade from 2001 - 2011; a more detailed demographic breakdown is required for this; a significant proportion are students in full time education (i.e. not keyworkers). What measures/incentives have the university take to accommodate their students within their accommodation? There is no detail provided as to how it can be ensured that the proposed houses will be for workers key to Oxford. With the Oxford Parkway station opening, the proposed new houses will be attractive to people commuting to London daily thereby not contributing to Oxford's unmet housing need. The proposals are not balanced. Many points relate to building communities that relate to Oxford. What about integration into the existing communities? E.g.. building 200 new homes on proposed plan PR7a will be a dramatic rise from Gosford's current close community.

Changes Sought

Reasons for Participation

More detail needs to be provided as to how the proposed increase to 2031 was reached and as to what the Universities and Oxford can achieve through development.

Welcomes that the Partial Review makes provision to accommodate sustainable development to deliver the Cherwell apportionment (as agreed by the Oxfordshire Growth Board) of 4,400 homes, in full & by 2031 (Policy PR1). The lead-in time for such large sites is noted in the Growth Board memorandum, & as such it seems appropriate to prepare the trajectory with a delivery start date of 2021 as the plan also supports earlier delivery where possible. Encourages earlier delivery where possible on the sites allocated in the Partial Review, & is keen to continue the positive joint working & enhanced collaboration as the sites progress towards more detailed design & delivery.

Comments

The entire Partial Review is predicated on the claim (by the Oxfordshire Growth Board) that 4400 homes need to be created in Cherwell District, to meet Oxford's unmet housing need. It is not consistent with a sustainable, or positive approach to meeting Oxford's housing need, & it could only be achieved by ignoring NPP. There are two obvious flaws in its justification. It was arrived at by the Growth Board deciding (a) that Oxford's unmet housing need (for 2011-2031) is roughly 15000 homes, & (b) that CDC should provide roughly 30% of this. Notes the figure of 15,000 is unreasonably high and it has never been justified publicly & objectively. Refers to how the Growth Board calculated the figure including references to the SHMA and the SHMA's assumptions which notes highly sensitive to decisions Oxford CC chooses to make about the use of land for employment purposes or for housing, in the emerging Oxford City LP. Notes the figure of 30% is unreasonably high, never been publicly justified, & cannot be defended. Refers to the Growth Board proposing that housing to meet Oxford's unmet need be shared among the districts surrounding Oxford city and explains the sensitivity of the a number of commuting routes into Oxford and particularly in Cherwell District noting all commuters from the additional homes would need to enter Oxford through this already chronically congested corridor, due to be made even more congested by commuters from the additional 2650 homes planned for Eynsham (West Oxfordshire's proposed contribution to meeting Oxford's unmet need), & those commuting to the Northern Gateway. Refers to LP1 PR Figure 6 and explains that a further reason the 30% figure should be reduced is that the far north of Oxford and beyond is one of the least effective directions in which to provide housing to meet Oxford's unmet need sustainably. Notes the 4400 homes to be provided in CDC is not a positive, sustainable solution to meeting Oxford's unmet need and the number must be reduced. Explains Oxford's unmet housing need could be met much more sustainably by almost all of it being provided in South Oxfordshire District and refers to Flood Zones, approach routes to employment and P&R and insufficient engagement with SODC. Consider unacceptable that the most sustainable solution to meeting Oxford's unmet housing need should be ruled out by lack of cooperation. Notes that Policy 1(a) is not in accordance with NP as it conflicts with the NPPF's 'presumption in favour of sustainable development'.

Changes Sought

Oxford's unmet housing need should be re-distributed as described above, by further negotiation between the district councils. In particular, means must be found of persuading SODC to accept most of the housing required to meet Oxford's unmet need, & (inter alia) of greatly reducing that to be provided by CDC. Policy 1(a) should then be revised accordingly, to give it a sound basis consistent with NP.

Reasons for Participation

Because the figure 4400 needs to be challenged, in order to achieve a more sustainable version of Policy 1(a)

We very much welcome that, per 5.13, the "strategy is Oxford specific; to provide homes where people can most readily connect to Oxford and sustainably access the city's employment areas, its universities and its services and facilities". This readiness to co-operate with neighbouring authorities is essential for coherent planning, and recognises the needs of both existing and future residents. The weakness of the plan arises from its acceptance of the current low densities of the area. The numbers of homes per hectare on the sites proposed in Table 4, around 20, are in line with those for existing 'fully developed' areas of Kidlington, but less than half in parts of Oxford, without any high rise development, and also without the outstanding existing and potential public transport options discussed in this plan. Planning for unnecessarily low densities means that new homes will, immediately via the open market, or over time as they are resold, be unaffordable by the keyworkers for whom they are meant. Measures to keep new homes affordable are welcome, but will be hard to maintain in the long run as long as there are not enough homes overall. The realism of para 5.13 should mean policies for Kidlington, Begbroke and Yarnton which allow the development of a new, distinct identities as local centres, so that they do not become low density dormitory suburbs, whether of Oxford or London. Higher densities should also apply to currently developed areas, in a way which works for existing residents, and reduce the area needed for new development. This would mean less loss of Green Belt, which will be welcomed by many, although this should not be an overriding objection. A gap between Oxford and these local centres risks undermining their connectedness with Oxford, as required by 5.13, so some Green Belt land will have to be re-designated. New policies suggested above for identities as local centres can offset this any loss in this regard. We strongly support policies for the encouragement of environmentally sustainable transport, such as the proposed new rail station at Yarnton, infrastructure required for rapid transport schemes, and better cycling facilities, especially allowing access to Oxford. Higher densities will also encourage walking, which is the most environmentally sustainable transport mode of them all.

Proposes site south of Tadmarton Rd, Bloxham for residential development. Site is 9.67 hectares and approximately 1.5km west of Bloxham. Site location plan attached. Detailed outline of development plan context. Objects to the proposed strategy as its unnecessarily restrictive approach would result in a Plan that is not positively prepared, not effective and ultimately will fail to deliver the housing needed for Oxford or Cherwell. The suggested strategic allocations require significant loss of Green Belt and rely too heavily on large strategic sites, which are often faced with substantial difficulties and delays in delivering the homes required of them. In contrast, development of the site at Tadmarton Road, Bloxham will meet the requirements of sustainable development set out in the NPPF, in respect of the social, economic and environmental aspects of sustainability. It has limited constraints and it is not covered by any restrictive policy designations (including Green Belt). Moreover, and contrary to the Council's reasoning for discounting Options C to I, the allocation of this site will directly assist the Council(s) in their commitment to meet Oxford's full allocation of unmet housing need in a location that is highly accessible and well related to Bloxham and other urban centres, and is readily accessible to Oxford by public transport (including by fast and regular train service), thereby enabling people to affordably live in Bloxham and to work in Oxford. We believe the site at Tadmarton Road, Bloxham should be allocated for residential development within the Partial Review. It represents a logical extension to Bloxham and forms a sustainable development proposal that can contribute towards Cherwell and Oxford's housing needs going forward, and it does not require the loss of Green Belt. Any potential adverse impacts are minor and can be readily mitigated through the development management process.

Planning Prospects represent the landowner in promoting the allocation of land at Tadmarton Road, Bloxham for residential development, and have detailed comments with regard to its suitability and deliverability to meet Oxford's unmet housing needs. We also have detailed comments with regard to the suitability and deliverability of the Partial Review, including those options put forward by Cherwell District Council.

Proposed Submission Plan - Policy PR1 - Achieving Sustainable Development for Oxford's Needs

PR-C-1467	10/10/2017	Terry	Tossell				
4631	Comments						
The Policy PR1a to build 4,400 houses in Kidlington and the surrounding area for Oxford's overspill is not a proven requirement and therefore not justified and not properly prepared and ineffective. It is based on an outdated, suspect and highly inflated estimate which recent Government figures have disproved. Their new targets could be met by the city by adopting policies to build houses not commercial premises; by building more affordable homes rather than the current low density dwellings; by attracting the already resident unemployed job seekers in the city and county; and by utilising unoccupied dwellings in the city. By continuing to follow its current unsustainable policies, the city has failed in its duty to cooperate because it has ignored the potential impact of its policies on surrounding councils. Now is the time to halt the Northern Gateway plans and use the land more appropriately. A more detailed analysis is included in the rep - see Section 1 - "The claim by Oxford City Council that it has an unmet housing need of 28,000 homes by 2031 is flawed." - discusses SHMA and examines how Oxford's need could be met by Oxford.

Oxford's "unmet housing need" as put forward in the SHMA is unproven and, in all probability, materially overstated. The Govt. has recently been consulting on a new methodology & the calculation of housing need produced by this is a much lower figure. Surely we cannot proceed on the basis of Cherwell Local Plan Review when there are Govt. figures which seem to undermine the whole basis of CDC's figures. OCC in its Preferred Options document has shown that it wishes to allocate land to new employment which obviously will exacerbate the housing the problem. If it wishes to address housing needs as a priority surely it should earmark land such as the Northern Gateway to housing in preference to employment. It could then make a better fist of meeting its own housing needs without requiring surrounding councils like CDC to build on its Green Belt. I understand that Oxford's Local Plan is in only at Preferred Options stage, so it is jumping the gun to allocate 4,400 houses to Cherwell when it is not yet clear how much land is available for housing in Oxford itself.

Objection to Policy PR1 Oxford City has not demonstrated the exceptional circumstances to force a review of the Local Plan. They have also not shown its commitment to accommodate the numbers expected to be drawn to the City by the offer of new employment opportunities. They should be asked to do more to meet its own needs and should find accommodation in its own empty housing stock /infill sites. Alternatively, houses should be built on land that the Council has allocated for "economic and employment growth". It cannot keep encouraging businesses to come to the City and not cater for the housing requirements of people drawn to the area for employment. The University should not be allowed to create any more departments/ science parks without providing accommodation for its own staff. We believe Cherwell District Council (CDC) has not done enough to test the need for this number of houses and see if this number is appropriate, proportionate or, indeed, sustainable. We believe 10,000 people would swamp our community and have a detrimental impact on local amenities e.g.: doctors, schools etc.

Strongly object and question the proposed plans and the criteria on which they are based. The plans are unsound and unjustified. Policy PR1 (a) – 4400 houses to be built to meet Oxford's housing need – is not justified. This estimate is not based on an unreasonable estimate of the housing requirements for present or future need and certainly not the housing requirements for Kidlington! Traffic congestion is already severe around and in Oxford and the road/infrastructure cannot cope. Schools and health services, already stretched, would not be adequate for this amount of expansion. Housing at GENUINELY affordable prices for the young should be given priority before land is given up to commercial and employment developments. There is not a need for this many houses in this area,. Oxford City Council should prepare plans to meet their own needs within the City rather than pass their problems to the surrounding areas.

Proposed Submission Plan - Policy PR1 - Achieving Sustainable Development for Oxford's Needs

PR-C-1508	09/10/2017	Alan	Graham		N	N	N	N
4740	Comments							
<p>Objections to the Partial Review of the Cherwell Local Plan to address Oxford's Unmet Housing Policy PR1 – achieving Sustainable Development for Oxford's Needs. The 4400 dwellings proposed in the Plan are not justified. The 2014 SHMA on which this figure is based is now outdated and to take this forward is now premature in view of: The current consultation being undertaken by DCLG (Planning for the Right Homes in the Right Places) to take forward a new methodology to assess the housing requirement demonstrates a substantial reduction in the number of houses required during the plan period. If the current number is taken forward there is a real danger of a substantial over supply of housing and in locations that would otherwise not be considered appropriate for housing development. The plan for Cherwell needs to be taken forward in conjunction with other plans to demonstrate a cohesive approach to planning. The Oxford Local Plan is being taken forward on a later timescale than this plan and the same goes for the other districts in Oxfordshire that are also addressing the housing need for Oxford. The Cherwell Plan is therefore premature. The co-ordinated approach to ensure comprehensive planning to address Oxford's housing needs should be undertaken in a co-ordinated manner with all plans taken forward at the same time, preferably through a single Public Examination in front of one Inspector to ensure the approach is co-ordinated. Therefore a further obstacle is that South Oxfordshire DC needs to be actively involved in the process as well. The entire approach towards the allocation of 4400 dwellings within Cherwell DC has been taken forward with a proper justification in terms of evidence and development in the Green Belt because of the time pressure places up Cherwell DC by the Planning Inspector's directive on the Part 1 of the Local Plan.</p>

<p>Planning for the right homes in the right place Sept 2017 considers that the current process for producing housing needs assessments "lacks transparency" and uses "different and inconsistent methods". The 4,400 homes to help meet Oxford City's unmet need is based on SHMA 2014, therefore do not believe this part of the Partial Review to be positively prepared, since the assessment of unmet housing need in Oxford City on which this partial review is based is fundamentally flawed, and not based on objectively assessed development requirements. 'Planning for the right homes in the right places' concludes that a more realistic assessment of the housing needs of Oxford City is 15,000 homes over the period 2011-2031, rather than the 28,000 from the SMHA on which the requirement for 4,400 homes in Cherwell District is based. I therefore do not believe this part of the Partial Review to be justified, since it is not based on proportionate evidence.</p> <p>Policy PR1 states that "Cherwell District Council will ... deliver: ... b) the Vision, Objectives and Policies set out in this Partial Review of the Local Plan." And that "Development proposals to meet Oxford's needs will be supported if ... it is demonstrated that they will achieve sustainable development." Where "For the purpose of the Partial Review, the definition of sustainable development includes development that meets Oxford's housing needs and does not cause harm to the delivery of the Cherwell Local Plan 2011-2031 (adopted July 2015)." The Key Objectives of the Cherwell Local Plan 2011-2031 include: "SO6 - To accommodate new development so that it maintains or enhances the local identity of Cherwell's settlements and the functions they perform" and "SO12 – To focus development in Cherwell's sustainable locations, making efficient and effective use of land, conserving and enhancing the countryside and landscape and the setting of its towns and villages." Paragraph 3.4.10 of the Category A Village Analysis which forms one of the supporting documents for the Partial Review states of Begbroke village that "The surrounding rural landscape forms the setting to the village and makes a contribution to its character." In addition, paragraph 3.4.12 states that "The area to the west of the A44 Woodstock Road is considered of highest sensitivity in terms of its character and historic sensitivity and as such should be protected with areas to the east". The developments proposed in the Partial Review would remove this rural land which is identified as being critical to the character, identity and setting of the villages of Begbroke and Yarnton, and would therefore contradict the Key Objectives of the Local Plan. I believe this means that the Partial Review is not effective, since the proposals will not be deliverable in accordance with the stated goals of the Local Plan and the Partial Review.</p> <p>Similarly, this makes the Partial Review inconsistent with the National Planning Policy Framework, which states in paragraph 17 that planning should "take account of the different roles and character of different areas, promoting the vitality of our main urban areas, protecting the Green Belts around them, recognising the intrinsic character and beauty of the countryside and supporting thriving rural communities within it" and in paragraph 123 that planning policies and decisions should "identify and protect areas of tranquillity which have remained relatively undisturbed by noise and are prized for their recreational and amenity value for this reason." The removal of open space and Green Belt land proposed by the Partial Review would contradict these requirements. It is therefore my opinion that the Partial Review is inconsistent with the National Planning Policy Framework, in addition to the other objections raised above.</p>								
Changes Sought				Reasons for Participation				

Page 2051

Believes the plan should be amended with a significant reduction in the number of houses to be built in Cherwell District in order to accommodate the unmet housing need of Oxford City. "Planning for the right homes in the right places" estimates the housing need of Oxford City to be approximately 15,000 homes over the period 2011-2031. Paragraph 1.26 of the Partial Review states that Oxford City is estimated to be able to provide 10,212 homes over the period 2011-2031, leaving an unmet need of approximately 5,000 homes. Based on the proportions by which the unmet need was distributed over the districts of Oxfordshire in Table 3 of the Partial Review, this would reduce Cherwell District's apportionment by two-thirds to approximately 1,500 homes. Believes that this represents a more appropriate scale of developments, which would make the Partial Review more positively prepared, by basing it on objectively assessed development requirements, and more justified, by basing it on proportionate evidence. However, this reduction alone would not also make the Partial Review effective, since it would not preserve the rural areas identified as being crucial to the identity and setting of the villages of Yarnton, Begbroke and Kidlington, and so the developments would still contradict the Key Objectives of the Local Plan. To make the Partial Review effective would also necessitate a significant reduction in the size of the developments and the area they cover.

<p>Unsound. We believe that it is too early to determine the number of houses required to meet Oxford's Unmet Need, the government has now released a consultation detailing new methodology for determining future housing requirements. The initial figures in the consultation indicate that the housing need for Oxfordshire will be drastically reduced. We urge the Council to put a hold on the Review of the Local Plan until the new housing need figures are released in 2018. In the developing Oxford City Council Local Plan the City Council are allocating large areas of land for economic/employment growth reducing the land available for housing within the City. This housing strategy giving preference to employment growth without providing housing is not sustainable and will only exacerbate Oxford's unmet housing need. For the proposals to be sustainable adequate infrastructure needs to be in place before the development takes place. Provision needs to be made in PR1 so that all infrastructure is provided before the development is completed, without the infrastructure all development in the area will be unsustainable as current infrastructure is not adequate.</p>

Proposed Submission Plan - Policy PR1 - Achieving Sustainable Development for Oxford's Needs

PR-C-1521 09/10/2017 Alaric Rose N N

4778

Comments

Objection to Policy PR1 – UNSOUND: Prematurity in apportionment of substantial growth to CDC. With the commencement of consultation for the new Oxford City Local Plan, the level of unmet need cannot be assessed until the new Plan has been examined and completed, and we have a five year gap between the 2031 date in SHMA and the 2036 date in Oxford's Local Plan. The new government document (Planning for Right Homes in the Right Places) has a formula which indicates that the overall figure for housing need is much less than that allocated by the Growth Board – indicating that the Oxford unmet need would shrink to about 9,000 (instead of 15,000), and that in Cherwell it pretty much halves the number to meet Oxford's Unmet Needs. The Oxford Local Plan outcome and the new government document should be taken into account before allocating valuable GB land to large swathes of housing which almost joins Kidlington, Oxford, Begbroke and Yarnton. The GB left in many areas is so small that there is no sound argument to say that the villages and Oxford are not being joined in one urban sprawl. It is premature to make decisions on the Cherwell Partial Review Local Plan (CPRLP), which only concerns accommodating Cherwell's apportion of Oxfords unmet need, until we have accurate numbers on an updated OAN for Oxford, and these numbers are tested through the Examination into the Oxford City Local Plan. Only then can the unmet need be calculated. Despite Oxford's need for housing, the emerging Oxford Plan continues to allocate sites for economic/employment growth, further reducing land available for housing growth. In an area with very low unemployment, bordered by areas with a similarly low unemployment figure, this can only lead to attracting people from areas that are not within commuting distance, exacerbating the need for housing. There are representations to the Oxford City Local Plan consultation requesting a review of this strategy, as sufficient priority is not given to Oxford's urgent housing need. Cherwell should assess any areas of housing need before making land available for economic use. The distribution of Oxford's unmet need between its neighbouring Authorities has been determined as guidance by the Oxfordshire Growth Board, and has to be tested in the Authorities individual Local Plans to determine if it can be accommodated. It is clearly stated that this is 'a working figure', and that Cherwell has been "asked to consider" accommodating 4400 homes as its share of the unmet need. Cherwell's share is not reasonable in scale, when you take into account the adopted policies protecting the separation of settlements so close to Oxford City and the very short length of common boundary. Other local authorities are not meeting the need on the boundary, but in sites further from Oxford. The evidence base for the CPRLP demonstrates that the scale of proposed development cannot be met in the part of Cherwell closest to Oxford without unacceptable harm to interests of importance, and therefore proposes unsustainable development. Interests of importance include: (i) Unacceptable harm to the integrity, functions and scale of the GB (ii) Unacceptable congestion and worsening of air quality on local roads (iii) Unacceptable damage to the individual character of local settlements (iv) Unacceptable loss of open land which preserves a separation between settlements and is valued open land.

Policy PR1 confirms that development will only be sustainable if it 'does not cause harm to the delivery of the Cherwell Local Plan 2015'. In my opinion, it should also take account of the 2016 Kidlington Masterplan, the core of which is the essential need to preserve the separate identity of Kidlington as a Settlement. The proposals in PR1 do not represent sustainable development, and therefore conflict with NPPF advice. The proposals are inconsistent with policies of the existing Development Plan including Policy ESD13 of the adopted Local Plan in terms of the impact on local landscape character, and ESD14 regarding separation of settlements. By increasing visual intrusion and harming the local landscape development of the huge scale proposed would be contrary to these policies. Policy ESD15 seeks to respect an area's unique built, natural and cultural context. Development on the scale proposed is incompatible with adopted Policy in the Cherwell Local Plan.

Changes Sought

C.1 More detailed work is essential to determine the up to date OAN for OxfordCity, and to maximise the use of land within the City boundary for new housing. The scale of unmet need can then be properly established. C.2 The Oxford Growth Board needs to consider afresh the distribution of newlycalculated unmet need between the neighbouring Authorities, giving greaterweight to the importance of avoiding the release of Green Belt land in Cherwell in particular, where studies have confirmed that existing Green Belt landperforms an essential Green Belt function in terms of the NPPF. C.3 Until these processes have been completed, Policy PR1 cannot be proven to be justified or in accordance with the NPPF in relation to the permanence of Green Belts. Policy PR1 provides an unacceptable starting point for theremainder of the Plan, and is premature in advance of up to date research. C.4 The scale of growth proposed at 4400 dwellings is too high and needs to bereduced in order to better achieve sustainable development. The ParishCouncil considers that any further development will lead to detrimental effectson the community and environment. C.5 However if development has to be accepted then the quantum of growthshould be restricted to a capacity which does not significantly adversely impacton the separation and separate identity of settlements, valued landscapes, local character and local transport congestion. C.6 Policy PR1 should include an additional requirement that all new allocateddevelopment makes adequate provision for all relevant infrastructure, unless other arrangements have been secured. Development should not proceed inadvance of certainty about the delivery of off-site infrastructure.

Objection to build 4,400 houses in the Kidlington and Yarnton area for Oxford overspill. This is not justified and is based on unsound and unrealistically inflated estimates of housing need which have since been demonstrated in the Government's Planning for Homes consultation (14th September) to be false: recent recalculations show there is no need for housing to accommodate Oxford residents that cannot be met by higher density city centre building. On 31st March 2018 the government will make an announcement on planning consultation which will allow Cherwell district council to assess real need at that time. The city has been allocating land in the city for employment rather than housing and by passing the burden for housing the city's employees to neighbouring councils, has failed in its duty to co-operate. The City Council should more to meet its own needs. There is no infrastructure to support this scale of increased housing, making it unsustainable, and an impossible drain on local services including schools and GP surgeries. The recent roadworks to improve traffic flows at peak times around Cuttleslowe and Wolvercote roundabouts have had limited effect and the traffic models employed in the plan are highly erroneous, averaging projected traffic increases across the day instead of taking into account that the majority of traffic flow occurs during short rush hour periods in the morning and evening. An increase in traffic at peak times would lead to much slower journeys for all, as well as greatly increasing congestion and pollution: it would not be effective. New houses in the vicinity of the Oxford Parkway railway station would be favoured by London commuters (and market forces will ensure that local first time buyers will not be able to afford such housing, as has already happened at Barton Park) destroying the sense of community and negating the supposed use to house Oxford city spill over and provide affordable homes for local people. Already, Oxford Parkway station car park is full every morning, to the point of commuters blocking access routes around the car park. Any further increase in numbers would simply be untenable.

Proposed Submission Plan - Policy PR1 - Achieving Sustainable Development for Oxford's Needs

PR-C-1529	08/10/2017	David	Stone		N	N	N	Y
4802	Comments							
<p>1. It's completely ignores the consequently impacts of Oxford City's new Local Plan, which is still in the "melting pot," and yet to be determined. It does not show a duty to co-operate, quite the reverse. This is significant because these two plans need to work together, not in isolation. Otherwise, Oxford and the setting of it's immediate northern communities could lose even moreprotected Greenbelt land than so far proposed. The sheer scale and amount of Greenbelt proposed for removal is breath-taking and totally in contravention of National Planning Policy Framework, Paragraphs 79 and 80, which define the need and purpose of Green Belts. As already mentioned, the number of houses on the sites mentioned above, are unsustainable, and contrary to Cherwell's own Summary Document page 4, they will do exactly the opposite to "limiting Oxford's Outward Growth." Indeed, this will, propel further 'ribbon development' in the future. The Plan is deeply "flawed," there is no mention of how it will safeguard and aid the needs, environment,and access to free-movement of present communities, adjoining the A4165, from the Cuttleslowe roundabout to the Kidlington roundabout by bus, car, cycle or on foot, the same applies across the Wolvercote area to the west end boundaries, where the ultimate impacts of development at the Northern Gateway, Barton Park (further to the east) is as yet unknown. To suggest it meets with the Country Council's Oxford Transport Strategy, is a misnomer, because this strategy is not sufficiently robust to deal with present excessive traffic congestion and health damaging pollution. Further more it is reliant on speculative funding, which may never arrive. TheLink road from Loop Farm A40 to A44, has been promised, but the funding is not is place. The congestion on the A40 is unsustainable and a northern link road is needed north of Kidlington to relieve the over-whelming volume of traffic. Travel from the Park and Ride designated for Eynsham, will be constrained by the reduced width of the bridge on the approach towards the Wolvercote roundabout, so traffic coming to Oxford will remain at a standstill. This is aspiration of close proximity and connection to Oxford, is a fallacy.It is not clear, from the evidence given, that Cherwell District Council have considered any alternative Brownfield sites, the review of sites, is distinctly prejudicial and unbalanced. The distribution of housing numbers next to north Oxford, while attractive on paper, is distinctly flawed.For example, Bicester is on the train route, so people could travel from there to Oxford, they do NOT have to live next to Oxford. It is regrettable that the County Council policy has cut bus services from villages, whom also need access to employment, perhaps if some of these villages were a little larger, bus services might be more sustainable?According to Cherwell District Council's Local Plan Summary Document:-It will create balanced and sustainable communities? NO! It will overwhelm north Oxford and Kidlington.It will be supported by necessary infrastructure? NO! No concrete evidence to deal with existing infrastructure, let along any new infrastructure. It will contribute to improving health and well-being? NO! It will increase detrimental health of existing residents in northern Cuttleslowe, north Oxford, Wolvercote and Kidlington. Traffic will be at gridlock all day, everyday, pollution all day, everyday at EXCESSIVE LEVELS in addition to present Oxford Air Quality, non- compliance. Elderly crossing the road or accessing the shops in our area will find it completely impossible.</p>								
Changes Sought				Reasons for Participation				
Remove the need for affordable housing, because, there is no way it will be affordable next to northOxford. Be honest with people, tell them their lives in Kidlington and north Oxford are to be blightedwith complete traffic gridlock and damaging vehicle pollution.Be legal by NOT destroying Greenbelt land next to Cuttleslowe Park, The Golf course, (an essentialrecreational resource currently), and stopping coalesce with Kidlington and north Oxford.				Believes, with respect, the Inspector would much benefit from really listening seriously to ordinary people, regarding the very real experience and particularly genuine concerns of how these 'grand proposals' to 'illegally' destroy all the immediate greenbelt land around Kidlington and north Oxford, will have a completely devastating impact on the lives, health, well being and free movement of wellestablished existing communities.

Object to Policy PR1(a) to build 4,400 houses in this area for Oxford overspill. This is not a proven requirement and not justified. It is based on a highly inflated estimate of housing need in the county. It is unsustainable. It would hugely worsen traffic problems and pollution. Schools and health services would be overstretched. The Green Belt's open countryside in which nearly 4,000 of the houses would be built would be sacrificed for ever and its walks and views lost. Natural habitats and wildlife would be destroyed. Oxford City Council has been allocating land in the city for employment instead of for housing. It has ignored the impact on surrounding Districtsand failed in its duty to cooperate. The City Council should do more to meet its own needs.

<p>Policy PR1(a) Legality of/Justification of the number</p> <ol style="list-style-type: none"> 1. The overall number (4400 for Cherwell) has been created by the Oxfordshire GrowthBoard, itself unelected and unaccountable. 2. The proposals refer to Oxford City's aspirations rather than the County of Oxfordshire's needs. 3. The number is not justified by present need alone but by aspirations for the future 4. Needs and aspirations cannot be dealt with as one and the same. 5. The Government is now working on a new formula for planning housing needs whichcould come into come into effect as early as March 2018 yet the proposals are plannedto cover a period up to 2031. It would be unsound to embark on a building programmethat would be based on erroneous, and most likely inflated, figures from the start.

4 Objection.The figure of 4,400 houses in PR1 is not justified because the underlying calculations in the Oxfordshire SHMA are highly exaggerated and incorrect. They were drawn up by a development consultancy which earns significant income from advising property developers about obtaining planning permission and it was undoubtedly in the consultancy's interests to exaggerate the need. Furthermore theprincipal authors of the SHMA have appeared at the Cherwell and West Oxfordshire local plan examinations representing developers which is a clear and massive conflict of interest, discrediting the entire analysis. The SHMA has been widely criticised including by several planning consultants, and those criticisms have not been seriously addressed. The recent DCLG consultation on "Planning for the right homes in the right places" also suggests that the SHMA figures are incorrect. Of particular relevance is the figure for Oxford of 746 houses per annum compared with the SHMA figure of 1200- 1600 (from which the requirement for Cherwell of 4400 is derived). As the DCLG figure includes a substantial increase (40%) to take account of affordability it is hard to see how the much higher SHMA number can be justified. The new calculation method will apply to Oxford's Local Plan which is not due to be submitted until December 2018.								
Changes Sought				Reasons for Participation				
Changes needed. The basis of the plan – namely the requirement of 4400 houses – is clearly flawed. It should be withdrawn pending a review of all of the Districts' needs in the light of the DCLG methodology.				Examination. I wish to participate in the public examination only if KidlingtonDevelopment Watch is not invited. I have taken an interest in the development ofCherwell's Local Plan since 2013 and have acquired some understanding andknowledge of the issues involved. I participated in the December 2014 examinationand consider it necessary that an alternative view is presented to that of thedevelopment industry which will inevitably be over represented at the examination.				

Proposed Submission Plan - Policy PR1 - Achieving Sustainable Development for Oxford's Needs

PR-C-1535	10/10/2017	Layla	Vidal-Martin	Lichfields on behalf of Taylor Wimpey (Oxfordshire)	Y	Y	N	Y
4820	<p>Comments</p> <p>Taylor Wimpey (TW) considers the Submission Plan is not sound as it is not “justified” or “consistent with national policy”. This is because : 1. CDC acknowledge (Submission Plan Executive Summary para XV) that “under national policy Green Belt boundaries should only be altered in exceptional circumstances through the preparation or review of a Local Plan”. The Submission Plan (para 5.17) sets out why CDC consider that exceptional circumstances exist for the release of these sites from the Green Belt & their allocation for residential development. TW contend that CDC have not thoroughly explored “all other reasonable options” &, where they have sought to do so, there are flaws in their evidence base (regarding their assessments of sustainability, transportation & alternative development locations). They have not demonstrated the “exceptional circumstances” required for the proposed release of the sites identified in Table 1 from the Green Belt; 2. CDC’s approach is predicated on an assumption that “Oxford’s Housing Needs” form a bespoke & identifiable source of housing need. This conflicts with the recognition in the Oxfordshire SHMA (2014) (para 9.2) that “the SHMA identifies an Oxford-focused Housing Market Area which extends across much of the County, reflecting the economic influence of the City. The county still remains the most appropriate geography for analysis of housing markets in terms of the ‘best fit’ of local authority boundaries to a functional housing market area.” More recently the Inspectors Report into the Vale of White Horse Local Plan emphasised that (para 45) “it is not the role of, or possible for, the plan to prescribe where people live and work;” and; 3. CDC compound this assumption (Policy 12a) by seeking to pursue a “separate five year housing land supply . . . For meeting Oxford’s needs.” This, in conjunction with proposals not to support Sites Not Allocated in the Partial Review (policy PR12b) are not consistent with the NPPF’s presumption in favour of sustainable development & risk substantially harming housing delivery in the District in the coming years. Scope of response (See Detailed 4 Section Report). This response amplifies TW’s concerns regarding the soundness of the Submission Plan, & their view that their site at Bloxham (Site PR35) forms a “reasonable option” for residential development prior to the release of the proposed allocations from the Green Belt. Specifically • Section 2: Summarises the appropriateness of residential development on the TW site; (Section 2 encloses * Sustainability Analysis by Calibro, * Residential Potential of Site, * Assessment of site against constraints, * SHLAA Analysis) • Section 3: Summarises TW’s concerns regarding the inadequacy of the evidence base, whilst emphasising their support for the level of residential development proposed. This underpins their contention that the Submission Plan does not establish “exceptional circumstances” for the proposed release of these sites from the Green Belt; • Section 4. Sets out TW’s comments on emerging policies and the changes that they consider are necessary to make the plan sound.</p> <p>Changes Sought</p> <p>The Plan proposes that around 55 % of the housing proposed should be targeted within the Green Belt (GB). Para 3.26 “approximately 14 % of Cherwell lies within the Oxford GB”. Thus CDC need to demonstrate “exceptional circumstances” as to why this housing cannot be located within non GB locations comprising 86 % of the District. We do not consider that CDC have appropriately addressed “reasonable alternatives” & therefore cannot be considered to have demonstrated “exceptional circumstances” for the release of all of these sites from the GB. * Whilst, as noted above, TW consider that it is appropriate to continue to plan to provide 4,400 homes to help meet Oxfords unmet housing needs by 2031 they consider that the references to the “vision,” “objectives” and “policies” within the Submission Plan inappropriate and unsound. * Specifically the vision focusses on connectivity to Oxford instead of seeking sustainable locations for development. TW consider that this approach is based on the erroneous view that Oxfords unmet housing needs form a distinct and identifiable housing need. Conversely the evidence is that the County forms a single HMA and the resident population displays more fluid habits than assumed within the vision.</p> <p>Reasons for Participation</p> <p>We consider it necessary to participate at the part of the Examination to amplify the concerns and points raised within the representations.</p>							
PR-C-1536	09/10/2017	Elizabeth and Tamsin	Leckie					N
4821	<p>Comments</p> <p>Object to Policy PR1(a) to build 4,400 houses in areas around Kidlington to meet Oxford City’s ‘unmet housing needs’. This requirement is unproven and is based on an overinflated estimate of housing need in the county. The Government’s recent revision of targets for new housing shows that the current SHMA housing targets for Oxford/Oxfordshire are overinflated by a third or even a half. Oxford City itself could and should meet most or all of its ‘unmet housing needs’ within the city itself on land it is reserving for business development, especially now that the housing targets for Oxford/Oxfordshire are being radically reduced. Sacrificing the Green Belt to accommodate Oxford City’s housing needs is therefore unnecessary as well as unproven and unjustified. Putting 4,400 new houses around Kidlington is unsustainable. It would aggravate already serious congestion problems and consequent air pollution. If the new houses are built in Oxford itself, they will not add to commuter traffic into Oxford. Schools and health services are already overstretched in the Kidlington area and could not cope with such a large increase in population.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							
PR-C-1538	09/10/2017	Dr Charles	Riddell					N
4831	<p>Comments</p> <p>Policy PR1(a), which proposes the building of 4,400 houses in the Kidlington-Yarnton area, is not justified and unsound, particularly following the government’s Planning for Homes consultation in September, which has shown Cherwell District Council’s estimate of housing need to be vastly over-inflated. Any additional and less exaggerated housing need can be met through use of land within Oxford city to increase house building, instead of using available land solely for employment use and imposing the building of unjustified accommodation for the city’s own employees on protected GB land outside of the city. Oxford City Council should house its own additional employees within its own boundaries and not encroach on protected GB land.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							
PR-C-1539	10/10/2017	Tim	Emptage					N
4832	<p>Comments</p> <p>Object very strongly to the virtual loss of the green gap separating Kidlington, Yarnton and Begbroke from each other and North Oxford. The gap in some places is so small that these communities have in effect been joined in one large urban sprawl. The Oxford Plan continues to allocate land for economic/employment growth within its boundaries, thus reducing land available for housing growth. More priority should be given to accommodating urgent housing need, in preference to further employment growth which will further exacerbate housing need. There is a need for affordable housing in Cherwell for people who work in Oxford but how this will be accessed by local people is not made clear in the plan. The figure of 4400 homes is totally unrealistic and the plan does not give any clear proposals for the infrastructure developments that will be required to support such a massive development. Object in relation to PR1 on the grounds of Prematurity as the true unmet housing number has not yet been properly assessed. The lack of a clear, deliverable infrastructure plan. There are no exceptional circumstances to justify development on this scale.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							
PR-C-1541	09/10/2017	Maurice	White					
4840	<p>Comments</p> <p>Object to PR1a to build 4,400 houses in this area for Oxford overspill. This is not justified and an unproven requirement. There is no evidence for this being due to current employment need or overspill related to housing existing population. This appears to be more to do with generating new growth as areas which could be used for housing within Oxford City boundary e.g. Oxford Gateway development near Peartree emphasise new commercial new population generating commercial growth of a kind which is not essential to key functions of Oxford (Education, Science Tech or High Order Services). Revised government figures for housing growth based on existing need suggest that a high proportion of speculative building opportunity has been included in these figures.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							

Proposed Submission Plan - Policy PR1 - Achieving Sustainable Development for Oxford's Needs

PR-C-1544	09/10/2017	Paul	Slater	Edgars on behalf of Mr & Mrs Tomes	Y
4850	<p>Comments</p> <p>Edgars object to Policy PR1 in that the 4,400 homes should be regarded as a minimum figure and should not preclude comprehensive sustainable development proposals which accord with the plan's vision and strategy (including land at 14 -16 Woodstock Road, Yarnton) even if these may exceed the 4,400 apportionment. Detailed justification and site description for 14-16 Woodstock Road, Yarnton included in rep.</p> <p>Changes Sought</p> <p>Policy PR1 should refer to at least 4,400 homes.</p> <p>Reasons for Participation</p> <p>Mr and Mrs Tomes have (and land under their control at 14-16 Woodstock Road, Yarnton. This land falls with plan proposal PR3a and adjoins plan proposal PR8. As such Mr and Mrs Tomes have a particular interest in the plan and reserve the right to participate at the oral part of the plan examination.</p>

Paragraph 2.2 of the submission states that it is objectively assessed and justified by evidence having considered reasonable alternatives. No evidence of any comprehensive study into alternatives that has been used in London and other major cities in the world to reduce building foot print and make optimum use of brownfield sites for medium rise (7/8 storey high) apartment blocks.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>				

Proposed Submission Plan - Policy PR1 - Achieving Sustainable Development for Oxford's Needs

PR-C-1576 4917	09/10/2017	Heidi	Lancaster				
Comments							
Objects to the proposed submission plan because there is a lack of strong evidence for such a large number of houses needed. In order for our villages, towns & cities to remain distinct entities the amount they can expand should be limited. With no mechanisms to prevent this the end result could be one large urban conurbation. The GB is one way in which the individual character of our villages, towns & cities can be retained. If Oxford cannot meet its own housing need, then it has expanded as much as is possible. It should not be looking to neighbouring LA's to meet that demand. A false demand for housing is being created by proposed business developments. If Oxford cannot supply the amount of housing required by the business developments then the business development plans need to be re-visited. They should be scaled down so that the housing needs created by the development can be met on land within Oxford City. Building on the Green Belt: The Government's NPPF, Section 9 "Protecting GB land" states: "The govt. attaches great importance to GB's. The fundamental aim of GB policy is to prevent urban sprawl by keeping land permanently open; the essential characteristics of GB's are their openness & their permanence." Only in "exceptional circumstances" should there be any change to the GB. As there is not a real demand for this number of houses, I do not consider the circumstances to be anywhere near exceptional. I would consider the need for housing to be exceptional if there were no empty houses in or around Oxford & if new developments sold out immediately. This is not the case. E.g.. there is a perfectly habitable empty house, 2 doors away from us for nearly 18 months. The loss of character to Oxford & the surrounding areas would be irreversible if the GB were to be developed. Open space is important for human well being. Affordable housing: The area severely lacks this. Many families are moving away due to high house prices. The plans do not address this need. The proposed density of housing would only be profitable for the developers if sold at market rates. A higher density would be required for affordable housing. The amount of affordable housing proposed in plans does not get enforced so even if a suitable amount was being proposed, it is unlikely they will be built as developers will look at profit first. Transport: There have been many large & expensive projects over the last 2 decades attempting to address Oxford's transport problems, including the "Oxford Transport Strategy", work on most of the major ring road roundabouts & the Frideswide Square re-modelling. While these projects have made differences to some of the traffic flow & helped some areas, transport around Oxford still remains a major issue. There is no capacity within the ring road to add more infrastructure & the ring road is extremely busy during rush hours. If the new houses are to serve those working in Oxford, it will create even more congestion. I urge you to consider the impact that this number of houses would have on the area & go back to the beginning to consider if such a demand really exists.

Comments							
The consultation document paras 3.6 and 3.7 state that the project team met from January 2015 to September 2016 to progress projects including an understanding of Oxford's unmet housing need, resulting in a decision on apportionment on 26 September 2016. The recent re-evaluation of Oxford's unmet housing need in August/Sept 2017 means that the decision referenced in para 3.7 is irrational, as are the housing proposals by the council based on that apportionment. This means the plan is not sound.

Objection to policy PR1(a) to build 4,400 houses in this area to satisfy Oxford's alleged "unmet housing need" because: i) Oxford's Local Plan has not yet been prepared so Cherwell's allocation of homes is premature and is not an appropriate strategy. ii) The government has recently produced a new method for calculating housing need. This indicates that the "housing need" is much lower than indicated by the Strategic Housing Market Assessment. This needs to be assessed and housing allocations adjusted accordingly. iii) We believe this proposal is unjustified and unsustainable.

Object to Policy PR1(a) in connection with the proposal to build 4,400 homes in the green belt on the grounds that it is not a justified or proven requirement. New Government methods for calculating housing need indicates that some 30% fewer houses are required in Oxfordshire than previously forecast with the consequence that the basis for housing allocations in Cherwell to accommodate its needs and the City of Oxford's requirements are no longer valid. Less land will be required to accommodate development and there are no exceptional circumstances to warrant the release of land from the Green Belt. Without prejudice to the above point, any proposals by Cherwell to release land from the Green Belt to meet the Oxford's needs are premature and unjustified given that the City of Oxford is in the process of reviewing its Local Plan and has not yet determined how much housing development can be accommodated on land within the City's boundaries.

Comments							
Object to Policy PR1 to build 4,400 houses in this area to fulfil Oxford's unmet housing needs. In view of the recent Government announcement, which supports the argument that this is not a proven requirement and is not justified, the numbers of houses required must be reviewed before plans are progressed any further. The proposed number of houses is unsustainable in an area which already suffers from traffic problems. Health services are already overstretched and this would cause further detriment to local services. The Green Belt open countryside would be lost for ever. Oxford City Council should be doing more to meet its own needs. Concerned that any housing provided would meet the proposed housing needs, in particular with respect to affordable housing. Developers frequently default on their affordable housing quota. As evidenced by the new development at Barton Park, the suggested prices are already well beyond the reach of first-time buyers and many others who are employed within the NHS and academia who earn around the national average.							
Changes Sought				Reasons for Participation			
The numbers of houses required must be substantially reduced to ensure that any development is sustainable for many years to come.

We consider that the proposed submission plan is Unsound, Not Positively Prepared, Not Justified, and Not Effective for the reasons given in the specific objections below. We object to Policy PR1(a) to build 4,400 houses in this area for Oxford overspill. This is not a proven requirement and not justified. It was based on a highly inflated estimate of housing need in the county which was unsustainable. The number of 4,400 houses now needs revisiting as does the 28,000 figure previously quoted as Oxford's unmet housing need. This latter figure equates to a population increase of 100, 000 people, a 40% increase and not at all realistic. We understand the increase to be more likely in the range of 10-20%. We demand that any development proposals be put on hold until pending the outcome of the current Government Planning for Homes Consultation - Right Homes in Right Places - which could result in halving the number of new homes the council has to build In addition the effects of Brexit are at present unknown, adding weight to the argument to STOP THE CONSULTATION NOW. A complete rethink of growth strategy is needed. All unsustainable expansion must certainly be stopped. Oxford is a beautiful, historic city which has already been spoiled by ugly developments including the new Westgate shopping centre which will bring more traffic to the already congested and polluted area. Kidlington and the area around it must be protected. We all have a duty to preserve the city and surrounding area for future generations. We were told of an "urgent and pressing need to find homes for Oxford." But there are more jobs than residents in Oxford so in fact there is no "pressing need". The Oxford Profile 2016 shows a job density ratio 1.08. i.e. there are more jobs than current residents! Oxford City Council is finding 15k homes anyway. There is no justification for building homes for people who do not already live here at the expense of the people who do! The "exceptional high need for affordable homes" is disproved by the Barton development where a 3 bedroom home will cost £600k! Homes like these are certainly not affordable for the average person who works in Oxford. For example, the new Westgate shops are paying staff £8 per hour which is below the Oxford living wage of £9.26 which Oxford City Council has committed to. These workers will not be able to afford housing in the area, either to buy or rent! What is needed is affordable housing in the immediate surrounding areas of large scale employment like the Westgate! Expansions outside the city would hugely worsen traffic problems and pollution which are already cause for great concern. According to the Oxford Profile 2016 , 46k people currently commute into Oxford for work, causing daily congestion and pollution, Infrastructure needs to be put in place before any more developments are permitted. Health services are already overstretched; schools are oversubscribed and struggle with budgets; children travel across congested Oxford daily to get to school. There is little confidence in local government management of traffic issues, e.g. £10m spent on Cutteslowe and Wolvercote roundabouts has resulted in even longer journey times! The Green Belt's open countryside is at risk of being sacrificed for ever and its walks and views lost. Natural habitats and wildlife could be destroyed. Oxford City Council has been allocating land in the city for employment instead of for housing. It has ignored the impact on surrounding districts and failed in its duty to cooperate. The City Council needs to do more to meet its own needs.

Proposed Submission Plan - Policy PR2 - Housing Mix, Tenure and Size

PR-C-01019 22	24/07/2017	Daniel	Scharf				N
Comments PR2 exclusively promotes self-contained dwellings. This is unjustified. The opportunities represented by purpose built HMOs & co-housing have been overlooked/excluded. These forms of housing are prevalent in many parts of the world but almost entirely absent in Oxfordshire. The Plan should include a policy to reserve (reference 5 - see original doc) land from larger sites for these alternative forms of housing (refers to Oxford C-Housing Group) in order to 'deliver' choice as is required by NPPF para 50. The fact that the SHMA finds the need for smaller dwellings to be greater in the affordable sector than the open market (and also supports 'upsizing') shows that the SHMA is actually an assessment of housing demand which reflects the market for housing for investment purposes (which should not be a matter to be taken account by the Plan) rather than the need for space in which to live that is the main purpose of the Plan (refers to website). Confusing these measures invalidates the Plan as an instrument for the meeting of real housing needs in both the City & Cherwell Districts.							
Changes Sought The Plan should be amended to include the necessary support and privileging of co- housing or community led housing				Reasons for Participation			
PR-C-0107 310	20/08/2017	Mr Jeffrey	Lyes				N
Comments If the old definition of "affordable" is used; the numbers are way over post performance; if they're using the currant definition, they're almost meaningless. Ref gives full definition of "affordable homes" in the letter. This is an extremely unsound plan! Cannot be effective.							
Changes Sought				Reasons for Participation			
PR-C-0237 813	15/09/2017	Karen	East	TMP Planning Ltd on behalf of Gosford and Water Eaton Parish Council			N Y
Comments Object to the level of housing proposed and do not consider that Green Belt sites in the Parish should be released for development. Notwithstanding this view the Parish Council supports the overall approach to providing high levels of affordable housing. A minimum of 50% affordable housing should be provided on any approved housing allocation to this area. Concerns regarding the delivery of these proposals. Know from our residents that there are significant problems for people trying to access affordable housing within Gosford and Water Eaton. Main concerns are as follows: 1. How will affordable housing be defined so that it is truly affordable for those in need? 2. The same affordability problems exist for residents of Gosford and Water Eaton as for those in Oxford. The Plan should ensure that new affordable housing is equally available to residents in Gosford and Water Eaton. 3. It is important that affordable housing is delivered in accordance with the policy and not watered down as a result of developer pressure. Appropriate mechanisms need to be in place to secure the affordable housing in perpetuity. 4. Providing housing for key workers is welcomed however how this will be made is unclear in the policy and would welcome explicit and secure inclusion. 5. In the case of market housing there is concern that an appropriate mix is provided and not just executive homes. The mix of housing type is not set out in the policy. In addition, are concerned that buy to let landlords may purchase market housing making it less affordable.							
Changes Sought There should be greater detail in the Policy and supporting text regarding how affordable housing will be defined and delivered such that it continues to remain affordable both for local residents and those from Oxford. Further details should also be given on the mix of market housing type and how key worker housing will be provided.				Reasons for Participation The Parish Council would wish to take part in order to explain the potential impact of the proposed development on local communities and why this should be better reflected in the draft vision.

PR-C-0265	09/10/2017	Ellis	Davies		N	N	N	Y
5548	Comments				Reasons for Participation			
This policy seems flawed by the fact that no agreement on the mix of housing that is required and yet they say that there is an unmet need. Surely there would have been some form of knowledge on what kind of housing mix would be needed when calculating the assumed unmet need for Oxford. This seems more of satisfying the developers and the proponents for the incursion into the Greenbelt. It needs to be recognised that over 70% to 75% is left to market forces and could easily be nothing to do with fulfilling Oxford unmet housing needs.					I would like the Begbroke & Yarnton Green Belt Campaign to represent me at the Examination should it take place.

1. The sites are on Oxford GB. GB's remain Govt. policy. Land between N Oxford & Kidlington is unique as it fully accords with the 5 GB purposes as per para 80 of the NPPF. GB's are designated to manage the location of new development, they would not exist were there not pressure to develop on them. Such pressures cannot be considered exceptional circumstances. As per para 84 of the NPPF there's no evidence of alternatives being considered i.e.. using allocated, undeveloped employment land in Oxford for housing & promoting employment growth outside Oxford, creating a better balance between where people live & work. Have the LA's co-operated in looking at alternatives? This land being GB also complies with para 81 of the NPPF. It is used for sport & recreation, is biodiverse & visually pleasing. 2. The identified housing needs rely on an outdated study which has never been independently assessed. Revised Govt. figures indicate a reduced requirement. It now seems there is no need to build on GB. Even if there is a need on this scale, it is a poor location to meet Oxford's needs, being adjacent to a London commuter rail line & in the expensive part of Oxford. The private housing will likely attract London commuters & wont provide affordable homes for people with jobs in Oxford. It is evident that many house buyers in N Oxford are those moving from London & continuing to work there. 3. Unsound in allocating NOGC for housing & not taking into account NPPF para 74. Understand NOGC weren't involved in discussions prior to this. NPPF Para 74 says existing sports facilities shouldn't be built on unless it assessed as surplus to requirements or replaced by equivalent or better provision. No such assessment has been made. NOGC, a well established & thriving club with 475 members & 3000 visitors p.a. Its clubhouse is used by the wider community. As a flat course, it is especially suitable for seniors. NOGC is needed. It is not sound practice to propose allocating land for housing & to carry out a retrospective assessment of the need for a golf course. We need this space for the health & wellbeing of locals. The land at Frieze Farm as a replacement GC, appears to be an afterthought. It is too small. Building a new GC on a similar sized site to NOGC would cause H & S issues unless mature trees were in all the right places. No indication shown on how it could be financed or developed. Apparently the landowners have stated to NOGC that they have no intention of providing another GC or providing the level of funds that would be needed. The mature landscape central to the current GC couldn't be replace in reasonable time & therefore the 2nd criterion of para 74 cannot be met.

4. NOGC is a biodiverse landscape. Containing different tree species & 55 recorded bird species & pond life. The NPPF states this is important for health & wellbeing. It is much valued by locals. Land N of Cutteslowe Park is also important in this respect, changing the open nature the Parks. It is a well used facility. 5. The development will put further pressures on transport & other infrastructures. Seemingly funding bids for infrastructure are being made to cater for growth, but funding has not been secured. Growth shouldn't be approved until infrastructure can be provided & it's demonstrated that any proposed measures will be effective. Traffic in the N Oxford area is already severe. Work on the 2 roundabouts hasn't improved this. More housing will add to congestion & air pollution. Oxford has good public transport provision, but not all who work/live locally will use this. Increased housing & employment levels will add to congestion with its health implications. It will reduce Oxfords' attractiveness as a business location & place to live. Putting more housing & employment in this area cannot be viewed as sustainable. There are also severe existing pressures on other services including health and education.

The housing allocations in the Kidlington Gap should be removed from the Plan & the Green Belt designation of the Kidlington Gap retained.								
PR-C-0500	30/09/2017	Gill	Oliver		N	N		
1191	Comments				Reasons for Participation			
1. The sites are in the Oxford GB. GBs remain Government policy. The Kidlington Gap land is in GB and fully meets all 5 of the purposes of GB set out in para. 80 of the NPPF. GB's are designed to manage the location of new development and would not exist were there not pressure to develop within them. The existence of such pressures cannot therefore be considered exceptional circumstances. There is no evidence (as per para 84 National Planning Policy Framework) that serious consideration and cooperation by local authorities has been given to alternatives such as using allocated and underdeveloped employment land in Oxford for housing and promoting employment growth outside Oxford to create a better balance between where people live and work. This land is also used positively for outdoor sport, recreations and has value for biodiversity and visual amenity. 2. The identified need is based on an outdated study and revised Government figures indicate a much reduced requirement. This is a poor location to meet Oxford's needs as it is adjacent to a commuter rail line to London and in the most expensive part of Oxford for housing. Therefore will likely cater for London commuters rather than provide the required affordable housing. 3. Para. 74 of the National Planning Policy Framework says that existing sports facilities should not be built on unless an assessment is undertaken showing it is surplus to requirements of replaced by equivalent or better provision. No such assessment as been made. It is understood that the Golf Club were not involved in discussions prior to the allocation. The Golf Club is well established, thriving club whose facilities are also used by the wider community. As a flat course it is particularly suitable for senior members. This facility is clearly needed for the health and well-being of residents. The allocated land at Frieze Farm as a replacement golf course is seemingly an afterthought with no indication of how it could be developed or financed. The mature landscape central to the current course could not be replaced within a reasonable timescale. This creates major health and safety issues and does not meet the second criterion of Para 74. 4. The golf course is valuable in terms of biodiversity and landscape, containing 25 different tree species and 55 regularly records bird species as well as pond life. There would also be a negative impact on the open nature of the land to the north of Cutteslowe Park. 5. Further pressures will be put on transport and other infrastructures. No funding has been secured for further infrastructure and growth should not be approved until it can be demonstrated that any proposed measures will be effective. It has been reported that the recent works on the 2 roundabouts have not improved queue times. More housing will add to congestion and air pollution, put pressure on health and education services, as well as reduce the attractiveness of Oxford. It is difficult to understand that putting more housing and employment in this area can be viewed as sustainable.

You have still not explained the need for such huge areas of development in Gosford and Water Eaton. Nor should you be allowed on any greenbelt or green land in this area. Gosford and Water Eaton do not have their own park – we rely on the greenbelt land that forms a part of the Oxford Greenbelt walk for our leisure. The pans that you have included put in a small green field – if you leave the green belt alone it is not required. Quotes website on Oxford Green belt in the letter. In terms of affordable housing – please define what you consider to be affordable and how this might tie into things like nurse's wages?								
Changes Sought				Reasons for Participation				

PR-C-0758	10/10/2017	Susan	Cooper		Yes	Yes		No
1902	Comments							
The effectiveness is hampered by the national definition of "affordable" as 80% of market value, which in the Oxford area is not in fact affordable for most people working in Oxford. This co-option of the term means that the word has become meaningless and using it just angers members of the community who know it can't be trusted to have its original meaning, and it leaves you appearing to be making meaningless promises. Requiring some 80%-of-market housing just means the developers need the rest to be even more expensive, so is counter-productive. Also housing which is initially sold at 80% of market price can be sold for full market price later, so is only a short-term help, except for those lucky few people who can get on 80% house and make a nice profit upon selling it. What we need is housing that is "affordable for people working in Oxford", so suggest you use that phrase, perhaps defining it as "Oxfordable" for short, e.g. in paragraph 5.24 and Policy PR2: paragraphs 2, 3, 5. Alternatively, in paragraph 5.24 and PR2-2 make it 100% social rent instead of leaving the mix between social and "affordable" rent undefined. The large unmet need for social housing would justify this at least initially. Perhaps it isn't needed for the full period so a phrase such as "as long as requested by Oxford City Council" could be added. In PR2-3, welcomes the shift of the mix toward smaller properties compared to that in the SHMA as quoted in paragraph 5.27, as smaller size should mean more affordable for Oxford workers, but suggest you go further and include some studio flats as a lowest cost option for buyers and renters.								
Changes Sought				Reasons for Participation				

Suggest that PR2 be expanded to allow for provision of employer-funded housing for their workers as a broader scope than just key workers, and also for student housing. Given the good bus service into the city centre, this could be attractive for Oxford University employees and graduate students, as well as other city-centre employees. Ring-fencing housing in such ways prevents it from being taken by people working in London and attracted to living in the North Oxford / Kidlington area by the new train station.

Proposed Submission Plan - Policy PR2 - Housing Mix, Tenure and Size

PR-C-0773	10/10/2017	Philip	Rawle	Greenlight Developments	Y	Y	N	Y
1951	<p>Comments</p> <p>Does not consider the Partial Review of Cherwell Local Plan to pass the 'tests' of soundness, in terms of being positively prepared, justified, effective and consistent with National policy. This is because the Partial Review does not make reference to the need for C2 units (residential institutions, including care homes), nor to care/nursing homes more generally. Policy PR2 deals with C3 uses only. Further limitations on current local planning policies (adopted and emerging) are outlined in the accompanying Note prepared by Lichfield's. In terms of National policy, the Government's National Planning Practice web-based resource in the section on 'Housing and economic development needs assessments' provides guidance to the plan-making process on how to deal with 'housing for older people'. Failure of the Partial Review to meet the care needs of the District will clearly have significant implications on housing options for Cherwell's increasingly ageing population. The accompanying Note prepared by Lichfield's quantifies that like the rest of the UK there is a clear need for care homes in Cherwell. Examples are found in the Oxfordshire SHMA, which projects the number of people with dementia and mobility issues in Cherwell and Oxfordshire will roughly double by 2031 (end of this Plan period). The latest DCLG figures project the number of people in Cherwell living in communal establishments to double by 2031. The Lichfield's' Note sets out the care need for Cherwell as follows: • In Cherwell District itself, the latest DCLG projections show growth in the number of people over age 75 living in communal establishments of 565, i.e. this is the number of care home bed spaces needed (2011 – 2031). However, as the Council are planning for housing growth well in excess of demographic trends, which will lead the population growth in excess of demographic trends, 565 bed spaces should be considered a minimum to plan for up to 2031. • In terms of Oxford City's need, the DCLG projections suggest a need for a further 305 bed spaces by 2031, and (as with its housing need) a proportion of this may well go unmet. Cherwell will inevitably import some of Oxford's care home needs, as those additional residents (who otherwise would have lived in Oxford) age and move into care homes. This further justifies the use of the 565 figure for Cherwell as a minimum, which may need to be increased if unmet care home need for Oxford is identified. Lichfield's' Note on Care Home Need provided.</p> <p>Changes Sought</p> <p>Greenlight asserts that it in order for this clear 'need' for care bed spaces to be met in Cherwell over the Plan period, specific policies are required to:(a) Set the delivery of this need over the Plan period as a requirement - this requirement being a minimum of 565 bed spaces by 2031; and(b) To identify and allocate sites to accommodate this need in the Plan and on the Policies Map.To this end, Greenlights' land interest at Skimmingdish Lane, Bicester, which is currently subject to planning application 17/01428/F, provides an opportune site to be allocated for a 64-bed care home; thus accommodating some 11.3% of the bed space requirement (based on a total requirement of 565 bed spaces) over the Plan period (by 2031).To demonstrate how the site at Skimmingdish Lane, Bicester can accommodate a 64-bed care home, and therefore to assist in informing its allocation as a care home site in the Plan, enclosed with this letter is the site location plan and proposed site layout plan, both of which form part of the current planning application on the site.</p> <p>Reasons for Participation</p> <p>The matters raised in these representations are of a strategic nature to the plan.</p>							
PR-C-0775	10/10/2017	Jon	Alsop	Savills on behalf of Christ Church, Exeter & Merton Colleges and Oxford University				Y
523	<p>Comments</p> <p>Objection. In relation to Affordable Housing the consortium requests a different policy approach to that in the Partial Review. Given that the specific purpose of this component of the Local Plan is to meet the housing needs of Oxford, it is right that the policy reflects the dynamics of that housing market. However, the prescribed approach is now a dated one and the City Council is in the process of reviewing it through the preparation of a new Local Plan. In this regard, the consortium requests that within the definition of affordable housing specific allowance is made for the key workers employed by the University and Colleges. As with other employers of key workers in the City, such as the hospitals and schools, members of the consortium frequently experience the challenge of recruiting new staff and retaining existing staff that the unaffordability of housing presents. This can be a deterrent to the consortium members attracting the brightest and the best young researchers coming to work in Oxford. This is a direct threat to the University maintaining its status as the Number 1 University in the World; to remain the best it must attract and retain the best academic minds. Meeting the needs of the University's key workers is not currently addressed in the affordable housing policies that apply in Oxford. However, the members of the consortium are in discussions with the City Council through the University to introduce such an amendment to the City's policies. The University is asking the City Council to recognise, in the definitions used in the Local Plan, that its academic staff, early career research staff and technical and support staff should be identified as key workers. The University has many academic, technical and support staff on lower incomes who cannot afford to buy a house at current market prices, whether that be in Oxford or in the adjacent districts.Key worker housing is intermediate housing that includes a condition of tenancy or lease that at least one full time occupier of each unit or sub-unit must, at the point of that person's first occupation, be in paid employment within one or more of the following occupations:• University and Colleges;• Academic staff;• Early career research staff; and• Other priority staff (both technical and support) at any College, Division or the Administration within the University of Oxford and Oxford University Press.It is intended that, through this mechanism, sites (or part of sites) that are being brought forward specifically to meet the requirements of key workers of the University and Colleges should be exempt in the Local Plan from the affordable housing policy quota.</p> <p>Changes Sought</p> <p>The Partial Review will need to reflect the most up-to-date position and that is the one that is emerging within Oxford, rather than the one contained in the 'Sites and Housing Plan'. The consortium therefore requests that Cherwell Council works closely with Oxford City to better define the requirement and composition of Affordable Housing for these sites as well as the provision to be made for key worker housing as a component of affordable housing.</p> <p>Reasons for Participation</p> <p>On behalf of the consortium, given the significance of their land interests, would wish to participate in the oral examination.</p>							
PR-C-0813	08/10/2017	Jennifer	Betts					N
2202	<p>Comments</p> <p>Support for 50% allocation of affordable housing on all sites together with provision for rented homes and allocation for key workers. Concern that affordable rented property will be allocated to Oxford residents not working in Oxford. There are many Kidlington and Cherwell District Council residents who work in Oxford. Nomination rights should be in the control of Cherwell District Council for rented property. The University who own much of the proposed development land should use these sites for university employees. Objection as some elements are unsound. There should be more clarity about how the affordable housing is to be achieved which will not be to the detriment of residents in Cherwell and more clarity about the provision of key worker housing and nomination rights.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							
PR-C-0814	07/10/2017	David	Betts					N
2218	<p>Comments</p> <p>Support for 50% allocation of affordable housing on all sites together with provision for rented homes and allocation for key workers. No clarity in relation to how the affordable housing will be allocated to Cherwell District Council residents who work in Oxford. Proposed Submission Plan - Policy PR2 - Housing Mix, Tenure and Size

PR-C-0836	09/10/2017	Chris	Pack							N
2265	<p>Comments</p> <p>Objection to Policy PR2: Understand that the principal premise of the CLPPR is to provide for Oxford City's unmet housing need and to ensure that 50% are affordable. I support that 50% figure but it is not included in this policy-only for individual sites. Further there is no clarity about how new affordable housing will be accessed bearing in mind that all the sites are in Cherwell. I would worry that CDC housing clients might be displaced from the waiting list by Oxford clients such as University key workers. Object on the grounds that it is Unsound since there is a lack of clarity and detail concerning matters of affordable housing.</p>									
	Changes Sought					Reasons for Participation				
PR-C-0842	10/10/2017	Duncan	Chadwick	David Lock Associates on behalf of University of Oxford, Merton College and a private landowner	Y	Y	N	Y		
5007	<p>Comments</p> <p>The Tripartite supports the objective of Policy PR2 to require affordable housing from the strategic development sites. Also supports the provision of 50% of homes as affordable housing subject to the representations, set out in relation to Policy PR8. Detailed comments provided (including for key work housing).</p>									
	Changes Sought					Reasons for Participation				
	<p>Changes to the following PR2 points: 1. All housing to be provided as self-contained dwellings (use class C3) only, which shall include flats or apartments, for the avoidance of doubt. 2. Provision of 80% of the affordable housing as affordable rent/social rented dwellings and 20% as other forms of intermediate affordable homes unless otherwise agreed with Cherwell District Council. 3. Delivery of 25 to 30% of the affordable homes as one-bedroomed properties, 30 to 35% as two-bedroomed properties, 30 to 35% as three-bedroomed properties and 5 to 10% as four+ bedroomed properties unless otherwise agreed with Cherwell District Council in consultation with Oxford City Council. 4. Delivery of a mix of sizes of market homes to meet current and future needs and to create socially mixed and inclusive communities. The mix of housing is to be agreed with Cherwell District Council in consultation with Oxford City Council having regard to the most up-to-date evidence on Oxford's housing need and available evidence on local market conditions. The mix of housing shall be generally agreed and set out in the Development Brief, which will then inform an outline application and subsequent reserved matters applications that will determine the final mix. 5. Provision for key workers as part of the affordable housing mix. The provision shall be made in accordance with Oxford City Council's definition of key workers unless otherwise agreed with Cherwell District Council in consultation with Oxford City Council. 6. Provision of an opportunity for community self-build or self-finish housing to be agreed with Cherwell District in consultation with Oxford City Council unless otherwise agreed with Cherwell District Council. Amend the 'definition of key worker' as set out in the Plan and supporting text for Policy PR2, as follows in respect of the University/Colleges: "Key worker housing is intermediate housing that includes a condition of tenancy or lease that at least one full-time occupier of each unit or sub-unit must, at the point of that person's first occupation, be in paid employment within one or more of the following occupations: Universities and colleges: academic staff, early career research staff and other priority staff (both technical and support) at any College, Division or the Administration within the University of Oxford and Oxford University Press."</p>					<p>The land owned and controlled by the Tripartite comprises some 86% of the largest draft allocation within the Plan and as such, occupies a unique and vitally important role in meeting Oxford's Unmet Housing Needs. As such, the Tripartite consider it is essential that it is present [and/or represented] and participates at the Examination in order to assist the Inspector by responding to any queries that may arise and supporting the assessment of the soundness of the Plan.</p>				
PR-C-0882	05/10/2017	Carl	Smith		N	N	N	Y		
5207	<p>Comments</p> <p>Affordable Housing. Questions the amount of affordable housing in the plan. The level of at least 35% per development in the Kidlington area should be substantially raised, but depending on circumstances to at least 50%, as in the Oxford Local Plan. This will then assist in meeting the housing need for people in Kidlington & surrounding area, and for that matter in Cherwell district as a whole. Between at least 5% & 7% of the total housing development should be allocated to Kidlington & surrounding area residents. Densities. Consideration should be given to using the housing densities associated with the Oxford Local Plan with its incorporated Strategic Land Availability and Unmet Housing Need Assessment (December 2014 & October 2016). This shows the density for dwellings in new Oxford residential, suburban development areas as 67 being the high value, 51 as the median value & 35 the low value. Generally an accepted proposal could be 50 dwellings per hectare. In contrast, the Cherwell Local Plan considers the BSC Policies should apply for the Green Belt being comparable to the effective & efficient use of Brownfield sites, being of at least 30 dwellings per hectare. This should apply as a low value. There are recent examples that support increasing the density of dwellings in order to reduce the size of identified development areas in Kidlington & surrounding areas, which create a planning precedence, e.g.. Bramley Close, Kidlington. A table & accompanying notes are provided. These form part of the objection & make a comparison between the basic details of CDC's identified residential development areas against the proposal set out in this objection for increasing housing densities to reduce development areas in order to protect as much as the Green Belt as possible and particularly preserve the "green gap" between north Oxford & Kidlington.</p>									
	Changes Sought					Reasons for Participation				
	<p>The objection is based on removing paragraph 2 of Policy PR2 and replacing it with "Depending on circumstances the reduction in size development areas PR6a to PR10 shall be at a density of between 35 & 50 homes/ hectare and each will consist of providing between 45% to 65% of affordable housing. Where at least 5% to 7% of this total is reserved for allocating to local people in Kidlington and surrounding area. The affordable housing shall consist of a mix of affordable rent/social rented dwellings and 20% as other forms of intermediate affordable housing.</p>					<p>Based on the representation, would like to reserve the right to respond if necessary.</p>

Comments

The entire premise of the Plan is that additional land is required to be allocated in Cherwell to accommodate Oxfords unmet housing needs, & to ensure that a high proportion of that new housing is genuinely affordable. Kidlington Parish Council (KPC) supports a requirement for 50% of new housing to be genuinely affordable. For clarity, it would be helpful if this requirement was included in PR2, rather than in each individual allocation. It is noted that it is not yet included in the Policy concerning unallocated sites (PR12B). PR2 gives insufficient certainty to the delivery of affordable housing for Cherwell residents who are employed in Oxford, & facing similar affordability problems. The Plan proposes that the definition of Key workers used in the Oxford City Plan should be adopted. KPC has concerns that CDC housing clients might be displaced from the Housing Waiting List by Oxford clients - in particular, by University Key workers to the detriment of other clients in housing need who are employed in local schools, the health service & other jobs which serve the whole community. Mindful of the fact that the Universities own much of the land proposed for new housing, it is suggested that only these sites should afford Key worker status to University staff. KPC has been unable to access any clarity from the relevant Authorities on how the allocation of new affordable housing will work in practice – the houses will be within CDC, but there is no visible process for shared nomination rights with Oxford City Council. As this is such an integral part of meeting Plan objectives, the principles to be adopted should be an annex to the Plan. Fuller information on the proposed strategy is essential before the Policy is adopted. It is not sufficient to defer this arrangement to a later stage.

Changes Sought

There needs to be greater detail in the Policy & supporting text (or an Appendix) regarding how affordable housing will be defined & delivered such that it continues to remain affordable for all local residents working in Oxford. Further details should also be given on the mix of market housing type and how key worker housing will be provided.

Reasons for Participation

KPC is an elected body, representing the views of a large number of people in the part of the District which will be most affected by the proposed alteration to the Development Plan. In addition to having a statutory role in the Planning process, the Parish Council has an in depth understanding of the local area where new development is proposed, and is well placed to contribute to the Local Plan process. It is essential for the KPC to be actively involved in the Examination, in order to be able to represent local views, fully respond to submissions made by others, and to address any modifications discussed in advance of the Examiners report.

Comments

The Policy sets a series of detailed requirements which the proposed allocations are required to meet. Recognise the importance of the proposed allocations meeting the identified needs for Oxford City however it is also important that the proposals are also responsive to the context of the part of Cherwell in which they will be located. Considers some of the specific requirements of the Policy in turn. 1) "All housing to be provided as self-contained dwellings (use class C3) only" - Whilst the clarification that only use class C3 dwellings will count towards the housing requirement is helpful, concern is raised regarding the description of these as 'self-contained dwellings'. It is considered that the use of this terminology may lead to unnecessary confusion as to whether flats with communal accesses; amenity space etc. would be counted towards this provision. 2) "Provision of 80% of the affordable housing as affordable rent/social rented dwellings and 20% as other forms of intermediate affordable homes" - The overall percentage requirement for affordable housing is set in the separate allocation policies and this is discussed in relation to the client's land. It is noted that the adopted Cherwell Local Plan requires a 70:30 split between affordable rent/social rented and intermediate affordable homes, as opposed to the 80:20 split proposed in the current consultation document. At this stage there is no clarity provided as to how the affordable housing units will be allocated and how this will be coordinated between Cherwell District and Oxford City Council. Whilst it is important that the proposed developments meet the identified needs of Oxford City, they will form part of Cherwell District and as such it is considered that the same approach should be applied to all new developments across the District to form a cohesive approach. Indeed it is noted that no differential in the quantum and mix of affordable housing has been proposed in the West Oxfordshire Local Plan which is currently at an advanced stage in its Examination. Under the currently proposed approach, concern is raised that this will hinder the delivery of the allocated Oxford City sites as clearly the delivery of the sites to meet Cherwell's needs would be economically preferable to developers under the current proposed approach. Whilst the consultation is supported by a viability appraisal, it is considered that flexibility should be included in the policy to allow for the mix or quantum of affordable housing to be amended should this be proved to be unviable. Furthermore whilst the individual policy allocations set out the level of affordable housing which will be sought, this is not applied to the sites not allocated in the Partial Review covered under Policy PR12b. As such an affordable housing requirement should be identified for sites coming forward under these circumstances. 3) "Delivery of 25 to 30% of the affordable homes as one-bedroomed properties, 30 to 35% as two-bedroomed properties, 30 to 35% as three-bedroomed properties and 5 to 10% as four+ bedroomed properties unless otherwise agreed with Cherwell District Council in consultation with Oxford City Council" - As discussed, whilst the identified needs for Oxford City it is also important that the proposals are responsive to the context of the part of Cherwell in which they will be located. Furthermore, flexibility should be included in the policy to allow for the mix of housing to be amended should the combination of policy requirements be shown to be unviable and to allow for changes in Government policy. 4) "Provision for key workers as part of both the affordable and market housing mix" - The provision shall be made in accordance with Oxford City Council's definition of key workers unless otherwise agreed with Cherwell District Council in consultation with Oxford City Council - Key workers are critical to the functioning of the local economy. We support an approach which recognises that key workers who cannot access market housing should be provided for. Whilst key-worker housing is not currently specified as a defined form of affordable housing in the NPPF, we consider it is appropriate to plan to meet those needs and we support an approach which prioritises key workers as occupants of affordable housing. Paragraph 5 implies that the Council may restrict elements of the market housing to key workers. That would be inappropriate as key worker who are not in need of affordable housing will have their needs met by the market. We consider greater flexibility is needed in terms of tenure mix to allow for changes in the affordable housing forms depending on the definitions which will be included in the new NPPF in due course, to maximise affordable housing delivery, and ensure wide ranging needs are met. 5) "Provision of an opportunity for community self-build or self-finish housing to be agreed with Cherwell District in consultation with Oxford City Council" - The Council have taken a clear lead in making provision for meeting demand for self build or self-finish housing across the District which is to be commended. This is particularly exemplified through the opportunity presented by Graven Hill and the work of the Build! programme. Clearly these programmes do however relate to meeting the needs for such forms of housing within Cherwell District. The evidence base to the Partial Review Proposed Submission Plan provides no clarity on whether the unmet need from Oxford City includes unmet demand for self-build or custom-build housing. Furthermore a copy of the Oxford City self-build register is also not provided and indeed from the City Council's website the only option for registering for self/custom build housing is for locations within the City itself therefore it is unclear whether those individuals on the register would indeed be interested in locations outside the City. Given the identified need for market and affordable housing and the commitment of Cherwell to assisting in meeting this demand, it is these needs which should be prioritised to be met. As such it is considered that this criterion should be removed.

Changes Sought

Suggests clarification of the description of 'self-contained dwellings'. Flexibility should be included in the policy to allow for the mix or quantum of affordable housing to be amended should this be proved to be unviable. Furthermore whilst the individual policy allocations set out the level of affordable housing which will be sought, this is not applied to the sites not allocated in the Partial Review covered under Policy PR12b. As such an affordable housing requirement should be identified for sites coming forward under these circumstances. Flexibility is needed in terms of tenure mix to allow for changes in the affordable housing forms depending on the definitions which will be included in the new NPPF in due course, to maximise affordable housing delivery, and ensure wide ranging needs are met. Criterion relating to self build should be removed.

Reasons for Participation

Our client has important land interests in the District and has raised matters important to the delivery of the Local Plan Partial Review which it would benefit the Inspector to discuss further at the Examination in Public.

Comments

We note that the Local Plan Part 1 Partial Review proposes policies applicable to sites which meet Oxford's unmet need only. All policies in the Partial Review should be consistent with the adopted Local Plan and its policies. Adopted Local Plan BSC 3: 'Affordable Housing' requires 30% affordable housing (target mix of 70% affordable/social rented and 30% as other forms of intermediate affordable homes) at Banbury and Bicester on sites that propose or can accommodate 11 or more dwellings (gross). Policy BSC 3 requires 35% affordable housing (target mix 70% affordable/social rented and 30% as other forms of intermediate affordable homes) at Kidlington and elsewhere on sites that propose or can accommodate 11 or more dwellings (gross). Local Plan Policy BSC 4: 'Housing Mix' 24 requires new residential development to provide a mix of homes to meet current and future housing needs. The Policy does not specify the target mix of housing. Partial Review Policy PR2 introduces an affordable mix of 80% affordable/social rented and 20% as other forms of intermediate affordable homes. It also introduces controls on the type of affordable housing with the delivery of 25-30% of the affordable homes as one bedroom properties, 30-35% as two bedroom properties, 30-35% as three bedroom properties and 5-10% as four+ bedroom properties. A2D query whether the affordable housing provision will meet the needs of Oxford City or CDC's waiting lists from which nominations are made. In any affordable housing policy, the flexibility to adjust quantum and tenure to reflect site circumstances and need (site location and scheme characteristics as well as viability) is essential. As already stated, all policies in the Partial Review should be consistent with the adopted Local Plan and its policies. A2D therefore objects to this draft policy.

Changes Sought

Reasons for Participation

Our objections in part relate to the proposed growth strategy to address Oxford City's unmet need, which we consider to be unsustainable and inconsistent with national policy. This is contrary to the adopted Growth Strategy set out in the Cherwell Local Plan 2011-2031 (Part 1), which focuses new development at key settlements, as identified in Cherwell's settlement hierarchy. The Council has not discharged its duty to demonstrate exceptional circumstances to release the identified sites from the Green Belt, pursuant to paragraph 82 of the National Planning Policy Framework. Further, there is insufficient evidence to suggest that opportunities to increase capacity at existing allocated housing sites have been robustly tested. Finally, there should be a single housing requirement for the Cherwell Local Plan. There is no justification for a separate figure to be applied to meet Oxford City's unmet need, as is currently proposed.

Comments

Affordable Housing It is welcomed that the Partial Review sets a target for 50% of development to be affordable, & that within the 50%, that priority is given to tenures which help those most in need (Policy PR2). The policy proposes the priority should be affordable rent or social rent. Please note that of those tenures, the City Council's priority for addressing the needs of those on the housing register would be for social rent homes. Welcomes the ongoing dialogue with CDC planning & housing colleagues, to discuss delivery of affordable housing at the sites allocated through the Partial Review, & particularly the allocations policy for rented affordable housing. It is envisaged that these discussions will culminate in an agreed strategy or process for allocating nomination rights to the City Council for those on its housing register. It is supported that 'key worker' housing may be delivered as part of the remaining 20% intermediate affordable housing. Oxford CC is proposing to take a new approach to this issue & not using the term key worker in its emerging policy approaches in the Oxford Local Plan; the Preferred Options proposes an approach aligned more with income & affordability rather than specific employers or sectors.

Oxford's chronic need is for housing affordable to people living & working in Oxford, on Oxford rates of pay. The SHMA showed the need is most acute for people on modest incomes. Oxford CC therefore has a policy of requiring 50% of housing provided to be 'affordable', of which 80% is affordable rent/social rented housing. Para 5.23 claims encouragingly 'we sought to meet Oxford's requirement for 50%..'. However, policy PR2 unacceptably fails to commit to this aim, without providing any justification. It is inevitable that, unless this requirement is adhered to rigorously, the majority of housing will not positively contribute to meeting the urgent needs of Oxford's workers. In the site-specific policies, the 50% requirement is included as being one of the conditions that, if met, will allow developments to be permitted. The policy should be changed to make clear that this condition MUST be met before developments are permitted. A hazard of aiming to meet some of Oxford's need in Cherwell District, is the proximity to easier London commuter trains, e.g. Bicester/ Oxford Parkway (& not Oxford City station). This option did not exist in 2014 when the SHMA was produced. Therefore, housing provided won't contribute Oxford's unmet need at all, as assessed by the SHMA but house London commuters instead. Recent experience of Barton Park shows that prices in the open market will be out of reach of almost all Oxford workers, & will only be affordable to workers in London city. There are 2 consequences; First, this in one reason Cherwell District is a bad location choice for providing the extra housing for Oxford's unmet need. Second, access to this housing must be restricted as much as possible to Oxford workers, e.g. by encouraging rentable key worker housing to be provided by big local employers, e.g. BMW, the hospitals, universities & school multi-academy trusts. Policy PR2 omits to mention this need, without justification, & needs to be changed.

Changes Sought

PR2 should be changed in two respects.1. It should make clear that the requirement to provide 50% 'affordable' housing is a non-negotiable condition for developments to be permitted by CDC.2. It should propose means to encourage development of housing for Oxford workers, e.g. by encouraging major Oxford employers (e.g. BMW, hospitals, universities, school multi-academy trusts) to develop housing for rent by their keyworkers.

Reasons for Participation

Because the need to change Policy PR2 needs to be emphasised.

We very much welcome that, per 5.13, the "strategy is Oxford specific; to provide homes where people can most readily connect to Oxford and sustainably access the city's employment areas, its universities and its services and facilities". This readiness to co-operate with neighbouring authorities is essential for coherent planning, and recognises the needs of both existing and future residents. The weakness of the plan arises from its acceptance of the current low densities of the area. The numbers of homes per hectare on the sites proposed in Table 4, around 20, are in line with those for existing 'fully developed' areas of Kidlington, but less than half in parts of Oxford, without any high rise development, and also without the outstanding existing and potential public transport options discussed in this plan. Planning for unnecessarily low densities means that new homes will, immediately via the open market, or over time as they are resold, be unaffordable by the keyworkers for whom they are meant. Measures to keep new homes affordable are welcome, but will be hard to maintain in the long run as long as there are not enough homes overall. The realism of para 5.13 should mean policies for Kidlington, Begbroke and Yarnton which allow the development of a new, distinct identities as local centres, so that they do not become low density dormitory suburbs, whether of Oxford or London. Higher densities should also apply to currently developed areas, in a way which works for existing residents, and reduce the area needed for new development. This would mean less loss of Green Belt, which will be welcomed by many, although this should not be an overriding objection. A gap between Oxford and these local centres risks undermining their connectedness with Oxford, as required by 5.13, so some Green Belt land will have to be re-designated. New policies suggested above for identities as local centres can offset this any loss in this regard. We strongly support policies for the encouragement of environmentally sustainable transport, such as the proposed new rail station at Yarnton, infrastructure required for rapid transport schemes, and better cycling facilities, especially allowing access to Oxford. Higher densities will also encourage walking, which is the most environmentally sustainable transport mode of them all.

Barwood Development Securities Ltd object to Policy PR2 of the Proposed Submission Plan, on the basis that it is neither justified nor effective, contrary to the paragraph 182 of the NPPF. With regard to affordable housing, we acknowledge the role of the SHMA in identifying the appropriate mix within the wider housing market area, and the inclusion of key worker housing within this mix. However, it is considered that Policy PR2 requires more flexibility to allow housing mix to be determined on a site by site basis, and a departure from policy where adequate justification and evidence is submitted as part of individual planning applications. This approach would allow individual developments to respond directly to local needs and requirements at the time. In terms of market housing, it should fall to commercial property developers to determine, within the parameters of Government policy, the housing mix appropriate for each individual development based on site specific circumstances and local market conditions

Objection to Policy PR2 Affordable Housing is 80% of the price of a house. Developers have said they will build 50% such houses for key workers. Kidlington ALREADY houses people working in the University, in the City centre; in the Hospitals in Headington and in the car factory in Cowley. It accommodates a huge number of Oxford's key workers. No provision has been given to these people living in Kidlington who face similar affordability issues. Please see the Oxford's new development at Barton Park. A 3-bedroom house is £600,000 and a flats priced at £300,000. 80% of these prices are £480,000 and £280,000. The reality is no first-time buyers can afford to buy these houses and developers of the site are defaulting on their affordable housing quota. It will be the same scenario here. First-time buyers will be priced out of the market; houses will be bought for Buy to Let or by commuters. Oxford's Unmet needs will not change and young people trying to get on the housing ladder will still not find housing they can afford. These plans are undeliverable. Would also ask why Kidlington residents must defer to Oxford's residents - why is it the City solely allocating this housing?

Policy PR2 – Housing Mix, Tenure and Size Overall support the provision of 50% affordable housing provision to meet local need and with the predominant form of tenure as social rented housing. The objective of achieving 80% rented housing is generally supported, but should only be for social rented housing, excluding affordable rented housing. There also needs to be recognition within the Plan that this should go towards meeting the local housing need within Cherwell DC. This is not stated in the Plan and this policy is not justified without nomination rights clarified.

Unsound. The entire reason for the plan is to provide additional housing for Oxfords unmet need and that a high proportion of this housing is genuinely affordable. Policy PR2 does not provide adequate provision of affordable housing for Cherwell residents who are employed in Oxford and are driving Oxfords economic growth. We support the 50% affordable housing target that has been set in these proposals, details need to be added into policy PR2 so that developers cannot get out of providing the required 50% affordable housing target. This target already exists in Oxford and is very rarely met by developers. In the current proposals, we understand that for the purpose of the local plan process all of the affordable housing in these proposals will be allocated for Oxford City residents. We find this unacceptable, a proportion of the housing needs to be allocated for people living in Kidlington, Gosford, Yarnton and Begbroke who are also affected by the inflated housing prices in the area.

How the allocation of new affordable housing will work in practice between OCC & CDC has not been established satisfactorily, & therefore it is essential there is a proposed strategy in place before the Policy is adopted.

Comments

The entire premise of the CPRLP is that additional land is required to be allocated in Cherwell to meet Oxfords unmet housing needs, and to ensure that a high proportion of that new housing is genuinely affordable. Full support a requirement for 50% of all new housing to be genuinely affordable, but it is not yet included in the Policy concerning unallocated sites (PR12B). Policy PR2 gives insufficient certainty to the delivery of affordable housing for Cherwell residents who are employed in Oxford, and face similar affordability problems. The Plan proposes that the definition of Key workers used in the Oxford City Plan should be adopted. Concern that Cherwell's residents may be displaced from the Housing Waiting List by Oxford clients - in particular, by University Key workers to the detriment of other clients in housing need who are employed in local schools, the health service and other jobs which serve the whole community. Mindful of the fact that the Universities own much of the land proposed for new housing, it is suggested that only these sites should afford Key worker status to University staff. Of concern is that Oxford University and its colleges may be exempted from any infrastructure contributions through charitable exemption. There has been no guidance as to how nomination rights will work in practice for the new affordable homes; the houses will be within Cherwell, but there is no visible process for sharing nomination rights with Oxford City Council. As this is such an integral part of meeting Plan objectives, the principles to be adopted should be an annex to the Plan. Fuller information on the proposed strategy is essential before the Policy is adopted. It is not sufficient to defer this arrangement to a later stage.

Changes Sought

Reasons for Participation

C.1 There should be greater detail in the Policy and supporting text (or an Appendix) regarding how affordable housing will be defined and delivered such that it continues to remain affordable both for local residents and those from Oxford. Further details should also be given on the mix of market housing type and how key worker housing will be provided.

Comments

1. Developers have a right to appeal any agreements they may have accepted regarding the proportion of 'affordable homes' on the basis that their profit margins would be compromised
2. Caveat emptor, comes to mind. If the cost of the land mitigates against sticking to original agreements then clearly too much was paid for the land. The residents of Cherwell cannot be expected to fund the profits of landowners and builders, local or otherwise.

Proposed Submission Plan - Policy PR2 - Housing Mix, Tenure and Size

PR-C-1535	10/10/2017	Layla	Vidal-Martin	Lichfields on behalf of Taylor Wimpey (Oxfordshire)	Y	Y	N	Y
5259	<p>Comments</p> <p>Taylor Wimpey (TW) considers the Submission Plan is not sound as it is not “justified” or “consistent with national policy”. This is because : 1. CDC acknowledge (Submission Plan Executive Summary para XV) that “under national policy Green Belt boundaries should only be altered in exceptional circumstances through the preparation or review of a Local Plan”. The Submission Plan (para 5.17) sets out why CDC consider that exceptional circumstances exist for the release of these sites from the Green Belt & their allocation for residential development. TW contend that CDC have not thoroughly explored “all other reasonable options” &, where they have sought to do so, there are flaws in their evidence base (regarding their assessments of sustainability, transportation & alternative development locations). They have not demonstrated the “exceptional circumstances” required for the proposed release of the sites identified in Table 1 from the Green Belt; 2. CDC’s approach is predicated on an assumption that “Oxford’s Housing Needs” form a bespoke & identifiable source of housing need. This conflicts with the recognition in the Oxfordshire SHMA (2014) (para 9.2) that “the SHMA identifies an Oxford-focused Housing Market Area which extends across much of the County, reflecting the economic influence of the City. The county still remains the most appropriate geography for analysis of housing markets in terms of the ‘best fit’ of local authority boundaries to a functional housing market area.” More recently the Inspectors Report into the Vale of White Horse Local Plan emphasised that (para 45) “it is not the role of, or possible for, the plan to prescribe where people live and work;” and; 3. CDC compound this assumption (Policy 12a) by seeking to pursue a “separate five year housing land supply . . . For meeting Oxford’s needs.” This, in conjunction with proposals not to support Sites Not Allocated in the Partial Review (policy PR12b) are not consistent with the NPPF’s presumption in favour of sustainable development & risk substantially harming housing delivery in the District in the coming years. Scope of response (See Detailed 4 Section Report). This response amplifies TW’s concerns regarding the soundness of the Submission Plan, & their view that their site at Bloxham (Site PR35) forms a “reasonable option” for residential development prior to the release of the proposed allocations from the Green Belt. Specifically • Section 2: Summarises the appropriateness of residential development on the TW site; (Section 2 encloses * Sustainability Analysis by Calibro, * Residential Potential of Site, * Assessment of site against constraints, * SHLAA Analysis) • Section 3: Summarises TW’s concerns regarding the inadequacy of the evidence base, whilst emphasising their support for the level of residential development proposed. This underpins their contention that the Submission Plan does not establish “exceptional circumstances” for the proposed release of these sites from the Green Belt; • Section 4. Sets out TW’s comments on emerging policies and the changes that they consider are necessary to make the plan sound.</p> <p>Changes Sought</p> <p>The Plan proposes that around 55 % of the housing proposed should be targeted within the Green Belt (GB). Para 3.26 “approximately 14 % of Cherwell lies within the Oxford GB”. Thus CDC need to demonstrate “exceptional circumstances” as to why this housing cannot be located within non GB locations comprising 86 % of the District. We do not consider that CDC have appropriately addressed “reasonable alternatives” & therefore cannot be considered to have demonstrated “exceptional circumstances” for the release of all of these sites from the GB. Taylor Wimpey are concerned that this draft policy is too prescriptive and fails to allow sufficient flexibility for specific circumstances that may apply. They consider that additional text should be added at the end of the first paragraph stating “except where such provision is not feasible or viable.”</p> <p>Reasons for Participation</p> <p>We consider it necessary to participate at the part of the Examination to amplify the concerns and points raised within the representations.</p>							
PR-C-1539	10/10/2017	Tim	Emptage					N
4833	<p>Comments</p> <p>Object in relation to PR2 on the grounds of lack of clarity on key worker housing and nomination rights.Lack of clarity on how Cherwell residents will benefit from the affordable housing. The allocation of 50% affordable housing and the allocation for key workers and provision for rented homes is to be welcomed but the plan does not make it clear on how this will be achieved. The plan does not detail how the affordable housing will be allocated with regard to Cherwell residents, many of whom work in Oxford. It would not be right for Oxford City council to have nomination rights on rented housing in Cherwell DC area. This issue should be resolved before proceeding with the plan.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							
PR-C-1542	10/10/2017	Cllr Andrew	Gant	Oxford City Council Liberal Democrat group	Y	N	N	Y
4847	<p>Comments</p> <p>The plan talks in several places about provision of balanced housing. It uses the term "affordable" in a variety of ways, sometimes in inverted commas. The plan should be clear where it means social rented housing. Specific to this point, there is reference at several places to a good balance between "affordable", market and "key worker" housing. However there is no commitment to the detail of how "key worker" housing will be provided. Planning matters such as size, density, tenure, ownership, price, qualification and other factors are simply ignored. Without them the commitment to "key worker" housing is meaningless, and the policy and associated statements cannot therefore be regarded as sound. The plan states that it will use Oxford City's percentages of housing types, and that it expects this policy to deliver balanced communities. It will not. Barton Park has delivered a large amount of much-needed and extremely welcome housing for social rent, and a slightly larger amount of market housing, currently priced at an average of £450,000. There is therefore no housing for those who do not qualify for social rent, and cannot afford the market prices. This accounts for the large majority of people in Oxford and surrounding, including "key workers" and others who represent the real housing need for Oxford. This model does not provide for them. If the plan aims to provide social rented housing, market housing, and little in-between, it should say so. The current plan does not meet its own aspiration to provide sufficient homes for those on average incomes. It cannot therefore be regarded as sound</p> <p>Changes Sought</p> <p>The plan must give more detail in planning terms of how the aspiration to house "key workers" and others on average incomes is to be met.</p> <p>Reasons for Participation</p> <p>To ensure full representation of the views and concerns of local people by their elected representatives</p>							
PR-C-1542	10/10/2017	Cllr Andrew	Gant	Oxford City Council Liberal Democrat group	Y	Y	N	Y
4845	<p>Comments</p> <p>Paragraph 5.26 states that "an overall increase in supply will facilitate movement in the housing market and 'free up' housing stock within Oxford". Although all commentators agree that a simple increase in numbers is an important part of addressing the housing crisis nationally, the local context clearly shows that this statement is simply wrong. It therefore renders the policy concluding drawn from it unsound on the basis that it is not positively prepared, justified or effective.An overall increase in the supply of market housing in and around North Oxford will not, by and large, facilitate movement within the existing market, because the prices are not within reach of most participants in the economy of Oxford and its surrounding regions. Instead, an increase in supply will increase the attractiveness of Oxford to commuters to London, families relocating to take advantage of Oxford's environment and schools, and investors. Familiarity with the housing market in North Oxford, which will be directly comparable, and with estate agents, many of them based in my ward in Summertown, confirms this. Cambridge has built large numbers of houses in recent years. Analysis printed in Oxford City Council's recent Annual Monitoring report reveals that between 2004 and 2017 average house prices in Cambridge rose from 9 x average income to 16 x, putting it on a level with Oxford and London . This does not support the inference that, within a local context, simply adding numbers to the housing stock will relieve pressure on the market. The plan cannot therefore be regarded as sound if it relies on that inference.</p> <p>Changes Sought</p> <p>Housing need is people, not numbers. The plan needs to address how its housing projections relate to real employees and families. It does this for those in the social rented sector. It does for high-end market housing. It does not do so sufficiently for those not in either of those categories.</p> <p>Reasons for Participation</p> <p>To ensure full representation of the views and concerns of local people by their elected representatives</p>							

Proposed Submission Plan - Policy PR2 - Housing Mix, Tenure and Size

Comments

Objects to the proposed submission plan because there is a lack of strong evidence for such a large number of houses needed. In order for our villages, towns & cities to remain distinct entities the amount they can expand should be limited. With no mechanisms to prevent this the end result could be one large urban conurbation. The GB is one way in which the individual character of our villages, towns & cities can be retained. If Oxford cannot meet its own housing need, then it has expanded as much as is possible. It should not be looking to neighbouring LA's to meet that demand. A false demand for housing is being created by proposed business developments. If Oxford cannot supply the amount of housing required by the business developments then the business development plans need to be re-visited. They should be scaled down so that the housing needs created by the development can be met on land within Oxford City. Building on the Green Belt: The Government's NPPF, Section 9 "Protecting GB land" states: "The gov. attaches great importance to GB's. The fundamental aim of GB policy is to prevent urban sprawl by keeping land permanently open; the essential characteristics of GB's are their openness & their permanence." Only in "exceptional circumstances" should there be any change to the GB. As there is not a real demand for this number of houses, I do not consider the circumstances to be anywhere near exceptional. I would consider the need for housing to be exceptional if there were no empty houses in or around Oxford & if new developments sold out immediately. This is not the case. E.g. there is a perfectly habitable empty house, 2 doors away from us for nearly 18 months. The loss of character to Oxford & the surrounding areas would be irreversible if the GB were to be developed. Open space is important for human well being. Affordable housing: The area severely lacks this. Many families are moving away due to high house prices. The plans do not address this need. The proposed density of housing would only be profitable for the developers if sold at market rates. A higher density would be required for affordable housing. The amount of affordable housing proposed in plans does not get enforced so even if a suitable amount was being proposed, it is unlikely they will be built as developers will look at profit first. Transport: There have been many large & expensive projects over the last 2 decades attempting to address Oxford's transport problems, including the "Oxford Transport Strategy", work on most of the major ring road roundabouts & the Frideswide Square re-modelling. While these projects have made differences to some of the traffic flow & helped some areas, transport around Oxford still remains a major issue. There is no capacity within the ring road to add more infrastructure & the ring road is extremely busy during rush hours. If the new houses are to serve those working in Oxford, it will create even more congestion. I urge you to consider the impact that this number of houses would have on the area & go back to the beginning to consider if such a demand really exists.

Objections to the whole "Land Grab" between Oxford and Kidlington
 1 The land being claimed for housing development is all in the GB. Filling in the green belt between Oxford and Kidlington is a ribbon development and will result in Kidlington being absorbed into Oxford. Leaving a derisory small gap between the two settlements is a cynical gesture.
 2 The land area being "grabbed" is much too large for the number of houses proposed, suggesting that many large detached houses will eventually be built. This is not what is required by local young people who hope to be employed in the Oxford area.
 3 Recent recalculation of housing need in the UK has shown that the calculation of number of houses planned in this application is much too high.
 4 Houses in the area around Oxford Parkway Station are likely to be bought largely by London commuters, not by people who plan to work in the local area. This will not satisfy local housing needs, and will push up prices.
 5 Predicted house prices in the new Barton development near Oxford seem to be inflated by at least 50% above prices of existing comparable housing in the area. Artificial price inflation will result in any "low cost housing" being inflated in price also, so there will eventually be very little "low cost housing" suitable for essential workers in the Oxford area.
 6. Local traffic around the south end of Kidlington and around Oxford Parkway Station is already very heavy, and there are very long delays in the morning rush hour. Very substantial re-planning of traffic flow would be required to accommodate cars from hundreds of new homes. Substantial land would have to be set aside for bus and cycle lanes and the local rail station car park would have to be greatly enlarged. This would contribute to the ugliness of the ribbon development, and use up valuable agricultural GB land.

Protesting against plans to build 4,400 new houses on GB around Begbroke and Yarnton. It seems GB does not stand for anything anymore. All wildlife habitat will be destroyed. A thriving bat population will go. A40 traffic is horrendous now what will another 8000 plus cars create, plus the pollution. The Oxford's unmet housing need has nothing to do with CDC so not on our GB.

Objections on: 1. Place is based on data collected in 2014. Since that time we have had the Brexit vote, which will radically alter the country's economic needs and its prosperity. The data cannot be used to assess future needs in the light of this huge change. 2. Not sensible to embark on major house building programme until the Barton Estate is completed and inhabited, since that will have a major impact on housing need. 3. It is naive to suppose that builders will respect council requirements for social housing. In no recorded cases under the present government has this happened-but social and affordable housing is what is needed. 4. The Green Belt should not be encroached upon at all. 5. Oxford traffic is already virtual stationary during rush hours. Public transport is crucial -but there is no guarantee that builders will make the streets in new developments wide enough for buses. 6. Infrastructure. Vast engineering works will be needed, Will the builders pay of this? The taxpayer - no - will be footing the bill.										
Changes Sought					Reasons for Participation					
1. The GB should be preserved at all costs. 2. Up to date statistics should be used. 3. No development should be allowed which does not have adequate road widths and infrastructure. 4. Development should not be allowed that results in Oxford becoming a dormitory suburb of London.

We very much understand pressure to build new houses, given the national and local shortage. However, we strongly object to PR3 building on GB land, and green countryside was a big decision maker for us moving to this area. Aside from the proven health benefits of green spaces, building on GB sets a precedence and it will never be reclaimed. There are brownfield/non-GB areas around Oxford that would not pose the problem. Also strongly object to PR11. Traffic on the Oxford Road and A44/A40 is already at a standstill most mornings. New houses on the scale proposed is not viable and will leave the area gridlocked. Air pollution and well being of residents will be sacrificed.

<p>The Plan is inconsistent with the National Policy as it treats the Green Belt (GB) with contempt. The national Planning Policy Framework (NPPF) only permits loss of GB in "very special" circumstances. Rep refers to government policy on GB in his letter. Unmet housing is not one of these. The Plan depends on the destruction of a significant portion of Green Belt. The NPPF states " The fundamental aim of the Green Belt is to prevent urban sprawl by keeping land permanently open; the essential characteristics of Green Belt are their openness and permanence". The identities of the three villages of Kidlington, Begbroke and Yarnton are characterised by open settings. They will be destroyed and become subsumed in a piece of what Cherwell Council calls "space shaping" - basically the urban sprawl the Government claims it wants to prevent. Cherwell seem to have a political approach to sustainability and have decided to simply offset the environmental loss of Green Belt by saying in Para 1.206 of their Sustainability Assessment: The overall impact on the Green Belt and its purposes, including the amount of land that needs to be removed to effectively implement the Plan, has been considered by the Council in the context of the outcomes of the SA for example in relation to the significant positive effects for affordable housing provision in locations which best help to meet Oxford's unmet housing needs." On that basis the Green Belt might as well not exist. It becomes by definition unsustainable.</p>

Proposed Submission Plan - Policy PR3 - The Oxford Green Belt

PR-C-0125	18/09/2017	Martin & Pamela	Palmer				
1010	Comments						
Objection to building on North Oxford Golf Club. The thought of this whole area losing its identity and becoming urban sprawl, with no break between Oxford and Kidlington, fills me with despair. As we move towards a more congested and possibly overpopulated country, the green belt breaks between populations will be even more important than they are now, and must be retained.

Particularly object to PR1(a) and PR3. There is seemingly plenty of land on unused property in Oxford itself. If there is a need for more housing, this should be exploited first, before destroying the countryside. This decision seems to have been made on a financial basis with a number of organisations and people standing to make significant sums. The ultimate irony is destroying and building on a golf course (owned by a college in Oxford?) to then build a golf course later. It seems that the additional traffic has not been factored in to this plan, and the local infrastructure can only just cope as it is. Additional building will only bring more of the roads to a standstill.

Object to Policy PR3 to remove land from The Green Belt. The Green Belt is not there for you to destroy. Government guidance states building on The Green Belt is only an option, when all other avenues have been exhausted. This surely is an untruth as Oxford City council has the land to build its so called 'unmet housing need' but is sitting on it, waiting for the right price from commercial developers. This surely must be investigated further. The Green Belt is the lungs of the Country and therefore should be protected, not only for now, but for future generations. You will destroy many wildlife habitats. We believe the Green Belt is precious and gives a life line to many wild animals and birds, as a member of the RSPB and BBOWT have a great love of the countryside, this whole proposal makes me very sad, the very thought of it is quite sick making at the very least. You will over populate our villages, and in this case, merging us all into an ugly extended Oxford City, we will no longer be a village. I believe removing our Green Belt, building on it is so very morally wrong and strongly object to it.

Concerns over Cherwell District Council's plans to build 4,400 houses to meet Oxford's so called "Unmet Needs" by building 3,990 of these houses on Green Belt land surrounding Oxford. Strenuously object to Policy PR3. The Plan purports that there are exceptional circumstances for building on the Green Belt, viz, "to help Oxford's needs. The reasons why the Green Belt exists are fivefold and the Government has said that it "attaches great importance to Green Belts" (NPPF para 79) except for one escape clause that in, "very special circumstances" it will allow inappropriate and harmful development to the Green Belt to be approved. (para 87) However, 'Very special circumstances' will not exist unless the potential harm to the Green Belt by reason of inappropriateness, and any other harm, is clearly outweighed by other considerations." (para 88) Furthermore, NPPF policy, (para 89) states definitively that, "A local planning authority (such as Cherwell District Council) should regard the construction of new buildings as inappropriate in Green Belt." Referring back to the fivefold reasons for the GB, the plan will actually:- cause and perpetuate the unrestricted sprawl of large built up areas; cause the melding of Yarnton and Begbroke into Kidlington and Kidlington being subsumed as a suburb of the city of Oxford; encroach extensively on open fields along the A44 "growth" corridor extending from North Oxford to Woodstock; cause the deterioration of the setting and approach to the Blenheim World Heritage site and the diminishing of the special character of local villages, in particular that of the historic town of Woodstock. The Plan should focus on regenerating and recycling of land within Oxford, e.g., the former Dog Racing Stadium, University Parks, Christ Church Meadow, Magdalen Deer Park, Oxpens Ice Rink, golf course, derelict farmland, increasing density and height of buildings, and prioritising affordable housing over employment sites. The Plan (PR 3) is excessive and unsound and now untenable and superfluous in the light of the national government's more reasonable calculation of housing needed by more than 30% i.e., from 100,000 to 68,000. The so-called "Unmet need" for Oxford would be reduced by about 50% thus neutralising the supposed "very special circumstances" upon which PR3 was concocted. These proposed reductions in housing need would also reduce the number of housing contributions required by local authorities for Oxford's "needs." Ex., Cherwell -33%, Oxford City -47%, South Oxfordshire -20%, Vale of White Horse -33%, West Oxfordshire -9%. Total for Oxfordshire -32%. We know that the these new national government housing projections are not yet official policy and will not be until at least March 2018 around which time there will be a public consultation on these projections. That is why some local authorities, despite these lower housing projections, prominent amongst them being the Cherwell District Council, have decided not to wait until these projections become policy and to rush ahead using current over-exaggerated figures. Why? Gross increases in taxable income? This makes this consultation nothing more than an expensive (to the tax payers) exercise in condescension and of placating the public. The Woodstock Action Group (WAG) in light of the national government's realisation that the current housing targets are flawed, over-calculated and in excess of those actually needed in Oxford, the Cherwell District and the other local authorities, calls for the deletion of policy PR3 from the CDC Local Plan.

The plan attacks the core principles on which GBs depend. Even if Oxford's inability to meet its own housing need is real and had been properly quantified this need it should be met elsewhere than in the GB, which three quarters if the Council's own voters want to see protected.

Proposed Submission Plan - Policy PR3 - The Oxford Green Belt

PR-C-0237	15/09/2017	Karen	East	TMP Planning Ltd on behalf of Gosford and Water Eaton Parish Council			N	Y
------------------	------------	-------	------	--	--	--	---	---

814 Comments

95% of the land within Gosford and Water Eaton Parish is within the Green Belt. The plan as proposed allocates 3 significant sites for housing and removes 2 others from the Green Belt. These are Water Eaton Park and Ride and land between the A34 and PR6b which the Plan states in 5.39 is not suitable for residential development. In total, this involves the removal of nearly 100 hectares of land from the Green Belt within the Parish Council's area which represents 12% of Green Belt in the Parish. This loss will occur in the narrow gap between Gosford and Water Eaton Parish and the village of Kidlington with north Oxford reducing the separation substantially leaving very little undeveloped land between the settlements. It will result in the urbanisation of Gosford and Water Eaton Parish with a 208% increase in the number of houses within the Parish. Noted that in the Green Belt Study (April 2017) all the site allocations in the Parish were identified as "High" or "Moderate High" in terms of harm to the Green Belt from their release for development. Indeed, of all the sites considered in the study within Gosford and Water Eaton the majority are also given a "High" or "Moderate High" ranking. It is clear that releasing this land for development of 1410 dwellings will lead to the coalescence or near coalescence of Kidlington, Gosford and Water Eaton and Oxford. The remaining gap is heavily dominated by transport infrastructure (railways and major roads) and therefore does very little to preserve any real sense of openness which is a key function of Green Belt policy. With such a narrow gap it will be much more difficult to retain any real sense of separate identity for Gosford and Water Eaton and for Kidlington. Quotes the NPPF five purposes of the Green Belt. The proposals put forward in the Partial Review would fundamentally conflict with several of these objectives. They would lead to: • further sprawl from a large built up area through the northward expansion of Oxford urban area; • Gosford and Water Eaton, Kidlington and Oxford merging as a result of the development; • Encroachment onto the countryside within the Parish. • Damage to the setting of Oxford through development within the Cherwell Valley. The NPPF is clear in paras. 88 and 89 that new building within the Green Belt is "inappropriate" and should only be allowed in "very special circumstances". The Parish Council is not convinced that "very special circumstances" exist in relation to the proposed development of Green Belt in the Parish. Also refer to the statement in para. 034 of the Planning Practice Guidance (Stage 5 – Housing and Economic Land Availability Assessments): "In decision taking, can unmet need for housing outweigh Green Belt protection? Unmet housing need (including for traveller sites) is unlikely to outweigh the harm to the Green Belt and other harm to constitute the "very special circumstances" justifying inappropriate development on a site within the Green Belt." Would also highlight a clear inconsistency in the way Cherwell District and Oxford City have approached the review of Green Belt sites as part of their Local Plan process. Both authorities have carried out Green Belt Studies using the same consultants (LUC) and the same methodology which assesses the harm associated with releasing sites for development. In the Oxford City Council – Background Paper Preferred Options on Housing Needs and Supply June 2017 it states on page 5: "On balance, the proposed policy approach in the Local Plan is to exclude from the site allocations process any sites or parcels which would have a "high" harm or "moderate high" harm impact" These sites are therefore not to be taken forward for further consideration. By contrast all the sites allocated by Cherwell in Gosford and Water Eaton are scored "moderate high" or "high". This is a fundamental inconsistency in the approach adopted and begs the question as to whether Oxford City have really considered all options for development within the City boundary to an equal extent as within Cherwell. In our view this throws further doubt on the appropriateness of the figure of 1410 houses for Gosford and Water Eaton. In conclusion our view is that development of the three sites in the Parish for 1410 dwellings will fundamentally undermine the key purposes of the Green Belt and should not be permitted to go ahead.

Changes Sought

Wish to see all allocations removed and the land retained as Green Belt.

Reasons for Participation

The Parish Council would wish to take part in order to explain the potential impact of the proposed development on local communities and why this should be better reflected in the draft vision.

Strong disagreement to proposed plans. GB enables and encourages distinct identities and characteristics for towns and villages whilst providing valuable space for exercise and enjoyment of the countryside. This long held tradition that has been enshrined in law is put at risk, riding roughshod over planning laws and local inhabitants. Houses are needed for local young people doing vital work in the caring, emergency and low paid industries but, as in the case of Barton where affordable housing was used as a pretext for gaining planning permission - there is now no affordable housing for local young people. It is feared that this vast development will become a dormer town for the better off/well paid in Oxford and London. To help local people the landowners could donate portions of their gifted lands to help local councils with smaller and less divisive developments. Whilst people employed by these landowners may well receive subsidised accommodation, this will not help our hospitals, schools, nursing homes or council workers who are vital to support the local infrastructure and are currently being forced out of the locality in order to be able to afford to rent or buy their own property. These people far away from friends and families will not be able to give or receive help from their families at time of need, thus impacting further on social services. Development of this size is horrific when the A34 and A44 are currently totally inadequate and overwhelmed. Local schools, nurseries, GP surgeries and hospitals are all overstretched and unable to cope with current numbers. Cherwell District Council has a duty of care to plan responsibly for the inhabitants of Cherwell and not become a dormer city for the convenience of Oxford City.

Object to Policy PR3 to remove land from the Oxford Green Belt. The Green Belt around Kidlington preserves green spaces that are so greatly appreciated and enjoyed by local residents. It protects both the historic city of Oxford from overdevelopment and neighbouring villages from coalescence. Government guidance says that Green Belt is a permanent designation and that unmet housing need is not a reason for building in the Green Belt. The plan is therefore ineffective and not consistent with National Policy. Would urge the inspector to listen to local residents on how much land would be needed to constitute separation. These proposals reduce the gaps so they are almost negligible.

Changes Sought

In light of the Government's consultation on its new approach to housing assessment, Cherwell DC should halt the current process and reassess its figures before continuing. If or when the process does continue, housing development on this scale is not justified on Green Belt sites around Kidlington, Yarnton and Begbroke and alternative sites in the district should be reassessed. Local residents strongly express the view that should building happen on the Green Belt, it should be a last resort, meet local need, is fully supported by infrastructure and be affordable to the community. This plan meets none of these criteria.

Reasons for Participation

In my role as Member of Parliament for Oxford West & Abingdon constituency, which includes Kidlington, Yarnton & Begbroke, it is my job to represent the views of my constituents at the Examination.

Objection to building on our Green Belt Absolutely horrified at the idea of all this extra development in and around Kidlington. The notion of building on our Green Belt between Oxford Parkway and Cutteslowe Park is absolutely ludicrous. Our Green Belt is precious, Kidlington would lose its individual identity and one of the joys of walking through Cutteslowe Park is being able to appreciate the open fields and views to the north of the park. Oxford Golf Club must stay exactly where it is, it makes a natural green break between Kidlington and Jordan Hill. The new roundabout at Cutteslowe doesn't work, it can take half an hour to drive my son the mile and a half from our home to his work in Cutteslowe Park. Traffic, especially in term time for some reason, can build right back into the Garden City estate. He has to travel by car as he is disabled. Those people who say these roundabout improvements work presumably don't have to sit in this traffic every morning. The extra load that these developments would put on the roads would be untenable. Our doctors' surgeries and schools are at breaking point now. Would these homes be for the benefit of local people? NO, it would encourage commuters and buy-to-let investors, not people who work in the area. My daughter had to move 17 miles from Kidlington because she couldn't afford to stay in the village in which she was born!

Proposed Submission Plan - Policy PR3 - The Oxford Green Belt

PR-C-0265	09/10/2017	Ellis	Davies		N	N	N	Y
5549	Comments							
<p>The plan is not consistent with the National Planning Policy Framework that was politically agreed and defended in the last election. It is not consistent with Cherwell District Council own stated Local Plan policy. The plan hasn't given an exceptionally proven reason for building within greenbelt. It is not an exceptional reason for building in the greenbelt so that it can be close to Oxford. People have and are currently commuting from Banbury, Bicester, Chipping Norton, Woodstock and surrounding areas in Cherwell District for many years. The Oxford University Hospital Trust do not allow employees to park cars at the Trust sites in Oxford if they are near a bus route so any additional expansion of housing elsewhere in the district is not an issue other than the failure of Oxford County Council management of the bus routes and their way of tendering to bus companies. The university of Oxford could do more to ensure that many of its employees and students could do likewise. Destroying the greenbelt by building houses and then saying that it will enhance it by having green spaces within it is to hoodwink the general public. The allocated greens spaces will not bring back the wildlife including frogs, newts, bats, woodpeckers and butterflies despite all the emphasis on saying that they will enhance the greenspace. The greenspaces is a pre-tense of underestimating the huge impact on the ecology of the existing flora and fauna within the area and those parts that are adjacent to it. Once build upon they are destroyed forever. Fifty metres green space between developed areas does not protect the ecology of wild life. The effect of light pollution on night insects has a huge detrimental impact on the ecology of the flora and fauna in the vicinity. One of the key purposes of the greenbelt is to prevent urban sprawl and what this plan effectively does is to create an urban sprawl merging three separate villages with North Oxford. Begbroke parish will lose a substantial portion of its parish to building and will effectively merged into Yarnton. It is noted that land will be allocated for employment purposes at Begbroke Hill Science Park. When Begbroke Hill was given planning permission for building the new road it was stated that no development was to occur in the greenbelt. How can it be now overturned and one suspects that this was the real objective for building the road. Objection to policy PR3a - Why is this being protected as greenbelt and, possibly, be allocated for a golf course. This is closer to the city so why this was not selected in the first place. Objection to policy PR3e - This policy is nothing to do with the unmet need of Oxford Housing needs. This is a ploy to place additional business premises, be it for University of Oxford, technological or other businesses to build in the Greenbelt. Objection to policy PR3b - Reserving a small amount for development of railway stop is in the wrong place. Surely it ought to be nearer to the Kidlington Centre. This is only to suit Oxford University aspirations and not for the good of three village communities. This will involve future infrastructure for linking to other sites and nothing seem to have been planned in.</p>

Very strong objection to Policy PR3 which threatens to remove land from the Oxford GB. Once protection of the GB is breached, a 'slippery slope' will lead to the complete destruction of the Belt as we know it. Village identity will be lost as the City spreads out, eventually destroying boundaries and all that we love about village life in Oxfordshire. Bear in mind too that much of the GB sits on flood plain. Why do you think there has been so much flooding in this country in recent years? It's because of incompetent planning and development of houses on areas of land that function primarily to control flood water, a function that is completely misunderstood by modern planners and greedy developers who only think about how best they can line their pockets. Just think for a moment about how you'll be able to meet the huge costs of introducing flood defence systems in the future as a result of incompetent decision-making now.

Objection to Policy PR3 as the houses would be developed on 'GB' land which is not consistent with National Policy to preserve green spaces for all. If the plans go ahead, our local area will become 'a mass urban sprawl'. The disadvantages of this are endless, as we would all suffer increased air, noise and light pollution and a devastating loss of wildlife habitats and precious green spaces. The 'GB' is supposed to be preserved across the UK, so why is it now at risk? Many people would be distraught if future generations were left without the priceless positive impact that nature has on them. Without the ability to walk their dogs, discover wildlife and get regular exercise, then we couldn't expect them to grow into caring or environmentally friendly adults. Therefore, ruining vital green spaces would have a lasting effect on both the UK's scenery, and generations to come.

Objection to remove land from the Oxford GB. This preserves open spaces that proved mental and physical health benefits for local residents, protects the City of Oxford from overdevelopment and neighbouring villages from coalescence into a vast urban sprawl. Government and (until now, Cherwell's) policy is that GB is permanent and unmet housing need is not a reason for building on GB. Once lost to development it can never be recovered and sets a very dangerous precedent. Alternatives are to make better use of previously developed land in Oxford and to use some of the proposed employment sites in the city for housing instead. It is not reasonable to develop within the GB.

Objection to removing land from GB. GB preserves open spaces for local residents, protects both the historic City of Oxford from overdevelopment and neighbouring villages from coalescence. Government guidance states GB is a permanent designation and the unmet housing need is not a reason from building on GB. Plan not consistent with national policy. Recent application to build 48 houses in Yarnton Garden Centre was rejected by both Cherwell District Council and Plan Inspectorate/Secretary of State after appeal. Comments from the Inspectors were "Woodstock Road and Sandy Lane are residential in character with both single and two-storey dwellings sitting front the highway and are set in large plots with long rear gardens and mature landscaping. These features contribute to the spacious and sylvan landscape setting of the area". "Given the character of the area the location of the proposed dwelling would be out of keeping with the prevailing pattern of residential development on Sandy Lane and Woodstock Road, it would transform the appearance of the area as a 'buffer' between the residential properties and the GB beyond". Both Inspectors dealing with this application said the new development would conflict with saved Policies C27, C28 and C30 of the Cherwell Local Plan (2006), which require that development respect historic settlement patterns and are sympathetic to the character and appearance of the area. The development would also fail to meet the requirement of para. 58 of the National Planning Policy Framework. There are other concerns regarding living conditions of neighbouring and potential noise.

UNMET HOUSING NEED': The figures put forward by Oxford City as unmet housing need are highly questionable, and Oxford City does not yet know how much of its 'unmet housing need' it can cater for as it has only just finished consulting on its Preferred Options and its Local Plan has not been prepared. It also continues to allocate land for employment and expects other authorities to meet its 'unmet housing need'. The Government's new method for calculating Objectively Assessed Housing Need suggests that Oxford has significantly over-stated its housing need. Cherwell's current proposals seem to have been produced with undue haste and this approach is not justified Site PR6a is adjacent to an area of GB land put forward for development by Oxford City, and neither council has considered or publicised the cumulative effect of both parcels of land being removed from the GB. The Councils have not demonstrated effective joint working on cross-boundary strategic priorities so these policies are not effective.

Changes Sought

Reasons for Participation

The Cherwell Plan is fundamentally unsound and I suggest it should be rejected. Cherwell should re-start the process at a future time when the amount of housing needed has been realistically calculated. Cherwell should have due regard for the NPPF an in particular the parts of the framework which apply to the Green Belt.

GREEN BELT: Over the past 50 years or so the Kidlington Gap has been steadily eroded with a large part now earmarked for the norther Gateway development, and the remaining gap largely comprised of PR6a and PR6b. The Cherwell Green Belt Study by LUC in April 2017 judged that the level of harm in releasing these two sites would be high. Paragraph 80 of the National Planning Policy Framework sets out the five purposes of the GB in checking unrestricted sprawl, preventing towns merging, safeguarding the countryside, preserving historic towns and assisting in urban regeneration. PR6a and PR6b prevent Kidlington and Oxford merging, and the LUC report states that "this release would result in the A34 becoming the Green Belt boundary from the Northern Gateway up to Oxford Parkway station, leaving only the width of a single field to separate Oxford from Kidlington". and that the "physical prominence of the golf course makes it an important buffer feature on the urban edge...". Development of these sites would also damage the rural setting of an important City with a rich heritage of history, architecture and culture. Cherwell considers the that the removal of these sites is justified by exceptional circumstances, but has failed to realise both the international importance of Oxford as a city and the likelihood of these homes providing for London commuters rather than Oxford. Cherwell has also failed to give proper consideration to other sites in its area that are not in the GB.

The Cherwell Plan is fundamentally unsound and I suggest it should be rejected. Cherwell should re-start the process at a future time when the amount of housing needed has been realistically calculated. Cherwell should have due regard for the NPPF an in particular the parts of the framework which apply to the Green Belt.

Proposed Submission Plan - Policy PR3 - The Oxford Green Belt

PR-C-0344	22/08/2017	Prof John	Batchelor		N
5293	<p>Comments</p> <p>The Green Belt preserves open spaces that are much appreciated by local residents, protects both the history city of Oxford from overdevelopment and neighbouring villages from coalescence. Government guidance says that Green Belt is a permanent designation and that unmet housing need is not a reason for building in the Green Belt. The Plan is therefore not consistent with National Policy. The proposal under Policy PR3 promises huge financial profit for landowners, builders and developers and misery for the rest of us. The Green Belt legislation was put in place for excellent reasons, and have seen no persuasive argument for any violation of the Green Belt by district and county councils and by planners and developers. The argument that says that the villages round Oxford should be forcibly enlarged to ease Oxford's housing problem has no force. There are brown field sites within the boundaries of the city of Oxford which should be used for housing not for spinoff from Oxford university's own projects, especially the development of business and science parks and the like. I have heard an argument to the effect that destruction of the green belt round Kidlington, Begbroke and Yarnton would be justified by the need to house employees of the businesses and science parks indicated above. This is wholly without justification; such employees would require housing in Oxford itself. Oxford city should (a) look to higher density housing on its own brown field sites to meet its supposed needs and (b) oppose the demand for additional building land stemming from the university's innovations. Policy PR3 is based on a brutal and destructive assumption, namely that the city has some kind of 'right' to wreck small and stable communities in the surrounding villages by dumping its traffic pollution and its surplus population on them.</p>

986	<p>Comments</p> <p>Object to the proposal to build on Green belt land which is supposed to be protected and this looks to build across a number of different sections of Green belt - which is one of the benefits of Kidlington is that it has a green belt that one feels should be protected. The proposal has also identified areas which are flood plains close to the rivers. Many trees and open spaces will be lost to development and have a big impact on an area that is boosted by the fact it is close to countryside and pleasant walks. Open space will be greatly reduced by these developments, there will also be a greater demand on these spaces by the increased population. Cherwell have not invested in the Kidlington parks and open spaces to any great extent with very old play equipment in the parks and poorly maintained tennis courts. Many other areas boast very good and modern park spaces for children and young people and sadly Kidlington is a big let-down in this area and certainly not equipped for the impact of many more users of these facilities. Nature conservation - Less open areas and grasslands will reduce the wildlife without areas of natural habitat for them, less birds, insects, foxes etc. will mean a less enriched life for both the wildlife and the residents that treasure this aspect of village life.</p>

PR-C-0368	13/08/2017	Geraldine	Knox		
1003	<p>Comments</p> <p>Building on green belt goes against everything we stand for in this country. Maybe more pressure should be put on the Universities to release some of their farms for development instead of building on green belt. Specifically object to the Stratfield Farm development because this along with the sports field and nature reserve is the buffer between Kidlington and Oxford and I do not agree with the golf course being developed either. Housing should be built for local people and should be affordable and not built for people who work in London. The only people who will benefit from these proposed developments are the developers and their shareholders. How can this proposed development deal with an issue which actually goes beyond more housing development but truly relates to escalating costs of housing and salaries that are, and have been far too low, for far too long, this is the problem.</p>

Strong objection to the use of Green Belt land. If the population is to increase, the 'lungs' of the city are even more important. Any development will increase traffic in the area and Green Belt helps to absorb some of the resulting pollution. It would be favoured to plant more trees in the whole of the city to attempt to absorb pollution all round, particularly near busy roads.

Objection made to Policy PR1(a) to build 4,400 houses in this area for Oxford overspill. This is not a justified or proven requirement and is unsustainable. Objection made to Policy PR3 to remove land from the Oxford Green Belt, we should not lose our Green Belt to meet Oxford's needs. The Green Belt preserves open spaces which are proven to benefit people and nature. The Government has stated that Green Belt is a permanent designation and therefore the plan is not consistent with National Policy. It is believed that the development cannot be guaranteed to provide truly affordable housing to the local community's young people and key workers, and that the vision of the council to make half of the development "affordable" will not be honoured due to previous developments failing to deliver this. An objection is also made to Policy PR11 on infrastructure because it is unsound. No costs are shown on the schedule. There is no indication of how the already congested roads will cope with the additional vehicles from these new houses and the other developments planned for the wider area. A further objection is made to the complexity of the consultation and its timing over the school summer holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known.

Proposed Submission Plan - Policy PR3 - The Oxford Green Belt

PR-C-0398	20/09/2017	Ross	Francis					
1034	Comments							
<p>Objection to the plan as a member of North Oxford Golf Club. The fact that the course is on a greenbelt which was put in place to preserve a barrier between Oxford and Kidlington should be reason enough to stop the urban sprawl. Another important point is that continual development of Oxford is bringing ever increasing numbers of cars and associated traffic to our roads which is becoming intolerable to bear. Objects from a golfers point of view if golf courses are to become a target for developers then where are we supposed to enjoy the game we love. Are we also going to see development of more schools in the area I'm sure Cherwell will soon be bulging at the seams and perhaps their playing field on the south site will be bulldozed and more buildings built there. That space is very important to the community as Oxford Harlequins use it as their training ground and also for matches. The point is that a stand has to be made to stop the urban sprawl that is driven by house prices in Oxford, we are suffering enough as it is as a result of this. So once again I object to the proposed development in the strongest terms and hope Cherwell council will refuse any applications for this site and any others in the area. A further concern is the impact on the infrastructure and pressure on local facilities. Is there adequate provision for doctors and schools? Overall, it is the size of this development that is most concerning along with the loss of the green belt land. Yarnton, Begbroke and Kidlington will be sucked into the Oxford urban area and the character of these villages will be lost.</p>

<p>Principal objection is to the erosion of Green Belt, and the removal of open spaces which are an important amenity for local residents and others, a crucial buffer against urban sprawl, and a means of preserving the distinct communities of Kidlington, Yarnton and Begbroke. If development goes ahead, these communities will be absorbed into a 'greater Oxford', and lose their identities, while a semi-rural area of mixed housing and countryside will become another concrete jungle. The green-belt areas now designated for development and those which have (for the moment?) been rejected are well-used recreational spaces, and should be preserved for posterity not sacrificed to developers. Cherwell Council should be serving the interests of the residents of the threatened communities, not the interests of Oxford City Council and developers.</p>

Comments

The proposals conflict with the National Planning Policy Framework, one of the core planning principles of which is 'protecting Green Belts,' (para 17) and the advice in paragraphs 79 and 80, which state that 'The Government attaches great importance to Green Belts. The fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open; the essential characteristics of Green Belts are their openness and their permanence.' This is particularly the case with the proposals on site PR38 which would lead to virtual coalescence between Oxford and Kidlington, leading to substantial erosion of Kidlington's identity as a separate settlement and the creation of a large area of urban sprawl on the northern edge of Oxford. This impact could be reduced by allocating areas around Kidlington which have a moderate or low harm to the Green Belt, such as my client's land at Webb's Way (site PR32) thereby reducing the number of dwellings that have to be allocated in areas where development would have a high impact on the Green Belt. Even if some development is still required on the PR38 land in order to accommodate Cherwell's allocation of 4,400 dwellings towards Oxford's unmet need, the detailed site Assessment on page 123 of Appendix 1 to the Cherwell Green Belt Assessment indicates that there would be substantially less harm to the Green Belt if only the areas closest to the Oxford City Council boundary were released, as indicated on the plan entitled 'Harm to Green Belt resulting from partial release of site'. The current strategy, which would lead to urban development over most of the 'Kidlington Gap', thereby leading to urban sprawl and significantly eroding the distinct identity of Kidlington as a separate settlement, is contrary to the purposes for which the Oxford Green Belt was designated and due to the scale of development proposed would cause significant harm to it. Given that there are other sites where development could be promoted, which would have less harm on the purposes of the Green Belt, it is not the most appropriate strategy.

Changes Sought

Amend the strategy to remove, or at least minimise, the amount of land to be removed from the Green Belt in the 'Kidlington Gap' by instead removing other areas, such as the J A Pye (Oxford)Ltd land at Webb's Way, Kidlington (PR32), which the Cherwell Green Belt Study (April 2017) has identified would cause less harm to the Green Belt.

Reasons for Participation

J A Pye (Oxford) Ltd owns land at Webb's Way, Kidlington and wishes to ensure that the argumentis strongly made for the removal of this site from the Green Belt and its allocation for housingdevelopment, which would help to address Oxford's unmet need.

The Partial Review of the Cherwell Local Plan 2011 - 2031 (Part 1) proposes to remove a number of parcels of land from the Green Belt whose contribution to the five purposes of including land in the Green Belt was assessed in the Cherwell Green Belt Study (April 2017). This assessment has looked at land owned by J A Pye (Oxford) Ltd at Webb's Way Kidlington (Site Ref: PR32) and come to the conclusion that it only makes a 'low moderate' contribution to Green Belt purposes. It concluded that it did not make a significant contribution to any of the five purposes of including land in the Oxford Green Belt. With regard to purposes 1 and 2 (checking sprawl of Oxford & preventing merger of settlements) it concludes that the parcel plays no role with regard to these purposes. With regard to Purpose 3 of Safeguarding the Countryside it acknowledges that 'the southernmost field [which is the part of the site where J A Pye (Oxford) Ltd are proposing development] is contained by inset development on three sides and so has a stronger relationship with the settlement edge than the surrounding countryside.' On Purpose 4 it is acknowledged that 'The Parcel has insufficient relationship with Oxford to be considered to contribute significantly to its historic setting or special character.' While it is stated that there could be some detracting influence in terms of the wider rural setting of the city through the sites relationship with the Cherwell Valley, the only part of the site proposed for development, as indicated on drawing ASP1 B in the accompanying Landscape & Visual Appraisal, is the inner field which is well screened from the Cherwell valley by a tall, dense hedgerow.

Changes Sought

Amend the strategy to remove, or at least minimise, the amount of land to be removed from the Green Belt in the 'Kidlington Gap' by instead removing other areas, such as the J A Pye (Oxford)Ltd land at Webb's Way, Kidlington (PR32), which the Cherwell Green Belt Study (April 2017) has identified would cause less harm to the Green Belt.

Object to Policy PR3 to remove land from Green Belt. Unmet housing need is not a reason for building in the Green Belt. The plan is therefore ineffective and not consistent with National Policy. The claims of exceptional need are unsound, indeed false. The proposals to destroy Yarnton and Begbroke as villages and create urban sprawl from Oxford through Cutteslowe to Woodstock are outrageous violations of National Policy. Object to PR3a and the adjacent secondary school proposal, where they nearly close the gap between Yarnton and Begbroke.

These comments should be considered in conjunction with the Representations made by the Begbroke & Greenbelt Campaign "BYG". The plan needs to be considered in the context of the many proposed building projects circling Oxford, which threaten to inflict permanent damage on the Oxford environs. Eating into the GB land in such a substantial way is non-reversible and make a mockery of the whole concept of GB in protecting the countryside from encroachment in order to protect wildlife, maintain space to 'get away' from the urban environment (e.g. walking on rural footpaths) and to keep settlements as separate entities. From a personal viewpoint we settled in Yarnton due to its semi-rural character with a close-knit sense of community and countryside right on our doorstep. Being away from the city, in a village situation with access to footpaths has been essential at time for my mental health. Even the thought of the permanent loss of this resource for me, my family and the wider community has caused me significant anxiety to the point where it has been hard to respond in a meaningful way. To take away this resource permanently in response to a perceived need which appears to have been significantly exaggerated cannot be prudent.

Changes Sought

For the reasons in my representation AND the representation made by the Begbroke & Yarnton Green Belt Campaign which I additionally support and adopt as part of my own representation in this document, the Plan cannot be changed to make it legally compliant or sound and should therefore NOT be submitted for Inspection.

It is believed these proposals are not consistent with National Policy because they do not take into account the detrimental effect that removing these large areas of Green Belt will have. These proposals therefore fail to meet the test of soundness as defined in paragraph 182 of the NPPF. Oxford's local plan has not yet been prepared so Cherwell's allocation of homes is premature and is not an appropriate strategy and is unjustified.

Policy PR3 seeks, to misrepresent one important but basic fact. It states that only 3% of the Green Belt is proposed for release. Whilst that is probably true, the 3% is concentrated in one small area and within that area the percentage loss would be very high and would very significantly change the feel and outlook of the areas for ever more. Its like stating that a bomb going off would not affect most of the UK. Correct, but it would be of great concern to those living close by! The Green Belt was established to prevent urban sprawl and to ensure that neighbouring towns do not merge into one another. It is also to preserve the setting and special character of historic towns. It seems to me that the present proposals would completely ignore the basic tenets contained within NPPG paragraph 80. In particular, the proposals contained within PR6a and PR6b would cause Oxford to effectively merge with Kidlington and would at the same time cause the present traffic congestion and air pollution to worsen considerably and to what objective? The outcome would provide expensive houses for commuters into London. Indeed, Cherwell's Proposed Submission Plan July 2017 states that "Protecting and respecting the identity of individual settlements is an important aim of the existing Local Plan's policies for the built environment". The proposal to remove PR6a and PR6b from the Green Belt is clearly at odds with this stated aim.

Does not think that Green Belt land should be released and that the City of Oxford and Cherwell DC should be instructed to examine all other options.									
PR-C-0465	08/10/2017	Colin & Sarah	Fletcher						
1139	Comments								
Permanent Loss of Green Belt Land: In the words of the Council's own Green Belt Report, the area "is critical to the maintenance of High separation between Kidlington, Yarnton and Begbroke, and despite the proximity of urban edges retains a relatively strong countryside character, development of which would represent significant encroachment on the countryside and would potentially detract from the generally rural character of the high ground surrounding Oxford." It is on this basis that the soundness of the plan to use green belt land can be questioned. The concern is that the villages will lose their own identities if they merge into one and that the loss of the Green Belt will have a detrimental effect on farming, wildlife and recreation. This will have an impact on the air quality which together will increase traffic pollution which will affect the health of village residents. There is the added concern that the bats, a protected species, which currently live in the area, will be disrupted. Rather than destroy the Green Belt, it would seem wiser to reconsider using the 'brown field sites. The Council must use these in order to preserve the Green Belt as the "exceptional circumstances" required have not been proven.

Object to Policy PR3 to remove land from the Oxford GB. The GB preserves open spaces that are much appreciated by local residents, protects both the historic city of Oxford from overdevelopment and neighbouring villages from coalescence. Government guidance says that GB is a permanent designation and that unmet housing need is not a reason for building in the GB. The NPPF (para74 under "Health") says that sports facilities should not be built on unless equivalent or greater provision is made elsewhere. Policy PR6c makes provision for a new golf course, but from the land available at Frieze Farm the replacement would be a lesser facility than provided by NOGC which is a tightly designed 18-hole course with virtually no provision for highly desirable safe practice areas. Anything provided at Frieze Farm would be substantially less acceptable than the cleverly-developed and well-kept facility that is NOGC. If land has to be taken from the GB for housing why not use Frieze Farm? NOGC is clearly the most important part of the GB separating the village of Kidlington and the creeping urban expansion of Oxford City.

Strong objection to remove land from Oxford GB. GB preserves open spaces, protects both the historic City of Oxford from overdevelopment and neighbouring villages from coalescence. Government guidance (and the conservative manifesto) says that GB is a permanent designation and that unmet housing need is not a reason for building on the GB. National Planning Policy Framework, March 2012 states five purposes of including land within the GB: <ul style="list-style-type: none"> • To check the unrestricted sprawl of large built-up areas. • To prevent neighbouring towns from merging into one another. • To assist in safeguarding the countryside from encroachment. • To preserve the setting and special character of historic towns. • To assist in urban regeneration, by encouraging the recycling of derelict and other urban land. GB around Kidlington, Yarnton and Begbroke is mainly attractive, unspoilt countryside with many well-used footpaths and 'green spaces'. It is appreciated and enjoyed by many and will be lost forever if built on. Not a legacy to leave for our young people. There are alternatives to housing development in GB including making better use of some previously developed land in Oxford and using some proposed employment sites in the City for housing instead. The reduced estimate of housing required in Oxford should be located in or adjacent to the City. Peartree Park & Ride could be used for residential development alongside new residential areas forming part of the Northern Gateway site. The Northern Gateway land allocated for business use could be better used for residential purposes and is contiguous with Oxford's built-up area. Land at Southfield Golf course should be considered as a potential site for "affordable housing" in the centre of Oxford. It is not reasonable to develop within the GB.

Proposed Submission Plan - Policy PR3 - The Oxford Green Belt

PR-C-0497	08/10/2017	Philip	Towler						N
1184	<p>Comments</p> <p>Objection to Policy PR3 to remove land from the Oxford GB. OCC seems to regard the GB as merely an inconvenient barrier to its inflated growth plans, and it is hugely disappointing that CDC seems content to accept that view. However, the GB is more important now than ever. It was created to preserve for posterity open spaces near to cities, and to prevent urban sprawl. The GB around Oxford comprises open spaces that are very important to local residents. People who live in neighbouring villages should not have to accept the coalescence that would result from the destruction of the GB, as that would effectively destroy the identity of their local communities. If the proposed plan were to be implemented, Kidlington, Yarnton, Begbroke, Wolvercote and Cutteslowe would all be swallowed up in one large Oxford conurbation. Countryside, landscapes and walks would disappear forever, and pressures on what little green space remains will inevitably increase. The environment will be damaged by loss of habitat, and local residents' quality of life will suffer from increased air, noise and light pollution. Moreover, Government policy states that the GB is a permanent designation, and that development in the GB should only be considered if there is no alternative. It also states that unmet city housing need is not a reason for building in the GB. The proposed plan is therefore inconsistent with National policy.</p>

PR-C-0499	30/09/2017	Alan	Oliver						N N
1189	<p>Comments</p> <p>1. The sites are on Oxford GB. GB's remain Govt. policy. Land between N Oxford & Kidlington is unique as it fully accords with the 5 GB purposes as per para 80 of the NPPF. GB's are designated to manage the location of new development, they would not exist were there not pressure to develop on them. Such pressures cannot be considered exceptional circumstances. As per para 84 of the NPPF there's no evidence of alternatives being considered i.e.. using allocated, undeveloped employment land in Oxford for housing & promoting employment growth outside Oxford, creating a better balance between where people live & work. Have the LA's co-operated in looking at alternatives? This land being GB also complies with para 81 of the NPPF. It is used for sport & recreation, is biodiverse & visually pleasing. 2. The identified housing needs rely on an outdated study which has never been independently assessed. Revised Govt. figures indicate a reduced requirement. It now seems there is no need to build on GB. Even if there is a need on this scale, it is a poor location to meet Oxford's needs, being adjacent to a London commuter rail line & in the expensive part of Oxford. The private housing will likely attract London commuters & wont provide affordable homes for people with jobs in Oxford. It is evident that many house buyers in N Oxford are those moving from London & continuing to work there. 3. Unsound in allocating NOGC for housing & not taking into account NPPF para 74. Understand NOGC weren't involved in discussions prior to this. NPPF Para 74 says existing sports facilities shouldn't be built on unless it assessed as surplus to requirements or replaced by equivalent or better provision. No such assessment has been made. NOGC, a well established & thriving club with 475 members & 3000 visitors p.a. Its clubhouse is used by the wider community. As a flat course, it is especially suitable for seniors. NOGC is needed. It is not sound practice to propose allocating land for housing & to carry out a retrospective assessment of the need for a golf course. We need this space for the health & wellbeing of locals. The land at Frieze Farm as a replacement GC, appears to be an afterthought. It is too small. Building a new GC on a similar sized site to NOGC would cause H & S issues unless mature trees were in all the right places. No indication shown on how it could be financed or developed. Apparently the landowners have stated to NOGC that they have no intention of providing another GC or providing the level of funds that would be needed. The mature landscape central to the current GC couldn't be replace in reasonable time & therefore the 2nd criterion of para 74 cannot be met.</p>								
	Changes Sought			Reasons for Participation					
	The housing allocations in the Kidlington Gap should be removed from the Plan & the Green Belt designation of the Killington Gap retained.								
PR-C-0499	30/09/2017	Alan	Oliver						N N
1190	<p>Comments</p> <p>4. NOGC is a biodiverse landscape. Containing different tree species & 55 recorded bird species & pond life. The NPPF states this is important for health & wellbeing. It is much valued by locals. Land N of Cutteslowe Park is also important in this respect, changing the open nature the Parks. It is a well used facility. 5. The development will put further pressures on transport & other infrastructures. Seemingly funding bids for infrastructure are being made to cater for growth, but funding has not been secured. Growth shouldn't be approved until infrastructure can be provided & it's demonstrated that any proposed measures will be effective. Traffic in the N Oxford area is already severe. Work on the 2 roundabouts hasn't improved this. More housing will add to congestion & air pollution. Oxford has good public transport provision, but not all who work/live locally will use this. Increased housing & employment levels will add to congestion with its health implications. It will reduce Oxfords' attractiveness as a business location & place to live. Putting more housing & employment in this area cannot be viewed as sustainable. There are also severe existing pressures on other services including health and education.</p>								
	Changes Sought			Reasons for Participation					
	The housing allocations in the Kidlington Gap should be removed from the Plan & the Green Belt designation of the Kidlington Gap retained.								
PR-C-0500	30/09/2017	Gill	Oliver						N N
1191	<p>Comments</p> <p>1. The sites are in the Oxford GB. GBs remain Government policy. The Kidlington Gap land is in GB and fully meets all 5 of the purposes of GB set out in para. 80 of the NPPF. GB's are designed to manage the location of new development and would not exist were there not pressure to develop within them. The existence of such pressures cannot therefore be considered exceptional circumstances. There is no evidence (as per para 84 National Planning Policy Framework) that serious consideration and cooperation by local authorities has been given to alternatives such as using allocated and underdeveloped employment land in Oxford for housing and promoting employment growth outside Oxford to create a better balance between where people live and work. This land is also used positively for outdoor sport, recreations and has value for biodiversity and visual amenity. 2. The identified need is based on an outdated study and revised Government figures indicate a much reduced requirement. This is a poor location to meet Oxford's needs as it is adjacent to a commuter rail line to London and in the most expensive part of Oxford for housing. Therefore will likely cater for London commuters rather than provide the required affordable housing. 3. Para. 74 of the National Planning Policy Framework says that existing sports facilities should not be built on unless an assessment is undertaken showing it is surplus to requirements of replaced by equivalent or better provision. No such assessment as been made. It is understood that the Golf Club were not involved in discussions prior to the allocation. The Golf Club is well established, thriving club whose facilities are also used by the wider community. As a flat course it is particularly suitable for senior members. This facility is clearly needed for the health and well-being of residents. The allocated land at Frieze Farm as a replacement golf course is seemingly an afterthought with no indication of how it could be developed or financed. The mature landscape central to the current course could not be replaced within a reasonable timescale. This creates major health and safety issues and does not meet the second criterion of Para 74. 4. The golf course is valuable in terms of biodiversity and landscape, containing 25 different tree species and 55 regularly records bird species as well as pond life. There would also be a negative impact on the open nature of the land to the north of Cutteslowe Park. 5. Further pressures will be put on transport and other infrastructures. No funding has been secured for further infrastructure and growth should not be approved until it can be demonstrated that any proposed measures will be effective. It has been reported that the recent works on the 2 roundabouts have not improved queue times. More housing will add to congestion and air pollution, put pressure on health and education services, as well as reduce the attractiveness of Oxford. It is difficult to understand that putting more housing and employment in this area can be viewed as sustainable.</p>

PR-C-0507	08/10/2017	Dr Bridget	Atkins					N
1206	<p>Comments</p> <p>Objection to removing land from GB. The GB is specifically for leisure, recreation, wildlife and if built on is irreversibly ruined for future generations. Reducing it's size has many long term effects on health, wellbeing, climate and local ecologies that often take a while to be apparent but are cumulative. GB has been designated by this conservative government as permanent. Unmet housing needs are not a reason to build on it. The plan is ineffective and not consistent with national policy.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							
PR-C-0509	06/10/2017	Laura, John & Benito	Wainwright					N
1212	<p>Comments</p> <p>Objection to build on GB around Kidlington - this is totally unjustified.. GB set up in the 1947 Town and Country Planning Act to prevent urban sprawl and the coalescence of neighbouring towns and villages, as well as providing a valuable amenity for local residents. Relentless expansion/urbanisation over ensuing 70 years makes GB more valid than ever. Government policy states that GB is a permanent designation and that unmet housing need is not an exceptional circumstance which would allow building on it. Government's commitment to GB is reaffirmed in September review of housing needs making this proposal not consistent with national policy and indefensible. Vast Swathes of open countryside around these villages would be lost and rural character and village identity irrevocably harmed. Wildlife habits would be destroyed and green spaces, walks and views lost forever. Development in Cherwell should be on non GB sites identified elsewhere in the District, While Oxford City Council could meet its housing need by using land it has earmarked for commercial use. Unemployment is not a great problem in this area so why is Oxford prioritising business development over housing development? It is highly irresponsible to exacerbate housing demand by business development only to then please huge 'unmet housing needs', expecting neighbouring councils to destroy GB to accommodate this need. There are numerous brown field sites in Oxford City and surrounding districts suitable for housing development. Density targets set by Cherwell are unduly low; a higher density would mean less land required.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							
PR-C-0510	08/10/2017	Rachel	Walton					N
1217	<p>Comments</p> <p>Objection to removing land from GB. Government guidance says GB is a permanent designation and that unmet housing need is not a reason for building in GB. Cherwell District Council has failed to prove exceptional circumstances that are requisite to take land out of GB. It has not demonstrated that: Oxford has urgent and pressing need to the extent of the number of homes - calculations are now in question. The clear inability for Oxford to meet its own needs - as volume of unmet need will now be lower than previously calculated, Oxford City could meet its own housing need without applying to other Councils for assistance. There are an absence of sustainable, deliverable and appropriate alternative sites - brownfield sites and other non GB sites (including Oxford City's own Golf club) in and around Oxford that could be investigated and used (probably not as cost efficient to developers). Brown field sites should be inexhaustibly researched before removal of GB is even an option. There is a need to improve the quantity and quality of new open public open space, green infrastructure, sport and recreation facilities in terms of access to the countryside - this will not be needed i the current GB is left in place. As there is no robust evidence supporting these points land cannot be justifiably removed from the GB. The plan is ineffective and not consistent with National Policy.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>

Proposed Submission Plan - Policy PR3 - The Oxford Green Belt

PR-C-0515 06/10/2017 Jeffrey Wright Begbroke Parish Council N Y

1251

Comments

1. Cherwell Policy PR3 is removal of areas of land in association with the Green Belt.2. Removal of areas of land in association with the strategic development sites3. Safeguarding of land beyond plan period for development4. Establish clear permanent boundaries to the Green Belt5. PR6a – 32.09 ha PR6b – 31.5 ha PR7a – 10.75 ha PR8 –111.79 ha PR9 – 17.6 ha PR3a – 7.5 ha PR3b – 0.7 ha PR3c –12.77 ha PR3d – 9.2 ha PR3e – 14.7 ha6. Safeguarding of land identified in the policy Begbroke -There is a clear boundary already but much more of Begbroke is inThe strategic development sites as demonstrated in statement 3. We have no confidence the green belt will be sustained and that land adjacent to Begbroke lane will be proposed for future development. Is the area shown in green on the Policies map appendix 1 really going to be a permanent local nature reserve? There is no guarantee of future green belt expansion – see page 151policyPR12b – “CDC has taken a formal decision that additional land beyond that allocated in the review is required to ensure the requisite housing supply”

Changes Sought

Reasons for Participation

Please review our PowerPoint presentation for the comments of Begbroke parish council. This is necessary as we believe Cherwell Executive will ignore any representations as they have already made their mind up. We believe that The Planning Inspectorate will take more notice of what we have to say.

Objects to removing land from the GB. It is unjustified & inconsistent with NP. References the 5 reasons for GB's implementation. Releasing land from the GB, will lead to the growth & urbanisation of the city. More alarmingly, the identity of 3 historic villages will be lost & they will become suburbs of Oxford. Allowing development on the "Kidlington gap"(PR6a & b) will remove Kidlington's identity as a separate village. All of the proposed sites will encroach on the countryside, which once gone will be lost forever. CDC's LP 2015 pledged to maintain the GB, so this current submission contravenes their own policy. Government policy states that land can only be released from the GB under exceptional circumstances. CDC have rejected other non-GB sites within their district, so this submission is not "exceptional circumstances" as there are other sites they could use. Govt. guidance also states that unmet housing need is not a reason to build on the GB so this submission is inconsistent with NP.

Object to PR3, the removal of land from GB. It is not a justified or proven requirement & is inconsistent with national policy. New Govt. methods for calculating housing need indicates that 30% fewer houses are required in Oxfordshire than previously forecast. Thus the basis used for Cherwell & Oxford's City's housing requirements are overstated and invalid. Less land will be required to accommodate development. There are no exceptional circumstances to warrant the release of land from the GB. PR3 is in direct contravention of national policy. Without prejudice to the above point, any proposals by Cherwell to release land from the GB to meet Oxford's needs are premature & unjustified given Oxford City is in the process of reviewing its LP & has not yet determined how much housing development can be accommodated on land within the City's boundaries. The land to the west of Oxford Road lies in the Kidlington Gap which forms a core component of the GB separating Oxford & Kidlington. Development there would be in direct contravention of the fundamental aim of GB policy to prevent urban sprawl by keeping land permanently open. The Kidlington Gap serves all the five purposes of the Green Belt. The Oxford GB, & Kidlington Gap in particular, is strategically important. It is one of the clearest examples of a GB. It prevents the coalescence of settlements, checking unrestricted sprawl, safeguarding the countryside & safeguarding the setting & character of historic Oxford City. Removing large areas from the GB fundamentally undermines the long established principles of GB policy.

Changes Sought

Reasons for Participation

Delete PR6a housing allocation on land to the east of Oxford Road. Delete PR6b housing allocation on land west of Oxford Road. Delete PR7a housing allocation on land south east of Kidlington. nDelete PR7b housing allocation on land at Stratfield Farm. Delete PR8 housing allocation on land east of the A44

1268

Comments

Objection to policy PR 3 to remove land from the Oxford GB. The GB preserves open spaces that are much appreciated by local residents and act to protect both the historic city of Oxford from overdevelopment and the neighbouring villages from coalescence. Any development should be limited to brownfield areas.

Comments

Policies PR8 & PR9 propose removal of land from the Oxford GB. This is not consistent with National Policy and is unsound. The 'exceptional circumstances' justifying its removal para 5.17 (p66) are largely implausible. Shoehorning in a number of homes close to Oxford City without regard to the identities of Yarnton & Begbroke & without effective infrastructure. PR8 & PR9 are not justified & the Plan is unsound.

Changes Sought

Reasons for Participation

As the parish Council representing a village that will be affected greatly by the proposed developments, we would like the opportunity to participate in the oral part of the examination.

Proposed Submission Plan - Policy PR3 - The Oxford Green Belt

Comments

An additional 13 hectares of land east of the railway line should be added to the area of the new urban neighbourhood identified under policy PR8 to provide employment land for B2 and B8 class uses, a consequential amendment to Policy PR3: The Oxford Green Belt would also be necessary. Without this change Policy PR3 would not be sound for the reasons given under the comments on Policy PR8. The rep also includes several appendices items: correspondence with Peter Day, Mineral and Waste Policy Team Leader at Oxfordshire County Council and with Julia Lyle, Strategic Asset Manager at Oxfordshire County Council, and previous reps for Scoping Consultation in January 2016.

Changes Sought

In order for the Plan to be sound Policy PR3 should be amended to include the following additional clause: "(f) 13 hectares of land east of the railway line (as shown on inset Policies Map PR8)."Further consequential changes would also be necessary to appendices 1 and 2 of the Plan. The change is necessary to remedy the failings in relation to the tests of soundness and to make the Plan legally compliant in respect of the requirement to have regard to national planning policy for the reasons identified at paragraph 11 of section 4 of the comments on Policy PR8.

Reasons for Participation

Local employer whose interests will be directly affected by the policies of the Plan, and considers that it is very important to be represented at the hearings into the relevant issues, in order to help inform the discussions and ensure that its views are fully taken into account.

Comments

Do not consider that the Proposed Submission Plan ('The Plan') has been positively prepared as it fails to remove from GB status a small area of land situated at Gosford Farm, Gosford, (Site plan provided) which has no justification in remaining within the GB. The Plan is therefore unsound in that it fails to address the removal of the Subject Site which forms part of Gosford Farm, Gosford despite the policies expressed in para.5.37 of Policy PR3. 2. Whilst we believe that The Plan is based on the most appropriate strategy when considered against the reasonable alternatives, we maintain that it can only be justified if it removes areas of the GB for unmet residential housing needs. Such areas are referred to in para. 5.37.2 of Policy PR3. The Subject Site at Gosford Farm has no reason to remain within the GB and could be used to meet the identified housing need. 3. We do not consider that The Plan is effective as it currently stands. Every area of the GB needs to be carefully considered for removal and the Subject Site that we are proposing to be removed has no justification in remaining as GB for those reasons set out in Section 5 below. 4. We do not consider that The Plan is consistent with the National Policy as it fails to address the purpose of the GB given that the small area of the GB (the Subject Site) that we are proposing should be removed has no justification for inclusion within the GB. 5. Paras. 5.37.4 and 5.39 of The Plan clearly state that the revised GB boundaries should be capable of enduring beyond the Plan period. We do not consider there is any planning justification in retaining the Subject Site within the GB and that its proposed continued inclusion could be overturned at a later date as being totally wrong and unjustified.

Changes Sought

1. It is necessary to amend the Local Plan to make it sound. 2. Our view is that to make the Local Plan sound, Policy PR3 needs to be amended as follows: ...'Policy PR7a Removal of 11.35 hectares of land as shown on inset Policy Map PR7a'.... 3. Policies Map PR7a will need to be amended on its northern extremity to show Gosford Farm, to include Gosford Farmhouse and the remainder of the land shown edged red on the attached plan. 4. This will comprise a minor amendment to "Policy PR3: The Oxford GB" and can be justified on the grounds that to retain the Subject Site within the GB would not meet the four basic purposes of GBs all as set out under Government Guidance (lists Green Belt principles). 5. The Subject Site is contained on three sides by existing development and on the fourth side by a long established and mature field boundary hedge which will be retained and enhanced.

Reasons for Participation

Wishes to participate at the oral Examination and consider this to be necessary so that the Inspector will be fully able to understand the justification for our proposed amendment to Policy PR7a and Policy PR7a - Proposals Map contained within the Proposed Submission Plan. 2. Acknowledges the Subject Site, comprising some 0.55 so hectares or thereabouts, hectares or thereabouts, is of minimal relevance to the Submission Plan and the Partial Review of the Cherwell Local Plan 2011 - 2031(Part One). For the reasons stated above, it is important that all areas of the GB are examined at this moment in time and we believe it is only right that the Subject Site should be excluded from falling within the boundaries of the future Oxford GB.

Comments

To remove land from the GB is not justified. There are no exceptional circumstances to warrant contravening the National Planning Policy Framework or the Government's own policy pledges. This proposal contravenes Government guidelines that insist that the GB is a permanent safeguard to prevent the kind of urban sprawl that merges communities and threatens their special character. As such the plan is unjustified and inconsistent with national policy.

Comments

Strong objection to PR3 to remove land from the Oxford GB. According to the National Planning Policy Framework, March 2012, there are five stated purposes of including land within the GB: • To check the unrestricted sprawl of large built-up areas • To prevent neighbouring towns from merging into one another • To assist in safeguarding the countryside from encroachment • To preserve the setting and special character of historic towns • To assist in urban regeneration, by encouraging the recycling of derelict and other urban land. Building on the GB around Oxford would completely disregard this framework. Once an area of land has been defined as GB, the stated opportunities and benefits include: • Providing opportunities for access to the open countryside for the urban population • Providing opportunities for outdoor sport and outdoor recreation near urban areas • The retention of attractive landscapes and the enhancement of landscapes, near to where people live • Improvement of damaged and derelict land around towns • The securing of nature conservation interests • The retention of land in agricultural, forestry and related uses. Why do the Councils involved consider that the well being of Oxfordshire residents, the legacy we leave to our children, the history and diverse environmental areas of outstanding beauty and scientific interest are of no value? Does money and greed supersede these basic rights for residents and the community as a whole? The proposal to develop in the GB is based on incorrect assumptions about the growth in jobs in Oxford. I think that there are alternatives to housing development in the GB including making better use of previously developed land in Oxford and using some proposed employment sites in the city for housing instead. It is not reasonable to develop within the GB. The Government's Manifesto promise and Cherwell's existing policy to protect the GB must be upheld.

I object to POLICY PR3 as not consistent with National Planning Framework(para74 under health) concerning building on Recreational facilities unless an equivalent or greater provision is made elsewhere. The land Pr6c which is proposed as a future site for a Golf course is not big enough at Frieze Farm so does not meet this requirement. The cost of designing and building any golf course with all its infrastructure clubhouse, pro shop, equipment garages, green staff facilities, access roads and car parking some years ago was estimated close to a million pounds a hole. Where would this money come from?? As the Frieze Farm site is virgin farmland it would be better to build there than to move the golf course some 400 yards at such great expense.

1361	Comments						
Objects to proposed designation of GB for housing and development. The existing GB preserves natural environments widely appreciated and used by local residents and tenant farmers. Development of such lands is to the detriment of the rural way of life and identities of the individual local communities, with historic villages being subsumed into the overdevelopment of City of Oxford. The NPPF clearly states that unmet housing need is not a justification for building on GB land and removal of the permanent designation of land as GB.

PR-C-0553	09/10/2017	Douglas	Williamson				
1371	Comments						
Objects to building 4,400 houses on GB around Kidlington, Gosford & Water Eaton to meet Oxford City's unmet housing need. The need for that number is not proven or justified. Central Govt. is suggesting revised methodology for calculating housing need, & is likely to reduce the number of homes required, possibly by half. Oxford & its surrounds has negligible unemployment. Proposed developments like Northern Gateway is likely to draw new workers into the area to fill jobs that cannot be filled by locals. Increasing the population contradicts the objective of meeting existing housing need. Oxford should re-designate land allocated for business use to housing use. Removing land from GB is inconsistent with the NPPF. Govt. states GB is a permanent designation. Overspill from Oxford is not an 'exceptional circumstance' to release GB from this permanence. Although I am expressing my concern about the impact of removing land around Kidlington and Gosford from the GB, I am nevertheless mindful that GB exists as much to protect the city of Oxford City from overdevelopment as it does to preserve the integrity of the surrounding rural settlements.

Objects to PR3. These proposals are not consistent with NPPF. They don't take into account the detrimental effect that removing large areas of GB will have. These proposals therefore fail to meet the test of soundness as defined in paragraph 182 of the NPPF. Oxford's LP has not yet been prepared so Cherwell's allocation of homes is premature, is not an appropriate strategy & is unjustified. GB boundaries should be meaningful. The existing boundaries of the Oxford GB should be upheld wherever possible. Current citizens have a responsibility to future generations. Oxford's GB exists to protect the countryside & individual communities. Once built on, this & the environment will be lost forever. It is vitally important that the rural landscape & open space be preserved, as it currently is by GB designation. CDC's policies seem to have no regard to the importance of the Oxford GB, & don't take into account other current new developments, e.g. Barton Park, traffic, transport, the likely availability of affordable housing under their policies, all of which would have to be resolved by Oxford. As Oxford has not yet made available its LP, Cherwell's policies seem particularly ill-timed.

THE GB STUDY No great weight should be given to the LUC GB Study. Its purpose was not to determine whether any of the GB made no, or an insignificant contribution to, the purposes of the GB since clearly all of the GB land contributes, and the loss of any would be harmful. Rather, in its own words, the GB Study has been commissioned by Cherwell District Council to assess the suitability of the strategic sites being promoted for development against the five purposes of the GB. In other words the sites had been pre-selected, as we showed above, in the face of GB policy, and targeting the most fragile point in the entire Oxford GB. LUC continue The considerations that will determine the most appropriate scenario, or combination of scenarios, will largely relate to the existing or potential environmental qualities and value of land, and to the sustainability of residential development. This will enable Cherwell District Council to consider whether there are ‘exceptional circumstances’ (under paragraph 83, NPPF) to justify altering GB boundaries through the Local Plan process, i.e. to enable existing GB land to contribute to meeting Oxford’s unmet housing need. That is, value is not primarily judged against GB purposes at all, but against environmental ones, and the sustainability of the land for housing development. LUC found that Release of areas identified as making a low contribution to GB could provide only 5.8ha of potential development land 4.13). Release of areas identified as making a low or low-moderate contribution to GB could, subject to consideration of cumulative impacts, provide 34.6ha of potential development land(4.14). Release of areas identified as making a low, low-moderate or moderate contribution to GB could, subject to consideration of cumulative impacts, provide 166.7ha of potential development land (4.15). Although as noted above, the judgment was largely not on GB grounds, moderate harm was considered acceptable in order to release a larger amount of land. LUC acknowledge that release of fragile GB 4.16 GB that occupies only a small/narrow area between separate urban settlements will tend to rate highly in terms of its role in preventing settlement coalescence. This exactly describes the land chosen for release; but LUC went on. However, if environmental assessment determines that this land lacks significant value then a case could be made for accepting the coalescence, or near-coalescence, of settlements in order to maximise the scale of development in one area. That is the, subjectively assessed low environmental value trumps urban sprawl and severe coalescence, the two founding principles of the GB. Further, they have targeted the very point at which the GB is already narrowest – the Kidlington Gap between Kidlington and Oxford – for release, directly creating the coalescence of two distinct settlements (It is material that Oxford itself is proposing to breach that same area from the South with a proposed development of St Frideswide Farm). The sites concerned are all at the exact point in the GB where coalescence of settlements (Oxford and Kidlington) is most threatened, with the built areas separated presently by a few fields. The proposed GB reviews, together with the release of the Parkway Station and Park and Ride would effectively merge the two settlements. Although Kidlington (population 13,000, 2011) is statutorily a village, it is larger than many towns, notably Thame (11,600) and Henley (11,700) in Oxfordshire.

Changes Sought

In CPRE's view, it is not possible to 'tweak' the current document in order to make it sound and therefore the current version of the Plan should be rejected. CDC should re-visit the process, as and when the final numbers for Oxford have been examined, adopting higher densities and prioritising protection for the GB.

Reasons for Participation

CPRE Oxfordshire represents a wide membership across the County, including many parish councils and local organisations, and seeks to influence development to protect and enhance the countryside. As one of the founders of the Oxford GB, we have considerable knowledge about its origins, purpose and ongoing relevance.

Comments

The primary duty of a Local Authority must be to the people it represents. In an independent market research exercise, with a very high sample size, conducted across Oxfordshire by Alpha Research of Thame in April 2015 respondents were specifically prompted that there was considered to be a need for more housing, and of the extent and purpose of the GB, before being asked whether the GB, should be developed for that, or indeed any other, purpose. Their answers were therefore fully informed by recognition of housing need. 76% of respondents considered that the GB should remain undeveloped; 66% considered housebuilding the greatest threat. Although polls have something of a tarnished reputation, this has resulted from situations where marginal inaccuracy can lead to wholly incorrect forecasts in narrow binary decisions. In this case the sample size was so large and so representative, and the outcome so conclusive, that whilst there might be up to a 5% margin of error, this would not be capable of affecting the result, or its scale. Further, this is in line with previous polls, adding to confidence that it accurately reflects public opinion. The same exercise showed that in North Oxfordshire – closely correlating to Cherwell - the outcome was hardly less conclusive, with 71% of respondents supporting the proposition that the GB should not be developed for housing or any other purpose. This was despite years of constant media campaigning by the City Council that Oxford has “no option” but to spread over the GB unless people are to go homeless (a wholly fallacious claim). Despite the City’s campaigning, 73% of non-homeowners, and 74% of C2DEs agreed that the GB should not be developed for housing. In other words, the people who would be expected to have been the most responsive to the City’s campaigning rejected GB development almost as strongly as the general population. Indeed 73% of the City Council’s own constituents rejected it. There can be no doubt that the people both of Oxfordshire, and of Cherwell itself, reject GB development in principle, and this must be given great weight in any consideration of doing so.

Changes Sought

In CPRE's view, it is not possible to 'tweak' the current document in order to make it sound and therefore the current version of the Plan should be rejected. CDC should re-visit the process, as and when the final numbers for Oxford have been examined, adopting higher densities and prioritising protection for the GB.

OXFORD'S 'UNMET NEED' AND REASONABLE OPTIONS FOR MEETING IT. 1. Is the Oxford unmet need real or realistic? Cherwell argues that an “exceptional circumstance” exists in the Inspector approving the adopted plan having added a requirement for “a formal commitment from the Council, together with other relevant Councils, to undertake a joint review of the boundaries of the Oxford GB, “once the specific level of help required by the city of Oxford to meet its needs that cannot reasonably be met within its present confines, IS FULLY AND ACCURATELY DEFINED”. (Our emphasis) It was our view at the time that the Inspector could have exceeded his remit as there was no evidence before him suggesting that further development in Cherwell was impossible without breaching the GB, nor of the precise quantum of Oxford’s unmet need (if any existed) or the capacity of other Districts to accommodate it. However it is relevant that he proposed a Review only AFTER Oxford’s unmet needs were fully and accurately defined. They still are not, and a review is therefore premature even on the Inspector’s terms. According to the City Council in a report to Scrutiny Committee (12th June), the agreed unmet need allocation, is used as a working basis for current local plans in Oxfordshire which will be updated when the Oxford Local Plan is completed. In other words it is presently neither fully nor accurately defined, as the Inspector had required it should be. Oxford has only now started its own Local Plan process to reflect the Oxfordshire Strategic Housing Market Assessment (SHMA), three years after it was published, and long after Oxfordshire’s other Districts. Its draft Local Plan gives no figure for unmet need, or for the City’s capacity to meet it. However, taking Oxford’s overall “need” to be for 28,000 houses over the plan period, CPRE argues that at least 26,000 could be provided inside the City itself by switching employment sites – the use of which for employment would only exacerbate the housing need the City Council describes as being its Number One priority to overcome – to housing, and increasing densities on all sites to compact city levels. That is even before the outcome of a review of further sites to which the City refers in its plan. (See Oxford/Densities paper attached) Consequently the Inspector’s condition, that Oxford’s unmet need should first be “fully and accurately defined” is nowhere near met, and, further, there would be little or no “unmet need” for other Authorities to consider. In any event, a “working assumption” of need cannot be an exceptional circumstance justifying GB release, especially when it is likely to be extremely inaccurate. Finally, during the course of this consultation the Government has proposed a new OAN formula to replace the SHMA (on which all the Review numbers are based). This new formula, if adopted, would reduce Oxford’s total annual housing need from a SHMA mid-point of 1400 per annum to 746, that is by 47%. This would in turn reduce “unmet need” by two thirds, even before taking into account that the City should use employment land to satisfy existing housing need rather than exacerbate it and build at densities appropriate to cities. The new OAN is at the very least further evidence that the level of unmet need this review seeks to satisfy is neither fully nor accurately defined.

Changes Sought

In CPRE's view, it is not possible to 'tweak' the current document in order to make it sound and therefore the current version of the Plan should be rejected. Cherwell District Council should re-visit the process, as and when the final numbers for Oxford have been examined, adopting higher densities and prioritising protection for the Green Belt.

Reasons for Participation

CPRE Oxfordshire represents a wide membership across the County, including many parish councils and local organisations, and seeks to influence development to protect and enhance the countryside. As one of the founders of the Oxford Green Belt, we have considerable knowledge about its origins, purpose and ongoing relevance.

OXFORD'S 'UNMET NEED' AND REASONABLE OPTIONS FOR MEETING IT. 2. If Oxford's unmet need were realistic could it be met elsewhere in Cherwell than in GB? a. Yes, it could be met on non-GB sites. Cherwell found that the required number of houses could sustainably be built elsewhere, outside the GB, at Junction9 M40, Arncott, Bicester and surrounding area, Upper Heyford, Junction 10 M40, Banbury and surrounding area. They rejected these alternative sites because they might upset the evolution of the current adopted plan – although why competent planners would not be able to deal with that problem, if real, is not apparent; because there might be shortfalls, although why these should be greater for Oxford's unmet need than for Cherwell's own need was not explained; and more dispersed options provided less opportunity for strategic infrastructure investment (e.g. transport and education), although why this would be the case for, for example, Upper Heyford which is already targeted and developed, or for other centres which already benefit from services, is not explained. The overriding reason for their rejection however was clearly that they were less well situated (than the GB sites) to build communities associated with Oxford, to assist with the delivery of the Oxford Transport Strategy, to provide affordable transport options, and more likely to involve commuting. It is significant that even GB sites like the previously developed Shipton Quarry, were rejected as Development here would relate to Shipton-on-Cherwell, not Oxford. Therefore the parcel plays no role with respect to this purpose (Oxford's unmet need). Simply put, this amounts to saying that all reasonable alternatives were unacceptable because they were not in the GB, or, if they were in the GB, were too far from Oxford. It is an argument that urban sprawl into the GB is justified by the fact that only GB sprawl could (by definition) be close enough to the City; in other words it is an argument not just for nibbling at the GB but for undermining its core purpose. It is clearly unacceptable in its own terms. Further, the proposed new OAN calculation would reduce Cherwell's own need by 33%. The effect of this would be that 33% of the housing trajectory in the Council's adopted plan would be superfluous to Cherwell's own requirement and therefore available to satisfy any unmet needs of neighbouring authorities that might arise. b. The unmet need could be met by marginal density increases on generally low density allocated sites. Policy BSC2 in the adopted plan states New housing should be provided on net developable areas at a density of at least 30 dwellings per hectare unless there are justifiable planning reasons for lower density development. Yet Policy Bicester 1 allocates 380 hectares to just 6,000 homes which is 16 houses per hectare. Assuming for these purposes that 30 dwellings per hectare is the average across the District, the sites to which the present 22,800 homes are allocated would need to increase build density by just 5%, to 36%, to accommodate all of the "working assumption" of Oxford's unmet need. This would still be less than half the density of Central Paris or Barcelona, or Islington in London. Higher density build would also mean smaller houses, of which 63% of Oxfordshire's SHMA need is comprised, and thus better meet public requirements. High densities also reduce the need for car travel and create a stronger sense of community.

Changes Sought

In CPRE's view, it is not possible to 'tweak' the current document in order to make it sound and therefore the current version of the Plan should be rejected. CDC should re-visit the process, as and when the final numbers for Oxford have been examined, adopting higher densities and prioritising protection for the GB.

Reasons for Participation

OXFORD'S 'UNMET NEED' AND REASONABLE OPTIONS FOR MEETING IT (continuation)
c. Even if there were no reasonable alternative sites, and even if densities on allocated non-GB sites could not be increased, the release of GB land could be substantially reduced. The total GB land proposed to be released is 264 ha. 10 hectares is proposed to be released for the station and Park and Ride, which already exist on GB land. There is no obvious rationale for the release. The net GB land to be released for housing is 254 hectares However within this area only 153 hectares is proposed to be actually used for housing, with the rest being allocated for sport, nature, agriculture etc., all legitimate GB uses. On the residual land 3990 houses are proposed at a density of 26 dph (although an average of 34 is claimed in the Plan). If build densities were increased to urban levels – the Council's stated Policy is to treat these incursions for Oxford's unmet need as urban extensions – then 70 houses per hectare, utilising only 37% of the land would be appropriate. This would require only 57 hectares, all of which could be comfortably accommodated on PR8, the least damaging in terms of coalescence and the Kidlington Gap of all these sites.

The NPPF states that one of its Core Planning Principles (para 17) is to take account of the different roles and character of different areas, promoting the vitality of our main urban areas, protecting the GBs around them, and noting (at para 79) that the fundamental aim of GB policy is to prevent urban sprawl by keeping land permanently open. Paragraph 83 states that once established, GB boundaries should only be altered in exceptional circumstances, through the preparation or review of the Local Plan. The recent Housing White Paper, clarifies what the steps before a finding of "exceptional circumstances" should be, when local authorities can demonstrate that they have fully examined all other reasonable options for meeting their identified housing requirements. Amongst these "reasonable options" which Local Authorities must demonstrate they have considered before there can be the "exceptional circumstances" required for review/release of GB land are: • making effective use of suitable brownfield sites and the opportunities offered by estate regeneration; • the potential offered by land which is currently underused, including surplus public sector land where appropriate; • optimising the proposed density of development; and • exploring whether other authorities can help to meet some of the identified development requirement. Although not yet law, the White Paper illustrates how high the hurdle for exceptional circumstances must be, given that the NPPF's "fundamental aim is keeping GB land permanently open", and the need to show there are no "reasonable options" before considering GB release.

DUTY TO CO-OPERATE - The SHMA is explicit that Authorities are not expected to meet OAN (Objectively Assessed Need) in full if e.g. it would necessitate Green Belt development. It has been the unforced choice – not the requirement – of Oxfordshire's Councils to agree to meet the SHMA need in full despite wide swathes of Oxfordshire being GB and AONB. It is therefore incumbent on Councils to take on each others' "unmet need" if it would otherwise require GB land to be released. As shown, Oxford's unmet need is very far indeed from being quantified or crystallised, but, if it were, it would be the duty of other Councils to assist Cherwell in meeting its part of that need without releasing GB land, not least by assisting Cherwell to understand how to do so within its own borders. There is no evidence that this has been attempted. Finally, the new OAN calculation proposed by the Government during the consultation defines "need" as the figure shown in the Government's own tables on household projections. This is overlaid in the proposed calculation with an arbitrary (and ill-conceived) uplift intended to reduce house prices. It is also accepted that local authorities may if they wish further inflate their housing targets to provide further economic growth than that already included in the government's base tables. However, it is submitted that these latter two elements cannot be defined as "need" and neighbouring Councils have no duty to co-operate in meeting them.

GB: CONCLUSIONS: 1. Government Policy and the Public Interest both require the GB to be permanent unless truly exceptional circumstances necessitate consideration of release. 2. Oxford unmet need is not an exceptional circumstance, firstly because it has not been defined and secondly because there are ample reasonable alternatives to accommodate it. 3. The LUC GB study was conducted on flawed principles and should be given little weight. 4. Cherwell have cited no other exceptional circumstances which hold any water – and their primary arguments – proximity to Oxford – is in fact a key argument for GB retention rather than release. 5. If at some future time an Oxford “unmet need” has been shown to exist and satisfactorily quantified, and if that requires any allocation to Cherwell, there are alternatives available to the District other than releasing GB land and therefore none should be released.

Government Policy requires development in the GB to be the very last resort, only to be considered if there is no alternative. Cherwell has stood that Policy on its head by making building in the GB its very first choice, rejecting what it accepts were reasonable alternatives. Cherwell says that building as close to Oxford as possible trumps all other considerations. Since Oxford is surrounded by GB, that has led them to select not just GB sites, but the very closest GB sites to the City, at the Kidlington Gap, where the GB is most fragile, just a few fields wide. It is those few fields the Council plans to build on, flatly contrary to GB policy, and the known wishes of the overwhelming majority of its electorate. If the Council gets away with this plan, it will also, again contrary to GB policy, cause the merger of Yarnton and Begbroke into Kidlington; expose Kidlington itself to being engulfed by the predatory City Council which has sought to subsume it for at least thirty years; and also, by declaring that proximity to Oxford is itself an exceptional reason to build on the GB which surrounds the City, fundamentally undermine its very purpose, risking opening the whole GB to development.

CPRE is opposed in principle to the release of GB land – as is national planning policy. A very strong case therefore has to be made to establish the exceptional circumstances required for the release of GB land. The Cherwell Plan goes nowhere near making such a case; Cherwell's electorate strongly supports retention of GB land as does Government Policy. There are a number of reasonable alternatives. The houses to satisfy Oxford's 'unmet need' targeted at the Cherwell GB could not only, on the Council's own admission, be sustainably built elsewhere in the District on other sites, or by increasing the density of build on existing sites, but also, at least to a considerable extent, within the City itself. Failing that, if there were genuinely no available option other than release of GB, national policy indicates that Cherwell would be expected to decline to do so and require other Councils to co-operate in meeting the unmet need Cherwell itself cannot satisfy. Additionally, during the course of the consultation, the Government published a revised Objectively Assessed Need (OAN) calculation, showing a total Oxford need of half that identified by the Oxfordshire Strategic Housing Market Assessment (SHMA). If adopted the new formula would make it certain that Oxford could accommodate all of its own housing need, and therefore there would be no "unmet need" for Cherwell to meet. The proposed OAN also reduces Cherwell's own need by a third, meaning that even if there were any Oxford unmet need to be covered, it could be met within the surplus the new OAN creates in Cherwell's adopted plan. This review is therefore premature and should be suspended at least until new "need" figures are crystallised.

Objection to the removal of land from the Oxford GB. The GB preserves open spaces that are much appreciated by local residents, protects both the historic city of Oxford from overdevelopment and neighbouring villages from coalescence. Government guidance says that GB is a permanent designation and that unmet housing need is not a reason for building in the GB. The Plan is therefore not consistent with National policy.

This Plan is contrary to the NPPF which states in paragraph 14 that Local Plans should meet objectively assessed needs unless specific policies in the Framework indicate development – including land designated as GB - should be restricted. It is also contrary to the twelve core land use planning principles set out in Paragraph 17 of the NPPF one of which is that planning should take account of the different roles and character of different areas, promoting the vitality of our main urban areas and protecting the GBs around them. Furthermore, National Planning Practice Guidance makes clear that assessing need is just the first stage in developing a Local Plan and that once need has been assessed, the local planning authority should take account of any constraints such as GB, which indicate that development should be restricted and which may restrain the ability of an authority to meet its need. Cherwell has accepted (or, more accurately, been pressured to accept) the inflated figures of the Oxfordshire SHMA in full and has never followed this guidance to “take account of any constraints such as GB Which may restrain the ability of an authority to meet its need”. The proposed submission plan is therefore not consistent or compliant with national policy.

Changes Sought

The plan should be withdrawn and a spatial strategy for Oxfordshire established which can address the issues addressed in this review in a co-ordinated and consistent way. Through such a strategy the Oxfordshire authorities should continue with their previous approach of actively encouraging further employment and housing growth away from Oxford. Oxford City Council and Cherwell in particular should co-operate more effectively and as part of this Oxford should (a) discourage further employment generating development in the city unless it is absolutely essential and (b) use some of the land it has currently allocated for employment, together with other previously developed land, for well planned high density housing.

Reasons for Participation

OGBN was established in 1997 to help to protect the Oxford GB and to support those wishing to resist proposals for inappropriate development within it. It comments regularly on planning applications in the GB and in planning policy consultations, particularly on matters affecting the GB. OGBN has made representations on all stages of the Cherwell Local Plan Part 1 and participated in the Public Examination in December 2014. We have also commented on earlier stages of this Partial Review. The membership of OGBN includes many of the Parish Councils whose areas include GB land. The OGBN fully supports the aims of GBs as set out in the NPPF and earlier planning guidance and in particular it strongly endorses the fundamental principle that GB is a permanent designation. We consider that our participation in the examination is necessary and justified because of our longstanding interest and understanding of the Oxford GB.

Strong objection to all of the proposed development in the Oxford GB which “was designated to restrain development pressures which could damage the character of Oxford City and its heritage through increased activity, traffic and the outward sprawl of the urban area.” This quote is from paragraph B256 of Cherwell’s adopted Local Plan Part 1 and we fully support it. We also support Policy ESD14 in the Plan to maintain the Oxford GB. The Oxford GB supports all five purposes set out in the NPPF and has been largely successful over the last sixty years. In particular it seeks to protect the setting and character of the historic city of Oxford. The reference to the character of the City, as referred to in Cherwell’s Local Plan. is often overlooked but it is a crucial aim of GB policy. The historic city centre by its nature cannot be expanded or comprehensively redeveloped. It is already under substantial pressure and this is likely to become highly damaging if expansion on the edge of the city is not restricted. The City’s never-ending traffic problems are testimony to this, and there have been calls for even the number of buses in the centre to be limited. The GB also provides accessible open space, footpaths and other recreational opportunities for residents of the city and for the communities within it. It is well used and supported as public opinion surveys have shown. GB is intended to be a permanent designation only to be changed in exceptional circumstances (NPPF). We think that that the overall levels of growth proposed are unnecessarily high and that alternatives to development in the GB are available. We therefore consider that exceptional circumstances do not exist to justify development in the GB.

Changes Sought

The plan should be withdrawn and a spatial strategy for Oxfordshire established in a co-ordinated and consistent way. Through such a strategy the Oxfordshire authorities should continue with their previous approach of actively encouraging further employment and housing growth, at realistic levels, away from Oxford. Oxford City Council and Cherwell in particular should co-operate more effectively and as part of this Oxford should a) discourage further employment generating development in the city unless it is absolutely essential and b) use some of the land it has currently allocated for employment, together with other previously developed land, for well planned high density housing.

Comments

We note that the plan calculates the loss of GB to be 3%. There is an implication here that the loss is relatively small and therefore acceptable. This is fallacious as is illustrated by the following example taken from a paper by Professor Dieter Helm, Chair of the Government’s Independent Natural Capital Committee “Think about St James’ Park in central London, set between Buckingham Palace at one end and Whitehall at the other. Suppose a developer comes along with a proposal; to build on a small plot on one corner of St James’ Park. This developer might argue as follows. The marginal value of the patch of grass in a small corner is not that great. After all, all the rest is left. Better still, the developer might pay such an enormous price for the small bit of land that perhaps a hospital could be built elsewhere with the proceeds. The marginal value to the ultimate owner of this house is so great relative to the marginal value of the small corner of St James’ Park that it makes marginal economic sense to build on it. There are two problems with this argument. The first is that the same marginal case can be made for the next small bit of St James’ Park. Indeed the value to the developer is even higher now because the Park is now slightly smaller. And for the next bit, the argument just gets stronger. Carried to its limits there is a great marginal case for incrementally building all over St James’ – and Hyde Park, and Regent’s Park and indeed all the green spaces in London. That is indeed what would have happened if the market had been left to allocate the land as if St. James’ was a private good. It is what would happen to the GB too. The second problem is that the reason why the land is so valuable is because it is not surrounded by other houses in close proximity. The very rich person who buys this house on the corner of St James’ is paying so much because others are not able to do so, and because it is St James’. We cannot all have green spaces around our houses – green space is in fixed supply. Carry both of these arguments across to the GB. Each marginal bit has a marginal economic case for developing it, and as each bit is chipped away, the value of the whole public good – the GB system – diminishes. The core point here is that the marginal case if carried through to its logical conclusion leads to no GB – there is a good marginal case for building on each and every marginal bit of land, as there is for building on each and every bit of St James’ Park.” The loss of a small proportion of GB therefore increases the likelihood of further loss. GB should be considered as an entity or system not as a collection of individual land parcels. This is a further reason why we fully endorse Government Policy (NPPF para 79) that GB is a permanent designation.

Strong disagreement with the assessment that “exceptional circumstances” exist. Twelve “circumstances” are listed. The final ten are not exceptional circumstances at all. Some of them might be described as “opportunities”, some of them are simply descriptions of how development might occur, and others are meaningless, for example “12.the ability to create a sustainable, holistic, joined up vision for the whole of the Oxford/Kidlington/A44 corridor area”. That statement certainly does not constitute an exceptional circumstance. Exceptional Circumstance 1 (urgent and pressing need for homes) is highly contentious. It is based on the assessment in the SHMA which has been heavily criticised and never validated. The proposed DCLG standardised methodology proposes a much lower level of need that takes account of affordability. Exceptional Circumstance 2 (clear inability of Oxford to meet its needs) is also unproven. Oxford’s needs have not been established through its own local plan process and neither has its ability to meet its own needs. It is clear that alternative development strategies could accommodate a significant number of additional dwellings within the city. The submission document in proposing to develop in the GB is in complete opposition to the purpose of the GB and contradicts Local Plan Pt 1. The main purpose of the Oxford GB, (Local Plan Part 1 para B256), is to limit the growth of Oxford to avoid damage to its character and heritage. Oxford City Council itself should have a part to play in this by restricting the growth of employment generating activities to the minimum necessary. This would have the double benefit of releasing some land for housing and reducing the demand for further housing. However its currently proposed policies do the opposite. We have made this point in our representations to the recent Options consultation on the Oxford Local Plan. Alternative development strategies – which have been successful in the past – are possible for Oxfordshire, and include the diversion of growth away from Oxford towards the country towns. Oxford City Council should play its part in this. We also think it would be possible for the Oxfordshire authorities to promote the diversion of some economic growth to other parts of the country which would welcome and benefit from it – possibly through formal ‘economic twinning’ arrangements.

Believes the proposed submission to be unsound, not properly prepared, not justified and not effective. Objects to Policy PR3 The Oxford Green Belt, Policies PR8 and PR 9 propose removal of specified areas of land from the Oxford Green Belt. This is not consistent with national policy and therefore unsound. Particularly object to the building in the Kidlington Gap, the most vulnerable part of the Green Belt. This area need to be protected so that there is not a continuous urban sprawl from Kidlington to Oxford. There is not an exceptional case for building on the Green Belt as the housing overspill need for Oxford has been created by the City Council choosing not to use its own sites for housing and not ensuring that sufficient affordable houses are built.

Green Belt: CDC regard this land as green belt as you yourselves graded it as such not that long ago so how can this even be considered for such a grotesque venture as what you are planning? There has to be better sites which should be seriously considered such as brown belt land and land nearer better road links such as along the M40. For the amount of houses proposed, this would, in effect, create a whole new community. Why don't you therefore look for sites that would cater for such a "community". Building on 2 – 3 existing communities would actually "destroy and swamp" the communities that are already in place. The green belt land for which development is proposed is used greatly and widely for recreational purposes by many locals, including myself, and not so local. The walkways and footpaths are well worn and gives a lovely peaceful ambiance of being in the country. From a personal point of view this green belt is integral to my business. This green belt differentiates the villages and their own identities. That is the point of VILLAGE life and what a lot of people buy into. If this preposterous proposal continues we will just be another form of Oxford where one area just blends into another and you do not know where it starts or finishes and are all just clumped together. How can you take a village and then triple it in size. This is just madness. The new houses would GREATLY outnumber the housing already situated in these villages threefold. Yarnton itself over recent years has already had a substantial growth due to developments. If the proposed houses were to be built there is also a greater potential for flooding. As it is, both Yarnton and Begbroke are already prone to some flooding in certain areas and this does cause severe disruption. Once concrete has been laid down, to my mind at least, the water then has to go somewhere else thus making the potential for lots more flooding. Once this green belt has gone it has gone and is lost forever. You cannot turn back the clock.

The ability to create a sustainable, joined-up vision for the whole of the north Oxford /Kidlington/ A44 corridor area. The green belt is there to do exactly the opposite of this vision. Ours is to retain what we have. This is not a joined up sustainable vision for North Oxford. It is the destruction of three villages being incorporated into North Oxford with the irrevocable loss of the green belt. It is the creation of an urban sprawl and the merging of three villages with Oxford. One can be cynical and believe that Cherwell interest has been to collect the additional revenue it will get by get these houses built.

Protest against any further development in the green belt of Oxford. Wants to point out that any green space around infill the land between Cutteslowe Park and Parkway Station and congested cities are vital for the environment, recreation, and general health of the residents and visitors, especially if they are also under official protection as in the case of Oxford.

Object to policy PR3, (The Oxford Green Belt) because: • Believes these proposals are not consistent with National Policy because they do not take into account the detrimental effect that removing these large areas of Green Belt will have. The green belts purpose is to prevent urban sprawl and building on this gap will cause towns to merge into one another.

Objection to building multiple house on partial GB land named as Kidlington Gap on the following basis: 1. The distinction between the City and Kidlington has offered a community a district identity that should not be damaged. 2. Will increase already severe congestion and pollution to dangerous levels at the top end of Banbury Road to the new ring road roundabout. 3. Proposed homes would become London and weekend houses completely defeating the objective of providing increased housing. 4. No justification to using GB when there are many other opportunities to build on brown field sites in and around Oxford.

Objection to the removal of land from the Oxford GB. The GB preserves open spaces that are much appreciated by local residents, protects both the historic city of Oxford from overdevelopment and neighbouring villages from coalescence. Government guidance says that GB is a permanent designation and that unmet housing need is not a reason for building in the GB. The Plan is therefore not consistent with National policy.

Proposed Submission Plan - Policy PR3 - The Oxford Green Belt

PR-C-0620	08/10/2017	Alison	Haigh						N
1539	Comments								
<p>Objection to PR3 on grounds they are unsound, not justified and not effective. Most important objection is removal of GB. This preserves open space used by local residents and others, providing necessary counteraction to urban air pollution. Government guidance states that GB is permanently set aside, providing a buffer against urban sprawl and preserving the distinct communities of Kidlington, Begbroke and Yarnton. The areas proposed for development should be preserved for the welfare of present and future generations, not sacrificed to Oxford's housing demands. Cherwell District Council has a duty to preserve the interest of it's own residents , not give in to pressure from Oxford and developers.</p>

<p>The Plan goes against NPPF Policy 9 Paras 79-92 which states that “ The fundamental aim of GB policy is to prevent urban sprawl by keeping land permanently open; the essential characteristics of GBs are their openness and their permanence.” It also states “...inappropriate development is, by definition, harmful to the GB and should not be approved except in very special circumstances.” The Plan fails to establish the very exceptional circumstances for building on land designated to be permanently open. The Summary Booklet gives a list of exceptional circumstances which justify development in GB, most of these do not constitute 'exceptional circumstances' they are reasons why development can be justified. The very existence of the GB that has checked urban sprawl around Oxford and hence even greater congestion of the city centre, has instead stimulated regeneration within the city, and has preserved the setting and special character of the historic city. The Plan should recognise that the GB around Oxford is now needed more than ever. The Plan shows that a loss of only 3% of GB is proposed, while accurate, is dishonest. It gives the impression that the small loss from the total will make an equally small amount of difference to the whole GB. But the effect on the city and the area to the north would be disproportionate to the actual area of GB loss. The value of this land, in terms of its statutory roles, is far greater than land further away. Further growth would be heralded once the principle of incursion into GB was established. Whilst sustainability is a high priority in the Plan there are alternative areas beyond the outer GB boundary, where both housing and employment could be located far more sustainably.</p>									
Changes Sought					Reasons for Participation				
<p>The Plan being unsound, what is required to make it sound is a deferral of the Plan in order to reconsider the choice of Options. In particular, I propose that a new settlement be developed beyond the outer Green Belt boundary. Using the Duty to Cooperate, areas outside Cherwell should be considered. Containing both employment and housing, it would be far more sustainable, would not require destruction of Green Belt status on land around Oxford, and could link in to the Oxford – Cambridge economic corridor that is gradually becoming a reality.</p>									
PR-C-0638	09/10/2017	Peter	Bridges						N
1568	Comments								
<p>Proposals not consistent with National Policy because they do not take into effect the detrimental effect that removing large areas of the GB will have. Therefore do not meet the test of soundness as defined in para 182. Oxford's Local Plan has not yet been prepared so Cherwell's allocation of homes is premature and not an appropriate strategy and is unjustified.</p>

<p>Objection to Policy PR3 to remove land from the Oxford GB. The GB around Kidlington preserves green spaces that are so greatly appreciated and enjoyed by local residents. It protects both the historic city of Oxford from overdevelopment and neighbouring villages from coalescence. Government guidance says that GB is a permanent designation and that unmet housing need is not a reason for building in the GB. The plan is therefore ineffective and not consistent with National Policy. At a meeting arranged by Kidlington Parish Council on 21st September a representative of The Campaign to Protect Rural England said CDC had failed to provide the “exceptional circumstances” needed to take land out of the GB to put the proposed houses on. During this meeting our Local MP, Layla Moran, asked Cherwell District Council Leader, Barry Wood, to put the current Cherwell Local Plan on hold until the Government Report (The Right Homes in the Right Place) comes out in April 2018 because the Government have devised a new formula for calculating housing needs. It was also reported on recently in the Oxford Mail by Reporter Callum Keown and by Oxford BBC News on 29th September, that Oxfordshire housing needs could be cut by more than one third using the new Government formula. This obviously has implications for CDC’s proposal to build 4,400 houses on the Green Belt areas in question. From this open meeting most people were left with the impression that Councillor Wood’s idea of consultation was to attend the meeting and then carry on with the Local plan regardless of opposition from the public but for the good of landowners and developers who stand to make large profits.</p>

<p>Objection to PR3 on the grounds the plan is not consistent with National Policy when assessed against the purposes of the GB and its protection of community identities. The GB around Kidlington protects it and neighbouring villages from merging together and provides a rural setting for a large village. Government guidance says that GB is a permanent designation and that unmet housing need is not a reason for building in the GB. The GB around Kidlington protects it and neighbouring villages from merging together and provide a rural setting for a large village. Unmet housing need figures have now been cast into doubt and all sites identified for development score high or moderate/high in the 2017 Cherwell GB study in terms of their value in preventing settlements merging and urban sprawl. Unsustainable as traffic problems and pollution would hugely worsen. Schools and health services would be overstretched. Kidlington will become part of a vast urban sprawl encompassing north Oxford. Major concern for the impact this would have upon the identity of Kidlington as a village. Kidlington people are very proud of their village status with a population of 15.046 contending for the largest village in England. The strength of our community includes large and varied number local clubs, societies and community organisations. One secondary, four Primary Schools, five churches serving the entire population helping weld together our community. Good performing High Street with 3 supermarkets, a variety of smaller shops including those in the purpose built Kidlington Centre and a thriving Friday and Saturday market. Main park is sited in Exeter Close which accommodates Parish Council Offices, a one stop shop, a large community hall and a smaller one, a pavilion for football and table tennis, tennis courts, a handball court, football pitch and children’s recreation area. Exciting plans are emerging for the development of extra recreational provision on the site for children, teenagers and adults. This all helps to cement a strong community identity and feeling. This is reflected in the annual Kidlington in Bloom competition.</p>

Proposed Submission Plan - Policy PR3 - The Oxford Green Belt

PR-C-0654	08/10/2017	Rose	Cross					N
1613	<p>Comments</p> <p>Objection to new housing on GB. Much concern about loss of GB which keeps the villages of Yarnton, Begbroke and Kidlington separate and provides country walks and wildlife habitat. People need green spaces around them for mental and physical health. Quality of life will deteriorate considerably due to light pollution and increased air/noise pollution. Infrastructure will struggle to cope with increased people and vehicles; the A44 is already badly congested. What will be the impact of all this extra traffic on Sandy Lane, already much used. Public services are going to be stretched to the limit. GP surgeries are already strained - how will they cope with all the extra families? Where is the demand - there are already lots of properties on the market. There are brownfield sites in Oxford that can be used. Building on these sites would mean a more vital and lively city, and people would be able to use public transport, walk or cycle to work instead of driving. Object in principle to building on GB, these developments are too big and overwhelming for this area. I consider that the proposed submission is unsound, not positively prepared, not justified and not effective due to the reasons given above.</p>

5417	<p>Comments</p> <p>Concern over the impact of the proposed Woodstock urban extension, including the potential adverse effects on the settings of important heritage assets. It is not clear that Cherwell have appropriately considered the cumulative impact of the proposed urban extension in combination with the proposals in the proposed West Oxfordshire Local Plan. The proposed West Oxfordshire Local Plan proposes 670 new homes on urban extension to Woodstock, including 300 homes to the immediate west of the Cherwell site which now have planning approval subject to a Section 106 agreement. The cumulative effects that need to be considered include the impact on the setting of the Blenheim Palace World Heritage Site. The site at present is a large open field, whose openness is readily apparent from the A44 as visitors travel towards Woodstock from the South, and this contributes to the setting of the World Heritage Site. A key issue to consider is the harm that the Cherwell proposal might cause in combination with the adjoining development in West Oxfordshire. Cherwell have not considered that already there is a woeful lack of parking available in Woodstock and there is a real fear that development of this site would create a satellite village whereby shoppers would use the private car to commute to and from Kidlington. Another important issue is the impact of the proposal on this setting of the Blenheim Villa Scheduled Ancient Monument which is within the site itself. Although the SAM itself will be protected from residential development, the proposed housing area would represent a significant change to the landscape just to the north of the SAM thereby adversely affecting its setting. There is a strong hedgerow feature on the western boundary of the site, which follows the alignment of a historic tract. The proposed urban extension would breach this natural boundary and extend development in an incongruous 'finger' to the east. As such it would not relate well to the existing urban form of Woodstock in this area. The proposed allocation is considered to cause harm to the settings of important heritage assets, it would also impact on the landscape and setting of Woodstock as a result of an incongruous urban extension which is poorly related to the characteristics of the location. The benefits of the proposed allocation do not outweigh these harms, given that there is scope to deliver housing to contribute towards Oxford's needs in alternative ways, such as through a modest increase in density on sites released from the GB, or by the development of the site Policy PR3a, which is to be removed from the GB but is not proposed for housing development in the proposed submission plan. More efficient use of the GB sites could deliver at least 410 additional homes and therefore eliminate the need for the proposed Woodstock urban extension. As such the proposed allocation is contrary to the NPPF.</p>

1621	<p>Comments</p> <p>Support for Policy PR3. Exceptional circumstances have been demonstrated to justify the release of sites from the GB, including sites for housing to help meet Oxford City's unmet housing needs, and sites for necessary transport infrastructure. It is clear from the evidence base for Cherwell's proposed submission plan and from the Oxfordshire Growth Board evidence base that the release of sites from the GB is necessary to deliver the scale of housing required in a sustainable manner. It is important to consider the relationship of sites with Oxford and consider how well they contribute to helping meet Oxford's needs. The proposed housing sites to be released from the GB relate well to Oxford and to proposed or existing transport infrastructure.</p>

Comments

Government guidance says the GB is a permanent designation and unmet housing need is not a reason to build on it. Policy PR3 assumes it is acceptable to take land from the GB to build houses, flouting National Policy. Building 1410 houses on the GB removes 12% of the GB within the narrow gap between Oxford and the urban area of Gosford and Water Eaton. In addition, it effectively merges Oxford with Gosford and Water Eaton. The purpose of the GB is to check the unrestricted sprawl of large built-up areas and to prevent neighbouring towns merging into one another. Brownfield sites have to be considered and used before GB land is used for housing. Cherwell have brown field sites which they have dismissed because it would take a while longer to deliver the housing. This is not effective, has not been positively prepared and is not justified.

Objection relating to Kidlington, Yarnton and Begbroke on the following grounds: Development could be located on sustainable sites identified elsewhere in the district rather than GB which Government says should only be used as a very last resort. A high proportion of the new homes should be affordable for young people and families from the local area. Infrastructure such as roads and schools should be put in place, as well as adequate parking facilities for the new residents. Traffic congestion and parking is already a major problem in Kidlington and the surrounding area, especially in the rush hour. Support for Cherwell's decision not to include land behind the Moors for development, as this is GB land used for recreation by local people, and would cause yet more traffic problems. I am appalled at the prospect of Kidlington and it's close neighbours becoming another suburbs of Oxford, with the consequential loss of revenue to Cherwell District Council.

Building on GB is Not Justified: (a) Review says (p.10), this ought only to be done in "exceptional circumstances", but there are no reasons in the Review matching this requirement. To say that other plans "would not deliver the Plan's vision" is to imply, absurdly, that the ordinary planning process is itself an exceptional circumstance. This is more or less stated at the bottom of p.14, but GB is a national planning principle, not a local preference, and should not be overridden in this way. (b) The term "exceptional" surely implies that the loss of GB might be acceptable where an otherwise important or essential proposal elsewhere would not be viable without the loss of some GB land, but the Review admits (p.68, par 5.17) that "All the sites we have identified, other than land to the south-east of Woodstock, lie within the Oxford GB." The proposal simply treats GB as development land. (c) The Review states (p.14, par 1.8) that "permanence" is one of the "essential characteristics" of GB land. Having overridden this characteristic, it then proposes as one of the purposes of overriding it (p.78, par. 5.37), to "ensure that the revised GB boundaries are capable of permanently enduring beyond the planned period". It manages, then, to make violating the Oxford GB now a means of ensuring its permanence in future: this I regard as altogether unsound, in logic and in likely effect.

Appalled at intention to build 4,000 houses on Oxford GB. The GB is vital to protect the character of the City and prevent urban sprawl as well as providing a green lung that helps maintain environmental quality. Once it is gone it is lost forever. This is hardly sustainable development. These circumstances are not exceptional but have been artificially created by Oxford City Council choosing to develop commercial properties rather than housing and not insisting on affordable homes to be built at high density in the City. Sites within the city could be used for housing. It is irrational to protect green field sites within the City then destroy the GB and put neighbouring villages under pressure. Once the GB is breached for such spurious reasons the flood gates will be open for even more uncontrolled sprawl.

PR3: The Oxford GB. Policies PR8 and PR9 propose removal of specified areas of land from the Oxford GB. This proposal is not consistent with National Policy which is Not Justified and UNSOUND. The 'exceptional circumstances' justifying this removal of the GB listed at para 5.17 (page 66) are largely implausible and represent a rather pathetic planning exercise to shoehorn in a sufficient number of homes close to Oxford City without regard to the identity of the existing villages of Yarnton and Begbroke, and without effective infrastructure. I believe if this plan is approved it will set a precedent that would see other authorities throughout England and Wales to override the GB Policy at will and render it redundant .

Proposed Submission Plan - Policy PR3 - The Oxford Green Belt

PR-C-0682	08/10/2017	Tara J	Prayag						N
1680	<p>Comments</p> <p>95% of the land within Gosford and Water Eaton Parish is within the Green Belt. The plan as proposed allocates 3 significant sites for housing and removes 2 others from the Green Belt. These are Water Eaton Park and Ride and land between the A34 and PR6b which the Plan states in 5.39 is not suitable for residential development. In total, this involves the removal of nearly 100 hectares of land from the Green Belt within the Parish Council's area which represents 12% of Green Belt in the Parish. This loss will occur in the narrow gap between Gosford and Water Eaton Parish and the village of Kidlington with north Oxford reducing the separation substantially leaving a very little undeveloped land between the settlements. It will result in the urbanisation of Gosford and Water Eaton Parish with a 108% increase in the number of houses within the Parish. We note that in the Green Belt Study (April 2017) all of the site allocations in the Parish were identified as "High" or "Moderate High" in terms of harm to the Green Belt from their release for development. Indeed of all the sites considered in the study within Gosford and Water Eaton the majority are also given a "High" or "Moderate High" ranking. There is no justification for building on this land – as mentioned earlier 'Green belt' is not code for reserved for 'Reserved for Planning at the County's pleasure. With such a narrow gap it will be much more difficult to retain any real sense of separate identity for Gosford and Water Eaton and for Kidlington. Quotes the purposes of the GB in Para' 80 of the NPPF. The proposals put forward in the Partial Review would in our view fundamentally conflict with several of these objectives. They would lead to: • further sprawl from a large built up area through the northward expansion of Oxford urban area; • Gosford and Water Eaton, Kidlington and Oxford merging as a result of the development. • Encroachment onto the countryside within the Parish • Damage to the setting of Oxford through development within the Cherwell Valley. The NPPF is clear in paras. 88 and 89 that new building within the Green Belt is "inappropriate" and should only be allowed in "very special circumstances". You have not made this argument. Refers to the statement in para. 034 of the PPG (Stage 5 – Housing and Economic Land Availability Assessments "In decision taking, can unmet need for housing outweigh Green Belt protection? Unmet housing need (including for traveller sites) is unlikely to outweigh the harm to the Green Belt and other harm to constitute the "very special circumstances" justifying inappropriate development on a site within the Green Belt."</p>

PR-C-0687	06/10/2017	Tim	Green		Y	Y	N	N	
1693	<p>Comments</p> <p>GB was established to prevent urban sprawl and ensure neighbouring towns do not merge into one another. Also to preserve the setting and special character of historic towns. This proposal completely ignores the basic tenets contained with NPG para. 80. Would result in removal of large amount of LOCAL GB in one go - greatly changing the nature of the local area, contrary to purpose of the GB. In particular, the proposals contained within PR6a and PR6b would cause Oxford to effectively merge with Kidlington and would at the same time cause the present traffic congestion and air pollution to worsen considerably and to what objective? The outcome would provide expensive houses for commuters into London. Cherwell's Proposed Submission Plan July 2017 states that "Protecting and respecting the identity of individual settlements is an important aim of the existing Local Plan's policies for the built environment". The proposal to remove PR6a and PR6b from the Green Belt is clearly at odds with this stated aim.</p>

1707	<p>Comments</p> <p>Objection to remove land from the Oxford GB. The GB around Kidlington preserves green spaces that are so greatly appreciated and enjoyed by local residents. It protects both the historic city of Oxford from overdevelopment and neighbouring villages from coalescence. Government guidance says that GB is a permanent designation and that unmet housing need is not a reason for building in the GB. The plan is therefore ineffective and not consistent with National Policy. 'Contributions to improvements to the environmental quality and accessibility of land remaining in the GB' can never compensate for the loss of GB. Our GB, particularly that separating Kidlington from Oxford, serves all the following purposes: - To check the unrestricted sprawl of large built-up areas. - To prevent neighbouring towns merging into one another. -To assist in safeguarding the countryside from encroachment. - To preserve the setting and special character of historic towns. - To assist in urban regeneration, by encouraging the recycling of derelict and other urban land. 'Exceptional circumstances' for removing land from our green belt are not proven. The circumstances that Cherwell 'consider' to be exceptional all need to be challenged further (legally if necessary), and should not include 'the urgent and pressing need to provide homes for Oxford including the exceptionally high need for affordable homes' and 'the clear inability for Oxford City Council to fully meet its own needs'.</p>

1712	<p>Comments</p> <p>Objection to proposed designation of GB for housing and development. The existing GB preserves natural environments widely appreciated and used by local residents and tenant farmers. Development of such lands is to the detriment of the rural way of life and identities of the individual local communities, with historic villages being subsumed into the overdevelopment of City of Oxford. The National Planning Policy Framework clearly states that unmet housing need is not a justification for building on GB land and removal of the permanent designation of land as GB. Therefore the proposal is both ineffective and not consistent with National Policy.</p>

Proposed Submission Plan - Policy PR3 - The Oxford Green Belt

PR-C-0694	09/10/2017	Elizabeth	McDonnell						N
5423	Comments								
<p>Objection to the proposed submission plan and sustainability appraisal which are inconsistent with the National Planning Policy Framework in terms of failing to provide sustainable development which ensures a better life for both current and future generations, this is on the grounds that it fails to: • Promote realistic sustainable transport. • Protect green belt land. • Meet the challenge of climate change and resultant flooding. • Conserve and enhance both the natural and historic environments. The proposed submission plan, associated policy maps and sustainability appraisal are unsound, not positively prepared, not justified and not effective for the reasons detailed in specific objections. The sustainability appraisal indicates that Cherwell District is expected to accept and allocation of 30% of the unmet housing need for Oxford City, which in comparison to other neighbouring districts is excessive. This is supportive the assertion that the City council has failed in its duty to co-operate, whilst Cherwell District has failed to ensure the proposal is effective, positively prepared and justified.</p>

<p>Strong Objection: The areas for development are all in the GB – it is government policy to protect the GB. The specific purpose of the GB is to prevent urban sprawl, why are these areas being considered at all? Some of the areas, particularly to the north and east of Kidlington contain precious natural habitats and well used footpaths. These are widely appreciated and enjoyed by large numbers of local residents. The GB is a permanent designation and unmet housing need is not a reason for building in the GB. The Government and Cherwell’s existing policy to protect the GB, must be upheld. If the sites along the Banbury Road between Oxford and Kidlington are built on, as proposed, then the Oxford conurbation will run continuously from Kennington in the south to Kidlington in the north specifically negating the purpose of the GB to prevent urban sprawl. What will have been the purpose of the green belt designation if it is sacrificed at the first significant challenge?</p>

<p>Strong objection to build housing on the GB. These areas are there to prevent urban sprawl and for residents to walk in and enjoy. These areas are extensively used. If they are built on there will be one large conurbation from Oxford thought to North Kidlington and Begbroke. Once lost ,it is lost forever. It is against national Government policy and guidance and should not be considered. It is an unsound plan.</p>

<p>Consider that the proposed submission plan is unjustified and unsound for the reasons given in my specific objections. Object to Policy PR3 to remove land from the Oxford Green Belt. The Green Belt was put in place for a very good purpose and the increasing pressure from developers makes the reasons for doing so even more important today than when it was first introduced. The Green Belt is a permanent designation and the Government's own guidance states that unmet housing need is not a reason for building in the Green Belt. This has been reinforced in the manifesto of the current administration where there is a commitment to protect the Green Belt. Cherwell's existing policy is also to protect the Green Belt and, given the number of development opportunities elsewhere in the district, there can be no justification for abandoning that policy. The Green Belt provides footpaths and green spaces that are used and enjoyed by many local residents. Another major advantage in having the permanence of the Green Belt is that it ensures that Oxford City does not suffer from over development and urban sprawl. If there is an unmet housing need, then Oxford City Council is largely to blame as it has been allocating land in the city for employment instead of for housing, even though there is little or no unemployment in the area. It has ignored the impact on surrounding Districts and failed in its duty to cooperate. The City Council should do more to meet its own needs before insisting that adjoining councils build on the Green Belt.</p>

<p>Object to Policy PR3 to remove land from the Oxford Green Belt. The Green Belt around Kidlington preserves green spaces that are so greatly appreciated and regularly enjoyed by me and my family. It protects both the historic city of Oxford from overdevelopment and neighbouring villages from coalescence. Government guidance says that Green Belt is a permanent designation and that unmet housing need is not a reason for building in the Green Belt. The plan is therefore ineffective and not consistent with National Policy. Alternative locations for housing development in Cherwell district, outside the Green Belt are available along good public transport corridors to Oxford. Even if a case for exceptional need to build in the Green Belt could be made, the amount of land proposed to be removed from the Green Belt is not justified as it far exceeds that which is necessary to satisfy Oxford's stated unmet housing need because of the proposed low density of dwellings. One suspects that after an area of Green Belt land is designated for development, much higher densities will be proposed and this area will be used to meet Cherwell's future housing needs in addition to Oxford's unmet need. I therefore also object to Policy PR12a which allows for permission to be granted for housing numbers that exceed Oxford's unmet need.</p>

<p>Object to Policy PR3 to remove land from the Oxford Green Belt. Believes that the Green Belt should be protected from development, so that animal and plant habitats are not destroyed, and in order that we ensure our environment is sustainable for the future. Also thinks the Green Belt around Oxford should be protected to avoid urban sprawl and so that local residents can continue to enjoy green spaces, with Kidlington, Yarnton and Begbroke retaining a 'village' feel. Understands that the land behind The Moors is still at risk of development. Walks there very frequently as a local resident of Kidlington and would be heartbroken to lose this beautiful open space, not least as it is home to at least one family of deer. I do not believe we are at the point where there are no other options except building on the Green Belt - far from it, I believe we can easily avoid this by insisting Oxford City Council take some of the burden and bearing in mind the likelihood that this level of development is an exaggeration of what's actually required.</p>

Object to Policy PR3 to remove land from the Oxford Green Belt because:- The Green Belt around Kidlington preserves green spaces that are so greatly appreciated and enjoyed by local residents. It protects both the historic city of Oxford from overdevelopment and neighbouring villages from coalescence. - Government guidance says that Green Belt is a permanent designation and that unmet housing need is not a reason for building in the Green Belt. The Green Belt should only be given up in 'exceptional circumstances'. The plan is therefore ineffective and not consistent with National Policy. The proposed density of new housing is low by modern UK standards, at well under 20 dwellings per hectare. It is hard to avoid the conclusion that either very few of the new houses will be the promised affordable housing (and that they will instead be luxury housing for London commuters), or that many more houses will be built than have been announced.

1802	Comments Object to policies PR3, (The Oxford Green Belt), PR6a (Land East of Oxford Road) and PR6b (Land West of Oxford Road). • Believes these proposals are not consistent with National Policy because they do not take into account the detrimental effect that removing these large areas of Green Belt will have. These proposals therefore fail to meet the test of soundness as defined in paragraph 182 of the NPPF. (National Planning Policy Framework) • Oxford's Local Plan has not yet been prepared so Cherwell's allocation of homes is premature and is not an appropriate strategy and is unjustified. Further comments regarding the Green Belt: • Its purpose aims at preventing urban sprawl• If Green Belt boundaries are re-defined, the way to define those using physical features would need to be readily recognisable and permanent. This is not the case on the area to the east of the A4165 (Oxford Road) because there are no such features and therefore no eastern boundary. There is a high risk to lead to unrestricted sprawl of large built up areas – which is contrary to the Green Belt purpose. Further comments regarding housing needs: The proposal is focussing on being close to the Parkway Station; this is unlikely to fill the need to have affordable housing. The developers are likely to have to pay a premium because of its location. It is clear that these new homes are likely to be purchased by London commuters due to the proximity of the station.

1806	Comments Strongly object to the proposed plans of building on the Green Belt between Oxford, Kidlington, and Yarnton. This is a clear removal of the separation between then and with most certainly lead to both Kidlington and Yarnton becoming Oxford. This is exactly why Green Belts were created and the proposed plans are an unjustified use of Green Belt land which is not consistent with National Policy. Not only are these proposed plans intending to build on Green Belt land but the most precious Green Belt land between Oxford and Kidlington.

1813	Comments Most of the proposed housing (about 3900 houses out of the 4400 proposed) is located on green belt land. Although it is only a small proportion of green belt land within Cherwell DC, it is an important part as it separates the villages of Kidlington, Yarnton and Begbroke from Oxford.Green Belt land is permanent (National Planning Policy Framework paragraph 79). The only way to release green belt land is to show that there are exceptional circumstances (paragraph 83). Meeting unmet housing need is not, in itself, an exceptional circumstance. In order to prove that there is an exceptional circumstance, there is a need to demonstrate that all the possible alternatives for development have been looked at (Housing White Paper "Fixing our Broken Housing Market" February 2017). This has not been demonstrated by Oxford City Council. In particular it is necessary to show :• Why land set aside for development cannot be re-zoned for housing• Why current brownfield land within Oxford cannot be used• Why surplus public sector land cannot be used• Why higher density housing cannot be use. A critical review of Oxford's recent proposed Local Plan 2036 by CPRE (CPRE Oxfordshire response to Oxford Local Plan 2036: Preferred Options Consultation August 2017) provides substantial evidence that Oxford CC has not demonstrated an exceptional circumstance for building on Green Belt land. If this is so, there is no justification for Cherwell DC to build on Green Belt land in order to meet Oxford's unmet housing need.The proposed submission is therefore is not justified.

1818	Comments The proposed submission plan is Unsound, Not Positively Prepared, Not Justified and Not Effective for the reasons given in my specific objections below.Development within the Green Belt: The green belt is intended to check urban sprawl and prevent towns and villages from merging. The current plans would see Kidlington, Yarnton and Begbroke absorbed into one continuous conurbation, running from Oxford almost all the way to Woodstock. At present, the villages of Kidlington, Yarnton and Begbroke are distinct, with their own individual communities and personalities. Knows neighbours in a way that the rep never did when living in Oxford. There are regular community events within the village, and there is a sense of familiarity with the people seen day-to-day. The drastic increase in population, and the merging of the villages, would destroy that identity The Cherwell Local Plan 2011–2031 states that 'The Oxford Green Belt boundaries within Cherwell District will be maintained in order to... prevent the coalescence of settlements; assist in safeguarding the countryside from encroachment; [and] assist in urban regeneration, by encouraging the recycling of derelict and other urban land.' In addition, this Plan stated the intention to 'avoid the coalescence of settlements, protect the vulnerable Kidlington Gap, and otherwise have the least impact possible on the Green Belt.' The current plans seem in direct contravention of these aims.The government's own policies make it clear that the green belt should be built on only in exceptional circumstances: 'councils should use their Local Plan, drawing on protections in the National Planning Policy Framework, to safeguard their local area against urban sprawl, and protect the green lungs around towns and cities...Once established, green belt boundaries should only be altered in exceptional cases...' The 'exceptional circumstances' listed by Cherwell District Council in their Proposed Submission Plan are, in fact, nothing of the sort.				
------	--	--	--	--	--

Changes Sought	Proposed changes to the plans In light of the objections outlined above, I would suggest: • reviewing the housing forecasts on which the current Local Plan is based. The calculations used to make these forecasts have been revised recently and the number of new homes required has fallen as a result. • looking to build on brownfield sites within Oxford itself. This would significantly reduce the impact on local transport infrastructure, and provide housing where it is actually needed. • looking to build on sites closer to the main industrial areas of Oxford (namely the City Centre, Headington and Cowley); again, this would reduce the impact on local transport infrastructure and increase the likelihood that these houses would be bought by people working in Oxford rather than people looking to commute to London.	Reasons for Participation	I would like the Begbroke and Yarnton Green Belt Campaign to act as my representative during the Examination by the Planning Inspector

Comments

The 'exceptional circumstances' listed by Cherwell District Council in their Proposed Submission Plan are, in fact, nothing of the sort. • 'the urgent and pressing need to provide homes for Oxford' and 'the clear inability for Oxford City Council to fully meet its own needs': Oxford City Council has not finished preparing its own local plan at the time of writing. It has not yet established exactly what its needs are, nor whether it will be able to meet them. Moreover, as quoted in the Bicester Advertiser on 19 September, A new method for working out housing need was released revealing that Oxfordshire – originally planning for 5,000 homes a year – actually needs 3,415 homes a year. Thus, the plans are Not Justified. • 'the exceptionally high need for affordable homes': 'Affordability' is usually based on a value that is 80% the average market value for a house in a given area. Oxfordshire house prices are at present around 9 times comparable incomes, so even so-called 'affordable' homes will remain out of reach for lower quartile buyers. Only 30% of the proposed development has been 'earmarked' for affordable housing and, given the proximity of the new developments to Oxford Parkway station, it is likely that many of these properties will be snapped up by commuters who cannot afford to live in London. This will have the dual effect of rendering these developments mere 'dormitories' for people working in London, and meaning that there is little improvement in the current housing crisis in Oxford. As a result, the plans are Not Sound. -the improvement of transport infrastructure in the north Oxford/A44 corridor area: Agrees that the transport infrastructure in this area needs to be improved. The roads into and around Oxford are already over-crowded; traffic conditions are so bad that rep choose to cycle into Oxford each day, rather than driving, even though the cycle path is unlit and littered with broken glass, mud and potholes. The extensive roadworks in the north of the city seem to have done little to improve the situation, and many bus routes have been discontinued in recent years, leaving people with no choice but to use their cars. However, the District Council's Transport Assessment has assumed that its model of urban commuting is being applied to an urban environment (i.e. 25% walk, 25% cycle, 20% use buses). This is not even close to the true situation (as described above – cycling facilities are poor and many bus routes have been discontinued); the bulk of the affected areas for PR8 and PR9 have a majority Red or Amber status, meaning that more strategic transport investment will be required to mitigate the impacts of development. Furthermore, the roads between the proposed developments and the centre of Oxford include a railway bridge, a canal bridge and many adjacent properties, meaning that any attempts to widen or otherwise adapt the roads will necessitate length road closures and cause major disruption to roads that are already congested. Thus, the proposed development is Not Sustainable.

Changes Sought

Proposed changes to the plans

In light of the objections outlined above, I would suggest:

- reviewing the housing forecasts on which the current Local Plan is based. As mentioned above, the calculations used to make these forecasts have been revised recently and the number of new homes required has fallen as a result.
- looking to build on brownfield sites within Oxford itself. This would significantly reduce the impact on local transport infrastructure, and provide housing where it is actually needed.
- looking to build on sites closer to the main industrial areas of Oxford (namely the City Centre, Headington and Cowley); again, this would reduce the impact on local transport infrastructure and increase the likelihood that these houses would be bought by people working in Oxford rather than people looking to commute to London.

It protects both the historic city of Oxford from over development and the neighbouring villages from coalescence. Government guidance says that Green Belt is a permanent designation and that unmet housing need is not a reason for building in the Green Belt. The plan is therefore ineffective and not consistent with the National Policy.

Does not agree that Cherwell's preferred options of areas A and B are the most suitable sites of the nine 'Areas of Search' in which to locate the 4,400 houses allegedly necessary to meet Oxford's unmet housing need. All the land within areas A and B – with the exception of site PR10 – lies within Oxford's Green Belt, contravening both Cherwell's own adopted Local Plan and National Policy that designates the Green Belt as permanent. Land should not be released from the Green Belt unless it can be demonstrated that exceptional circumstances exist and that the scale of a 4,400 housing development in Cherwell District is proven. We welcome Cherwell's rejection of sites north and east of Kidlington, but consider all sites not currently selected for development as remaining endangered by ANY relaxation of Green Belt protection, since the Green Belt should be retained as an entity and not be subjected to piecemeal development, and we therefore oppose in their totality Cherwell's preferred search options A and B. States the NPPF (para 80) the Green Belt's five purposes in the letter. Oxford's Green Belt is an excellent example of the successful performance of these functions: it has preserved the size, setting, and character of the historic city of Oxford and of the villages surrounding it; it has prevented the merger of Oxford and surrounding settlements into an extended conurbation of urban sprawl; and it has ensured that the surrounding countryside and its landscapes – whether farmland or other open green spaces - have been protected and conserved. Local Plan Policy ESD 14: Oxford Green Belt quoted. Cherwell's positive intention to protect and preserve the Green Belt is sound and observes NPPG, and its rationale for doing is reiterated throughout the Local Plan. There could be few better defences of the Green Belt than Cherwell's own. Paragraphs of the adopted Local Plan Part 1 quoted. The requirement on Cherwell to add to its Local Plan an acknowledgement of its Duty to Cooperate to address the objectively assessed need for housing across the Oxfordshire Housing Market Area has resulted in an inherent contradiction in the Local Plan, which now both opposes and supports a strategic review of the Green Belt. Extracts of Section B of the adopted Local Plan Part 1 quoted. Cherwell states that its duty to cooperate with neighbouring authorities means that it is obliged to help meet Oxford's unmet housing need, and proposes that it should fulfil its obligation by development of 4,400 houses in selected sites in areas A and B. Areas A and B lie almost entirely within the Oxford Green Belt. Cherwell's stated policy is against development in the Green Belt. Locating these 4,400 houses in these areas (as opposed to the other areas of search that were considered) would therefore be a contravention of Cherwell's own Local Plan.

Object to policies PR3, (The Oxford Green Belt), PR6a (Land East of Oxford Road) and PR6b (Land West of Oxford Road). Believe these proposals are not consistent with National Policy because they do not take into account the detrimental effect that removing these large areas of Green Belt will have. These proposals therefore fail to meet the test of soundness as defined in paragraph 182 of the national Planning Policy Framework (NPPF).

Lives adjacent to a field that supports much wildlife including barn owls. Very upset to think that the need to destroy the habitat of these creatures because we cannot build efficiently in the City! The farmland also provides oxygen and food for us and a beautiful environment in which we can walk and relax. If the villages are joined and this area becomes an urban sprawl then the individual identity of the villages will be lost and that of Woodstock. There is land available within the City and the Green Belt should be preserved at all costs for future generations.

1895	Comments							
Strongly object to Cherwell District Council's plan to build 4,400 houses on the Green Belt surrounding the villages of Begbroke, Yarnton and Kidlington. 5 purposes of the Green Belt from the NPPF quoted. The NPPF emphasises that 'Green Belt boundaries should only be altered in exceptional circumstances' and I do not consider that Oxford City Council's inability to manage their own housing needs as 'exceptional circumstances'. Cherwell DC's plan also contravenes the NPPF's policy on the Green Belt and their reasons for 'exceptional circumstances' are not acceptable both to the Rep and to many other people. The main purpose of the Green Belt is to prevent urban sprawl. Cherwell's Local Plan which has been adopted states that that "The Oxford Green Belt was designated to restrain development pressures which could damage the character of Oxford City and its heritage through increased activity, traffic and the outward sprawl of the urban area." If these plans are instigated then Oxford City will engulf Begbroke, Yarnton and Kidlington creating 'urban sprawl' on an unprecedented scale. These villages, which have stood alone for hundreds of years, will become 'incorporated' into the suburbs of Oxford and the loss of the Green Belt which separates them will also be lost forever in a mass of bricks and concrete. Cherwell states that these areas override any other considered areas as they are closest to the City and this is why they have been selected for development. However it is these Green Belt areas which, by their very nature, are designed to halt the spread of urban sprawl and the incorporation of populations. Government policy states that development within the Green Belt should only be the very last resort and should only be considered if there is no other alternative. Does not accept that Cherwell District Council has taken into account the above statement. If these plans were to come to fruition Yarnton and Begbroke would be consumed by Kidlington and all would then be engulfed by Oxford city. These villages have their own historical significance and have stood alone for hundreds of years as already stated, this 'independence' would be lost along with each village's history. Cherwell District Council Green Belt Report (April 2017) - summary quoted from the site assessment for site PR51. This was only reported in April of this year so why are Cherwell going back on their original statement regarding the nature of our villages? Para B.256 of Cherwell's adopted Local Plan Part 1 quoted.

In paragraph 5.35, replace "Oxford's unmet housing needs" by "the unmet need for housing for people working in Oxford". Only then is use of the Green Belt justified. Do not want to sacrifice the Green Belt just to provide a dormitory for London. The new train station makes the latter particularly a concern in the North Oxford / Kidlington area. However if this problem can be solved, then agrees that use of the Green Belt near the city of Oxford is justified by the need for housing for Oxford workers. It makes much more sense to provide housing close to their place of work than further out, which would require longer travel distances and reduce the fraction of people willing to cycle to work. The Oxford-Kidlington gap gets reduced, but Green Belts and separate villages elsewhere can be preserved.

Oxford Green Belt is sacrosanct and strongly oppose building in it. The Green Belt around Kidlington is vital to sustaining coherence and character of the conservation area around St Mary's Church (to north/east). It is essential in protecting Kidlington's separateness from Oxford (to south) and from other villages (to west). If the Green Belt were to be developed, Kidlington would no longer be a village: it would be a contiguous city suburb. The Green Belt is a permanent designation. Government guidance states that unmet housing need is not a reason for building in the Green Belt. The Government's promise must be upheld. Cherwell's official policy is to protect the Green Belt. Cherwell's commitment to us must be upheld. To fail to do so undermines Cherwell District Council's integrity. There are realistic alternatives to housing development in Oxford's Green Belt. Brown-field sites exist that should be made available. Redeveloping previously-developed land should be the first propriety. Where green-field sites are necessary, these should be non-greenbelt. Oxford City is creating false pressure on the Green Belt by reserving its own sites for commercial development. These should be repurposed for residential development. For example, the Northern Gateway should be used to provide housing within Oxford's own boundary. To offload residential development onto the Green Belt and villages, claiming Oxford "doesn't have possible sites", is disingenuous.

PR-C-0774	10/10/2017	Ailsa	Reid					N
1956	Comments							
Object to the scale of the proposed housing developments in the Kidlington and Yarnton area. Aware that more housing is needed, spent several years hoping to find 'affordable' housing within Oxford, before deciding that this was not possible and had to buy elsewhere, with a lot of assistance from family. Does not think it is sensible that Oxford be allowed to dictate terms to the surrounding area, rather that it should be made to put its own house in order. Extremely alarmed by the plans to sacrifice Green Belt land for housing, in defiance of Government and Cherwell District Council's own policies. Not only will this permanently sacrifice open spaces to housing, it will set a precedent for further development. Particularly concerned by the possibility of development of land behind The Moors, Kidlington – this is a valuable open space much used by local people, and acts as a vital habitat reservoir for wildlife. It is particularly appreciated by the local deer herd – I have seen up to 14 visible at one time in a single space – but much smaller wildlife depends on this rarely cultivated land for winter food and shelter. A quick fix for Oxford's woes now will result in the loss of this amenity and habitat for ever. Much of the proposed development area is also low-lying and prone to flooding – new houses are already being built near Yarnton on floodplain land – with the rise in rainfall and extreme weather events this can only lead to more and worse flooding events. Building on this low-lying land will remove space which flood water could spread onto to prevent it from causing flooding further downstream in Oxford and other communities. Does not believe that there will be a meaningful amount of 'affordable' housing in the proposed developments. The Oxford area is bleeding talent at one end because young people cannot afford to live here, and increasing traffic at the other as those who can at least afford to live nearby commute in (aware of people commuting to Kidlington from Swindon, Didcot, and Aylesbury, despite relatively low wages by the area standards), and if situations such as that at Templar Square with just 20% of "affordable" units are allowed, this will not only continue but get much worse. Utterly astonished by the lack of plans to improve the road network. Traffic already regularly backs up well through Kidlington in the morning, and it only takes a single incident to cause major traffic problems through the area. Without major investment in infrastructure, the extra vehicles from the proposed developments will cause traffic chaos of the sort we have seen recently with the works at the Wolvercote and Cutteslowe roundabouts on a daily basis, clogging the Northern routes into the city, and causing gridlock on the roads feeding them. I know from long experience the effect this has on the A34 which is supposed to be a major transport artery bringing goods North and South across the country, but it seems is likely to become one huge traffic jam if these developments are allowed to go ahead. The growth in traffic they will cause is utterly unsustainable.

Proposed Submission Plan - Policy PR3 - The Oxford Green Belt

PR-C-0775 525	10/10/2017	Jon	Alsop	Savills on behalf of Christ Church, Exeter & Merton Colleges and Oxford University				Y	
Comments									
Support with amendments. The consortium supports the removal of 11.8 hectares of land south of the A34 and west of the railway line from the GB. The site shown as PR3© is enclosed by the A34 to the west and the railway line to the east. To the south, a collection of buildings associated with Peartree Hill Farm are also contained by these strong linear features and thereby isolated from the wider countryside. The main field is of pasture and is divided by PROW 299/10/20, which runs on an east-west alignment between a level crossing on the railway line and the A34 embankment. The character of this area is heavily influenced by views of the A34 and Peartree interchange and contained by embankment and vegetation. The supporting text to the policy states that following the development of land to the north of Oxford and to the west of Oxford Road, the A34 will form the logical, permanent Green Belt boundary is this location. PR3c, it states, is not considered to be suitable for residential development but connectivity will be expected through the site to Oxford's Northern Gateway site to the south.									
Changes Sought					Reasons for Participation				
The consortium considers that, whilst the site may not be suitable for residential development, the Council should go further and that this site should be specifically allocated in the Partial Review as employment land, capable of access from the A44 to the south. Further detailed representations relating to this particular Policy and land parcel will be submitted by Merton College.					On behalf of the consortium, given the significance of their land interests, would wish to participate in the oral examination.

In addition to its interests in sites PR6a and PPR6b, the University of Oxford and Merton College also have landownership interests in the following sites: • PR3c: land north of Oxford Service Area. • PR8: land East of the A44 at Begbroke/Yarnton. • PR9: land West of the A44 at Yarnton.									
Given their shared interest across these sites, there has been careful co-ordination between the landowners and their advisory teams in the preparation of these representations and specifically comments in relation to these sites. In addition, the teams advising the landowners have met in order to start to formulate a co-ordinated approach to the sites in relation to common themes (e.g. transport) and in terms of planning phase and subsequent implementation. These parties will continue to work together on areas where their interests are aligned with the aim of achieving a comprehensive and co-ordinated approach to the delivery of these sites and the strategy for the A44 corridor overall.

Support. As stated previously, and noting the case for exceptional circumstances, the consortium supports the principle of a revision to the boundary of the Oxford GB to facilitate the development of new, mixed-use communities to the north of Oxford and in the vicinity of Kidlington / Yarnton / Begbroke on the basis that these locations are closest to Oxford and therefore the best places at which to meet the housing needs of the city.

Object strongly to the proposal to remove land from the Oxford Green Belt. The Green Belt around Kidlington is mainly pleasant and unspoilt countryside with many well-used footpaths and 'green spaces'. It is much appreciated and enjoyed by large numbers of local residents. Kidlington does not have many green spaces within it, and no park, and the surrounding Green Belt helps to compensate for this. The Masterplan SPD notes that Kidlington's distinctive character is as a 'village set in the landscape' and specifically seeks to enhance that. The Plan does not sufficiently consider the Kidlington Masterplan. The pressure for release of Green Belt land for housing results from the City Council's apparent and damaging strategy of attempting to direct employment growth towards and within Oxford. There are alternatives such as a continuing strategy of dispersal as outlined above. The city council could also do much more to meet housing needs within its own boundaries such as making better use of previously developed land in Oxford and using some protected employment sites in the city for housing instead.									
Changes Sought					Reasons for Participation				
Green Belt land should not be released. The real housing need for Oxford should be assessed and validated. The Councils should cooperate to protect the Green Belt and to protect Oxford from over-development. The current draft plan should be withdrawn.					Would like to be represented by Kidlington Development Watch at the oral examination in public. For the reasons given in the Kidlington Development Watch representation.

Proposed Submission Plan - Policy PR3 - The Oxford Green Belt

PR-C-0796	10/10/2017	Kevin & Laura	Atkin						
2052	Comments								
<p>Feel that it is totally unacceptable to use these sites for affordable housing or anything similar. It will certainly cause extensive issues in so many ways. • Urban sprawl, more crime etc. • Use brownfield sites first, Green Belt land should only be developed in exceptional cases and that economic growth is not in itself an 'exceptional case'. • The land that we overlook floods very badly and drains onto our garden, this will only be made worse as there will be nowhere for the rainwater to drain into the ground. • Greenbelt allows for excess rainwater to drain away, climate change is real and happening and building more houses will only make the situation worse, this will cause environmental impact that can't be reversed. There is a bat colony on the land and various wildlife like deer, beautiful rare birds, owls etc. where will they go if the land is used for development? • Wildlife populations depend on their environment or habitat to receive the basic needs for survival. An ecosystem or habitat provides populations of wildlife with food, water, shelter and space. If all four of these basic needs are not available in a suitable arrangement, populations of wildlife can not exist. Many examples were given to explain how the whole ecosystem will be affected. • More traffic on already congested roads, we already have far too much traffic on the roads, this will end up causing 'grid lock' the roads aren't properly maintained as it is, will the council outlay more money to cope with this or just charge us for it by increasing our council tax etc. • How do you know how much land is needed, this is unproven therefore use the Oxford and surrounding areas brownfield sites. Prove to us that you are unable to use the brownfield sites. Please think about what you are planning to do, this proposal can and will affect everything, you may not think that it will affect you but it will have a huge impact on so many things and once built on, there is no going back.</p>

<p>This submission relates to land at and adjacent to Knightsbridge Farm, Yarnton, and which is located on the south-east edge of Yarnton and immediately to the south-east of the Begbroke Policy PR8 - Land East of the A44 Proposed Urban Neighbourhood. The land is owned by the Sheehan Group of Companies and Cappagh and is previously developed land comprising a redundant sewerage treatment works, a haulage depot and storage land and a concrete batching plant. The land extends in all to some 13 hectares and is outlined in red on the attached plan. This submission should be read alongside and is put forward as an alternative to a separate submission made by Planning Consultant, Suzi Coyne, who has argued that, consistent with the existing use of the Sheehan land, the site as a whole should be allocated for employment land for B2 and B8 uses. Development at and adjacent to Knightsbridge Farm would be a logical addition to the Begbroke Urban Neighbourhood or the existing built up area of Yarnton and would assist further in meeting Oxford's unmet housing need. It is also less sensitive in GB terms than, for example, proposed allocations PR6a and PR6b both of which (a) cause a material diminution in the gap between Oxford and Kidlington (contrary to the GB purpose of preventing neighbouring towns from merging in to one another) and (b) seriously undermine the requirement to preserve the setting and special character of Oxford, central to which is its green backdrop. Key attributes for the land at and adjacent to Knightsbridge Farm listed.</p>									
Changes Sought					Reasons for Participation				
Remove the land at and adjacent to Knightsbridge Farm from the GB. Amend the boundary of the Begbroke Urban Neighbourhood (Policy PR8) so as to include the land at and adjacent to Knightsbridge Farm in the allocated site for residential development or a mix of residential and other uses.					As drafted, and in so far as it relates to the land at and adjacent to Knightsbridge Farm, the Plan has not been positively prepared, is not justified and is not effective. This goes to its soundness and raises issues that should be explored fully at the oral part of the Examination.

2073	Comments								
<p>This policy proposes to remove land adjacent to the canal corridor from the designated Green Belt, PR7b & PR8. In these locations, the canal currently enjoys picturesque rural outward views and development in these locations has the potential to significantly alter the character of this stretch of canal. It will be important that development of these sites retain a sense of the countryside along the canal and this appears to be considered with the areas for built development being set back with green space retained to the canal boundary. Opportunities for unlocking the potential of the canal should also be supported through the development of these sites. The provision of services for canal users, pedestrians/cyclists and boaters, could be explored within comprehensive Development Briefs. Open green landscapes adjacent to the canal could aid in retaining a sense of the rural feel within the surrounding landscape. Landscape proposals would need to demonstrate that they work to buffer the harder visual impacts of the development such as hardstanding, parking bays and structures from the canals outward views.</p>

	The Oxford Green Belt was set up with the intention of permanently securing the separation of established settlements and to preserve areas of landscape value and prevent urban sprawl. It was not intended that they should be built on at all. The NPPF states that 'once established, Green Belt boundaries should only be altered in exceptional circumstances' Green Belt land should be seen as the last resort for development but it seems that CDC has proposed all but the land at Woodstock within the Green Belt. I am opposed to the scale of development in the GB for the following reasons: • The total quantum of Oxfords unmet need has not been proven and is premature. • The proposals constitute the joining up of Oxford Kidlington, Begbroke and Yarnton fully destroying any prevention of coalescence which was one of the key aims of the Green Belt. • CDC has accepted the 4400 figure without challenge and have assumed that it can be wholly fitted into the south part of the district with no other consideration. • CDC has not examined with Oxford City as part of the cross border working the utilisation of employment land such as the Northern Gateway employment land which is creating the pressure for more housing. • Oxford City are also proposing to build on Green Belt land within the city boundary. I object to this policy for the reasons stated. The arguments put forward by CDC for building in the Green Belt in paragraph 5.17 are weak. Of the 12 reasons only reason 1 and 2 could be justified as reasons for building in the Green Belt and even then they are premature until Oxford City Local Plan is completed and the outcome of the governments new paper is clearer. Do not consider that CDC have demonstrated that there is an exceptional circumstance to allow building in the Green Belt on the scale proposed.

	The Oxford GB is a major part of Oxfordshire's Green Infrastructure. It is of immense value to city dwellers precisely because it is so near to the city boundary. The chosen sites are precisely where it is narrowest i.e. in the gap between Kidlington and North Oxford. Government policy dictates that the GB should prevent coalescence of settlements. The State of Nature in Oxfordshire 2017 report produced by Wild Oxfordshire quoted.				
	Changes Sought		Reasons for Participation		
	The review of the Adopted Cherwell Local Plan is premature and should be suspended until Oxford City has completed its Local Plan and produced a robust figure for the number of houses that it is unable to build. The Inspector for the Local Plan Part 1 specified that a review of the Green Belt should happen but only after the unmet need is fully and accurately defined. If, after Oxford City has a Local Plan in place, Cherwell is called to co-operate with Oxford City by taking extra houses, then there are means for these to be accommodated without building on the Green Belt. Housing density could be increased on several sites in Cherwell as well as in Oxford City. Urban sites can take up to 70 houses per hectare. Higher density houses are necessarily smaller but 63% of Oxfordshire's need is for smaller units.

Comments

It is not right to follow the action proposed and remove such a large proportion of the Green Belt from such a small area. The policy does not take account of the detrimental effect that this will have and so is not consistent with National Policy. The National Planning Policy Framework aims for the Green Belt include: the prevention of urban sprawl; this plan would result in the coalescence of Oxford and Kidlington, preservation of the setting and special character of historic towns; this policy will be detrimental to the setting of Oxford, safe guarding the countryside from encroachment; this policy results in encroachment on the countryside and leaves open the opportunity for further encroachment, prevention of urban sprawl; this policy leads to urban sprawl, assists in urban regeneration; this policy does not. It is manifestly wrong to allow the Kidlington Gap to be built on and thus to allow the separate entities of Oxford and Kidlington to coalesce. The countryside that will be lost is of high value, with a great amenity value for the local populations. Of particular concern to me are the proposals PR6a and PR6. These effectively remove the Kidlington Gap. The cost to the local environment is incalculable yet Cherwell DC has other non-Green Belt sites available that are not part of the proposals. It is essential that it is noted that the proposed development area PR6a has no defined eastern boundary and so the potential for bids to take further land out of the Green Belt is obvious. Cherwell DC has failed in its duty to define a clear boundary using physical boundaries which are readily recognisable and likely to be permanent. The absence of the boundary leaves potential for unrestricted urban sprawl. The proposal PR6b is laughable. The proposal is to remove a golf course to make way for very low density housing and then to relocate the golf course a few hundred yards away on a site unsuitable for a golf course but which could be suitable for housing.

Changes Sought

The process should be restarted once the Oxford Local Plan has been completed and thus when any unmet housing need of Oxford is known. When Cherwell does this it should correct the errors made in this process and take account of the importance of the Green Belt and provide solutions which do not impact the Green Belt.

The amount of green belt land to be removed in such a small area is disproportionate. The removal of this green belt land goes against the UK government National Planning Policy Framework which is absolutely clear why Green belt exists. This plan will mean the merging of Kidlington and Oxford. It will create urban sprawl. It will not safeguard the countryside from encroachment. It will DEFINITELY NOT preserve the setting and special character of historic Oxford or the existing buildings of Water Eaton Manor. It will NOT assist in urban regeneration as the developers and landowners with vested interest can ignore existing land in the city or earmark it for "employment". Building on the green belt is meant to be a last resort. The current situation has other options and this last resort is not needed. The land that would be lost would mean losing high quality countryside we will never get back. The recreation value will be lost. we would lose nature and gain tarmac. Plans for PR6a and PR6b will completely eradicate the Kidlington gap. If Cherwell MUST build on green belt (which is debateable) then there are other places in the district with much less impact. Also, PR6a has no defined boundary to the east. This could lead to "creep" where more and more green belt is removed once anyone starts building on this area. Not having a recognisable permanent boundary represents a failing by Cherwell. PR6b means digging up a golf course and building a few houses on it (i.e. low density housing) with a half baked plan to move the golf course to a nearby site, totally unsuitable as a golf course (but quite usable for housing).

Changes Sought

The local plan should be scrapped and the investigation and research started again. The local plan should recognise the importance of the Green Belt. The Green belt isn't an inconvenient anachronism to be discarded. It is essential to the wellbeing of the citizens of Oxford and surrounding towns and villages. It is evident that the UK government values its green belt more than this local plan does ... The Government national planning policy framework states that the Green belt exists to prevent urban sprawl, prevent neighbouring towns merging, safeguard countryside from encroachment, preserve setting and character of historic towns (such as Oxford!), assist in urban regeneration (by forcing entities such as the Oxford city Council, the University and its colleges to consider land in the city for housing not more unnecessary jobs).

Object strongly to the proposal to remove land from the Oxford Green Belt. The Green Belt around Kidlington is mainly pleasant and unspoilt countryside with many well-used footpaths and 'green spaces'. It is much appreciated and enjoyed by large numbers of local residents. Kidlington does not have many green spaces within it, and no park, and the surrounding Green Belt helps to compensate for this. The Masterplan SPD notes that Kidlington's distinctive character is as a 'village set in the landscape' and specifically seeks to enhance that. The Plan does not sufficiently consider the Kidlington Masterplan. The pressure for release of Green Belt land for housing results from the City Council's apparent and damaging strategy of attempting to direct employment growth towards and within Oxford. There are alternatives such as a continuing strategy of dispersal as outlined above. The city council could also do much more to meet housing needs within its own boundaries such as making better use of previously developed land in Oxford and using some protected employment sites in the city for housing instead.

Changes Sought

Green Belt land should not be released. The real housing need for Oxford should be assessed and validated. The Councils should cooperate to protect the Green Belt and to protect Oxford from over-development. The current draft plan should be withdrawn.

Reasons for Participation

Wish to be represented by Kidlington Development Watch at the oral examination in public.

Objection to Policy PR3 to remove land from the Oxford Green Belt. The Green Belt around Kidlington preserves green spaces that are so greatly appreciated and enjoyed by local residents. It protects both the historic city of Oxford from overdevelopment and neighbouring villages from coalescence. Government guidance in the National Planning Policy Framework says that Green Belt is a permanent designation and that unmet housing need is not a reason for building in the Green Belt. Quotes (Para 79) Green Belt purposes and the National Planning Practice Guidance concerning exceptional circumstances. Exceptional or very special circumstances have not been demonstrated in the CLPPR. Unmet housing need figures have now been cast into doubt and all the sites identified for development score high or moderate/high in in the 2017 Cherwell Green Belt study in terms of their value in preventing settlements merging and urban sprawl. Building so many houses in a relatively small area of green belt between Oxford and Kidlington is unsustainable. It would hugely worsen traffic problems and pollution. Schools and health services would be overstretched. Kidlington will become part of a vast urban sprawl encompassing North Oxford. Green Belt's open countryside in which nearly 4,000 of the houses would be built would be sacrificed forever and its walks and views lost. Natural habitats and wildlife would be destroyed. Oxford City Council has been allocating land in the city for employment instead of for housing. It has ignored the impact on surrounding Districts and failed in its duty to cooperate. The City Council should do more to meet its own needs. Object to Policy PR3 on the grounds that the plan is not consistent with National Policy when assessed against the purposes of the Green Belt as set out in the National Planning Policy Framework (NPPF) and is therefore Unsound and Not Positively Prepared.

Proposed Submission Plan - Policy PR3 - The Oxford Green Belt

PR-C-0841	10/10/2017	Catherine	Newman			N	N	
2276	<p>Comments</p> <p>The Green Belt boundaries within Cherwell DC will be maintained in order to meet the 5 purposes of the Green Belt. Therefore these plans to build 4,400 houses (with such high density) should never have been considered. Cherwell District Council has acted far too fast in agreeing to these developments and not acted in the interest of Yarnton, Begbroke and Kidlington. Both Yarnton and Kidlington have already built houses which home some of Oxford City overspill. Yarnton and Begbroke should not be merged together with each other or with Kidlington, each village should keep its own separate historic identity. Once the Green Belt has been built on it can never be recovered.</p>

5008	<p>Comments</p> <p>Subject to the Tripartite's comments on Policy PR3b, the Tripartite supports the objectives and general wording of Policy PR3, which confirms the removal of land from within the Green Belt and sets new outer boundaries. However, the Tripartite considers that it is not clear to the general public as to why, for example, € 14.7 hectares of land to the north, east and west of Begbroke Science Park (as shown on inset Policies Map PR8) is separate to the removal of 111.8 hectares of land referred to earlier in the Policy under Policy PR8, when it is within the same proposed allocation. In addition, in the case of Begbroke Science Park, the adopted Cherwell Local Plan Part 1 has already stated (Para. B.529) that a specific need has been identified [for additional employment land] at the Science Park. Therefore, exceptional circumstances have already been considered to exist to justify a small scale local review of the Green Belt to meet employment needs (see 'Policy Kidlington 1: Accommodating High Value Employment Needs') here, which is not referred to in the Policy. It is requested that this is addressed in revised wording for this section of the Policy.</p>							
	Changes Sought			Reasons for Participation				
	Suggested change to PR3(e) - 14.7 hectares of land to north, east and west of Begbroke Science Park (as shown on inset Policies Map PR8) as the adopted Local Plan Part 1 has already acknowledged that exceptional circumstances exist to justify a small scale review of the Green Belt to meet employment needs at the Science Park.			The land owned and controlled by the Tripartite comprises some 86% of the largest draft allocation within the Plan and as such, occupies a unique and vitally important role in meeting Oxford's Unmet Housing Needs. As such, the Tripartite consider it is essential that it is present [and/or represented] and participates at the Examination in order to assist the Inspector by responding to any queries that may arise and supporting the assessment of the soundness of the Plan.				
PR-C-0842	10/10/2017	Duncan	Chadwick	David Lock Associates on behalf of University of Oxford, Merton College and a private landowner	Y	Y	N	Y
5009	<p>Comments</p> <p>These comments are specifically in respect of Policy PR3(b) as separate representations have been made by the Tripartite on Policy PR3. The Tripartite notes that under Policy PR3(b) it is proposed to remove a small area of land from the Green Belt that lies adjacent to the proposed allocation (Policy PR8) and bounded to the east by the railway line. The railway line is to become 'the consistent and strong Green Belt boundary at the eastern edge to the proposed allocation' (Policy PR8). The land the subject of Policy PR3(b) is owned by the University of Oxford (part of the Tripartite) and is coterminous with and closely-related to the remainder of the proposed allocation at Policy PR8. Whilst the Plan states that there is no need for PR3(d) sic – meant to be PR3 (b) – to be allocated, reserved or safeguarded for development, equally the Tripartite considers that there is no clear or valid reason why this land should not be incorporated within the red line boundary of the proposed allocation at Policy PR8. The Tripartite has requested (elsewhere in its representations on Policy PR8) that land be excluded from the proposed allocation because of different land ownerships, willingness to develop/collaborate and nature of the land-use contribution towards the aspirations of Policy PR8. However, none of these apply to land at Policy PR3(b), which could usefully be included in the proposed allocation to contribute towards the development, the delivery of homes and place-making principles of the new urban neighbourhood at Begbroke. It would also contribute towards offsetting the removal of land from the proposed PR8 allocation for deliverability and other reasons (e.g. land contamination). The land is available, suitable, deliverable and achievable so is developable in the context of Paragraph 47 of the NPPF in conjunction with the remainder of Policy PR8 and it would be reasonable, rational and logical to include it as 'residential land' within Policy PR8 and on the Policy PR8 Policies Map. As already established in the Plan it would make no contribution to the purposes of including land within the Green Belt as set out in the NPPF.</p>							
	Changes Sought			Reasons for Participation				
	Amend Policy PR3(b) to remove the reference to 0.7 hectares of land adjoining and to the west of the railway (to the east of the strategic development site allocated under policy PR8 as shown on inset Policies Map PR8); and include the 0.7 hectares of land referred to above as 'residential land' within Policy PR8 and on the Policies Map. This is on the basis that it would make no contribution to the purposes of including land within the Green Belt as set out in the NPPF and would offset (in part) land recommended by the Tripartite to be removed from the Policy PR8 allocation because of deliverability and other issues (e.g. land contamination).			The land owned and controlled by the Tripartite comprises some 86% of the largest draft allocation within the Plan and as such, occupies a unique and vitally important role in meeting Oxford's Unmet Housing Needs. As such, the Tripartite consider it is essential that it is present [and/or represented] and participates at the Examination in order to assist the Inspector by responding to any queries that may arise and supporting the assessment of the soundness of the Plan.

PR-C-0847	10/10/2017	Dr Michael	Fraser		N	N	N	Y
5290	<p>Comments</p> <p>Referenced the 5 purposes of the Green Belt and NPPF paragraphs 82-84. Quotes provided on the Elmbridge Local Plan and Poole Local Plan. Quotes provided on NPPG's guidance on the Housing and Economic Land Availability Assessment (HELAA). Reference to Policy ESD14 of the adopted Local Plan Part 1. it is reasonable to conclude that whilst local districts may have accepted an apportionment of Oxford's unmet housing need the actual number is not absolute and the Local Plan process may determine that Cherwell, for example, is unable to accommodate the apportioned figure due to existing national policies, such as Green Belt. Conversely, Oxford City, through the development of its own Local Plan and consideration of urban density, re-allocation of land previously earmarked for employment use, etc. may determine that the total unmet housing need is lower than that recommended by the SHMA and post-SHMA work. The latter point will especially apply should Oxford City seek to justify exceptional circumstances to remove Green Belt land that falls within its own jurisdiction. Reference to Oxford's Preferred Options document.</p> <p>Changes Sought</p> <p>For the reasons given above AND the Representations made by the Begbroke & Yarnton Green Belt (BYG) Campaign which I additionally support and adopt as part of my own Representation in this document, the Plan in its current form cannot be changed to make it legally compliant or sound and should therefore be withdrawn and NOT be submitted for Inspection.</p> <p>Reasons for Participation</p> <p>"Would like the Begbroke & Yarnton Green Belt (BYG) Campaign to represent meat the Examination should it take place"</p>

Exceptional circumstances for releasing land from the Green Belt cannot be demonstrated. Construction of 4000 homes can hardly be regarded as "limited infilling in villages" of which 2000 affordable houses are hardly "limited" and furthermore are not for local (Kidlington, Yarnton or Begbroke) community needs. From any perspective, the proposed development is inappropriate, and must not be permitted. The strength of CDC's argument for development within Green Belt is based upon the wish to support Oxford's unmet housing need. Economic circumstances, Government plans for a standardised formula for calculating housing need and the Cullen Report suggest that there should be little or no unmet housing need in Oxford. Object to development within the Green Belt on the basis that :-• The proposals run counter to the National Policy Planning Framework• Oxford's unmet housing need has been grossly over-estimated to the extent that there will probably be no unmet need.

Proposed Submission Plan - Policy PR3 - The Oxford Green Belt

PR-C-0882	05/10/2017	Carl	Smith		N	N	N	Y
5208	<p>Comments</p> <p>Objects to CDC's proposals not complying with paragraphs 79 & 80 of the National Policy Framework (NPF), or with current CDC Cherwell Local Plan policy ESD14. This is because the additional housing proposals do not prevent unrestricted sprawl of large built up areas, or prevent neighbouring existing urban areas from merging into one another. In fact the proposals create continuing urban sprawl & the further degrading of the green setting & special character framework around the historic city of Oxford. The proposals also do not comply with paragraph 34 of the NPF because it is considered that the Oxfordshire Growth Board unmet housing need for Oxford assessment is unlikely to outweigh the harm to the Green Belt to constitute that "very special circumstances" to permit it. The objection is based on the fact that if there is a justification for "very special circumstances" to build dwellings in the Green Belt to meet Oxford's unmet housing need, THEN there must also be an equally justifiable "very special circumstances" for ensuring the area of Green Belt land take being taken is as minimal as possible, which is NOT being achieved in the Cherwell Local Plan Partial Review (Part 1) proposals. (Refers to amended Policies map attached to representation).</p> <p>Changes Sought</p> <p>Replace PR3 with; "The allocated strategic development sites will be based on minimising the areas of identified land to be removed from the Green Belt. This is shown as being a flexible range on the attached amended referenced Policies Maps and Green Belt Plan for accommodating the number of additional homes to be allocated in Cherwell for meeting Oxford's unmet housing need. It shall include Kidlington and surrounding area as follows: PR6a- removal of between 9.6 to 12.0 hectares of land as shown on inset Policies Map PR6a. PR6b - no land to be removed from land as shown on Policies Map PR6b. PR7a- removal of between 16.2 to 23.5 hectares o f land as shown on inset Policies Map PR7a. Policy PR7b - removal of between 4.4 to 6.7 hectares of land as shown on Policies Map PR7b. PR8 - removal of between 39.0 to 65.0 hectares of land as shown on Policies Map PR8. PR9 - removal of 17. 7 hectares of land as shown on inset Policies Map PR9. Consideration should be given for reducing housing numbers for all the above proposed development areas, particularly for protecting the Green Belt gap by considering developing the Brown field site at Shipton quarry cement works. The reserving of safeguarded land for proposing future further unknown development proposals is unacceptable.</p> <p>Reasons for Participation</p> <p>Based on the representation, would like to reserve the right to respond if necessary.</p>

Strongly objects to Policy PR3. Removing GB land. GB was established to prevent unrestricted urban sprawl, prevent neighbouring towns from merging, safeguard the countryside from encroachment, preserve the special character of historic towns & assist in urban regeneration by encouraging the recycling of derelict & other urban land. The proposals are in direct conflict with this. Govt. guidance states that GB is a PERMANENT designation & that unmet housing need isn't a reason for building on it. The GB North of Oxford preserves open land for these stated purposes. It is appreciated & used by locals. Removing it will result in a loss of amenity. Our personal living choice was partly made on its ease of access which we frequently use for recreation. GB would be lost if 1,950 homes are built (PR8 Land East of the M4). This will have a detrimental impact on our quality of life. The GB protects Historic Oxford City from overdevelopment & neighbouring villages/communities from coalescing into one large conurbation. I object to Policy PR3 as I do not consider the plan consistent with NP & don't believe that such policy can be put aside for convenience sake.

Objection to the removal of land from the Oxford Green Belt. The Green Belt preserves open spaces that are much appreciated by local residents, protects both the historic city of Oxford from overdevelopment and neighbouring villages from coalescence. Government guidance says that Green Belt is a permanent designation and that unmet housing need is not a reason for building in the Green Belt.

Government guidance says that Green Belt is a permanent designation and that unmet housing need is not a reason for building in the Green Belt. Don't believe 'exceptional' need has been proved for the development on designated Green Belt. Neither does it make any sense to propose the development of recreational GB land that has been used as such for over 100 years & then set aside undeveloped land situated 300 yards from the existing recreational use (N Oxford Golf Club). There would also be the loss of the Kidlington circular walk.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>

Object to PR1a, PR3, PR11, plus unreasonable consultation process. Object to CDC failing to commission and examine an environmental report. It is NOT good enough to leave it to contractors. Strongly Object to CDC not representing the people of Cherwell and choosing to give into pressure from Oxford. Not acceptable. On your website you have 4 priorities; 1. Sound budgets & customer focussed council. You are ignoring the customer. 2. Thriving communities. You are intending to smash the community to pieces. 3. District of Opportunities. Letting Oxford City Council pressure you makes this a ridiculous statement. 4. Safe, clean and green. You are proposing lots of traffic, fumes, getting rid of Green Belt. Why are you proposing to do the opposite of what you state on you website are your priorities?

Proposed Submission Plan - Policy PR3 - The Oxford Green Belt

PR-C-0973 1921	08/10/2017	Guy	Harrison		N
Comments					
Object to Policy PR3 to remove land from the Oxford Green Belt. The Green Belt around Kidlington provides enjoyment and health benefits to local residents. Government guidance says that Green Belt is a permanent designation and that unmet housing need is not a reason for building on it. The plan is therefore ineffective and not consistent with National Policy. If the proposal goes ahead, Kidlington would become part of a vast urban sprawl encompassing north Oxford, Cutteslowe, Wolvercote, Begbroke and Yarnton with a consequent loss of identity for all these communities. The walks and physical and mental health benefits of the Green Belt's open countryside would be lost for good and important natural habitats and wildlife would be destroyed. Sites rejected at this stage by Cherwell DC are still vulnerable and I strongly support the decision of Cherwell DC not to include Options sites PR14 and PR27 (Land behind the Moors) for development. This would entail the loss of a rich habitat for many rare wildlife species including Short Eared Owls, Great Crested Newts and Skylarks as well as a valuable amenity for village residents and visitors providing walks and historic views of the village toward St. Mary's Church. The land should be treated as a permanent green space. Any development would also exacerbate the flood risk to housing and adjoining land/conservation area. There is inadequate local infrastructure to support such development and it would have a detrimental impact on existing roads and services especially surface and foul drainage. Development would generate a lot of extra traffic near a school and nursery on a road already subject to traffic calming.

Objection to the removal of land from the Oxford GB. The GB preserves open spaces that are much appreciated by local residents, protects both the historic city of Oxford from overdevelopment and neighbouring villages from coalescence. Government guidance says that GB is a permanent designation and that unmet housing need is not a reason for building in the GB. The Plan is therefore not consistent with National policy.

Building on the GB will completely disregard the National Planning Policy Framework 2012. GB is to prevent urban sprawl - it is an important area for the well being of the local residents. It provides important habitat for protected wildlife and flora.

Proposed Submission Plan - Policy PR3 - The Oxford Green Belt

PR-C-1205 3898	13/08/2017	Jake	Bennett				N
Comments							
Objection to the removal of land from the Oxford GB. The GB preserves open spaces that are much appreciated by local residents, protects both the historic city of Oxford from overdevelopment and neighbouring villages from coalescence. Government guidance says that GB is a permanent designation and that unmet housing need is not a reason for building in the GB. The Plan is therefore not consistent with National policy.

PR-C-1223	15/08/2017	Diana	Lintott					
1031	Comments							
Objection made for the following reasons: Green belt land should not be built on just because Oxford house prices are high. Cherwell's responsibility is to it's own rate payers and not to accept demand from Oxford. The green belt is there to prevent urban sprawl and to counter the pollution issues in the area. It is also liable to flooding and is therefore unsuitable for housing. The housing that is being proposed to be built on the green belt will be designed for commuters to London and not designed as affordable housing for those who work in Oxford. house prices in Kidlington are so high that those who work in service occupations in Oxford are required to live in Bicester and commute in. Traffic routes are already congested and the suggestion that the extra housing will not affect the current traffic difficulties as people will be encouraged to cycle is fanciful.

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. I object to Policies, PR1(a), PR3, PR11 and it is an unreasonable consultation process. Countryside, landscape and walks will disappear. The current infrastructure will not cope with increased population. Traffic congestion during peak periods will be much worse.

Objection to the removal of land from the Oxford GB. The GB preserves open spaces that are much appreciated by local residents, protects both the historic city of Oxford from overdevelopment and neighbouring villages from coalescence. Government guidance says that GB is a permanent designation and that unmet housing need is not a reason for building in the GB. The Plan is therefore not consistent with National policy.

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. I agree with objections, PR1(a), PR3 and PR11 and to help save the Green Belt, the local countryside and our rural villages in Cherwell and Oxford's unmet housing needs. I support the stance CPRE Oxfordshire have taken that the city could meet most, if not all of it's housing needs within its own boundaries by prioritising land for housing and making sure houses are genuinely affordable homes that people are hoping for. This could be achieved by making better use of brownfield sites and taking a step increase in density targets. Extra housing would require extra transport requirements, but there appears to be no proposals to cope with increased traffic and congestion. Plans should be put on hold until this is addressed. Also Sandy Lane should be improved, not closed to vehicles. I believe CDC can do better with regard to building the required houses without concreting very the Green Belt we require for future generations.

The justification & effectiveness of PR3a is at odds with your own requirements for clear permanent boundaries to be re-established for the affected area. The triangle of land at PR3a is shown at Appendix 2 within the new light green area being GB to be removed, clearly not in the GB. A new permanent boundary would follow the A44 & the railway to a point where they meet. As it stands this area is in limbo, on one hand it is clearly shown as outside of the GB in an area of GB to be removed Appendix 2, yet your policy PR3a regards it as land that needs to be protected beyond the plan period. You agree that the railway line forms a consistent & strong GB boundary, one of your requirements. You say that area PR3a will make little difference, the small field adjacent to Cuckoo or Green Lane could supply 15 to 20 houses identified as a type required in Oxford, being one & two bedroom of affordable rent or low purchase price. This field could allow sustainable housing with good transport links to Oxford & of course be close enough to allow cycle access. I feel that any land adjacent to Oxford should be included to meet Oxford's unmet need. The access to the A44 would be along the route of Cuckoo or Green Lane which is an OCC adopted road up to & beyond the level crossing. The A44 at this point is not a fast stretch of road as vehicles are slowing for the existing roundabout. I am sure a junction could be shown even if it means left turn only. This triangle of land should be included in this review as fully within the site boundaries of PR8								
Changes Sought				Reasons for Participation				
As PR3a has been taken out of the Green Belt it should be included fully within the boundaries of PR8 and particularly PR8 16; 'the provision of a limited number of new homes to be agreed with the Council, to provide for students & those working for the University at the Science Park to support its expansion and reduce car journeys.								
PR-C-1322	10/10/2017	Adrian & Pat	Sutton & White					
5147	Comments							
For more than 60 years the Green Belt that forms the Kidlington Gap has successfully checked urban sprawl, and it has prevented the merging of Oxford and Kidlington, provided access to countryside to residents of north Oxford and Kidlington, and preserved the setting of the historic town of Oxford. In view of the new assessment of housing need in Oxford, and the lack of a completed local plan by Oxford City Council informed by accurate data on the land available for housing within Oxford, it would be irresponsible and reckless for Cherwell District Council to proceed with its plans to build on the Kidlington Gap. We assume the availability of brownfield sites in Cherwell and Oxford has been thoroughly explored. Understand the need for more housing in and around Oxford. We hope that building on the Green Belt is a last resort, and that any new development takes into account the impact on the quality of life of existing communities. We urge Cherwell District Council to postpone any decision on the development of the Green Belt around Oxford until all the facts are made available.

These proposals are not consistent with National Policy. The removal of this land from the GB, which is vital to maintain the separate and distinct identity of the villages of Begbroke and Yarnton, will result in urban sprawl, with insufficient transport infrastructure, and little feasible chance to rectify this. We chose this area for our family home specifically for the access and close proximity to the land within the GB. This proposal will permanently destroy the rural nature of this beautiful area of Oxfordshire.								
Changes Sought				Reasons for Participation				
For the reasons I have given and the Representations made by The Begbroke & Yarnton GB Campaign which I additionally support and adopt as my own Representation in this document, the plan cannot be changed to make it legally compliant or sound and should therefore not be submitted for inspection.				I would like the Begbroke and Yarnton Green Belt Campaign to represent me at the Examination should it take place.

Objects because proposals are not consistent with NP because they do not take into account the detrimental effect that removing these large areas of GB will have. These proposals therefore fail to meet the test of soundness as defined in para. 182 of the NPPF. Oxford's LP has not yet been prepared so Cherwell's allocation of homes is premature & is not an appropriate strategy & is unjustified.

Proposed Submission Plan - Policy PR3 - The Oxford Green Belt

PR-C-1350 4414	09/10/2017	Mr PA & Mrs JM	Carpenter				
Comments							
Oxford GB. PR8 & PR9 propose removing land from the GB surrounding Yarnton & Begbroke. This against NP & also disregards the independent identities of both villages, one of which is recorded in the 1086 Domesday Book. It appears that Oxford, whilst protecting its own green spaces & having sufficient brown field sites within the city boundaries to build housing on, is more than willing to sacrifice our green spaces!

Opposition to the plan to build high-density housing on the GB land to the east and west of the A44 between Yarnton and Begbroke. GB is a valuable breathing space to prevent urban sprawl and in many cases is agricultural land. Government is committed to protecting GB and development should only be allowed when no brownfield sites are available. Our GB should not developed to meet any part of Oxford City's unmet housing need when the city has brownfield sites. Sites around Cowley, Northern Gateway and Park & Ride at Redbridge could be used for housing and parking transferred to a site less suitable for housing. These brown sites are close to potential employment and therefore have less impact on road congestion. Impact of additional houses on A44 has not been adequately addressed. Suggested bus lanes are impracticable as no consideration given to pinch-points, mainly south of Yarnton where railway and canal bridges restrict the width of the carriageway. Ensuing traffic congestion will increase journey times, pollution, accidents, delivery costs and wear and tear on already deteriorating roads. Causing Sandy Lane to through traffic will inconvenience residents in accessing facilities in and around Kidlington High Street. Additional traffic on the road travelling west towards the A40, through Yarnton and Cassington villages will increase the dangers for children at local schools. Several acres of land to the south side of Sandy Lane was once a landfill site before its present agricultural use; it could be subject to subsidence and release of gases if the topsoil is disturbed by building. There is also the potential for flooding to the west of Yarnton on the lower slopes of Spring Hill, where heavy rain causes flash flooding.

Objects to PR3 to remove land from the Oxford Green Belt. The Green Belt not only protects the historic city of Oxford from overdevelopment and neighbouring villages from coalescence, but also from pollution and calamities brought by climatic events. The recent catastrophic flooding in Houston (Texas) should serve as tell-tale of what happens when vast green areas – including wetlands - are paved over. It's widely accepted that wetlands are able to soak up massive amounts of flood water. According to research of the Texas A&M University, the loss of 16,000 acres of wetland around Houston in the last two decades resulted in the equivalent to nearly 4 billion gallons in lost storm-water detention. The loss of natural prairies, which are highly permeable and act as sponges for storm-water, also decreased the region's ability to handle flooding. Government guidance says that the Green Belt is a permanent designation and that unmet housing need is not a reason for building in the Green Belt. Cherwell has failed to prove the existence of such exceptional circumstances. The plan is therefore both ineffective and not consistent with National Policy. There has been much talk recently of changing this policy under the (misinformed) view that it is not fit for the 2010s. It is argued that the modern green belt is often not green at all, but grey or beige, full of quarries, dumps and breakers' yards and that huge chunks are intensively farmed agricultural land that contributes rather than alleviates air pollution (through the ammoniaemission of fertilizers). If that is the case, then surely the answer should not be to concrete the Green Belt over, but to make it greener, that is to say to restore it to its natural shape and purpose. For example, farmers could be required to adopt the practice of injecting rather than spreading manure in their fields as it is common in other European countries such as Denmark and the Netherlands in order to reduce emerging contaminants to the environment.

Importance of green spaces for mental health and the negative impact of loss of identity and sense of community through the merging of villages. GB serves many purposes and once given up can never be retrieved - housing need is no reason to destroy it. If more housing is need it should be built outside the GB, and surely the new housing in Bicester will go some way toward meeting Oxford's need. Oxford could also do much more to meet its own need.

Proposed Submission Plan - Policy PR3 - The Oxford Green Belt

PR-C-1371	10/10/2017	J E	Bates					
4452	Comments							
<p>Deeply concerned about building such a vast number of home between Yarnton, Begbroke and Kidlington, as I feel irreversible harm will occur to the rural identity of these villages and the increase in traffic on already congested transport networks. These areas are used extensively by people enjoying the countryside - once lost this can never be replaced. The closure of Sandy Lane to through traffic is untenable as it is a busy and vital link between the three communities. The field alongside Rowel Brook can become a flood plain in bad weather, and the proposed 50m wide strip of land to be left between the brook and the development will not cope with he additional problem of the adjoining area being covered in buildings and railways. All of this is to cover a problem that is not a problem of Cherwell District Council and the unmet housing needs of Oxford are unproven: recent government reports indicate that less housing is required than has been estimated by the city. I strongly oppose the development: it will produce a large urban sprawl losing the individuality of three thriving communities and destroying an area of natural beauty. Do not believe that there is the need to do so as Oxford has brownfield sites which are suitable.</p>

<p>The proposal is not justified because it is not reasonable to plan to help meet the unmet need of a neighbouring authority (Oxford City Council) where that Council has yet to fully assess its unmet need. This is particularly relevant in the light of new methodology which suggests that Oxford's supposed unmet need is significantly overstated. The proposal is not justified because it does not meet the requirements of the NPPF on protecting Green Belt land. The land on PR6a & PR6b is very important in preventing urban sprawl, preventing towns from merging, protecting the countryside from encroachment and preserving the setting and special character of historic towns. The proposal does not take sufficient account of the damage that removing this Green Belt land would have. The proposal is not justified because the key exceptional circumstances as put forward by Cherwell are not valid. The proposal is not effective in terms of protecting an important park which lies on the border of Oxford City and Cherwell. The proposals put forward to protect the park can not be seen as deliverable. The proposal is not effective because it is not the most appropriate strategy. There are other sites within Cherwell which would not result in loss of valuable, high-performing Green Belt land. We would be grateful if the Inspector could visit the park please.</p>

<p>PR3 is not sound because it is not consistent with the NPPF. PR3 is not justified because the information presented supporting removal of areas from the Green Belt is not convincing. Greenbelt is irreplaceable. Destruction of Green Belt affects future generations as well as the current one. Paragraph 5.40 provides an unrealistic alternative to the loss of Green Belt. Planning release of Green Belt for development is unacceptable. It is not likely to be effective in dealing with Oxford's unmet housing need for the reasons provided in relation to PR6a and PR6b (see rep). PR3 may have a negative effect on the Green Belt by leading to a domino effect with increasing likelihood of more plans for destruction of other parts of the Green Belt. This is particularly likely where the proposed boundary of loss of Green Belt does not correspond to a well-defined feature.</p>

Policy PR3 states that the reduction of Green Belt land in the proposed submission plan is only 3%. However, this 3% is concentrated in a small geographical area so the effect is much more damaging than this figure would suggest. The fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open; the essential characteristics of Green Belts are their openness and their permanence. Proposing such a relatively high proportion of land to be removed from the Green Belt would fail to meet this fundamental aim and the five purposes of Green Belt land, as set out at paragraph 80 of the NPPF. We oppose the removal of this Green Belt land. In particular we oppose the removal of the Green Belt land in North Oxford (Draft Policies PR6a & PR6b) because this land performs strongly against the purposes of the Green Belt. The areas covered by PR6a and 6b are part of what is known as the "the Kidlington Gap". This area of Green Belt has long been under pressure for development and most of it now forms the Northern Gateway site which Oxford City intends to develop, largely for commercial uses. Once Northern Gateway is complete, apart from a small piece of land, it is only Draft Policy Areas PR6a and PR6b which will separate the very large village of Kidlington from North Oxford so the removal of these sites from the Green Belt would result in the virtual coalescence of these communities. Such extensive removal of Green Belt land would also erode the existing countryside setting of an internationally recognised City of historic, architectural and cultural significance. This potential merging of settlements and erosion of the countryside, would clearly be at odds with national Green Belt policy. There have been various assessments of the landscape value of Draft Policy Area PR6a (land east of Oxford Road). When the Department of Transport proposed the A40 North of Oxford Bypass (colloquially known as the Tin Hat Scheme) in the early 1990s this entire area was designated an "Area of Great/High Landscape Value". The land owner (Christ Church) has adopted a policy of benign neglect allowing the vegetation along the A4165 to largely obscure views from the road. However, the views across the Cherwell Valley are still of high landscape value. A factor that has been overlooked by Cherwell is that they are also highly accessible areas of countryside with Public Rights of Ways which are well used. Access to this area is often via Cutteslowe Park, Oxford City Council's largest park, which benefits from an open setting and countryside views due to this area of Green Belt land. Cutteslowe Park is used by tens of thousands of visitors each year and each one has the opportunity to enjoy this vast, high quality landscape which would be severely affected by development of PR6a. The Green Belt Study covering Draft Policy ArPR6b (Land Parcel Ref OXI) stated in relation to the golf course "Due to the proximity of Kidlington to Oxford the parcel plays an essential role in preventing the erosion of the physical and visual gap between the settlements" and "adds a rural character to Oxford's setting at close proximity to the City". Cherwell's Proposed Submission Plan July 2017 states that "Protecting and respecting the identity of individual settlements is an important aim of the existing Local Plan's policies for the built environment". Proposing the removal of sites PR6a and PR6b from the Green Belt would seem to be at odds with this stated aim. We do not consider that the benefits of developing in this area would far outweigh the adverse effects of losing valuable agricultural land, a golf course and loss of and harm to the Green Belt. In fact it is clear that this Green Belt is extremely important in maintaining the rural setting of historic Oxford, preventing the virtual merging of communities and safeguarding high quality, accessible and well-used countryside. Oxford City's recent Preferred Options Local Plan consultation document looks to develop a further area of Green Belt land adjacent to PR6a. The cumulative effect of this has not been considered by Cherwell (or Oxford) and shows that the Councils have not demonstrated effective joint working on cross-boundary strategic priorities. We do not consider that Cherwell has effectively demonstrated exceptional circumstances and none of those listed are sufficiently exceptional to justify such a large release of high-performing Green Belt land on the edge of such an important City. There are alternative sites, outside the Green Belt, which have not been given due consideration as a result of Cherwell's blinkered and unimaginative solution of "dumping" a large proportion of the "unmet housing need" on Oxford's doorstep. It should also be remembered that the stated intention of this proposal is to provide houses (50% affordable) to meet Oxford's "unmet housing need" close to the source of that need. However, due to the proximity of the station and the nature of the sites it is widely acknowledged that it is more likely to result in expensive homes for London commuters. We do not accept the figures currently put forward by Oxford City council as "unmet housing need" and believe that they are based on the flawed premise of encouraging economic growth within a City which already has very low employment. Oxford could and should look to a different approach which would enable it to meet more of its own housing need. The Government's proposed new method for calculating Objectively Assessed Housing Need also indicates that the "housing need" for Oxford City has been significantly overstated. This provides further evidence that Oxford City's "unmet housing need" has been overstated. We consider that the proposals for removing land from the Green Belt, as set out within Draft Policy PR3, are not justified as such a relatively high proportion of development on Green Belt land is not the most appropriate strategy particularly considering that Oxford City is only at its Preferred Options stage of Local Plan preparation. Oxford City clearly does not yet know exactly how much land is available for housing development within its own boundaries. In light of this, we consider that the allocation of housing within Cherwell, to meet Oxford City's housing needs is premature and should be delayed until Oxford City has made further progress with its own Local Plan. Draft Policy PR3 is not effective as it does not take into account the potential cumulative impact of the proposed removal of Green Belt land in Cherwell and potential further removal of Green Belt land within the administrative area of Oxford City, as indicated within the City's Preferred Options Local Plan document. The policy therefore does not demonstrate, in this respect, the practice of effective joint working on cross boundary strategic priorities. Furthermore, Draft Policy PR3 is not considered to be consistent with national policy as it has not fully taken into account the detrimental effect such removal of land from the Green Belt will have and therefore fails to meet the tests of soundness as defined within paragraph 182 of the NPPF."

Changes Sought

We respectfully request that this Local Plan be rejected. Cherwell District Council should re-start the process once Oxford City's housing need has been properly examined and when Cherwell does this it should have due regard for the importance and functions of the Green Belt.

Reasons for Participation

We represent our members who live within Oxford City and who stand to be greatly affected by Cherwell's proposals. We live in and have knowledge of the area adjacent to the Kidlington Gap yet the attempts by Cherwell and Oxford City, to engage us in this process have been minimal.

Comments

This new development crosses the parish boundaries leaving a physical gap between Begbroke and Yarnton of approximately 50 metres. This has been referred to as a 'green corridor'. Yarnton is a village with a population of approximately 2,550 and Begbroke is a village with a population of approximately 780 based on the 2011 Census. There are approximately 1,350 houses in Yarnton and 390 houses in Begbroke. The proposals from CDC will be to build 2,480 new houses on the Green Belt land that currently separates our two villages. There is also only a small gap between this enlarged development and Kidlington, meaning in effect that the three villages are merged into one large conurbation with an estimated population upwards of 30,000. These proposals represent a significant incursion into green belt land. The government attaches great importance to Green Belts. Land designated as green belt under the National Planning Policy Framework (NPPF) is protected for a number of important reasons. The CDC Partial review highlights the importance of Green Belt in its own local plan and this is referred to in the partial review (section 5.32) referring to policy ESD14 of the existing Local Plan (2015). Yarnton and Begbroke are covered by "Policy Villages 1". Policy PR3 in the review document seeks to overturn these restrictions that only recently were regarded as vital and sacrosanct. This is to facilitate the removal of significant portions of green belt land without demonstrating any exceptional need to do so. Policy PR3 appears designed to pre-empt any future consultation or discussion on the expansion of the Begbroke Science Park, although the exact nature of this expansion will not be known until the local plan Part 2 is announced. It would seem however that the expansion of the Science Park is a foregone conclusion in the eyes of CDC.

Proposed Submission Plan - Policy PR3 - The Oxford Green Belt

PR-C-1397	10/10/2017	Robert	Davies	Gerald Eve on behalf of Merton College, Oxford	Y	Y	N	Y
4503	<p>Comments</p> <p>Policy PR3 is supported. However, at paragraph 5.39, under the description of PR3, it is stated that the site is ""not considered to be suitable for residential development but connectivity will be expected through the site to Oxford's Northern Gateway site to the south"". This element of the policy formulation is considered to be unsound. Merton College have commissioned work in respect of exploring the development potential of the site in detail including acoustic surveys which demonstrate that the site can accommodate some elements of residential accommodation alongside commercial uses in terms of a noise environment that could be created in this location close to the A34. Furthermore, it is considered that the site would serve to complement the neighbouring site allocations to the east and south, PR6b and PR6a (by Cherwell District Council) and the potential allocation (by Oxford City Council) of site 590 (to the north east of the Northern Gateway AAP area) within the City's advancing Local Plan, as it is a sustainable location for development. The site to the south of the boundary with Oxford City Council should not be treated in isolation. There should be sufficient flexibility to allow this land to come forward in isolation or as a more comprehensive scheme with the land to the south (site 590). Our client's landholding is suitable, appropriate and available for residential and/or commercial development and therefore the reference to the site not being considered suitable for residential development should be removed. The acceptability and appropriateness of any development proposal would be tested through the development of a planning application.</p> <p>Changes Sought</p> <p>Remove reference to site not being suitable for residential development.</p> <p>Reasons for Participation</p> <p>To enable the Planning Inspector to fully understand the key reasons why our requested amendment to the Local Plan is required to make the plan 'sound', and to facilitate a thorough examination of the issues.</p>							

PR-C-1398	10/10/2017	Ben	Simpson	WYG on behalf of Bonnar Allan Ltd	Y	Y	N	N
5329	<p>Comments</p> <p>The representations are submitted on behalf of my client Bonnar Allan with regard to their proposals at New Alchester. The land is identified in the Vision document attached to these representations and will include up to 7,200 new market & affordable homes, primary & secondary schools, creation of a 240 acre country park & watersports centre & the potential to incorporate a new Park & Ride site with connection to the railway line south of Bicester by a new railway station. Our comments on the PSP are confined to issues of soundness. A summary of the alternative Options A to I that CDC considered at the last stage of the Plan is set out at paragraph 2.12. For the reasons we set out in our representations to that stage, we consider that the CDC's proposed approach of allocating land to the north of Oxford & within the Green Belt (GB) around Kidlington as set out in PR3 is flawed, & that the Partial Review does not pass the test of soundness. The PSP is not Justified as in our view it does not represent the most appropriate strategy for meeting Oxford's un-met housing needs. The logic that appears to underlie the PSP is in essence that the closer the proximity of the required housing to the City, the more sustainable it will be. This logic ignores the fact that there would be better prospects of residents travelling into Oxford as well as the major employment locations in the Science Vale by public transport including by rail from New Alchester. The preferred locations around Kidlington will increase congestion on the highway network & will result in the loss of GB & lead to coalescence between Kidlington, Begbroke & Yarnton, whereas the proposals at New Alchester are located beyond the GB. As we make clear in the Vision document, our proposals can be delivered in a phased manner & there are no impediments to early delivery. The scale of the proposals at New Alchester allows it to meet both the identified needs of Oxford City as well as an element of the future needs of Cherwell District, & in so doing, we recognise the journey that this proposal involves.</p> <p>Changes Sought</p> <p>We consider that the PSP should direct a majority of the un-met need to New Alchester which constitutes a more sustainable & justified location for the new homes needed both to meet the City's un-met needs as well as future need within Cherwell District. The PSP should be re-drawn to allocate land at New Alchester in place of the proposed allocations in the Green Belt (GB) around Kidlington. New Alchester can provide a highly sustainable location for the much needed development, at a location outside the GB & on the railway line into Oxford. The development would facilitate creation of a new railway station at New Alchester which would encourage people to travel to Oxford City & also other employment centres within the Science Vale by public transport.</p> <p>Reasons for Participation</p>							

Proposed Submission Plan - Policy PR3 - The Oxford Green Belt

PR-C-1399	10/10/2017	Ms Jennifer	Mitter	Lichfields on behalf of The Church Commissioners for England (CCE)	N		N	Y
-----------	------------	-------------	--------	--	---	--	---	---

4505

Comments

The Church Commissioners for England (CCE) consider that the need to release some Green Belt land to meet the housing requirement is recognised and agreed. However, the evidence base sitting behind those sites currently identified for release under Policy PR3 does not sufficiently justify the current position in the draft Local Plan.

In terms of revising Green Belt boundaries, paragraph 84 of the NPPF states that ...“When drawing up or reviewing Green Belt boundaries local planning authorities should take account of the need to promote sustainable patterns of development. They should consider the consequences for sustainable development of channelling development towards urban areas inside the Green Belt boundary, towards towns and villages inset within the Green Belt or towards locations beyond the outer Green Belt boundary”. In addition, the recently produced Housing White Paper states that: “We are also proposing that national policy would make clear that when carrying out a Green Belt review, local planning authorities should look first at using any Green Belt land which has been previously developed and/or which surrounds transport hubs”. Evidence Base document PR40 ‘Cherwell Green Belt Study (April 2017) and Addendum (June 2017)’ which builds on the previous 2015 County Council study, seeks to assess the potential harm to the Green Belt that could result from the release of land associated with sites submitted to CDC in response to its ‘call for sites’ in January 2016 and the November 2016 Options Consultation. However, the methodology used is ‘black box’ and the conclusions are subjective, making it difficult to understand how the various parcels have scored against the five purposes of Green Belt as defined by NPPF (Paragraph 80) or indeed how they have scored against each other. The Study should, therefore, be revised to include a full assessment of the sites against the five purposes of the Green Belt. The Church Commissioners would further comment that the published HELAA takes an inconsistent approach when assessing sites within the Green Belt. The HELAA was not published until August 2017 which is after the draft Local Plan was published for consultation. This document should have formed a key part of the evidence base when considering sites for allocation but instead the assessment of the Green Belt sites has been heavily influenced by the draft allocations within the Local Plan. CCE question the objectivity of this evidence base document in relation to the Green Belt sites in terms of content and are concerned by the timing of its publication. It is also unclear how CDC have utilised the findings of the various published Green Belt studies to identify the release of the sites as now proposed under Policy PR3. There is a significant gap in the evidence base regarding the selection of these sites and the reasoning why these are preferred to other options. For example, Para 4.20 of the 2017 Study considers the possibility of the release of land at Islip for a new settlement with development in this location determined as ‘potentially retaining a degree of distinction from the core of the existing settlement, with only land to the north of the railway line being released. The Cherwell valley floodplain strengthens separation from Kidlington’. However, there is nothing published to justify why this option was rejected in preference to releasing ‘fragile Green Belt’ sites around the Yarnton/Kidlington/Begbroke area. One of the key purposes of Green Belt is ‘to prevent neighbouring towns merging into one another’ (NPPF, Para 80) yet proposals under Policy PR3 will see the gap between the villages of Kidlington, Yarnton and Begbroke almost entirely eroded. While NPPF Para 80 refers to towns; as recognised within document PR40 (Para 3.18), the separation of smaller settlements is also considered relevant to Green Belt purposes. Para 4.16 of the 2017 Study states that ‘if environmental assessment determines that this land lacks significant value then a case could be made for accepting the coalescence, or near-coalescence, of settlements’. However, this case has not been made within the evidence base documents and therefore it cannot be determined that the most appropriate strategy is being pursued as the reasonable alternatives (i.e. a new settlement at Islip) have not been sufficiently explored. Soundness - The Green Belt reviews in isolation do not support CDC’s position at Policy PR3 and there is a significant gap in the evidence base and thus a thorough exploration of the reasonable alternatives is required. The Council needs to justify its approach for focusing so much of the new development in one area. The evidence base prepared to support Policy PR3 is not sufficiently robust to justify the approach taken to release the Green Belt sites in the locations proposed in the draft Plan and further work should be undertaken to justify any such release, including a thorough exploration of the reasonable alternatives. The Plan is not justified and fails this test of soundness. The draft Plan is not Effective, as it focuses too much of the housing requirement in one, focused area and, therefore, there will likely be an impact on market delivery with the target housing delivery of an additional 4,400 units by 2031 unlikely to be achievable. The Plan is not consistent with national Policy as a full and robust assessment of Green Belt land and sustainable development has not been undertaken.

Changes Sought

A more thorough Green Belt Review is required which should include a full assessment of the sites against the five purposes of the Green Belt. The additional work needs to explore and justify why the Council has chosen to pursue development at these Green Belt sites which will see the coalescence of three existing settlements over other more suitable development options. In addition, more detailed consideration needs to be given to the scope to release Green Belt land around Islip, as identified on the attached Plan. The release of this land would not harm the five purposes of including land within the Green Belt and would assist in distributing the provision of new homes across the District, thereby reducing the impact on infrastructure in only one confined area. New development at this location would be sustainable and would support the existing local community. It has been demonstrated that there are no overriding physical constraints, in terms of highway impact, flooding and ecology, to the development of this land.

Reasons for Participation

Due to the complexity of the matters discussed in relation to PR3

Policy PR3c removes GB status from the small wedge of land west of PR6b and south of the railway, although no development is as yet proposed on this site. Once the GB designation is removed however, the site might in the future be capable of development under the terms of Policy PR12b, bringing the northward expansion of Oxford unacceptably close to Kidlington. It is proposed to remove GB designation from the Water Eaton Park and Ride/Parkway site PR3d. KPC fear that this could pave the way for a wider range of additional buildings, reducing the open character of the site, further weakening the break in development between Oxford and Kidlington, and adversely impacting on the separate identity of Kidlington which is fundamental to the adopted Kidlington Masterplan and the Local Plan.

Changes Sought

Retain Green Belt Policy on all the above sites, and do not allocate for development.

Reasons for Participation

KPC is an elected body, representing the views of a large number of people in the part of the District which will be most affected by the proposed alteration to the Development Plan. In addition to having a statutory role in the Planning process, the Parish Council has an in depth understanding of the local area where new development is proposed, and is well placed to contribute to the Local Plan process. It is essential for the KPC to be actively involved in the Examination, in order to be able to represent local views, fully respond to submissions made by others, and to address any modifications discussed in advance of the Examiners report.

Proposed Submission Plan - Policy PR3 - The Oxford Green Belt

Comments

Successive strategic plans in Oxfordshire have confirmed that: * Oxford's growth should be constrained, reflected in the introduction of a Green Belt of 6.5- 10km width around the City. • An alternative strategy of Country Towns should disperse both housing & economic growth through the County. The current SEP identifies the need for growth at both Science Vale (S of Oxford), Oxford & within the Oxfordshire Knowledge Spine which extends to include Bicester & Kidlington lies within the latter zone. Employment allocations & a commitment to consider additional expansion of employment sites W. of Kidlington are already addressed in the Adopted CDCLP & the 2016 SPD Masterplan for the village. The Country Town strategy is therefore not incompatible with the SEP, the Adopted CDCLP & the adopted DPD (Masterplan) for Kidlington. Refers to the principles of the GB. Refers to para. 034 of National Planning Practice Guidance (Stage 5 HELAA). Exceptional circumstances have not been demonstrated in relation to the scale of need that should be accommodated in Cherwell District. All the proposed sites are categorised as scoring high or moderate/high in importance in the GB study, in respect of preventing neighbouring towns merging into each other (See Figure 4.3 Oxford Green Belt Study 2015). They should be excluded from further consideration for new development & consistent with the findings of the Oxford City Preferred Options Local Plan. The Cherwell GB study 2017 downgrades the importance of some of the sites & scores land south of the railway & land west of Kidlington high in terms of harm. Substantial reduction of the GB is wholly incompatible with the strategic need for a GB. The effects of the planned allocations would be to reduce the width of the GB between the expanded settlement of Oxford & Kidlington to less than 1Km in places, in a location where much of the intervening gap is occupied by transport infrastructure. This is far too small when the separation is between two large settlements, & does not provide a meaningful GB in the terms set out in the NPPF. Only 14% of Cherwell District is subject to Green Belt policy – but KPC consider that land within the GB, as supported by the NPPF, should be seen as the last resort for new development, when all other options have been proven to be unsuitable. While it is appreciated that Kidlington is a convenient direction of growth for Oxford, KPC does not consider that the necessity for development here has been justified. KPC also finds the arguments set out in 4.16-4.17 of the Green Belt Study 2017 under the heading of 'Fragile Green Belt' are specious. To state that a case can be made for coalescence, whilst accepting the vulnerability & importance of the remaining gap, ignores one of the fundamental objectives of national Green Belt policy. KPC welcomes the retention of GB designation on sites north of Kidlington, including land between the village and the River Cherwell, & the absence of development allocations in this area. Development north of Kidlington would have severe adverse impacts not only on land important to the integrity of the GB & the character of the area, but would be likely to increase traffic movement through Kidlington, exacerbating existing problems of congestion and poor air quality. KPC also welcomes the retention of Green Belt designation on Frieze Farm site. Complete opposition to the release of any land in the Green Belt which has been found to have a high or moderate high score when assessed against the essential Green Belt functions set out in the NPPF.

Object strongly to the proposal to remove land from the Oxford Green Belt. The Green Belt around Kidlington is mainly pleasant and unspoilt countryside with many well-used footpaths and 'green spaces'. It is much appreciated and enjoyed by large numbers of local residents. 5.4 Kidlington does not have many green spaces within it, and no park, and the surrounding Green Belt helps to compensate for this. The Masterplan SPD notes that Kidlington's distinctive character is as a 'village set in the landscape' and specifically seeks to enhance that. 5.5 Kidlington Masterplan. The submission document does not sufficiently take into account the recently adopted Kidlington Masterplan SPD which is written on the basis that the surrounding Green Belt remains fundamentally unchanged. In particular we draw attention to the objective to strengthen Kidlington's distinctive character of a 'village set in the landscape' and the objective to 'protect and enhance Kidlington's landscape and biodiversity assets'. 5.6 Above all, the Green Belt exists to protect the historic city of Oxford from the effects of over-development as is acknowledged in the adopted Cherwell Local Plan. Government guidance states that Green Belt is a permanent designation and that the existence of Green Belt is a reason not to meet objectively assessed need in full. It also states that unmet housing need is not a reason for building in the Green Belt. Cherwell Council has made no allowance for this in the submission plan. All of the Green Belt around Kidlington contributes to the purposes set out in the NPPF as has been shown in local studies. Government guidance and Cherwell's existing policy to protect the Green Belt should be upheld. 5.7 As argued above, the pressure for release of Green Belt land for housing results from the City Council's apparent and damaging strategy of attempting to direct employment growth towards and within Oxford. There are alternatives such as a continuing strategy of dispersal as outlined above. The city council could do much more to meet housing needs within its own boundaries such as making better use of previously developed land in Oxford and using some protected employment sites in the city for housing instead. 5.8 Exceptional circumstances (para 5.17). We do not consider that exceptional circumstances for release of Green Belt have been demonstrated because (1) the 'unmet housing need' for Oxford has not been proved (2) nor has the inability of Oxford to meet its own needs and (3) realistic alternatives to building in the Green Belt exist. 5.9 Paragraph 5.41 implies that the Green Belt boundaries established by this plan are not necessarily intended to endure beyond the life of the plan. This is contrary to national planning policy (NPPF). It is also premature to make major changes to Green Belt boundaries, as proposed in this plan, prior to the joint Oxfordshire plan referred to in para 5.41.

Changes Sought

Green Belt land should not be released. The real housing need for Oxford should be re-assessed as described earlier. An alternative spatial strategy should be established to protect the Green Belt and to protect Oxford from over-development. The plan should be withdrawn so that these matters can be addressed.

Reasons for Participation

"We (Kidlington Development Watch – KDW) consider this is necessary because of our extensive involvement with the consultations at all stages of the Cherwell Local Plan to date; the considerable work we have undertaken to publicise the consultation ourselves; of the feedback we have received from Kidlington residents; and, the large numbers of them who have responded as a result of our efforts. KDW is a voluntary organisation run by Kidlington residents with experience and interest in planning issues. We believe that effective, informed public participation in planning consultations is vital to democratic policy making. We publicise consultations that directly affect Kidlington and offer advice on how people can best make their views known. In relation to this and the previous options consultation we printed and distributed leaflets, put up posters, ran a stall on many Saturday markets and at other events, participated in public and parish council meetings, provided information on our website and responded to requests for information from Kidlington residents. As a result, we have gained a very good understanding of the views of Kidlington residents, a large number of whom have made representations because of our activities. KDW's representations therefore reflect the views of much of the Kidlington community."

Proposed Submission Plan - Policy PR3 - The Oxford Green Belt

Detailed comments are provided in relation to transport including traffic generation, modes of transport, and the Park and Ride. The proposals in Submission draft policy PR3b to remove the Park & Ride and Oxford Parkway station from the Green Belt appear to endorse/facilitate the County Council's consideration of extending the Park & Ride site at Water Eaton. This is also endorsed in supporting paragraphs 3.63 and 5.46. However, plans to extend the Water Eaton Park & Ride contradict the County Council's own preferred strategy of locating new capacity away from edge of city locations. Section 2.3 of the Oxford Park & Ride Future Strategy Development – Final Report (PR 37) sets out that: 'Morning arrivals at the Peartree, Oxford Parkway, Redbridge and Seacourt P&R sites contribute, in particular, to traffic using the three A34 interchanges to the west of the city. Removing this demand through capturing those users further from the city would have an immediate positive impact on the Kidlington Oxford operation of the A34 and other roads it intersects as vehicles using the sites would no longer need to cross it. The OTS acknowledges that future housing and employment growth within Oxfordshire is set to further exacerbate congestion on the A34, the outer Ring Road and other corridors that feed into the city, unless traffic can be captured before it reaches them. The OTS concluded that the expansion of the current city-edge P&R sites to meet forecast levels of demand would add substantially to traffic levels on already congested routes, meaning those accessing the city via P&R would encounter significant traffic delays en-route to the P&R sites at peak times.'

Comments

Main objection to the use of this very large tract of land is that the theoretical capacity of the site was established at 8,731 dwellings in the Initial Sustainability Appraisal Report, which is not dissimilar to the 7,000 put forward by the developer at the time of the Local Plan. At that time, the proposal was rejected, and the Inspector ruled that the small scale local review for employment purposes (at Langford Lane and Begbroke Science Park) was reasonable, while strategic housing was to be located in Bicester, Banbury and Heyford which catered for the expected employment growth. It is not appropriate to use the pretext of meeting Oxford's unmet housing need to source new housing for Cherwell generated employment. This undermines the agreed strategy of the Local Plan. The Kidlington Masterplan deals with minor non-strategic housing to meet local needs. Detailed analysis provided. The closure of Sandy Lane to motorised traffic is undesirable. In 100 interviews conducted in Kidlington High Street, 8% of visitors came from Yarnton, and the closure of Sandy Lane would inhibit this trade. At the time of the Sainsbury's extension around 10 years ago, the Inspector accepted that Kidlington High Street's anchor stores were underperforming relative to average store floor spaces by £5m/year, and the Co-op anchor store has recently received planning permission to reduce its floor space. It is not the case that Kidlington has a thriving centre in which the loss of some trade from Yarnton would be unnoticed. For Yarnton Nurseries, 26% of their trade comes via Sandy Lane from Kidlington. This is unlikely to be made up for by allocations in the Yarnton area, as Kidlington would still be a far larger settlement. Other than the purely trading links, Sandy Lane provides a valued communal link which would not otherwise exist if such a direct link were severed. Would be happy to accept a much smaller scale of development on this site, one that reflects the originally sanctioned small scale 2ha increase in the Begbroke Science Park, with one primary school. But in terms of meeting the bulk of Oxford's needs, believes that there are better alternatives closer to the Northern Gateway that are less damaging in terms of the near coalescence of settlements, and more sustainable.

Changes Sought

Reasons for Participation

Retain allocation of nature conservation areas, one primary school, remove allocation of 1,950 dwellings and secondary school. Remove existing proposed expansion of Begbroke Science Park. Remove references to and indicative map of station. Insert new policy with retained secondary school, and allocation of 200 houses, permitted 2ha expansion of Begbroke Science Park. Insert new station proposal linked by cycleway from a location at Lyne Road.

Comments

The appraisal and choice of sites due to the weighting attached to the criteria in both the Green Belt Study and the Sustainability Appraisal result in skewed assessments that place heavy weighting on access to transport infrastructure and employment potential, and very little emphasis on harm to the Green Belt. Representations to Issues and Options stage included in references made. The allocation of sites has been made based very largely on the results of the sustainability appraisal, backed up by a very flawed Transport Assessment (see my Appendix 1 and below). This therefore supports my contention that neither the policy purposes nor the value of the Green Belt in contributing intrinsically to the sustainability of places for people to live have been adequately taken on board as part of a more complete assessment. Given that CDC accept the importance of local landscape, then that should have featured in a supplementary document of some sort, and weightings should have been given and sites reassessed. None of the criteria used in the latest assessment vary from the initial assessment, but applying my separate criteria, and using the rather blunt '+' and '-' scale used in the SA, the scores of each of the key sites are changed radically (see Appendix 1).

Changes Sought

Reasons for Participation

Rewrite to reflect impact on Green Belt in the local areas.

Proposed Submission Plan - Policy PR3 - The Oxford Green Belt

PR-C-1404	09/10/2017	Andrew	Hornsby-Smith		N	N	N	Y
5375	Comments							

Not consistent with national policy. The allocations in Policies PR3, PR6A, PA6B, PR8, and PR12a by virtue of their location, scale, and likelihood to lead to future harm to the Green Belt, fail to demonstrate the 'very special circumstances' required to offset the protection against inappropriate development in the Green Belt, and the coalescence of settlements.

5366	Comments							

If the aim is to provide 1,180 houses in the area south of Kidlington, the least damaging locations would be at Stratfield Farm (site 49) and south of Gosford (sites 178, and HELAA 243 incidentally, a new site not identified at the Issues and Options stage). The two assessed sites have existing small allocations, but the theoretical capacity is far higher. The Initial Sustainability Appraisal (which excluded site 243) set these at 523 and 1,388 respectively. Allowing 3.2 hectares for a new primary school, probably best sited at the Gosford sites, and the 0.7 hectares identified for a cemetery extension in the Submission draft PR7a no. 3, the total net combined land available would be 34.26 + approximately 5 hectares of previously unidentified site HELAA 243. Adding in the existing allocation of 220 + 120, the total number of dwellings required to replace those not developed south of Oxford Parkway becomes 1,520. This represents an overall net density of 38.7 dph (1,520/39.26), which is lower than the 40 dph proposed in the submission draft in PR6a, less than the 45 dph proposed in Policy PR8 and less wasteful of Green Belt land than the 25 dph proposed in policy PR6b, or, to put the figures in greater perspective, withdrawing 60 hectares of land from Green Belt protection (Policy 6A, 6B) contributes 1,180 houses at a net density of just under 20dph. Detailed comments are provided in relation to the selection of alternative sites PR178 and PR49 and the Kidlington Masterplan.

Changes Sought

PR3, 6a, 6b - Delete references to PR6a and 6b in PR3. Rewrite all references to sites in Kidlington gap, deleting allocations, setting out playing field allocation in land east of A4165. Allow mixed use on land identified within Policy 3c playing fields, residential allocation of 140 written as a new policy. PR7 a and PR7b - Increase allocation to 1,520 between these sites. Retain a small buffer area to the west of Stratfield Farm. Remove reference to playing fields. PR12a - Rewrite to avoid incentive for future allocations beyond those allocated in the plan, or delete.

Reasons for Participation

PR-C-1405	10/10/2017	Donna	Palmer	Turley on behalf of landowner of northern parcel of land at south east Kidlington and Hill Residential Developments	Y	Y	Y	Y
5389	Comments							

The NPPF makes clear that the "Government attaches great importance to Green Belts" (para. 79). The NPPF continues to advise that: "When drawing up or reviewing Green Belt boundaries local planning authorities should take account of the need to promote sustainable patterns of development. They should consider the consequences for sustainable development of channelling development towards urban areas inside the Green Belt boundary, towards towns and villages inset within the Green Belt or towards locations beyond the outer Green Belt boundary." (para. 84). The Council has clearly set out what it considers to be the exceptional circumstances which justify the release of Green Belt to meet the needs of Oxford City at paragraph 5.17 of the Plan. An important consideration in this circumstance has been the relationship of the proposed sites with Oxford City given the need for these allocations to effectively meet the needs of the City. It is clear from the process that the Council has been through in preparing the Local Plan Partial Review that the needs of Oxford City cannot be met in a sustainable manner without the release of Green Belt. This conclusion is supported by the Sustainability Appraisal prepared in support of the Local Plan Partial Review. As such it is considered that the proposed release of Green Belt is appropriate. Additionally, the Council has proposed to remove an additional parcel of land from the Green Belt and safeguard it beyond the Plan period. This is considered to be an appropriate response which adds greater flexibility to the Plan whilst also meeting the requirements of the NPPF in respect of ensuring Green Belt boundaries are capable of enduring beyond the Plan period.

Objection: - Proposals are not consistent with National Policy because they do not take into account the detrimental effect that removing these large areas of GB will have. These proposals therefore fail to meet the test of soundness as defined in paragraph 182 of the National Planning Policy Framework. - Oxford's Local Plan has not yet been prepared so Cherwell's allocation of homes is premature and is not an appropriate strategy and is unjustified.

OBJECT to the proposals in Policy PR3 in particular. In our opinion, a better outcome would be achieved by reverting to the original Alan Baxter work, with a localized review of the Green Belt for housing, combined with a master plan for the village that funds and delivers regeneration, place-making and other community benefits. Our proposals at The Moors (PR14) are consistent with this, and this would also protect the villages of Yarnton and Begbroke, as well as urban sprawl in the Kidlington Gap.

Changes Sought

Reasons for Participation

Following the precautionary principle, the Plan should start from the assumption that key strategic components of the Green Belt are considered sacrosanct. These components are identified by LUC (i.e. high impact) and include the Kidlington Gap and Begbroke Gap; acknowledging that some development may be acceptable where there are special locational advantages that only the Gaps offer (e.g. for the University or inward investment), or where the resultant development does not significantly impact on the integrity of the Gaps or their permanence.

We note that paragraph 1.19 of the draft Plan records the LPP1 Inspector's advice that Oxford's unmet need must be considered within the context of a "countywide housing market area". It is difficult to see the case for the loss of strategically important Green Belt given this context. Cherwell need to repackage and represent the need for a strategic review of the Green Belt and also take a comprehensive approach to include University and inward investor needs given that the prospect of a further Green Belt review is unlikely for a generation.

We confirm that we wish to attend the examination in public.

------------------	------------	--------	----------	--	--	--	---	--

4534

Comments

Is opposed to the proposed Green Belt allocations mainly because CDC has not proved the exceptional circumstances required to build on a GB, nor has it proved Oxford's "unmet need". Use of the GB for development should be the last resort, if at all. The impact of this proposed "sprawl" on the environment would be massive, with extra cars on roads that are unable to sustain what already exists. This is true also of the existing infrastructure as a whole.

Objection to Options A and B as National Planning Policy states that a local planning authority should regard the construction of new buildings as inappropriate in GB. The policy lists exceptions but these exceptions do not concur with the exceptions that Cherwell are listing. Limited infilling in villages, and limited affordable housing for local community needs may be acceptable but the proposals put forward by CDC for Kidlington, Begbroke and Yarnton cannot be considered as "limited" and therefore do not meet that criteria. The fundamental aim of GB Policy is to prevent urban sprawl by keeping land permanently open – the CDC proposals would considerably increase urban sprawl - with the villages of Kidlington, Yarnton and Begbroke coalescing and thereby destroying their individual identities. CDC lists "Oxford's urgent and pressing housing need" as an "Exceptional Circumstance for GB development". We accept that there is a need for more affordable housing in Oxford but the figures quoted in the document have been suggested by others as being inaccurate and exaggerated. It is unclear as to which target population this proposed housing is meeting. Ideally it should for residents who wish to live and work in Oxford. Current stock is already being used by people who commute to outside the area and there is no legislation in place to prevent that. Oxford City Council has not fully explored ALL possible solutions to create more housing within the city. They have shown an unwillingness to build at higher densities and a reluctance to use Compulsory Purchase Orders to acquire land and buildings that have remained derelict or where landowners have resisted requests to release land for building. Given the serious traffic issues that arise from development outside the Oxford city area which is contrary to the requirement of sustainability in the NPPF, it is incumbent on the Oxford City Council to reconsider strategies to satisfy the housing need within its own boundaries before using GB land. CDC lists the "improvement of transport infrastructure in the north Oxford / A44 / A4260 corridor areas" as another "Exceptional Circumstance for GB Development" These routes are already heavily congested and additional housing in these areas will exacerbate the situation. There is insufficient information and data available to show that the County Council's A44/A4260 Corridor Study and its proposals are achievable both physically and financially. It appears to push the traffic and transport problem into other parts of Oxford. It follows from the above that Policies PR8 & PR9 (Development in Begbroke & Yarnton) are Unsound as the sites are in the Oxford Green Belt and the above arguments apply.

Object to policy to remove land from the Oxford Green Belt. The Green Belt around Kidlington preserves green spaces that are so greatly appreciated and enjoyed by local residents, and protects both the historic city of Oxford from overdevelopment and neighbouring villages from coalescence. Government guidance says that Green Belt is a permanent designation and that unmet housing need is not a reason for building in the Green Belt. The plan is therefore ineffective and not consistent with National Policy.

Proposed Submission Plan - Policy PR3 - The Oxford Green Belt

PR-C-1427	10/10/2017	Christopher	Villiers						
4553	Comments								
<p>Almost all the new houses are planned to be built in Oxford's GB. Particular concern with the 1,180 houses envisaged for the land between Cutteslowe Park and Banbury Road and for North Oxford Golf course. Your own Local Plan states in connection with Oxford's GB that it "was designated to restrain development pressures which could damage the character of Oxford City and its heritage through increased activity, traffic and the outward sprawl of the urban area." It is clear that filling the gap between Oxford and Kidlington breaches all three reasons given above for having a GB. It would be not only an obvious 'urban sprawl' but it would fly in the face of one of the purposes of all GBs - i.e. to prevent the coalescing of existing settlements (Oxford and Kidlington). GBs are a permanent designation and thus are not the same as other green field land. Oxford is lucky to have one: many other cities of its size have no such designation of the land surrounding them and are thus subject to relatively unrestricted outward expansion. Unlike other green field sites, GB land can be built on only under exceptional circumstances. Various grounds claim this is a case where such 'exceptional circumstances' exist. In particular I quote Exceptional Circumstance 2: "Clear inability of Oxford to meet its (housing) needs." Even if one accepts that Cherwell has a 'duty to co-operate', this argument a) is incorrect and b) has been overtaken by events. It is incorrect in that Oxford City Council, whilst stating it has a housing shortage, is using some of its available land to create further employment opportunities rather than for new housing. This not only removes land which otherwise could be used for housing, but makes the situation worse in that more demand for housing (and other infrastructure) is created by those who will take the new jobs. The event which now renders this whole review at the very least questionable is the emergence of new methodology to determine the county's 'unmet need' for housing. The demand for new housing for the whole county has been reduced by 30%, while Oxford City's need has been slashed by 50%. These new figures, while still high, are a lot more realistic than the previous ones which seemed to have been developer led. It means that the City need no longer rely on the District Councils to meet its housing needs.</p>

<p>Objection to Policy PR3 to remove land from the Oxford GB. The GB around Kidlington preserves green spaces that are so greatly appreciated and enjoyed by local residents. It protects both the historic city of Oxford from overdevelopment and neighbouring villages from coalescence. Government guidance says that GB is a permanent designation and that unmet housing need is not a reason for building in the GB. The plan is therefore ineffective and not consistent with National Policy. Oxford City should look to its own open spaces within the ring road first, such as: - Cowmead Allotments off the Abingdon Road (A4144). - Oxford Golf Club (off Hill Top Road). - Open land between Osney Mead (behind the industrial estate) to Grandpoint. - Open land at Marston off the B4495. - Open land south of the Botley Road stretching out to the Ring Road (A34). Oxford may cite that the land between Botley and the Ring Road is in the Flood Plain – well so is Kidlington - a flood alleviation scheme is planned for Botley. These large pockets of land could accommodate all of the 4,400 houses within the City boundary without destroying the GB around the north of the city. This should take precedent and Oxford should be compelled to utilize land within the City first.</p>

<p>Green Belt Oxford CC supports the position that there are exceptional reasons for development within the GB (Policy PR3). Both councils have used the same methodology in reviewing the GB (which also aligns with the GB work undertaken under the Growth Board). This is helpful to ensure a joined up & consistent approach across the planning areas in addressing this strategic issue.</p>

<p>PR3 proposes removing large areas of land from the GB in order to provide housing. It is clear Nation Policy that this can only be justified in the most exceptional of circumstances. The Partial Review & its accompanying documents do not provide convincing justification. The issues at stake vary a little between the different GB sites threatened. The Reps focuses on land covered by PR6a & PR6b, since they impact most especially on my constituents as County Councillor. Describes the location of PR6a and its relationship to the countryside and its surroundings including site's visibility and its part in defining the character of the area. Refers to this part of the Oxford GB having served its purposes extremely well over the years; safeguarding the open countryside, preventing Oxford sprawling north & swallowing up Kidlington, & preserving the historic character of Oxford as a discrete city. Notes that removing land from the GB will undo this and result on a classic example of urban sprawl. This would be in clear breach of NP, & unacceptable to the community I represent, that borders the land concerned. Implementing PR6a in its present form will be to disregard the NPPF intention that, when drawing up a Local Plan 'authorities should consider GB boundaries having regard to their intended permanence in the long term'. Similar considerations apply to the land covered by PR6b. Describes the site's amenity role for over 100 years. Considers that its use for house building would be considered a tragedy by local residents. Oxford & Kidlington would have been merged, contrary to the aims of the GB, & again in conflict with NP. No doubt PR3 is based on judgements made in the LUC GB Study about the relative amounts of damage to the purposes of the GB. But these judgements are mostly subjective. Notes that the LUC study grossly under-estimates the damage to be caused to the character of the N Oxford/Kidlington gap by implementing PR6a & PR6b, especially the de-facto merging of Oxford & Kidlington that would result. Refers to LP1 PR para 5.17 points 1 and 3 as weak arguments. Does not dispute the exceptional need for more housing, especially affordable housing, to meet Oxford's needs but for reasons highlighted in comments on PR 1(a) & PR2, Cherwell District & the PR6a and PR6b sites in particular, are not effective, sustainable locations for providing this housing. Therefore the 'exceptional need' justification is spurious in this context, & the sustainability justification does not bear scrutiny.</p>									
	Changes Sought			Reasons for Participation					
<p>Policy PR3 must be re-considered, and changed at least to remove reference to the land covered by PR6a and PR6b. If it really proves impossible to negotiate a substantial reduction in the figure of 4400 homes to be provided by CDC, then CDC should remove the need to use Green Belt land, by proposing brownfield land instead (available at the Shipton on Cherwell quarry), in order to be consistent with national policy.</p>				<p>Because the need to change Policy PR3 needs to be emphasised.</p>

We very much welcome that, per 5.13, the "strategy is Oxford specific; to provide homes where people can most readily connect to Oxford and sustainably access the city's employment areas, its universities and its services and facilities". This readiness to co-operate with neighbouring authorities is essential for coherent planning, and recognises the needs of both existing and future residents. The weakness of the plan arises from its acceptance of the current low densities of the area. The numbers of homes per hectare on the sites proposed in Table 4, around 20, are in line with those for existing 'fully developed' areas of Kidlington, but less than half in parts of Oxford, without any high rise development, and also without the outstanding existing and potential public transport options discussed in this plan. Planning for unnecessarily low densities means that new homes will, immediately via the open market, or over time as they are resold, be unaffordable by the keyworkers for whom they are meant. Measures to keep new homes affordable are welcome, but will be hard to maintain in the long run as long as there are not enough homes overall. The realism of para 5.13 should mean policies for Kidlington, Begbroke and Yarnton which allow the development of a new, distinct identities as local centres, so that they do not become low density dormitory suburbs, whether of Oxford or London. Higher densities should also apply to currently developed areas, in a way which works for existing residents, and reduce the area needed for new development. This would mean less loss of Green Belt, which will be welcomed by many, although this should not be an overriding objection. A gap between Oxford and these local centres risks undermining their connectedness with Oxford, as required by 5.13, so some Green Belt land will have to be re-designated. New policies suggested above for identities as local centres can offset this any loss in this regard. We strongly support policies for the encouragement of environmentally sustainable transport, such as the proposed new rail station at Yarnton, infrastructure required for rapid transport schemes, and better cycling facilities, especially allowing access to Oxford. Higher densities will also encourage walking, which is the most environmentally sustainable transport mode of them all.

"WNF does not consider that the policy of building on the Green Belt has been based on an "objectively assessed" housing need, and therefore it has not been positively prepared nor justified. We question whether any housing to meet the unmet housing need should be built on the Green Belt without first exploring other ways of meeting Oxford's housing needs, for example by Oxford City Council using land within its boundaries for housing rather than for employment, and building homes at a higher density. The Government has recently put forward a new way of calculating objectively assessed housing need and this suggests that housing needs and therefore unmet housing needs have been wrongly calculated and overestimated. Oxford City Council has not yet prepared a local plan (it is only at the Preferred Options stage) so there is currently no estimate of how much housing it can provide itself and so the unmet need cannot be accurately determined. Proposing to build more homes under these circumstances is irresponsible and makes the plan unsound. WNF does not support building on the Green Belt. This policy is not considered to be justified, when alternatives as outlined above, are available. A survey which we carried out amongst Wolvercote residents indicated that almost 70% were against development on the Green Belt. A new community could be built on an existing brownfield site at Shipton on Cherwell quarry (site 19) as we proposed in our response to the Partial Review - Optional Consultation. This would involve developing the infrastructure, but could form a new self-contained community. A new station on the railway there would serve commuters to Oxford. Development there would have the advantage of not increasing the pollution and congestion of the roads immediately north of the city. The policy is not considered to be effective. The transport infrastructure could not cope with the additional traffic which building new homes on the Green Belt north of Oxford would bring. The currently approved developments at the Northern Gateway and at Barton will inevitably lead to increased traffic before the proposed developments could take place. The Green Belt has already been unacceptably reduced by development. The policy is not consistent with national policy as outlined in the NPPF, which rules that building on the green belt should only happen under "exceptional circumstances". It specifically rules outbuilding to meet an unmet housing need

"These representations support the principle of the Green Belt Review in Cherwell District, and the subsequent removal of land from the Oxford Green Belt. Policy PR3: The Oxford Green Belt proposes the removal of land from the Green Belt for the allocated strategic development sites within the Proposed Submission Plan. This includes the removal of 10.8 hectares of land for the allocation of our client's site at South East Kidlington under Policy PR7a. In accordance with paragraph 83 of the NPPF, it is considered that the "exceptional circumstances" required for removal of land from the Green Belt have been demonstrated, as detailed within paragraph 5.17 of the Proposed Submission Plan. Although the removal of land at South East Kidlington from the Green Belt is supported by these representations, it is considered that there is an opportunity to release additional land above the 10.8 hectares currently proposed under Policy PR3, in order to accommodate a higher level of residential development, and so better address the sustainability concerns set out in the Transport Assessment and Sustainability Appraisal. The Concept Masterplan and Vision Document (Appendix A and B) submitted with these representations identifies a different proposed Green Belt boundary at the Site's southern extent, which demonstrates how a higher level of housing development can be sensitively brought forward, maximising the economic and social benefits of developing this Site, without having any further material environmental impacts or harm to the Green Belt or conflicting with the five main purposes of the Green Belt (NPPF Paragraph 80). The failure to maximise the opportunity now, creates issues of "unsoundness" as the plan does not meet the Framework tests for strong Green Belt boundaries, that will endure beyond the Plan period. Sports pitches do not fall within the definition of appropriate development contained within paragraph 89 of the NPPF. As such, they are by definition, inappropriate development, which requires "exceptional circumstances" for release from the Green Belt. It is contended, therefore, that the entire Site at South East Kidlington is proposed for removal from the Green Belt under Policy PR3, and the split between residential development and sports pitch provision formally established by a subsequent planning application. The current allocation under Policy PR3 is not sound, as it is neither consistent with national planning policy, nor effective in providing the most appropriate strategy for delivering Oxford City's unmet housing need. Extending the residential area further south would maximise the development potential of this Site within a location acknowledged as being the most sustainable for meeting Oxford's Unmet Housing Needs, in accordance with one of the Framework's key objectives to "significantly boost the supply of housing development" (paragraph 47). It is considered that this will also create a more logical and defensible future boundary to the Green Belt and the settlement of Kidlington, compliant with paragraphs 83 and 85 of the NPPF."

"Object to houses being built on the greenbelt for the following reasons; It would impact heavily on the wildlife in the area. The green belt should be there for future generations to enjoy not paved over, these things matter to me because I have an interest in walking and in wildlife and I DO NOT want it to disappear. By continuously adding houses to the outskirts of Kidlington and joining up with other villages, Kidlington will lose its identity. There is no justification for building more houses and it would impact Kidlington considerably. It would increase the volume of traffic on the roads considerably, there is already enough traffic on our roads. It would also increase the levels of pollution even more with more cars on the road, which would be bad for the environment. It would stretch public services even harder, like doctors practices and schools. Once these houses are built there is no going back, the damage to our environment will be permanent. It is for these reasons that I hope this will not go ahead. I hope that you will consider my views and the views of everybody else who has protested against this."

Comments

This submission relates to land east of the A44, Yarnton which is located at the southern end of the proposed allocation; Policy PR8 - Land East of the A44 Proposed Urban Neighbourhood. The land is owned by Mr M Smith and Mr G Smith. The land is in agricultural use and it extends to some 11.81 hectares and is outlined in red on the attached plan. The Proposed Submission Partial Review proposes to deliver 4,400 new homes within seven residential development areas. Paragraph 8.60 states that delivering all 4,400 homes, or significantly more, in close proximity to Oxford and the villages of Kidlington, Begbroke, Islip and Yarnton will ensure that the new homes are located in areas with good access to medical services and open spaces for recreation. This approach is fully supported. Development of the land identified at Policy PR8 is a logical urban extension to the settlement in a location which is sustainable being located only a short distance from Oxford, from where the housing need arises. The development adjacent to the Begbroke Science Park will further support the sustainability of the site from the perspective of residents having the possibility of living and working in close proximity. The allocation of a strategic allocation brings with it a range of benefits including the ability of large scale development to delivery infrastructure such as schools and other facilities that might otherwise be unviable through a number of smaller developments to achieve the same housing need. Mr and Mr Smiths' land abuts the A44 to the west and as such Glanville Consulting have assessed the deliverability of an access from the allocated site onto the A44. They have concluded that an access onto the A44 would be deliverable and depending on the design of the site and how much of the allocation it serves will determine the access solution. A junction design could range from a left in left out junction to traffic lights or a roundabout. The exact solution will be a matter for discussion with Oxfordshire County Council as highway authority once the function of the junction is further understood. High level drawings showing how a left in left out option or a roundabout could be accommodated on the A44 frontage accompany this submission. The site is available and deliverable within the next five years. Map attached.

Comments

The areas of land proposed to be removed from the Green Belt pay insufficient regard to the need to prevent coalescence of communities. The remaining areas of Green Belt between Kidlington and the proposed extension of Oxford City, between Kidlington and Yarnton and between Yarnton and Begbroke have been narrowed to such an extent that for all practical purposes the communities of Kidlington, Yarnton and Begbroke will become coalesced with each other and with Oxford City.

Changes Sought

"In order to maintain a meaningful separation between communities, the areas removed from the Green Belt for strategic development sites should be revised as follows: Policy PR6a: removal of approximately 6.2 hectares of land as shown on map PR6a. attached to the original letter. Policy PR6b: this policy should be deleted Policy PR7a: removal of approximately 53 hectares of land as shown on map PR7a. attached to the original letter Policy PR7b: removal of 4.3 hectares of land as shown on Policies Map PR7b (unchanged) Policy PR8: removal of approximately 93 hectares of land as shown on map PR8. attached to the original letter. Policy PR9: removal of 17.7 hectares of land as shown on the map attached to the original letter PR9.jpg The additional land removed from the Green Belt should be revised as follows: Policy PR3a: unchanged Policy PR3b: unchanged Policy PR3c: this policy should be deleted Policy PR3d: this policy should be deleted Policy PR3e: approximately 14.7 hectares of land adjoining Begbroke Science Park should be removed from the Green Belt, but the boundaries should be revised as shown on map PR8, attached to the original letter. Two new areas of additional land should be removed from the Green Belt as shown on map PR7a. Attached to the original letter. These are: New policy PR3c: the area comprising Gosford Farm and Bramley Close New policy PR3d: a small triangle of land adjacent to the development site and between that site and the A34 Table 4 needs in consequence to be rewritten: North Oxford: Policy PR6a: 180 homes Kidlington: Policy PR7a: 1230 homes Policy PR7b: 100 homes Yarnton Policy PR8: 1610 homes Policy PR9: 530 homes Woodstock: Policy PR10: 750 homes Total: 4400 homes Note: the area covered by policy PR8 is misleadingly described in the submission plan as Begbroke, but in fact falls predominantly within the parish of Yarnton, and so has been described as such in revised table 4 above."

Reasons for Participation

"This submission raises an important issue as to whether, in the event of the removal of Green Belt land being found to be necessary, residential development could be allocated in a different manner so as to reduce detriment to the Green Belt and minimise the coalescence of communities."

PR-C-1461	10/10/2017	Deborah & Jeffrey	Wright					N

Comments

Cherwell claim that the total area of Cherwell that comprises Green Belt would fall from 14.3% to 13.9%. They also claim a 3% reduction in Green Belt. Whilst this is probably true, it is not reflecting the real change in affected areas such as Begbroke, Yarnton and Kidlington! Removal of parts of a building so extensively on Green Belt cannot be justified and will mean coalescence of villages. There are no exceptional reasons for doing so when alternative sites are available. Employment and housing are inappropriate developments of site PR3e. The Government attaches significant importance to Green Belts and their essential characteristics are their openness and permanence.

It seems that most of the 4,400 homes that CDC has been asked to provide are proposed to be built on the Green Belt (GB) between Oxford & Kidlington. The GB was set up to prevent the urban sprawl of Oxford City & protect the smaller out-lying communities from being absorbed into the city as had already happened with Cutteslowe, Headington Marston, Cowley, Islip, Wolvercote, etc. The GB has been faithfully preserved & together with it areas of natural beauty which can be enjoyed by all. It is protected by law & can only be released in 'exceptional circumstances'. Does not regard this as an exceptional circumstance. Kidlington has been chosen as being near to Oxford. However, since the new Oxford Parkway station opened the prices of houses in North Oxford & Kidlington have soared. Oxford wants 'affordable housing'. This is not likely to happen. With easy access to London now, new houses will be sought after by London commuters as well as people who work in Oxford. 4,400 new homes would nearly double the size of Kidlington. This would put an enormous strain on schools, health services, & transport. People working in Oxford would all have to travel south, increasing the already serious traffic congestion in the Banbury Road. The new Cutteslowe roundabout designed to improve the situation would once again be swamped. Some of the sites proposed are particularly unsuitable. Those in the northern part of Kidlington, particularly 27 & 14, which are near the river, & liable to flooding. This would mean people having to travel through the village in order to get to Oxford, & is totally unacceptable. The Banbury Rd through Kidlington is already a nightmare during the rush hour. Kidlington is a large village but is blessed with the GB, providing pleasant countryside, nature reserves, footpaths & walks. To destroy this would remove these benefits of village life for ever. Oxford has agreed to provide only 500 new homes compared with Kidlington's 4,400 & the other District Councils' allocations. Yet the Northern Gateway area, in Oxford's domain, is scheduled for industrial development, not houses. This will surely aggravate the housing situation rather than help it. The North Oxford Golf Course is a proposed building site (38 and 50) but why not the Southfield Golf Course in Oxford. Objects strongly to the proposals as they stand, & urge the CDC to reconsider its position.

Proposed Submission Plan - Policy PR3 - The Oxford Green Belt

PR-C-1467	10/10/2017	Terry	Tossell						
5271	Comments								
The Policy PR3 to remove land from the Green Belt is also not justified. There are no "exceptional circumstances" to warrant contravening the National Planning Policy Framework or the Government's own policy pledges or CDC's own local Kidlington Framework Masterplan. This proposal contravenes Government guidelines that insist that the Green Belt is a permanent safeguard to prevent the kind of urban sprawl that merges communities and threatens their special character. As such the plan is unjustified and inconsistent with national and local policy. A more detailed analysis is included in the rep - see Section 2 - "Green Belt must mean Green Belt" - discusses aims of NPPF, Government's election manifesto and Kidlington Masterplan.

PR-C-1472	10/10/2017	David	Tighe			N	N	N	
5223	Comments								
Govt. Planning Policy states that development of the Green Belt (GB) should only be a very last resort in exceptional circumstances. CDC therefore must establish, as a minimum, that it has no other non-GB sites that it could use. It has failed to do so. CDC's own policy is that GB should be permanent. If allowed to go ahead this area will become a continuous urban sprawl covering Kidlington, North Oxford, Wolvercote, Begbroke & Yarnton. It cannot be right that these areas effectively become merged. Valuable high quality countryside of this GB land will be lost forever. Much of this is highly accessible & used for recreation, with habitats which support much flora & fauna. It will also adversely affect the rural setting of historic Oxford city. CDC's proposals are not consistent with National Planning Policy. They do not take account of the adverse effects of removing such a large area of GB land. I also understand that if GB boundaries are re-defined (as would happen if the GB areas are developed) Local Authorities should define boundaries clearly using physical features that are readily recognisable and likely to be permanent. This is not the case on the area to the east of the A4165 (Oxford Road) because there are no such features & therefore no eastern boundary. This could therefore lead to unrestricted sprawl of large built up areas - exactly what the GB is there to prevent. The proposals in respect of the Golf Club seem totally unrealistic/nonsensical i.e.. that the Golf Club is relocated a few hundred yards away at Frieze Farm. I have played at the Golf Club and know a number of the members. They would not move to a new site which consists of flat arable land at Frieze Farm. To develop this to an equivalent standard or even a tolerable standard would mean a huge investment and this will simply not happen. There are no funds available for this proposed relocation; the land owner of Frieze Farm has no desire or interest in having a golf course there; and the members of the golf club have no appetite to move there. It will not happen and any suggestion that it will is completely misleading

PR-C-1473	10/10/2017	Debbie	Dance	Oxford Preservation Trust		Y	N	N	Y
5220	Comments								
Once established, Green Belt boundaries should only be altered in exceptional circumstances (NPPF, para. 83). OPT acknowledges that CDC has a legal duty to cooperate with neighbouring authorities; that Oxford cannot meet its housing needs from within its administrative boundary; & that consequently, a review of the Oxford Green Belt is justified in terms of seeking to meet that unmet need in sustainable locations close to the City. OPT notes also the exceptional circumstances listed at paragraph 5.17 in the Proposed Submission Plan. However, while these might be justified, regard must also be had to striking a balance between the requirement for housing & the obligation to preserve the special character of historic Oxford, one of the key components of which is its green setting and the separation between the City & surrounding towns and villages. In our view, if the Local Plan Examination eventually determines that there are exceptional circumstances sufficient to justify land being taken out of the Green Belt, then some compensation land should be provided, which provides publicly accessible green space & improves biodiversity, together with measures to ensure that this is permanent. In addition OPT would want to see higher contributions put towards enhancement of existing Green Belt & any new local areas of permanent open space as stated at NPPF Paragraph 81 " local planning authorities should plan positively to enhance the beneficial use of the Green Belt, such as looking for opportunities to provide access; to provide opportunities for outdoor sport & recreation; to retain & enhance landscapes, visual amenity & biodiversity; or to improve damaged & derelict land."									
Changes Sought					Reasons for Participation				
					"OPT considers that there are important matters relating to the soundness of the plan that need to be discussed at the Examination and therefore wishes to reserve the right to participate at the Oral Examination. We take a forward thinking and positive approach to development, looking to influence change rather than stopping it. We are recognised as a professional and experienced voice, able to speak with conviction on matters relating to landscape, views and the impact of development on the city of Oxford and its green setting and surrounds, and are committed to ensuring that Oxford can continue to flourish and prosper, whilst protecting its historic character and setting."

The site marked PR3e is also a thinly disguised opportunity for industrial development within a housing scheme. In addition, there are developments in process immediately to the north of Begbroke - another science park at Langford Lane - so the village is rapidly becoming hemmed in on all sides. If the land was to be converted from 'agricultural' to 'building' land the value of it would increase dramatically to those who own it with no real benefit to the communities affected.

Green Belt and Exceptional Circumstances: The proposed plan has not demonstrated that exceptional circumstances justify the loss of green belt land. The NPPF is clear that neighbouring towns should not be merged by loss of greenbelt, that the historic setting of towns should be respected, and that countryside should be protected for current and future generations. The proposals contravene Cherwell District Council's own green belt policies set out in the Cherwell Local Plan. The method of calculating Oxford's unmet housing need has now been shown to be flawed, further weakening the case for building over green belt. This makes the whole basis for the proposed development legally questionable. CDC state there is a "clear inability for Oxford City to fully meet its own needs" - has this been demonstrated in the context of the revised calculation method? Do not feel it is proven, developments such as the Northern Gateway should be reconsidered for housing rather than unnecessary business parks. The stated sustainable transport improvements to Kidlington are totally unrelated to this development PR8, as noted access to the suggested station will be difficult from the east with the closure of Sandy Lane. The A44 will be worsened as a transport link, it is unsound to claim that supposedly improving it constitutes an exceptional circumstance to lose green belt, the development would make it much Cherwell Local Plan 2011-2031 (Part 1) - Partial Review – Oxford's Unmet Housing Need – Proposed Submission Representation Form worse. The inability of Oxfordshire County Council to undertake any road improvements without massive disruption (e.g. the recent Wolvercote/Cotteslowe roundabouts) will mean many months of delays before any small benefits are gained from improvements. The claim that the developments will provide improvements to open spaces and access to the countryside is clearly false. How can the loss of many hectares of open unspoilt countryside possibly be offset by the creation of a few small designated areas of "parkland"? The wellbeing of existing communities and those living in new housing will be harmed by loss of so much open countryside. This response though separate and my own should be read in conjunction with the Representations made by the Begbroke & Yarnton Green Belt Campaign "BYG".

Changes Sought

For the reasons I have given AND the Representations made by the Begbroke & Yarnton Green Belt Campaign which I additionally support and adopt as part of my own Representation in this document, the Plan cannot be changed to make it legally compliant or sound and should therefore NOT be submitted for Inspection.

Reasons for Participation

I would like the Begbroke & Yarnton Green Belt Campaign to represent me at the Examination should it take place.

"Opposed to building on Green Belt and the subsequent loss of biodiversity and wildlife. • The Plan to build on Green Belt is unsound and not justified, as it offers no evidence that Oxfordshire Growth Board's figures for Oxford's housing needs are based on up to date, impartial research rather than estimates from potential developers. Growth Board figures used as the basis of the Plan need to be urgently reconsidered in view of recent changes to Government's methodology in calculating housing demand. • The Local Plan is unjustified and unsound in allowing housing and other development on Green Belt land. Oxford's long standing Green Belt was designed and designated to limit Oxford's outward growth. That limit has now been reached. If exceptions are now permitted to erode the Green Belt, there are no guarantees that more and more of Green Belt will not be built on in future. As the Plan destroys the existing Green Belt limit on Oxford's expansion, it must define and specify new limits, otherwise Oxford's growth is literally "unlimited." • The Local Plan is unsound, because whilst claiming to have considered the "wider context of growth and planning in West Oxfordshire and Aylesbury", it does not appear to take account of additional removal of Green Belt and extensive building developments elsewhere around Oxford, in Vale of White Horse District and especially neighbouring South Oxfordshire District which is scheduled to take the largest share of Oxford overspill. The Plan does not consider that Cherwell developments will contribute to a sprawling urban conurbation from Kidlington to North Oxford, and from Oxford southwards to North Abingdon, Radley, Culham, Berinsfield, Chalgrove and Didcot "Garden Town". Development in Cherwell cannot be viewed in isolation. • The Local Plan is disingenuous in claiming there will be no "harm to habitats and biodiversity" or that development plans can "conserve and enhance the natural environment". The construction of so many houses on green field, rural land and the further fragmentation and isolation of remaining green spaces will inevitably be detrimental to wildlife. Badgers in particular will lose much of their foraging and feeding areas on existing agricultural land. Sett colonies will be isolated and adversely affected as surviving green space come under increased recreational pressure and disturbance from a still larger population of people and their dogs. • The Local Plan fails to consider the impact of the greatly increased road traffic servicing 4,400 new houses on wildlife in general and badgers in particular. The increased probability of badger road casualties will further threaten this protected species. "

Object - The Oxford Green Belt Policy PR3
Do not consider the proposed submission plan to be sound and do not see any valid reason for exceptional circumstances to justify removal of green belt land in the area.
The report that Oxford's unmet housing need is as high as stated in the plan has been thrown in to doubt with conflicting reports, and that new Government targets are significantly lower than this plan is based on. The plan is unsound and unjustified. It is being rushed through and not based on accurate figures.
The proposed plan for improving infrastructure in the area to support this level of development is nowhere near realistic on a physical or financial basis. It does not begin to address the problems that will arise in this area. The proposal of closing the road between Yarnton and Kidlington is not justified at all. The plan is unsound as the need has not been thoroughly assessed or understood and no effective solution has been put forward. There is no justification for removal of green belt land in this area based on these proposals.

Object to policies PR3, (The Oxford Green Belt), PR6a (Land East of Oxford Road) and PR6b (Land West of Oxford Road). • I believe these proposals are not consistent with National Policy because they do not take into account the detrimental effect that removing these large areas of Green Belt will have. These proposals therefore fail to meet the test of soundness as defined in paragraph 182 of the NPPF. • Oxford's Local Plan has not yet been prepared so Cherwell's allocation of homes is premature and is not an appropriate strategy and is unjustified.

Land in the western part of the site (the 'Western Development Zone') - see provided plans, is surplus to the airport's requirements. It has been earmarked by LOA for housing, employment, & a park & ride facility (the latter being a key piece of infrastructure referred to throughout the draft Local Plan, but for which land is not allocated). The adopted LPP1 does not provide a policy basis to support development in this part of the site. It is relevant to addressing Oxford's unmet housing needs therefore is a relevant matter for consideration as part of the partial review of LPP1. The airport has further areas of surplus land to the north west & north east of the site, however developing these areas is of a lower priority for the airport at present. Other Evidence: The same concern applies to other evidence base documents, including the draft Housing & Economic Land Availability Assessment (August 2017). Again this assumes that it is the entire LOA site being promoted for non-airport development (as opposed to just surplus land parcels). Accordingly the site is assessed to be not suitable or achievable for housing (due to the assumed loss of the airport) & not considered further. Assessing the site as a whole is too blunt an assessment & produces inaccurate results. The Western Development Zone is, in our opinion, suitable & achievable (see Enclosure 2 in full representation).									
Changes Sought					Reasons for Participation				
In order to make the plan sound, in the first instance we recommend that the SA is revisited and revised in respect to the LOA site. To assist, we have provided our own sustainability appraisal of the LOA site (using the Council's SA framework) at Enclosure 3. This clearly indicates that development being promoted at LOA would comprise a particularly sustainable option for the Council which would offer the opportunity to realise unique economic benefits alongside satisfying Oxford's unmet housing needs. Secondly, and on the assumption that the Council's updated SA reaches similar conclusions to those at Enclosure 3, we recommend amending the plan to establish a policy position that supports the development of part/all of the Western Development Zone of the LOA site for housing, employment and a transport interchange (park and ride) facility. Refer to Enclosure 2 for further details. Specifically this would include: - Amending Policy PR3 to remove part/all of the Western Development Zone from the Green Belt - Amending Policy PR4a to include specific reference to a transport interchange (park and ride) facility) in the Western Development Zone of LOA - Insert a new policy (PR10a) to allocate part/all of the Western Development Zone for housing, employment, and transport interchange uses.					"LOA is a significant economic asset which has a functional relationship with Oxford and ingenerating/meeting its unmet housing needs. Our concerns go to the heart of the soundness of the plan, therefore we request to participate."

4675	Comments								
Objection to Policy PR3 Use of Green Belt. "Unmet Housing Need" does not outweigh the protection given to the Green Belt. Once established, Green Belt boundaries should only be altered in exceptional circumstances. The provision of 4400 number of houses will do unacceptable harm to the Green Belt which is essential in preventing the urbanisation of Oxford. The Green Belt not only restricts the sprawl of large built-up areas and preserves the character of the historic cities such as Oxford but it also protects neighbouring villages from being swallowed up/amalgamated by ever-expanding cities. It has been agreed in Local Plans that check Oxford's growth by surrounding the City with Green Belt designated land (between 6.5-10 km wide). CDC should not review the Green Belt boundary or allocated sites where the impact would be "high". Policy PR3c removes Green Belt status from the small piece of land west of PR6b and south of the railway, we believe the site could in the future be capable of development. The policy also removes Green Belt designation from the Water Eaton Park and Ride/Parkway site PR3d. We fear that this could pave the way for a wider range of development and reduce the separation between Oxford and Kidlington.

Object to Policy PR3 to remove land from the Oxford Green Belt. The Green Belt around Kidlington preserves green spaces that are so greatly appreciated and enjoyed by local residents. It protects both the historic city of Oxford from overdevelopment and neighbouring villages from coalescence. Government guidance says that Green Belt is a permanent designation and that unmet housing need is not a reason for building in the Green Belt. The plan is therefore ineffective and not consistent with National Policy.

4701	<p>Comments</p> <p>The 'exceptional circumstances' listed in the plan for encroaching on the Green Belt speak of "clear economic and social relationships that exist between Oxford and Cherwell's local communities at Begbroke, Yarnton, Kidlington and at Gosford and Water Eaton, and the clear potential to develop these relationships" without in any way stating what these economic and social relationships are. Begbroke and Yarnton have their own churches, their own village halls, their own pubs, their own parish councils; they are separate villages. They are only united now in their opposition to this plan to join their villages together and merge them into one. It is ridiculous to claim a knowledge of 'social relationships' when so little regard is being paid to the views and wishes of those involved. Kidlington is another place, joined to Begbroke and Yarnton by the tenuous link that is Sandy Lane which the plan proposes to close.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>

Policy PR3 – The Oxford Green BeltThe Oxford Green Belt was established to permanently secure the separation of settlements, protecting both Oxford and neighbouring communities for coalescence. The permanence of the Green Belt is embodied in national planning policy guidance and to bring forward sites that are within the Green Belt would appear to demonstrate that this is not permanent and should not come under consideration for development. This Plan goes a long way to upsetting the balance created by the Green Belt with the erosion of substantial parts of the most vulnerable areas of the Green Belt. Specifically, the already narrow gap between Oxford and Kidlington where sites are allocated at the North Oxford Golf Club and on the east side of the Oxford Road. Also with the virtual coalescence of Kidlington with Yarnton and Begbroke through the allocation of 1950 dwellings through Policy PR8. The Plan does not provide a justification for the exceptional circumstances to develop in the Green Belt. The locations for development appear to have been selected on criteria of proximity to Oxford meeting the objectives of Oxford City Council to have the housing in the closest proximity rather than with any concern about the permanence of the Green Belt. Another factor in the creation of the Green Belt was to provide a constraint to the growth of Oxford; this objective has been overridden with some of the site allocations and is not justified in taking this approach. Other criteria that appear to have been considered relevant are the development of Oxford Parkway Station and employment generation at Begbroke Science Park, but development in such areas for other purposes do not provide a 'de facto' justification for this scale of residential development in the Green Belt. On the assumption that there is a need to address Oxford's housing requirements alternatives solutions should be sought rather than development in the Green Belt, such as addressing the imbalance between housing and employment within Oxford itself. Where land that could easily be allocated for housing has been allocated for employment such as Oxford's Northern Gateway, this employment allocation could be addressed in a review of the Oxford Local Plan. Development on the sites proposed in the Green Belt undermines long established national planning policy for the permanence of the Green Belt and has not been justified in this Cherwell Plan.

Exceptional reasons need to exist to justify building on the Green Belt. Oxford City Council are planning to build commercial premises creating 5,000 jobs, without having 5,000 people within reasonable commuting distance to take these jobs. That is not an exceptional reason to justify building on the Green Belt. If Oxford City have a housing shortage without the Northern Gateway, then they should use that space to satisfy the housing requirement, before there is any argument to justify building on the Green Belt. If Oxford City Council believe there is sufficient people who can commute to take these jobs, then there is no reason to build on the Green Belt.

Unsound. Several plans have confirmed that Oxford's growth should be constrained, which is reflected in the introduction of 6.5-10km wide green belt around Oxford, and an alternative strategy of County Towns should be adopted to disperse both housing and economic growth throughout the County. The sites that have been considered in these proposals act as urban extensions to Oxford and do not restrict the growth of Oxford, these specific sites are Policy PR6a Land East of Oxford Road and Policy PR6b Land West of Oxford Road. These two sites are situated on the border of Oxford. Another prime purpose of the green belt is to prevent coalescence of settlements, this is contravened in Policy PR8 Land East of the A44 and Policy PR9 Land West of Yarnton, construction in these areas will lead to coalescence of Begbroke and Yarnton. To constrain the growth of Oxford we believe that no housing should be built in the green belt directly surrounding Oxford, we also think a strategic gap policy needs to be added to the plan, this will add an extra layer protection to the green gap between Kidlington and Oxford.

Not Positively Prepared. Not Justified. Not Effective. Not Consistent with National Policy. These submissions are made on behalf of Lone Star Ltd who control the land hatched red as identified on the accompanying plan (Drawing PF/9634.01 LS). A separate submission has been made on behalf of EP Barrus which controls the land hatched blue on the plan. The two landowners are in discussions for a planned release of the two landholdings. The land held by Lone Star Ltd extends to some 11.7 hectares. As shown on the accompanying plan, the land interest adjoins the area of land identified for housing within the Core Strategy Villages 5. A resolution to grant planning permission has recently been made for 79 dwellings on land abutting this land holding (Ref: 15/01357/F). Policy Villages 5 sets out specific design and place making principles including avoiding development on more sensitive and historically significant sites at RAF Upper Heyford, the retention of features which are important to the character and appearance of the site; encourage biodiversity enhancement and secure environment improvement. It is submitted that this landholding displays similar physical and environmental characteristics to the adjoining site, which has a resolution to grant planning permission (albeit acknowledged that the site does not lie within the potential development area as shown on the Proposals Map). This is a detailed submission with references to: The Upper Heyford Landscape and Sensitivity and Capacity Assessment, The Upper Heyford Assessment Interim Final Report 2014, Issues to Soundness and Green Belt Policy. The land identified (red and blue) has a gross site area of some 11.7 hectares. Assuming a 70% gross to net development area to allow for green infrastructure, the dwelling capacity would be 245 new homes (density 30 dph). Developer interest in the land exists. There are no known physical constraints to development. This submission propounds that the allocation of the land edged red on the accompanying plan - as a parcel of land, or in conjunction with the land edged blue at Upper Heyford for housing development would: - Promote a sustainable pattern of development consistent with 'the most sustainable strategy for the District (IR 212) including new homes at RAF Upper Heyford' to meet some of the displaced housing need from Oxford. - Reduce the extent to which GB land may be required for housing to meet displaced housing need from Oxford, and hence - Comprises a reasonable alternative to the loss of GB.

Successive strategic plans in Oxfordshire have confirmed that Oxford’s growth should be constrained - reflected in the introduction of a GB of 6.5-10km width around the City (Ref Central Oxfordshire Local Plan, Cherwell Local Plans 1996 and 2015 and 2011 Oxfordshire Structure Plan), and - an alternative strategy of County Towns should disperse both housing and economic growth through the County. The current SEP identifies the need for growth of both Science Vale (south of Oxford), Oxford and within the Oxfordshire Knowledge Spine which extends to the north to include Bicester, with Kidlington being within the latter zone. Employment allocations and a commitment to consider additional expansion of employment sites west of Kidlington are already addressed in the Adopted CDCLP and the 2016 SPD for the village. The County Town strategy is therefore not incompatible with the SEP, the Adopted CDCLP and the adopted DPD (Masterplan) for Kidlington. GB designation is intended to permanently secure the separation of settlements, to prevent the unrestricted sprawl of large built-up areas and to preserve the setting and special character of historic towns (in this case the setting of Oxford). [NPPF P. 80]. In paragraph 034 of National Planning Practice Guidance (Stage 5 – Housing and Economic Land Availability Assessments), the question is put with a succinct response: “In decision taking, can unmet need for housing outweigh GB protection? “Unmet housing need (including for traveller sites) is unlikely to outweigh the harm to the GB and other harm to constitute the “very special circumstances” justifying inappropriate development on a site within the GB.” In the NPPF, the advice is: “Once established, GB boundaries should only be altered in exceptional circumstances, through the preparation or review of the Local Plan.” Exceptional circumstances have not been demonstrated as to the scale of need that are required in Cherwell District. All the sites now proposed for development are categorised as scoring high or moderate/high in importance in the GB study, in respect of their performance in preventing neighbouring towns merging into each other (See Figure 4.3 Oxford GB Study 2015). On this basis alone they should be excluded from further consideration for new development. This is entirely consistent with the findings of the current Oxford City Preferred Options Local Plan, which states: Preferred Option 31A..... Do not review the GB boundary or allocate sites where the impact would be ‘high’. Rejected Option 31C, which suggested that all grades of GB land should be considered for development, rightly concluded that: This approach is likely to have a significant harm to the overall integrity of the GB in Oxford. The important functions, and ultimate aim of the GB to protect Oxford’s setting would be significantly harmed.

The later 2017 Cherwell Green Belt Study – conducted by the same consultants – illogically downgrades the importance of some of the sites. However, it acknowledges that all of the land south of the railway and all land west of Kidlington scores high in terms of harm that would result from the release of sites for development. (See Figs 4.1 and 4.2 2017 GB Study.) Yet this is the land that is proposed to be developed.

Cross boundary coordination must reflect shared values.

The proposed substantial reduction of the Green Belt is completely incompatible with the strategic need for a Green Belt of sufficient width around Oxford, especially since the Oxford Local Plan proposes development on Green Belt sites within its administrative boundary to increase capacity, and has allocated land for development at the Northern Gateway close to Kidlington (which in my opinion should be solely for housing).

The planned allocations would reduce the width of the Green Belt between the expanded settlement of Oxford and Kidlington to less than 1Km in places, in a location where much of the intervening gap is occupied by the A34, railway and car parks. This is far too small when the separation is between two large settlements, and does not provide a meaningful Green Belt in the terms set out in the NPPF.

Only 14% of Cherwell District is subject to Green Belt policy – but that land within the Green Belt, as supported by the NPPF, should be seen as the absolute last resort for new development, when all other options in both Cherwell and Oxford, have been proven to be unsuitable (another case of prematurity given the current consultation on Oxford’s Local Plan). Oxford considers Kidlington a convenient direction of growth for Oxford, but the necessity for development here has not been justified.

The arguments set out in 4.16-4.17 under the heading of ‘Fragile Green Belt’ are specious. To make a case for coalescence, whilst accepting the vulnerability and importance of the remaining gap, ignores one of the fundamental objectives of national Green Belt policy.

We should all welcome the retention of Green Belt designation on sites north of Kidlington, and in the land between Kidlington and the River Cherwell, and the absence of development allocations in this area.

Development here would have severe adverse impacts both on land important to the integrity of the Green Belt and the character of the area, and, through an increase traffic movement, on existing problems of congestion and poor air quality.

I also welcome the retention of Green Belt designation on Frieze Farm site.

Policy PR3c removes GB status from the small wedge of land west of PR6b and south of the railway, although no development is as yet proposed on this site. Once the GB designation is removed however, the site might in the future be capable of development under the terms of Policy PR12b. The plans for Frieze Farm presented to Kidlington Voice connect the development with this site via a bridge. It is proposed to remove GB designation from the Water Eaton Park and Ride/Parkway site PR3d. This could then green light a wider range of additional buildings, reducing the open character of the site, further weakening the break in development between Oxford and Kidlington, and adversely impacting on the separate identity Kidlington which is fundamental to the adopted Kidlington Masterplan and the Local Plan.

Comments

Objection to remove land from the Oxford GB. GB is sacrosanct and enshrined in planning regulations as a permanent designation. It protects both Oxford from overdevelopment and surrounding communities from urban sprawl. It also provides an immensely important health benefit to the local communities: recent research on the built environment has clearly demonstrated the recuperative impact of calm green spaces on both physical and mental health. Removing this for commercial reward and to the main benefit of housing developers (not the local community, who will undoubtedly suffer) is wholly unjustifiable and I would suggest verges on unlawful.

1. It's completely ignores the consequently impacts of Oxford City's new Local Plan, which is still in the "melting pot," and yet to be determined. It does not show a duty to co-operate, quite the reverse. This is significant because these two plans need to work together, not in isolation. Otherwise, Oxford and the setting of it's immediate northern communities could lose even more protected Greenbelt land than so far proposed. The sheer scale and amount of Greenbelt proposed for removal is breath-taking and totally in contravention of National Planning Policy Framework, Paragraphs 79 and 80, which define the need and purpose of Green Belts. Cherwell District Council are paying only "lip-service" to the detrimental consequences. This is not acceptable. To claim the amount to be removed is only repents 3% is a very misleading distortion, because the locations identified, PR6b, PR6a, PR6c, PR8 will completely "strangle" north Oxford and are unsustainable. The consequences of what clearly will be a very significant additional spread of - urban sprawl - have not been evaluated effectively. IT IS IMPORTANT TO RETAIN THE PRESENT GAP BETWEEN KIDLINGTON AND NORTH OXFORD. IT IS IMPORTANT TO STOP URBAN SPRAWL TO PRESERVE THE OPEN INTEGRITY AND SETTING OF CUTTESLOWE PARK.

Changes Sought

Remove the need for affordable housing, because, there is no way it will be affordable next to north Oxford. Be honest with people, tell them their lives in Kidlington and north Oxford are to be blighted with complete traffic gridlock and damaging vehicle pollution. Be legal by NOT destroying Greenbelt land next to Cutteslowe Park, The Golf course, (an essential recreational resource currently), and stopping coalesce with Kidlington and north Oxford.

Reasons for Participation

Believes, with respect, the Inspector would much benefit from really listening seriously to ordinary people, regarding the very real experience and particularly genuine concerns of how these 'grand proposals' to 'illegally' destroy all the immediate greenbelt land around Kidlington and north Oxford, will have a completely devastating impact on the lives, health, well being and free movement of well established existing communities.

Object to Policy PR3 to remove land from the Oxford Green Belt. The Green Belt around Kidlington preserves green spaces that are so greatly appreciated and enjoyed by local residents. It protects both the historic city of Oxford from overdevelopment and neighbouring villages from coalescence. Government guidance says that Green Belt is a permanent designation and that unmet housing need is not a reason for building in the Green Belt. The plan is therefore ineffective and not consistent with National Policy.

Policy PR3 Destruction of Green Belt 1. Based on National policy, building on the green belt is permitted only in 'Exceptional Circumstances'. An actual housing shortage, let alone an aspirational shortage, does not constitute an exceptional circumstance. Social housing may do, but social housing does not appear to be a significant part of the proposals. This element of the proposals is not in-keeping with National green belt policy. 2. Green belt is most precious, to those on both sides of it, where it is the narrowest. This appears to be the very criterion on which the plans are based: using the narrowest part of the green belt between Kidlington and North Oxford, i.e. the land closest to Oxford. 3. The figures were produced by the Oxfordshire Growth Board but clearly are for the benefit of Oxford City, not the County. There are greater swathes of green belt further away from Oxford, for social housing in the County, which have not been considered. 4. Villages such as Kidlington do not encompass a great deal of 'open space'. The greenbelt is its open space. Oxford however does have green space/parks within its boundaries so will be spared the effects of the sprawl. Once built on green belt will never be reinstated. 5. Sustainability of biodiversity, recreational space and open vistas is non-existent.

Objection. The Green Belt exists to "restrain development pressures which could damage the character of Oxford City and its heritage through increased activity, traffic and the outward sprawl of the urban area" as acknowledged in para B256 of the Local Plan Part 1. In order to achieve this, the Green Belt has to be permanent as stated in the NPPF. The review proposals are therefore at odds with both Cherwell's existing policy and Government policy. It is also at variance with Government Policy because: - Cherwell has not taken into account Green Belt as a valid constraint which reduces its ability to meet "objectively assessed need" - it ignores the core principle underpinning policy (para 17 NPPF) that Green Belt should be protected - it is at variance with planning practice guidance which says that unmet housing need is not a valid reason to build on the Green Belt. Cherwell has also not proved that exceptional circumstances exist for building on the Green Belt. Of the 12 points listed in the plan (p66), only the first two might even be considered to be exceptional circumstances. The first of these, Oxford's need, has not been proven and is likely to be much lower than claimed. The second, Oxford's alleged inability to meet its need, is also not proven. The city council has been unnecessarily protecting and allocating land (such as the Northern Gateway) for employment purposes, when additional employment is not needed (there is almost no unemployment in this area). Such land could be used for housing, whereas its (unfulfilled) potential for generating employment is instead being used to artificially boost housing need. It is also the case that realistic alternatives to development in the Green Belt exist. In particular a continued strategy to restrict the growth of Oxford and promote it elsewhere in the County and beyond is perfectly feasible. Such a strategy could be developed in co-operation with the other District Councils, though it is clearly at odds with the intentions of the city council. Residential site areas seem unnecessarily large. Finally, I have a concern relating to the site capacities. While I object to all allocations in the Green Belt, I am concerned that if any of these go ahead, the land areas allocated specifically for residential development (i.e. the pink areas on the maps) are higher than is needed to accommodate the numbers of houses at the specified net densities. In most cases this excess provision is about 50%. In addition some of the proposed densities are relatively low. Taken together, these provisions could result in a significantly larger number of houses being permitted than intended. Given that Policy 12(a) allows the Council to count over-provision towards its own requirement (rather than Oxford's), this is a concern which ought to be clarified in any final plan to ensure that only the intended number of houses is built and that Green Belt land is not needlessly sacrificed.

Changes Sought

Changes needed. The plan should be withdrawn so that an alternative planning strategy can be developed based on more realistic growth assumptions and which would continue to protect Oxford from outward sprawl through the maintenance of the Green Belt and through the encouragement of growth elsewhere. If any of the proposed residential allocations go ahead, there should be provisions to ensure that only the intended number of houses is built, given what appear to be excessively large site areas.

wish to participate as stated in representation above.

Proposed Submission Plan - Policy PR3 - The Oxford Green Belt

PR-C-1535	10/10/2017	Layla	Vidal-Martin	Lichfields on behalf of Taylor Wimpey (Oxfordshire)	Y	Y	N	Y
-----------	------------	-------	--------------	---	---	---	---	---

Comments

Taylor Wimpey (TW) considers the Submission Plan is not sound as it is not “justified” or “consistent with national policy”. This is because : 1. CDC acknowledge (Submission Plan Executive Summary para XV) that “under national policy Green Belt boundaries should only be altered in exceptional circumstances through the preparation or review of a Local Plan”. The Submission Plan (para 5.17) sets out why CDC consider that exceptional circumstances exist for the release of these sites from the Green Belt & their allocation for residential development. TW contend that CDC have not thoroughly explored “all other reasonable options” &, where they have sought to do so, there are flaws in their evidence base (regarding their assessments of sustainability, transportation & alternative development locations). They have not demonstrated the “exceptional circumstances” required for the proposed release of the sites identified in Table 1 from the Green Belt; 2. CDC’s approach is predicated on an assumption that “Oxford’s Housing Needs” form a bespoke & identifiable source of housing need. This conflicts with the recognition in the Oxfordshire SHMA (2014) (para 9.2) that “the SHMA identifies an Oxford-focused Housing Market Area which extends across much of the County, reflecting the economic influence of the City. The county still remains the most appropriate geography for analysis of housing markets in terms of the ‘best fit’ of local authority boundaries to a functional housing market area.” More recently the Inspectors Report into the Vale of White Horse Local Plan emphasised that (para 45) “it is not the role of, or possible for, the plan to prescribe where people live and work;” and; 3. CDC compound this assumption (Policy 12a) by seeking to pursue a “separate five year housing land supply . . . For meeting Oxford’s needs.” This, in conjunction with proposals not to support Sites Not Allocated in the Partial Review (policy PR12b) are not consistent with the NPPF’s presumption in favour of sustainable development & risk substantially harming housing delivery in the District in the coming years. Scope of response (See Detailed 4 Section Report). This response amplifies TW’s concerns regarding the soundness of the Submission Plan, & their view that their site at Bloxham (Site PR35) forms a “reasonable option” for residential development prior to the release of the proposed allocations from the Green Belt. Specifically • Section 2: Summarises the appropriateness of residential development on the TW site; (Section 2 encloses * Sustainability Analysis by Calibro, * Residential Potential of Site, * Assessment of site against constraints, * SHLAA Analysis) • Section 3: Summarises TW’s concerns regarding the inadequacy of the evidence base, whilst emphasising their support for the level of residential development proposed. This underpins their contention that the Submission Plan does not establish “exceptional circumstances” for the proposed release of these sites from the Green Belt; • Section 4. Sets out TW’s comments on emerging policies and the changes that they consider are necessary to make the plan sound.

Changes Sought

The Plan proposes that around 55 % of the housing proposed should be targeted within the Green Belt (GB). Para 3.26 “approximately 14 % of Cherwell lies within the Oxford GB”. Thus CDC need to demonstrate “exceptional circumstances” as to why this housing cannot be located within non GB locations comprising 86 % of the District. We do not consider that CDC have appropriately addressed “reasonable alternatives” & therefore cannot be considered to have demonstrated “exceptional circumstances” for the release of all of these sites from the GB. * Combined with the inadequacy of the evidence base, these concerns are amplified by the fact that the Submission Plan appears to prejudge the proposed development strategy irrespective of the evidence base. This is reflected in the fact that the (Executive Summary para xiv) states that the Plan “focusses development on a geographic area extending north from Oxford to south Kidlington, along the A44 corridor” & earlier iterations of the evidence base acknowledged that only sites within two of the nine areas of search have been assessed, * Conversely TW have established that the TW site at Bloxham does form a “reasonable alternative” for development within a sustainable location which is capable of meeting housing need. This is consistent with CDC’s analysis within the HELAA (albeit that TW’s technical analysis is that the site is capable of accommodating a higher level of residential development). * Accordingly the TW site should be allocated for residential development (under this or an additional policy) prior to CDC moving on to consider the need for any Green Belt release. * Without the amendments sought above our clients do not consider that the Submission Plan can be considered “sound”, particularly with regards to being “positively prepared” or “justified.”

Reasons for Participation

We consider it necessary to participate at the part of the Examination to amplify the concerns and points raised within the representations.

Object to Policy PR3 to remove land from the Oxford Green Belt and build over it. It is a National Policy that the Green Belt is a permanent designation and can only be built on in ‘exceptional circumstances’. Oxford’s ‘unmet housing need’ does not meet this criterion. Therefore the plan breaches National Policy. The Green Belt around Gosford, Kidlington, Begbroke and Yarnton performs vital functions. It protects the identity of these villages and prevents them from being swallowed up in one vast, alienating conurbation. It protects residents of these villages from dangerously high concentrations of air pollution. It supports a rich and diverse wildlife. It provides green spaces cherished by local residents for outdoor leisure activities and it provides a beneficial respite from the stressful busyness and noise of urban environments for all. Once areas of Green Belt are built over, they are lost forever.

Objects to PR3 on the grounds that the current proposals will in effect mean the coalescence of Kidlington, Oxford, Yarnton and Begbroke which was one of the primary purposes of the green belt. Cherwell DC has failed to challenge the overall figure of 4400 homes and have allocated all of them to the southern tip of the district without giving any serious consideration to other areas in the district. The total number of Oxford’s unmet housing need has yet to be properly established and therefore this proposal is premature. The green belt around Oxford was established to ensure the separation of established communities and to prevent urban sprawl. The NPPF states that ‘once established, Green Belt boundaries should only be altered in exceptional circumstances.’ Green belt land should only be built on as a last resort in exceptional circumstances. One of the main reasons to designate land as green belt is to permanently secure the separation of settlements, to check the unrestricted sprawl of large built-up areas and to preserve the setting and special character of historic towns. In para. 034 of National Planning Practice Guidance (Stage 5 – Housing and Economic Land Availability Assessments), the question is put and the response is clear: “In decision taking, can unmet need for housing outweigh Green Belt protection? “Unmet housing need (including for traveller sites) is unlikely to outweigh the harm to the Green Belt and other harm to constitute the “very special circumstances” justifying inappropriate development on a site within the Green Belt.” In the NPPF, the advice is: ‘Once established, Green Belt boundaries should only be altered in exceptional circumstances, through the preparation or review of the Local Plan.’ The 2017 Cherwell Green Belt Study acknowledges that all land south of the railway and all land west of Kidlington scores high in terms of harm that would result from the release of sites for development yet this is the land that is proposed to be developed. The proposed substantial reduction of the green belt is wholly incompatible with the strategic need for a Green Belt of sufficient width around Oxford, particularly at a time when the Oxford Local Plan proposes development on green belt sites within its administrative boundary to increase capacity, and has allocated land for development at the Northern Gateway close to Kidlington. The effects of the planned allocations would be to reduce the width of the green belt between the expanded settlement of Oxford and Kidlington to such a small area as to result in virtual coalescence in a location where much of the intervening gap is occupied by transport infrastructure. This is far too small when the separation is between two large settlements, and does not provide a meaningful green belt in the terms set out in the NPPF. CDC has accepted the 4400 figure without challenge and have assumed that it can be wholly fitted into the south part of the district without proper consideration of other areas of the district. It is worth noting that in all other District Council around Oxford (who are also addressing the Oxford Unmet Need) none are proposing development as an extension to Oxford within the green belt. CDC has not examined with Oxford City as part of the cross border working the reallocation of employment land for housing. An example would be the Northern Gateway employment land which is simply going to increase the pressure for more housing.

I object to PR3 to remove land from the Oxford Green Belt. Speculative building is not a special circumstances for building in the Green Belt. This land is used and appreciated by the people of Kidlington and North Oxford as recreational space and as a means preventing the merging of significant separate settlements thus preserving the historic City of Oxford and the identity of Kidlington.

Proposed Submission Plan - Policy PR3 - The Oxford Green Belt

PR-C-1544	09/10/2017	Paul	Slater	Edgars on behalf of Mr & Mrs Tomes			Y	Y
5282	Comments							
Edgars consider that the plan is sound as it is positively prepared and consistent with National Policy, but nor=t sound as it is not justified and not effective. Edgars support Policy PR3 in so far as it proposes the removal of the land at 14 – 16 Woodstock Road, Yarnton from the Green Belt under policy PR3a. The site does not make a significant contribution toward the Green Belt purposes as it is already subject to urban influences, is part of urban fringe land and does not form part of an open settlement gap. In association with allocation PR8, Edgars agree with the Council that the railway line to the west of the site will form the most logical and robust Green Belt boundary. Edgars object to Policy PR3 as the land at 14-16 Woodstock Road should not be safeguarded for future development but should be included within the comprehensive proposals for a new sustainable urban neighbourhood east of the A44 under proposed allocation PR8. Detailed justification and site description for 14-16 Woodstock Road, Yarnton included in rep.								
Changes Sought				Reasons for Participation				
Edgars support Policy PR3 in so far as land at 14-16 Woodstock Road, Yarnton is to be removed from the Green Belt but consider that for the plan to be justified and effective, land at 14-16 Woodstock Road, Yarnton will be required to be developed within the plan period in association with allocation PR8 and should not be safeguarded for a future plan.				Mr and Mrs Tomes have (and land under their control at 14-16 Woodstock Road, Yarnton. This land falls with plan proposal PR3a and adjoins plan proposal PR8. As such Mr and Mrs Tomes have a particular interest in the plan and reserve the right to participate at the oral part of the plan examination.

Strong opposition to any building application for houses/business units on the land to the rear of The Moors in Kidlington. The council has already listened to the residents of Kidlington who voiced their concerns when CDC looked and discounted this site as being unsuitable for housing. This is a GB area and as such is used by many residents and is the habitat for numerous wildlife, which must be protected. The traffic in Kidlington is at saturation point with the existing roads barely able to cope at certain times of day. An additional 300 houses plus industrial units in North Kidlington would likely generate another 450+ vehicles a day through Kidlington causing it to grind to a halt.

Proposed Submission Plan - Policy PR3 - The Oxford Green Belt

PR-C-1576 4917	09/10/2017	Heidi	Lancaster				
Comments							
<p>Objects to the proposed submission plan because there is a lack of strong evidence for such a large number of houses needed. In order for our villages, towns & cities to remain distinct entities the amount they can expand should be limited. With no mechanisms to prevent this the end result could be one large urban conurbation. The GB is one way in which the individual character of our villages, towns & cities can be retained. If Oxford cannot meet its own housing need, then it has expanded as much as is possible. It should not be looking to neighbouring LA's to meet that demand. A false demand for housing is being created by proposed business developments. If Oxford cannot supply the amount of housing required by the business developments then the business development plans need to be re-visited. They should be scaled down so that the housing needs created by the development can be met on land within Oxford City. Building on the Green Belt: The Government's NPPF, Section 9 "Protecting GB land" states: "The gov't. attaches great importance to GB's. The fundamental aim of GB policy is to prevent urban sprawl by keeping land permanently open; the essential characteristics of GB's are their openness & their permanence." Only in "exceptional circumstances" should there be any change to the GB. As there is not a real demand for this number of houses, I do not consider the circumstances to be anywhere near exceptional. I would consider the need for housing to be exceptional if there were no empty houses in or around Oxford & if new developments sold out immediately. This is not the case. E.g.. there is a perfectly habitable empty house, 2 doors away from us for nearly 18 months. The loss of character to Oxford & the surrounding areas would be irreversible if the GB were to be developed. Open space is important for human well being. Affordable housing: The area severely lacks this. Many families are moving away due to high house prices. The plans do not address this need. The proposed density of housing would only be profitable for the developers if sold at market rates. A higher density would be required for affordable housing. The amount of affordable housing proposed in plans does not get enforced so even if a suitable amount was being proposed, it is unlikely they will be built as developers will look at profit first. Transport: There have been many large & expensive projects over the last 2 decades attempting to address Oxford's transport problems, including the "Oxford Transport Strategy", work on most of the major ring road roundabouts & the Frideswide Square re-modelling. While these projects have made differences to some of the traffic flow & helped some areas, transport around Oxford still remains a major issue. There is no capacity within the ring road to add more infrastructure & the ring road is extremely busy during rush hours. If the new houses are to serve those working in Oxford, it will create even more congestion. I urge you to consider the impact that this number of houses would have on the area & go back to the beginning to consider if such a demand really exists.</p>

<p>Objections to the whole "Land Grab" between Oxford and Kidlington 1 The land being claimed for housing development is all in the GB. Filling in the green belt between Oxford and Kidlington is a ribbon development and will result in Kidlington being absorbed into Oxford. Leaving a derisory small gap between the two settlements is a cynical gesture. 2 The land area being "grabbed" is much too large for the number of houses proposed, suggesting that many large detached houses will eventually be built. This is not what is required by local young people who hope to be employed in the Oxford area. 3 Recent recalculation of housing need in the UK has shown that the calculation of number of houses planned in this application is much too high. 4 Houses in the area around Oxford Parkway Station are likely to be bought largely by London commuters, not by people who plan to work in the local area. This will not satisfy local housing needs, and will push up prices. 5 Predicted house prices in the new Barton development near Oxford seem to be inflated by at least 50% above prices of existing comparable housing in the area. Artificial price inflation will result in any "low cost housing" being inflated in price also, so there will eventually be very little "low cost housing" suitable for essential workers in the Oxford area. 6. Local traffic around the south end of Kidlington and around Oxford Parkway Station is already very heavy, and there are very long delays in the morning rush hour. Very substantial re-planning of traffic flow would be required to accommodate cars from hundreds of new homes. Substantial land would have to be set aside for bus and cycle lanes and the local rail station car park would have to be greatly enlarged. This would contribute to the ugliness of the ribbon development, and use up valuable agricultural GB land.</p>

<p>Objection to policies PR3, (The Oxford GB), PR6a (Land East of Oxford Road) and PR6b (Land West of Oxford Road). We are particularly concerned about the loss of the GB for PR6a as we are regular walkers on this land and aware of the wildlife and habitats that will be lost forever with the loss of this land. This land contains established grass snake colonies which will be destroyed. The grass snake is a UKBAP priority species of conservation concern³⁹. It is also protected under the Wildlife and Countryside Act, and the Bern Convention. We believe these proposals are not consistent with National Policy because they do not take into account the detrimental effect that removing these large areas of Green Belt will have. These proposals therefore fail to meet the test of soundness as defined in paragraph 182 of the NPPF.</p>

<p>Object to proposal to remove land from the Green Belt as it is not a justified or proven requirement and it is inconsistent with national policy. New Government methods for calculating housing need indicates 30% fewer houses required in Oxfordshire than previously forecast and the basis for housing allocations in Cherwell to accommodate its needs and the City of Oxford's requirements are overstated and invalid. Less land will be required to accommodate development and there are no exceptional circumstances to warrant the release of land from the Green Belt. Without prejudice to the above point, any proposals by Cherwell to release land from the Green Belt to meet the Oxford's needs are premature and unjustified given that the City of Oxford is in the process of reviewing its Local Plan and has not yet determined how much housing development can be accommodated on land within the City's boundaries. The land to the east of Oxford Road lies in the Kidlington Gap which forms a core component of the Green Belt separating Oxford and Kidlington. Development in this location would be in direct contravention of the fundamental aim of Green Belt policy which is to prevent urban sprawl by keeping land permanently open. The Kidlington Gap serves all the five purposes of the Green Belt and is strategically important. It is one of the clearest examples of an open area preventing the coalescence of settlements, checking unrestricted sprawl and safeguarding the setting and character of the historic city of Oxford. Its loss would fundamentally undermine the long established principles of Green Belt policy. The housing allocation proposed in Policy PR6b is also unsustainable, both on its own and in conjunction with the other planned releases of land from the Green Belt for housing. Infrastructure and services in and around Oxford are already under great strain. This applies to schools, hospitals/healthcare and roads. There is no capacity for major additional development. Oxford and the surrounding area are already beyond capacity in relation to infrastructure and services, and the further population pressure from the proposed developments is unacceptable. The road network in the immediate environs and the wider area is already highly congested. There are no clear, identified and funded proposals in the Plan to address these issues.</p>

Comments

Object to Policy PR3 to remove land from the Green Belt. The Green Belt around Kidlington preserves green spaces that are appreciated and enjoyed by local residents. It protects both Oxford from overdevelopment and neighbouring villages, such as Kidlington, from coalescence. Government guidance says that Green Belt is a permanent designation and that unmet housing need is not a reason for building in the Green Belt. The plan is therefore ineffective and not consistent with National Policy. Do not understand why the Green Belt has been identified for building when there is plenty of non-Green Belt land available.

Changes Sought

Reasons for Participation

Alternative areas to the Green Belt should be considered more fully.

PR-C-1603	10/10/2017	Gordon and Helen	Henning		Y	Y	N	N
------------------	------------	------------------	---------	--	---	---	---	---

5072

Comments

Not consistent with national policy on the purposes of the Green Belt. Not Justified because the information presented supporting removal of areas from the Green Belt is not convincing. Green Belt is irreplaceable; destruction of Green Belt affects future generations as well the current one.

Planning release of Green Belt for development is unacceptable, Not effective in dealing with Policy PR 3 may well have a negative effect on Green Belt by leading to a "domino" effect, with increasing likelihood of more plans for destruction of other parts of the Green Belt. This is particularly likely where the proposed boundary of loss of Green Belt does not correspond to a well-defined feature.

Changes Sought

Reasons for Participation

The Local Plan should be re-written without alteration to the existing Green Belt.

5529

Comments

Main objection is to Policy PR3 and the removal of so much land from the Oxford Green Belt. This land was designated as Green Belt for a reason and I do not consider that the required exceptional circumstances have been demonstrated in this case. There is a Government consultation in progress and it is likely that the housing figures given in the plan are widely inaccurate. Once the Green Belt is gone it is gone forever, so it would seem sensible to wait for this consultation to finish before committing to anything.

Object to policies PR3, (The Oxford Green Belt), PR6a (Land East of Oxford Road) and PR6b (Land West of Oxford Road)- Believe these proposals are not consistent with National Policy because they do not take into account the detrimental effect that removing these large areas of Green Belt will have. These proposals therefore fail to meet the test of soundness as defined in paragraph 182 of the NPPF. - Oxford's Local Plan has not yet been prepared so Cherwell's allocation of homes is premature and is not an appropriate strategy and is unjustified.

Proposed Submission Plan - Policy PR3 - The Oxford Green Belt

PR-C-1622	09/10/2017	Andrew	Hornsby-Smith	Kidlington & Yarnton Labour Party	N	Y	N	Y
-----------	------------	--------	---------------	-----------------------------------	---	---	---	---

5535

Comments

Kidlington & Yarnton Labour Party acknowledges the real housing need for Oxford. It is not convinced that the need is for 4,400 houses to be built in Cherwell District. It opposes the allocations in the vulnerable Kidlington gap (proposed policies 6a, 6b), which it believes will mainly be used by London commuters rather than meeting local need; and by the size of the allocation made between Kidlington and Yarnton (Policy PR8). It considers that there are less harmful alternatives available at Gosford (the area allocated for playing fields in Policy PR 7a and at Stratfield Farm, Policy 7b). It also believes that land at Frieze Farm and close to Loop Farm offers alternatives that are closer to the Northern Gateway employment site and less damaging to the open countryside between Yarnton and Kidlington. It considers that the North Oxford Golf course provides an important Green Belt friendly amenity, and that the need for additional playing fields could be met south of the Park & Ride. It is concerned to ensure that the County Council develops additional Park & Ride capacity east of Kidlington, where the traffic impact would be less damaging than an extension at Water Eaton Park & Ride. It would support the provision of a railway station on the Cherwell Valley line, but not at the proposed location at Sandy Lane, but closer to the airport, Langford Locks and Lyne Road (for the benefit of Kidlington's residents). We are concerned that at each of the main allocations, an unreasonably high level of land has been extracted from the Green Belt, which we believe will lead to future speculative development that will be difficult to resist.

Changes Sought

Opposes policies 6a, 6b. There are less harmful alternatives available at Gosford (the area allocated for playing fields in Policy PR 7a and at Stratfield Farm, Policy 7b); and by the size of the allocation in policy PR8.

Land at Frieze Farm and close to Loop Farm offers alternatives that are closer to the Northern Gateway employment site and less damaging to the open countryside between Yarnton and Kidlington.

It considers that the North Oxford Golf course provides an important Green Belt friendly amenity, and that the need for additional playing fields could be met south of the Park & Ride.

It is concerned to ensure that the County Council develops additional Park & Ride capacity east of Kidlington, where the traffic impact would be less damaging than an extension at Water Eaton Park & Ride.

It would support the provision of a railway station on the Cherwell Valley line, but closer to the airport, Langford Locks and Lyne Road (for the benefit of Kidlington's residents).

Reasons for Participation

I have spoken as a platform speaker at three public meetings in Kidlington and Gosford. I made a substantial representation at the Issues and Options stage. As a former parish councillor, I represented Kidlington Parish Council at the North Oxford Area Action Plan examination in public, and likewise was invited to the Examination in Public of the Local Plan. I have an MSc in Transport Planning, so part of my representation covers that area. I also offer a distinctive perspective as a local resident, who agrees with the principle of a Green Belt review, but does not support the current planned site allocation. I have no interest in promoting a particular site, but only have some sympathy with those who would wish to preserve the Green Belt intact. I believe my views represent many in Kidlington who recognise the need for local housing, but see these plans as strategically unacceptable. My representation contains primary research evidence which I would wish to represent.

PR-C-0003	24/07/2017	Julie and Albert	Nutbrown		
3	<p>Comments</p> <p>Protesting against plans to build 4,400 new houses on GB around Begbroke and Yarnton. It seems GB does not stand for anything anymore. All wildlife habitat will be destroyed. A thriving bat population will go. A40 traffic is horrendous now what will another 8000 plus cars create, plus the pollution. The Oxford's unmet housing need has nothing to do with CDC so not on our GB.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>				
PR-C-0019	24/07/2017	Daniel	Scharf		
23	<p>Comments</p> <p>References to the Oxford to Cambridge corridor are contradictory. The Plan supports the existing rail link (between Bicester & Oxford) & onwards (to Milton Keynes, Bedford & Cambridge) but also supports the Expressway that would be in direct competition, probably preventing the completion of the rail link or making it extremely costly in subsidy. This is contrary to the sustainable transport policies. Why are there no further investigations into the Expressway? Another reason for opposing the Expressway is the effect it would have on the A34, A44 & other link roads at both ends of the "corridor". On the contrary, East/West rail would enhance connections to Cambridge, Norwich & Felixstowe to the east & Swindon (inc. Research Council offices), Bristol, Bath, Cardiff, Swansea & Exeter to the West. Even without the Expressway, the Plan refers to & relies on the suggestion that conditions on the A34 will improve. The proposed development will increase A34 use & congestion, which is an international (i.e. Route Euro05 from Algeciras to Greenock), national (Southampton to Preston) & local (knowledge spine). Why is this trunk road junction a suitable place for further development? It is Government policy that GB development should not be supported until reasonable alternatives have been properly explored & rejected. Meeting the needs of Oxford City by concentrating development on its outskirts is a road centred policy that will add to congestion & increase emissions (CO2, NOX & particulates). Also the propensity of residents of this housing will be commuting from Oxford Parkway to other employment centres & not meeting Oxford's need. No concern shown about air quality & the impact on residents being next to a heavily trafficked trunk road with a high proportion of freight. There are no adequate policies to assist in the necessary transition to the use of ULEVs. Parking at workplaces, local centres (& the City centre) should privilege ULEVs. Parking spaces in residential areas should be limited to ULEVs & visitors.</p> <p>Changes Sought</p> <p>Reasons for Participation</p> <p>If development was concentrated along the two railway lines (e.g. Shipton Quarry), commuters could access the centre of Oxford & towns/cities further afield without using the car. It should be made clear that all new developments must provide a number of ULEVs and charging points and car clubs. Parking spaces in residential areas should be limited to ULEVs and visitors.</p>

Comments

The new workers will need to be issued with pushbikes to have any chance of getting to work! This is again a unsound, ineffective plan with only vague mentions of contributions from developers. Therefore ineffective. The Plan fails to provide adequate infrastructure. This is unrealistic if the plan is to succeed in supporting Oxford by creating a commuter annex. There are no costings or new ideas. Much significance is given to expanding cycleways, a non-solution that has been promoted by Government since the 1960s when Ernest Marples to workers to "get on yer bike"! Further the Plan in general is devoid of any costings or risk analysis. This is contrary to Para 173 of the NPPF plan making guidance which states: "Pursuing sustainable development requires careful attention to viability and costs in plan-making and decision taking. Plans should be deliverable". There is no evidence that these plans are deliverable.

These proposals fail to recognise the narrowing of the A44 at the Turnpike PH roundabout where all southbound traffic (Oxford direction) merges into one lane. Between The Turnpike PH and Frieze Way roundabouts there are two bridges (one railway and one canal). This section of road is already heavily congested at peak times including weekends and Blenheim Palace events. Improved public transport at this section of the A44 will not have the slightest effect as it will only join the queue.

a. Oxford has practically full employment but continues to set aside land for employment sites rather than housing. Oxford City Council needs to be more creative and do more in meeting its own housing needs. B. Cherwell District Council and other local authorities needs to be realistic and comply with the national governments' revised calculations on the lesser housing needs in the area. C. With Oxford City's "Unmet needs" being reduced by almost 50% the "Duty to Co-operate" by all local authorities is now less stringent or demanding. D. To reduce stress, congestion and numerous accidents on the local highway systems, more housing needs to be built closer to where the jobs are so that local residents can feasibly walk, cycle or use buses to get to work. Some alternatives are: Northern Gateway, Langford Lane and Gosford. E. CDC's Plan for 4,400 houses and West Oxfordshire's proposed 300 or more houses at SE Woodstock if progressed undiluted and in accordance with the exaggerated and dismissed SHMA figures, would prove to be unsustainable, unjustified and contrary to NPPF policy. F. The plan is not positively prepared or complete in that the costs and sources or identification of funding on required infrastructure are not shown. It is more of a "seek to" approach rather than a definitive statement of purpose. G. Woodstock Action Group call upon the leaders of both the Cherwell and West Oxfordshire District Councils to do the right thing and reduce the number of proposed houses in line with the national government's recent and reasonable lowered calculations of actual housing need in both local areas.

Comments

Serious concerns about ponderous, heavily technically laden text of this Plan. Local residents will have had difficulty reading and understanding this excessive publication, no doubt, resulting in reducing the number of residents' representations, especially negative ones. The same trick of scheduling public consultations during holiday seasons. In attempting to negate local action groups' objections planning proposals offer sugar-coated proposals in the hopes of seducing potential residents into buying houses. E.g. Cherwell District Council says that a new railway station between Kidlington and Begbroke would support residents of the proposed housing in those areas. This is very doubtful. Affordable and sustainable transportation on the A44 to and from Oxford and Woodstock. CDC have not come forward with any up to date evidence of a traffic or planning assessment pertaining to the local Environment as related to forecasted transport requirements and their affects upon local residents and commercial interests who stand to be adversely affected by the additional housing along the "growth" corridor of the A44 from Oxford to Woodstock. The A44 through Woodstock and the A4095 in Bladon are operating at peak levels of around 70 to 75%. Major planned developments will substantially increase local traffic, private and otherwise, and this has not been factored into the overall Plan. Consequently, these local highway systems will not be able to cope with or sustain themselves with the massive combined developments planned in Cherwell and West Oxfordshire, specifically on good farmland at the SE quadrant of Woodstock and across the A4095 border in Cherwell. There is no timely register of just when and how these planning proposals will be delivered in the CDC Local Plan, i.e. suitable and sustainable plans to reduce and cope with the inevitable exponential surge of growth in all kinds of traffic on local area roads and specifically, the A44 "growth" corridor from North Oxford and sprawling out to Woodstock. Clarity is needed to warrant the acceptance of a multitude of traffic assessments as being realistic rather than optimistic. Morning and evening peak periods' traffic, already at saturation point, will increase as the number of 2-way daily journeys, private, public and essential, expands. Leading to more time spent on local highways at a much slower speed or gridlock. This will further increase the amount of noxious CO2 and NO2 gases spewed into the local surrounding atmosphere with resultant increases of disabling lung diseases and premature related deaths in the larger local areas.

Changes Sought

Reasons for Participation

WAG call upon the leaders of both the Cherwell and West Oxfordshire District Councils to do the right thing and reduce the number of proposed houses in line with the national government's recent and reasonable lowered calculations of actual housing need in both local areas.

Comments

The level crossings which appear to be affected are listed and give detail of the type of crossing. Any development which would result in a material increase or significant change in the character of traffic using these rail crossings should be refused unless, in consultation with Network Rail, it can either be demonstrated that the safety will not be compromised, or where safety is compromised serious mitigation measures would be incorporated to prevent any increased safety risk as a requirement of any permission. Network Rail has a strong policy to guide and improve its management of level crossings, which aims to; reduce risk at level crossings, reduce the number and types of level crossings, ensure level crossings are fit for purpose, ensure Network Rail works with users / stakeholders and supports enforcement initiatives. Without significant consultation with Network Rail and if proved as required, approved mitigation measures, Network Rail would be extremely concerned by the impact the proposed site allocations would have on the safety and operation of the level crossings listed above. The safety of the operational railway and of those crossing it is of the highest importance to Network Rail. Councils are urged to take the view that level crossings can be impacted in a variety of ways by development proposals. Councils are urged to take the view that level crossings can be impacted in a variety of ways by third party planning proposals. It is Network Rail's and indeed the Office of Rail Regulation's (ORR) policy to reduce risk at level crossings, not to increase risk, as could be the case with an increase in usage at the level crossings in question. The Office of Rail Regulators, in their policy, hold Network Rail accountable under the Management of Health and Safety at Work Regulations 1999, and that risk control should, where practicable, be achieved through the elimination of level crossings in favour of bridges or diversions. The Council have a statutory responsibility under planning legislation to consult the statutory rail undertaker where a proposal for development is likely to result in a material increase in the rail volume or a material change in the character of traffic using a level crossing over a railway.

PR-C-0231	31/08/2017	Kate	Nash	Hanwell Parish Council						
800	<p>Comments</p> <p>The Council says the housing could be supported by a new railway station 'between Kidlington and Begbroke' but this is extremely unlikely to be deliverable. Plans for additional housing in North Oxford/South Kidlington should be put on hold until the Oxford to Cambridge Expressway route is settled, the East West railway is re-opened and the full extent of the expansion of Bicester is agreed, with its possible new transport infrastructure.</p>									
	Changes Sought			Reasons for Participation						
PR-C-0237	15/09/2017	Karen	East	TMP Planning Ltd on behalf of Gosford and Water Eaton Parish Council			N	Y		
815	<p>Comments</p> <p>North Oxford suffers from “high levels of congestion and delay” and that there are Air Quality Management Areas across the wholecity as a whole and on a small section of the Bicester Road due to high levels of pollution. The Parish Council considers that 4400 new homes (with 1410 in the Parish) will exacerbate these problems further and is not convinced that the transport measures set out are deliverable and will address these problems. Gosford and Water Eaton is criss-crossed by the main major highways (A34, A44 and A4165) bringing commuters and visitors to the City. Additional houses allocated within the Parish, and at Begbroke, Yarnton, Woodstock and Kidlington as well as further afield at Banbury and Bicester will all generate extra traffic which will be channelled through the Parish. Whilst the Parish welcomes the proposed transport improvements in the Plan remains unconvinced that sufficient funding exists or can be secured to deliver these improvements. Even with these changes in place the transport pressures in this area will remain. It is critical that these measures are delivered and in many cases, they are required to address problems now, even without a further 4400 houses in Cherwell. Traffic Leve:Oxford Road is regularly at a standstill from 7.00am on a working day. It can take minimum 45 – 60 minutes to get into Oxford City. Roundabout changes at Cutteslowe and Wolvercote have not made things better. Additional traffic will make the situation worse.The Bicester Road is similarly busy at peak times, often coping with traffic avoiding the congested A34. We would question what changes can be made on the slip road from A34 onto the Bicester Road in order to improve congestion in the long run. Bicester Road is used as a rat run when the A34 is blocked which happens frequently leading to congestion.An additional 4400 houses in Cherwell (1410 of which are in the Parish) together with further growth at Banbury, Bicester and Upper Heyford will put further pressure on the transport network through our Parish and exacerbate the problem. The new Westgate Shopping Centre is anticipated to be a major attraction drawing visitors in and traffic problems within Oxford related to this are already being reported locally. Bus Services PR2 (a) ii and (d) refer to improved bus services along the A4260/A4165. At present there are examples of bus services being reduced through Gosford rather than increased. The S5 service no longer runs direct from Gosford. Delays are due to increased traffic congestion Also concerned that charges at the P&R are increasing which will not help alleviate the problems.Where will additional space be found for a bus lane on Oxford or Bicester Road? Residents already experience problems from vibration in their houses from buses/lorries so if the bus lane is brought closer to their properties this will make the problem worse. How will an additional bus lane through Kidlington or Gosford be achieved. Previous proposals for pedestrianisation did not happen.Air Pollution:There are designated Air Quality Management Areas (AQMA) covering the whole of Oxford and on Bicester Road within the Parish. Given that the whole of the administrative area of Oxford City has been declared an AQMA it is difficult to believe that areas just immediately to the north of the City Boundary will not risk suffering equally from air pollution resulting from increased traffic levels. Within the Oxford AQMA the Wolvercote and Cutteslowe roundabouts are identified as hotspots for pollution both of which are close to Gosford and Water Eaton Parish. Do not consider that Cherwell has fully considered the air pollution impacts of the additional traffic on the Parish.Funding:</p> <p>Appendix 4 provides a list of transport infrastructure improvements to support the growth proposed. Noted that whilst many of these are considered of “Critical” costs/funding are to be confirmed. Unclear whether these improvements will indeed secure the necessary funding. In addition, many of these schemes, require developer funding for implementation which are clearly yet to be secured. There needs to be a much clearer link between the transport improvements and new developments. Development should not go ahead until critical infrastructure is in place. Do not consider that Policy PR4 will achieve sustainable development, nor will it be effective in delivering the necessary improvements over the Plan. Unconvinced that the policy complies with the National Planning PolicyFramework paragraphs 29 and 30 in terms of delivering sustainable transport and reducing congestion.</p>									
	Changes Sought			Reasons for Participation						
	There needs to be a much clearer relationship between transport improvements and the delivery of new development. In our view there are too many uncertainties within the current plan regarding delivery and timing of new infrastructure. This needs to be made more explicit in Appendix 4 which should set out costs and funding sources and also how this is linked to delivery of development.			The Parish Council would wish to take part in order to explain the potential impact of the proposed development on local communities and why this should be better reflected in the draft vision.						
PR-C-0244	08/09/2017	Michael	Groves				N	N	N	
830	<p>Comments</p> <p>Strong disagreement to proposed plans. GB enables and encourages distinct identities and characteristics for towns and villages whilst providing valuable space for exercise and enjoyment of the countryside. This long held tradition that has been enshrined in law is put at risk, riding roughshod over planning laws and local inhabitants. Houses are needed for local young people doing vital work in the caring, emergency and low paid industries but, as in the case of Barton where affordable housing was used as a pretext for gaining planning permission - there is now no affordable housing for local young people. It is feared that this vast development will become a dormer town for the better off/well paid in Oxford and London. To help local people the landowners could donate portions of their gifted lands to help local councils with smaller and less divisive developments. Whilst people employed by these landowners may well receive subsidised accommodation, this will not help our hospitals, schools, nursing homes or council workers who are vital to support the local infrastructure and are currently being forced out of the locality in order to be able to afford to rent or buy their own property. These people far away from friends and families will not be able to give or receive help from their families at time of need, thus impacting further on social services. Development of this size is horrific when the A34 and A44 are currently totally inadequate and overwhelmed. Local schools, nurseries, GP surgeries and hospitals are all overstretched and unable to cope with current numbers. Cherwell District Council has a duty of care to plan responsibly for the inhabitants of Cherwell and not become a dormer city for the convenience of Oxford City.</p>

2042	<p>Comments</p> <p>The Proposal is irresponsible as it will have a major negative impact on transport with extra pressure being placed on already congested roads.The plans for new transport infrastructure deal with the existing needs and do not model the impact of the additional 4,400 houses. These irresponsible plans will also cost millions of pounds and are currently unfunded. The Rapid Transit system (remember these are long buses, NOT TRAMS) will not pass through either Begbroke or Yarnton but will instead go from the new proposed Park & Ride site at Bladon roundabout to Kidlington along Langford Lane. Traffic that normally passes through Kidlington will be encouraged to use the A44. This means our villages will not be served by the Rapid Transit system and will suffer increased traffic, and that is before considering the new houses. This is very irresponsible! The CDC has not consider how an additional 4,400 houses in the area will affect the daily routine of the residents, particularly those that commute to and from work everyday.Therefore the CDC's Proposal is very irresponsible as it does not consider the commuting needs of the people who go to work and it will affect people going by car or cycling to work too. The transport plans indicate that Sandy Lane will be closed to through traffic at the level crossing. Sandy Lane, by the admission of Oxfordshire County Council and Cherwell District Council, is a well-used road. We also know that it provides a valuable link between our two villages and Kidlington. There is no public transport option planned to link these villages together with the only option being to travel further by car (which is already being discouraged) or walking or cycling. The traffic increase resulting from the CDC's Plans may well produce casualties including those cycling to work. Therefore the proposal is very irresponsible.</p>

	For the reasons given AND the Representations made by the Begbroke & Yarnton Green Belt Campaign which are additionally supported, the Plan cannot be changed to make it legally compliant or sound and should therefore NOT be submitted for Inspection.			Would like the Begbroke & Yarnton Green Belt Campaign to represent me at the Examination should it take place.						

Proposed Submission Plan - Policy PR4a - Sustainable Transport

PR-C-0254	19/09/2017	Denise	Greenspan				
841	Comments						
<p>Complete and unequivocal objection to Cherwell District Councils plans to build Oxford City housing on the Yarnton and Begbroke GB. Objections to the threat to wildlife and creeping urbanisation of our cities and further objections to consultation process. Suggests approaches to ribbon development. The plan is based on flawed and out of date information (pre-Brexit data and a discredited SHMA). With regard to increase in traffic a CDC representative at the exhibition in Begbroke village hall felt that there would only be a 1.2% increase, there is simply no way that tripling the size of the village will lead to only a 1.2% increase in traffic. Objections are: 1. The loss of vast swathes of countryside and wildlife around Yarnton 2. Irreversible harm to the history and identity of the village 3. Traffic gridlock on the A44 – it already takes one hour to get from Yarnton to Cowley each morning and no amount of bendy buses will improve that because there is only room for one lane in each direction over the bridge. 4. Air pollution from said increased and gridlocked traffic 5. Lack of water supply – Thames Water has informed me that water will be brought in from Wales. The reservoir that South Oxford is trying to build is to support the water supply in London – only 20% of it, if it is ever actually built will be allocated to South Oxford. 6. Ironically then – this proposal would also lead to an increased flood risk. 7. Closure of Sandy Lane – this is a busy thoroughfare between Yarnton and Kidlington, its closure would require a 3 – 4 mile detour in either direction - leading to even more traffic on the A44 8. Since this is housing for Oxford City it should be said that this is just too far for public transport in to the city; it would take me more than 2 hours each way, by bus, to get to my office in Cowley. It takes 2 hours to get to London. This plan would end up being London housing, not Oxford City. Oxford City should be exploring other non-greenbelt sites closer to the city. As well as having higher density targets within the inner city or perhaps building where better infrastructure has already been provided, such as Bicester.</p>

<p>PR4a admits the plan will increase traffic in the area. Traffic is already at intolerable levels and increasing it will guarantee continued breaches of air quality standards continuing delays and a worsening of the environment in the area. 5.62 Outlined transport changes are not under your control. Citing them as part of the plan is disingenuous - only if they were an enforced prerequisite would it make sense. It is highly likely that they will not go ahead or be severely delayed. Even if delivered, they are likely to make things worse. The County Council has already wasted £10M and 18 months of severe delays 'improving' the Cutteslowe and Wolvercote roundabouts. It has just been confirmed that these 'improvements' have actually increased delays, causing more congestion, pollution and noise. Calling buses (for that is what they are) 'Rapid Transit' does not make them any faster, more convenient, or more sustainable. It just sounds better.</p>

<p>TRAFFIC CONGESTION AND POLLUTION: Oxford Road and other routes into Oxford are heavily congested at peak periods and an extra 1200 vehicles, together with a school located at the southern end of the PR6a site will exacerbate this. Other developments such as Northern Gateway will be a large employment site. Additionally, Oxford has poor air quality from traffic and has been designated an Air Quality Management Area. The Cutteslowe Roundabout regularly exceeds national and international Nitrogen Dioxide limits. The infrastructure changes proposed are not based on accurate and up-to-date information, and rely on unrealistic targets of people using bikes, buses and walking. They are also largely unfunded. PR11 is an approach and the plan is not positively prepared because it does not identify or provide for the required infrastructure.</p>							
Changes Sought				Reasons for Participation			
The Cherwell Plan is fundamentally unsound and I suggest it should be rejected. Cherwell should re-start the process at a future time when the amount of housing needed has been realistically calculated. Cherwell should have due regard for the NPPF an in particular the parts of the framework which apply to the Green Belt.

<p>Sandy Lane: Vehicles travelling to and from Kidlington and other destinations frequently use this road. Closure will have a major impact on Begbroke, Frieze Way, Langford Lane and the A4260 Sandy Lane in December 2000 recorded 1187 vehicles in 18 hrs with a peak flow of 201 vehicles in the period 8.00 to 9.00 a.m. The paradox is that plans seek to reduce A4260 traffic with bus lanes and diversion of traffic to the A44. Some of this traffic will then seek other ways to Kidlington – via A44 Frieze Way and Langford Lane – ending up on the A4260. Is this a proposition by the railway authority to rid itself of a barrier crossing? Campsfield Road A4095: County Council wish to divert traffic from the Kidlington (south bound A4260 along A4095 to A44 and continue through Begbroke. The proposed P&R at Campsfield Rd will again cause further traffic problems. This will cause further problems in Begbroke with attempting to cross the A44 and cause even further delays at Wolvercote and Cutteslowe Roundabouts. This does not even account for the 4500 houses. Traffic problem pictures are shown of Langford Lane with an event held at Blenheim adjacent to proposed P&R and Campsfield Rd, Langford Lane and Parking Places at Oxford Technology park. Key commuter routes including Sunderland Avenue and Banbury Road more congested than before the £10m roundabout scheme. Langford Lane: At peak times traffic queues in both directions to the traffic lights at each end. The queues are often from the airport boulevard. Traffic cannot easily exit the industrial estates. Buses stop near Mercedes exacerbating the queues. Oxford Technology Park will have a major traffic impact. The image shows a road in Wales reduced in width for a bus lane causing major delays. Sections of road have roundabouts between.</p>

				Please review our PowerPoint presentation for the comments of Begbroke parish council. This is necessary as we believe Cherwell Executive will ignore any representations as they have already made their mind up. We believe that The Planning Inspectorate will take more notice of what we have to say.			

Proposed Submission Plan - Policy PR4a - Sustainable Transport

PR-C-0518	25/09/2017	Zoe	Christodoulou					N
1238	<p>Comments</p> <p>Objects to PR4a. It is unsound. Improving bus services to Oxford mainly rely on Oxfordshire CC subsidies which have recently been removed from many routes leading to withdrawal of services. Even if the frequency of buses was improved, the journey time into the city will increase, as there will inevitably be more traffic on the roads. The rapid transport network that is due to be ready by 2035, is a long way from being approved, or funded, let alone built. The submission states the new homes will be ready by 2031, this leaves 4 years minimum with even more traffic.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							

PR-C-0580	03/10/2017	Lorna	Bennett					
1466	<p>Comments</p> <p>The road structure in this area is already at full capacity and some. If you were to develop this land and add a further 4,400 or whatever new homes there is a good chance these houses will have at least 2 cars +. This would then swamp the roads that are already congested. The Council cannot even maintain what is already here, under your own admission, as the state of the roads are evident. The road are currently not really fit for purpose as it is and to add a potential 8,000 more cars is ludicrous. As for local transport, this is also not going to be fit for purpose and from what I can see no bus lane will be able to be implemented as there are too many bottle neck areas to negotiate. Therefore a park and ride would also not be feasible. The idea of shutting Sandy Lane is also extremely preposterous. The road carries a lot of local traffic from both Begbroke and Yarnton to Kidlington and vice versa. If that was to shut all traffic would then either have to go Loop Farm roundabout and Frieze Way or Langford Lane. Both of which, I think you will agree, is also not really an option as, again, these are already congested. Believes a survey was done down Sandy Lane which showed how much that road was used and also believe you do in fact have these figures. I cannot see how this would work in any event as there are actually houses along that road right up to the level crossing.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							

PR-C-0657	05/10/2017	John & Joan	Amor					
1618	<p>Comments</p> <p>Objection to large areas of land being removed from the GB. The GB was set up to safeguard the countryside from the city spreading into neighbouring countryside and to preserve the setting of the historic and beautiful city of Oxford. It now seems that present claims are not justified. Transport - Before the construction of the M40 volume of traffic along the A44 increased year by year. Completion of the motorway saw a significant drop in use of the road to Oxford. Since that time numbers of both lorries and cars have increased. If there are problems now, what can we expect when the new houses are built. The roads into Oxford through Yarnton and Kidlington will not be able to cope. Closing Sandy Lane - Sandy Lane is frequently used. The rail crossing and the canal bridge cause no problems. The bridge that was built about 1790 copes with 21st century traffic - if it needs strengthening surely this should not be a problem for today's engineers. If Sandy Lane is closed that traffic will use Sunderland Avenue just adding to the turmoil. Access to Oxford is most important to people in this area. The Kidlington area already has problems Are there better areas with easier access to Oxford? The Heathfield area would have the existing routes into Oxford plus access through Islip and Bayswater (and even through Woodeaton and Marston, although these are country roads). The Islip route has the addition of rail contact with the city. The Kidlington district is not the right place to build large estates. Yarnton and Kidlington have long histories as villages and the people living there do not deserve to be swallowed up in a great anonymous conurbation.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							

PR-C-0658	09/10/2017	Giles	Hughes	West Oxfordshire District Council	Y	Y	N	Y
1622	<p>Comments</p> <p>Transport and infrastructure are key issues and growth in Cherwell needs to be looked at cumulatively with growth in West Oxfordshire. The two local planning authorities share the A44 corridor, and this together with the A40 feeds into the congested Wolvercote roundabout. Growth in Cherwell and West Oxfordshire may have implications for northern Oxford and for the A34. The impact of the A44 corridor needs to be carefully considered, and it is vital that both districts work together with the County Council to bring forward the proposed A40/A44 link together with improvements to the A44. Consideration should be given to improving rail links by providing a new station at Begbroke. The two Councils should work together on the delivery of their Infrastructure Delivery Plans. Policy PR4a provide an appropriate framework for this to happen. Agree with the expectation that strategic developments will be expected to provide proportionate financial contributions towards necessary infrastructure and services.</p> <p>Changes Sought</p> <p>Reasons for Participation</p> <p>It is essential to have recognition of some of the wider transport improvements required in the proposed policy. For example the proposed A40/A40 link and improvements to the A44.</p> <p>To address cross-boundary issues with West Oxfordshire</p>							

PR-C-0660	07/10/2017	Carol	Matheson					N
1630	<p>Comments</p> <p>Transport has not been positively prepared. It fails to address the already polluted roads, traffic congestion and parking issues. It fails to explain how the roads will be improved to accommodate the thousands of extra cars and it fails to give any source of funding for improving roads/transport.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							

PR-C-0668	08/10/2017	Stephen	Youngman					
1645	<p>Comments</p> <p>Objection relating to Kidlington, Yarnton and Begbroke on the following grounds: Development could be located on sustainable sites identified elsewhere in the district rather than GB which Government says should only be used as a very last resort. A high proportion of the new homes should be affordable for young people and families from the local area. Infrastructure such as roads and schools should be put in place, as well as adequate parking facilities for the new residents. Traffic congestion and parking is already a major problem in Kidlington and the surrounding area, especially in the rush hour. Support for Cherwell's decision not to include land behind the Moors for development, as this is GB land used for recreation by local people, and would cause yet more traffic problems. I am appalled at the prospect of Kidlington and it's close neighbours becoming another suburbs of Oxford, with the consequential loss of revenue to Cherwell District Council.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>

Proposed Submission Plan - Policy PR4a - Sustainable Transport

PR-C-0678	04/10/2017	Neil	Bennett				
1665	Comments						
<p>Oxford's unmet housing needs - it has been proven that the number of houses required has been grossly overestimated. Oxford City must have plenty of sites that can cater for their housing requirements such as brown belt land and derelict sites. Also long term vacant properties could be used either in their ownership or under compulsory purchase orders. GB - Greatly saddened that building on GB land could become acceptable. Brown belt land nearer better road links such as along the M40 should be seriously considered. Building this amount of houses on 2 - 3 existing communities would actually swamp and destroy them. This GB land is widely used for recreational purposes by many locals and visitors. GB is integral to my business. It differentiates the villages and their own identities. This proposal will create another form of Oxford where one area blends into another, all clumped together. Villages will triple in size which is just madness. There will also be greater potential for flooding. Once this GB has gone it will be lost forever. Density - the proposed density will result in everyone living in each others pockets and paying a premium for the privilege. Affordable housing is needed in the form of cheaper homes or council houses enabling the younger generation (and some older people) to be able to afford their own houses in this area. The proposed affordable housing makes me laugh and will not be affordable for local people. We have enough luxury houses already and people attracted to these houses are likely London commuters or investment properties to be rented out. Transport - Road structure is already at capacity and this development would swamp roads that are already congested. The roads are already not really fit for purpose with little or no maintenance. A park and ride would not be feasible as no bus lane could be implemented due to the bottle neck areas. The idea of shutting Sandy Lane is extremely preposterous - this carries a lot of local traffic which would have to use other congested options. A survey was done showing how much Sandy Lane is used. How would this work as there are houses right up to the level crossing? Employment - The figure for new employment is grossly overestimated. Existing and part built Science Parks and the like already add to the traffic problems on inadequate roads, while a lot of units remain empty. These sort of developments should be located near or have easy access to motorways and be fit for purpose. I feel like I am being pushed out of the village I was born and grew up in. There are far better sustainable sites which could make a whole new community. Please leave our GB alone.</p>

<p>The Submission Plan (5.45) north Oxford suffers from “high levels of congestion and delay” and that there are Air Quality Management Areas across the whole city as a whole and on a small section of the Bicester Road due to high levels of pollution. Traffic Levels Oxford Road is regularly at a standstill from 7.00am on a working day. It can take minimum 45 – 60 minutes to get into Oxford City. Roundabout changes at Cutteslowe and Wolvercote have not made things better. Additional traffic will make the situation worse. The Bicester Road is similarly busy at peak times, often coping with traffic avoiding the congested A34. Bicester Road is used as a rat run when the A34 is blocked which happens frequently leading to congestion. The Submission Plan itself in 5.47 says: “Traffic modelling suggests that under the highway circumstances that exist in 2013, the 4400 new homes we are planning for would increase car journeys by 1.3-1.4% - a relatively small percentage change but one that must be seen in the context of a wider picture of existing traffic congestion and delay experienced on the network.” You have not explained where you got that figure. Are you anticipating one car per house (and ignoring the fact that most people rent out rooms) – the flat above us has three bedrooms and has two cars. An additional 4400 houses in Cherwell (1410 of which are in the Parish) together with further growth at Banbury, Bicester and Upper Heyford will put further pressure on the transport network through our Community and exacerbate the problem. The new Westgate Shopping Centre is anticipated to be a major attraction drawing visitors in and traffic problems within Oxford related to this are already being reported locally. Bus Services PR2 (a) ii and (d) refer to improved bus services along the A4260/A4165. At present there are examples of bus services being reduced through Gosford rather than increased. The S5 (Stagecoach) bus service no longer runs direct from Gosford, have more diverted routes and are busier and more delayed than previously. Delays are due to increased traffic congestion. No where do you mention the cuts that affected the bus routes across the whole county. Also understand that charges at the Park and Ride are increasing which will not help alleviate the problems. Where will additional space be found for a bus lane on Oxford or Bicester Road? One was there previously and was deemed unsuccessful and did not last more than a couple of months. Residents already experience problems from vibration in their houses from buses/lorries so if the bus lane is brought closer to their properties this will make the problem worse. How will an additional bus lane through Kidlington or Gosford be achieved. Given the above concerns do not believe that Policy PR4 will achieve sustainable development, nor will it be effective in delivering the necessary improvements over the Plan period. Remain unconvinced that the policy complies with the National Planning Policy Framework paragraphs 29 and 30 in terms of delivering sustainable transport and reducing congestion. Air Pollution There are designated Air Quality Management Areas (AQMA) covering the whole of Oxford and on Bicester Road within the Parish. This illustrates that there are recognised air pollution problems within and very close to the Parish. The most recent 2016 Air Quality Status Report for Cherwell confirms (Table 3.1) that nitrogen dioxide concentrations still exceed the national air quality objective for Bicester Road AQMA. Given that the whole of the administrative area of Oxford City has been declared an AQMA it is difficult to believe that areas just immediately to the north of the City Boundary (and within the Parish) will not risk suffering equally from air pollution resulting from increased traffic levels. Within the Oxford AQMA the Wolvercote and Cutteslowe roundabouts are identified as hotspots for pollution both of which are close to Gosford and Water Eaton Parish. We do not consider that Cherwell has fully considered the air pollution impacts of the additional traffic on the Parish. Funding Appendix 4 provides a list of transport infrastructure improvements to support the growth proposed. However, it is noted that whilst many of these are considered of “Critical” costs/funding are to be confirmed. It remains distinctly unclear as to whether these improvements will indeed secure the necessary funding. In addition, many of these schemes, it appears require developer funding for implementation which are clearly yet to be secured. There needs to be a much clearer link between the transport improvements and new developments. Development should not go ahead until critical infrastructure is in place. <p>Transport plans are complacent. Current congestion at peak periods is already amongst the worst outside London. The resulting air pollution is a serious hazard to health, especially to those living on major arteries. The proposal is to increase the housing stock by > 50%, no specific plans with deadlines are included to mitigate the huge additional traffic load that will be created by the new residents. The response in terms of queuing times to increased traffic load is non-linear, so the long wait already experienced at the 'Sainsbury's roundabout' & Peartree intersection could easily double or triple at peak times. The intervals of the day with significant congestion will also be significantly expanded. Other infrastructure, schools, surgeries, retail outlets, leisure facilities, etc. will all need to cater for a 50% increase in the population when they are already stretched well beyond their designed capacity. On both transport and other infrastructure the only rational approach is to increase capacity first BEFORE building more homes.</p>

<p>The Transport Assessment is not based on any feasibility study and so is disingenuously optimistic about what can be achieved. It speaks of a bus lane from Begbroke to Loop Farm disregarding the fact that a railway bridge and a canal bridge would preclude this from happening on this single carriageway. It acknowledges that the cost of delivering the necessary road improvements would be very high but there is absolutely no guarantee that anything like the amount of money needed would be found. A cursory look round Yarnton at the state of the potholes and weeds growing along the road edges indicate that roads have been a very low priority for a long time. Furthermore, the closure of Sandy Lane to cars would mean drivers having to take a much longer route to our nearest shopping centre, Kidlington, thus adding to air pollution.</p>

Proposed Submission Plan - Policy PR4a - Sustainable Transport

Rep Number	Date Received	First Name	Surname	Organisation	Legally Compliant	DtC Compliant	Sound	Participate
PR-C-0720 1810	07/10/2017	Adrian	Sutton					
<p>Comments</p> <p>The Government has published a consultation document Planning for the right homes in the right places. This document sets out Government proposals to assess housing needs in different areas of the country. It has been welcomed by many professionals who regarded the earlier SHMA estimates as overblown and unjustified. Rep quotes Helen Marshall of CPRE as saying that the housing needs in Oxford had been reduced in the new estimates by no less than 47%. For more than 60 years the Green Belt that forms the Kidlington Gap has successfully checked urban sprawl, and it has prevented the merging of Oxford and Kidlington, provided access to countryside to residents of north Oxford and Kidlington, and preserved the setting of the historic town of Oxford. In view of the new assessment of housing need in Oxford, and the lack of a completed local plan by Oxford City Council informed by accurate data on the land available for housing within Oxford, it would be irresponsible and reckless for Cherwell District Council to proceed with its plans to build on the Kidlington Gap. The above Government consultation document also notes that the pressure on housing is much greater in London, and is set to increase further over the next decade. Given that the proposed housing in PR6a and PR6b is approximately 10 minutes walk from Oxford Parkway station it is obvious that those sites east and west of Oxford Road (A4165) will be very attractive for London commuters. It is hard to imagine how key workers in Oxford in need of affordable housing will be able to compete with the market pressure of London commuters for this housing. The proposed housing density on the golf course is only 25 per hectare, and it is highly unlikely that any of it will be affordable to those who need cheaper housing in Oxford. One of the greatest attractions for families living in north Oxford is the wide range of available secondary schools. If 1,180 new households were built on either side of Oxford Road there would be even more car journeys to schools inside the Ring Road to prolong the commute into Oxford. Following a Freedom of Information request Oxford City Council has admitted recently that the new road layout and traffic lights at Cutteslowe roundabout have not improved traffic flow along Banbury Road. This continues to be an area of severe traffic congestion during school term, and the proposed housing can only make it worse. The only good transport link is from Oxford Parkway station, but even there the huge station car park is already filled by London commuters during week-days, less than 2 years since the station opened. We understand that Cherwell District Council have been obliged by the "Duty to Cooperate" with Oxford City Council to solve Oxford's perceived housing problems. But Oxford City Council has chosen to allocate land to employment at the Northern Gateway development instead of housing. Further employment growth is unnecessary and unsustainable in an area of full employment and a shortage of housing. It only exacerbates the housing problem, and leads to even more people commuting into Oxford. Rather than helping Oxford City Council in this way Cherwell District Council should challenge the lack of thinking displayed by the City Council. We recognize that Oxford has a housing problem, especially for key workers. But building on the Kidlington Gap is unjustified by the information available, and by Oxford City Council's own policies to develop land for employment rather than housing. Once the Green Belt has gone it has gone forever, and it is difficult to see how further urban sprawl to the east of Oxford Road could be contained since the nearest road is the B4027, which is several miles to the east (National Policy Planning Framework, paragraph 85). We urge Cherwell District Council to postpone any decision on the development of the Green Belt around Oxford until all the facts are made available.</p>

<p>Comments</p> <p>As residents of Yarnton with a grown family living at home four cars are used. There is no SAFE way to cycle to work and the public transport either does not travel close enough to the place of work or would require substantially more time than is feasible but the cars are needed at work for operational purposes. Like many households cars will run and this won't change however much public transport is improved. The current infrastructure DOES NOT support the current traffic requirements encouraging the use of 'rat runs' through all the villages. The traffic reaches a standstill on the A34, the ring road, the Woodstock and Banbury roads into the City Centre, this backs up to the Pear Tree roundabout and most of the way to Woodstock on the A44 and to Eynsham on the A40. The traffic from Bicester impacts greatly on the roads in the area. It would be unthinkable to increase the housing level in this area without improving the road network. Many hours of work have been lost due to the current road situation and it is a huge worry. There is no money allocated for new infrastructure.</p>

<p>Comments</p> <p>Support with amendments. The consortium is supportive in principle of the provision of sustainable transport measures in order to ensure that residents of new sites have a range of sustainable transport options when they choose to travel. However, the most appropriate means of achieving sustainable transport arrangements has yet to be the subject of detailed study. It may be that when the effects of a proposed development upon the local highway network is assessed it will determine that some of these measures are no longer appropriate, or indeed that other measures should be prioritised.</p>								
Changes Sought				Reasons for Participation				
The wording of the policy should not therefore be so prescriptive as that currently drafted, but should simply describe a range of options that might be delivered by the proposed development sites.				On behalf of the consortium, given the significance of their land interests, would wish to participate in the oral examination.

Comments

The Proposal is irresponsible as it will have a major negative impact on transport with extra pressure being placed on already congested roads. The plans for new transport infrastructure deal with the existing needs and do not model the impact of the additional 4,400 houses. These irresponsible plans will also cost millions of pounds and are currently unfunded. The Rapid Transit system (remember these are long buses, NOT TRAMS) will not pass through either Begbroke or Yarnton but will instead go from the new proposed Park & Ride site at Bladon roundabout to Kidlington along Langford Lane. Traffic that normally passes through Kidlington will be encouraged to use the A44. This means our villages will not be served by the Rapid Transit system and will suffer increased traffic, and that is before considering the new houses. This is very irresponsible! The CDC has not consider how an additional 4,400 houses in the area will affect the daily routine of the residents, particularly those that commute to and from work everyday. Therefore the CDC's Proposal is very irresponsible as it does not consider the commuting needs of the people who go to work and it will affect people going by car or cycling to work too. The transport plans indicate that Sandy Lane will be closed to through traffic at the level crossing. Sandy Lane, by the admission of Oxfordshire County Council and Cherwell District Council, is a well-used road. We also know that it provides a valuable link between our two villages and Kidlington. There is no public transport option planned to link these villages together with the only option being to travel further by car (which is already being discouraged) or walking or cycling. The traffic increase resulting from the CDC's Plans may well produce casualties including those cycling to work. Therefore the proposal is very irresponsible.

Changes Sought

For the reasons given AND the Representations made by the Begbroke & Yarnton Green Belt Campaign which are additionally supported, the Plan cannot be changed to make it legally compliant or sound and should therefore NOT be submitted for Inspection.

Reasons for Participation

Would like the Begbroke & Yarnton Green Belt Campaign to represent me at the Examination should it take place.

Comments

This policy requires proposed development on the strategic sites to include the provision of new and enhanced pedestrian/cycle routes into and out of Oxford. As identified within the document the canal provides a direct link into Oxford. The canal towpath is an important traffic free route for walking / cycling for both leisure and utility walkers and could provide linkages between the urban areas and for access to local facilities such as schools / train stations. The towpath would also aid in providing a safe, convenient and attractive walking and cycling network to promote health and well-being, consistent with the aims of the NPPF. The Trust would note that the towpath width is restricted and there may be structures, pinch points and narrow sections of canal towpath, such as adjacent locks, within the District which may be a challenge in terms of increased usage and integrating with other towpath users, visitor moorings and anglers. It should therefore be recognised that enhancements / improvements may involve more than towpath resurfacing works. The improvement of existing access points may also be required to support the proposed developments and increased use of the canal network. In addition, widening and improvements to the tow path (and subsequently the canal bank) may be required along with dredging and vegetation management should widening be required to support additional use. To encourage and support additional use of the canal for cyclists additional signage may also be required in pinch points to highlight that pedestrians have priority. Interpretation along the canal, with circular walks etc. could also be required to support additional leisure use. Enhancements such as the removal of graffiti and measures to reduce any further instances of vandalism should also be incorporated as these would further enhance the attractiveness of the use of the canal corridor. The Canal & River Trust generally seeks to maintain its assets in a "steady state", and this is based on current usage. Where new development has the likelihood to increase usage we consider that it is reasonable to request a financial contribution from developers to mitigate this impact by addressing issues such as those set out above. The mechanisms through which improvements are to be provided should be fully set out within Policy PR11.

Note that the developments of PR6 to PR10 are to make proportionate contributions directly to transport infrastructure. Do not think this is clear enough and concerned that if public money is not forthcoming and the development does not happen or happen together there will not be sufficient funds to meet the transport infrastructure needs it total or in time for the development.

Changes Sought

An infrastructure delivery plan should be prepared to ensure that the entire infrastructure is in place in time to meet the needs of the new development and mitigate impact on the existing community.

Content relating to public rights of way and access to the countryside is supported, in particular policy 4a (Sustainable Transport), 5 (Green Infrastructure) and PR1 1 (Infrastructure Delivery) as they meet the aims of the adopted OCC Rights of Way Management Plan 2015-2025. Where development sites are crossed by public rights of way this can be addressed on a site by site basis as applications come forward. The Plan provides a reasonable amount of protection and potential for enhancement and mitigation. It also has the potential to significantly increase access for non-motorised residents and visitors which is fully supported.

The Tripartite supports the principle of this policy and accepts that the Policy PR8 proposed allocation site should contribute proportionately towards measures to improve car and non-car access to the Begbroke site. This is to mitigate the impacts of traffic likely to be generated by or attracted to the site as a result of development including the provision of a Park & Ride (P&R) facility and associated Bus/Rapid Transit services which would remove a proportion of existing traffic from the highway network. However, whilst the Tripartite agrees that the approach proposed within the Proposed Submission Plan will deliver a sustainable site and strategic development at Begbroke, it considers that the option to relocate the P&R site proposed presently at the London Oxford Airport to the Begbroke site should be considered, as this has the ability to deliver enhanced public transport access between Begbroke/Yarnton and Oxford. The reasons for this are set out in the attached supporting note prepared by the Tripartite’s transport consultants, IMA Transport Planning. The proposed Begbroke and Yarnton allocations combined would provide 56% of the unmet housing need to be accommodated within Cherwell, and, uniquely amongst the proposed allocation sites, the proposed Begbroke allocation (PR8) encompasses the existing Science Park and includes a significant area for its expansion. This expansion has already been accepted in principle in the Cherwell Local Plan Part 1 as an ‘exceptional circumstance’ and is to be formally confirmed through the Partial Review and/or the Local Plan Part 2. Hence, as well as generating trips towards Oxford from housing to employment (and other purposes), the Begbroke site will also attract trips from Oxford to the University- based Science Park contained within it. For this reason, the potential clearly exists to provide sustainable public transport services connecting Begbroke and Yarnton with Oxford and so minimise car usage. Considering existing bus provision, during the working week, at present one bus service (the half hourly Service S3) passes the Begbroke site on the A44 and runs through the urban area of Yarnton. This service runs between Oxford in the south east and Chipping Norton (via Woodstock) in the north west. By comparison there are currently 3 bus services running through Woodstock (Services 7, 500 and S3 – all half hourly) giving 6 buses per hour or one bus every 10 minutes on average in each direction. All of these services run into the centre of Oxford. Kidlington is currently served by 9 main bus services (including the variations on Service 2) which combine to provide some 21 buses per hour during the working week, or around 1 bus every 3 minutes in each direction on average. With the exception of service 700, these services all run into the centre of Oxford. Service 700, which runs every 20 minutes to and from Kidlington, serves the Headington area of Oxford, which is a major employment area. All the services running through Kidlington route into and out of Oxford by way of the A4260/A4165 corridor, which bisects the proposed Kidlington and North Oxford allocation sites. As such, the need to improve public transport services to and from the proposed Begbroke and Yarnton allocations sites, which jointly would provide over 50% of Cherwell’s element of Oxford’s unmet housing needs, is greater than for the other allocation sites, and hence should be prioritised within Policy PR4a. Initial master planning for the Begbroke site has demonstrated that an effective public transport loop can be accommodated through the centre of the proposed development. Therefore, in addition to the potential for the P&R services to route through the site, it is important that this bus infrastructure should also be utilised for other bus services. Policy PR4a sets out a number of schemes where the provision of land is required to support a relevant transport schemes. Policy PR8 requires the reservation of 0.5 hectares of land for a future railway halt/station on land east of the A44 at Begbroke. As a significant and sustainable transport element of the PR8 strategic development site, it is considered that this should be listed within Policy PR4a, albeit subject to further investigation on feasibility and discussions with all relevant stakeholders. Early indicative demand forecasting shows there is a strong business case for both a 1 train per hour (tph) service between Oxford and Banbury, an alteration to the existing service, calling at Begbroke, or an extended 1 tph London Paddington-Oxford to Banbury service calling at Begbroke. However, the estimated land requirement for a station, based on IMA’s experience of stations of a similar size which includes two 10 car platforms, a station building, forecourt (drop-off, replacement bus and taxis bays), cycle rack and car parking spaces is around 1.5 ha, and therefore it is recommended that the allocation area is increased accordingly.

Changes Sought

Proposed changes suggested for Policy PR4a - These schemes shall include: (a) improved bus services and facilities along: i. the A44/A4144 corridor linking Woodstock and Oxford, with prioritisation given to the improvement of public transport services to and from the proposed Begbroke and Yarnton allocations sites, which jointly would provide most (over 50%) of Cherwell’s element of Oxford’s unmet housing needs, linked to a P&R at the Begbroke site. (g) the reservation of 1.5 hectares of land for a potential future railway halt/station at Begbroke in line with Policy PR8, subject to ongoing feasibility assessment.

Reasons for Participation

The land owned and controlled by the Tripartite comprises some 86% of the largest draft allocation within the Plan and as such, occupies a unique and vitally important role in meeting Oxford’s Unmet Housing Needs. As such, the Tripartite consider it is essential that it is present [and/or represented] and participates at the Examination in order to assist the Inspector by responding to any queries that may arise and supporting the assessment of the soundness of the Plan.

PR-C-0864 05/10/2017 Reverend Peter Hewis

2350 Comments

The planners fail to realise that Kidlington is the nearest shopping centre, place for major doctors’ surgeries, the centre of entertainment and exhibitions (Exeter Hall) and the place of major shops and banks for Yarnton. I have done the return journey by car from our home and the closure of Sandy Lane will greatly increase the mileage between the two communities. The planned new railway station or halt seems to have very restricted access and no parking provision. Kidlington residents will have no access other than on foot or bicycle as no buses serve that area. To create a bus lane will involve widening the canal bridge and railway bridge at Yarnton yet the District Council recently gave planning permission for new housing very close to the canal bridge.

8) There are no proposals for any form of innovative car free, or to discourage having cars associated direct with the proposed housing development areas, which could improve on housing density. 9) Concerned that a Brown Field site at the disused Shipton quarry & cement works has been dismissed from being identified as a proposed housing development area. It is understood from proposals many years ago that this development project was for a self contained settlement with a sustainable community consisting of a substantial number of homes provided with day to day facilities. This included a railway station link to close by Banbury / Oxford railway line, along with a park & ride service to Kidlington & on to the Oxford area. Being to the north of Kidlington it is close to the diversionary route for missing Kidlington using the A4260 Banbury Road junction with A4095 Upper Campsfield Road, leading to A44 Bladon Roundabout. In transport terms a proposal for such a Shipton development area would be superior to the housing development areas identified by CDC. Such a site would take away less Green Belt land, & being a new development with self contained facilities the designed layout would benefit from being planned from scratch. Rather than on an ad hoc basis, relying on existing over-stretched facilities, as proposed in the CDC Partial Review. Shipton quarry and cement works is proposed in the additional objections along with a suggested development area map. 10) Under PR4a - Sustainable Transport, the strategic developments provided under Policies PR6 to 10 is expected to pay substantial financial contributions towards providing the delivery of improvements and mitigations to the highway network, for providing other infrastructure and support for public transport. It is assumed that such financial contributions will come under Section 106, or a Community Infrastructure Levy (CIL). Therefore such funding of projects & improvements can only happen once a substantial amount of house building & purchase of homes has taken place, or from possibly other developer available funding. Also in the event of any shortfall of finances, then either such proposals will be deferred, or not come to fruition. This OBJECTION makes it clear that the proposals under the Cherwell Local Plan Partial Review (Part 1) will cause an unacceptable level of traffic congestion, pollution & road accidents for the road network around Kidlington & surrounding area. The representation includes a SUGGESTED BROAD BRUSHED BASIC ASSESSMENT TO INDICATE ABOUT THE ADDITIONAL POPULATION AND ADDITIONAL TRAFFIC WHICH IS LIKELY TO BE GENERATED ONTO THE LOCAL ROAD NETWORK IN KIDLINGTON AND SURROUNDING AREA DUE TO THE PROPOSED ADDITIONAL 4,400 HOMES (see representation).

Changes Sought

Change proposed area to Shipton Quarry Cement works site.

Comments

1) The statement in the Cherwell Local Plan Partial Review (Part 1) paragraph 5.47 about the "traffic modelling suggests that under highway circumstances that existed in 2013 the 4,400 new homes would increase car journeys by 1.3% to 1.4%". However for clarity this should have included quoting an increase in vehicular traffic generated by the proposed developments onto the local road network, and expressed as a range due to the many uncertainties associated with the CDC proposals. Detailed comments are made to support this view. 2) The attached broad brushed approach using data obtained from National Census 2011, D for T, Transport Trends 2015 and Oxford & Cherwell provides an estimate of 10,560 additional population with a likely additional of 26,400 to 31,680 vehicles per day. These will be using the local road network each day, & at peak times will be between 3,000 & 3,600. The Cherwell Partial Review does not provide any indication about what type of junction arrangements will be provided onto the existing local highway network for serving each identified development area. All this will have a significant bearing on the traffic capacity of the local highway network in Kidlington & surrounding areas at peak times. The existing highway network already indicated by OCC's current Local Transport Plan shows that in this area at certain pinch points the road network is already at an RFC of between 85% & 95% and will approach saturation point with additional traffic from proposed developments, where RFC equals 1.0. It is also noted in the OCC Local Transport Plan that during peak hours the A34 between Peartree & Botley interchanges reaches over capacity & unlikely to accommodate any more traffic generated from further Oxford developments. 3) There is mention of an A40 / A44 proposal to the south of Kidlington & a possible Oxford to Cambridge expressway some time (or never) in the future to relieve the A34. In the case of an A40/A44 Loop Farm roundabout link, it will generate more traffic onto the A4260 to Kidlington roundabout & use C43 Bicester Road, which is not an OCC Lorry Route. Also part of this road is identified for being provided with an Air Quality Action Plan, but suffers from Oxford and other long distance lorry drivers using this route as a rat run to & from A34, which is being ignored by the Authorities for implementing a much needed HGV ban. 4) There is mention about a proposal for an A4260/ A44 link to the north of Kidlington for diverting traffic away from Banbury & Oxford Roads, but traffic assignments involve route lengths and congestion where at peak times it could still mean being quicker to route along the main road through Kidlington, or rat run through The Moors which happens frequently at present. 5) As indicated in the Department for Transport National Transport Trends, in the Oxfordshire Local Transport Plan, and from recent automatic traffic counts the trend is for vehicular traffic to increase in the future, particularly under Oxfordshire planning to become an economic growth area. This does not seem to have been taken into account in the traffic assessment. 6) With the ever shrinking number of official car parking spaces in Kidlington the proposal for an additional 4,400 homes will lead to more on-street parking than happens at present, with less shoppers. 7) The new park & ride proposal at Langford Lane could mean more people bypassing Kidlington shopping centre as they head direct towards Oxford. However such a car park would help solve the on-street parking problems which happen along service roads in the business parks off Langford Lane.

The plans are being sold on the premise that they provide easy access into the city by simple virtue of their straight line proximity to the city centre. This is highly simplistic and initially ignores all the limiting factors imposed by the existing road network, peak traffic flows and local network geography. When these salient facts become evident the review seeks to divert attention away from them by broad references to aspirational projects such as a "Rapid Transport Scheme" or Green Infrastructure. None of these concepts are defined in the review beyond these loose buzzwords. When questioned at one of the local presentations, planning officers obviously had no clue how many of these projects would work in practice. It's not enough to simply aspire to improved transport systems, there is a need for specifics about how they could be achieved, especially if additional burdens are going to be placed on already overstretched existing infrastructure by massive increases in population. Without a clear and workable plan, and most importantly, the funding to make it reality BEFORE additional houses are built, further development will simply serve to make an already intolerable set of circumstances much worse leading to a reduction in the quality of life for both existing and new residents alike. Proposals within the review surrounding transport infrastructure are some of the most audacious, fantastical and speculative within a document that is an exemplar of those qualities. There are several wild assumptions made about existing and additional traffic flow, private car use and availability of public transport. The terms 'sustainable' and 'green' feature heavily throughout these proposals, but as with so much else within this review, there is very little substance to the aspirations and no realistic assessments or explanations of how they could be delivered. Detailed arguments to support this view are given. Whilst I would support any moves towards sustainable transport initiatives, it's clear that these areas of north Oxfordshire are singularly unsuited to such projects in the short term and it would be very unlikely to seem such additional transport infrastructure implemented within the timeframe encompassed by this partial review. Transport Infrastructure It is arguable that many of these transport improvements are already desperately needed for the people already living in these areas, so perhaps if such projects come to fruition over the coming years there may be more scope to consider additional development. But it would seem unlikely that anything on the scale being proposed now would be viable without significant and major improvements over the next 10-20 years."

Changes Sought

Reasons for Participation

To have an opportunity to make a personal representation at the appropriate time and when further information is available about the scale of response to these plans. There will likely be many changes in circumstances between the submission of representations and the consideration of the outcome. I would like to be able to add additional relevant information at that time if appropriate. Also as Green Party Parliamentary candidate for many parts of the area under consideration I feel I should be able to give voice to the views of the Green Party supporters and voters when the time comes

Proposed Submission Plan - Policy PR4a - Sustainable Transport

PR-C-1388 10/10/2017 David Abbott Highways England

4489

Comments

Transport Modelling: We have considered the potential impact of the proposed development locations on the SRN junctions in the local vicinity, using high level outputs from the Oxford Strategic Model's Refined Development scenario. With the enhanced transport improvement package, modelling shows that the links on the A44 corridor appear to be approaching or over-capacity in 2031 for both morning and evening peak hours, while some junctions along these corridors are predicted to be experiencing delay. It is unclear whether the model was used to identify the proposed mitigation measures to support the additional housing development set out in the PR or whether these were taken from other sources and adopted in the model as a 'given' and it is requested that clarification is provided on this. We understand that two packages of strategic off-site transport improvements were tested in relation to the proposed development using the OSM. Highways England consider that there is a lack of clarity regarding the schemes included within these model runs (including those discussed in the PR such as a new rail station at Yarnton/Kidlington, the conversion of the A34/A44 Peartree Junction to signal controlled, the severing of Sandy Lane, the A40/A44 link road and the mode shift to cycling). Further clarity is sought on details model infrastructure inputs in this regard. We note that following the implementation of PR development there are predicted to be capacity issues along the A34 and at M40 Junction 9. It is not fully clear whether or how the operation is predicted to worsen when compared to the Do Minimum scenario. It is requested that a more comprehensive set of outputs is provided to enable HE to assess the impact of the PR development on the SRN and to assess whether the proposed transport improvement measures sufficiently mitigate those impacts. Furthermore, we are unaware of any more detailed junction modelling that has been undertaken, making use of flow outputs from the OSM. In order to accurately determine the operation of SRN junctions (including the A34/A44 Peartree junction, other junctions on the A34, and M40 Junction 9) it is recommended that junction-specific models are used to assess the operation of the SRN both without development and with development and the proposed infrastructure measures. In connection with this, sensitivity testing should be carried out for scenarios in which the provision of infrastructure that would affect the SRN is/ is not included, for example the A40/A44 link road and the severance of Sandy Lane to motor vehicle traffic. Testing a scheme to convert the A34/A44 Peartree junction to traffic signal control should also be included, whether or not this forms part of the infrastructure to be provided, since it has been referred to in the TA as possible mitigation measure, unless it has been discounted.

Spatial Strategy
 We note that the PR seeks to locate the majority of development on land designated as Green Belt but that Cherwell District Council considers the circumstances to be exceptional and meet the conditions set out in NPPF Section 9 in allowing development on Green Belt land. We would highlight the risk that if Green Belt development is not permitted it may need to be allocated elsewhere, which could potentially have a far more onerous impact on the highway network than is predicted within the PR. The case in support of Green Belt development needs therefore to strongly emphasise this.
 Nevertheless, we consider that if 4,400 dwellings are delivered in the plan period (in addition to the developments already committed in the Cherwell Local Plan) then there could be a significant impact on the operation of the SRN and the importance of the accurate assessment of this impact needs to be emphasised.
 We acknowledge that development locations have broadly been allocated along the A44/A4260 Corridor between North Oxford and Woodstock, with some locations on the edges of the Oxford and Kidlington urban areas and some in more rural areas. It should be noted that the development sites away from urban centres may not benefit from some of the existing urban sustainable transport options available. It is therefore important that sufficient sustainable transport solutions are provided to/from the development in these areas to ensure the impact of additional traffic on the network is minimised where possible.
 We welcome the location of development in relatively close proximity to Oxford along key radial routes. There is the potential for frequent, high quality sustainable transport connections from the additional development sites to the Oxford urban area. Should these not be in place then we consider that the traffic impact upon A34/A44 Peartree Interchange arising from the additional development is likely to be intolerable. We note that the PR does not appear to propose any highway infrastructure improvements to support the development proposal, only public transport infrastructure. However, the residual impacts are yet to be fully understood, as are any mitigation measures that may be a consequence of them.
 In addition to the A34/A44 Peartree Interchange, we consider that there could be an impact on the operation of other sections of the strategic road network, including other links and junctions on the A34 and M40 Junction 9. It is unclear yet from the PR what these impacts could be. Whilst we support the intention of Cherwell District Council to seek developer funding for the infrastructure schemes listed in the PR, it should be clarified whether the developer funding is intended to fully cover these schemes or whether further additional funding would be required. An approach would be welcomed where planning permission for the proposed developments would be conditional on including proportional funding for the infrastructure set out by the PR.
 We note that 1,180 dwellings have been put forward as extensions to the northern edge of the Oxford urban area. Extensions to the urban area could be considered suitable locations for development provided good accessibility to existing services and facilities exists and necessary supporting infrastructure (including public transport services) can be provided. Although we welcome the proximity to existing and planned sustainable transport infrastructure, we consider that the extensions proposed could affect the A34/A44 Peartree Interchange, the A34/Oxford Road junction and potentially M40 Junction 9.
 We note that the remaining 3,220 dwellings have been allocated to sites adjacent to Kidlington, Begbroke, Yarnton and Woodstock. Whilst some of these sites are located further away from the Strategic Road Network, it is likely car trips from these sites to Oxford will route via the A34/A44 Peartree Interchange and that a number of longer distance trips could also route via A34/A44 Peartree Interchange as well as the A34/Oxford Road junction.
 We consider that whilst some of the sites may have less of an impact on the strategic road network due to their size and/or proximity, the cumulative impact could be significant and it is recommended that an assessment of this impact is undertaken.
 We welcome the intention to prepare Transport Assessments and Travel Plans to support all development identified to meet Oxford's unmet housing need. Transport Assessments should endeavour to establish the potential impact of a development on the SRN and what measures may be required to mitigate these impacts. The PR indicates that developers will be required to make a contribution to infrastructure measures identified within the adopted Local Plan and Oxford Transport Study. Transport Assessments could therefore also be used as a basis to establish the quantum of each contribution, each development should make, together with type and form of the mitigation measures required.

Proposed Submission Plan - Policy PR4a - Sustainable Transport

PR-C-1389	10/10/2017	Nick	Small	Stagecoach in Oxfordshire				Y
4495	<p>Comments</p> <p>Stagecoach is very encouraged by the manner in which this Plan Review has been progressed by Cherwell District Council, supported by key partners and stakeholders, and OCC in particular. It is positively prepared in that it seeks to meet in full, the development needs that have been judged to require accommodation within the District arising from the Oxfordshire Growth Board's apportionment. The Plan is properly justified, backed by a comprehensive suite of relevant and proportionate evidence as required by NPPF paragraph 182. There is a proportionate and relevant transport evidence base that underpins the Plan, and this evidence base has been available suitably early in the Plan-making process. The OTS and the dLPPR are both now each supported further by work to establish in more detail the feasibility and design options for key measures set out within it. Therefore, the Plan is supported by a deliverable series of transport mitigations. Stagecoach wishes to publicly commend the Councils for the depth and breadth of partnership working in addressing not only the need to accommodate the City's development requirements beyond the City's boundary, but the transport and movement issues that arise from this. Preparing the STA and the Corridors Study has demanded intensive partnership working with a wide range of stakeholders within very ambitious timescales. Stagecoach recognises and also applauds, that the dLPPR progresses a development strategy that is focused on several key principles, which align excellently with the principles set out in the NPPF. The only area where Stagecoach has some small residual concern is that the Plan could make rather clearer that the A44-A4260 Corridor Study has shown that opportunity clearly exists for comprehensive bus priority on the A44 South of Bladon, of equivalent standard to that proposed on the A4260 BRT Corridor. We would urge that this is rather more clearly signalled within the STA, the Infrastructure Delivery Plan (IDP)/infrastructure Schedule, and the draft policies for Strategic Allocations proposed North East of Woodstock, North of Yarnton, and at Begbroke. The STA makes clear that south of Yarnton, the A44 is already subject to severe peak delays and that without substantial measures to address this, these conditions will substantially deteriorate. The significance of the A44 Bus Priority within the Plan, as part of its supporting transport mitigations strategy, is that much the more important when regard is had to the development strategy proposed in West Oxfordshire, which will directly impact on the A44 south of the Bladon Roundabout. The Corridor Study shows that the rail bridge on the A44 south of Yarnton evidently is a very significant constraint limiting the scope to cost-effectively add capacity for general traffic. Even if it could be, providing for general traffic would serve only to add pressure on key links and junctions at pear tree and Cutteslowe. However, north of Yarnton, the existing A44 carriageway has been largely ""hatched out"" as redundant. As a result, the Corridor Study shows that bus lanes could be delivered very cost-effectively making use of this currently unused highway pavement, with limited need to construct new carriageway with its attendant costs. South of the rail bridge, the Study is more agnostic, as it looked only at what could be achieved within the public highway. However, allocations are made alongside the A44 in the Plan, and it is vital that the Plan and supporting IDP references the potential for bus priority along the A44 to resume, through provision of a widened carriageway incorporating bus lanes, over a relatively short stretch on approach to the Loop Farm roundabout, and beyond to Pear Tree. The constriction at the bridge can in our view readily be addressed by bus gates. We are also aware that the Corridor Study suggests a new parallel bridge structure could be provided which would allow free-flowing continuous bus priority. We would greatly prefer and strongly recommend that this is taken forward if at all possible. We would therefore welcome further work being undertaken to establish the feasibility, costs, and benefits of the alternatives to the rail crossing. Finally, we note that the Infrastructure Schedule does not specifically reference the bus lanes on a stretch of A44 between Langford Lane and the Begbroke Science Park access road, which forms an important part of the A44 Bus Priority proposals set out in the Corridor Study, and is an essential element if the necessary seamless rapid transit pathway is to be provided.</p>

PR-C-1396	09/10/2017	Paul	Walker	Oxford Bus Company				Y
5161	<p>Comments</p> <p>SUPPORT this policy with AMENDMENTS.The provision of adequate infrastructure to facilitate commercial bus operation is essential. The district also needs to be mindful of objectives set out for transport in both LTP4 and Local Enterprise Partnership (LEP) strategic documents. The LEP infrastructure ambitions must be realised through developments as they go through the planning process and reflected within their development plans. Demand within Oxford is highly peaked and distances between main settlements means that high mileages are involved. The opportunity cost in improving such services is extremely high, especially when off-peak demand is so limited. For bus services to be commercially viable in a climate of reducing public funding we would recommend that housing developments are either located on existing public transport corridors where possible or they are concentrated where volumes can justify the provision of a bus service. The suggestion that the traffic modelling shows only a 1.3-1.4% increase in car journeys during the plan period from these developments suggests that there must be a reliance on sustainable non car modes to achieve this figure. It is critical that any new infrastructure introduced to facilitate housing and economic growth is mindful of the public transport network and any new infrastructure should be designed to enhance rather than impede this. Engagement with bus operators on each development as planning applications are made is absolutely essential and we are more than willing to help shape developments and thus what infrastructure is required to facilitate commercial bus operation in the medium to long term after initial 'pump priming' using section 106 funds. Encouraged by the approach within the policy that proportionate financial contributions are made by the sites covered in Policies PR6-PR10 to ensure that development takes place that is sustainable both in planning terms and financially. In particular we support the improved bus services along the A44/A4095 and A4260/A4165 as well as bus services along the A4260 into Oxford. Oxfordshire County Council is proposing the development of Bus Rapid Transit (BRT) schemes to help buses to get to the city centre more quickly. However at this stage the plans are not mature enough to demonstrate how the highway will be used to facilitate this and therefore what journey time improvements can be made that would be a sufficient and deliverable. However the policies need to explicitly highlight costed proposals for bus services improvements. Therefore there needs to be mention within the policy of the need to "kick start" bus services for a number of years promoting alternative transport to the car until the development is built out and services viable. We support the development of new park and ride models where these are feasible – in terms of generating suitable BCRs we would suggest this needs to build on existing sites and where there is or shall be demandcreated. This includes improved and prioritised links for buses between settlements including access onto major routes as well as through major sites which will give certainty to journey times. The concept of an outer ring of P&R's further out of the city centre is not proven. P&R's further out of the city will increase journey times and cost significantly and reduce attractiveness to many commuters. It is generally regarded that with bus based P&R twenty minutes is an acceptable journey time. Commuters within the ring of proposed "outer" P&R sites would, in our opinion be unlikely to drive out of town to travel back in through P&R provision. In addition to aid this we would suggest a planning requirement of a "one payment" system which would stop users having to pay for parking and then pay separately for the bus service and that ways of providing this need to be developed as part of the pre-planning process. The Local Transport Plan 4 for Oxfordshire aims to support jobs, housing growth and economic vitality, reduceemissions and enhance air quality as well as protect the environment and quality of life. The Plan also aims to minimise the need to travel, influence development to maximise the use of existing and planned strategic development and develop sustainable patterns of growth to deal with worsening traffic congestion. We would point to emerging guidance from CIHT which is currently being developed, and on which Oxford Bus Company have been involved. The aim of the guidance is make development more bus friendly and support the development of commercially viable routes once a development is fully built out. Development shouldalso be high quality with quality bus provision that is attractive to users with improved access to main corridors, less deviations off route and reduces potential delays with carriageway widths within new development a minimum of 6.75 metres. Moreover it is essential that if developments are to be made sustainable public transport services are provided and funded from very early in the development to embed transportation habits. We are keen to ensure a high quality bus stop with superior facilities that might be expected on a high quality bus corridor. A typical stop should be provided with: -- Good bus stop design including real time passenger information display as set out above, printed timetable and service information, local map and way finding;- High visibility bus stop flag and pole with appropriate and consistent branding;- Interactive audio help points;- A Wi-Fi hotspot if public transport bus stop departure times can be accessed via mobile phones;- An enhanced maintenance regime to maintain the quality feel of infrastructure investment;- A higher kerb to reduce the step height between the bus and the footway, minimum 125mm;- Higher quality footway and carriageway paving materials;- A stop cage marking of sufficient length to enable buses access close to the kerb. Minimum of 15m per bus if unobstructed (to cater for maximum likely vehicle lengths).</p>							

Changes Sought

Reasons for Participation

Propose this policy is amended to ensure that there is a clear roadmap as set out above to deliver the safeguarded transport improvements desired at especially with regard to the strategic locations highlighted within the plan.

Proposed Submission Plan - Policy PR4a - Sustainable Transport

PR-C-1399	10/10/2017	Ms Jennifer	Mitter	Lichfields on behalf of The Church Commissioners for England (CCE)	N		N	Y
-----------	------------	-------------	--------	--	---	--	---	---

Comments

The CDC Local Plan Part 1 and the NPPF (Para 34) support a strategy whereby growth should be directed towards the most sustainable locations, encouraging travel by non-car modes. The County Council's Oxford Transport Strategy is also clear in its objectives for achieving a meaningful modal shift for those travelling into Oxford City away from the private car and towards public transport. In this context, the justification for the Council's approach in pursuing growth at sites such as PR7, PR8, PR9 and PR10 which propose concentrated levels of development (circa 3,220 dwellings) is unclear. The development as proposed is concentrated along the already very congested A44 corridor and around Kidlington which is a known congestion hotspot. While some development in this area may be appropriate, the concentration of sites will lead to significant issues of congestion given that the sustainable modes being pursued (with the exception of cycling) are all road based Park & Ride, Bus and RTP routes. The Sustainability Appraisal (June 2017) recognises that new development around the Kidlington area 'may increase congestion but the Local Plan Part 1 Partial Review allocates new housing sites that encourage the use of sustainable transport and are allocated following consideration of their impacts on transport patterns through the SA'. Notwithstanding assessment of the proposed allocations through the SA, the impact of congestion has not been sufficiently weighed in the balance when considering reasonable alternative sites and a broader distribution across the District. For example, locating development on the rail network at locations such as Islip would assist in removing some traffic movement from the road entirely. It's recognised that there is the potential for a new railway station at Yarnton, but this is a long term strategy with no immediate proposals for delivery. CDC does not consider this necessary infrastructure to support the proposals and simply consider it a potential future benefit. Therefore, all focus for this plan period under this strategy will be on the road, contrary to the conclusions of the Sustainability Appraisal and to which our client objects. Overall, the various transport evidence base documents prepared to date have not robustly assessed the opportunities to improve rail usage despite current work being undertaken to develop the East-West rail link. East-West rail Phase 1 works saw an upgrade of Islip station which is on the new Oxford – London Marylebone line. The Western Section of East-West Rail will also see the introduction of three new passenger services, for direct services within the region and connections to national mainline services. These services are due to start operating in the early 2020s. Despite this significant rail investment, no development is proposed within Islip which is just a 3 minute train ride from Oxford Parkway, 7 minutes from Bicester, 11 minutes from Oxford and under an hour to London Marylebone. Our client is of the view that Policy PR4a (and by association policies PR6-PR10) focuses too strongly on improvements to and mitigations for the highway network rather than considering options for removing traffic from the road network and towards more sustainable modes such as rail. The proposed locations for the additional housing are known areas of congestion and the transport proposals do not go far enough to solve the existing issues, with the proposed levels of development in this location likely to compound matters further. Our client objects to these policies which will lead to increased levels of congestion and the strategy will not achieve a step change in modal split. Soundness - The evidence base prepared to support Policy PR4a (and by association policies PR6-PR10) is not sufficiently robust to justify the approach to allocate this level of housing in an area of existing traffic congestion without an effective strategy to achieve a step change in modal split. The Council needs to justify its approach for focusing so much of the new development in one area which is already known to suffer issues relating to road congestion. Rail has not been considered as a reasonable alternative within the evidence base documents and consequently the draft plan is not justified. The draft Plan is not Effective, as it focuses too much of the housing requirement in one, focused area. The Plan is not consistent with national Policy as the proposed development is not located where the need to travel will be minimised and the use of sustainable transport modes can be maximised.

Changes Sought

The evidence base has failed to sufficiently consider investment in rail / exploitation of existing rail assets despite recent investment in the East-West Rail project. A thorough exploration of the reasonable alternatives is required. More detailed consideration needs to be given to the potential for locating new development at Islip within proximity to the existing railway station. This location would be sustainable and would support the existing local community. It has been demonstrated that there are no overriding physical constraints, in terms of highway impact, flooding and ecology, to the development of this land.

Reasons for Participation

Due to the complexity of the matters discussed in relation to PR4a

Comments

The locations chosen for the 4,400 new houses are close to the most congested roads in Oxfordshire. The Local Transport Plan shows that all four roads meeting at the Peartree intersection are at or over capacity . Anyone who travels in this area will confirm that there are long delays at peak times and often unpredictable delays at other times in this area. These high levels of traffic congestion are acknowledged in the plan and result in high levels of local air pollution. In para 5.47 of the plan it is suggested that 4,400 new houses "would increase car journeys by 1.3-1.4%" also suggesting that this is a small change. This is a meaningless statement as it does not specify on which roads, over which area and at what times these journeys would occur. It is also based on data from 2013 which is clearly now out of date. Furthermore it, presumably, does not take into account additional traffic arising from the housing allocations in other Districts, from the substantial allocations made in Local Plan Pt 1, from the proposed development at the "Northern Gateway" and from possible regional or national highway projects. Kidlington, Begbroke and Yarnton currently have around 8000 houses. Common sense suggests that an increase of 4,400 houses would result in an increase in carjourneys in that area of over 50% (and certainly not 1.4%), without allowing for increases resulting from other development. A plan should surely be subject to a 'sanity check' such as this, and the fact that the statement in para 5.47 is included without any comment, justification or qualification suggests a serious lack of evidence and understanding. Indeed the plan goes on to say that "Our development strategy provides the opportunity to reduce this percentage" (para 5.47) without any explanation or justification. The plan is clearly not justified. The Council's proposed answer is Policy 4a "Sustainable Transport" by which developers of the allocated sites will be expected to contribute to highway and public transport improvements. Such improvements, largely for public transport, form a significant proportion of the projects listed in the infrastructure schedule. However, these have no costings or funding source attached. Private developers will also be expected to make contributions to utilities provision, public services, green infrastructure and affordable housing. Without information on costs it is impossible to say whether the transport projects can be afforded. The plan is not justified. Very few of the proposed improvements are intended to cater for private vehicles such as cars, vans and lorries. The "sustainable transport policy" simply means expecting very large numbers of people to change their behaviour and cycle, walk or use the bus instead of their cars because of the public transport improvements proposed. However there is no analysis to give any confidence that the public transport improvements will even meet the extra demand generated by the new development let alone achieve significant modal shift away from private transport. Instead the explanatory text for this policy is dotted with words such as 'opportunity' and 'potential'. It is simply wishful thinking with no foundation. Many journeys can only realistically be made by car and many modern developments such as retail parks rely on car use. Journeys by delivery and service vehicles will still be needed, as will freight traffic. Given the proposed 50% increase in population in this area, it is inevitable that journeys by private vehicles will increase significantly. Again no analysis is provided and no explanation of how increased journeys by private transport will be accommodated. As it stands this policy is not justified and ineffective. While the proposed housing sites have been chosen for being close to Oxford, they are actually located at the other side of the city from two of its three major employment areas in Headington and Cowley. So, not only would journeys to these areas originate in an area which is one of the most congested in the county but also they would involve travel across the city, cutting across other congested routes to the centre. Whether these journeys would be made by public or private transport they would be longer, more difficult to provide for and give rise to more congestion than is necessary. Do not consider that the transport improvements needed to support the additional development proposed can be achieved without considerable harm to the natural environment and to local air quality. The road network in this area already serves local, regional and national functions and already requires improvement to address existing capacity issues. Further investment should be confined to addressing these issues only."

Changes Sought

There is no reliable evidence that the proposed transport policy will support the proposed development, so the plan should be withdrawn. Further it is likely that the highway improvements needed will in themselves be damaging, so a different development strategy is needed. A realistic plan for overcoming existing problems in this area should be included within that strategy.

Reasons for Participation

We (Kidlington Development Watch – KDW) consider this is necessary because of: our extensive involvement with the consultations at all stages of the Cherwell Local Plan to date; the considerable work we have undertaken to publicise the consultation ourselves; of the feedback we have received from Kidlington residents; and, the large numbers of them who have responded as a result of our efforts. KDW is a voluntary organisation run by Kidlington residents with experience and interest in planning issues. We believe that effective, informed public participation in planning consultations is vital to democratic policy making. We publicise consultations that directly affect Kidlington and offer advice on how people can best make their views known. In relation to this and the previous options consultation we printed and distributed leaflets, put up posters, ran a stall on many Saturday markets and at other events, participated in public and parish council meetings, provided information on our website and responded to requests for information from Kidlington residents. As a result, we have gained a very good understanding of the views of Kidlington residents, a large number of whom have made representations because of our activities. KDW's representations therefore reflect the views of much of the Kidlington community."

<p>Comments</p> <p>In terms of connectivity, we OBJECT to Policy PR4a because it does not provide for a cycleway link northwards from Begbroke Science Park into the southern end of Oxford Technology Park. This link was shown prominently on the 2013 work by Alan Baxter.</p> <p>Changes Sought</p> <p>The link between Begbroke Science Park and Oxford Technology Park, as proposed by Alan Baxter (Figure 15.2) needs to be reinstated as sound place-making; e.g., linking to the hotel at the technology park (a current planning application). Generally, the land to the north of Begbroke is better suited in landscape terms for development, which could include a mix of uses behind the technology park on land owned by Blenheim. Proposes a modest expansion of Oxford Technology Park, to include the cycleway link to Begbroke Science Park first proposed in the Alan Baxter work .</p> <p>Reasons for Participation</p> <p>We confirm that we wish to attend the examination in public.</p>								
PR-C-1417 4533	10/10/2017	Gary	Orchard					
<p>Comments</p> <p>Objects strongly to CDC's plans to build 2,480 new houses on Green Belt (GB) land surrounding Yarnton, Begbroke & Kidlington. The GB area meets all 5 conditions for GB status, thus making it ineligible for a building project of this nature. It would also destroy the nature & quality of life in all 3 villages, seriously harm the wildlife dependant on this area for survival and put an impossible strain on the infrastructure which struggles to cope with the existing level of occupation. Transport. The current proposal has no mention of increased or improved road networks which would therefore put an unnecessary and impractical strain on the already overcrowded road system in & around Kidlington. The increase in traffic, particularly on the main Woodstock Road between the Rutten Lane roundabout & the Kidlington roundabout, that is inherent in this proposal would result in serious deterioration of the road surface which is already in a poor state & which CDC seems currently unable or unwilling to do anything about. There is currently no bus service between Yarnton & Kidlington which means that if Yarnton residents wish to have access to the main Kidlington supermarkets they have to drive there. Under these proposals the Sandy Lane link between Yarnton & Kidlington would be closed to through access, which would force residents onto the already overcrowded Woodstock Road & double the length of their journey, adding to cost, pollution & gridlock which is already a regular feature on this stretch of road, particularly when Blenheim Palace hosts major events i.e.. Country File Live. Health. Getting an appointment at Yarnton Medical Practice is already a long, drawn out process with a minimum wait of two weeks for a regular appointment. Urgent, same day, appointments are strictly limited and very much a question of luck. With over 2k new families moving into the area, this service would crumble under the strain, leading to serious health implications for those living in the area. Making the elderly & the very young, vulnerable. Quality of life. Those who choose to live in this area do so because we prefer not to live in an over-crowded, under resourced urban sprawl. The proposals would turn Yarnton, Begbroke & Kidlington into just that sort of area. It will probably become a dormitory town for those wishing an easy commute to London via Oxford Parkway Station, filling the area with people who have no real interest in the area itself & no wish to become integrated into the local community. Parkway Station, already well used, especially during the week, would become overcrowded with too few parking spaces, as would all the other car parks in Kidlington. Summary. The suggested population increase has not been supported by facts; the possibility of affordable homes is non-existent with the leader of the Council blaming Developers for the problem when in fact they are functionaries appointed by the Council to carry out their bidding; no additional infrastructure such as improved road networks, better public transport, shops & medical facilities have been factored into these plans; the targeting of the GB has been seen as an easy option rather than the Council utilising brownfield sites within the Oxford City boundaries; proper consultation procedures have been ignored & the opinion of residents disregarded. This plan is unwarranted & unwanted & should be abandoned immediately.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>								
PR-C-1422 4543	10/10/2017	J K	Jutton					Y
<p>Comments</p> <p>Object to PR4 (a). This policy is unsound as it clearly identifies the A44 as the priority route for private vehicles, while providing unconvincing proposals for improvements, only hoping more people would cycle or use public transport. There is a high risk of creating regular traffic gridlock by adding even more vehicles, as this route is often crawling during the weekday morning rush hour as the traffic funnels into the single carriageway constriction at the Cassington Road roundabout (Turnpike Public House), the road ahead constrained from widening by 2 bridges before struggling to join the ever busy A34 at the Peartree roundabout and join or cross the congested A40 ring road at the Wolvercote roundabout. Air and noise pollution levels along the Yarnton dual carriageway are already bad, and any new houses on the eastern side will from this environmental impact, as it would be situated downwind of the prevailing westerly airflow.</p> <p>Changes Sought</p> <p>Reasons for Participation</p> <p>Represented by Begbroke and Yarnton Greenbelt campaign group</p>								
PR-C-1426 4551	10/10/2017	Kathleen	Hayes				N	Y
<p>Comments</p> <p>Transport. The proposed new developments around the A44 will enormously increase the traffic problems already being experienced. The A44 is a major route channelling traffic into Oxford from Woodstock and North Oxfordshire. It changes from dual to single carriageway in Yarnton at the junction with Cassington Road at the Turnpike roundabout. This causes huge tailbacks of slow-moving or stationary traffic, which often stretch back towards Woodstock from the Pear Tree interchange at peak times. There is constant road noise which can be heard all day long, including evenings, from the houses and gardens in nearby Meadow Way. The proximity of the road to housing is also a potential health hazard in respect of air pollution. It is dangerous to try to cross the road other than at the one pedestrian traffic light crossing between Cassington Road and Rutten Lane. Cassington Road runs east to west through the centre of Yarnton and is used as a rat run by traffic from the A40 avoiding the Pear Tree interchange. This in turn leads to tailbacks of stationary and slow-moving traffic through the village in the rush-hour because vehicles cannot get out onto the A44 at the Turnpike roundabout. The Plan states that the purpose of the new Park & Ride at Bladon roundabout is to capture the traffic travelling into Oxford from the north. However, this will be negated by the fact that 2,480 new homes are to be built between the new Park & Ride and Oxford. The residents of these houses are unlikely to be prepared to travel north to the Park & Ride in order to get a bus south into Oxford. Given that most homes now have more than one car that will be a massive increase in car journeys through Yarnton and Begbroke. If the new developments were to be located north of the new Park and Ride the proposal would make much more sense. There will also be an increase in traffic through Yarnton and Begbroke as the Plan proposes to divert traffic from the Banbury Road across to the A44 to avoid going through Kidlington. The current S3 country bus service travels from Chipping Norton (or Charlbury) through Woodstock, Begbroke and Yarnton into Oxford via the A44 and Woodstock Road. These buses have recently been reduced to two per hour in the day-time and are usually very full by the time they reach our villages. They also struggle to keep to the timetable due to traffic congestion on the A44. Stagecoach have recently introduced a new trial 7A bus service from Yarnton via Oxford Parkway into Oxford. This is a welcome attempt to help us get by public transport to the new train station, Summertown shops and the 700 hospitals bus service at Water Eaton Park & Ride. However, the buses stop running after 8.28 am and start again at 3.28 pm. This means people with senior bus passes (which can only be used after 9 am) cannot use them on the outward journey. These older people are among the most likely to be travelling to hospital for appointments or visiting and need a bus service that runs throughout the day as there is very little choice when arranging clinic appointments. The only alternative is for such journeys to be made by car. The local bus service between Begbroke, Yarnton and Kidlington was withdrawn last November. In addition to this there are no other east-west bus services, so village residents cannot get to Witney, Cassington or Eynsham either by public transport. This only exacerbates the congestion by increasing the number of car journeys made locally.</p> <p>Changes Sought</p> <p>Reasons for Participation</p> <p>I would like the Begbroke and Yarnton Green Belt Campaign to act as my representative during the Examination by the Planning Inspector.</p>

Proposed Submission Plan - Policy PR4a - Sustainable Transport

PR-C-1426	10/10/2017	Kathleen	Hayes				N	Y
4552	<p>Comments</p> <p>The potential trebling of the combined population of Yarnton and Begbroke, the severe limitations of the existing bus services, and the proposed diversion of additional traffic from Kidlington to the A44, make it essential to provide improved public transport facilities and road design/management to avoid constant gridlock, pollution and delays in the future. However, it would appear that there are no realistic plans to alleviate current problems, let alone avoid even worse ones in the future. What plans there are seem to focus exclusively on introducing bus lanes on the A44 and encouraging commuters to cycle to work. This reinforces the impression that the proposed new housing is targeted primarily at young professionals commuting to either Oxford or London via Oxford Parkway station, apparently often by bike. There seems to be little or no consideration of the actual needs of existing residents or commuters, which are varied. The majority of residents do not necessarily work in central Oxford. My experience of commuting to work from Yarnton pre-retirement was very different from the picture painted in the Plan. There was often no alternative but to travel by car via the A44, A34 or northern ring road. Travelling to work outside Oxfordshire often had to be done by car. Even journeys to Oxford entailed a car journey to the Park & Ride. The S3 bus was unreliable with poor frequency. All journeys had to be planned around traffic congestion making the working day longer than necessary. And of course the volume of traffic has increased in the last seven years. Since retirement I have used public transport wherever possible, but still have to contend with journeys being much longer than they should be at peak times, often sitting in stationary buses on the A44 and Woodstock Road. No mention of how to improve the already congested road network for private vehicles or how it will cope with the increase from all these developments. The proposed introduction of bus lanes on the A44 will reduce availability of whole lanes to car drivers, thereby reducing the capacity of the A44. And because the section of the A44 between the Turnpike and Loop Farm roundabouts is single carriageway it will be impossible to provide bus lanes unless the road is widened. But because this stretch incorporates canal and railway bridges it is likely the cost will be astronomical. A particular issue for Yarnton and Begbroke is that we will not be served by the new Rapid Transport system that will run from the new Park & Ride at Bladon roundabout via Langford Lane and Kidlington to Oxford Parkway Station and into Oxford. The other premium bus route from the Park & Ride to Oxford, whilst travelling through our villages on the A44, does not appear to stop in either Begbroke or Yarnton. The proposed closure of Sandy Lane to through traffic is incomprehensible. This is the main and only direct route from Yarnton and Begbroke to Kidlington, our nearest location for essential amenities and services. It is well-used, trouble-free, avoids the congestion on the A44 and takes local traffic off the A44 and Frieze Way or Langford Lane – both resulting in much longer car journeys. Residents would be unable to use Sandy Lane to get to Kidlington if it was pedestrianised. Whilst Yarnton and Begbroke have been allocated the largest share of additional housing, no realistic plans have been made to improve the currently struggling road networks and failing public transport services in order to accommodate the increased pressures. The reverse is the case and aspects of the plans will make things worse.</p> <p>Changes Sought</p> <p>Reasons for Participation</p> <p>I would like the Begbroke and Yarnton Green Belt Campaign to act as my representative during the Examination by the Planning Inspector.</p>							
PR-C-1436	10/10/2017	Patsy	Dell	Oxford City Council				
4572	<p>Comments</p> <p>Supports the overall spatial strategy, Vision & the new Spatial Objectives (SO16-SO19) as they specifically & positively respond to the issue of meeting Oxford's unmet need, & recognise that the strategy needed to be different to that of meeting the wider district needs. The strategy reflects how important it is for the sites to have a good spatial relationship to Oxford, & incorporates essential planning principles which align with those identified & agreed in the joint studies undertaken under the Growth Board; The strategy seeks to locate development so that it is well-connected to Oxford & supports the city's economy (Policy PR4a); & in addition it seeks to offer people convenient affordable & sustainable travel opportunities to the city's places of work, services, & facilities; These guiding principles are all welcomed. Supports the sites proposed in the Plan (Policies 6-10), which the evidence base demonstrates will offer residents good relationships to Oxford & sustainable travel options for accessing work & other requirements in Oxford. Welcomes how cross border issues including affordable housing & transport have been addressed for the sites which adjoin the administrative boundary, in order to achieve a joined up approach to design & integrated communities, particularly the links to the Northern Gateway site, access to Oxford Parkway station, & the sensitive consideration of Cutteslowe Park (Policy PR5).</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							
PR-C-1442	10/10/2017	Tim	Lund	Oxford YIMBYs			Y	Y
4604	<p>Comments</p> <p>We very much welcome that, per 5.13, the "strategy is Oxford specific; to provide homes where people can most readily connect to Oxford and sustainably access the city's employment areas, its universities and its services and facilities". This readiness to co-operate with neighbouring authorities is essential for coherent planning, and recognises the needs of both existing and future residents. The weakness of the plan arises from its acceptance of the current low densities of the area. The numbers of homes per hectare on the sites proposed in Table 4, around 20, are in line with those for existing 'fully developed' areas of Kidlington, but less than half in parts of Oxford, without any high rise development, and also without the outstanding existing and potential public transport options discussed in this plan. Planning for unnecessarily low densities means that new homes will, immediately via the open market, or over time as they are resold, be unaffordable by the keyworkers for whom they are meant. Measures to keep new homes affordable are welcome, but will be hard to maintain in the long run as long as there are not enough homes overall. The realism of para 5.13 should mean policies for Kidlington, Begbroke and Yarnton which allow the development of a new, distinct identities as local centres, so that they do not become low density dormitory suburbs, whether of Oxford or London. Higher densities should also apply to currently developed areas, in a way which works for existing residents, and reduce the area needed for new development. This would mean less loss of Green Belt, which will be welcomed by many, although this should not be an overriding objection. A gap between Oxford and these local centres risks undermining their connectedness with Oxford, as required by 5.13, so some Green Belt land will have to be re-designated. New policies suggested above for identities as local centres can offset this any loss in this regard. We strongly support policies for the encouragement of environmentally sustainable transport, such as the proposed new rail station at Yarnton, infrastructure required for rapid transport schemes, and better cycling facilities, especially allowing access to Oxford. Higher densities will also encourage walking, which is the most environmentally sustainable transport mode of them all.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							
PR-C-1447	10/10/2017	Christopher	Hardman	Wolvercote Neighbourhood Forum			N	Y
5190	<p>Comments</p> <p>The policy has not been positively prepared, as existing roads approaching the north of Oxford are already at full capacity in peak periods. There are few indications that the work on the Wolvercote and Cutteslowe roundabouts has much improved traffic flow and the pollution levels are no doubt as high as before. Oxfordshire County Council's Transport Plan relies heavily on the introduction of rapid transit buses and improved cycle lanes, and this policy expects that the County's Plan will be carried out on time. Highway improvements to be effective need to be more extensive than we have experienced so far and it is unrealistic to expect that they will be implemented in the necessary time scale in the present economic climate. Even if adequate improvements are planned there will be a mis-match between the speed of development and the rate of their completion. Buses approaching from out of city Park and Ride facilities will be unlikely to cope with all the increased demand resulting from the 4,400 dwellings planned much closer to the city. The policy is not justified. The A4144 (Woodstock Road) and A4165 (Banbury Road) each currently carry over 17,000 vehicles every day and 46,000 people a day commute into Oxford to work. The developments proposed by Cherwell District Council to the north of the city seem to ignore the fact that the majority of the employment sites are to the south east of the city. It does not make sense to build in these northerly areas, simply encouraging workers to cross the city by car. In addition, the policy does not appear to take account of the likely effect on the roads of building on the Northern Gateway site, with thousands of employees and hundreds of residents. Currently, the Northern Gateway AAP allows for 90,000 sqm of employment space, and 500 dwellings. The policy is not considered to be effective, as it relies heavily on the implementation of the County Transport Plan. If this is not completed on time, the increase in traffic in north Oxford will just lead to even more congestion than already exists. The policy seems to ignore the fact that many people still prefer to drive their cars. The policy is not in line with national policy, because its delivery is questionable, as explained above.</p> <p>Changes Sought</p> <p>Reasons for Participation</p> <p>Wolvercote Neighbourhood Forum would wish to be represented at the examination because we represent a large number of local people who will be affected by any development in Cherwell near to the northern boundary of the city.</p>							

Proposed Submission Plan - Policy PR4a - Sustainable Transport

PR-C-1479	09/10/2017	Hugh	Morris				N	Y
------------------	------------	------	--------	--	--	--	---	---

Comments

The proposed submission plan is unsound, despite the details drawing the concept is not fully thought through, not justified and not effective for the reasons given in my specific objections below. Do not believe that this proposal has been considered having regard for other proposals in the immediate area and how that will all impact in the area. It will swamp the local area. Aware of a very similar proposal for Eynsham which will create further traffic for the A40 and therefore also the A44. There is also a huge housing estate near Barton under construction. Oxford has many areas that could be developed, using brown field or green field sites. The impact on traffic on the A44 has been understated and will become unsustainable. In the morning the traffic regularly queues back from The Turnpike roundabout, using both lanes, to Begbroke, changing one of the lanes to a bus lane will extend the queue a further mile, even if it creates more bus passengers. Noted the extra traffic volume has been assessed as very small. If that is so, given its 4,000 houses planned, that must mean the existing volume of traffic is very high, and it should be recognised that any additional traffic in the rush hour will have a significant impact, which is when most of these vehicles will be on the road. The proposed train station would be a good idea but access is being limited by the traffic restrictions so it would not be used as much as has probably been assumed. There is a variety of travel problems and suggestions in the letter. The proposed development will ruin the nature of the village and it will just become an urban sprawl with no identity and will merge into Begbroke and Kidlington. The consultation refers to maintaining the character of the villages, this proposal will not, it will swamp Yarnton and Begbroke, who will probably be separated by a narrow footpath, and both will have just the canal between them and Kidlington. One of the beautiful aspects of living in Yarnton is the green belt and the surrounding countryside walks. Part of this will be destroyed by the proposed development and wildlife lost to the area. The proposed plan to build a new primary and secondary school are totally out of keeping with the character of the villages. The proposals bring little to be attractive to the existing residents, there is no gain for our side of the scales. The proposed density of the housing is also of great concern and totally out of keeping with the existing housing. Oxford could meet its own unmet housing needs by using land earmarked for business use or redevelop brown site land. Most residents who want to live in Oxford do not want to live outside the existing city boundary. This is apparently driven by Oxford housing unmet need. The plan put forward by Cherwell Council seems to be to build everything as near to Oxford as possible. The proposal is preparing Oxford to expand to encompass the local villages. In the 70's and 80's the plan then was, and largely still is, to expand Bicester, Didcot, Abingdon and Witney. That has just created traffic queues. What is needed is a solution that moves some of the employment out to these towns. Not unhelpful of appropriate developments and growth which benefit the local area. This proposal is not appropriate. Also, belatedly noticed that the councils as a group are bidding to increase Oxfordshire population by 40% over the next 20 odd years. Oxford is already an area of low unemployment and housing shortages, traffic issues regularly create issues on the A 34 and other local roads. It seems that the councils are pursuing one plan without having due regard to what the residents want. Whilst the population will increase, building more will draw in more new residents into the area. Oxford has an international brand but does any development need to concentrate everything in a narrow area. Modern innovations means that the skill and jobs could be targeted in areas where housing or redevelopment opportunities would not have a detrimental impact. That proposal would dwarf this one.

Changes Sought

Reasons for Participation

I would like the Begbroke and Yarnton Green Belt Campaign to act as my representative during the Examination by the Planning Inspector.

SA Submission Report Chapter 3 - Section 3.112 Transport. The Plan is unsound for the following reasons: A. The 4,000 plus homes will significantly worsen the traffic congestion at the Pear Tree roundabout, the Wolvercote roundabout and the Banbury Road roundabout. It is a fantasy to suggest otherwise. The A40 has already ceased to function effectively as part of a ring road and this extra traffic will cause massive delays. B. North Oxford is a poor generator of extra employment being very largely residential. Those employed from these 4,000 plus homes will for the most part have to travel round the ring road, adding significantly to other traffic congestion points. If instead they work further out from Oxford then their housing is in the wrong place, pointlessly damaging the green belt. There is no attempt in this Plan to identify where employment is growing or should grow and develop housing accordingly. C. The entire Plan is unsound because Oxford should have an accepted planned maximum population with either a new town or new villages outside Oxford created to manage the growth in population.

Changes Sought

Reasons for Participation

To make the Local Plan sound it is necessary to abandon the building of 4,000 plus homes on the green belt as set out and to plan for extra housing either east of Oxford beyond the green belt and nearer to employment possibilities or in a completely new village outside of Oxford with good communications.

I wish to discuss the poor positioning of the proposed housing for employment and the necessity of planning for an upper limit to Oxford's population with development beyond the green belt.

Transport: Sandy Lane forms part of my daily commute. The closure of it to cars will sever the link between Kidlington and Yarnton, necessitating several extra miles travel either through the congested Pear Tree interchange, or the equally congested airport road, putting unbearable pressure on these areas. This will make access to local amenities more difficult and increase traffic congestion. It is fundamentally flawed, and the proposals have not made clear its impact on existing homes and businesses on both sides of the railway line. It does not serve the stated objective of improving access between communities, but actively hinders it. This has not been thought through, and is hugely detrimental. The proposed new station is shown with a small star on the development plan. No space is actually shown for the station, car park and associated access. It will either take a significant amount of space out of the area allocated for homes, or will require land east of the railway line, outside of the red line, and would amount to further development by stealth. Indicating it as a mere star on a plan suggests that no real thought has gone into this. What guarantee is there that Network Rail would agree to it? The loss of Sandy Lane will make it of no benefit to those east of the line. This response though separate and my own should be read in conjunction with the Representations made by the Begbroke & Yarnton Green Belt Campaign "BYG".

Changes Sought

Reasons for Participation

For the reasons I have given AND the Representations made by the Begbroke & Yarnton Green Belt Campaign which I additionally support and adopt as part of my own Representation in this document, the Plan cannot be changed to make it legally compliant or sound and should therefore NOT be submitted for Inspection.

I would like the Begbroke & Yarnton Green Belt Campaign to represent me at the Examination should it take place.

Land in the western part of the site (the 'Western Development Zone') - see provided plans, is surplus to the airport's requirements. It has been earmarked by LOA for housing, employment, & a park & ride facility (the latter being a key piece of infrastructure referred to throughout the draft Local Plan, but for which land is not allocated). The adopted LPP1 does not provide a policy basis to support development in this part of the site. It is relevant to addressing Oxford's unmet housing needs therefore is a relevant matter for consideration as part of the partial review of LPP1. The airport has further areas of surplus land to the north west & north east of the site, however developing these areas is of a lower priority for the airport at present. Other Evidence: The same concern applies to other evidence base documents, including the draft Housing & Economic Land Availability Assessment (August 2017). Again this assumes that it is the entire LOA site being promoted for non-airport development (as opposed to just surplus land parcels). Accordingly the site is assessed to be not suitable or achievable for housing (due to the assumed loss of the airport) & not considered further. Assessing the site as a whole is too blunt an assessment & produces inaccurate results. The Western Development Zone is, in our opinion, suitable & achievable (see Enclosure 2 in full representation).

Changes Sought

In order to make the plan sound, in the first instance we recommend that the SA is revisited and revised in respect to the LOA site. To assist, we have provided our own sustainability appraisal of the LOA site (using the Council's SA framework) at Enclosure 3. This clearly indicates that development being promoted at LOA would comprise a particularly sustainable option for the Council which would offer the opportunity to realise unique economic benefits alongside satisfying Oxford's unmet housing needs.

Secondly, and on the assumption that the Council's updated SA reaches similar conclusions to those at Enclosure 3, we recommend amending the plan to establish a policy position that supports the development of part/all of the Western Development Zone of the LOA site for housing, employment and a transport interchange (park and ride) facility. Refer to Enclosure 2 for further details. Specifically this would include:

- Amending Policy PR3 to remove part/all of the Western Development Zone from the Green Belt
- Amending Policy PR4a to include specific reference to a transport interchange (park and ride) facility in the Western Development Zone of LOA
- Insert a new policy (PR10a) to allocate part/all of the Western Development Zone for housing, employment, and transport interchange uses.

Reasons for Participation

"LOA is a significant economic asset which has a functional relationship with Oxford and ingenerating/meeting its unmet housing needs. Our concerns go to the heart of the soundness of the plan, therefore we request to participate."

Objection to Policy PR4a and Policy PR11 Congestion. 4400 houses x approx. 2 cars per household = 8800 cars. There will cause unacceptable congestion in the area. The surrounding roads in North Oxford, on the Eastern Bypass, Banbury and Woodstock are already totally gridlocked. There are no concrete or fully costed plans to improve the roads into Oxford and between villages. Everything that has been mooted in the plans has been aspirational. These plans can be sacrificed. In fact the proposal to close Sandy Lane, a major link road between Yarnton/Begbroke and Kidlington, will create even more congestion and upheaval. According to the plans the closure is for a green pedestrian, WHEELCHAIR and cycling route with railway crossing. There are no plans to widen the A44 but we have seen plans to slightly modify the circular mini roundabout at the bottom of Frieze Way/Loop Farm to become an oval mini roundabout. This will only cause more disruption and will not help to ease congestion. We understand bus schedules to Begbroke/Yarnton are actively being cutback. We do not believe there is a need for a Railway Halt and think it will not be deliverable. There is no programmed delivery on any of the Infrastructure improvements proposed, no third-party costings have been quoted and the phrase "the costs should be borne externally" is worrying. These plans should, therefore, be considered "pie in the sky". All developments should not go ahead before Infrastructure plans are fully costed and have been locked into the contract.

Comments

The houses proposed for Begbroke and Yarnton on either side of the A44 will produce more traffic onto a road that is already at its limit. The land labelled PR8 on the east of the A44 is proposed to accommodate 1950 houses and the land labelled PR9 on the west side of the A44 is proposed to accommodate 530 houses, a total of 2480 houses. All the traffic to and from these houses will come off the A44; with the closure of Sandy Lane there would be no other road. These houses would generate a traffic of over 1000 vehicles per hour at peak hours and this would swamp the A44 which is already at its limits. Has made a survey of traffic in and around Yarnton during the past few weeks. There are varied results of peak time traffic flow in the letter.d). Currently the traffic locks up and drops to a crawl or even a stand-still along this stretch of road in both the morning and the evening weekday peaks. At the Turnpike Roundabout, there are two changes to the flow; the traffic from the Cassington Road joins the A44, and the road south narrows from two lanes to one. The traffic along this southern section of the A44 is significantly higher than that along the dual carriageway section because of the traffic entering and leaving the Cassington Road. My figures show that at peak times between 16% and 27% of the traffic along the southern section leaves or enters by the Cassington Road.e). Once it passes through the village of Yarnton, the Cassington Road is no more than a country lane leading to Cassington, but it also connects to the A40 and it has become a rat-run for vehicles travelling both east and west seeking to avoid the delays in the roundabouts at the head of the Woodstock Road and at the Peartree. With more building planned for West Oxon and more houses along the A44, this will likely become an even busier road, and if traffic on the dual carriage-way is slowed there is the possibility of Rutten Lane through the village of Yarnton and past the School becoming a part of this rat-run. That would be disastrous.f). It is likely that the daily traffic lock-ups on the A44 are caused in part by the traffic at the Frieze Farm and Peartree Roundabouts and the general flow of traffic into Oxford; these junctions cannot cope with the traffic as it is, and the increased flow generated by the proposed new houses will have a disastrous effect on traffic movements and journey times for everyone in the future.

Comments

Policy PR4a states that plans for sustainable transport will include improved bus services and facilities, and provision of new and enhanced pedestrian, cycling and wheelchair routes into and out of Oxford. Do not believe this part of the plan to be effective, since it is not deliverable over its period. The A44 & A4260 Corridor Study produced by Oxfordshire County Council (OCC) in April 2014 estimates that the necessary traffic flow improvements along the A44 and A4260 will cost in the region of £34 million. This is due to the complexity of widening bridges and roads along the route. This also does not take into account the potential additional costs of adapting these designs to accommodate an A44/A40 link road at Loop Farm that is currently under consideration (Section 5.2.1 of the A44 & A4260 Corridor Study). Such a scheme represents a figure that approaches the total yearly spend on highway and transport improvements and repairs by the entire of Oxfordshire County Council (based on figures from the OCC Statement of Accounts 2016/17). Spread over the period 2011-2031, this would be equivalent to OCC dedicating 5% of its annual capital spend on transport solely to the Kidlington area, an unreasonably high figure. Policy PR4a states that developments "will be expected to provide proportionate financial contributions" to help fund infrastructure improvements. Proportionate financial contributions will be based on figures that will allow sufficient profit for the developers from the projects, and will thus be likely to fall far short of the financial contributions necessary to secure the improvements. This policy is therefore not effective, since delivering the necessary infrastructure improvements has not been sufficiently budgeted for in the Partial review. In addition, improvements to bus services will require co-operation from service providers. Do not believe that the Partial Review is justified, since there is not proportionate evidence to suggest that the service providers in the area are committed to providing the level of service that would be required for such hugely increased passenger numbers. Recent changes to the timetable of the S3 bus which runs through Begbroke and Yarnton along the A44, which would be a key transport link for the new developments proposed in the Partial Review, have reduced the frequency of off-peak services from 3 per hour to 2 per hour, and the frequency of peak services from every 10 minutes to every 20 minutes. This has resulted in significant overcrowding on services at peak times, even with the current level of demand. A new bus route between Yarnton and the Oxford Parkway rail station, which would also be likely to be a high-demand route for residents of the new developments commuting to London, has been timetabled such that the buses arrive at the rail station at the same time as trains are scheduled to depart. This leaves no time for interchange between bus and train, making the service of very limited use to commuters. These timetable designs demonstrate unwillingness on the part of the service operator to provide an adequate service for residents, and so there is insufficient evidence to believe that the necessary improvements to bus services envisaged by policy PR4a would be deliverable, making this aspect of the Partial Review ineffective.

Changes Sought

Believes that Policy 4a should be amended to state the developers will be required to provide sufficient financial contributions to fund the entirety of the infrastructure improvements detailed in the A44 & A4260 Corridor Study. It should also include a requirement to obtain guarantees from service operators that they will provide a service to the new developments which will be sufficient to meet the greatly increased demand that will result from the building of new houses.

2. The Plan is NOT POSITIVELY PREPARED. As already mentioned, the number of houses on the sites mentioned above, are unsustainable, and contrary to Cherwell's own Summary Document page 4, they will do exactly the opposite to "limiting Oxford's Outward Growth." Indeed, this will propel further 'ribbon development' in the future. The Plan is deeply "flawed," there is no mention of how it will safeguard and aid the needs, environment, and access to free-movement of present communities, adjoining the A4165, from the Cuttleslowe roundabout to the Kidlington roundabout by bus, car, cycle or on foot, the same applies across the Wolvercote area to the west end boundaries, where the ultimate impacts of development at the Northern Gateway, Barton Park (further to the east) is as yet unknown. To suggest it meets with the Country Council's Oxford Transport Strategy, is a misnomer, because this strategy is not sufficiently robust to deal with present excessive traffic congestion and health damaging pollution. Further more it is reliant on speculative funding, which may never arrive. The Link road from Loop Farm A40 to A44, has been promised, but the funding is not in place. The congestion on the A40 is unsustainable and a northern link road is needed north of Kidlington to relieve the over-whelming volume of traffic. Travel from the Park and Ride designated for Eynsham, will be constrained by the reduced width of the bridge on the approach towards the Wolvercote roundabout, so traffic coming to Oxford will remain at a standstill. It is regrettable that the County Council policy has cut bus services from villages, whom also need access to employment, perhaps if some of these villages were a little larger, bus services might be more sustainable? According to Cherwell District Council's Local Plan Summary Document: -It will create balanced and sustainable communities? NO! It will overwhelm north Oxford and Kidlington. It will be supported by necessary infrastructure? NO! No concrete evidence to deal with existing infrastructure, let alone any new infrastructure. It will contribute to improving health and well-being? NO! It will increase detrimental health of existing residents in northern Cuttleslowe, north Oxford, Wolvercote and Kidlington. Traffic will be at gridlock all day, everyday, pollution all day, everyday at EXCESSIVE LEVELS in addition to present Oxford Air Quality, non-compliance. Elderly crossing the road or accessing the shops in our area will find it completely impossible. Cherwell District Council

Changes Sought

Remove the need for affordable housing, because, there is no way it will be affordable next to north Oxford. Be honest with people, tell them their lives in Kidlington and north Oxford are to be blighted with complete traffic gridlock and damaging vehicle pollution. Be legal by NOT destroying Greenbelt land next to Cuttleslowe Park, The Golf course, (an essential recreational resource currently), and stopping coalesce with Kidlington and north Oxford.

Reasons for Participation

Believes, with respect, the Inspector would much benefit from really listening seriously to ordinary people, regarding the very real experience and particularly genuine concerns of how these 'grand proposals' to 'illegally' destroy all the immediate greenbelt land around Kidlington and north Oxford, will have a completely devastating impact on the lives, health, well being and free movement of well established existing communities.

Objection. The locations chosen for the 4,400 new houses are close to the most congested roads in Oxfordshire and the busiest intersection in Oxfordshire. Traffic from about 3000 houses in the allocation (those along the A44) would have to negotiate that intersection. Additionally these proposed housing sites are located at the other side of the city from two of its three major employment areas in Headington and Cowley (fig 6, p48). So, whether journeys to these areas would be made by public or private transport they would be longer, more difficult to provide for and give rise to more congestion than is necessary. There is no proposal to increase capacity other than for public transport and to facilitate cycling and walking. However, it is unrealistic to suggest that there will be no increase in trips by private motor vehicles. Many of these trips will continue to be generated and are likely to increase in proportion to the scale of the new development, even if there is some shift to other modes of transport. Additionally, roads will get busier as a result of the other proposed major developments elsewhere in Cherwell and around Oxford. I see no evidence that this has been rigorously or robustly modelled. The Oxford transport strategy is described in the plan mainly in terms of its vision and objectives. In other words it is a set of hopes and wishes rather than an integrated, concrete set of funded projects that are designed to meet robustly modelled traffic flows. Any required highway projects, identified through a robust and up to date analysis, would have to be built in an area which is already environmentally sensitive and which suffers from noise and air pollution. Such projects would be likely to add to these problems suggesting that a completely different development strategy is required. Even the public transport projects identified in the infrastructure schedule have no costs and usually no source of funding identified. There is no certainty that even these can be afforded. The plan accepts that there is already an 'infrastructure deficit' and that investment is needed to cope with existing problems. These should be addressed before any further development is contemplated.

Changes Sought

Changes Sought: There is no robust or reliable evidence that the proposed transport policy will support the proposed development or that capacities can be increased without causing unacceptable harm. There should be a realistic plan for addressing existing problems together with a different spatial development strategy that directs growth and traffic flows away from Oxford.

Reasons for Participation

wish to participate as stated in representation above.

Object in relation to PR4a on the grounds that the transport infrastructure plan is not sufficiently robust and lacks clarity. The plan simply provides a list of aspirations and a statement that developments PR6 to PR10 are to make contributions to fund the transport infrastructure. This is not sufficiently robust and does not make clear what happens if only some of the developments proceed. Nor does it make clear that the required infrastructure will be in place when needed.

Proposed Submission Plan - Policy PR4a - Sustainable Transport

PR-C-1552	09/10/2017	Mark and Sandra	Bennett				
4881	Comments						
Strong opposition to any building application for houses/business units on the land to the rear of The Moors in Kidlington. The council has already listened to the residents of Kidlington who voiced their concerns when CDC looked and discounted this site as being unsuitable for housing. This is a GB area and as such is used by many residents and is the habitat for numerous wildlife, which must be protected. The traffic in Kidlington is at saturation point with the existing roads barely able to cope at certain times of day. An additional 300 houses plus industrial units in North Kidlington would likely generate another 450+ vehicles a day through Kidlington causing it to grind to a halt.

Object for the following reasons: 1. The closure of Sandy Lane will divert all traffic onto the A44 and cut a vital link between the villages of Yarnton, Begbroke and Kidlington. Many elderly people or those with health issues would be physically incapable of cycling.2. According to the plans that were presented by CDC at the exhibitions held in the summer, the only way out of the new development on the Eastern side of the A44 is via the road leading from the Science Park. This is clearly inadequate on safety grounds.3. The traffic lights at this junction currently prioritise traffic entering and leaving this road. This, coupled with the sequence of lights regulating the increased flow of traffic from Langford Lane and the new development/park and ride at Woodstock would make it virtually impossible to get out onto the A44 from Begbroke and even more dangerous than it already is crossing the dual carriageway from one side of village to the other without a pedestrian crossing. The representative from CDC I spoke to made it clear that no change to the A44 was planned. 4. More traffic will be using the A44 due to the new developments. Already we have traffic diverting from the A40 which passes through Bladon and down the A44 to avoid the queue on the A40 at the Wolvercote roundabout. All this traffic, including the proposed Rapid transit buses will be caught in the bottleneck from the Turnpike pub to the Loop Farm roundabout where the road becomes single lane. Widening it not an option due to the canal and railway bridges. 5. No consideration has been given to the additional traffic generated by events at Blenheim Palace. 100,000 cars were expected at Countryfile Live this year.6. The A34 is up to capacity. Since the M40 extension it is now a major north-south route as well as being a bypass for Oxford. The road is taking much more traffic than it was ever designed for. It could not cope with the added amount of traffic that a development of this size would generate.

Objects to the proposed submission plan because there is a lack of strong evidence for such a large number of houses needed. In order for our villages, towns & cities to remain distinct entities the amount they can expand should be limited. With no mechanisms to prevent this the end result could be one large urban conurbation. The GB is one way in which the individual character of our villages, towns & cities can be retained. If Oxford cannot meet its own housing need, then it has expanded as much as is possible. It should not be looking to neighbouring LA's to meet that demand. A false demand for housing is being created by proposed business developments. If Oxford cannot supply the amount of housing required by the business developments then the business development plans need to be re-visited. They should be scaled down so that the housing needs created by the development can be met on land within Oxford City. Building on the Green Belt: The Government's NPPF , Section 9 "Protecting GB land" states: "The govt. attaches great importance to GB's. The fundamental aim of GB policy is to prevent urban sprawl by keeping land permanently open; the essential characteristics of GB's are their openness & their permanence." Only in "exceptional circumstances" should there be any change to the GB. As there is not a real demand for this number of houses, I do not consider the circumstances to be anywhere near exceptional. I would consider the need for housing to be exceptional if there were no empty houses in or around Oxford & if new developments sold out immediately. This is not the case. E.g.. there is a perfectly habitable empty house, 2 doors away from us for nearly 18 months. The loss of character to Oxford & the surrounding areas would be irreversible if the GB were to be developed. Open space is important for human well being. Affordable housing: The area severely lacks this. Many families are moving away due to high house prices. The plans do not address this need. The proposed density of housing would only be profitable for the developers if sold at market rates. A higher density would be required for affordable housing. The amount of affordable housing proposed in plans does not get enforced so even if a suitable amount was being proposed, it is unlikely they will be built as developers will look at profit first. Transport: There have been many large & expensive projects over the last 2 decades attempting to address Oxford's transport problems, including the "Oxford Transport Strategy", work on most of the major ring road roundabouts & the Frideswide Square re-modelling. While these projects have made differences to some of the traffic flow & helped some areas, transport around Oxford still remains a major issue. There is no capacity within the ring road to add more infrastructure & the ring road is extremely busy during rush hours. If the new houses are to serve those working in Oxford, it will create even more congestion. I urge you to consider the impact that this number of houses would have on the area & go back to the beginning to consider if such a demand really exists.

Objections to the whole "Land Grab" between Oxford and Kidlington1 The land being claimed for housing development is all in the GB. Filling in the green belt between Oxford and Kidlington is a ribbon development and will result in Kidlington being absorbed into Oxford. Leaving a derisory small gap between the two settlements is a cynical gesture. 2 The land area being "grabbed" is much too large for the number of houses proposed, suggesting that many large detached houses will eventually be built. This is not what is required by local young people who hope to be employed in the Oxford area. 3 Recent recalculation of housing need in the UK has shown that the calculation of number of houses planned in this application is much too high. 4 Houses in the area around Oxford Parkway Station are likely to be bought largely by London commuters, not by people who plan to work in the local area. This will not satisfy local housing needs, and will push up prices. 5 Predicted house prices in the new Barton development near Oxford seem to be inflated by at least 50% above prices of existing comparable housing in the area. Artificial price inflation will result in any "low cost housing" being inflated in price also, so there will eventually be very little "low cost housing" suitable for essential workers in the Oxford area. 6. Local traffic around the south end of Kidlington and around Oxford Parkway Station is already very heavy, and there are very long delays in the morning rush hour. Very substantial re-planning of traffic flow would be required to accommodate cars from hundreds of new homes. Substantial land would have to be set aside for bus and cycle lanes and the local rail station car park would have to be greatly enlarged. This would contribute to the ugliness of the ribbon development, and use up valuable agricultural GB land.

Object to PR4(b) on the ground that it is vague and lacking content. Want to see recognition of the fact that the larger part of the High Street is residential and contains historic buildings and a conservation area. The shopping area is constrained in size by the road system and has limited parking. For this reasons significant new neighbourhoods should have their own convenience stores planning in. Also the buses for Oxford presently use stands in the High Street that would be impractical for more intensive use. Consideration should be given to using the laybys on the Oxford Road for the Rapid Transit service. Consideration should also be given to extending the proposed 20mph speed limit in the Oxford Road to the High Street. It is farcical to cite "the strengthening of Kidlington Centre" as a benefit from concreting the Green Belt (GB)! About as convincing as Cherwell other alleged benefits. If these are accepted as exceptional circumstances, the whole concept of GB is lost. Another ineffective policy.

Proposed Submission Plan - Policy PR4b - Kidlington Centre

PR-C-0237 15/09/2017 Karen East TMP Planning Ltd on behalf of Gosford and Water Eaton Parish Council N Y

815 Comments

North Oxford suffers from “high levels of congestion and delay” and that there are Air Quality Management Areas across the wholecity as a whole and on a small section of the Bicester Road due to high levels of pollution. The Parish Council considers that 4400 new homes (with 1410 in the Parish) will exacerbate these problems further and is not convinced that the transport measures set out are deliverable and will address these problems. Gosford and Water Eaton is criss-crossed by the main major highways (A34, A44 and A4165) bringing commuters and visitors to the City. Additional houses allocated within the Parish, and at Begbroke, Yarnton, Woodstock and Kidlington as well as further afield at Banbury and Bicester will all generate extra traffic which will be channelled through the Parish. Whilst the Parish welcomes the proposed transport improvements in the Plan remains unconvinced that sufficient funding exists or can be secured to deliver these improvements. Even with these changes in place the transport pressures in this area will remain. It is critical that these measures are delivered and in many cases, they are required to address problems now, even without a further 4400 houses in Cherwell.Traffic Leve:Oxford Road is regularly at a standstill from 7.00am on a working day. It can take minimum 45 – 60 minutes to get into Oxford City. Roundabout changes at Cutteslowe and Wolvercote have not made things better. Additional traffic will make the situation worse.The Bicester Road is similarly busy at peak times, often coping with traffic avoiding the congested A34. We would question what changes can be made on the slip road from A34 onto the Bicester Road in order to improve congestion in the long run. Bicester Road is used as a rat run when the A34 is blocked which happens frequently leading to congestion.An additional 4400 houses in Cherwell (1410 of which are in the Parish) together with further growth at Banbury, Bicester and Upper Heyford will put further pressure on the transport network through our Parish and exacerbate the problem. The new Westgate Shopping Centre is anticipated to be a major attraction drawing visitors in and traffic problems within Oxford related to this are already being reported locally. Bus Services PR2 (a) ii and (d) refer to improved bus services along the A4260/A4165. At present there are examples of bus services being reduced through Gosford rather than increased. The S5 service no longer runs direct from Gosford. Delays are due to increased traffic congestion Also concerned that charges at the P&R are increasing which will not help alleviate the problems.Where will additional space be found for a bus lane on Oxford or Bicester Road? Residents already experience problems from vibration in their houses from buses/lorries so if the bus lane is brought closer to their properties this will make the problem worse. How will an additional bus lane through Kidlington or Gosford be achieved. Previous proposals for pedestrianisation did not happen.Air Pollution:There are designated Air Quality Management Areas (AQMA) covering the whole of Oxford and on Bicester Road within the Parish. Given that the whole of the administrative area of Oxford City has been declared an AQMA it is difficult to believe that areas just immediately to the north of the City Boundary will not risk suffering equally from air pollution resulting from increased traffic levels. Within the Oxford AQMA the Wolvercote and Cutteslowe roundabouts are identified as hotspots for pollution both of which are close to Gosford and Water Eaton Parish. Do not consider that Cherwell has fully considered the air pollution impacts of the additional traffic on the Parish.Funding:

Appendix 4 provides a list of transport infrastructure improvements to support the growth proposed. Noted that whilst many of these are considered of “Critical” costs/funding are to be confirmed. Unclear whether these improvements will indeed secure the necessary funding. In addition, many of these schemes, require developer funding for implementation which are clearly yet to be secured. There needs to be a much clearer link between the transport improvements and new developments. Development should not go ahead until critical infrastructure is in place. Do not consider that Policy PR4 will achieve sustainable development, nor will it be effective in delivering the necessary improvements over the Plan. Unconvinced that the policy complies with the National Planning PolicyFramework paragraphs 29 and 30 in terms of delivering sustainable transport and reducing congestion.

Changes Sought

There needs to be a much clearer relationship between transport improvements and the delivery of new development. In our view there are too many uncertainties within the current plan regarding delivery and timing of new infrastructure. This needs to be made more explicit in Appendix 4 which should set out costs and funding sources and also how this is linked to delivery of development.

Reasons for Participation

The Parish Council would wish to take part in order to explain the potential impact of the proposed development on local communities and why this should be better reflected in the draft vision.

PR-C-0641 09/10/2017 Carole Pack N

1578 Comments

Objection on grounds that this policy is Not Positively Prepared. Kidlington has a vital and thriving village centre which is important to the identity of the village. It is a crucial feature of the Kidlington Master Plan. This must be supported and protected by CDC over the impact that major new housing areas and competing commercial development will have upon the High Street. Investment will be required and there is no delivery plan specified for feeding into the Kidlington Master Plan, including ways of accessing the amount of investment needed.

Transport has not been positively prepared. It fails to address the already polluted roads, traffic congestion and parking issues. It fails to explain how the roads will be improved to accommodate the thousands of extra cars and it fails to give any source of funding for improving roads/transport.

<p>Comments</p> <p>The Submission Plan (5.45) north Oxford suffers from “high levels of congestion and delay” and that there are Air Quality Management Areas across the whole city as a whole and on a small section of the Bicester Road due to high levels of pollution. Traffic Levels Oxford Road is regularly at a standstill from 7.00am on a working day. It can take minimum 45 – 60 minutes to get into Oxford City. Roundabout changes at Cutteslowe and Wolvercote have not made things better. Additional traffic will make the situation worse. The Bicester Road is similarly busy at peak times, often coping with traffic avoiding the congested A34. Bicester Road is used as a rat run when the A34 is blocked which happens frequently leading to congestion. The Submission Plan itself in 5.47 says: “Traffic modelling suggests that under the highway circumstances that exist in 2013, the 4400 new homes we are planning for would increase car journeys by 1.3-1.4% - a relatively small percentage change but one that must be seen in the context of a wider picture of existing traffic congestion and delay experienced on the network.” You have not explained where you got that figure. Are you anticipating one car per house (and ignoring the fact that most people rent out rooms) – the flat above us has three bedrooms and has two cars. An additional 4400 houses in Cherwell (1410 of which are in the Parish) together with further growth at Banbury, Bicester and Upper Heyford will put further pressure on the transport network through our Community and exacerbate the problem. The new Westgate Shopping Centre is anticipated to be a major attraction drawing visitors in and traffic problems within Oxford related to this are already being reported locally. Bus Services PR2 (a) ii and (d) refer to improved bus services along the A4260/A4165. At present there are examples of bus services being reduced through Gosford rather than increased. The S5 (Stagecoach) bus service no longer runs direct from Gosford, have more diverted routes and are busier and more delayed than previously. Delays are due to increased traffic congestion. No where do you mention the cuts that affected the bus routes across the whole county. Also understand that charges at the Park and Ride are increasing which will not help alleviate the problems. Where will additional space be found for a bus lane on Oxford or Bicester Road? One was there previously and was deemed unsuccessful and did not last more than a couple of months. Residents already experience problems from vibration in their houses from buses/lorries so if the bus lane is brought closer to their properties this will make the problem worse. How will an additional bus lane through Kidlington or Gosford be achieved. Given the above concerns do not believe that Policy PR4 will achieve sustainable development, nor will it be effective in delivering the necessary improvements over the Plan period. Remain unconvinced that the policy complies with the National Planning Policy Framework paragraphs 29 and 30 in terms of delivering sustainable transport and reducing congestion. Air Pollution There are designated Air Quality Management Areas (AQMA) covering the whole of Oxford and on Bicester Road within the Parish. This illustrates that there are recognised air pollution problems within and very close to the Parish. The most recent 2016 Air Quality Status Report for Cherwell confirms (Table 3.1) that nitrogen dioxide concentrations still exceed the national air quality objective for Bicester Road AQMA. Given that the whole of the administrative area of Oxford City has been declared an AQMA it is difficult to believe that areas just immediately to the north of the City Boundary (and within the Parish) will not risk suffering equally from air pollution resulting from increased traffic levels. Within the Oxford AQMA the Wolvercote and Cutteslowe roundabouts are identified as hotspots for pollution both of which are close to Gosford and Water Eaton Parish. We do not consider that Cherwell has fully considered the air pollution impacts of the additional traffic on the Parish. Funding Appendix 4 provides a list of transport infrastructure improvements to support the growth proposed. However, it is noted that whilst many of these are considered of “Critical” costs/funding are to be confirmed. It remains distinctly unclear as to whether these improvements will indeed secure the necessary funding. In addition, many of these schemes, it appears require developer funding for implementation which are clearly yet to be secured. There needs to be a much clearer link between the transport improvements and new developments. Development should not go ahead until critical infrastructure is in place. Proposed Submission Plan - Policy PR4b - Kidlington Centre

PR-C-0882	05/10/2017	Carl	Smith		N	N	N	Y
5210	<p>Comments</p> <p>8) There are no proposals for any form of innovative car free, or to discourage having cars associated direct with the proposed housing development areas, which could improve on housing density. 9) Concerned that a Brown Field site at the disused Shipton quarry & cement works has been dismissed from being identified as a proposed housing development area. It is understood from proposals many years ago that this development project was for a self contained settlement with a sustainable community consisting of a substantial number of homes provided with day to day facilities. This included a railway station link to close by Banbury / Oxford railway line, along with a park & ride service to Kidlington & on to the Oxford area. Being to the north of Kidlington it is close to the diversionary route for missing Kidlington using the A4260 Banbury Road junction with A4095 Upper Campsfield Road, leading to A44 Bladon Roundabout. In transport terms a proposal for such a Shipton development area would be superior to the housing development areas identified by CDC. Such a site would take away less Green Belt land, & being a new development with self contained facilities the designed layout would benefit from being planned from scratch. Rather than on an ad hoc basis, relying on existing over-stretched facilities, as proposed in the CDC Partial Review. Shipton quarry and cement works is proposed in the additional objections along with a suggested development area map. 10) Under PR4a - Sustainable Transport, the strategic developments provided under Policies PR6 to 10 is expected to pay substantial financial contributions towards providing the delivery of improvements and mitigations to the highway network, for providing other infrastructure and support for public transport. It is assumed that such financial contributions will come under Section 106, or a Community Infrastructure Levy (CIL). Therefore such funding of projects & improvements can only happen once a substantial amount of house building & purchase of homes has taken place, or from possibly other developer available funding. Also in the event of any shortfall of finances, then either such proposals will be deferred, or not come to fruition. This OBJECTION makes it clear that the proposals under the Cherwell Local Plan Partial Review (Part 1) will cause an unacceptable level of traffic congestion, pollution & road accidents for the road network around Kidlington & surrounding area. The representation includes a SUGGESTED BROAD BRUSHED BASIC ASSESSMENT TO INDICATE ABOUT THE ADDITIONAL POPULATION AND ADDITIONAL TRAFFIC WHICH IS LIKELY TO BE GENERATED ONTO THE LOCAL ROAD NETWORK IN KIDLINGTON AND SURROUNDING AREA DUE TO THE PROPOSED ADDITIONAL 4,400 HOMES (see representation).</p> <p>Changes Sought</p> <p>Change proposed area to Shipton Quarry Cement works site.</p> <p>Reasons for Participation</p> <p>Based on the representation, would like to reserve the right to respond if necessary.</p>							
PR-C-0882	05/10/2017	Carl	Smith		N	N	N	Y
5209	<p>Comments</p> <p>1) The statement in the Cherwell Local Plan Partial Review (Part 1) paragraph 5.47 about the ""traffic modelling suggests that under highway circumstances that existed in 2013 the 4,400 new homes would increase car journeys by 1.3% to 1.4%"". However for clarity this should have included quoting an increase in vehicular traffic generated by the proposed developments onto the local road network, and expressed as a range due to the many uncertainties associated with the CDC proposals. Detailed comments are made to support this view. 2) The attached broad brushed approach using data obtained from National Census 2011, D for T, Transport Trends 2015 and Oxford & Cherwell provides an estimate of 10,560 additional population with a likely additional of 26,400 to 31,680 vehicles per day. These will be using the local road network each day, & at peak times will be between 3,000 & 3,600. The Cherwell Partial Review does not provide any indication about what type of junction arrangements will be provided onto the existing local highway network for serving each identified development area. All this will have a significant bearing on the traffic capacity of the local highway network in Kidlington & surrounding areas at peak times. The existing highway network already indicated by OCC's current Local Transport Plan shows that in this area at certain pinch points the road network is already at an RFC of between 85% & 95% and will approach saturation point with additional traffic from proposed developments, where RFC equals 1.0. It is also noted in the OCC Local Transport Plan that during peak hours the A34 between Peartree & Botley interchanges reaches over capacity & unlikely to accommodate any more traffic generated from further Oxford developments. 3) There is mention of an A40 / A44 proposal to the south of Kidlington & a possible Oxford to Cambridge expressway some time (or never) in the future to relieve the A34. In the case of an A40/A44 Loop Farm roundabout link, it will generate more traffic onto the A4260 to Kidlington roundabout & use C43 Bicester Road, which is not an OCC Lorry Route. Also part of this road is identified for being provided with an Air Quality Action Plan, but suffers from Oxford and other long distance lorry drivers using this route as a rat run to & from A34, which is being ignored by the Authorities for implementing a much needed HGV ban. 4) There is mention about a proposal for an A4260/ A44 link to the north of Kidlington for diverting traffic away from Banbury & Oxford Roads, but traffic assignments involve route lengths and congestion where at peak times it could still mean being quicker to route along the main road through Kidlington, or rat run through The Moors which happens frequently at present. 5) As indicated in the Department for Transport National Transport Trends, in the Oxfordshire Local Transport Plan, and from recent automatic traffic counts the trend is for vehicular traffic to increase in the future, particularly under Oxfordshire planning to become an economic growth area. This does not seem to have been taken into account in the traffic assessment. 6) With the ever shrinking number of official car parking spaces in Kidlington the proposal for an additional 4,400 homes will lead to more on-street parking than happens at present, with less shoppers. 7) The new park & ride proposal at Langford Lane could mean more people bypassing Kidlington shopping centre as they head direct towards Oxford. However such a car park would help solve the on-street parking problems which happen along service roads in the business parks off Langford Lane.</p> <p>Changes Sought</p> <p>Reasons for Participation</p> <p>Based on the representation, would like to reserve the right to respond if necessary.</p>							
PR-C-1400	10/10/2017	Ms Deidre	Wells	Red Kite Development Consultancy on behalf of Kidlington Parish Council			N	Y
5353	<p>Comments</p> <p>This policy is fundamentally platitudinous, & it is difficult to see that it will achieve any of the positive investment necessary. We suspect it will be ignored by developers. The Policy is confined to addressing transport and movement issues, while the need is for far wider changes to improve the vitality, viability, scale and quality of services in the village centre. The adopted 2016 Kidlington Masterplan deals with these in more detail, but is limited to matching the restrained local growth anticipated in the adopted CDCLP. If substantial new strategic developments are encouraged in the local area, it is essential that the village centre is assisted to both protect its valuable function in the light of competing new destinations, and to genuinely secure enhancements, rather than accept them if they are offered, as the current Policy suggests. The principals set out in the adopted Masterplan- to reinforce the role of the village centre and to protect the individuality and sense of identity of the settlement - underlines the requirement for proper integration of any new development. KPC urges CDC to carry out a study to consider the impacts of the proposed new developments on the vitality and viability of Kidlington Centre as well as movement, and to include measures in the Plan to ensure its ability to thrive in the future, including investment where appropriate. NEW BACKGROUND RESEARCH: An assessment of the impacts of any proposed new large scale development on the vitality and viability of the village centre and movement around the village in the light of new development proposed, recommending new or enlarged facilities required, and ways in which necessary investment can be secured from new developments.</p> <p>Changes Sought</p> <p>Amend title to 'Securing Transport and other improvements to Kidlington Village Centre'. • Replace 'will be supported' to 'will be required' • Add to Policy 4B (or 4A) a requirement for all new strategic developments in the area to contribute to enhancing movement in Kidlington Village centre. NEW BACKGROUND RESEARCH 4.05 An assessment of the impacts of any proposed new large scale development on the vitality and viability of the village centre and movement around the village in the light of new development proposed, recommending new or enlarged facilities required, and ways in which necessary investment can be secured from new developments.</p> <p>Reasons for Participation</p> <p>KPC is an elected body, representing the views of a large number of people in the part of the District which will be most affected by the proposed alteration to the Development Plan. In addition to having a statutory role in the Planning process, the Parish Council has an in depth understanding of the local area where new development is proposed, and is well placed to contribute to the Local Plan process. It is essential for the KPC to be actively involved in the Examination, in order to be able to represent local views, fully respond to submissions made by others, and to address any modifications discussed in advance of the Examiners report.</p>							
PR-C-1422	10/10/2017	J K	Jutton					Y
4544	<p>Comments</p> <p>Object to PR4 (b). This policy is unsound as it clearly identifies the A44 as the priority route for private vehicles, while providing unconvincing proposals for improvements, only hoping more people would cycle or use public transport. There is a high risk of creating regular traffic gridlock by adding even more vehicles, as this route is often crawling during the weekday morning rush hour as the traffic funnels into the single carriageway constriction at the Cassington Road roundabout (Turnpike Public House), the road ahead constrained from widening by 2 bridges before struggling to join the ever busy A34 at the Peartree roundabout and join or cross the congested A40 ring road at the Wolvercote roundabout. Air and noise pollution levels along the Yarnton dual carriageway are already bad, and any new houses on the eastern side will from this environmental impact, as it would be situated downwind of the prevailing westerly airflow.</p> <p>Changes Sought</p> <p>Reasons for Participation</p> <p>Represented by Begbroke and Yarnton Greenbelt campaign group</p>							

Proposed Submission Plan - Policy PR4b - Kidlington Centre

We very much welcome that, per 5.13, the "strategy is Oxford specific; to provide homes where people can most readily connect to Oxford and sustainably access the city's employment areas, its universities and its services and facilities". This readiness to co-operate with neighbouring authorities is essential for coherent planning, and recognises the needs of both existing and future residents. The weakness of the plan arises from its acceptance of the current low densities of the area. The numbers of homes per hectare on the sites proposed in Table 4, around 20, are in line with those for existing 'fully developed' areas of Kidlington, but less than half in parts of Oxford, without any high rise development, and also without the outstanding existing and potential public transport options discussed in this plan. Planning for unnecessarily low densities means that new homes will, immediately via the open market, or over time as they are resold, be unaffordable by the keyworkers for whom they are meant. Measures to keep new homes affordable are welcome, but will be hard to maintain in the long run as long as there are not enough homes overall. The realism of para 5.13 should mean policies for Kidlington, Begbroke and Yarnton which allow the development of a new, distinct identities as local centres, so that they do not become low density dormitory suburbs, whether of Oxford or London. Higher densities should also apply to currently developed areas, in a way which works for existing residents, and reduce the area needed for new development. This would mean less loss of Green Belt, which will be welcomed by many, although this should not be an overriding objection. A gap between Oxford and these local centres risks undermining their connectedness with Oxford, as required by 5.13, so some Green Belt land will have to be re-designated. New policies suggested above for identities as local centres can offset this any loss in this regard. We strongly support policies for the encouragement of environmentally sustainable transport, such as the proposed new rail station at Yarnton, infrastructure required for rapid transport schemes, and better cycling facilities, especially allowing access to Oxford. Higher densities will also encourage walking, which is the most environmentally sustainable transport mode of them all.

Objection to Policy PR4b There is no need to strengthen Kidlington centre through transport improvements. Kidlington is served very well by buses which travel into the centre of Oxford, Headington hospitals and Woodstock. This is not an exceptional circumstance for the development of the Green Belt.

Policy PR4b – Kidlington CentreThe policy refers to securing improvements to Kidlington Village Centre, but further clarity is sought as how this is to be achieved when the proposed sites have their focus of attention generally directed towards Oxford or to a new neighbourhood centre in land to the East of Yarnton/Begbroke.It is difficult to envisage developer contributions coming forward towards enhancing the village centre and with changing retail habits and the locations of the proposed developments detracts from the vitality of the Kidlington Village Centre. Detailed work is required associated with this plan to provide evidence of what is likely to happen and how it is addressed associated with this Plan.

We are concerned about the vitality and viability of Kidlington Village Centre if the proposed developments take place, in the proposals there are sites that have been identified for small local centres which will include retail units, cafes/restaurants, community buildings and opportunities for leisure facilities. With the extra retail and café units it will put a strain on existing businesses in the village. We urge Cherwell District Council to carry out a study into the impacts of the proposed developments on the vitality and viability of Kidlington Centre and to ensure that the Kidlington thrives as a village centre once the development is completed.

It is difficult to see that this policy will achieve any of the positive investment necessary. The Policy is confined to addressing transport and movement issues, while the need will be for far wider changes to improve the vitality, viability, scale and quality of services in the village centre. The adopted 2016 Kidlington Masterplan deals with these in more detail, but is limited to matching the restrained local growth anticipated in the adopted CDCLP. PR4b.3 If substantial new strategic developments are encouraged in the local area, it is essential that the village centre is assisted to both protect its valuable function in the light of competing new destinations, and to genuinely secure enhancements, rather than accept them if they are offered, as the current Policy suggests. The principals set out in the adopted Masterplan- to reinforce the role of the village centre and to protect the individuality and sense of identity of the settlement - underlines the requirement for proper integration of any new development. I believe Cherwell should carry out a study as soon as possible to consider the impacts of the proposed new developments on the vitality and viability of Kidlington Centre, and to include measures in the Plan to ensure its ability to thrive in the future, including investment where appropriate.

Changes Sought

Reasons for Participation

1. Amend title to 'Securing Transport and other improvements to Kidlington Village Centre' 2. Replace 'will be supported' to 'will be required'
3. Add to Policy 4B (or 4A) a requirement for all new strategic developments in the area to contribute to enhancing movement in Kidlington Village centre.
NEW BACKGROUND RESEARCHAn assessment of the impacts of any proposed new large scale development on the vitality and viability of the village centre, recommending new or enlarged facilities required, including those of other stakeholders such as the CCG, and on ways in which necessary investment can be secured from new developments.

Proposed Submission Plan - Policy PR4b - Kidlington Centre

PR-C-1529	08/10/2017	David	Stone		N	N	N	Y
5432	<p>Comments</p> <p>2. The Plan is NOT POSITIVELY PREPARED. As already mentioned, the number of houses on the sites mentioned above, are unsustainable, and contrary to Cherwell's own Summary Document page 4, they will do exactly the opposite to "limiting Oxford's Outward Growth." Indeed, this will, propel further 'ribbon development' in the future. The Plan is deeply "flawed," there is no mention of how it will safeguard and aid the needs, environment, and access to free-movement of present communities, adjoining the A4165, from the Cuttleslowe roundabout to the Kidlington roundabout by bus, car, cycle or on foot, the same applies across the Wolvercote area to the west end boundaries, where the ultimate impacts of development at the Northern Gateway, Barton Park (further to the east) is as yet unknown. To suggest it meets with the Country Council's Oxford Transport Strategy, is a misnomer, because this strategy is not sufficiently robust to deal with present excessive traffic congestion and health damaging pollution. Further more it is reliant on speculative funding, which may never arrive. The Link road from Loop Farm A40 to A44, has been promised, but the funding is not in place. The congestion on the A40 is unsustainable and a northern link road is needed north of Kidlington to relieve the over-whelming volume of traffic. Travel from the Park and Ride designated for Eynsham, will be constrained by the reduced width of the bridge on the approach towards the Wolvercote roundabout, so traffic coming to Oxford will remain at a standstill. It is regrettable that the County Council policy has cut bus services from villages, whom also need access to employment, perhaps if some of these villages were a little larger, bus services might be more sustainable? According to Cherwell District Council's Local Plan Summary Document: -It will create balanced and sustainable communities? NO! It will overwhelm north Oxford and Kidlington. It will be supported by necessary infrastructure? NO! No concrete evidence to deal with existing infrastructure, let alone any new infrastructure. It will contribute to improving health and well-being? NO! It will increase detrimental health of existing residents in northern Cuttleslowe, north Oxford, Wolvercote and Kidlington. Traffic will be at gridlock all day, everyday, pollution all day, everyday at EXCESSIVE LEVELS in addition to present Oxford Air Quality, non-compliance. Elderly crossing the road or accessing the shops in our area will find it completely impossible. Cherwell District Council</p> <p>Changes Sought</p> <p>Remove the need for affordable housing, because, there is no way it will be affordable next to north Oxford. Be honest with people, tell them their lives in Kidlington and north Oxford are to be blighted with complete traffic gridlock and damaging vehicle pollution. Be legal by NOT destroying Greenbelt land next to Cuttleslowe Park, The Golf course, (an essential recreational resource currently), and stopping coalesce with Kidlington and north Oxford.</p> <p>Reasons for Participation</p> <p>Believes, with respect, the Inspector would much benefit from really listening seriously to ordinary people, regarding the very real experience and particularly genuine concerns of how these 'grand proposals' to 'illegally' destroy all the immediate greenbelt land around Kidlington and north Oxford, will have a completely devastating impact on the lives, health, well being and free movement of well established existing communities.</p>							

Proposed Submission Plan - Policy PR5 - Green Infrastructure

PR-C-0305	25/09/2017	Martin	Small	Historic England	Y	Y	Y	
902	<p>Comments</p> <p>Historic England welcomes "expectation" (5) "Demonstrate the opportunities for improving the existing and proposed built and natural landscape through the provision of GI and for the protection or enhancement of the historic environment" as part of the positive strategy for conserving and enjoying, and clear strategy for enhancing, the historic environment as required by the National Planning Policy Framework.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							
PR-C-0357	18/08/2017	Margaret & Nancy	Carrier					
992	<p>Comments</p> <p>I refer to Ref 5.67 item 5. iv. 'Responding to climate change' - Wish to refer to the traffic situation that occurs on the A44 running through Yarnton and Begbroke. Nitrogen oxide and other pollutants are generated by stationary, or slow moving vehicles during peak times in the day and this state already exposes vehicle drivers, passengers and house residents, in the vicinity of the A44, to significant health risks. To exacerbate this polluting situation by accepting CDC's plans for directing further traffic, from the proposed additional housing, to this traffic pinch point, is directly in contravention to our Government's current environmental protection drive and directly contravenes CDC's proposed intentions. Ref 5.67 item vi 'Protecting heritage assets' - CDC's plans totally ignore this consideration. Yarnton has a proven record of 5,000 years of continuous occupation, according to Oxford University archaeological studies and literature, and this individual identification is to be swallowed up and lost by the ill thought out urban sprawl proposed. This would be such a sad move by Cherwell District Council and not in line with historic protection measures taken by Oxford City and its associated towns and villages.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							
PR-C-0499	30/09/2017	Alan	Oliver			N	N	
1189	<p>Comments</p> <p>1. The sites are on Oxford GB. GB's remain Govt. policy. Land between N Oxford & Kidlington is unique as it fully accords with the 5 GB purposes as per para 80 of the NPPF. GB's are designated to manage the location of new development, they would not exist were there not pressure to develop on them. Such pressures cannot be considered exceptional circumstances. As per para 84 of the NPPF there's no evidence of alternatives being considered i.e.. using allocated, undeveloped employment land in Oxford for housing & promoting employment growth outside Oxford, creating a better balance between where people live & work. Have the LA's co-operated in looking at alternatives? This land being GB also complies with para 81 of the NPPF. It is used for sport & recreation, is biodiverse & visually pleasing. 2. The identified housing needs rely on an outdated study which has never been independently assessed. Revised Govt. figures indicate a reduced requirement. It now seems there is no need to build on GB. Even if there is a need on this scale, it is a poor location to meet Oxford's needs, being adjacent to a London commuter rail line & in the expensive part of Oxford. The private housing will likely attract London commuters & won't provide affordable homes for people with jobs in Oxford. It is evident that many house buyers in N Oxford are those moving from London & continuing to work there. 3. Unsound in allocating NOGC for housing & not taking into account NPPF para 74. Understand NOGC weren't involved in discussions prior to this. NPPF Para 74 says existing sports facilities shouldn't be built on unless it assessed as surplus to requirements or replaced by equivalent or better provision. No such assessment has been made. NOGC, a well established & thriving club with 475 members & 3000 visitors p.a. Its clubhouse is used by the wider community. As a flat course, it is especially suitable for seniors. NOGC is needed. It is not sound practice to propose allocating land for housing & to carry out a retrospective assessment of the need for a golf course. We need this space for the health & wellbeing of locals. The land at Frieze Farm as a replacement GC, appears to be an afterthought. It is too small. Building a new GC on a similar sized site to NOGC would cause H & S issues unless mature trees were in all the right places. No indication shown on how it could be financed or developed. Apparently the landowners have stated to NOGC that they have no intention of providing another GC or providing the level of funds that would be needed. The mature landscape central to the current GC couldn't be replaced in reasonable time & therefore the 2nd criterion of para 74 cannot be met.</p> <p>Changes Sought</p> <p>The housing allocations in the Kidlington Gap should be removed from the Plan & the Green Belt designation of the Killington Gap retained.</p> <p>Reasons for Participation</p>							

Proposed Submission Plan - Policy PR5 - Green Infrastructure

PR-C-0499	30/09/2017	Alan	Oliver		N		N	
1190	<p>Comments</p> <p>4. NOGC is a biodiverse landscape. Containing different tree species & 55 recorded bird species & pond life. The NPPF states this is important for health & wellbeing. It is much valued by locals. Land N of Cutteslowe Park is also important in this respect, changing the open nature the Parks. It is a well used facility. 5. The development will put further pressures on transport & other infrastructures. Seemingly funding bids for infrastructure are being made to cater for growth, but funding has not been secured. Growth shouldn't be approved until infrastructure can be provided & it's demonstrated that any proposed measures will be effective. Traffic in the N Oxford area is already severe. Work on the 2 roundabouts hasn't improved this. More housing will add to congestion & air pollution. Oxford has good public transport provision, but not all who work/live locally will use this. Increased housing & employment levels will add to congestion with its health implications. It will reduce Oxfords' attractiveness as a business location & place to live. Putting more housing & employment in this area cannot be viewed as sustainable. There are also severe existing pressures on other services including health and education.</p> <p>Changes Sought</p> <p>The housing allocations in the Kidlington Gap should be removed from the Plan & the Green Belt designation of the Kidlington Gap retained.</p> <p>Reasons for Participation</p>							

PR-C-0500	30/09/2017	Gill	Oliver		N		N	
1191	<p>Comments</p> <p>1. The sites are in the Oxford GB. GBs remain Government policy. The Kidlington Gap land is in GB and fully meets all 5 of the purposes of GB set out in para. 80 of the NPPF. GB's are designed to manage the location of new development and would not exist were there not pressure to develop within them. The existence of such pressures cannot therefore be considered exceptional circumstances. There is no evidence (as per para 84 National Planning Policy Framework) that serious consideration and cooperation by local authorities has been given to alternatives such as using allocated and underdeveloped employment land in Oxford for housing and promoting employment growth outside Oxford to create a better balance between where people live and work. This land is also used positively for outdoor sport, recreations and has value for biodiversity and visual amenity. 2. The identified need is based on an outdated study and revised Government figures indicate a much reduced requirement. This is a poor location to meet Oxford's needs as it is adjacent to a commuter rail line to London and in the most expensive part of Oxford for housing. Therefore will likely cater for London commuters rather than provide the required affordable housing. 3. Para. 74 of the National Planning Policy Framework says that existing sports facilities should not be built on unless an assessment is undertaken showing it is surplus to requirements of replaced by equivalent or better provision. No such assessment as been made. It is understood that the Golf Club were not involved in discussions prior to the allocation. The Golf Club is well established, thriving club whose facilities are also used by the wider community. As a flat course it is particularly suitable for senior members. This facility is clearly needed for the health and well-being of residents. The allocated land at Frieze Farm as a replacement golf course is seemingly an afterthought with no indication of how it could be developed or financed. The mature landscape central to the current course could not be replaced within a reasonable timescale. This creates major health and safety issues and does not meet the second criterion of Para 74. 4. The golf course is valuable in terms of biodiversity and landscape, containing 25 different tree species and 55 regularly records bird species as well as pond life. There would also be a negative impact on the open nature of the land to the north of Cutteslowe Park. 5. Further pressures will be put on transport and other infrastructures. No funding has been secured for further infrastructure and growth should not be approved until it can be demonstrated that any proposed measures will be effective. It has been reported that the recent works on the 2 roundabouts have not improved queue times. More housing will add to congestion and air pollution, put pressure on health and education services, as well as reduce the attractiveness of Oxford. It is difficult to understand that putting more housing and employment in this area can be viewed as sustainable.</p> <p>Changes Sought</p> <p>Housing allocations in Kidlington Gap should be removed from the Plan and GP designation of Kidlington Gap retained.</p> <p>Reasons for Participation</p>							

PR-C-0536	01/10/2017	Liz & Roy	Moore					N
545	<p>Comments</p> <p>The loss of countryside and green space will damage or obliterate what are currently rich and diverse wildlife and habitats, with additional and unsustainable pressures from increased visitor numbers on what little green space remains. These negative effects and enormous diminution of green space cannot be compensated for by the urbanisation of nature through theartificially created 'wildlife corridors' and miniature 'nature reserves' the Plan proposes. Nearly all the development sites are claimed to provide what are aspirational and unproven 'net biodiversity gains' and various conservation measures from 'green infrastructure' to 'enhancements' and tree and hedge retention schemes, with no evidence of how and by whom they will implemented and, critically, how they will be funded. The large area of public access land allocated in site PR9 is highly vulnerable to future housing development (and may be in reserve for that purpose); site PR8 is in damagingly close proximity to an SSSI. The band of land along the Cherwell valley fromShipton to Kidlington and beyond, including land behind The Moors in Kidlington (already at this early stage under threat of development) is a valuable and much-valued wildlife and recreational area and should be preserved as such.Green spaces. The NPPF (7.3) states that the Green Belt provides 'access to high quality open spaces for sport and recreation'. Huge swathes of these open spaces around Cutteslowe, Kidlington, Begbroke and Yarnton will be lost. They are the green lungs of these settlements, much loved for walking, dog walking, horse riding or for just enjoying the peace and tranquillity of the countryside.It would be tragic for them to disappear under housing, and nor can they be compensated for by the small areas of replacement green space provision outlined in the Plan, bearing in mind especially the huge increase in households that will substantially alter the ratio of green space to population numbers. All people have the right to access green space within walking distance of their home, whether opencountryside or sizeable parkland. Oxford is well endowed with green spaces, and consistently refuses development applications on them. It is unjustifiable therefore to deprive neighbouring settlements of their own green spaces. It is illogical and insulting for Cherwell to suggest that a benefit of the development plan is 'the opportunity [as opposed to the provision of] for improvements to the quantity and quality of new public open space, green infrastructure ... and in terms of access to the countryside' when the land that already abundantly provides this will disappear under housing and 'infrastructure improvements'. Cherwell's Local Plan pledges to 'Protect, enhance and make accessible for enjoyment the District's countryside'. (SO11), but the proposed development will do little to meet what Cherwell identifies as 'a key challenge to ensuring sustainable development' - the fact that: 'Cherwell's households have the lowest access to natural green space across the whole of the South East. 72% of households meet none of the Access to Green space requirements – a reflection of the low number of country parks and areas of common land in the district' (A25) On the contrary, the size and coalescence of the proposed development will mean that a substantial proportion of residents (most especially in the central spine of Kidlington) will not be within walking distance of significant areas of green space. The ANGST model promoted by English Nature is quoted in the letter. Cherwell's own open space standards are set out differently, but it is remains the case that the new development would be unlikely to comprehensively meet either of these standards and would substantially reduce existing access to sizeable areas of natural green space. Policy BSC10 Table 7 provided. Reduced access to open countryside will encourage people who now are within reasonable walking distance of the countryside to use their cars to go further afield, increasing traffic and pollution, also contrary to Cherwell's policy to reduce car use. Landscape and views. The proposed development will destroy or significantly damage our landscapes through the overpowering size and extent of development such as in the Begbroke Gap (PR8) (and notably along the Begbroke Lane public footpath), and alongside the Oxford canal, which Cherwell has pledged to 'protect and enhance... through the control of development. The length of the Oxford Canal through Cherwell District is a designated Conservation Area and proposals which would be detrimental to its character or appearance will not be permitted. The biodiversity value of the canal corridor will be protected.' (ESD16).</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							

Proposed Submission Plan - Policy PR5 - Green Infrastructure

PR-C-0766	10/10/2017	Haidrun	Breith	Berks, Bucks & Oxon Wildlife Trust					Y
1937	<p>Comments</p> <p>Welcome the inclusion of a Green Infrastructure (GI) policy to compliment the already existing and adopted Green Infrastructure policy ESD17 from the accepted Cherwell LP 2011-2031, Part 1. Understand that there is neither a GI strategy for the district nor for the county, which would help to inform decisions on GI networks. As a result the policy can address GI on a local level only but could potentially deliver greater benefits if information on strategic GI networks was available. Concerned about the lack of a county-wide strategy to identify, protect and enhance GI networks and recommend that the Council continues to work in partnership with the other Oxfordshire Councils with a view to develop a GI strategy for Oxfordshire in the future. Believe that such as strategy is also necessary to compliment and inform the draft Oxfordshire Infrastructure Study. Agree that Green Infrastructure includes open spaces not only for biodiversity but also for recreation or other uses such as food production. However, many habitats and species of nature conservation interest are sensitive to disturbance, pollution, recreational pressure or similar and it is important that GI planning takes account of this by avoiding development in close proximity of sensitive sites, providing adequate buffers to sensitive habitats and through the provision of high-quality recreational open spaces for people to use. Careful masterplanning is required to minimise impacts and to optimise GI as part of development.</p>								
	<p>Changes Sought</p> <p>Recommend the following minor changes to the wording. Suggested changes to wording provided. Also recommend that the term 'long-term' is defined in the supporting text. Long-term is often interpreted as 25 years, however, we consider this insufficient and believe that it should be understood as the lifetime of the development. The integration of GI into developments should be considered from the outset and at various levels e.g. at masterplanning level by providing adequate green corridors but also by including biodiversity enhancing measures within the built-up areas. Welcome the inclusion of GI in the policies but more detail could be provided in places either as part of the policy or in a separate guidance document (e.g. minimum buffers to retained hedges, minimum requirements for tree planting). This has been successfully done elsewhere, e.g. as a stand-alone document or as part of residential design guidance and BBOWT would be happy to assist in developing such a guidance. A table of potential measures to encourage biodiversity in development and to deliver benefits for people is attached in appendix 1 at the end of these comments.</p>			<p>Reasons for Participation</p> <p>Potential biodiversity impacts as outlined in the representation.</p>					
PR-C-0775	10/10/2017	Jon	Alsop	Savills on behalf of Christ Church, Exeter & Merton Colleges and Oxford University					Y
1963	<p>Comments</p> <p>Support with amendments. The consortium is supportive of the delivery of Green Infrastructure as part of the overall provision of new sustainable communities to the north of Oxford and in the A44 Corridor. However, and notwithstanding our comments regarding 'exceptional circumstances', there are limits as to the extent to which the planning applications that are submitted for each of the development sites are able to deliver Green Infrastructure measures, based on environmental suitability, long-term viability and the extent of land control.</p>								
	<p>Changes Sought</p> <p>Policy PR5 should acknowledge the restrictions and the wording of the policy be amended. Suggested changes to bullets 2 and 3 provided.</p>			<p>Reasons for Participation</p> <p>On behalf of the consortium, given the significance of their land interests, we would wish to participate in the oral examination.</p>					
PR-C-0842	10/10/2017	Duncan	Chadwick	David Lock Associates on behalf of University of Oxford, Merton College and a private landowner	Y	Y	N	Y	
5011	<p>Comments</p> <p>Policy PR5 sets out the importance of green infrastructure (GI) to strategic developments provided for under Policies PR6 to PR10 and how these strategic developments will be expected to protect and enhance GI. This is a general policy and whilst the NPPF (e.g. Paragraphs 58 and 114) advises of the need for local planning authorities to set out a strategic approach to the provision of GI in their Local Plans, planning positively for the creation, protection, enhancement and management of networks of biodiversity and green infrastructure, there is unnecessary duplication with the GI requirements within each strategic development policy. These requirements are more specific and appropriate to the individual strategic development sites respecting their own characteristics and circumstances. The Tripartite has suggested how Policy PR8 should be amended to reduce duplication, avoid unnecessary detail and enable flexibility to be provided within the Plan. Irrespective of this, on a detailed point, Policy PR5 states that applications will be "expected to show how existing trees will be protected and the opportunities for planting new trees" (Point 4). The Tripartite supports the aim of the policy, to protect and enhance GI, particularly in this location, where land is to be removed from the Green Belt as the Housing White Paper – 'Fixing our broken housing market' (2017) expects local policies to require the impact to be offset by compensatory improvements to the environmental quality or accessibility of remaining Green Belt land. However, the Tripartite consider that the wording of Point 4 is not sufficiently flexible and therefore not effective. Planning applications for strategic development are likely to include an Arboricultural survey, which will determine which trees should be retained given their quality, amenity value, condition, health and other constraints. A blanket policy requirement to protect all existing trees is unjustified in amenity, Arboricultural and practical terms and the wording of Point 4 subsequently needs to be revised.</p>								
	<p>Changes Sought</p> <p>Propose changes suggested: (4) include a tree survey of trees within the site/immediately adjacent to the site and an Arboricultural impact assessment showing which trees will be retained, how retained trees will be protected and the opportunities for planting new trees</p>			<p>Reasons for Participation</p> <p>The land owned and controlled by the Tripartite comprises some 86% of the largest draft allocation within the Plan and as such, occupies a unique and vitally important role in meeting Oxford's Unmet Housing Needs. As such, the Tripartite consider it is essential that it is present [and/or represented] and participates at the Examination in order to assist the Inspector by responding to any queries that may arise and supporting the assessment of the soundness of the Plan.</p>					
PR-C-0882	05/10/2017	Carl	Smith		N	N	N	Y	
5212	<p>Comments</p> <p>Objects based on an increase of the local population by an estimated 10,500 people will lead to the following problems: 1) The already overstretched existing local medical centres will be overwhelmed to such an extent as to a risk to those currently using them.2) Existing schools, already nearing pupil capacity would become overwhelmed. Any overspill from new developments in this area will mean more school car runs to a proposed new school in north Oxford, which will increase traffic congestion on the local road network. 3) There is an inadequate water supply or sewerage facilities for servicing the amount of proposed new development. 4) The policing in this area will become overstretched leading to more crime. 5) A RAG transport assessment has been carried out for comparison purposes between location option areas which were suggested in an earlier consultation for a proposed for housing development in Cherwell. However this assessment for selecting such locations could be considered rather meaningless without considering including the many other topics and issues associated with planning housing developments, which should include considering using a scoring technique for ranking the importance of each.</p>								
	<p>Changes Sought</p> <p>Change proposed area to Shipton Quarry Cement works site.</p>			<p>Reasons for Participation</p> <p>Based on the representation, would like to reserve the right to respond if necessary.</p>

Objects to green infrastructure proposals, as follows:- 1) The designated Parish circular walk around Kidlington, Gosford & Water Eaton (see attached map) seems to have been conveniently removed from the Oxfordshire internet published footpath maps of recreational walks. 2) The landscape assessments carried out by consultants for the Cherwell Local Plan Partial Review Part (1) seems to consist of examining the views in the proposed identified development areas rather than taking into account the scenic quality of the surrounding landscape. This is based on being viewed from both inside the various sites looking outwards, or from outside view points looking inwards, from such viewing points along the above circular walk with network of footpaths & from high vantage points. 3) In the case of earlier adopted Cherwell Local Plans the landscaped classification in the Green Belt to the east of Kidlington & surrounding area towards Water Eaton was classified as being of high landscape value. However this classification appears to now be conveniently dropped, although the landscape has not materially changed. Except for around the Park & Ride and Parkway area, where it is considered that the proposed planting screens around both these sites has not been properly established as shown when planning these developments. The landscape will be further degraded by the CDC housing development proposals particularly in the ""green gap"" between Oxford and Kidlington, where countryside walks along public rights of way will become scenically urbanised, by views of housing estates being blots on the landscape and causing more light pollution at night. 4) There is an objection that large areas of productive agricultural land will be lost to the nation by being replaced by housing estates and the site of the lost ancient village of Water Eaton located in the gap north of Oxford will be under concrete. 5) There appears to be no ecological assessment carried out into the impact on biodiversity in accordance with CDC Local plan Policy ESD10. Any new housing development, along with cosmetic treatment of public open spaces located where the countryside possesses a rich variety of wildlife will create a disturbing adverse influence over long distances. This is due to attracting an increase in human activities leading to litter, fly tipping, noise, uncontrolled dog walking and cats being able to roam and hunt wildlife freely. This will lead to the loss of many endangered identified breeding bird species that nest in this area such as Skylarks, Yellow Wagtails, Bullfinches and Yellow Hammers. 6) Although the CDC proposals for each housing development area are more than likely to include sustainable drainage systems, it is known from local experiences that these become poorly maintained and can lead to not only surface water flood problems, but also pollution of watercourses.

Changes Sought

Change proposed area to Shipton Quarry Cement works site.

Reasons for Participation

Based on the representation, would like to reserve the right to respond if necessary.

Comments

There are no details about who would pay for these additional facilities, who would build them, staff them or maintain them. Currently Oxfordshire's infrastructure is degrading, even before growth. Money from central and local government is not available to reach these objectives and, as has already been discussed above, the amount of funding being bid for my CDC is very unlikely to cover even modest road upgrades, let alone the costs of providing additional services capacity. Developer contributions are not always what we expected them to be. Perhaps the original planning permissions are gained without realistic assessment of the costs. Whatever the reason, it is entirely normal for developers to reduce their infrastructure contributions because their projects would otherwise not be feasible."

Changes Sought

Reasons for Participation

To have an opportunity to make a personal representation at the appropriate time and when further information is available about the scale of response to these plans. There will likely be many changes in circumstances between the submission of representations and the consideration of the outcome. I would like to be able to add additional relevant information at that time if appropriate. Also as Green Party Parliamentary candidate for many parts of the area under consideration I feel I should be able to give voice to the views of the Green Party supporters and voters when the time comes

Comments

Sport England welcomes the Council's references throughout the document and policies requiring developers to include open space, outdoor sport and recreation. However, Sport England is concerned that the Council has yet to publish its evidence base in relation to playing fields and outdoor sports provision and built sports facilities. The Council will need to ensure that all of the new development contributes towards indoor and outdoor sports facilities in the District. The Council's evidence base will help frame this work. Sport England also recommends that the Council includes a requirement for applicants to include a statement demonstrating how their development has met the 10 principles included in Sport England's Active Design document. See Section 3 of the document 'how to use Active Design' and the proposed change.

Changes Sought

Sport England recommends that the Council consult Sport England at the earliest opportunity on the preparation of the Playing Pitch Strategy. Sport England suggest the following text could be included in the policies to support Active Design; PR5 (10) Provide evidence of how the development has improved the health and well being of new residents by demonstrating how the proposals will meet the 10 Active Design Principles set out in Sport England's guidance document 'Active Design' <https://www.sportengland.org/facilitiesplanning/active-design>

Whilst support is given for the principle of the Policy and the spirit of what it seeks to achieve, concerns are raised regarding the unduly restrictive nature of the policy wording. As currently drafted it is considered that the Policy is neither effective nor consistent with national policy. As currently drafted the strategic developments “will be expected to protect and enhance green infrastructure (GI) and incorporate green assets and the water environment into the design approach for each site.” The Policy is drafted with this as an absolute requirement and does not allow any flexibility. Clearly new developments should seek to protect and enhance green infrastructure wherever possible, however it should be recognised that this will not be possible in all circumstances and this flexibility should be required. As currently drafted it appears that all elements of the proposals will be required to protect and enhance green infrastructure, rather than recognising that in certain circumstances some harm may be required, such as to facilitate access, and that this should be weighed in the overall planning balance. It is noticed that Criterion 1, does recognise the balance that must be struck. As such it is considered that the Policy wording should be amended as follows in order to be sound: “The strategic developments provided for under Policies PR6 to PR10 will be expected to protect and enhance green infrastructure (GI) and incorporate green assets and the water environment into the design approach for each site wherever possible.” In a similar vein, criterion 4 of the Policy requires that applications “show how existing trees will be protected and the opportunities for planting new trees.” Clearly the provision of tree protection details and planting plans would be a standard requirement as part of detailed development proposals for a site. Flexibility should however be introduced to this criterion in order to reflect the fact that in certain circumstances trees may need to be removed in order to facilitate the development, and this would in any event be weighed in the planning balance. Indeed, it should be recognised that not all trees on sites are suitable for retention, due to age, disease and safety concerns, and as such will be required to be removed as part of development proposals.

Green Belt - Yarnton and Begbroke are surrounded by GB land. It is what defines the two villages and allows them to retain their individual and historic characters and identities. They are part of a rural/historic part of Oxfordshire and this in turn helps to define Oxford City itself. To support this statement, the representation quotes the five points of Policy ESD14 of the existing CDC Local Plan (2015) which seeks to maintain the boundaries of the Oxford GB. The retention of GB land is also supported by National Government policies. The GB in this area contributes to the health and wellbeing of residents of Yarnton, Begbroke and Kidlington in particular (as well as those from further afield) through the use of public rights of way and other walks and rural pathways that provide them with access on their doorsteps to unspoilt open countryside and farmland, with its associated wildlife, and quiet peaceful places with wonderful views of nature that for many people helps to counter the stress of modern life. It also facilitates the farming of local land and production of locally sourced food products, which in turn support local agricultural employment. Cherwell District Council Health Walks Organisation leads weekly walks from the Royal Sun in Begbroke over Spring Hill (PR9) to Bladon and Yarnton, and across GB land east of the A44(PR8) towards the Oxford Canal. The present Plan proposes to replace this open countryside with “local nature reserves”, “nature conservation areas”, “public open green space as informal canal side parkland”, and “community woodland” (p.121, Nos. 8,9,10 and p.130, Nos. 5,6). But these are urban forms of green open space that are small - hemmed in by high density urban development, and not wild, open or peaceful in the way our GB land is. They are in no way an acceptable replacement for the GB land being removed and built on. The reasons given for removing land permanently from the Oxford GB do not demonstrate "exceptional circumstances": It would appear that the figures used to support the case for Oxford's alleged unmet housing needs are now in doubt and may therefore not longer be valid. In addition, Oxford City could consider Brownfield, GB and leisure sites as well as sites reserved for non-housing development with the City to meet it's own needs. It would make more sense for Oxford City to explore the possibility of incorporating further high density developments within its own boundaries where there are already precedents for such urban styles of building, rather than expect Cherwell to build high density developments on it's GB land, thereby changing the character of such historic rural localities for ever. How can it be right that Cherwell is being expected to sacrifice Green Belt land when Oxford is not prepared to do the same itself? The main areas of growth and employment in Oxford are now around the Headington and Cowley areas to the south east of the City, and jobs are continuing to be moved there from the city centre. This therefore negates the need to locate such high density development in this area which is on the opposite side of Oxford from the new and growing major employment opportunities. All other reasons become invalid once the key reason of Oxford's unmet housing need is dismantled.

Supports the overall spatial strategy, Vision & the new Spatial Objectives (SO16-SO19) as they specifically & positively respond to the issue of meeting Oxford's unmet need, & recognise that the strategy needed to be different to that of meeting the wider district needs. The strategy reflects how important it is for the sites to have a good spatial relationship to Oxford, & incorporates essential planning principles which align with those identified & agreed in the joint studies undertaken under the Growth Board; The strategy seeks to locate development so that it is well-connected to Oxford & supports the city's economy (Policy PR4a); & in addition it seeks to offer people convenient affordable & sustainable travel opportunities to the city's places of work, services, & facilities; These guiding principles are all welcomed. Supports the sites proposed in the Plan (Policies 6-10), which the evidence base demonstrates will offer residents good relationships to Oxford & sustainable travel options for accessing work & other requirements in Oxford. Welcomes how cross border issues including affordable housing & transport have been addressed for the sites which adjoin the administrative boundary, in order to achieve a joined up approach to design & integrated communities, particularly the links to the Northern Gateway site, access to Oxford Parkway station, & the sensitive consideration of Cutteslowe Park (Policy PR5).

Proposed Submission Plan - Policy PR5 - Green Infrastructure

PR-C-1442	10/10/2017	Tim	Lund	Oxford YIMBYs	Y	Y	N	N
4604	<p>Comments</p> <p>We very much welcome that, per 5.13, the "strategy is Oxford specific; to provide homes where people can most readily connect to Oxford and sustainably access the city's employment areas, its universities and its services and facilities". This readiness to co-operate with neighbouring authorities is essential for coherent planning, and recognises the needs of both existing and future residents. The weakness of the plan arises from its acceptance of the current low densities of the area. The numbers of homes per hectare on the sites proposed in Table 4, around 20, are in line with those for existing 'fully developed' areas of Kidlington, but less than half in parts of Oxford, without any high rise development, and also without the outstanding existing and potential public transport options discussed in this plan. Planning for unnecessarily low densities means that new homes will, immediately via the open market, or over time as they are resold, be unaffordable by the keyworkers for whom they are meant. Measures to keep new homes affordable are welcome, but will be hard to maintain in the long run as long as there are not enough homes overall. The realism of para 5.13 should mean policies for Kidlington, Begbroke and Yarnton which allow the development of a new, distinct identities as local centres, so that they do not become low density dormitory suburbs, whether of Oxford or London. Higher densities should also apply to currently developed areas, in a way which works for existing residents, and reduce the area needed for new development. This would mean less loss of Green Belt, which will be welcomed by many, although this should not be an overriding objection. A gap between Oxford and these local centres risks undermining their connectedness with Oxford, as required by 5.13, so some Green Belt land will have to be re-designated. New policies suggested above for identities as local centres can offset this any loss in this regard. We strongly support policies for the encouragement of environmentally sustainable transport, such as the proposed new rail station at Yarnton, infrastructure required for rapid transport schemes, and better cycling facilities, especially allowing access to Oxford. Higher densities will also encourage walking, which is the most environmentally sustainable transport mode of them all.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>

Proposed Submission Plan - Policy PR6a - Land East of Oxford Road

PR-C-0255	11/08/2017	Mr Ronald	Lloyd					N
99	<p>Comments</p> <p>The statements in CLPPR paras 5.78, 5.81, 5.82 suggesting that the merits of meeting housing numbers "far outweigh" those of a vibrant social facility - the Golf Course - appears to be another assertion without explanation. That the University has 'made the land available' raises questions as to why. There are of course obligations on councils to fulfil policy agreements, but Cherwell also has a responsibility to support NPPF guidelines (paras 73, 74) and its own vision (Executive Summary ix.4), and intelligently question the focus on housing targets in the City more than the County. Motives of the owners of land leased to NOGC will, one assumes, have been examined. It would not reflect well on the Council if it emerged that cash proceeds of the sale were judged more important than fulfilling a primary responsibility of the University to help sustain the health and social wellbeing of people who live in the City, and even the County, in its management of an extensive portfolio of land. It is a responsibility of Councils to challenge the University to uphold the interests of local people. The suggestion that land at Frieze Farm could be a location for NOGC has been rejected by many on grounds of inadequate size, and unattainable levels of spending to create a course in any way comparable with current one. It also questions the logic of invading greenbelt by digging up the golf course and moving it a short distance, when the case for not building houses at Frieze Farm has not been made. However much hard work has gone into producing the land allocation plan it behoves the Planning Department to give proper consideration to new information and alternative views - especially of local people whose health and wellbeing are directly affected.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							

PR-C-0225	24/08/2017	Mrs Anne	Davies		N	N	N	N
787	<p>Comments</p> <p>The policy needs to acknowledge that connectivity between areas of Oxford is already poor. The lack of joined up transport thinking in the plan suggests that it has not been appropriately scrutinised by either Oxford City Council or Oxfordshire County Council. If the justification for the release of land from the Green Belt is the requirement to meet Oxford's Housing need for Oxford City Council and the main employers, as the land is owned by Oxford University or its colleges, the development should be subject to a policy requirement that it is developed for key worker housing for the University, Brookes University, and the NHS Trust. If the land is to be sold on the open market to make already rich institutions slightly richer, this would not justify the release of land from the Green Belt.</p> <p>Changes Sought</p> <p>Reasons for Participation</p> <p>If the justification for the release of land from the GB is to meet Oxford's housing needs, the development should be subject to a policy requirement that it is developed for key worker housing for the University, Brookes and the NHS. If the land is to be sold on the open market, this would not justify the release of land from the GB. The policy should state that critical transport improvements should take place at developers' costs before works begin. The terms of the S106 agreements should be published so that local residents know what to expect Oxford University to provide.</p>

The National planning Policy Framework (NPPF) at Section 9 attaches great importance to green belts (quote provided). If these sites are taken out of the Green Belt, Oxford and Kidlington will inevitably merge - the division between the settlements will at best be the already developed roundabout into Kidlington. Large scale housing development of the sort to be authorised by the policy is a classic example of inappropriate development in the Green Belt which should only be permitted in Very Special Circumstances. The Very Special Circumstances claimed by Cherwell District Council are the ability to provide homes for Oxford on land to be made available by Oxford Colleges on land which is very sustainable in transport terms and with a community integrated with Oxford and access to jobs and amenities within Oxford. However, no controls are proposed through policy on the future use of the land. There is nothing in the proposed policy approving the development on the basis that it is used in its entirety to meet the housing needs of Oxford by providing long term social or key worker housing for the University, Colleges or Hospitals - a circumstance which arguably could amount to very special circumstances. Instead, it would simply constitute additional housing to meet the housing need of Oxford, Reading or London if it were occupied at all. Furthermore, with its location so close to Oxford Parkway station the likelihood is that any private development will become housing to fulfil a need in London, not even locally. Without constraints on occupation, the legal test for development in the Green Belt cannot be considered to be met and the development is not justified adequately or at all. Furthermore, if delivery of units for occupation of the site is to begin in 2021, the infrastructure improvements for the development which are identified as "critical" in Appendix 4 should be provided in advance and any planning permission for the development should not be allowed to come forward unless all the infrastructure is provided before the works begin. This infrastructure should include the provision of the extension to Water Eaton Park and Ride (currently identified as a long term aspiration 2026-2031); Bus Lane improvements (medium term so to be provided between 2021 and 2026 - potentially after 530 units on sites 6A and 6B are built and occupied. These improvements are identified as Necessary or Critical. There are proposals for a Cycle Super-Highway which again is identified as Critical but a Medium Term aspiration. There are regular injury accidents on the Sainsbury's Roundabout into Kidlington and these facilities should be upgraded as a matter of course - certainly before the introduction of a further 1000 homes. Note that the funding for all the highway and infrastructure improvements is currently "TBC". If these improvements are "critical" as stated, they should be required by policy to form part of a Section 106 obligation to be carried out at the Developer's cost prior to the development of the allocated sites. If the infrastructure development does not take place, but housing development does, Oxford will become significantly less accessible from Kidlington.

This development will result in the loss of agricultural land (48Ha) and a highly valued local landscape which is used by local residents for recreation. Adding 650 houses will lead to a substantial reduction in the gap between Oxford and Kidlington and urbanisation of Gosford and Water Eaton. It is noted in the Plan in 5.83 that this area is viewed as a new North Oxford neighbourhood, however the land is within Gosford and Water Eaton Parish and should be recognised as such especially given the scale of development planned. All references to this land should be credited to Gosford and Water Eaton in any future documentation. In terms of specific comments: • In total 1410 dwellings are proposed in the Parish. 650 of these are on this site. This number will have a major impact on transport infrastructure in particular on the already heavily congested Oxford Road. The Parish considers that traffic from this development will increase congestion further. It is not clear how the transport improvements including new bus lane (and/or cycle lane provision) can be implemented without further problems for Oxford Road residents who already suffer from congestion, delay, air pollution and vibration caused by passing lorries/buses. • In the Green Belt Study (April 2017) this site was categorised as "High" in terms of harm to the Green Belt from its release for development. The PC concurs with this view and consider that it would significantly erode the gap between Kidlington and Oxford, especially in combination with removal of the Park and Ride site from the Green Belt. This would result in continuous development up to the railway/A34. This will lead towards the coalescence of Gosford/Water Eaton/Kidlington and Oxford. The area has no easily definable boundary to the east which raises further concerns about how development may be contained in the long run. Whilst opposed to the development on this land, if it were to go ahead would wish to see the following incorporated in the proposals: • Support the 50% affordable housing provision, however it is important that Cherwell DC, robustly enforces this policy and ensures that affordable housing is equally available to residents of Gosford and Water Eaton Parish in perpetuity. • Providing community facilities for residents is welcomed although have concerns as stated about the traffic implications of this and the impact on Kidlington Centre which is much used by Gosford and Water Eaton residents. There are major pressures on existing community and health facilities in the area and therefore it is critical that new facilities are delivered. • Green spaces- The provision of public open space/wildlife habitats is welcomed however would seek reassurance that this land will be protected from future development and will remain permanently in the Green Belt. • Wildlife habitats should be properly investigated and protected.

Changes Sought

Reasons for Participation

Wish to see this allocation deleted and the land retained as Green Belt.

The Parish Council would wish to take part in order to explain the potential impact of the proposed development on local communities and why this should be better reflected in the draft vision.

Reasons for Participation

For the reasons I have given above AND the Representations made by the Begbroke & Yarnton Green Belt Campaign which I additionally support and adopt as part of my own Representation in this document, the Plan cannot be changed to make it legally compliant or sound and should therefore NOT be submitted for Inspection.

Would like the Begbroke & Yarnton Green Belt Campaign to represent me at the Examination should it take place.

Proposed Submission Plan - Policy PR6a - Land East of Oxford Road

PR-C-0305	25/09/2017	Martin	Small	Historic England	Y	Y	N	
-----------	------------	--------	-------	------------------	---	---	---	--

903

Comments

According to Historic England records, the site "Land East of Oxford Road" is within the setting of, rather than includes, the Grade II* listed St Frideswide Farmhouse. As the Council will be aware, paragraph 126 of the National Planning Policy Framework requires local planning authorities to recognise that heritage assets are an "irreplaceable resource" and "conserve them in a manner appropriate to their significance". Paragraph 129 notes that the significance of a heritage asset can be affected by development affecting its setting, and paragraph 132 recognises Grade II* listed buildings to be assets of the "highest significance", substantial harm to or loss of which should be "wholly exceptional". The rural context of the farm is likely to be an important aspect of its significance, and Historic England considers that this should be assessed through a Heritage Impact Assessment before the site is taken forward, in order to ascertain the acceptability of development over what area of this site. Historic England notes that requirement 15 of Policy PR6a requires an HIA to be undertaken by a prospective developer to support an application which will "include measures to avoid or minimise conflict with the identified heritage assets within the site, particularly the Grade 2* Listed St Frideswide Farmhouse". However, we consider this to be too late in the planning process, which gradually firms up this allocation as the Plan progresses. We therefore consider that Policy PR6a fails to provide adequate protection for St Frideswide's Farmhouse in accordance with the National Planning Policy Framework and therefore object to this policy and consider it not to be sound. We welcome the presumed intention behind requirement 18 of Policy PR6a for the application to be supported by an archaeological investigation which may "then require predetermination evaluations and appropriate mitigation measures" as part of the positive strategy for conserving and enjoying, and clear strategy for enhancing, the historic environment as required by the National Planning Policy Framework. However, requirement 18, as drafted, only notes that the archaeological investigation may require predetermination evaluations and appropriate mitigation measures respectively. It does not require these measures to be incorporated in or to influence the actual development scheme. The same flaw is evident in requirement 15 in that it only requires the HIA to include measures to avoid or minimise conflict with the identified heritage assets, not these measures to be incorporated into any proposed development scheme. Historic England therefore considers that the policy provides inadequate protection for the Farmhouse (and potential archaeological remains on the site) in this way too, and that Policy PR6a as written does not conform with the Framework and thus is not sound for this reason too. Historic England supports requirement 24 and, in principle, requirement 28, although it should be reworded to make it clear that the location of archaeological features should help determine the landscape design of the site.

Changes Sought

The site "Land East of Oxford Road" should not be taken forward without an assessment of the significance of St Frideswide Farmhouse, the contribution of its setting to that significance, and the likely impact of proposed development on that significance. (Discussions with the Council are ongoing at the time of submitting this representation, but early indications are that the Council will consider commissioning such an assessment prior to submitting the Plan. If it was to do so, and Policy PR6a amended as necessary to our satisfaction, Historic England's objections to the Policy on the basis of the impact on St Frideswide Farmhouse would be overcome). If, however, Policy PR6a remains without that assessment, Requirement 15 of Policy PR6a should be reworded as follows: "15. The application shall be supported by a Heritage Impact Assessment which will identify measures to avoid or minimise conflict with the identified heritage assets within the site, particularly the Grade 2* Listed St Frideswide Farmhouse. These measures shall be incorporated or reflected, as appropriate, in any proposed development scheme." In either event, Requirement 18 should be reworded as follows: The application(s) shall be supported by a desk-based archaeological investigation which may then require predetermination evaluations and appropriate mitigation measures. The outcomes of the investigation and mitigation measures shall be incorporated or reflected, as appropriate, in any proposed development scheme". Requirement 28 should be reworded as follows: "The location of archaeological features, including the tumuli to the east of the Oxford Road, should be incorporated and made evident in the landscape design of the site". (Discussions with the Council are ongoing at the time of submitting this representation, but early indications are that the Council will consider rewording these requirements as suggested as minor modifications. If it was to do so, Historic England's objections to these requirements would be overcome).

Key Delivery Requirements' on all these policies are nothing more than a fig leaf. It is perfectly obvious the developers will agree to some or all of them and then will renege on them. This always happens. 50% affordable housing will be thrown out of the window as it has been in Templars Square where 50% has magically transformed into 23%. Similarly, developers never actually deliver infrastructure like schools, community centres or roads that are wide enough. The 'Place shaping principles' in these policies are valueless: there are no measure by which they might be enforced. How can one tell, for example, whether an extension "responds to the 'gateway' location of the site". It's gobbledygook. PR11: This is completely empty. 'Working with partners' does not guarantee anything except that you have no control over the outcome. Nor does 'setting out the Council's approach'. Its all very well having the development proposals demonstrate that infrastructure requirements can be met - it does not mean they will be met.

GREEN BELT: Over the past 50 years or so the Kidlington Gap has been steadily eroded with a large part now earmarked for the norther Gateway development, and the remaining gap largely comprised of PR6a and PR6b. The Cherwell Green Belt Study by LUC in April 2017 judged that the level of harm in releasing these two sites would be high. Paragraph 80 of the National Planning Policy Framework sets out the five purposes of the GB in checking unrestricted sprawl, preventing towns merging, safeguarding the countryside, preserving historic towns and assisting in urban regeneration. PR6a and PR6b prevent Kidlington and Oxford merging, and the LUC report states that "this release would result in the A34 becoming the Green Belt boundary from the Northern Gateway up to Oxford Parkway station, leaving only the width of a single field to separate Oxford from Kidlington". and that the "physical prominence of the golf course makes it an important buffer feature on the urban edge...". Development of these sites would also damage the rural setting of an important City with a rich heritage of history, architecture and culture. Cherwell considers the that the removal of these sites is justified by exceptional circumstances, but has failed to realise both the international importance of Oxford as a city and the likelihood of these homes providing for London commuters rather than Oxford. Cherwell has also failed to give proper consideration to other sites in its area that are not in the GB.

UNMET HOUSING NEED': The figures put forward by Oxford City as unmet housing need are highly questionable, and Oxford City does not yet know how much of its 'unmet housing need' it can cater for as it has only just finished consulting on its Preferred Options and its Local Plan has not been prepared. It also continues to allocate land for employment and expects other authorities to meet its 'unmet housing need'. The Government's new method for calculating Objectively Assessed Housing Need suggests that Oxford has significantly over-stated its housing need. Cherwell's current proposals seem to have been produced with undue haste and this approach is not justified. Site PR6a is adjacent to an area of GB land put forward for development by Oxford City, and neither council has considered or publicised the cumulative effect of both parcels of land being removed from the GB. The Councils have not demonstrated effective joint working on cross-boundary strategic priorities so these policies are not effective.

It is not considered therefore that the impact on the Conservation Area is a valid one for rejecting allocation of the Webb's Way site. The Council acknowledges that the Webb's Way site is located in a suitable location to accommodate Oxford's unmet need and has good access to services and facilities in Kidlington. Although the Webb's Way site is a relatively small site, it is important to allocate a mix of housing sites, as smaller sites have the benefit of enabling development to come forward at an early stage in the plan period as significant infrastructure provision would not be required, thereby enabling an early contribution towards meeting Oxford's unmet housing need. In addition, the impact of developing a small site adjoining the existing settlement of Kidlington would have a much smaller impact on the purposes of the Green Belt than the large areas which it is proposed to allocate under policies PR6a and PR6b, which are located in a critical location in the Kidlington Gap as set out in the accompanying Green Belt representations. It is therefore considered that the failure to allocate land at Webb's Way, Kidlington does not represent the most appropriate strategy when considered against the reasonable alternatives and the plan is therefore unsound in this respect.

Changes Sought

Amend the strategy to remove, or at least minimise, the amount of land to be removed from the Green Belt in the 'Kidlington Gap' by instead removing other areas, such as the J A Pye (Oxford)Ltd land at Webb's Way, Kidlington (PR32), which the Cherwell Green Belt Study (April 2017) has identified would cause less harm to the Green Belt.

Reasons for Participation

J A Pye (Oxford) Ltd owns land at Webb's Way, Kidlington and wishes to ensure that the argumentis strongly made for the removal of this site from the Green Belt and its allocation for housingdevelopment, which would help to address Oxford's unmet need.

Comments

Appendix 4 of the council's HEELA states that the site (HEELA168) 'is considered to be unsuitable for development as the site is an important open space within the Church St Conservation Area & provides a rural setting for the church and its environment.' While it is accepted that this is the case with the outer fields which are not proposed for development, it is not the case with the inner field, which is screened by a continuous thick hedgerow on its eastern boundary. Aspect's comments on the potential impact on the Conservation Area are contained in paragraph 3.7 of the Landscape & Visual Appraisal of Land at Webb's Way (January 2017) , where they state that: 'It is considered however that, on the ground, the south western part of the site is not readily perceived and does not appear to contribute to the setting of the Conservation Area, particularly when compared to the more open network of fields to the north east which are publicly accessible and from which views towards the church are available. This part of the site does not appear to be related to the listed buildings or the setting of the Church or Mill End. It is acknowledged that the proposals will change the character of the site, however, various post- war residential developments to the south east and north west of the site, immediately adjacent to the Conservation Area and the listed buildings of Mill Street have been integrated without harm to the setting of these buildings or the wider designation. It is considered that a sensitively designed development can be integrated without compromising the perceived landscape setting of the listed buildings or Conservation Area. '

Comments

Much of the land proposed to be allocated to meet Oxford's unmet need is not located close to existing service centres. As a result new service centres are proposed to be created under the allocation policies for Begbroke (policy PR8) and land east of Oxford Road (policy PR6a). The effect of this is that these new developments will not be served by or support the important Kidlington Village Centre. This would conflict with the aspiration of the Cherwell Local Plan 2011- 2031 Part 1 policy Kidlington 2, which is entitled 'Strengthening Kidlington Village Centre,' which states that it is proposed in part 2 of the Local Plan to expand the geographical area defined as Kidlington Village Centre, with the aim of supporting the viability and vitality of the existing village centre and encouraging economic activity. This is also the aspiration of the adopted Kidlington Masterplan, Theme 3 of which is 'Strengthening Kidlington Village Centre,' with the objective being: 'To strengthen the Village Centre, increasing its mix of uses and vitality and its attractiveness to local residents, employees and visitors as a place to shop, work and spend leisure time during the day and evening.' None of the proposed allocations to meet Oxford's unmet need, which amount to a total of 4,400 dwellings, would help to achieve this objective, however, as they are all located well away from Kidlington Village Centre, with the most significant amounts of development being allocated on the northern edge of Oxford; and at Begbroke and Yarnton.

Comments

In order to increase footfall to Kidlington Village Centre it is important that some of this development is located much closer to the village centre. One such site is the J A Pye (Oxford) Ltd land at Webb's Way (as indicated on the attached Site Location Plan L02) and there are also other potential sites that could be allocated, as indicated in the council's HEELA and Green Belt Study. Allocating the land at Webb's Way would also enable a significant contribution to be made towards providing green infrastructure in the area in accordance with proposed policy PR5, which requires development proposals meeting Oxford's unmet need to show how multi-functioning Green Infrastructure can be provided including the restoration or re-creation of habitats; biodiversity enhancements; informal and public open space and movement corridors. The Landscape & Visual Appraisal (January 2017) carried out by Aspect, which is submitted with these representations, indicates that the south western part of the site is well contained, being adjoined by residential development on three sides and a hedgerow on the other and has the capacity to accommodate sensitively designed residential development. The north eastern part of the site is more open and this part of the site would be a suitable location for landscaped public open space and wildlife habitats.

Comments

It is believed these proposals are not consistent with National Policy because they do not take into account the detrimental effect that removing these large areas of Green Belt will have. These proposals therefore fail to meet the test of soundness as defined in paragraph 182 of the NPPF. Oxford's local plan has not yet been prepared so Cherwell's allocation of homes is premature and is not an appropriate strategy and is unjustified.

Does not believe that the proposal to develop the land between Cutteslowe Park and the Parkway Station is in compliance with national policy and in particular with the NPPF. Furthermore, does not believe that Oxford's housing needs have been properly calculated and feel that they are presently overstated. Indeed the recent announcement by the government which changes the way in which housing needs are to be assessed undermines the whole planning process. Until the figures are recalculated, the Consultation and Examination in Public should be suspended. In addition, Oxford's Local Plan is not yet in existence and so the proposals, so readily accepted by Cherwell, have little or no validity. Cutteslowe Park is a wonderful local facility enjoyed by so very many people who use it for a wide variety of recreational uses. The unique feature of the park is its rural setting with wide open spaces and farmland views to the north and east. The park has many public footpaths leading from it onto and across the farmland, particularly to the north but also out towards the village of Islip. The proposed development would remove the rural setting, which would be so very disappointing. Also of concern is the fact that there is no physical or geographic boundary to the east of the proposed development area and has a very real fear that if PR6a is allowed to be developed, in future years the land owner will seek to build on land further to the east and towards the village of Islip. In addition the development of this land would adversely affect the setting of the two Grade II*listed buildings at Water Eaton Manor and St Frideswide's Farmhouse. The development of the land within PR6a and PR6b would cause the coalescence of Oxford and Kidlington and therefore be against NPPG paragraph 80. Although the present plans indicate additional park land will be provided, there is no guarantee of this and feels that it would not be delivered. Firmly believes that any houses built on the land (PR6a), being so close to the Parkway Station, would be built for and occupied by people commuting to London. How would that help Oxford's housing need ? Clearly, it would not. Firmly believes that the Green Belt should be preserved and that brown land within the city should be developed for housing and not for additional office and business space. The Northern Gateway is an example.

Changes Sought

Thinks that Cherwell should be directed to hold the present process in abeyance until Oxford's Local Plan is in place and until after the government's new method of calculating required housing numbers has been carried out.

Comments

Sites PR6a and PR6b are large expanses of open land forming part of the key gap separating Oxford from Kidlington. They meet all of the purposes of a GB. In addition, development of site PR6a would involve the loss of attractive open farm land and seriously harm the character and setting of St. Frideswide's Farmhouse, an idyllic 16th century Tudor stone house listed as Grade II *. Site PR6b is a well-established golf course, that provides a valuable sports facility, and its loss, with the consequent need to replace it elsewhere, makes little sense.

PR-C-0499	30/09/2017	Alan	Oliver		N	N
1190	<p>Comments</p> <p>4. NOGC is a biodiverse landscape. Containing different tree species & 55 recorded bird species & pond life. The NPPF states this is important for health & wellbeing. It is much valued by locals. Land N of Cutteslowe Park is also important in this respect, changing the open nature the Parks. It is a well used facility. 5. The development will put further pressures on transport & other infrastructures. Seemingly funding bids for infrastructure are being made to cater for growth, but funding has not been secured. Growth shouldn't be approved until infrastructure can be provided & it's demonstrated that any proposed measures will be effective. Traffic in the N Oxford area is already severe. Work on the 2 roundabouts hasn't improved this. More housing will add to congestion & air pollution. Oxford has good public transport provision, but not all who work/live locally will use this. Increased housing & employment levels will add to congestion with its health implications. It will reduce Oxfords' attractiveness as a business location & place to live. Putting more housing & employment in this area cannot be viewed as sustainable. There are also severe existing pressures on other services including health and education.</p> <p>Changes Sought</p> <p>The housing allocations in the Kidlington Gap should be removed from the Plan & the Green Belt designation of the Kidlington Gap retained.</p> <p>Reasons for Participation</p>					
PR-C-0499	30/09/2017	Alan	Oliver		N	N
1189	<p>Comments</p> <p>1. The sites are on Oxford GB. GB's remain Govt. policy. Land between N Oxford & Kidlington is unique as it fully accords with the 5 GB purposes as per para 80 of the NPPF. GB's are designated to manage the location of new development, they would not exist were there not pressure to develop on them. Such pressures cannot be considered exceptional circumstances. As per para 84 of the NPPF there's no evidence of alternatives being considered i.e.. using allocated, undeveloped employment land in Oxford for housing & promoting employment growth outside Oxford, creating a better balance between where people live & work. Have the LA's co-operated in looking at alternatives? This land being GB also complies with para 81 of the NPPF. It is used for sport & recreation, is biodiverse & visually pleasing. 2. The identified housing needs rely on an outdated study which has never been independently assessed. Revised Govt. figures indicate a reduced requirement. It now seems there is no need to build on GB. Even if there is a need on this scale, it is a poor location to meet Oxford's needs, being adjacent to a London commuter rail line & in the expensive part of Oxford. The private housing will likely attract London commuters & wont provide affordable homes for people with jobs in Oxford. It is evident that many house buyers in N Oxford are those moving from London & continuing to work there. 3. Unsound in allocating NOGC for housing & not taking into account NPPF para 74. Understand NOGC weren't involved in discussions prior to this. NPPF Para 74 says existing sports facilities shouldn't be built on unless it assessed as surplus to requirements or replaced by equivalent or better provision. No such assessment has been made. NOGC, a well established & thriving club with 475 members & 3000 visitors p.a. Its clubhouse is used by the wider community. As a flat course, it is especially suitable for seniors. NOGC is needed. It is not sound practice to propose allocating land for housing & to carry out a retrospective assessment of the need for a golf course. We need this space for the health & wellbeing of locals. The land at Frieze Farm as a replacement GC, appears to be an afterthought. It is too small. Building a new GC on a similar sized site to NOGC would cause H & S issues unless mature trees were in all the right places. No indication shown on how it could be financed or developed. Apparently the landowners have stated to NOGC that they have no intention of providing another GC or providing the level of funds that would be needed. The mature landscape central to the current GC couldn't be replace in reasonable time & therefore the 2nd criterion of para 74 cannot be met.</p> <p>Changes Sought</p> <p>The housing allocations in the Kidlington Gap should be removed from the Plan & the Green Belt designation of the Killington Gap retained.</p> <p>Reasons for Participation</p>					
PR-C-0500	30/09/2017	Gill	Oliver		N	N
1195	<p>Comments</p> <p>1. The sites are in the Oxford GB. GBs remain Government policy. The Kidlington Gap land is in GB and fully meets all 5 of the purposes of GB set out in para. 80 of the NPPF. GB's are designed to manage the location of new development and would not exist were there not pressure to develop within them. The existence of such pressures cannot therefore be considered exceptional circumstances. There is no evidence (as per para 84 National Planning Policy Framework) that serious consideration and cooperation by local authorities has been given to alternatives such as using allocated and underdeveloped employment land in Oxford for housing and promoting employment growth outside Oxford to create a better balance between where people live and work. This land is also used positively for outdoor sport, recreations and has value for biodiversity and visual amenity. 2. The identified need is based on an outdated study and revised Government figures indicate a much reduced requirement. This is a poor location to meet Oxford's needs as it is adjacent to a commuter rail line to London and in the most expensive part of Oxford for housing. Therefore will likely cater for London commuters rather than provide the required affordable housing. 3. Para. 74 of the National Planning Policy Framework says that existing sports facilities should not be built on unless an assessment is undertaken showing it is surplus to requirements of replaced by equivalent or better provision. No such assessment as been made. It is understood that the Golf Club were not involved in discussions prior to the allocation. The Golf Club is well established, thriving club whose facilities are also used by the wider community. As a flat course it is particularly suitable for senior members. This facility is clearly needed for the health and well-being of residents. The allocated land at Frieze Farm as a replacement golf course is seemingly an afterthought with no indication of how it could be developed or financed. The mature landscape central to the current course could not be replaced within a reasonable timescale. This creates major health and safety issues and does not meet the second criterion of Para 74. 4. The golf course is valuable in terms of biodiversity and landscape, containing 25 different tree species and 55 regularly records bird species as well as pond life. There would also be a negative impact on the open nature of the land to the north of Cutteslowe Park. 5. Further pressures will be put on transport and other infrastructures. No funding has been secured for further infrastructure and growth should not be approved until it can be demonstrated that any proposed measures will be effective. It has been reported that the recent works on the 2 roundabouts have not improved queue times. More housing will add to congestion and air pollution, put pressure on health and education services, as well as reduce the attractiveness of Oxford. It is difficult to understand that putting more housing and employment in this area can be viewed as sustainable.</p> <p>Changes Sought</p> <p>Housing allocations in Kidlington Gap should be removed from the Plan and GP designation of Kidlington Gap retained.</p> <p>Reasons for Participation</p>

1219	<p>Comments</p> <p>GB is designed to protect from overdevelopment. If PR6 and /or PR7 are permitted, Kidlington, Yarnton and Begbroke will become victims of urban sprawl and become a suburb of Oxford. This GB should not be sacrificed as it will irrevocably damage the countryside, wildlife and biodiversity of North Oxfordshire, reducing quality of life for local residents.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>					
PR-C-0518	25/09/2017	Zoe	Christodoulou			N
1239	<p>Comments</p> <p>Objects to PR6a. The use of GB land for meeting Oxford's unmet housing need is not justified & not consistent with NP. Allowing development on the "Kidlington gap"(PR6a & b) will completely remove Kidlington's identity as a separate village. Kidlington will become a suburb of Oxford in it's increasing urban sprawl, which the GB is meant to prevent. This proposed site will encroach on the countryside, which once gone will be lost forever. The increased traffic into the local roads will lead to more congestion & increased journey times both by car or public transport. The likelihood is that housing here will do little to ease Oxford's housing problem as the proximity to Oxford parkway means that a large proportion will be purchased by Londoners who will then commute back via the train.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>

Comments

Objects to PR6a. It is not a justified or proven requirement & is inconsistent with national policy. New Govt. methods for calculating housing need indicates that 30% fewer houses are required in Oxfordshire than previously forecast. Consequently the basis for allocating housing to accommodate Cherwell & Oxford City's requirements are overstated & invalid. Less land will be required to accommodate development & there are no exceptional circumstances to warrant the release of land from the GB. Without prejudice to the above point, proposals to release Cherwell's GB to meet Oxford's needs are premature & unjustified as Oxford City is in the process of reviewing its LP & has not yet determined how much housing development can be accommodated on land within the City's boundaries. PR6a lies in the Kidlington Gap (core GB that separates Oxford & Kidlington). Development here would be in direct contravention of the fundamental aim of GB policy, preventing urban sprawl by keeping land permanently open. The Kidlington Gap serves all the five purposes of the Green Belt which are: (lists the 5 purposes) & it is strategically important. It is a clear example of an open area preventing the coalescence of settlements, checking unrestricted sprawl & safeguarding the setting & character of historic Oxford city. Its loss would fundamentally undermine the principles of GB policy. PR6a is unsustainable on its own & in conjunction with other planned releases from the GB for housing. Infrastructure & services in & around Oxford are already under strain i.e.. Schools, hospitals/healthcare & roads. There is no capacity for major additional development. The infrastructure & services of Oxford & its surrounds are already beyond capacity. Further population is unacceptable. The road network in the immediate & wider environs are already highly congested. There are no clear, identified & funded proposals in the Plan to address these issues.

Changes Sought

Delete PR6a housing allocation on land to the east of Oxford Road. Delete PR6b housing allocation on land west of Oxford Road. Delete PR7a housing allocation on land south east of Kidlington. nDelete PR7b housing allocation on land at Stratfield Farm. Delete PR8 housing allocation on land east of the A44

Support for Cherwell Local Plan 2011-2031 (Part 1). Obvious need for new houses in area. While GB is valued it should be used as an aid to creating good plans, not a straight-jacket to frustrate them. The land of PR6a is not of high amenity visually or practically. and is ideally suited to housing. Land for PR6b is equally suited to housing, and I have no objection to moving the golf course further away from the centre of Oxford. Oxford has great opportunities to grow, in enterprise and in employment. The notion that business should be denied land so that housing needs can be met is absurd. Gaps in the current plans should be addressed in due course. In particular transport, for cars, bikes, and pedestrians need careful attention. I should particularly like to see proposal for a safe and quiet footpath between the existing housing in the area of Harbord Road and Five Mile Drive, and Oxford Parkway Station.

Comments

These comments apply equally to PR6a and PR6b. The GB reserved areas between North Oxford and Kidlington provide a critical buffer between the two areas. If they are allowed to merge, then Oxford and Kidlington become one large sprawl. Already the A4165 Oxford Road is hugely over-congested, with stationary traffic every day in the morning rush hour, and this would just make matters worse. PR6a and PR6b are undesirable developments which violate national GB planning policy. A non-urban buffer zone in this area must be maintained. Maybe a legal justification can be forced through but it is entirely unwanted by local residents and would be vigorously opposed.

Changes Sought

Drop PR6a and PR6b. Housing needs can be met by expanding other areas if necessary.

Comments

The exceptional need to build 650 homes on this area due to few alternative locations being available is not proven, convincing or justified. This planning solution for meeting housing needs is insensitive towards overdevelopment to nearby villages, as well as the preservation of already too little remaining natural space and wildlife. How could this possibly therefore be effective or result in potentially healthy new living space? Using small bit of green space left would only be a temporary measure with irreversible consequences. Infrastructure plans are afterthoughts not actually agreed, funded or guaranteed by potential developers. The current infrastructure in surrounding areas, rapidly deteriorating and under increasing duress, surely needs to be a paramount consideration before exposing it to further demands. Consistent with National Policy? Only, and at best are 50% of these homes planned to accommodate housing needs which means that the remaining land will be used purely for property investment. Property investor's interests should surely not be underlying necessities in any GB development state as an exceptional cause? Justifying this plan as an exception to meet urgent needs therefore is not in compliance with the national GB policy. Decision making by any parties that stand to profit from the success of this planning should not be allowed. GB space is labelled as such to cap the area from inevitable demand of expansion. This development would link Kidlington to the outskirts of the city centre and would result in an urban sprawl thus eliminating a small but precious pocket of wildlife and character. The high quantity of housing threatens the already deteriorating and increasingly grid-locked infrastructure. Decision makers for these plans and deciding on the fate of GB areas should be those it will affect as there is no question it will have an impact on their quality of life.

Changes Sought

Changes to Plan 6a - so that it is more legally compliant and sound. 1. If using our GB areas is truly the only option for development then Cherwell should decline and point to other solutions such as a. Brownfield sites within Oxford or further out. b. Current and numerous vast amounts of land either being reserved for commercial use (much of it not looking very utilised or successful). 2. Ensure affordable housing is defined and that proposed housing estates are more than 50% (at least 65%) toward the housing need, not the interest of property investors. 3. Current infrastructure problems to be considered by developers as a paramount concern. 4. Funding of infrastructure plans to be agreed and legally bound by property investors before the start of any development. 5. The decision making process should be ultra-sensitive and rigid to the aesthetics at risk.

Comments

Proposal not consistent with national policy because they do not take into account the detrimental effect removing large areas of GB will have. Proposal fails to meet the test of soundness as defined in para 182 of the National Planning Policy Framework. Oxford's Local Plan has not yet been prepared so Cherwell's allocation of homes is premature, not an appropriate strategy and is unjustified. Oxford City Council should be utilising their own unused land such as Lord Nuffield Grounds and Oxford Greyhound stadium before pushing housing to other districts. It is unlikely that low density housing will be affordable for key workers. Barton Park prices and the proximity to the train station will make this area very attractive to London commuters. Traffic congestion will just get even worse and no consideration has been put forward to alleviate this (in addition to the air quality hotspots). Cutteslowe Park and its infrastructure will be detrimentally affected by an obvious increase in its resources.

These proposals are not consistent with NPPF. They don't take into account the detrimental effect that removing large areas of GB will have. These proposals therefore fail to meet the test of soundness as defined in paragraph 182 of the NPPF. • Oxford's LP has not yet been prepared so Cherwell's allocation of homes is premature, is not an appropriate strategy & is unjustified. GB boundaries should be meaningful. The existing boundaries of the Oxford GB should be upheld wherever possible. Current citizens have a responsibility to future generations. Oxford's GB exists to protect the countryside & individual communities. Once built on, this & the environment will be lost forever. It is vitally important that the rural landscape & open space be preserved, as it currently is by GB designation. CDC's policies seem to have no regard to the importance of the Oxford GB, & don't take into account other current new developments, e.g. Barton Park, traffic, transport, the likely availability of affordable housing under their policies, all of which would have to be resolved by Oxford. As Oxford has not yet made available its LP, Cherwell's policies seem particularly ill-timed.

1429	Comments									
GB: CONCLUSIONS: 1. Government Policy and the Public Interest both require the GB to be permanent unless truly exceptional circumstances necessitate consideration of release. 2. Oxford unmet need is not an exceptional circumstance, firstly because it has not been defined and secondly because there are ample reasonable alternatives to accommodate it. 3. The LUC GB study was conducted on flawed principles and should be given little weight. 4. Cherwell have cited no other exceptional circumstances which hold any water – and their primary arguments – proximity to Oxford – is in fact a key argument for GB retention rather than release. 5. If at some future time an Oxford “unmet need” has been shown to exist and satisfactorily quantified, and if that requires any allocation to Cherwell, there are alternatives available to the District other than releasing GB land and therefore none should be released.										
Changes Sought					Reasons for Participation					
In CPRE's view, it is not possible to 'tweak' the current document in order to make it sound and therefore the current version of the Plan should be rejected. CDC should re-visit the process, as and when the final numbers for Oxford have been examined, adopting higher densities and prioritising protection for the GB.					CPRE Oxfordshire represents a wide membership across the County, including many parish councils and local organisations, and seeks to influence development to protect and enhance the countryside. As one of the founders of the Oxford GB, we have considerable knowledge about its origins, purpose and ongoing relevance.

TRANSPORT - THE PROPOSED NEW STATION AT KIDLINGTON/BEGBROKE. The initial proposals for the development made great emphasis on the provision of a new railway station “between Kidlington & Begbroke”, the implication being that this station would cater for the needs of residents to reach their places of employment in Oxford and that therefore the housing plans are more sustainable. The relevant railway line is that from Oxford and the south to the midlands and north via Banbury. It is intensively used with half hourly cross-country trains and frequent freights including regular intermodal trains from and to Southampton docks. There is also a local service of 12 trains per day each way (9 on Saturdays, 3 on summer Sundays, none on winter Sundays) calling at the intermediate stations at Tackley, Heyford & Kings Sutton. North of Aynho Junction, as far as Banbury, these trains all have to interwork with the three trains per hour on the Chiltern Line to and from London Marylebone. There are presently no proposals for a new station on this line, nor are there likely to be. Neither Network Rail, Oxfordshire County Council nor any train operator has any aspiration for a station here. It does not feature on any relevant route study or strategic proposal. For example, we note that no such plans have been included in the Oxfordshire Infrastructure Strategy, signed off by the Oxfordshire Growth Board in September 2017, which claims to 'provide a view of emerging development and infrastructure requirements to support growth from 2016 to 2031 and beyond'. This includes a description of numerous rail improvement projects both pre and post 2031, as well as listing infrastructure priorities for the A40 Corridor, but gives no mention at all to a new station in this area. Journey time for the local trains is 30 minutes and they only just slot in between the other services; in other words, a train leaving Banbury soon after the previous southbound train only arrives in Oxford just before the next one. To add an extra stop on the route would make this pathing issue even more tricky. It would be possible to accelerate the journey time with electric trains which have better acceleration and deceleration rates and thus allow an extra stop in the same timetable but although the previous government did announce a scheme to electrify this railway as part of its “electric spine” in 2012, this has been deferred and there is at present no prospect of this happening. Great Western Railway (GWR) operate the local trains and they do have an aspiration to increase the frequency to a train every 90 minutes across the whole day but it is only an aspiration, not a timed commitment. Even that frequency is not really sufficient to attract substantial numbers of commuters to use rail on a daily basis. For that a half hourly service level is, these days, a basic requirement. The station at Oxford Parkway, opened in October 2015 and connected to Oxford station in December 2016 has in any case now become the railhead for Kidlington, swathes of north Oxford, Headington and surrounding villages. The rail industry as a whole is thus utterly unlikely to wish to commit to another new station “between Kidlington and Begbroke”.										
Changes Sought					Reasons for Participation					
References to the station should be removed from the Plan as it is not deliverable within the lifetime of the Plan and therefore is not effective. Any element of development that is dependent on this station being delivered should be removed from the Plan as unsound. Plans for additional housing in north Oxford/south Kidlington should be put on hold until the Oxford to Cambridge Expressway route is settled, the East West railway is re-opened and the full extent of the expansion of Bicester is agreed, with its possible new transport infrastructure.					CPRE Oxfordshire represents a wide membership across the County, including many parish councils and local organisations, and seeks to influence development to protect and enhance the countryside. We would like to attend the oral part of the Examination.

1420	<p>Comments</p> <p>Government Policy requires development in the GB to be the very last resort, only to be considered if there is no alternative. Cherwell has stood that Policy on its head by making building in the GB its very first choice, rejecting what it accepts were reasonable alternatives. Cherwell says that building as close to Oxford as possible trumps all other considerations. Since Oxford is surrounded by GB, that has led them to select not just GB sites, but the very closest GB sites to the City, at the Kidlington Gap, where the GB is most fragile, just a few fields wide. It is those few fields the Council plans to build on, flatly contrary to GB policy, and the known wishes of the overwhelming majority of its electorate. If the Council gets away with this plan, it will also, again contrary to GB policy, cause the merger of Yarnton and Begbroke into Kidlington; expose Kidlington itself to being engulfed by the predatory City Council which has sought to subsume it for at least thirty years; and also, by declaring that proximity to Oxford is itself an exceptional reason to build on the GB which surrounds the City, fundamentally undermine its very purpose, risking opening the whole GB to development.</p> <p>Changes Sought</p> <p>In CPRE's view, it is not possible to 'tweak' the current document in order to make it sound and therefore the current version of the Plan should be rejected. PR-C-0562	05/10/2017	Helen	Marshall	CPRE Oxfordshire	N	Y
1421	<p>Comments</p> <p>CPRE is opposed in principle to the release of GB land – as is national planning policy. A very strong case therefore has to be made to establish the exceptional circumstances required for the release of GB land. The Cherwell Plan goes nowhere near making such a case; Cherwell's electorate strongly supports retention of GB land as does Government Policy. There are a number of reasonable alternatives. The houses to satisfy Oxford's 'unmet need' targeted at the Cherwell GB could not only, on the Council's own admission, be sustainably built elsewhere in the District on other sites, or by increasing the density of build on existing sites, but also, at least to a considerable extent, within the City itself. Failing that, if there were genuinely no available option other than release of GB, national policy indicates that Cherwell would be expected to decline to do so and require other Councils to co-operate in meeting the unmet need Cherwell itself cannot satisfy. Additionally, during the course of the consultation, the Government published a revised Objectively Assessed Need (OAN) calculation, showing a total Oxford need of half that identified by the Oxfordshire Strategic Housing Market Assessment (SHMA). If adopted the new formula would make it certain that Oxford could accommodate all of its own housing need, and therefore there would be no "unmet need" for Cherwell to meet. The proposed OAN also reduces Cherwell's own need by a third, meaning that even if there were any Oxford unmet need to be covered, it could be met within the surplus the new OAN creates in Cherwell's adopted plan. This review is therefore premature and should be suspended at least until new "need" figures are crystallised.</p> <p>Changes Sought</p> <p>In CPRE's view, it is not possible to 'tweak' the current document in order to make it sound and therefore the current version of the Plan should be rejected. CDC should re-visit the process, as and when the final numbers for Oxford have been examined, adopting higher densities and prioritising protection for the GB.</p> <p>Reasons for Participation</p> <p>CPRE Oxfordshire represents a wide membership across the County, including many parish councils and local organisations, and seeks to influence development to protect and enhance the countryside. PR-C-0562	05/10/2017	Helen	Marshall	CPRE Oxfordshire	N	
1422	<p>Comments</p> <p>The primary duty of a Local Authority must be to the people it represents. In an independent market research exercise, with a very high sample size, conducted across Oxfordshire by Alpha Research of Thame in April 2015 respondents were specifically prompted that there was considered to be a need for more housing, and of the extent and purpose of the GB, before being asked whether the GB, should be developed for that, or indeed any other, purpose. Their answers were therefore fully informed by recognition of housing need. 76% of respondents considered that the GB should remain undeveloped; 66% considered housebuilding the greatest threat. Although polls have something of a tarnished reputation, this has resulted from situations where marginal inaccuracy can lead to wholly incorrect forecasts in narrow binary decisions. In this case the sample size was so large and so representative, and the outcome so conclusive, that whilst there might be up to a 5% margin of error, this would not be capable of affecting the result, or its scale. Further, this is in line with previous polls, adding to confidence that it accurately reflects public opinion. The same exercise showed that in North Oxfordshire – closely correlating to Cherwell - the outcome was hardly less conclusive, with 71% of respondents supporting the proposition that the GB should not be developed for housing or any other purpose. This was despite years of constant media campaigning by the City Council that Oxford has "no option" but to spread over the GB unless people are to go homeless (a wholly fallacious claim). Despite the City's campaigning, 73% of non-homeowners, and 74% of C2DEs agreed that the GB should not be developed for housing. In other words, the people who would be expected to have been the most responsive to the City's campaigning rejected GB development almost as strongly as the general population. Indeed 73% of the City Council's own constituents rejected it. There can be no doubt that the people both of Oxfordshire, and of Cherwell itself, reject GB development in principle, and this must be given great weight in any consideration of doing so.</p> <p>Changes Sought</p> <p>In CPRE's view, it is not possible to 'tweak' the current document in order to make it sound and therefore the current version of the Plan should be rejected. Proposed Submission Plan - Policy PR6a - Land East of Oxford Road

PR-C-0562	05/10/2017	Helen	Marshall	CPRE Oxfordshire	N	Y
1423	<p>Comments</p> <p>The NPPF states that one of its Core Planning Principles (para 17) is to take account of the different roles and character of different areas, promoting the vitality of our main urban areas, protecting the GBs around them, and noting (at para 79) that the fundamental aim of GB policy is to prevent urban sprawl by keeping land permanently open. Paragraph 83 states that once established, GB boundaries should only be altered in exceptional circumstances, through the preparation or review of the Local Plan. The recent Housing White Paper, clarifies what the steps before a finding of “exceptional circumstances” should be, when local authorities can demonstrate that they have fully examined all other reasonable options for meeting their identified housing requirements. Amongst these “reasonable options” which Local Authorities must demonstrate they have considered before there can be the “exceptional circumstances” required for review/release of GB land are: • making effective use of suitable brownfield sites and the opportunities offered by estate regeneration; • the potential offered by land which is currently underused, including surplus public sector land where appropriate; • optimising the proposed density of development; and • exploring whether other authorities can help to meet some of the identified development requirement. Although not yet law, the White Paper illustrates how high the hurdle for exceptional circumstances must be, given that the NPPF’s “fundamental aim is keeping GB land permanently open”, and the need to show there are no “reasonable options” before considering GB release.</p> <p>Changes Sought</p> <p>In CPRE's view, it is not possible to 'tweak' the current document in order to make it sound and therefore the current version of the Plan should be rejected. PR-C-0562	05/10/2017	Helen	Marshall	CPRE Oxfordshire	N	Y
1424	<p>Comments</p> <p>OXFORD'S 'UNMET NEED' AND REASONABLE OPTIONS FOR MEETING IT. 1. Is the Oxford unmet need real or realistic? Cherwell argues that an “exceptional circumstance” exists in the Inspector approving the adopted plan having added a requirement for “a formal commitment from the Council, together with other relevant Councils, to undertake a joint review of the boundaries of the Oxford GB, “once the specific level of help required by the city of Oxford to meet its needs that cannot reasonably be met within its present confines, IS FULLY AND ACCURATELY DEFINED”. (Our emphasis) It was our view at the time that the Inspector could have exceeded his remit as there was no evidence before him suggesting that further development in Cherwell was impossible without breaching the GB, nor of the precise quantum of Oxford’s unmet need (if any existed) or the capacity of other Districts to accommodate it. However it is relevant that he proposed a Review only AFTER Oxford’s unmet needs were fully and accurately defined. They still are not, and a review is therefore premature even on the Inspector’s terms. According to the City Council in a report to Scrutiny Committee (12th June), the agreed unmet need allocation, is used as a working basis for current local plans in Oxfordshire which will be updated when the Oxford Local Plan is completed. In other words it is presently neither fully nor accurately defined, as the Inspector had required it should be. Oxford has only now started its own Local Plan process to reflect the Oxfordshire Strategic Housing Market Assessment (SHMA), three years after it was published, and long after Oxfordshire’s other Districts. Its draft Local Plan gives no figure for unmet need, or for the City’s capacity to meet it. However, taking Oxford’s overall “need” to be for 28,000 houses over the plan period, CPRE argues that at least 26,000 could be provided inside the City itself by switching employment sites – the use of which for employment would only exacerbate the housing need the City Council describes as being its Number One priority to overcome – to housing, and increasing densities on all sites to compact city levels. That is even before the outcome of a review of further sites to which the City refers in its plan. (See Oxford/Densities paper attached) Consequently the Inspector’s condition, that Oxford’s unmet need should first be “fully and accurately defined” is nowhere near met, and, further, there would be little or no “unmet need” for other Authorities to consider. In any event, a “working assumption” of need cannot be an exceptional circumstance justifying GB release, especially when it is likely to be extremely inaccurate. Finally, during the course of this consultation the Government has proposed a new OAN formula to replace the SHMA (on which all the Review numbers are based). This new formula, if adopted, would reduce Oxford’s total annual housing need from a SHMA mid-point of 1400 per annum to 746, that is by 47%. This would in turn reduce “unmet need” by two thirds, even before taking into account that the City should use employment land to satisfy existing housing need rather than exacerbate it and build at densities appropriate to cities. The new OAN is at the very least further evidence that the level of unmet need this review seeks to satisfy is neither fully nor accurately defined.</p> <p>Changes Sought</p> <p>In CPRE's view, it is not possible to 'tweak' the current document in order to make it sound and therefore the current version of the Plan should be rejected. Cherwell District Council should re-visit the process, as and when the final numbers for Oxford have been examined, adopting higher densities and prioritising protection for the Green Belt.</p> <p>Reasons for Participation</p> <p>CPRE Oxfordshire represents a wide membership across the County, including many parish councils and local organisations, and seeks to influence development to protect and enhance the countryside. As one of the founders of the Oxford Green Belt, we have considerable knowledge about its origins, purpose and ongoing relevance.</p>					

PR-C-0562	05/10/2017	Helen	Marshall	CPRE Oxfordshire	N	Y
1428	<p>Comments</p> <p>THE GB STUDY No great weight should be given to the LUC GB Study. Its purpose was not to determine whether any of the GB made no, or an insignificant contribution to, the purposes of the GB since clearly all of the GB land contributes, and the loss of any would be harmful. Rather, in its own words, the GB Study has been commissioned by Cherwell District Council to assess the suitability of the strategic sites being promoted for development against the five purposes of the GB. In other words the sites had been pre-selected, as we showed above, in the face of GB policy, and targeting the most fragile point in the entire Oxford GB. LUC continue The considerations that will determine the most appropriate scenario, or combination of scenarios, will largely relate to the existing or potential environmental qualities and value of land, and to the sustainability of residential development. This will enable Cherwell District Council to consider whether there are ‘exceptional circumstances’ (under paragraph 83, NPPF) to justify altering GB boundaries through the Local Plan process, i.e. to enable existing GB land to contribute to meeting Oxford’s unmet housing need. That is, value is not primarily judged against GB purposes at all, but against environmental ones, and the sustainability of the land for housing development. LUC found that Release of areas identified as making a low contribution to GB could provide only 5.8ha of potential development land (4.13). Release of areas identified as making a low or low-moderate contribution to GB could, subject to consideration of cumulative impacts, provide 34.6ha of potential development land(4.14). Release of areas identified as making a low, low-moderate or moderate contribution to GB could, subject to consideration of cumulative impacts, provide 166.7ha of potential development land (4.15). Although as noted above, the judgment was largely not on GB grounds, moderate harm was considered acceptable in order to release a larger amount of land. LUC acknowledge that release of fragile GB 4.16 GB that occupies only a small/narrow area between separate urban settlements will tend to rate highly in terms of its role in preventing settlement coalescence. This exactly describes the land chosen for release; but LUC went on. However, if environmental assessment determines that this land lacks significant value then a case could be made for accepting the coalescence, or near-coalescence, of settlements in order to maximise the scale of development in one area. That is the, subjectively assessed low environmental value trumps urban sprawl and severe coalescence, the two founding principles of the GB. Further, they have targeted the very point at which the GB is already narrowest – the Kidlington Gap between Kidlington and Oxford – for release, directly creating the coalescence of two distinct settlements (It is material that Oxford itself is proposing to breach that same area from the South with a proposed development of St Frideswide Farm). The sites concerned are all at the exact point in the GB where coalescence of settlements (Oxford and Kidlington) is most threatened, with the built areas separated presently by a few fields. The proposed GB reviews, together with the release of the Parkway Station and Park and Ride would effectively merge the two settlements. Although Kidlington (population 13,000, 2011) is statutorily a village, it is larger than many towns, notably Thame (11,600) and Henley (11,700) in Oxfordshire.</p> <p>Changes Sought</p> <p>In CPRE's view, it is not possible to 'tweak' the current document in order to make it sound and therefore the current version of the Plan should be rejected. CDC should re-visit the process, as and when the final numbers for Oxford have been examined, adopting higher densities and prioritising protection for the GB.</p> <p>Reasons for Participation</p> <p>CPRE Oxfordshire represents a wide membership across the County, including many parish councils and local organisations, and seeks to influence development to protect and enhance the countryside. Proposed Submission Plan - Policy PR6a - Land East of Oxford Road

PR-C-0562	05/10/2017	Helen	Marshall	CPRE Oxfordshire	N	Y
1427	Comments					
<p>DUTY TO CO-OPERATE - The SHMA is explicit that Authorities are not expected to meet OAN (Objectively Assessed Need) in full if e.g. it would necessitate Green Belt development. It has been the unforced choice – not the requirement – of Oxfordshire’s Councils to agree to meet the SHMA need in full despite wide swathes of Oxfordshire being GB and AONB. It is therefore incumbent on Councils to take on each others’ “unmet need” if it would otherwise require GB land to be released. As shown, Oxford’s unmet need is very far indeed from being quantified or crystallised, but, if it were, it would be the duty of other Councils to assist Cherwell in meeting its part of that need without releasing GB land, not least by assisting Cherwell to understand how to do so within its own borders. There is no evidence that this has been attempted. Finally, the new OAN calculation proposed by the Government during the consultation defines “need” as the figure shown in the Government’s own tables on household projections. This is overlaid in the proposed calculation with an arbitrary (and ill-conceived) uplift intended to reduce house prices. It is also accepted that local authorities may if they wish further inflate their housing targets to provide further economic growth than that already included in the government’s base tables. However, it is submitted that these latter two elements cannot be defined as “need” and neighbouring Councils have no duty to co-operate in meeting them.</p>

<p>OXFORD'S 'UNMET NEED' AND REASONABLE OPTIONS FOR MEETING IT. 2. If Oxford’s unmet need were realistic could it be met elsewhere in Cherwell than in GB? a. Yes, it could be met on non-GB sites. Cherwell found that the required number of houses could sustainably be built elsewhere, outside the GB, at Junction9 M40, Arncott, Bicester and surrounding area, Upper Heyford, Junction 10 M40, Banbury and surrounding area. They rejected these alternative sites because they might upset the evolution of the current adopted plan – although why competent planners would not be able to deal with that problem, if real, is not apparent; because there might be shortfalls, although why these should be greater for Oxford’s unmet need than for Cherwell’s own need was not explained; and more dispersed options provided less opportunity for strategic infrastructure investment (e.g. transport and education), although why this would be the case for, for example, Upper Heyford which is already targeted and developed, or for other centres which already benefit from services, is not explained. The overriding reason for their rejection however was clearly that they were less well situated (than the GB sites) to build communities associated with Oxford, to assist with the delivery of the Oxford Transport Strategy, to provide affordable transport options, and more likely to involve commuting. It is significant that even GB sites like the previously developed Shipton Quarry, were rejected as Development here would relate to Shipton-on-Cherwell, not Oxford. Therefore the parcel plays no role with respect to this purpose (Oxford’s unmet need). Simply put, this amounts to saying that all reasonable alternatives were unacceptable because they were not in the GB, or, if they were in the GB, were too far from Oxford. It is an argument that urban sprawl into the GB is justified by the fact that only GB sprawl could (by definition) be close enough to the City; in other words it is an argument not just for nibbling at the GB but for undermining its core purpose. It is clearly unacceptable in its own terms. Further, the proposed new OAN calculation would reduce Cherwell’s own need by 33%. The effect of this would be that 33% of the housing trajectory in the Council’s adopted plan would be superfluous to Cherwell’s own requirement and therefore available to satisfy any unmet needs of neighbouring authorities that might arise. b. The unmet need could be met by marginal density increases on generally low density allocated sites. Policy BSC2 in the adopted plan states New housing should be provided on net developable areas at a density of at least 30 dwellings per hectare unless there are justifiable planning reasons for lower density development. Yet Policy Bicester 1 allocates 380 hectares to just 6,000 homes which is 16 houses per hectare. Assuming for these purposes that 30 dwellings per hectare is the average across the District, the sites to which the present 22,800 homes are allocated would need to increase build density by just 5%, to 36%, to accommodate all of the “working assumption” of Oxford’s unmet need. This would still be less than half the density of Central Paris or Barcelona, or Islington in London. Higher density build would also mean smaller houses, of which 63% of Oxfordshire’s SHMA need is comprised, and thus better meet public requirements. High densities also reduce the need for car travel and create a stronger sense of community.</p>

<p>OXFORD'S 'UNMET NEED' AND REASONABLE OPTIONS FOR MEETING IT (continuation)</p> <p>c. Even if there were no reasonable alternative sites, and even if densities on allocated non-GB sites could not be increased, the release of GB land could be substantially reduced. The total GB land proposed to be released is 264 ha. 10 hectares is proposed to be released for the station and Park and Ride, which already exist on GB land. There is no obvious rationale for the release. The net GB land to be released for housing is 254 hectares However within this area only 153 hectares is proposed to be actually used for housing, with the rest being allocated for sport, nature, agriculture etc., all legitimate GB uses. On the residual land 3990 houses are proposed at a density of 26 dph (although an average of 34 is claimed in the Plan). If build densities were increased to urban levels – the Council’s stated Policy is to treat these incursions for Oxford’s unmet need as urban extensions – then 70 houses per hectare, utilising only 37% of the land would be appropriate. This would require only 57 hectares, all of which could be comfortably accommodated on PR8, the least damaging in terms of coalescence and the Kidlington Gap of all these sites.</p>

Comments

Strong objection to all of the proposed development in the Oxford GB which “was designated to restrain development pressures which could damage the character of Oxford City and its heritage through increased activity, traffic and the outward sprawl of the urban area.” This quote is from paragraph B256 of Cherwell’s adopted Local Plan Part 1 and we fully support it. We also support Policy ESD14 in the Plan to maintain the Oxford GB. The Oxford GB supports all five purposes set out in the NPPF and has been largely successful over the last sixty years. In particular it seeks to protect the setting and character of the historic city of Oxford. The reference to the character of the City, as referred to in Cherwell’s Local Plan. is often overlooked but it is a crucial aim of GB policy. The historic city centre by its nature cannot be expanded or comprehensively redeveloped. It is already under substantial pressure and this is likely to become highly damaging if expansion on the edge of the city is not restricted. The City’s never-ending traffic problems are testimony to this, and there have been calls for even the number of buses in the centre to be limited. The GB also provides accessible open space, footpaths and other recreational opportunities for residents of the city and for the communities within it. It is well used and supported as public opinion surveys have shown. GB is intended to be a permanent designation only to be changed in exceptional circumstances (NPPF). We think that that the overall levels of growth proposed are unnecessarily high and that alternatives to development in the GB are available. We therefore consider that exceptional circumstances do not exist to justify development in the GB.

Changes Sought

The plan should be withdrawn and a spatial strategy for Oxfordshire established in a co-ordinated and consistent way. Through such a strategy the Oxfordshire authorities should continue with their previous approach of actively encouraging further employment and housing growth, at realistic levels, away from Oxford. Oxford City Council and Cherwell in particular should co-operate more effectively and as part of this Oxford should a) discourage further employment generating development in the city unless it is absolutely essential and b) use some of the land it has currently allocated for employment, together with other previously developed land, for well planned high density housing.

Reasons for Participation

OGBN was established in 1997 to help to protect the Oxford GB and to support those wishing to resist proposals for inappropriate development within it. It comments regularly on planning applications in the GB and in planning policy consultations, particularly on matters affecting the GB. OGBN has made representations on all stages of the Cherwell Local Plan Part 1 and participated in the Public Examination in December 2014. We have also commented on earlier stages of this Partial Review. The membership of OGBN includes many of the Parish Councils whose areas include GB land. The OGBN fully supports the aims of GBs as set out in the NPPF and earlier planning guidance and in particular it strongly endorses the fundamental principle that GB is a permanent designation. We consider that our participation in the examination is necessary and justified because of our longstanding interest and understanding of the Oxford GB.

Comments

We consider it to be a serious omission that at the options stage a question was not asked about the acceptability of development in the GB. This is probably the most important matter raised in this review. The plan may therefore be rendered procedurally noncompliant.

Changes Sought

The plan should be withdrawn and a spatial strategy for Oxfordshire established which can address the issues addressed in this review in a co-ordinated and consistent way. Through such a strategy the Oxfordshire authorities should continue with their previous approach of actively encouraging further employment and housing growth away from Oxford. Oxford City Council and Cherwell in particular should co-operate more effectively and as part of this Oxford should (a) discourage further employment generating development in the city unless it is absolutely essential and (b) use some of the land it has currently allocated for employment, together with other previously developed land, for well planned high density housing.

Reasons for Participation

OGBN was established in 1997 to help to protect the Oxford GB and to support those wishing to resist proposals for inappropriate development within it. It comments regularly on planning applications in the GB and in planning policy consultations, particularly on matters affecting the GB. OGBN has made representations on all stages of the Cherwell Local Plan Part 1 and participated in the Public Examination in December 2014. We have also commented on earlier stages of this Partial Review. The membership of OGBN includes many of the Parish Councils whose areas include GB land. The OGBN fully supports the aims of GBs as set out in the NPPF and earlier planning guidance and in particular it strongly endorses the fundamental principle that GB is a permanent designation. We consider that our participation in the examination is necessary and justified because of our longstanding interest and understanding of the Oxford GB.

Comments

This Plan is contrary to the NPPF which states in paragraph 14 that Local Plans should meet objectively assessed needs unless specific policies in the Framework indicate development – including land designated as GB - should be restricted. It is also contrary to the twelve core land use planning principles set out in Paragraph 17 of the NPPF one of which is that planning should take account of the different roles and character of different areas, promoting the vitality of our main urban areas and protecting the GBs around them. Furthermore, National Planning Practice Guidance makes clear that assessing need is just the first stage in developing a Local Plan and that once need has been assessed, the local planning authority should take account of any constraints such as GB, which indicate that development should be restricted and which may restrain the ability of an authority to meet its need. Cherwell has accepted (or, more accurately, been pressured to accept) the inflated figures of the Oxfordshire SHMA in full and has never followed this guidance to “take account of any constraints such as GB Which may restrain the ability of an authority to meet its need”. The proposed submission plan is therefore not consistent or compliant with national policy.

Strong disagreement with the assessment that “exceptional circumstances” exist. Twelve “circumstances” are listed. The final ten are not exceptional circumstances at all. Some of them might be described as “opportunities”, some of them are simply descriptions of how development might occur, and others are meaningless, for example “12.the ability to create a sustainable, holistic, joined up vision for the whole of the Oxford/Kidlington/A44 corridor area”. That statement certainly does not constitute an exceptional circumstance. Exceptional Circumstance 1 (urgent and pressing need for homes) is highly contentious. It is based on the assessment in the SHMA which has been heavily criticised and never validated. The proposed DCLG standardised methodology proposes a much lower level of need that takes account of affordability. Exceptional Circumstance 2 (clear inability of Oxford to meet its needs) is also unproven. Oxford’s needs have not been established through its own local plan process and neither has its ability to meet its own needs. It is clear that alternative development strategies could accommodate a significant number of additional dwellings within the city. The submission document in proposing to develop in the GB is in complete opposition to the purpose of the GB and contradicts Local Plan Pt 1. The main purpose of the Oxford GB, (Local Plan Part 1 para B256), is to limit the growth of Oxford to avoid damage to its character and heritage. Oxford City Council itself should have a part to play in this by restricting the growth of employment generating activities to the minimum necessary. This would have the double benefit of releasing some land for housing and reducing the demand for further housing. However its currently proposed policies do the opposite. We have made this point in our representations to the recent Options consultation on the Oxford Local Plan. Alternative development strategies – which have been successful in the past – are possible for Oxfordshire, and include the diversion of growth away from Oxford towards the country towns. Oxford City Council should play its part in this. We also think it would be possible for the Oxfordshire authorities to promote the diversion of some economic growth to other parts of the country which would welcome and benefit from it – possibly through formal ‘economic twinning’ arrangements.

We note that the plan calculates the loss of GB to be 3%. There is an implication here that the loss is relatively small and therefore acceptable. This is fallacious as is illustrated by the following example taken from a paper by Professor Dieter Helm, Chair of the Government’s Independent Natural Capital Committee “Think about St James’ Park in central London, set between Buckingham Palace at one end and Whitehall at the other. Suppose a developer comes along with a proposal; to build on a small plot on one corner of St James’ Park. This developer might argue as follows. The marginal value of the patch of grass in a small corner is not that great. After all, all the rest is left. Better still, the developer might pay such an enormous price for the small bit of land that perhaps a hospital could be built elsewhere with the proceeds. The marginal value to the ultimate owner of this house is so great relative to the marginal value of the small corner of St James’ Park that it makes marginal economic sense to build on it. There are two problems with this argument. The first is that the same marginal case can be made for the next small bit of St James’ Park. Indeed the value to the developer is even higher now because the Park is now slightly smaller. And for the next bit, the argument just gets stronger. Carried to its limits there is a great marginal case for incrementally building all over St James’ – and Hyde Park, and Regent’s Park and indeed all the green spaces in London. That is indeed what would have happened if the market had been left to allocate the land as if St. James’ was a private good. It is what would happen to the GB too. The second problem is that the reason why the land is so valuable is because it is not surrounded by other houses in close proximity. The very rich person who buys this house on the corner of St James’ is paying so much because others are not able to do so, and because it is St James’. We cannot all have green spaces around our houses – green space is in fixed supply. Carry both of these arguments across to the GB. Each marginal bit has a marginal economic case for developing it, and as each bit is chipped away, the value of the whole public good – the GB system – diminishes. The core point here is that the marginal case if carried through to its logical conclusion leads to no GB – there is a good marginal case for building on each and every marginal bit of land, as there is for building on each and every bit of St James’ Park.” The loss of a small proportion of GB therefore increases the likelihood of further loss. GB should be considered as an entity or system not as a collection of individual land parcels. This is a further reason why we fully endorse Government Policy (NPPF para 79) that GB is a permanent designation.

Proposed Submission Plan - Policy PR6a - Land East of Oxford Road

PR-C-0574 508	09/10/2017	Chris	Anstey	CRJ Anstey on behalf of The Trustees of the Water Eaton Estate					
Comments									
The Trustees of Water Eaton Estate own 13.4 hectares of land S of Oxford Parkway, the remainder of the Estate lies East of the PR6a area. The Estate will be heavily impacted upon by development. It would be harmful to the historic, architecturally important Grade 1; Grade 2* Listed, & other buildings in close proximity to the development. The development is on higher ground & in clear view of these buildings. It is important that the Estate is protected from the impact. Access Issues. The only access to the Estate is off the A4165. If PR6a goes ahead this vital access will need to be breached (possibly in various places) to accommodate internal roadways & cycle/pedestrian paths. This access is used daily by the 6 Estate dwellings, tractors/heavy machinery & 44 tonne articulated delivery vehicles etc. This usage is likely to increase & sits uncomfortably with being crossed by cars/cycles/pedestrians. Being the main approach/access to the Estate it will need improvement, landscaping & widening to emphasise it's importance. The Trustees will not contemplate any downgrading of the access & careful design consideration will be needed to accommodate these disparate interests. Visual Intrusion. PR6a will be visible from the Listed & important dwellings of the Estate. This will impact on it's the capital value. Everything possible must be done to limit visual intrusion. The Trustees suggest; a. Residential & other dwellings should be limited in height to max. 3 storeys, with low profile roofing on any 3 storey buildings. B. The Eastern boundary of PR6a will need strengthening & thickening up by an agreed landscaping/planting/bunding brief, agreed with CDC Planning & developers. C. The overall impact of all artificial lighting will need careful consideration, to reduce light pollution. D. Any residential/other ancillary development will need to be undertaken sympathetically & attractively. The Trustees welcome the opportunity to work with CDC to ensure a high standard of architectural design/development is achieved. Surface Water. The major part of the remainder of WE Estate lies in flood plain. The impact of surface/ground water flowing from higher ground onto the retained Estate must be carefully considered & dealt with by way of viable & effective engineering solutions. There must be no increased risk of flooding on the Estate. Local Centre & School. The Trustees see no possible reason for locating the Local Centre & School within the Northern part of PR6a. They support the proposal by CDC, that such uses are located in the Southern part of PR6a, closer to Cutteslowe. It makes no sustainable planning sense to put the Local Centre or School on the Trustees land, being the northern outskirts of the development.

Exceptional circumstances have been demonstrated to justify the release of sites from the GB, including sites for housing to help meet Oxford City's unmet housing need. It is clear from the evidence base for Cherwell's proposed submission plan and from the Oxfordshire Growth Board evidence base that the release of sites from the GB is necessary to deliver the scale of housing required in a sustainable manner. However, there is a need to make efficient use of land released from the GB for housing purposes. Some of the proposed densities on sites released from the GB do not appear to make efficient use of this land despite their close proximity to Oxford and to sustainable transport infrastructure and services. By increasing the density on some of the GB sites and by developing the site covered by Policy PR3a Cherwell DC would achieve their target of meeting Oxford City's unmet housing need without requiring development at Woodstock South East (Policy PR10).

Over-development and over allocation of dwellings to one Parish - Gosford and Water Eaton. This parish currently has 676 dwellings. Adding 1410 houses into Gosford and Water Eaton, increases the number of homes by 208% to 2083. The proposal increases the Parish housing by two thirds of its current size. 32% of all the new houses have been allocated to Gosford and Water Eaton. If there have to be more houses here then a 25% increase is acceptable (under 200).

Strong objection to building in the Kidlington gap. This is the narrowest and most vulnerable part of the GB and will mean that Oxford City and Kidlington become joined. The site PR6b is currently occupied by North Oxford Golf Club which is a recreational and social facility for over 500 local people of all ages. It has been in existence for over 110 years and is a beautiful piece of green land enhancing the environmental quality of the area. Why remove this which is contributing to the health and well being of so many people, to replace it with low density houses that will be of no value in helping resolve the housing problems? It will become a perfect place for people to live and commute to London attracting more wealthy people who make no contribution to the City. These proposed developments are not providing affordable housing. This development is being led by the University Colleges who own the land to swell their coffers rather than being a rational planning choice. If a golf course is to be sacrificed then why not the one in the City rather than destroying the GB? It is also completely irrational and unsound to propose to build a new course at Frieze Farm a few hundred metres away. Frieze Farm could be considered for housing instead. Golf courses cannot be made overnight and it would be years before a new course could be established. I object to the way in which the University and its Colleges together with unscrupulous developers are ruining the City and being allowed to control developments. The Council should look after the well being of people living in the City and its surroundings. This plan is completely ineffective and not consistent with National Policy. It is disgraceful.

This land is Gosford and Water Eaton parish land – not North Oxford. In total 1410 dwellings are proposed in the Parish. 650 of these are on this site. This number have a major impact on transport infrastructure in particular on the already heavily congested Oxford Road. The traffic from this development will increase congestion further. It is not clear how the transport improvements including new bus lane (and/or cycle lane provision) can be implemented without further problems for Oxford Road residents who already suffer from congestion, delay, air pollution and vibration caused by passing lorries/buses. In the Green Belt Study (April 2017) this site was categorised as “High” in terms of harm to the Green Belt from its release for development. I agree with this and consider that it would significantly erode the gap between Kidlington, Gosford and Water Eaton and Oxford, especially in combination with removal of the Park and Ride site from the Green Belt. This would result in continuous development up to the railway/A34. This in our view will lead towards the coalescence of Gosford/Water Eaton/Kidlington and Oxford. The area has no easily definable boundary to the east which raises further concerns about how development may be contained in the long run. Green spaces- You ironically discuss the provision of public open space whilst destroying the current green belt. Why?

I am writing to raise my concerns about the impending planning application for housing development at North Oxford Golf Club. My concerns centre around the potential destruction of a recreational site. I am a Director of England Hockey. This National Governing Body is funded in part by Sport England, a central government body. In the latest funding cycle Sport England have stated that one of their objectives is to promote exercise activity for those people who currently don't engage in any exercise. This directive comes from the DCMS. Development of North Oxford for housing would remove a facility where people could begin a pastime that would be in line with the wishes of both the DCMS and Sport England.

Para. 85 of the NPPF states that GB boundaries should be clearly defined, using physical features that are readily recognisable and likely to be permanent. Proposed revised GB boundary immediately east of 'land east of Oxford road' does not appear to provide a clear, defensible or permanent boundary. Developing this land may lead to the 'unrestricted sprawl of large built-up areas'. One of the five purposes and the fundamental aim of GB is to prevent urban sprawl by keeping land permanently open as set out in para. 80 of NPPF. Whilst land does need to be released from GB to meet unmet needs of Oxford City, the proposed area should be reduced and located on land that provides permanent and defensible boundaries. Proposed urban extension to Oxford City at land east of Oxford Road, comprising 650 dwellings at a net density of 40 dwellings per hectare, is considered detrimental to the highly valued GB and current individual identity of land. Removal of land from GB would result in coalescence of Oxford and Kidlington, eroding existing countryside contrary to National Policy. Particular concern is the impact on the existing setting of Cutteslowe Park, with open landscape/countryside views being destroyed with loss of openness, one of the main purposes of GB. The provision of public open space an extension to Cutteslow Park, including the creation of wildlife habitats is considered not to compensate for the proposed overall loss of valued agricultural and undeveloped land, rich in biodiversity that is currently accessible via existing Public Rights of Ways. There is no guarantee that this will even happen. The associated traffic and pollution will impact greatly on Cutteslow Park and existing areas rich in biodiversity. This is the largest park in Oxford and is home to a number of sports clubs/facilities, and significant wildlife areas and community woodland. It is unclear what level of provision is proposed to ease road traffic congestion particularly when popular community events are held. Significant increase in road traffic alongside other significant developments already in the pipeline is highly environmentally unsustainable. Oxford City has been declared an Air Quality Management Area where pollution levels of nitrogen dioxide objective will not be met. The Cutteslow Roundabout is one of seven hotspots. Given the proportion of relatively recent planning permissions/proposed developments, it is considered that the 2013 traffic data used to inform the preparation of the draft Local Plan Partial Review is outdated and therefore invalid. Concern is raised regarding the potential conflict between the proposed development on site and the Grade II* listed St Frideswide Farmhouse. What measures will be put in place to protect the setting of this heritage asset? Level of proposed housing is questionable as Oxford City has not finalised its Local Plan. Emphasis on encouraging further employment is concerning, it is felt that Oxford City should be prioritising land for housing. Thus it is considered that allocation of housing within Cherwell to meet Oxford City's need is premature and should be delayed pending completion of Oxford's Local Plan. Proposed new Government protocol for the determination of housing need indicates the requirement in and around Oxford is greatly reduced from the previous determination. This should be properly examined before any development is undertaken. Proposal is not considered effective as they are not based on effective joint working and cross-boundary strategic priorities. The proposal is not considered to be consistent with national policy as it has not fully taken into account the detrimental effect that removing such extensive land from the Green Belt will have.

Changes Sought

Reasons for Participation

It is respectfully requested that the preparation of the Local Plan Partial Review is delayed until further progress has been made with Oxford City's Local Plan to more accurately ascertain the level of housing that can be delivered within the City. Failing that, it is requested that the number of houses developed on 'land east of Oxford Road' is reduced in any event.

Proposed Submission Plan - Policy PR6a - Land East of Oxford Road

PR-C-0717	01/10/2017	Pierre	Pazgrat		N
5444	<p>Comments</p> <p>Object to policies PR3, (The Oxford Green Belt), PR6a (Land East of Oxford Road) and PR6b (Land West of Oxford Road). • Believes these proposals are not consistent with National Policy because they do not take into account the detrimental effect that removing these large areas of Green Belt will have. These proposals therefore fail to meet the test of soundness as defined in paragraph 182 of the NPPF. (National Planning Policy Framework) • Oxford's Local Plan has not yet been prepared so Cherwell's allocation of homes is premature and is not an appropriate strategy and is unjustified. Further comments regarding the Green Belt: • Its purpose aims at preventing urban sprawl• If Green Belt boundaries are re-defined, the way to define those using physical features would need to be readily recognisable and permanent. This is not the case on the area to the east of the A4165 (Oxford Road) because there are no such features and therefore no eastern boundary. There is a high risk to lead to unrestricted sprawl of large built up areas – which is contrary to the Green Belt purpose. Further comments regarding housing needs: The proposal is focussing on being close to the Parkway Station; this is unlikely to fill the need to have affordable housing. The developers are likely to have to pay a premium because of its location. It is clear that these new homes are likely to be purchased by London commuters due to the proximity of the station.</p>

PR-C-0720	07/10/2017	Adrian	Sutton		
1810	<p>Comments</p> <p>The Government has published a consultation document Planning for the right homes in the rightplaces. This document sets out Government proposals to assess housing needs in differentareas of the country. It has been welcomed by many professionals who regarded the earlierSHMA estimates as overblown and unjustified. Rep quotes Helen Marshall of CPRE as saying that the housing needs in Oxford had beenreduced in the new estimates by no less than 47%. For more than 60 years the Green Belt thatforms the Kidlington Gap has successfully checked urban sprawl, and it has prevented themerging of Oxford and Kidlington, provided access to countryside to residents of northOxford and Kidlington, and preserved the setting of the historic town of Oxford. In view ofthe new assessment of housing need in Oxford, and the lack of a completed local plan byOxford City Council informed by accurate data on the land available for housing withinOxford, it would be irresponsible and reckless for Cherwell District Council to proceed withits plans to build on the Kidlington Gap. The above Government consultation document also notes that the pressure on housing ismuch greater in London, and is set to increase further over the next decade. Given that theproposed housing in PR6a and PR6b is approximately 10 minutes walk from Oxford Parkwaystation it is obvious that those sites east and west of Oxford Road (A4165) will be veryattractive for London commuters. It is hard to imagine how key workers in Oxford in need ofaffordable housing will be able to compete with the market pressure of London commutersfor this housing. The proposed housing density on the golf course is only 25 per hectare, andit is highly unlikely that any of it will be affordable to those who need cheaper housing inOxford.One of the greatest attractions for families living in north Oxford is the wide range ofavailable secondary schools. If 1,180 new households were built on either side of Oxford Road there would be even more car journeys to schools inside the Ring Road to prolong thecommute into Oxford. Following a Freedom of Information request Oxford City Council hasadmitted recently that the new road layout and traffic lights at Cutteslowe roundabout havenot improved traffic flow along Banbury Road. This continues to be an area of severe trafficcongestion during school term, and the proposed housing can only make it worse. The onlygood transport link is from Oxford Parkway station, but even there the huge station car parkis already filled by London commuters during week-days, less than 2 years since the stationopened.We understand that Cherwell District Council have been obliged by the “Duty to Cooperate”with Oxford City Council to solve Oxford's perceived housing problems. But Oxford CityCouncil has chosen to allocate land to employment at the Northern Gateway developmentinstead of housing. Further employment growth is unnecessary and unsustainable in an areaof full employment and a shortage of housing. It only exacerbates the housing problem, andleads to even more people commuting into Oxford. Rather than helping Oxford City Councilin this way Cherwell District Council should challenge the lack of thinking displayed by theCity Council.We recognize that Oxford has a housing problem, especially for key workers. But building onthe Kidlington Gap is unjustified by the information available, and by Oxford City Council'sown policies to develop land for employment rather than housing. Once the Green Belt hasgone it has gone forever, and it is difficult to see how further urban sprawl to the east ofOxford Road could be contained since the nearest road is the B4027, which is several miles tothe east (National Policy Planning Framework, paragraph 85).We urge Cherwell District Council to postpone any decision on the development of the GreenBelt around Oxford until all the facts are made available.</p>

These proposals therefore fail to meet the test of soundness as defined in paragraph 182 of the National Planning Policy Framework (NPPF). Oxford's Local Plan has not yet been prepared so Cherwell's allocation of homes is premature and is not an appropriate strategy and is unjustified.</p>

PR-C-0756	10/10/2017	William & Rebecca	Hodgson		
1900	<p>Comments</p> <p>The proposed development on the land north of Cutteslowe Park, which is part of the Green Belt north of Oxford and forms a separating barrier known locally as the Kidlington Gap, between the northern boundary of the city of Oxford and the large urban village of Kidlington. The development directly contradicts the five stated purposes of land of the green belt as set out by the NPPF. To build on the green belt North of Cutteslowe would contravene all the five stated purposes; Resulting in Oxford sprawling and encroaching into the countryside, Oxford and Kidlington merging into one another, the historic character of Oxford being diminished and overwhelmed by the large urban sprawl, whilst the use of available derelict and urban land should be considered, instead of Greenbelt landIn addition, the local infrastructure (transport, hospital and schools) will be unable to cope with the large influx of people. While the aim is to provide housing for local Oxford people, the location of the houses near a direct-London line station will encourage people to live in Oxford but commute to London. Only about 13% of England is Green Belt and when there is so much other land available it is counter-productive to develop on Green Belt land. Strongly suggest that the Council reconsiders their development proposals to urbanise the small Green Belt area separating Oxford town and Kidlington.</p>

Proposed Submission Plan - Policy PR6a - Land East of Oxford Road

PR-C-0758	10/10/2017	Susan	Cooper		Yes	Yes		No
1905	<p>Comments</p> <p>The views described in paragraph 5.73 are actually unavailable to most people, being blocked along most of the Oxford Road by trees and hedges at the side of the road. This makes it less important to preserve this Green Belt land, allowing more weight to the need to provide housing needed by people working in Oxford. Paragraphs PR6a – 26 and PR6b – 24 specify an “active frontage”, which assume means removing the trees and hedges along the road. Suggest not doing this. Having a sports ground to the east of Oxford Road south of Kidlington and keeping the Green Belt on the west side keeps a small separation between Kidlington and the extended Oxford. More of an optical separation could be maintained if a small strip of land along each side of the road in the area to be used for housing were left as is – planted with trees and hedges – instead of running the housing right up to the road. This strip needn’t be very wide so would make only a minimal effect on the area available for housing, while having a significant positive effect on the apparent separation. The housing would also benefit from this shielding from the busy road. Lives on Banbury Road and it is not at all pleasant since it has become so much busier during the last 20 years. In addition, a cycle and pedestrian path could be provided on the housing side of this strip, providing shielding for cyclists and pedestrians. Frequently walks from the north edge of Oxford to the new train station and back; the noise of the traffic is unpleasant, and it is much worse when the road is wet and one get splashed by passing traffic The green strip could be extended past the Park and Ride to hide this unsightly area from the road. The proposed density of 27 dwellings per hectare is below the average new build density of 32 quoted (Rep quotes website in the letter) which also says the best health is found in areas with a density greater than 32. To make best use of the Green Belt land and to build a settlement fit for the future, suggest the target density be increased. Nothing is said about the ratio of flats to single-family houses. Perhaps no flats are foreseen at all. Higher density should be achievable in an attractive way by including a reasonable fraction of flats, which are also more likely to be affordable to Oxford workers.</p> <p>It would also be good to encourage innovative designs of blocks of flats, such described on the website as provided.</p>

PR-C-0766	10/10/2017	Haidrun	Breith	Berks, Bucks & Oxon Wildlife Trust				Y
1940	<p>Comments</p> <p>Policy PR6a - Land East of Oxford Road. The policy proposes residential development on 24ha of the site at an average density of 40 dwellings per hectare. Have no principle objection to this but have some concerns that 40 dwellings/ha might not allow sufficient space for meaningful green infrastructure such as large native street tree planting within the built-up areas. Having said this it is unclear what the calculation is based on as 650 dwellings over 24 ha would result in a lower density than stated. Welcome the requirement to create a green infrastructure link along the eastern boundary to Cutteslowe Park. Also welcome the requirement for cross-boundary working between local authorities. Considering that the site is located next to another allocation PR6b wonder whether the two sites should be considered in combination rather than isolation Map / key: - Ancient Woodland: see general comment on mapping above. - BAP habitat: BAP habitat is shown on an area that is currently arable. Whilst it might be the intention to create a BAP habitat this might be difficult to achieve in this location. We recommend that the wording in the key is changed to ‘proposed BAP habitat’ or ‘proposed area for nature conservation’ or similar - Adjoining allocation: The map shows the golf course as remaining but policy PR6b allocates the site for development. This is misleading and the map should be revised accordingly - Policy PR3 land: see general comment on mapping above.</p>

PR-C-0773	10/10/2017	Philip	Rawle	Greenlight Developments	Y	Y	N	Y
1951	<p>Comments</p> <p>Does not consider the Partial Review of Cherwell Local Plan to pass the ‘tests’ of soundness, in terms of being positively prepared, justified, effective and consistent with National policy. This is because the Partial Review does not make reference to the need for C2 units (residential institutions, including care homes), nor to care/nursing homes more generally. Policy PR2 deals with C3 uses only. Further limitations on current local planning policies (adopted and emerging) are outlined in the accompanying Note prepared by Lichfield's. In terms of National policy, the Government’s National Planning Practice web-based resource in the section on ‘Housing and economic development needs assessments’ provides guidance to the plan-making process on how to deal with ‘housing for older people’. Failure of the Partial Review to meet the care needs of the District will clearly have significant implications on housing options for Cherwell’s increasingly ageing population. The accompanying Note prepared by Lichfield's quantifies that like the rest of the UK there is a clear need for care homes in Cherwell. Examples are found in the Oxfordshire SHMA, which projects the number of people with dementia and mobility issues in Cherwell and Oxfordshire will roughly double by 2031 (end of this Plan period). The latest DCLG figures project the number of people in Cherwell living in communal establishments to double by 2031. The Lichfield's' Note sets out the care need for Cherwell as follows: • In Cherwell District itself, the latest DCLG projections show growth in the number of people over age 75 living in communal establishments of 565, i.e. this is the number of care home bed spaces needed (2011 – 2031). However, as the Council are planning for housing growth well in excess of demographic trends, which will lead the population growth in excess of demographic trends, 565 bed spaces should be considered a minimum to plan for up to 2031. • In terms of Oxford City’s need, the DCLG projections suggest a need for a further 305 bed spaces by 2031, and (as with its housing need) a proportion of this may well go unmet. Cherwell will inevitably import some of Oxford’s care home needs, as those additional residents (who otherwise would have lived in Oxford) age and move into care homes. This further justifies the use of the 565 figure for Cherwell as a minimum, which may need to be increased if unmet care home need for Oxford is identified. Lichfield's' Note on Care Home Need provided.</p>							

Changes Sought

Reasons for Participation

Greenlight asserts that it in order for this clear ‘need’ for care bed spaces to be met in Cherwell over the Plan period, specific policies are required to:(a) Set the delivery of this need over the Plan period as a requirement - this requirement being a minimum of 565 bed spaces by 2031; and(b) To identify and allocate sites to accommodate this need in the Plan and on the Policies Map.To this end, Greenlights’ land interest at Skimmingdish Lane, Bicester, which is currently subject to planning application 17/01428/F, provides an opportune site to be allocated for a 64-bed care home; thus accommodating some 11.3% of the bed space requirement (based on a total requirement of 565 bed spaces) over the Plan period (by 2031).To demonstrate how the site at Skimmingdish Lane, Bicester can accommodate a 64-bed care home, and therefore to assist in informing its allocation as a care home site in the Plan, enclosed with this letter is the site location plan and proposed site layout plan, both of which form part of the current planning application on the site.

The matters raised in these representations are of a strategic nature to the plan.

PR-C-0775	10/10/2017	Jon	Alsop	Savills on behalf of Christ Church, Exeter & Merton Colleges and Oxford University				Y
1958	<p>Comments</p> <p>In addition to its interests in sites PR6a and PPR6b, the University of Oxford and Merton College also have landownership interests in the following sites: • PR3c:land north of Oxford Service Area. • PR8: land East of the A44 at Begbroke/Yarnton. • PR9: land West of the A44 at Yarnton.</p> <p>Given their shared interest across these sites, there has been careful co-ordination between the landowners and their advisory teams in the preparation of these representations and specifically comments in relation to these sites. In addition, the teams advising the landowners have met in order to start to formulate a co-ordinated approach to the sites in relation to common themes (e.g. transport) and in terms of planning phase and subsequent implementation. These parties will continue to work together on areas where their interests are aligned with the aim of achieving a comprehensive and co-ordinated approach to the delivery of these sites and the strategy for the A44 corridor overall.</p>

Proposed Submission Plan - Policy PR6a - Land East of Oxford Road

PR-C-0775 1964	10/10/2017	Jon	Alsop	Savills on behalf of Christ Church, Exeter & Merton Colleges and Oxford University				Y
<p>Comments</p> <p>Support with amendments. The consortium is strongly supportive of the proposed policies to develop a new North Oxford neighbourhood either side of the A4165 Oxford Road, with direct access to central Oxford and Summertown, to employment opportunities, including at Northern Gateway, and to services and facilities nearby including public transport hubs. The policy supporting text highlights that in this location sustainable travel choices can be strongly encouraged and car use for local journeys discouraged. Whilst the proposals here would involve the loss of agricultural land and realignment of the GB boundary, and give rise to other localised impacts on environmental assets, the consortium agrees with the Council that the proposals would represent the most sustainable opportunity to create a new gateway neighbourhood, and that the impacts are capable of being mitigated as well as being substantially outweighed by the benefits. The opportunities exist to consolidate this urban edge, integrate the area with the existing north Oxford communities, and develop a highly sustainable neighbourhood that will achieve social, environmental and economic benefits in line with NPPF, paragraph 7. Detailed comments provided on affordable housing, housing numbers density and local services contributions, development brief and location of key facilities.</p>

PR-C-0778 5465	10/10/2017	Sarah	Knox-Brown	Begbroke & Yarnton Green Belt Campaign				N
<p>Comments</p> <p>Begbroke & Yarnton Green Belt Campaign's (BYG) main concern is that they believe there is no proper justification for altering the Green Belt boundaries from where they currently stand. On a local level, they particularly object to the removal of the land described as PR8 and PR9 from the Green Belt due to the significant detrimental impact of that removal on the villages and villagers of Begbroke and Yarnton. They also object to the removal of land described as PR6a, PR6b, PR7a and PR7b from the Green Belt due to the importance of these sites in maintaining the gap between the villages of Begbroke, Yarnton and Kidlington to Oxford City and to the land described as PR10, a green field site due to the impact its development will have on the adjacent A44 corridor. Instructed Bruce Bamber, a transport consultant, to prepare a report on the transport implications of the allocation of sites PR8 and PR9 for housing purposes. Although his technical review has focused on these areas, the broader methodology to identify potential development locations has also been assessed for its soundness. The report has been provided as Appendix B. Key conclusions from the report includes: the Sustainability Appraisal Report was published before the Transport Assessment and therefore cannot properly take into account the transport impact of development options. The SAR fails to report the adverse traffic congestion impact from the proposed development around Begbroke and Yarnton and is therefore flawed. Transport evidence base and the associated environmental assessment work is fundamentally unsound and cannot be relied upon. A number of legal issues are raised in Appendix A with a detailed summary provided. If the Council proceeds as planned, we consider the Inspector will find the Plan unsound due to inadequacy of evidence base and failure to ensure effective consultation and participation by the public.</p>

PR-C-0779 1980	10/10/2017	Graham	Jones	Summertown and Wolvercote Conservatives				N
<p>Comments</p> <p>Whilst it is challenging to help solve Oxford's housing problem, there are better ways to do this than those proposed in Policies PR6a and PR6b. There are already agreed plans for homes in the Wolvercote Ward (500 Northern Gateway, 190 mill site, Lower Wolvercote and 17 at Elsfield Hall). In addition there are a number of brownfield sites that can be developed for housing in the city. This with the recently revised and lower Government housing needs figure for Oxfordshire and Oxford, in particular, mean only the most appropriate sites for housing should be considered. These two policies use GB land, which our forebears had the wisdom to set up to prevent urban sprawl, to prevent urban conurbations from joining up and to ensure that those living in an urban environment have some open space and countryside within a reasonable distance. The National Planning Framework makes this quite clear. The proposal to effectively close the "Kidlington Gap" so that Kidlington is divided from Oxford but not much more than the A34 and the railway to Bicester means that Kidlington will be as joined up to Oxford as Blackbird Leys. There are other sites that are not in the GB that would be better suited. The proposal to put housing on both sides of the Banbury Road, next to the Oxford Parkway Station, will be of great appeal to London commuters and will not readily ease the housing needs of local people. The road system, in spite of lengthy and expensive works carried out on the Cutteslowe and Wolvercote Roundabouts, is barely coping with the current traffic. The situation will deteriorate when the Northern Gateway employment and housing site is developed. Further development in such close proximity for up to another 1,080 homes, with additional entry points on to the Banbury Road, will further exacerbate the problem to the extent that there will be unacceptable levels of pollution and congestion. Understand the need for more housing but believe there are other solutions. Do not agree that the proposals are consistent with national policy and that the need of housing is sufficiently exceptional to allow for the ripping up of the GB and, by doing so, enabling the joining of Kidlington to Oxford. Do not consider that sound, justified or effective.</p>

PR-C-0779 1981	10/10/2017	Graham	Jones	Summertown and Wolvercote Conservatives				N
<p>Comments</p> <p>While it is pleasing to see that a larger site here within the Cherwell Valley is no longer being considered, the proposals for this site are inappropriate. The development of the full site covered by PR6b would compromise the setting of the Grade II listed St Frideswide Farmhouse as well as the edge of the Cherwell Valley. There is a wildlife corridor on this site on the edge of the Banbury Road and every effort should be taken to retain this.</p>

PR-C-0799 5475	10/10/2017	Steven	Sensecall	Carter Jonas on behalf of Sheehan Group of Companies			N	Y
<p>Comments</p> <p>This submission relates to land at and adjacent to Knightsbridge Farm, Yarnton, and which is located on the south-east edge of Yarnton and immediately to the south-east of the Begbroke Policy PR8 - Land East of the A44 Proposed Urban Neighbourhood. The land is owned by the Sheehan Group of Companies and Cappagh and is previously developed land comprising a redundant sewerage treatment works, a haulage depot and storage land and a concrete batching plant. The land extends in all to some 13 hectares and is outlined in red on the attached plan. This submission should be read alongside and is put forward as an alternative to a separate submission made by Planning Consultant, Suzi Coyne, who has argued that, consistent with the existing use of the Sheehan land, the site as a whole should be allocated for employment land for B2 and B8 uses. Development at and adjacent to Knightsbridge Farm would be a logical addition to the Begbroke Urban Neighbourhood or the existing built up area of Yarnton and would assist further in meeting Oxford's unmet housing need. It is also less sensitive in GB terms than, for example, proposed allocations PR6a and PR6b both of which (a) cause a material diminution in the gap between Oxford and Kidlington (contrary to the GB purpose of preventing neighbouring towns from merging in to one another) and (b) seriously undermine the requirement to preserve the setting and special character of Oxford, central to which is its green backdrop. Key attributes for the land at and adjacent to Knightsbridge Farm listed.</p>								
Changes Sought				Reasons for Participation				
Remove the land at and adjacent to Knightsbridge Farm from the GB. Amend the boundary of the Begbroke Urban Neighbourhood (Policy PR8) so as to include the land at and adjacent to Knightsbridge Farm in the allocated site for residential development or a mix of residential and other uses.				As drafted, and in so far as it relates to the land at and adjacent to Knightsbridge Farm, the Plan has not been positively prepared, is not justified and is not effective. This goes to its soundness and raises issues that should be explored fully at the oral part of the Examination.

PR-C-0813 2208	08/10/2017	Jennifer	Betts					N
<p>Comments</p> <p>Objection to the allocation of PR6a and PR6b: Both sites are important parts of the Green Belt separating Oxford from Kidlington allowing both to retain their identity. The closure of this gap by building on the Green Belt will leave a small gap of about half a kilometre so it would effectively be joining Oxford to Kidlington to become an urban extension of Oxford. This part of the Green Belt has high landscape value providing a clear divide of rural land between Oxford and Kidlington. There is no evidence that this land should be released from the Green Belt on exceptional circumstances as studies have shown this land to be of high importance to the integrity and function of the Green Belt. The land occupied by the Golf Club serves a contribution to the Green Belt both is its landscape function and as a recreational activity. The plan proposes a low density of 25/Ha, which is unlikely to be attractive to accommodate 50% affordable housing. In addition the balance of the site is likely to be attractive to Commuters from London who will pay high prices for large expensive houses. This site would clearly never meet the objectives of providing houses that are reasonably priced for workers in Oxford.</p>

Loss of Cherwell District Local Amenities - The development of North Oxford Golf Club and adjacent land on the opposite side of the Banbury Road will only result in multimillion pound houses for Oxford and London commuters. The impractical alternative proposed site at Frieze Farm is smaller, flat featureless agricultural land and within a mile of the current North Oxford Golf Club; who will pay for it to be moved to an unviable site? A new golf course requires a significant investment and take years to develop to an acceptable condition. Why can this alternative site not be considered for housing? Has the Oxford Golf Course been scheduled for development to meet Oxford city's housing needs, if not why not? Its acreage is significantly larger than North Oxford Golf Club and not within the Green Belt area.

PR-C-0821	09/10/2017	Caroline	Johnson		Y	Y	N	N
2243	Comments							
The proposal to take land between Oxford and Kidlington is wrong because of its impact on the Green Belt and the loss of the Kidlington Gap. If this proposal is accepted there will be urban sprawl, the neighbouring towns of Oxford and Kidlington will merge with one another, there will be encroachment on the countryside, the setting and special character of the historic town of Oxford will be adversely affected, there will be no assistance to urban regeneration. The proposal is not in line with National Planning Policy as they do not take account of the adverse effects of removing this land from the Green Belt. These issues are also discussed in my response to PR3. Specific concerns about the proposal PR6a. The proposals are predicated on meeting Oxford's unmet housing need yet the density of housing proposed for this site is so low that it is clear that these will be executive homes. It is reasonable to assume that a large proportion will be purchased by people moving from London and then using the train service to go to work. Thus they will make no contribution to meeting the unmet housing need. The proposal suggests that a primary school should be placed at the southern edge of the parcel of land, northern boundary of Cutteslowe Park. This is nonsensical given that the majority of the population growth is in Yarnton and there is an Oxford City Council school at Cutteslowe, half a mile away. It is proposed that an extension to Cutteslowe Park will be included but there is no guarantee of this and it could be withdrawn. Similarly a proposal is made to keep an area of land as arable farmland but there is no guarantee of this. These proposals were made in response to concerns raised at the previous stage of Consultation about the impact of PR6a on the unique and very valuable setting of Cutteslowe Park. Even if these offers were to materialise the impact on the Park would be highly detrimental. The setting in open countryside with far reaching views will be lost. This proposal is for an area which has no defined eastern boundary. When redefining the boundaries of Green Belt land Local Authorities should define clear boundaries using physical features that are easily recognised and likely to be permanent. This is not the case for PR6a which has 3 boundaries defined by the Park and two major roads but whose eastern boundary is only a field boundary. The risk of future proposals being made to add further fields to the development is very high and thus there would be urban sprawl. The proposal to develop PR6a is contrary to the purposes of the Green Belt. It is unjustified and unsustainable.								
Changes Sought				Reasons for Participation				
The process should be restarted once the Oxford Local Plan has been completed and thus when any unmet housing need of Oxford is known. When Cherwell does this it should correct the errors made in this process and take account of the importance of the Green Belt and provide solutions which do not impact the Green Belt.								

PR-C-0822	09/10/2017	Iain	Johnson		Y	Y	N	N
2247	Comments							
Even if Cherwell and Oxford City's calculation of unmet housing need is correct, (which it isn't), the proposal for PR6A is flawed. The density of housing in PR6A is too low to provide affordable housing or the type of houses for key workers in Oxford. The density implies large houses for people who will notice they have railway station on their doorstep and can commute to London in an hour. If people move into these homes to work in London that does nothing to meet Oxford's need. The proposal includes a primary school next to the park, on the edge of the proposed low density housing development. The major population growth in this plan is in Yarnton not next to Cutteslowe park. Primary school children are the most likely to travel to school by car adding several hundred car journeys to an already overcrowded road system. Cutteslowe already has one primary school at the other end of the park. The planned extension to the park, offered as a cynical ploy to curry favour with nearby residents and park users, is not guaranteed. There is also no guarantee of the arable farmland promised in the plan. Building next to the park will alter the park irrevocably. People travel to and use this park because it is on the edge of the city with views over open countryside. Without its setting it is much diminished. Cutteslowe park is a lovely green space surrounded by open countryside that provides habitats for wildlife visible in and around the park. The open fields and farmland provide a setting that allows the city population to take leisure while viewing a countryside that contributes to their wellbeing. Happiness from being in and viewing green space shouldn't be underestimated and should be valued. PR6a has no permanent eastern boundary. This amounts to a "developers charter" where existing development can be used as an excuse for further development and then yet more. This is a crass and foolish oversight by Cherwell and will play into the hands of landowners and developers who will build and build and build some more making PR6a bigger and bigger. PR6a is directly in opposition to what the Green belt is for and what the National Policy Framework clearly says the Green belt is for 5 purposes of the Green Belt quoted. This plan goes against all 5 purposes.								
Changes Sought				Reasons for Participation				
The local plan should be scrapped and started again when there is clarity about the ACTUAL unmet housing need and not just the desire of the city council, and Cherwell, to meet a figure they have made up based on discredited calculations. The local plan should also recognise the importance of the Green Belt. The Green belt isn't an inconvenient anachronism to be discarded. It is essential to the wellbeing of the citizens of Oxford and surrounding towns and villages. It is evident that the UK government values its green belt more than this local plan does ... The Government national planning policy framework states that the Green belt exists to prevent urban sprawl, prevent neighbouring towns merging, safeguard countryside from encroachment, preserve setting and character of historic towns (such as Oxford!) and assist in urban regeneration (by forcing entities such as the Oxford city Council, the University and its colleges to consider land in the city for housing not more unnecessary jobs).								

Proposed Submission Plan - Policy PR6a - Land East of Oxford Road

PR-C-0832 5030	10/10/2017	David	Flavin	Oxfordshire County Council					
Comments					Proposed changes suggested.				
Changes Sought					Reasons for Participation				
On page 88, para 5.85, the document states that: "Design principles which seek to deliver a connected and integrated urban extension to Oxford will be required". The new Cycling and Walking Design Guides should be referenced as the relevant document for best practice Design principles.									
PR-C-0832 5042	10/10/2017	David	Flavin	Oxfordshire County Council					
Comments					North Oxford development sites (Policy PR6a East of Oxford Road, 650 homes and Policy PR6b West of Oxford Road, 530 homes) would be expected in combination to generate approximately 360 primary pupils. This would require a 2 form entry (420 place) primary school, which would be expected to have some space to accommodate children from other growth areas as well. A 2.2ha site is therefore required for a new 2 form entry primary school within this site.				
Changes Sought					Reasons for Participation				
Policy PR6a currently requires "provision of a primary school with at least three forms of entry on 3.2 hectares of land". This requirement can be reduced as above and should state "provision of a primary school with two forms of entry on 2.2 hectares of land".									
PR-C-0832 5053	10/10/2017	David	Flavin	Oxfordshire County Council					
Comments					The requirements within each site policy for an archaeological assessment and potential pre-determination investigations are supported.

Comments					Proposed changes suggested.				
Changes Sought					Reasons for Participation				
a. Primary school – the site Development Brief will need to consider school requirements regarding length of frontage, not on cul de sac, number of access points etc. as well as options for parking and drop off. b. Needs to be a direct walking/cycling link to Oxford Road via the existing residential streets to the south. c. Due to the size of the development, the Policy needs to specify two separate access points onto the highway. d. Generally, should PR6a and b be covered by a single masterplan? This would need to include integration across Oxford Road. It would help to coordinate the vehicular access points, crossings and pedestrian/cycle links. e. Pedestrian connection to adjacent residential area should be secured.									
PR-C-0846 2285	10/10/2017	Alison	Noel					N	
Comments					Object to policies PR3, (The Oxford Green Belt), PR6a (Land East of Oxford Road) and PR6b (Land West of Oxford Road). • Believes these proposals are not consistent with National Policy because they do not take into account the detrimental effect that removing these large areas of Green Belt will have. These proposals therefore fail to meet the test of soundness as defined in paragraph 182 of the NPPF. • Oxford's Local Plan has not yet been prepared so Cherwell's allocation of homes is premature and is not an appropriate strategy and is unjustified.				
Changes Sought					Reasons for Participation				
PR-C-0847 5291	10/10/2017	Dr Michael	Fraser		N	N	N	Y	
Comments					References on the Cherwell Green Belt Study (April 2017), the Oxford Green belt Study (2015), Category A Village Analysis (2016), Policy Villages 1 and 2 of the adopted Local Plan Part 1 and SA report. Conclude that the removal of Green Belt separating Begbroke (PR8) and Yarnton (PR9) and subsequent development as proposed would result in coalescence of both settlements; encroach on the open countryside; and result in highly inefficient use of land (which itself is a combination of grade 2 and grade 3 agricultural land). The harm that results is exactly the harm that the Green Belt land is designed to prevent. The loss of protection of the Green Belt and the scale of subsequent development is contrary to existing Local Plan policies. The "exceptional circumstances" put forward by Cherwell District Council are without merit with respect to all sites proposed for removal from the Green Belt.				
Changes Sought					Reasons for Participation				
For the reasons given above AND the Representations made by the Begbroke & Yarnton Green Belt (BYG) Campaign which are additionally supported, the Plan in its current form cannot be changed to make it legally compliant or sound and should therefore be withdrawn and NOT be submitted for Inspection.					Would like the Begbroke & Yarnton Green Belt (BYG) Campaign to represent meat the Examination should it take place.

PR-C-0847	10/10/2017	Dr Michael	Fraser		N	N	N	Y
5290	<p>Comments</p> <p>Referenced the 5 purposes of the Green Belt and NPPF paragraphs 82-84. Quotes provided on the Elmbridge Local Plan and Poole Local Plan. Quotes provided on NPPG's guidance on the Housing and Economic Land Availability Assessment (HELAA). Reference to Policy ESD14 of the adopted Local Plan Part 1. it is reasonable to conclude that whilst local districts may have accepted an apportionment of Oxford's unmet housing need the actual number is not absolute and the Local Plan process may determine that Cherwell, for example, is unable to accommodate the apportioned figure due to existing national policies, such as Green Belt. Conversely, Oxford City, through the development of its own Local Plan and consideration of urban density, re-allocation of land previously earmarked for employment use, etc. may determine that the total unmet housing need is lower than that recommended by the SHMA and post-SHMA work. The latter point will especially apply should Oxford City seek to justify exceptional circumstances to remove Green Belt land that falls within its own jurisdiction. Reference to Oxford's Preferred Options document.</p> <p>Changes Sought</p> <p>For the reasons given above AND the Representations made by the Begbroke & Yarnton Green Belt (BYG) Campaign which I additionally support and adopt as part of my own Representation in this document, the Plan in its current form cannot be changed to make it legally compliant or sound and should therefore be withdrawn and NOT be submitted for Inspection.</p> <p>Reasons for Participation</p> <p>"Would like the Begbroke & Yarnton Green Belt (BYG) Campaign to represent meat the Examination should it take place"</p>

2288	<p>Comments</p> <p>Object to policies PR3, PR6a and PR6b as well. The key facts:- The proposal is not consistent with the National Policy because the policies do not take into account the detrimental effect that removing these large areas of Green Belt will have.- There are no 'exceptional circumstances', which could allow a City Council to ruin the environment and the future of our children. The Government's NPPF (Para 80) is very clear what the aims of the Green Belt are. The Green Belt must be 'enhanced', not reduced. There are no supporting facts that all relevant alternatives had been assessed.</p> <p>Changes Sought</p> <p>Revise the Plan</p> <p>Reasons for Participation</p>							
PR-C-0874	03/10/2017	Mr Stuart & Mrs Phyllis	Holcroft		Y	Y		N
2369	<p>Comments</p> <p>Consider that Policies 6a and 6b are unjustified, on the grounds that :- • They do nothing to check the growth of Oxford and its urban sprawl. • There are sites within the City Council boundary that would potentially be more suitable • The level of Oxford's need has not been confirmed. If there is little or no need in Oxford this will reduce the pressure of developing in the Green Belt. • Residents of Kidlington, Gosford and Water Eaton have no desire for their communities to be swallowed up into Oxford. The Plan will remove much of the physical and importantly, the visual green space between Kidlington and Oxford and instead promote the A34 as the physical boundary of Green Belt. This effectively reduces the belt to a ribbon a few hundred metres wide. What would remain as visible belt is a narrow strip extending from the Kidlington roundabout to the A34 bridge adjacent to Parkway station. Moving the Green Belt boundary away from Oxford in this way would provide the basis of future arguments to engulf Kidlington within the City of Oxford. Disagree with Para 5.77 about integrating with existing North Oxford communities. Reference to two Green Belt sites within Oxford, both rejected due to coalescence which is inconsistent to Cherwell's approach. The Cundall Report "Unlocking Oxford's Development Potential "concluded in Para 158 that "It is not appropriate for the City Council to enter into discussions regarding the use of neighbouring Authorities land, especially if it is Green Belt, without undergoing a thorough and robust assessment of all potential sites for housing within its own authority's boundary first".</p> <p>Changes Sought</p> <p>Reasons for Participation</p>

Comments

Objects to PR6a. This is an ambitious plan to remove the Green Belt gap between Oxford & Kidlington. The green policies associated with the proposals appear to be a cosmetic remodelling to the detriment of wildlife & appearance of the high graded landscape. The areas of residential development & open/ green spaces shown on policy map PR6a are unacceptable & do not replace roaming in the countryside. The proposed new school shown on proposals Map PR6a is unlikely to be convenient for those in Kidlington and surrounding area, where existing schools are already becoming overstretched with pupil numbers. Any pupil overspill which may be allocated to such a proposed new school other than at Oxford are likely to have to travel long trips, which will lead to more cars on school runs using the already congested road network. Any foot/ cycle route links between north Oxford and the Water Eaton Park & Ride / Parkway should be along or landscaped close to the A4165 Jordan Hill corridor and not in the open countryside, which will create further creeping urbanisation and light pollution, if lit. A map/diagram is provided, suggesting alternative development areas & boundaries.

Changes Sought

PR6a should be replaced by the attached revised proposal map showing options for housing densities at 30 & homes per hectare. Although the outer boundary has been rigidly fixed, the internal layout of development shown should be designed using a flexible approach. The proposed revised development needs shown on the attached map makes use of existing hedgerows close to the brow of Jordan Hill and can be reinforced with a wide green buffer screen for marrying it into the landscape and preventing excessive light pollution.

Reasons for Participation

Based on the representation, would like to reserve the right to respond if necessary.

Objections to the proposed development of housing in the Green Belt north of Oxford city- the area identified as PR6a. Objections:1. Traf Housing on the scale envisaged will generate a huge increase in commuter and general traffic. This would be on roads which are in poor condition, already congested and could not cope with the additional volume; they can barely handle the existing loads. 2. Cutteslowe Par.Cutteslowe Park is one of few green open spaces in Oxford that are freely accessible to the public; most of the many green areas are college lands which not available to the general public. The new housing will encroach on the borders of Cutteslowe Park and destroy the open country aspect at the borders of the Park. That this would take place on Green Belt land is particularly regrettable. The proposed 'Park Extension' and 'Arable Land' would have no guarantee of permanence. If the current application is approved, no doubt these plots of land would then also soon become ripe for building. Is well aware that there is dire need for more low-cost housing and that something urgently needs to be done to put right the current unacceptable situation. Is not a 'NIMBY' - believes it is wrong to build these houses on Green Belt land so near to a much valued public park.

Comments

The exceptional need to build 650 homes on this area due to few alternative locations being available is not proven, convincing or justified. This planning solution for meeting housing needs is insensitive towards overdevelopment to nearby villages, as well as the preservation of already too little remaining natural space and wildlife. How could this possibly therefore be effective or result in potentially healthy new living space? Using small bit of green space left would only be a temporary measure with irreversible consequences. Infrastructure plans are afterthoughts not actually agreed, funded or guaranteed by potential developers. The current infrastructure in surrounding areas, rapidly deteriorating and under increasing duress, surely needs to be a paramount consideration before exposing it to further demands. Only, and at best are 50% of these homes planned to accommodate housing needs which means that the remaining land will be used purely for property investment. Property investor's interests should surely not be underlying necessities in any green belt development stated as an exceptional cause? Justifying this plan as an exception to meet urgent needs therefore is not in compliance with the national green belt policy.Decision making by any parties that stand to profit from the success of this planning should not be allowed. Green belt space is labelled as such to cap the area from inevitable demand of expansion. This development would link Kidlington to the outskirts of the city centre and would result in an urban sprawl thus eliminating a small but precious pocket of wildlife and character. The high quantity of housing threatens the already deteriorating and increasingly grid-locked infrastructure. Decision makers for these plans and deciding on the fate of green belt areas should be those it will affect as there is no question it will have an impact on their quality of life.

Changes Sought

1) If using our green belt areas is truly the only option for development then Cherwell should decline and point to other solutions such as a. brown field sites within Oxford or further out b. current and numerous vast amounts of land either being reserved for commercial use (much of it not looking very utilised or successful 2) Ensure affordable housing is defined and that proposed housing estates are more than 50% (at least 65%) towards the housing need, not the interest of property investors 3) Current infrastructure problems to be considered by developers as a paramount concern. 4).Funding of infrastructure plans to be agreed and legally bound by property investors before the start of any development5) The decision making process should be ultra-sensitive and rigid to the aesthetics at risk.

Reasons for Participation

Concerned as a long time resident that these plans will affect. Also aware and understand these plans and their implications involving both current and future residents. Strongly believes to be competent and justified to be involved in ensuring that alternatives, and fair compromises are met.

Strongly objects to developing on N Oxford Golf Course (NOGC). It is outside but abuts Oxford CC's boundary. It provides golfing facilities for Oxford and Cherwell CC's residents. Golf is played by males, females, from pre-teens up to 90 yrs. It is good exercise & enjoyable & can be competitive. It is good for the health & fitness of those in their later years. NOGC has a good membership, particularly for the over 50's. We appreciate that there is high demand for housing in the Oxford area, but cannot see the sense in removing a successful recreational facility which could be used by the new home dwellers, & other housing sites already with PP. We recognise that PR6b has been suggested as an alternative location, but this is flawed. It makes no sense developing on an existing facility & set a new one up 1 mile away. This will cost in excess of £10 million & will take decades to establish on of the same quality. Also the new course would need to be available before the existing course is closed for development to ensure continuity. That means there would be no new completed housing at NOGC for a long time.

The Kidlington Gap (PR6a & PR6b) should be protected to prevent urban sprawl and village identities. The Golf course is a valuable recreational amenity that can't be moved. Object to transport strategy because; Most improvements are un-funded. Railway proposal is unrealistic. Unreal expectations for people to journey on foot, bicycle & bus. No demonstrations of air quality improvement, Oxford being an Air Quality Management Area, especially plans PR6a & PR6B adding to more cars onto the A4165. Does not take into account house building in the pipeline. How will building in PR6a & PR6b be affordable homes? London commuters will buy them. Schools, GP's, Hospitals etc. are already pressurised. Cutteslowe Park is not given sufficient protection.

I commented at the earlier stage on the need to ensure that additional housing is so organised as to avoid simply becoming London overspill. For that reason too I would use Areas 6a-c as parkland and if need be part of the existing Cutteslowe Park for housing - it is particularly close to the JR hospital. I also commented on the need to direct employment outside Oxford and to locate housing accordingly.

Positive Preparation - There has been an apparent failure to stress-test the alleged requirements of Oxford City Council. This is the subject of widespread local criticism, and the latest downgrading of the Government's own estimates of housing requirements undermines the whole basis of Cherwell's proposals and Oxford's demands. We need to start again with a process geared to the current Government figures as an absolute maximum. Damage to the GB just seems to have been assumed as a given, whilst it is not. Justification - The proposals cannot be justified as matters stand, as the figures have not been adequately tested and may no longer be current.

If as I believe the loop for this part of the GB is not substantiated then these areas should be zoned for use as London-style community park, with purpose facilities for public use. The area is easily accessible from several directions by public transport, and it would be far preferable for this to be properly landscaped as a continuing "Green Lung" of benefit to both Oxford (which could contribute to the cost) and Cherwell. The Golf Course is in effect already landscaped. If the City still believes that it needs additional housing I suggest that part of Cutteslowe Park is developed and the funds released used to provide a new and larger community facility. The existing Cutteslowe Park is not easily accessed from Kidlington, and the additional extension proposed of little use to any except Cutteslowe residents and gives little protection to the GB/"Green Lung".

Duty to Co-operate - I do not believe that the duty to co-operate requires a Council to accept without apparent justification the aspirations of an overwhelming neighbour Council where that Council has not done all it can to solve the problems. They have not substantiated the basis for it's alleged housing shortfall and has not shown any obvious willingness to co-operate in the funding and/or provision of essential infrastructure. There is a lack of mutuality.

This policy is unsound and ineffective. It is intended that building in this area will help to address Oxford City's 'unmet housing need' which is for affordable homes, but it will simply provide expensive homes close to Oxford Parkway station which will inevitably attract London commuters. Also object to the encroachment of GB land and the detrimental effect it would have on the open views from Cutteslowe Park - the best public park in Oxford and a much-appreciated and valuable resource for many residents.

Comments

The policies are unsound because they fail to meet the real needs of people for low cost (rented or for sale) houses that deal with urgent housing problems. Housing to meet local needs could be achieved by building smaller units at higher density and using far less land. Houses for sale at so-called 'affordable' prices, and houses at market prices, do not meet the needs of the teachers, nurses, public sector workers and young families. Build some houses, but make all of them of the type that people need - not what developers and landowners desire.

The proposal is not justified because it is not reasonable to plan to help meet the unmet need of a neighbouring authority (Oxford City Council) where that Council has yet to fully assess its unmet need. This is particularly relevant in the light of new methodology which suggests that Oxford's supposed unmet need is significantly overstated. The proposal is not justified because it does not meet the requirements of the NPPF on protecting Green Belt land. The land on PR6a & PR6b is very important in preventing urban sprawl, preventing towns from merging, protecting the countryside from encroachment and preserving the setting and special character of historic towns. The proposal does not take sufficient account of the damage that removing this Green Belt land would have. The proposal is not justified because the key exceptional circumstances as put forward by Cherwell are not valid. The proposal is not effective in terms of protecting an important park which lies on the border of Oxford City and Cherwell. The proposals put forward to protect the park can not be seen as deliverable. The proposal is not effective because it is not the most appropriate strategy. There are other sites within Cherwell which would not result in loss of valuable, high-performing Green Belt land. We would be grateful if the Inspector could visit the park please.

Proposed Submission Plan - Policy PR6a - Land East of Oxford Road

PR-C-1380	10/10/2017	Gordon	Henning				N	N
4471	Comments							

PR6a/PR6b are not justified or effective in terms of SA Objective 10 (Air Pollution/Road Congestion). Whatever pedestrian, cycle or public transport provision is available, increased vehicular traffic will inevitably be associated with development on this site. Climate change may well also increase the frequency and severity of adverse weather conditions making cycling etc. very unpleasant and more dangerous.

Changes Sought

Reasons for Participation

PR-C-1380	10/10/2017	Gordon	Henning				N	N
5841	Comments							

PR6a and PR6b are not justified because a) the prediction for the number of houses needed is questioned and is to be re-evaluated b) it does not take into consideration the intrinsic value of the Green Belt for current and future generations and the irreplaceable nature of the Green Belt c) is difficult to see how this development can be sustainable given the lack of realistic plans for providing necessary infrastrucutre - these are already significant longstanding problems in Oxford and Oxfordshire which are likely to be seriously exacerbated by the Northern Gateway development. Policy PR6a is not likely to be effective because a) it is very likely to provide housing for London commuters rather than people employed in Oxford and local areas, and hence exacerbate many of the problems that Oxford and Oxfordshire already have e.g. traffic and demand for schools, healthcare etc. b) the considerable uncertainty over many financial and economic matters after Brexit mean that there is considerable uncertainty about whether the plan could be deliverable over its period c) we have seen little real evidence in recent years of effective co-operation between local authorities. PR6a is not consistent with the NPPF and has an indistinct border.

Changes Sought

Reasons for Participation

PR6a and PR6b should be withdrawn completely. There are other alternatives for increased availability of housing including i) use of land within Oxford city for housing instead of employment and ii) increased housing density on sites already used or designated for housing within Oxford city.

PR-C-1381	10/10/2017	Caroline	Johnson	The Harbord Road Area Residents Association	Y	Y	N	Y
5286	Comments							

The proposed urban extension to Oxford City at land east of Oxford Road, comprising 650 dwellings at a net density of 40 dwellings per hectare, is considered detrimental to the highly valued Green Belt land and the current individual identity of land within Oxford City and Cherwell District. In addition it is considered extremely likely that housing on this site would be aimed at the affluent London commuter market with no real prospect of any affordable housing. Thus Green Belt land would be lost and Cherwell would fail to meet its objective of meeting Oxford's (alleged) housing need. Paragraph 85 of the National Planning Policy Framework (NPPF) states that when defining Green Belt boundaries, Local Authorities should define boundaries clearly, using physical features that are readily recognisable and likely to be permanent. The proposed revised Green Belt boundary immediately east of 'land east of Oxford Road' does not provide a clear, defensible or permanent boundary. Therefore, developing this land is likely to lead to the 'unrestricted sprawl of large built-up areas'. One of the five purposes of Green Belt land, according to paragraph 80 of the NPPF, is to prevent such sprawl. Indeed, the fundamental aim of the Green Belt is to prevent urban sprawl by keeping land permanently open, as set out at paragraph 79 of the NPPF. This lack of a clear, recognisable and permanent boundary gives cause for deep concern particularly because this area extends to the east across the wide open and stunning landscape of the Cherwell Valley towards Islip. The proposed removal of this land from the Green Belt would result in the coalescence of Oxford and Kidlington. Such removal of Green Belt land would erode the existing countryside setting of Oxford, contrary to national planning policy. Of particular concern, relating to development on 'land east of Oxford Road', is the impact that this level of development will have on the existing setting of Cutteslowe Park. This very large park is enjoyed by tens of thousands of visitors each year and they all benefit from the open landscape and countryside views. The footpath from the park leads to a network of Public Rights of Way thus providing easy access to this vast and attractive area of Green Belt countryside. Whilst some of the views will be retained the location of a school adjacent to the park's cricket pitch and development of land to the north will have a detrimental effect. Cherwell has responded to concerns raised at an earlier stage by providing for an "extension to Cutteslowe Park and agricultural land to be kept free of buildings to avoid landscape impact". These measures are too vague and indeed could be rescinded and do not provide sufficient protection for this very important and beautiful park. It is important to protect the openness of the Green Belt, one of its main purposes, in this location. The photos demonstrate that this is not an urbanised environment but valued Green Belt countryside fulfilling the important purposes for which it was designated. Draft Policy PR6a proposes the provision of public open space as an extension to Cutteslowe Park, including the creation of wildlife habitats. However, it is considered that this does not compensate for the proposed overall loss of valued agricultural and undeveloped land, rich in biodiversity that is currently accessible via existing Public Rights of Way. Furthermore, the associated traffic and pollution will impact greatly on Cutteslowe Park and existing areas rich in biodiversity. Cutteslowe Park is the largest park in Oxford with sports pitches and pavilions, play areas, miniature golf and railway, a skate park, significant wildlife areas and a community woodland. As recognised by the Council, the park is home to a number of sports clubs and hosts regular community events. It is of great concern that the increased level of traffic associated with a development of 650 dwellings will significantly impact on traffic and access to Cutteslowe Park, particularly when popular community events are held. It is unclear what exact level of provision is being proposed to ease such road traffic congestion. In relation to Oxford City, in September 2010 the City Council made an Air Quality Management Order declaring the whole of the City as an Air Quality Management Area (AQMA), where pollution levels of nitrogen dioxide objective will not be met. The Cutteslowe Roundabout has been identified as one of seven localised hotspots where pollution levels of nitrogen dioxide have exceeded national objectives. In light of this, it is considered that the significant increase in road traffic, inevitably associated with a cumulative increase of 1,180 new homes, in the local area (Draft Policies PR6a and Gb), alongside further significant developments already in the pipeline (Barton Park: up to 885 new homes, Northern Gateway: 500 proposed new homes and Wolvercote Papermill: 250 new homes) is highly environmentally unsustainable. Given the proportion of relatively recent planning permissions and proposed development listed above, it is considered that the 2013 traffic data used to inform the preparation of the draft Local Plan Partial Review is outdated and therefore invalid. It should also be noted that most of the traffic infrastructure improvements are unfunded and inadequate. All approaches to Oxford including the A4165 are subject to regular and severe congestion which further exacerbates air quality issues. Concern is raised regarding the potential conflict between the proposed development on site and the Grade II* listed St Frideswide Farmhouse. Any development of this site will cause substantial harm to the setting of The Manor given its important relationship to its rural landscape setting. The level of proposed housing provision on 'land east of Oxford Road' is questionable considering that Oxford City is currently only at the Preferred Options stage of Local Plan preparation. Therefore it is not yet known exactly how much land is available for housing development within Oxford City. It is concerning that Oxford City Council's strategy appears to be encouraging further employment growth within the City as this reduces available land with potential for residential development whilst, at the same time, creating additional demand for new homes. This was a shared concern, raised by many, during Oxford City Council's First Steps Consultation and is likely to have been raised again during the recent Preferred Options Consultation. Whilst it is appreciated that Oxford City is an appropriate location for new employment development within the County, it is felt that Oxford City should be prioritising land for housing at this current time. For example, Oxford City could well allocate more housing on the proposed Northern Gateway development by reducing the proportion of land currently allocated for employment use. It is considered that the allocation of housing within Cherwell to meet Oxford City's housing needs is premature and should be delayed until Oxford City has made further progress with its own Local Plan. It is considered that proposed development at 'land east of Oxford Road' is not justified as allocating new homes ahead of further preparation of Oxford City's Local Plan is premature and therefore not the most appropriate strategy. In the same respect, it is not considered effective as the proposals at this time are not based on effective joint working and cross-boundary strategic priorities. The proposal is not considered to be consistent with national policy as it has not fully taken into account the detrimental effect that removing such extensive land from the Green Belt will have. The proposal therefore fails to meet the tests of soundness as defined within paragraph 182 of the NPPF."

Changes Sought

Reasons for Participation

We respectfully request that this Local Plan be rejected. Cherwell District Council should re-start the process once Oxford City's housing need has been properly examined and when Cherwell does this it should have due regard for the importance and functions of the Green Belt.

We respectfully request that the Planning Inspector visits Cutteslowe Park and walks from the footpath in the Bottom Field, over the footpaths / bridleways to the Oxford Road past Water Eaton Manor and past St Frideswide Farmhouse.

Proposed Submission Plan - Policy PR6a - Land East of Oxford Road

PR-C-1382	10/10/2017	Peter	Watson		Y	N	N	Y
-----------	------------	-------	--------	--	---	---	---	---

Comments

Consider the proposed plan to be uncompliant and unsound. Object strongly as this would conflict with two principal objectives of the GB in checking the unrestricted sprawl of large built-up areas and preventing neighbouring towns from merging. It is not sound and not justified as it is not the most appropriate strategy when considered against reasonable alternatives and is not consistent with national policy. Conflicts flagrantly with two principle objectives of the GB.

Changes Sought

Not changes in words but a matter of retaining the area in the GB and finding alternative sites for development to the north, between the A4260 and the A44. e.g. accessible to the proposed station.

Reasons for Participation

Consider that the views of Gosford & Water Eaton and Kidlington have not been sufficiently heard during the preparation of these proposals. Have lived in the area for over 30 years and local councillors have previously been keen to preserve Kidlington gap while Oxford City wished to expand into the areas covered by PR6a and PR6b. Local councillors have not been well represented on the relevant reviewing bodies.

PR-C-1396	09/10/2017	Paul	Walker	Oxford Bus Company				Y

Comments

SUPPORT the Policy with AMENDMENTS. The Brief should clearly set out how the plan proposals relate to the strategic bus network and how this will evolve, what the trigger points to deliver this shall be and give clarity to developers on the costs of developing in these locations. The risk of not doing this is one of a hap-hazard development pattern of sites coming forward which cannot be served by high quality public transport though lack of forward planning, lack certainty for developers and a poorly thought out network connecting major nodes. We therefore support the Policy PR6a 10© and PR6b 8© which both state the need for the development to enable connection to Oxford Parkway & Water Eaton P&R site and to existing or potential public transport services. However the policy needs to explicitly highlight that the development brief will need to contain costed proposals for bus services improvements. The size of the strategic allocation also makes it unlikely that it will support key local facilities, such as a substantial district centre. The result is that, to a very great extent, any bus route created to serve this site would have to rely only on the new demand generated by the development itself. Therefore there needs to be mention within the policy of the need to “kick start” bus services for a number of years promoting alternative transport to the car until the development is built out and bus services commercially viable. This viability may come from diversion into the site of existing services and as such we consider that any extension and/or diversion of the 500 park and ride service provide this role. Not least that such a connection would better enable occupiers if these developments were to access not only Oxford city centre but also Oxford Parkway Station which will better enable modal shift, keeping park and ride spaces free for longer distance travellers and providing a direct link to the station which will be more attractive to potential occupiers. Whilst supporting the notion of policy PR6a 7 in terms of a green infrastructure corridor for pedestrians and cyclists we would also contend that to improve journey time reliability & speedier connections, modal shift and operational viability that this link also be for bus use to provide a suitable piece of bus priority consistent with the emerging plan for the A44/A4415 corridor and the Oxford Transport Strategy.

Changes Sought

Like to see the policy strengthened to highlight the need to connect inter urban bus route networks between settlements that reflect the OCC strategic bus network in a phased manner than can allow new developments to be accessible by modes other than the car with appropriate S106 commitments to enable these developments to be sustainable in a manner that is clear to developers promoting sites. Additionally we would therefore suggest that PR6a 7 be amended to include bus provision along the green infrastructure corridor.

Comments

The representations are submitted on behalf of my client Bonnar Allan with regard to their proposals at New Alchester. The land is identified in the Vision document attached to these representations and will include up to 7,200 new market & affordable homes, primary & secondary schools, creation of a 240 acre country park & watersports centre & the potential to incorporate a new Park & Ride site with connection to the railway line south of Bicester by a new railway station. Our comments on the PSP are confined to issues of soundness. A summary of the alternative Options A to I that CDC considered at the last stage of the Plan is set out at paragraph 2.12. For the reasons we set out in our representations to that stage, we consider that the CDC's proposed approach of allocating land to the north of Oxford & within the Green Belt (GB) around Kidlington as set out in PR6a is flawed, & that the Partial Review does not pass the test of soundness. The PSP is not Justified as in our view it does not represent the most appropriate strategy for meeting Oxford's un-met housing needs. The logic that appears to underlie the PSP is in essence that the closer the proximity of the required housing to the City, the more sustainable it will be. This logic ignores the fact that there would be better prospects of residents travelling into Oxford as well as the major employment locations in the Science Vale by public transport including by rail from New Alchester. The preferred locations around Kidlington will increase congestion on the highway network & will result in the loss of GB & lead to coalescence between Kidlington, Begbroke & Yarnton, whereas the proposals at New Alchester are located beyond the GB. As we make clear in the Vision document, our proposals can be delivered in a phased manner & there are no impediments to early delivery. The scale of the proposals at New Alchester allows it to meet both the identified needs of Oxford City as well as an element of the future needs of Cherwell District, & in so doing, we recognise the journey that this proposal involves.

Changes Sought

We consider that the PSP should direct a majority of the un-met need to New Alchester which constitutes a more sustainable & justified location for the new homes needed both to meet the City's un-met needs as well as future need within Cherwell District. The PSP should be re-drawn to allocate land at New Alchester in place of the proposed allocations in the Green Belt (GB) around Kidlington. New Alchester can provide a highly sustainable location for the much needed development, at a location outside the GB & on the railway line into Oxford. The development would facilitate creation of a new railway station at New Alchester which would encourage people to travel to Oxford City & also other employment centres within the Science Vale by public transport.

Comments

The CDC Local Plan Part 1 and the NPPF (Para 34) support a strategy whereby growth should be directed towards the most sustainable locations, encouraging travel by non-car modes. The County Council's Oxford Transport Strategy is also clear in its objectives for achieving a meaningful modal shift for those travelling into Oxford City away from the private car and towards public transport. In this context, the justification for the Council's approach in pursuing growth at sites such as PR7, PR8, PR9 and PR10 which propose concentrated levels of development (circa 3,220 dwellings) is unclear. The development as proposed is concentrated along the already very congested A44 corridor and around Kidlington which is a known congestion hotspot. While some development in this area may be appropriate, the concentration of sites will lead to significant issues of congestion given that the sustainable modes being pursued (with the exception of cycling) are all road based Park & Ride, Bus and RTP routes. The Sustainability Appraisal (June 2017) recognises that new development around the Kidlington area 'may increase congestion but the Local Plan Part 1 Partial Review allocates new housing sites that encourage the use of sustainable transport and are allocated following consideration of their impacts on transport patterns through the SA'. Notwithstanding assessment of the proposed allocations through the SA, the impact of congestion has not been sufficiently weighed in the balance when considering reasonable alternative sites and a broader distribution across the District. For example, locating development on the rail network at locations such as Islip would assist in removing some traffic movement from the road entirely. It's recognised that there is the potential for a new railway station at Yarnton, but this is a long term strategy with no immediate proposals for delivery. CDC does not consider this necessary infrastructure to support the proposals and simply consider it a potential future benefit. Therefore, all focus for this plan period under this strategy will be on the road, contrary to the conclusions of the Sustainability Appraisal and to which our client objects. Overall, the various transport evidence base documents prepared to date have not robustly assessed the opportunities to improve rail usage despite current work being undertaken to develop the East-West rail link. East-West rail Phase 1 works saw an upgrade of Islip station which is on the new Oxford – London Marylebone line. The Western Section of East-West Rail will also see the introduction of three new passenger services, for direct services within the region and connections to national mainline services. These services are due to start operating in the early 2020s. Despite this significant rail investment, no development is proposed within Islip which is just a 3 minute train ride from Oxford Parkway, 7 minutes from Bicester, 11 minutes from Oxford and under an hour to London Marylebone. Our client is of the view that Policy PR4a (and by association policies PR6-PR10) focuses too strongly on improvements to and mitigations for the highway network rather than considering options for removing traffic from the road network and towards more sustainable modes such as rail. The proposed locations for the additional housing are known areas of congestion and the transport proposals do not go far enough to solve the existing issues, with the proposed levels of development in this location likely to compound matters further. Our client objects to these policies which will lead to increased levels of congestion and the strategy will not achieve a step change in modal split. Soundness - The evidence base prepared to support Policy PR4a (and by association policies PR6-PR10) is not sufficiently robust to justify the approach to allocate this level of housing in an area of existing traffic congestion without an effective strategy to achieve a step change in modal split. The Council needs to justify its approach for focusing so much of the new development in one area which is already known to suffer issues relating to road congestion. Rail has not been considered as a reasonable alternative within the evidence base documents and consequently the draft plan is not justified. The draft Plan is not Effective, as it focuses too much of the housing requirement in one, focused area. The Plan is not consistent with national Policy as the proposed development is not located where the need to travel will be minimised and the use of sustainable transport modes can be maximised.

Changes Sought

The evidence base has failed to sufficiently consider investment in rail / exploitation of existing rail assets despite recent investment in the East-West Rail project. A thorough exploration of the reasonable alternatives is required. More detailed consideration needs to be given to the potential for locating new development at Islip within proximity to the existing railway station. This location would be sustainable and would support the existing local community. It has been demonstrated that there are no overriding physical constraints, in terms of highway impact, flooding and ecology, to the development of this land.

Reasons for Participation

Due to the complexity of the matters discussed in relation to PR4a

PR-C-1400	10/10/2017	Ms Deidre	Wells	Red Kite Development Consultancy on behalf of Kidlington Parish Council	N		N	Y

Comments

This site would perform as urban extensions to Oxford, physically linked to existing communities. Development of these sites would significantly narrow the important open countryside gap between Oxford and Kidlington, effectively creating the perception that Kidlington was not a separate village community, but a suburb of Oxford. The combination of both sites, either side of the Oxford Road, currently provides a valued area of unlit open green space, and a distinct break in development between the City and surrounding villages, along a major entrance corridor to Oxford. Evidence does not demonstrate that exceptional circumstances exist to justify a release from the Green Belt, where background studies confirm that both sites are of high importance to the integrity and function of the Green Belt. (See 2015 and 2017 Green Belt Studies) Development on either or both sites would aggravate existing local congestion and air quality issues, and adversely impact on movement between Oxford and Kidlington. The open character of the agricultural land east of Oxford Road forms part of the wider landscape which provides an important setting on the approach to Oxford. The landscape of the Golf Course is manmade, but long established, with significant tree belts and groups. It is unlikely to be able to preserve these features unless development is restricted to a low density and larger dwellings. As a result, there would be an inefficient use of an important large area, and potential viability difficulties in accommodating 50% affordable housing. The net benefits do not outweigh the substantial harm to local character. The Golf Course is also a local recreation facility, and KPC consider that its loss is unlikely to be offset by a new Golf Course on a significantly smaller site at Frieze Farm. Development on this site conflicts not only with NPPG Green Belt Policy, but also with paragraph 74 of the NPPG, which seeks to prevent the loss of recreation facilities. Indeed, site owners/promoters have recently made a presentation proposing 600 houses on the Frieze Farm site, and have no apparent intention of creating a new Golf Course. (See representations on Policy PR6c). In summary - Retain Green Belt Policy on all the above sites, and do not allocate for development."

Changes Sought

Retain Green Belt Policy on all the above sites, and do not allocate for development.

Reasons for Participation

"KPC is an elected body, representing the views of a large number of people in the part of the District which will be most affected by the proposed alteration to the Development Plan. In addition to having a statutory role in the Planning process, the Parish Council has an in depth understanding of the local area where new development is proposed, and is well placed to contribute to the Local Plan process. It is essential for the KPC to be actively involved in the Examination, in order to be able to represent local views, fully respond to submissions made by others, and to address any modifications discussed in advance of the Examiners report."

PR-C-1401	10/10/2017	Alan	Lodwick	Alan Lodwick on behalf of Kidlington Development Watch	N		N	Y
-----------	------------	------	---------	--	---	--	---	---

Comments

While we object to any release of land in the Green Belt including the allocated sites, we have a further concern relating to the possible overall location of land for housing in the event that any or all of the allocated sites are confirmed for development in any adopted plan. PR6a, 6b, 7a, and 8, the land areas allocated specifically for residential development (i.e. not the total site areas) are approximately 50% higher than would be necessary to accommodate the stated number of houses at the net densities specified. For example the largest site (PR8) for 1950 houses at 45dpha net should require 43.3ha. Whereas the allocation is for 66ha, over 50% larger. The definition of net density is not specified in the plan though it usually includes access roads, parking, incidental open space and play areas. There are separate allocations for schools and a local centre, so it appears that the areas allocated specifically for residential development are significantly too large. Given the desirability of this land to developers, there is a clear risk that permission could be sought for significantly higher numbers of dwellings over and above the intended provision, resulting in even greater environmental harm and pressure on infrastructure. We are therefore concerned about the provision in PR12a (para 7) that should more than 4400 houses be built this will be taken into account in meeting Cherwell's own need, which would appear to be an incentive to the Council to approve higher numbers than set out in this plan."

Changes Sought

All allocations should be withdrawn because they are premature (need not yet established) and because alternatives to Green Belt development exist. However if some or all of the allocations are confirmed (which we completely oppose) then the plan should be amended to ensure that no more than the specified numbers of houses will be permitted (e.g. by reducing site areas or other stipulations).

Reasons for Participation

We (Kidlington Development Watch – KDW) consider this is necessary because of our extensive involvement with the consultations at all stages of the Cherwell Local Plan to date; the considerable work we have undertaken to publicise the consultation ourselves; of the feedback we have received from Kidlington residents; and, the large numbers of them who have responded as a result of our efforts. KDW is a voluntary organisation run by Kidlington residents with experience and interest in planning issues. We believe that effective, informed public participation in planning consultations is vital to democratic policy making. We publicise consultations that directly affect Kidlington and offer advice on how people can best make their views known. In relation to this and the previous options consultation we printed and distributed leaflets, put up posters, ran a stall on many Saturday markets and at other events, participated in public and parish council meetings, provided information on our website and responded to requests for information from Kidlington residents. As a result, we have gained a very good understanding of the views of Kidlington residents, a large number of whom have made representations because of our activities. KDW's representations therefore reflect the views of much of the Kidlington community."

Comments

"Object to the allocations in Policies PR6a, 6b,7a,7b,8 and 9 for the reasons given in our objection to release of Green Belt land (seeobjection to PR3). All of these sites contribute to the purposes of the Green Belt and should not therefore be removed from it. Other Green Belt Sites rejected by the Council. We also explicitly support the Council's rejection of other sites in the Green Belt considered at the options stage for the same reasons. Policy 10 : Woodstock Allocation. In the case of Policy 10, the site is on the edge of the Green Belt, and would impact on its openness. It would also be an excessive and disproportionate extension to the small historic town of Woodstock particularly when considered in addition to the adjacent site provisionally allocated in the draft West Oxfordshire Local Plan (currently under examination) for 300 houses. Due to wide-spread concerns raised at the hearings, the Inspector has asked West Oxfordshire District Council to conduct a heritage impact assessment of this site given its proximity to a World Heritage site. Cherwell should have conducted a similar assessment, taking into account the cumulative impact of the proposed development. Woodstock town is not within the Cherwell boundary but nevertheless, Cherwell has a duty to seek to protect historic Woodstock from inappropriate development and we consider it is not reasonable or sustainable to locate 410 extra houses in this area to meet Oxford's unmet housing needs."

Changes Sought

All allocations should be withdrawn because they are premature (need has not been established) and because alternatives to Green Belt development exist.

Reasons for Participation

We (Kidlington Development Watch – KDW) consider this is necessary because of:our extensive involvement with the consultations at all stages of the Cherwell LocalPlan to date; the considerable work we have undertaken to publicise the consultationourselves; of the feedback we have received from Kidlington residents; and, the largenumbers of them who have responded as a result of our efforts.KDW is a voluntary organisation run by Kidlington residents with experience andinterest in planning issues. We believe that effective, informed public participation inplanning consultations is vital to democratic policy making. Comments

An existing golf course is located within policy allocation PR6a - Land East of Oxford Road. Sport England welcomes the Council's identification of a replacement site within the policy on 'Land at Frieze Farm'. This will replace the facility lost, in accordance with paragraph 74 of the NPPF.

Changes Sought

If it is proposed not to replace the golf course, the Council should commission an independent assessment of the need for golf in the District (together with Oxford City).

Reasons for Participation

To discuss the matter with the Council and the Planning Inspector if the golf course is proposed to be lost.

PR-C-1403	10/10/2017	Vicky	Aston	Sport England	Y	Y	N	
------------------	------------	-------	-------	---------------	---	---	---	--

5184

Comments

Sport England welcomes the Council's references throughout the document and policies requiring developers to include open space, outdoor sport and recreation. However, Sport England is concerned that the Council has yet to publish its evidence base in relation to playing fields and outdoor sports provision and built sports facilities. The Council will need to ensure that all of the new development contributes towards indoor and outdoor sports facilities in the District. The Council's evidence base will help frame this work. Sport England also recommends that the Council includes a requirement for applicants to include a statement demonstrating how their development has met the 10 principles included in Sport England's Active Design document. See Section 3 of the document 'how to use Active Design' and the proposed change.

Changes Sought

Sport England recommends that the Council consult Sport England at the earliest opportunity on the preparation of the Playing Pitch Strategy. Sport England suggest the following text could be included in the policies to support Active Design: PR5 (10) Provide evidence of how the development has improved the health and well being of new residents by demonstrating how the proposals will meet the 10 Active Design Principles set out in Sport England's guidance document 'Active Design' <https://www.sportengland.org/facilitiesplanning/active-design/>

Comments

If the aim is to provide 1,180 houses in the area south of Kidlington, the least damaging locations would be at Stratfield Farm (site 49) and south of Gosford (sites 178, and HELAA 243 incidentally, a new site not identified at the Issues and Options stage). The two assessed sites have existing small allocations, but the theoretical capacity is far higher. The Initial Sustainability Appraisal (which excluded site 243) set these at 523 and 1,388 respectively. Allowing 3.2 hectares for a new primary school, probably best sited at the Gosford sites, and the 0.7 hectares identified for a cemetery extension in the Submission draft PR7a no. 3, the total net combined land available would be 34.26 + approximately 5 hectares of previously unidentified site HELAA 243. Adding in the existing allocation of 220 + 120, the total number of dwellings required to replace those not developed south of Oxford Parkway becomes 1,520. This represents an overall net density of 38.7 dph (1,520/39.26), which is lower than the 40 dph proposed in the submission draft in PR6a, less than the 45 dph proposed in Policy PR8 and less wasteful of Green Belt land than the 25 dph proposed in policy PR6b, or, to put the figures in greater perspective, withdrawing 60 hectares of land from Green Belt protection (Policy 6A, 6B) contributes 1,180 houses at a net density of just under 20dph. Detailed comments are provided in relation to the selection of alternative sites PR178 and PR49 and the Kidlington Masterplan.

Changes Sought

PR3, 6a, 6b - Delete references to PR6a and 6b in PR3. Rewrite all references to sites in Kidlington gap, deleting allocations, setting out playing field allocation in land east of A4165. Allow mixed use on land identified within Policy 3c playing fields, residential allocation of 140 written as a new policy. PR7 a and PR7b - Increase allocation to 1,520 between these sites. Retain a small buffer area to the west of Stratfield Farm. Remove reference to playing fields. PR12a - Rewrite to avoid incentive for future allocations beyond those allocated in the plan, or delete.

Reasons for Participation

Has spoken as a platform speaker at three public meetings in Kidlington and Gosford. Made a substantial representation at the Issues and Options stage. As a former parish councillor, has represented Kidlington Parish Council at the North Oxford Area Action Plan examination in public, and likewise was invited to the Examination in Public of the Local Plan. Has an MSc in Transport Planning, so part of representation covers that area. Also offers a distinctive perspective as a local resident, who agrees with the principle of a Green Belt review, but does not support the current planned site allocation. Has no interest in promoting a particular site, but only have some sympathy with those who would wish to preserve the Green Belt intact. Believe views represent many in Kidlington who recognise the need for local housing, but see these plans as strategically unacceptable. Representation contains primary research evidence which could be presented.

Proposed Submission Plan - Policy PR6a - Land East of Oxford Road

PR-C-1404	09/10/2017	Andrew	Hornsby-Smith		N	N	N	Y
5375	Comments				Not consistent with national policy. The allocations in Policies PR3, PR6A, PA6B, PR8, and PR12a by virtue of their location, scale, and likelihood to lead to future harm to the Green Belt, fail to demonstrate the 'very special circumstances' required to offset the protection against inappropriate development in the Green Belt, and the coalescence of settlements.			
	Changes Sought			Reasons for Participation				
				Has spoken as a platform speaker at three public meetings in Kidlington and Gosford. Made a substantial representation at the Issues and Options stage. As a former parish councillor, has represented Kidlington Parish Council at the North Oxford Area Action Plan examination in public, and likewise was invited to the Examination in Public of the Local Plan. Has an MSc in Transport Planning, so part of representation covers that area. Also offers a distinctive perspective as a local resident, who agrees with the principle of a Green Belt review, but does not support the current planned site allocation. Has no interest in promoting a particular site, but only have some sympathy with those who would wish to preserve the Green Belt intact. Believe views represent many in Kidlington who recognise the need for local housing, but see these plans as strategically unacceptable. Representation contains primary research evidence which could be presented.				
PR-C-1406	08/10/2017	Dr. Alan and Mrs Catherine	Dobson					N
4512	Comments				Objection: - Proposals are not consistent with National Policy because they do not take into account the detrimental effect that removing these large areas of GB will have. These proposals therefore fail to meet the test of soundness as defined in paragraph 182 of the National Planning Policy Framework. - Oxford's Local Plan has not yet been prepared so Cherwell's allocation of homes is premature and is not an appropriate strategy and is unjustified.

PR-C-1409	10/10/2017	Richard	Cutler	Bloombridge Development Partners				N Y
5605	Comments				Object to PR6a & PR6b, where exceptional circumstances have not been demonstrated . The dominance of residential shown on the Policies Map is a massive lost opportunity for higher order uses, notably University-related and for inward investment, uses best suited to take full advantage of a location next to Oxford Parkway Station. Housing here is very likely to increase commuting to London. There is no long term defensible Green Belt boundary.			
	Changes Sought			Reasons for Participation				
	The proposals for housing development at Water Eaton and Begbroke (PR6 & PR8) either need to be deleted as unsound or modified to include 'safeguarded land' for the University or major inward investors, typically 25 to 50 hectares (based on our Arlington experience, for example in relation to the former Regional Investment Sites in the West Midlands RSS). This will have an impact on the housing capacity of these sites.			We confirm that we wish to attend the examination in public.

PR-C-1418	10/10/2017	Glenda	Abramson					N
5090	Comments				Is opposed to the proposed Green Belt allocations mainly because CDC has not proved the exceptional circumstances required to build on a GB, nor has it proved Oxford's "unmet need". Use of the GB for development should be the last resort, if at all. The impact of this proposed "sprawl" on the environment would be massive, with extra cars on roads that are unable to sustain what already exists. This is true also of the existing infrastructure as a whole.

PR-C-1423	10/10/2017	Dr. Judith	Webb					
4328	Comments				Land East of Oxford Road. Developing this farmland would be the final nail in the coffin of the 'Kidlington Gap' of GB which separates the city from Kidlington. Strong objection to it. Maintain the GB here. the likelihood is that the nearness to Oxford Parkway Station will mean that developers will want to build large expensive houses which will go to commuters to London from the station or will be bought by landlords for renting out at high price. There will be nowhere near the 50% truly affordable housing that should have been built there. People desperate for housing in Oxford city will not be helped by development of PR6a. How can any Planning Policies prevent this? Green land and food production area will be lost at massive profits to developers. I note a red line around 'parkland and retained agricultural land' to the east of PR6a. I consider this land should never be developed, however hard developers push for it, years down the line.

Proposed Submission Plan - Policy PR6a - Land East of Oxford Road

PR-C-1425	10/10/2017	Katherine	Chetwynd						N
4330	Comments								
I have family living at Lucerne Rd, Oxford and know the area well. 650 new homes on this site, together with the 550 homes suggested for PR6b, would place an intolerable strain on the Banbury Road roundabout and route into the city of Oxford. Therefore no building should commence until after a full rapid transit system has been provided. Full recognition should be made of the importance of agricultural land in feeding an expanding population in an uncertain world. Farms in the vicinity of PR6a should be disrupted as little as possible. Cutteslowe Park should not be extended as proposed, and the land should be retained as agriculture. I note that sports, play areas, and allotments are to be provided within the new housing areas. The setting of the Grade 2* St Frideswides Farm is insufficiently respected and the Green Belt land between the Banbury Road, the railway line and the River Cherwell is a particularly loved and special area, given its open countryside feel right next to the City and its historic nature and 'land that time forgot' feel, and the exceptional nature of Water Eaton. Damage to this area would be desecration.

PR-C-1427	10/10/2017	Christopher	Villiers						
4554	Comments								
Almost all the new houses are planned to be built in Oxford's GB. Particular concern with the 1,180 houses envisaged for the land between Cutteslowe Park and Banbury Road and the North Oxford Golf course. Your own Local Plan states in connection with Oxford's GB that it "was designated to restrain development pressures which could damage the character of Oxford City and its heritage through increased activity, traffic and the outward sprawl of the urban area." It is clear that filling the gap between Oxford and Kidlington breaches all three reasons given above for having a GB. It would be not only an obvious 'urban sprawl' but it would fly in the face of one of the purposes of all GBs - i.e. to prevent the coalescing of existing settlements (Oxford and Kidlington). GBs are a permanent designation and thus are not the same as other green field land. Oxford is lucky to have one: many other cities of its size have no such designation of the land surrounding them and are thus subject to relatively unrestricted outward expansion. Unlike other green field sites, GB land can be built on only under exceptional circumstances. Various grounds claim this is a case where such 'exceptional circumstances' exist. In particular I quote Exceptional Circumstance 2: "Clear inability of Oxford to meet its (housing) needs." Even if one accepts that Cherwell has a 'duty to co-operate', this argument a) is incorrect and b) has been overtaken by events. It is incorrect in that Oxford City Council, whilst stating it has a housing shortage, is using some of its available land to create further employment opportunities rather than for new housing. This not only removes land which otherwise could be used for housing, but makes the situation worse in that more demand for housing (and other infrastructure) is created by those who will take the new jobs. The event which now renders this whole review at the very least questionable is the emergence of new methodology to determine the county's 'unmet need' for housing. The demand for new housing for the whole county has been reduced by 30%, while Oxford City's need has been slashed by 50%. These new figures, while still high, are a lot more realistic than the previous ones which seemed to have been developer led. It means that the City need no longer rely on the District Councils to meet its housing needs.

PR-C-1427	10/10/2017	Christopher	Villiers						
4555	Comments								
Disagrees with proposals for building on land next to Cutteslowe Park: 1. Proposals based on a consultants' report which suggests that the Park is little used. The Park has always been well used and has become even busier than before over the last few years. A new splash feature and beach volleyball court have been added; the international phenomenon of Parkrun has really taken off in Cutteslowe Park. Both the summer/winter courses take runners very near the proposed new housing: what is now a pleasant rural run would be ruined, and the air quality adversely affected too, with developments along the edge of the Park. The Park has become so popular that a new carpark has just been added alongside the A40. 2. The great joy of the Park is that it adjoins open, unspoilt land. There is easy access to open countryside, in particular to and around the village of Water Eaton. The proposal to build houses between the Park and Oxford Parkway Station would completely destroy this rural quality. Oxford City Council initially argued that development in area PR6a is necessary in their attempt to solve its housing shortages, but (as has been widely reported) they now admit that houses in this particular area will just be snapped up by London commuters doing nothing to alleviate any local housing shortage. This admission alone is enough to defeat any proposed development anywhere near Oxford Parkway as any such development would do nothing to meet Oxford's alleged unmet housing need. Opposes Cherwell's plans as put forward in the partial review and agree with our local MP that it is time for a total rethink.

4574	Comments								
Supports & welcomes the proposals to deliver 1180 homes on sites PR6a and PR6b in North Oxford. The City Council supports the analysis that the area south of the A34 is perceptually part of the city of Oxford & that the recent developments at Oxford Parkway Station & Water Eaton Park & Ride reinforce this impression. We consider that this area links more clearly & effectively as part of the urban area to the south than to the rural area beyond. In sustainability terms, the area benefits from being adjacent to existing communities, frequent public transport links into the city, local facilities & services provided in Cutteslowe, Summertown & beyond, & proximity to the planned employment opportunities at Northern Gateway. Improving these existing links & facilities to support residents of the new housing is an efficient and effective way to secure their delivery. Refers to the importance of design considerations in the context and policy guidance of both Cherwell & Oxford and that these sites are approached in terms of forming an urban extension to the city integrated to neighbouring communities and infrastructure. Refers to maximizing opportunities for new residents to access jobs and facilities in Oxford by sustainable travel modes. Keen to ensure that a strong contemporary urban feel is delivered.									
Changes Sought					Reasons for Participation				
Oxford CC notes that on the maps to accompany policies PR6a,b & c (pages 89, 95 & 100) that a small area within the Oxford CC's administrative area is identified as a BAP habitat. We consider that this notation is not necessary as it is the only notation in the city's area & would simply ask that the maps are amended to remove this for consistency.									
PR-C-1436	10/10/2017	Patsy	Dell						
4580	Comments								
Supports PR6a and although considers the proposed density to be a lower average density than can be seen in much of the city considers that it is important to take into account local context; welcomes the opportunity to be involved in the production of the development brief & in exploring the appropriate density & design for the site. The policy also makes provision for a 3-form entry primary school & a local centre which would offer a range of facilities to support the new residents & offer additional benefits to existing residents in the area. Supports the approach of linking new public open space on this site to the existing provision at Cutteslowe Park. The creation of a green infrastructure corridor is supported; this would provide a range of sustainability benefits, including opportunities for pedestrian & cycle links to local transport hubs, the Northern Gateway strategic development area, & the wider cycle/footpath network.

Comments

PR3 proposes removing large areas of land from the GB in order to provide housing. It is clear Nation Policy that this can only be justified in the most exceptional of circumstances. The Partial Review & its accompanying documents do not provide convincing justification. The issues at stake vary a little between the different GB sites threatened. The Reps focuses on land covered by PR6a & PR6b, since they impact most especially on my constituents as County Councillor. Describes the location of PR6a and its relationship to the countryside and its surroundings including site's visibility and its part in defining the character of the area. Refers to this part of the Oxford GB having served its purposes extremely well over the years; safeguarding the open countryside, preventing Oxford sprawling north & swallowing up Kidlington, & preserving the historic character of Oxford as a discrete city. Notes that removing land from the GB will undo this and result on a classic example of urban sprawl. This would be in clear breach of NP, & unacceptable to the community I represent, that borders the land concerned. Implementing PR6a in its present form will be to disregard the NPPF intention that, when drawing up a Local Plan 'authorities should consider GB boundaries having regard to their intended permanence in the long term'. Similar considerations apply to the land covered by PR6b. Describes the site's amenity role for over 100 years. Considers that its use for house building would be considered a tragedy by local residents. Oxford & Kidlington would have been merged, contrary to the aims of the GB, & again in conflict with NP. No doubt PR3 is based on judgements made in the LUC GB Study about the relative amounts of damage to the purposes of the GB. But these judgements are mostly subjective.

Notes that the LUC study grossly under-estimates the damage to be caused to the character of the N Oxford/Kidlington gap by implementing PR6a & PR6b, especially the de-facto merging of Oxford & Kidlington that would result. Refers to LP1 PR para 5.17 points 1 and 3 as weak arguments. Does not dispute the exceptional need for more housing, especially affordable housing, to meet Oxford's needs but for reasons highlighted in comments on PR 1(a) & PR2, Cherwell District & the PR6a and PR6b sites in particular, are not effective, sustainable locations for providing this housing. Therefore the 'exceptional need' justification is spurious in this context, & the sustainability justification does not bear scrutiny.

Changes Sought

Policy PR3 must be re-considered, and changed at least to remove reference to the land covered by PR6a and PR6b. If it really proves impossible to negotiate a substantial reduction in the figure of 4400 homes to be provided by CDC, then CDC should remove the need to use Green Belt land, by proposing brownfield land instead (available at the Shipton on Cherwell quarry), in order to be consistent with national policy.

Reasons for Participation

Because the need to change Policy PR3 needs to be emphasised.

PR-C-1446	10/10/2017	Mary	Brown	Wolvercote Commoners Committee			N	Y

Comments

There should be no building on the Green Belt. This is against national policy as outlined by the NPPF. There are no exceptional circumstances to justify building on the Green belt in this area. The Plan is therefore considered to be unsound. Wolvercote Commoners' Committee (WCC), which is an elected body representing the residents of the parish of Wolvercote, are concerned about the likely effects of this development on Wolvercote Common, Wolvercote Green and Goose Green. These are nationally important areas of Common Land which lie very close to the areas just north of Oxford which are currently part of Cherwell District's plans. The WCC has seen the Habitat Regulations Assessment Screening Report dated June 2017, which considers the possible significant effects of the Local Plan Review development on the habitat of the Oxford Meadows SAC. This includes Wolvercote Common and Wolvercote Green, both of which have been actively managed by the Wolvercote Commoners' Committee since 1929. The HRA Screening Report concludes that the Partial Review of the Local Plan "will not lead to likely significant effects, either alone or in combination, on the qualifying features of the Oxford Meadows SAC". It is the view of the WCC that this is incorrect, as it is based on assumptions which may well be incorrect. The key concerns of the WCC are set out below. The Report asserts that air pollution will not increase, and yet the Appendix B traffic data show an increase in average daily flow on Godstow Road (which runs adjacent to both Wolvercote Common and Wolvercote Green) from 4,791 in 2013 to 7,261 in 2031 with 'transport improvement package 2 and Super Cycle route in place'. This represents an increase in daily traffic in close proximity to the Oxford Meadows of 51.5%. Wolvercote is covered by the city-wide Air Quality Management Area (AQMA) due to the air quality objectives for nitrogen dioxide being exceeded in areas dominated by traffic. This increase is calculated without the effects of forecast traffic increases on the A34 and A40, which together will have increased from an AADT of 103,218 in 2013 to 120,252 in 2031 with the same "improvement package." This represents growth in traffic of 16.5%. It is hard to see that an increase in traffic on this scale will not result in an increase in pollution which would affect the Meadows SAC. The HRA Screening Report's conclusion is based on the assumption that the County's Transport Plan will be implemented in full. There is no guarantee that this will be implemented in full until after the new housing is built, due to current funding issues for local authorities. There are many assumptions in the Report about the likelihood of any effects on the Oxford Meadows SAC as a result of other planned projects in the area in combination with the housing developments proposed in the Cherwell Local Plan Review. This applies not just to air pollution, but to the effect on water levels and water quality, which are also vital to the continued health of the SAC. All of the HRA reports for other developments in the area apparently came to the conclusion that there would be no effect on the SAC as a result of that specific development. The most important local planned new development in the area is the Northern Gateway, which will lie very close to the southern end of the Cherwell plans. The likely effects of this development on traffic, and therefore air pollution, as well as possible effects on water quality on Oxford Meadows are apparently not likely to be any significant effects. (Table 5.1). This is all based on what developers are going to be asked to do - to take appropriate measures to protect the Oxford Meadows SAC. No-one knows what will happen in reality, so it would seem much more sensible to place new developments further away from internationally-recognised and protected areas. Cherwell District Council should not build on the Green Belt, nor in this close proximity to north Oxford."

Changes Sought

Reasons for Participation

The WCC represents people living in Wolvercote who are likely to be affected by this development. It is the responsibility of the Committee to safeguard the Commons in Wolvercote from any damage caused by building nearby.

PR-C-1447	10/10/2017	Christopher	Hardman	Wolvercote Neighbourhood Forum			N	Y

5191

Comments

"This policy is not positively prepared, as it relies on an entirely incorrect assessment of the problems that will result from building on these areas of north Oxford. The increased traffic, congestion and pollution caused by building next to major roads has already been mentioned in the comments on PR4a. The residential areas proposed are on Green Belt land, and all the comments made previously about Policy PR3 apply. Building on the Green Belt is not sustainable. Development here will result in a high risk of harm to the Green Belt, according to the LUC Cherwell Green Belt Study (April 2017). To prevent the coalescence of Oxford and Kidlington these sites should not be developed. One of the purposes of the Green Belt is to prevent the coalescence of settlements. Development will harm the existing views of open countryside from Cutteslowe Park. If the North Oxford Golf Course is to be relocated it will take some years to develop a similar mature natural environment. In the meantime the proposed relocation will remove a recreational facility also valued for its contribution to biodiversity. There are other possible sites that have not been given sufficient consideration. This plan is also not justified because it is likely to fail to provide for the unmet housing need. The proximity to the station makes it far more likely that unaffordable expensive homes will be built for the benefit of commuters to London. The policy is not effective, as it is unlikely that development would result in a net biodiversity gain (as required under PR6a clause 11) because green belt land would be destroyed by development. The policy is not consistent with national Policy, as it proposes to build on Green Belt, when NPPF outlaws the use of such land to meet unmet housing need when this is accurately determined.

Changes Sought

Reasons for Participation

Wolvercote Neighbourhood Forum would wish to be represented at the examination because we represent a large number of local people who will be affected by any development in Cherwell near to the northern boundary of the city.

Proposed Submission Plan - Policy PR6a - Land East of Oxford Road

PR6a, PR6b, PR6c and PR7a: These sites are all within one Parish – the Parish of Gosford and Water Eaton. Not once in any of the planning documentation does it mention these sites being within the Parish of Gosford and Water Eaton. It has been referred to as Land East or West of Oxford Road, North Oxford or South East of Kidlington. To be clear, all are within the Parish of Gosford and Water Eaton. We have an identity, we have a community and we deserve to be appropriately recognised! 4400 Homes in the Cherwell District: Of this 4400 figure 1410 is allocated in Gosford and Water Eaton Parish and represents 32% of the total. There are currently 676 dwellings within the Parish so these proposals for 1410 dwellings will lead to a 208% increase in number of houses in the Parish. This is a substantial figure which in my view needs to be fully tested in terms of its impact on the Parish and its residents. I believe that the figure is inappropriate given the impact on existing communities, the environment and transport infrastructure. Was this figure influenced by the growth of the University of Oxford? If so, Brexit has already seen a downturn in EU research funding and thus a decline in the level of recruitment. Also the University has called for voluntary redundancies for centrally employed staff so employment growth is not set to grow any further (They are the largest employer in the County). An independent review should be undertaken to reassess the original housing figures.

Comments

Act of behalf of Mr M Smith, the owner of land east of Water Eaton Park & Ride, Oxford Road, who is promoting the site as an additional housing allocation. The subject site has previously been promoted through the Cherwell Local Plan Part 1 Partial Review. The subject site adjoins the proposed allocation at land east of Oxford Road (draft Policy PR6a), the red line of PR6a adjoins the subject site in the north east corner (Map attached).

The site is currently not allocated for any other use and Mr Smith would like the site to be considered for residential development in the form of a logical extension to the allocated site at Policy PR6a. If the site is not seen as a suitable housing site then other uses compatible with its location adjacent to a transport hub such as a commercial use in the form of a hotel should be considered. In any event the site should be removed from the green belt to enable the site to be developed in the future for any one of the uses referred to above.

Refers to Paragraph 8.60 of the LP1 PR noting this paragraph suggests that it would be more sustainable to deliver new homes within the villages than other parts of the District, or even the County as a whole. Given that the need arises in Oxford, and is a city with a wide range of services and facilities, it is considered that the areas has the capacity to deliver more new homes than currently proposed within the Partial Review Local Plan.

Development on land east of Water Eaton P&R and the Oxford Parkway Station would further help meet Oxford's unmet housing need due to the site's close proximity and accessibility to the City.

In summary, we are concerned that the Council has not undertaken a robust assessment of the options for accommodating Oxford City's unmet housing need within North Oxford area. It is not considered that the draft Local Plan Partial Review is justified as the Council has failed to fully consider all reasonable alternatives/ additional options as land south of Sandy Lane is clearly a sustainable location given its relationship with land proposed to be allocated for development at Begbroke (PR8).

Changes Sought

Reasons for Participation

Amend the boundary of Land East of Oxford Road Neighbourhood Centre (Policy PR6a) so as to include the land east of the Water Eaton Park and Ride in the allocated site for residential development or a mix of residential and other uses. Remove the land east of the Water Eaton Park and Ride from the Oxford Green Belt. (Map attached)

As drafted, and in so far as it relates to land East of Oxford Road the Plan has not been positively prepared, is not justified and is not effective. This goes to its soundness and raises issues that should be explored fully at the oral part of the Examination.

Comments

Believes that Cherwell District Council would fight to preserve GB around Oxford to prevent the areas of PR6a, PR6b, PR8 and PR9 ever being developed. Moved to village of Yarnton to be part of a typical English village community but now appears that, if not stopped, developers will be given carte blanche to turn a crucial part of beautiful Oxfordshire countryside into yet another amalgamated housing estate. Traffic chaos will be on A44 by expansion of Begbroke and Yarnton, combined with additional houses at Woodstock and ludicrous proposal to close Sandy Lane to through traffic, will have a devastating effect on the ability of residents and others to use the A44. Majority of people using A44 do not want to cycle to Oxford and the a super cycle way or bus lane would not alleviate the misery. Bitterly oppose the digging up of the historical North Oxford Golf Course (PR6b) for low density, highly priced housing aimed at London commuters – an act of vandalism to a wonderful local amenity which will not help resolve Oxford's low-cost housing shortage. It would be a tragedy for members and visitors, and local people who have access to wander through the beautiful parkland established over 110 years. Cherwell D.C. appear to offer an alternative site PR6c clearly knowing that it would not be acceptable to a golf course developer and would never be recreated. The questions around this proposal are: (a) Why does Cherwell D.C. not offer up PR6c for housing as it is only yards away from the existing club? (b) Why does the city not build its houses on the city's golf (Southfield) course – i.e. on the land it owns and which is ideally suited to higher density housing and in an area of greater need? Why doesn't the Council use its powers of compulsory purchase to acquire the under-used golf course at ST Edward's School or a number of the many under-used college sports grounds, reserved for the rich and academics? This once again shows the stranglehold the University has on Oxfordshire residents. For the reasons given above and the Representations made by the Begbroke & Yarnton Green Belt Campaign which are supported and adopted as part of my own representation in this document, the Plan cannot be changed to make it legally compliant or sound and should therefore not be submitted for Inspection.

Changes Sought

"This policy extends the built-up area of Oxford City too close to the built-up area of Kidlington, leading to the effective coalescence of communities"

Changes Sought

Reasons for Participation

"Approximately 21.5 hectares of land should be allocated to outdoor sports provision as shown on attached map PR6a. In the rep. 180 dwellings should be constructed on approximately 6.2 hectares of land shown as residential on the attached map PR6a. At an approximate average net density of 40 dwellings per hectare. Land allocated to outdoor sports provision, together with the adjacent green infrastructure corridor and the extension to Cutteslowe Park should remain in the Green Belt. The adjacent site PR3d comprising the Park & Ride terminal and Oxford Parkway station should also remain in the Green Belt. In order to preserve as far as possible the appearance of this site from the A4165, the existing belt of trees along much of the western edge of the site should be retained."

"This submission raises an important issue as to whether, in the event of the removal of Green Belt land being found to be necessary, residential development could be allocated in a different manner so as to reduce detriment to the Green Belt and minimise the coalescence of communities."

Proposed Submission Plan - Policy PR6a - Land East of Oxford Road

PR-C-1472	10/10/2017	David	Tighe		N	N	N	
5224	Comments							
<p>The density of proposed housing on the golf course is 25 per ha and on the land to the east of the A4165 is 40 per ha. These proposed densities on land which is adjacent to Oxford Parkway Station are not likely to lead to developers building "affordable" houses since they will simply not be viable. Particularly since developers are likely to have to pay a premium on this land because of its location. Even if "affordable" houses are built they still won't actually be affordable to most people. These houses are also unlikely to provide homes to meet Oxford City Council's alleged "unmet housing need" because many of them are likely to be purchased by London commuters due to the proximity of the station. Underfunded public services are already struggling. For example, many GPs are struggling to cope, with long waits to get an appointment to see a doctor. Also, the hospitals have huge parking issues which the Councils believe can be solved by persuading people to use public transport, which won't work if you are ill, injured or elderly. This will all lead to more pressure on parking, more traffic coming into Oxford from the north and more pressures on existing healthcare resources. If the Council were serious about avoiding destruction of the Green Belt more houses could be built in Oxford if the City Council stopped reserving spare land for commercial use. Houses could be built at higher densities and some of the houses which are supposed to satisfy Oxford's "unmet need" could be sustainably built on other sites in Cherwell District, outside the Green Belt.</p>

PR-C-1473	10/10/2017	Debbie	Dance	Oxford Preservation Trust	Y	N	N	Y
5221	Comments							
<p>The proposed residential development sites PR6a & PR6b which lie in the 'The Kidlington Gap' is important to Oxford & its setting. To build on this land will destroy the northern limb of Oxford's green setting & will bring about the coalescence of Oxford with Kidlington, contrary to, arguably, the two most important purposes of the Oxford Green Belt. If land is needed close to Oxford for housing then in our view further more detailed consideration should be given to other less sensitive locations in both Green Belt terms & in terms of the special character of Oxford. In addition, we have a particular concern regarding the lack of a clear & permanent boundary to the east of PR6a. NPPF Paragraph 85 states that when defining Green Belt boundaries, Local Authorities should "define boundaries clearly using physical features that are readily recognisable and likely to be permanent". In our view, the lack of such a boundary to the east could lead to unrestricted sprawl, contrary to purpose 1 of the Green Belt. An absence of any defined & permanent boundary would also have the effect of making it more difficult to integrate new development as a part of the existing urban forms, risking its intrusion into the open countryside being accentuated. We note that steps to protect some of the extensive views from Cutteslowe Park, an area of "extra parkland" are referred to with an area of agricultural land included to the east of site PR6a, to be kept as such in permanence. However, we are concerned as to what measures will be put in place to ensure the permanence of any such safeguard. OPT also responded earlier this year to Oxford City Council's consultation on its Local Plan 2036 Preferred Options document. In that document, a number of sites on the northern edge of Oxford were identified as having the potential for residential development, notably site 107 "St Frideswide's Farm". This is immediately adjacent to site PR6a, & the two sites would have the potential to be merged & their impact should surely be judged together & not singly. We are unclear as to whether the "duty to cooperate" has been extended to a site-specific level, but would urge that this should be done in order to protect the urban edge of Oxford from the impact of such cumulative development.</p>								
Changes Sought				Reasons for Participation				
<p>We consider that the sites allocated in policies PR6a and PR6b should be deleted. Consequential amendments to the Proposals Map would then be necessary. We also consider that CDC must make the changes necessary to remedy the failings of the plan in relation to the tests of soundness and the requirement to have regard to national planning policy.</p>

<p>Object to policies PR3, (The Oxford Green Belt), PR6a (Land East of Oxford Road) and PR6b (Land West of Oxford Road). • I believe these proposals are not consistent with National Policy because they do not take into account the detrimental effect that removing these large areas of Green Belt will have. These proposals therefore fail to meet the test of soundness as defined in paragraph 182 of the NPPF. • Oxford's Local Plan has not yet been prepared so Cherwell's allocation of homes is premature and is not an appropriate strategy and is unjustified.</p>

<p>PR6a should be removed from the list of potential sites, or at the least the area allocated for housing should not extend north of the track from the A4165 to Frideswide Farm in order to maintain the 'Kidlington Gap'. PR6b should remain a golf course and PR6c, be developed for housing instead - again, this would maintain the 'Kidlington Gap'. PR6c is close to the Northern Gateway. Additional housing could be allocated to PR7a and PR7b as high density urban extensions to Kidlington. No further sites at Kidlington should be reconsidered. The area and scale of development proposed for Yarnton on site PR8 would completely change the character of the village, and threaten coalescence with Kidlington. The land take should be pulled back from the railway. If the target 4,400 dwellings cannot be met by increasing densities and additional housing on some other sites, the target should be reconsidered</p>

4744	<p>Comments</p> <p>This site seem to form a natural extension to the north side of Oxford and on sustainable transport routes into Oxford City Centre, but not to other employment centres in Oxford. It also appears to be in a sustainable location for Oxford Parkway Station which would actually encourage outward commuting from housing this area and could not be considered for the latter reason as likely to address Oxford's housing needs. A further concern about the development of the Oxford Golf Club is that the proposed density of development on this site is low with only 530 dwellings proposed on the 32 hectare site, if it cannot be developed at a substantially higher density it should be considered inappropriate on those grounds alone. With an allocation of 50% affordable housing provision this element is likely to be at a much higher density, potentially 40-50 dwellings per hectare and this leaves the market housing on large plots which are likely to be very expensive properties and not addressing any specific need, other perhaps for commuters to London from Oxford Parkway station. The Plan even states that houses will be on large plots, presumably the market housing, and this is inconsistent with the prime objective of addressing Oxford's housing needs. The sites are located in one of the most vulnerable areas of the Green Belt and development on these two sites brings about a substantial erosion of the Green Belt in terms of moving towards coalescence between Oxford and Kidlington, in terms of national policy development in this area is not appropriate.</p>

PR-C-1513	10/10/2017	Mark	Lowen				N
4756	<p>Comments</p> <p>PR6a - Land East of Oxford Road, PR6b - Land to the West of Oxford Road & N Oxford golf course. NOGC is a well established & heavily used course. It is an attraction to the area & a valuable resource. It is proposed to make land (Site PR6c) available for a new course. It would cost circa £10m to build a new course & take many years for it to establish. This would be unsustainable, it will not happen & there is no evidence within the proposals that it will. It is inconceivable that anyone would try & establish a new golf course at that site given the nature of the land (entirely flat), it's too small & the upfront cost. It wasn't a golfer that drafted this plan! Along with PR6b it will produce some 1180 homes. For many years there has been enormous traffic congestion involving Cutteslowe, Kidlington, Wolvercote & the two Peartree Roundabouts. A further 1,000 vehicle movements at peak times will cause gridlock. This plan does not provide for any realistic proposals to alleviate traffic congestion. The proposal to provide a link from the A40 west of Wolvercote Roundabout to the small Peartree Roundabout, while it might relieve congestion at Wolvercote & Cutteslowe, will equally exacerbate it at the small Peartree & Kidlington Roundabouts. Perhaps though the siting of these developments will provide housing for commuters into London, via a walk to the railway station. However, that is not meeting Oxford's housing shortage, its alleviating London's.</p>

PR-C-1514	10/10/2017	Councillors Neil Prestidge and Maurice Billington	Prestidge and Billington				N
4764	<p>Comments</p> <p>We object to the proposals to build 650 homes on this site, this site is situated in the strategic gap between Kidlington and Oxford, this part of the green belt is key to preventing the coalescence of Oxford and Gosford. There is no strategic gap policy in any of the local plans, if one was in place here it would offer extra protection to the gap between Gosford and Oxford. If this site was developed, then there would be a considerable loss of habitat for a wide number of species. We urge the council to do a proper wildlife survey on the site before any development takes place. We also want assurances from the council that the remaining green belt will not be developed around this site. As stated in our response to Policy PR2, we support the social housing target of 50%. Given the location of this site and the proposed housing density we want to seek assurances that this target will be met and enforced. We also want to make sure that residents of Gosford and Kidlington are prioritised in the housing allocation process for the affordable housing on this site. As stated in our response to Policy PR4b, we are concerned that the amenities that are being provided to serve this site will be in direct competition with businesses in Kidlington Village Centre. We want assurances from Cherwell District Council that proper investment will be made in the Village Centre to make sure it is a viable place for local businesses. It is not clear how the improvements to the infrastructure will benefit the residents of the Oxford Road. If this site is used for housing the traffic issues will only be exacerbated, the residents of Gosford are already in one of the most polluted areas of Cherwell District Council and measures need to be taken to ensure that this does not get worse. The council needs to have a plan in place to solve the pollution issue in Gosford before any development takes place.</p>

These sites would become urban extensions to Oxford, physically linked to existing communities. Development of these sites would significantly narrow the important open countryside gap between Oxford and Kidlington, erasing the perception that Kidlington is a separate village community, and bringing it into Oxford. The combination of both sites, either side of the A4260, provides a valued area of unlit open green space, and a distinct break in development between the City and surrounding villages, along a major entrance corridor to Oxford. Evidence does not demonstrate that exceptional circumstances exist to justify a release from the GB, where background studies confirm that both sites are of high importance to the integrity and function of the GB. (See 2017 GB Study) Development on either or both sites would aggravate existing local congestion and air quality issues, and adversely impact on movement between Oxford and Kidlington. The open character of the farmland east of Oxford Road forms part of the wider landscape which provides an important setting on the approach to Oxford. The landscape of the Golf Course is manmade, but long established, with significant tree belts and thickets. It is highly unlikely that these features could be saved unless development is restricted to a low density and larger dwellings. As a result, there would be an inefficient use of an important large area, and potential viability difficulties in accommodating 50% affordable housing. The net benefits do not outweigh the substantial harm to local character. The Golf Course is also a local recreation facility, and its loss is unlikely to be offset by a new Golf Course on a significantly smaller site at Frieze Farm contrary to NPPF p74 "Existing open space, sports and recreational buildings and land, including playing fields, should not be built on unless:

- an assessment has been undertaken which has clearly shown the open space, buildings or land to be surplus to requirements
- the loss resulting from the proposed development would be replaced by equivalent or better provision in terms of quantity and quality in a suitable location
- the development is for alternative sports and recreational provision, the needs for which clearly outweigh the loss."

Owners of the Frieze Farm land seem unaware of the plans to site a golf course there, and recently made a presentation to Kidlington Voice (made up of local businesses and parish/district councillors) proposing 600 houses on the site. (See representations on Policy PR6c)

Changes Sought

Retain GB Policy on all the above sites, and do not allocate for development.

Cherwell District Council's Partial Review of it's Local Plan to 'Meet Oxford's Unmet Housing Need is UNSOUND.

1. It's completely ignores the consequently impacts of Oxford City's new Local Plan, which is still in the "melting pot," and yet to be determined. It does not show a duty to co-operate, quite the reverse. This is significant because these two plans need to work together, not in isolation. Otherwise, Oxford and the setting of it's immediate northern communities could lose even more protected Greenbelt land than so far proposed.

The sheer scale and amount of Greenbelt proposed for removal is breath-taking and totally in contravention of National Planning Policy Framework, Paragraphs 79 and 80, which define the need and purpose of Green Belts. Cherwell District Council are paying only "lip-service" to the detrimental consequences. This is not acceptable. To claim the amount to be removed is only repents 3% is a very misleading distortion, because the locations identified, PR6b, PR6a, PR6c, PR8 will completely "strangle" north Oxford and are unsustainable. The consequences of what clearly will be a very significant additional spread of - urban sprawl - have not been evaluated effectively. IT IS IMPORTANT TO RETAIN THE PRESENT GAP BETWEEN KIDLINGTON AND NORTH OXFORD. IT IS IMPORTANT TO STOP URBAN SPRAWL TO PRESERVE THE OPEN INTEGRITY AND SETTING OF CUTTESLOWE PARK.

2. The Plan is NOT POSITIVELY PREPARED.As already mentioned, the number of houses on the sites mentioned above, are unsustainable, and contrary to Cherwell's own Summary Document page 4, they will do exactly the opposite to "limiting Oxford's Outward Growth." Indeed, this will, propel further 'ribbon development' in the future. The Plan is deeply "flawed," there is no mention of how it will safeguard and aid the needs, environment, and access to free-movement of present communities, adjoining the A4165, from the Cuttleslowe roundabout to the Kidlington roundabout by bus, car, cycle or on foot, the same applies across the Wolvercote area to the west end boundaries, where the ultimate impacts of development at the Northern Gateway, Barton Park (further to the east) is as yet unknown. To suggest it meets with the Country Council's Oxford Transport Strategy, is a misnomer, because this strategy is not sufficiently robust to deal with present excessive traffic congestion and health damaging pollution. Further more it is reliant on speculative funding, which may never arrive. The Link road from Loop Farm A40 to A44, has been promised, but the funding is not in place. The congestion on the A40 is unsustainable and a northern link road is needed north of Kidlington to relieve the over-whelming volume of traffic. Travel from the Park and Ride designated for Eynsham, will be constrained by the reduced width of the bridge on the approach towards the Wolvercote roundabout, so traffic coming to Oxford will remain at a standstill. It is regrettable that the County Council policy has cut bus services from villages, whom also need access to employment, perhaps if some of these villages were a little larger, bus services might be more sustainable? According to Cherwell District Council's Local Plan Summary Document:-It will create balanced and sustainable communities? NO! It will overwhelm north Oxford and Kidlington. It will be supported by necessary infrastructure? NO! No concrete evidence to deal with existing infrastructure, let alone any new infrastructure. It will contribute to improving health and well-being? NO! It will increase detrimental health of existing residents in northern Cuttleslowe, north Oxford, Wolvercote and Kidlington. Traffic will be at gridlock all day, everyday, pollution all day, everyday at EXCESSIVE LEVELS in addition to present Oxford Air Quality, non-compliance. Elderly crossing the road or accessing the shops in our area will find it completely impossible.

Changes Sought

Remove the need for affordable housing, because, there is no way it will be affordable next to north Oxford. Be honest with people, tell them their lives in Kidlington and north Oxford are to be blighted with complete traffic gridlock and damaging vehicle pollution. Be legal by NOT destroying Greenbelt land next to Cuttleslowe Park, The Golf course, (an essential recreational resource currently), and stopping coalesce with Kidlington and north Oxford.

Reasons for Participation

Believes, with respect, the Inspector would much benefit from really listening seriously to ordinary people, regarding the very real experience and particularly genuine concerns of how these 'grand proposals' to 'illegally' destroy all the immediate greenbelt land around Kidlington and north Oxford, will have a completely devastating impact on the lives, health, well being and free movement of well established existing communities.

Proposed Submission Plan - Policy PR6a - Land East of Oxford Road

PR-C-1535	10/10/2017	Layla	Vidal-Martin	Lichfields on behalf of Taylor Wimpey (Oxfordshire)	Y	Y	N	
-----------	------------	-------	--------------	---	---	---	---	--

5261

Comments

Taylor Wimpey (TW) considers the Submission Plan is not sound as it is not "justified" or "consistent with national policy". This is because : 1. CDC acknowledge (Submission Plan Executive Summary para XV) that "under national policy Green Belt boundaries should only be altered in exceptional circumstances through the preparation or review of a Local Plan". The Submission Plan (para 5.17) sets out why CDC consider that exceptional circumstances exist for the release of these sites from the Green Belt & their allocation for residential development. TW contend that CDC have not thoroughly explored "all other reasonable options" &, where they have sought to do so, there are flaws in their evidence base (regarding their assessments of sustainability, transportation & alternative development locations). They have not demonstrated the "exceptional circumstances" required for the proposed release of the sites identified in Table 1 from the Green Belt; 2. CDC's approach is predicated on an assumption that "Oxford's Housing Needs" form a bespoke & identifiable source of housing need. This conflicts with the recognition in the Oxfordshire SHMA (2014) (para 9.2) that "the SHMA identifies an Oxford-focused Housing Market Area which extends across much of the County, reflecting the economic influence of the City. The county still remains the most appropriate geography for analysis of housing markets in terms of the 'best fit' of local authority boundaries to a functional housing market area." More recently the Inspectors Report into the Vale of White Horse Local Plan emphasised that (para 45) "it is not the role of, or possible for, the plan to prescribe where people live and work;" and; 3. CDC compound this assumption (Policy 12a) by seeking to pursue a "separate five year housing land supply . . . For meeting Oxford's needs." This, in conjunction with proposals not to support Sites Not Allocated in the Partial Review (policy PR12b) are not consistent with the NPPF's presumption in favour of sustainable development & risk substantially harming housing delivery in the District in the coming years. Scope of response (See Detailed 4 Section Report). This response amplifies TW's concerns regarding the soundness of the Submission Plan, & their view that their site at Bloxham (Site PR35) forms a "reasonable option" for residential development prior to the release of the proposed allocations from the Green Belt. Specifically • Section 2: Summarises the appropriateness of residential development on the TW site; (Section 2 encloses * Sustainability Analysis by Calibro, * Residential Potential of Site, * Assessment of site against constraints, * SHLAA Analysis) • Section 3: Summarises TW's concerns regarding the inadequacy of the evidence base, whilst emphasising their support for the level of residential development proposed. This underpins their contention that the Submission Plan does not establish "exceptional circumstances" for the proposed release of these sites from the Green Belt; • Section 4. Sets out TW's comments on emerging policies and the changes that they consider are necessary to make the plan sound.

Changes Sought

The Plan proposes that around 55 % of the housing proposed should be targeted within the Green Belt (GB). Para 3.26 "approximately 14 % of Cherwell lies within the Oxford GB". Thus CDC need to demonstrate "exceptional circumstances" as to why this housing cannot be located within non GB locations comprising 86 % of the District. We do not consider that CDC have appropriately addressed "reasonable alternatives" & therefore cannot be considered to have demonstrated "exceptional circumstances" for the release of all of these sites from the GB. * Combined with the inadequacy of the evidence base, these concerns are amplified by the fact that the Submission Plan appears to prejudge the proposed development strategy irrespective of the evidence base. This is reflected in the fact that the (Executive Summary para xiv) states that the Plan "focusses development on a geographic area extending north from Oxford to south Kidlington, along the A44 corridor" & earlier iterations of the evidence base acknowledged that only sites within two of the nine areas of search have been assessed, * Conversely TW have established that the TW site at Bloxham does form a "reasonable alternative" for development within a sustainable location which is capable of meeting housing need. This is consistent with CDC's analysis within the HELAA (albeit that TW's technical analysis is that the site is capable of accommodating a higher level of residential development). * Accordingly the TW site should be allocated for residential development (under this or an additional policy) prior to CDC moving on to consider the need for any Green Belt release. * Without the amendments sought above our clients do not consider that the Submission Plan can be considered "sound", particularly with regards to being "positively prepared" or "justified."

Object to development on sites PR6a and PR6b. These sites are critical parts of the Oxford which prevent the coalescence of Kidlington and Oxford enabling each community to retain its own individual identity. It was to prevent this sprawl that the green belt was originally established. The proposed developments would leave such as small gap as to be completely useless in effectively separating the two communities. Kidlington would then become no more than an extension of Oxford. There is no evidence that this land should be released from the greenbelt on exceptional circumstances as studies have shown this land to be of high importance to the integrity and function of the greenbelt. The land occupied by the Golf Club makes a significant contribution to the green belt both in its landscape function and as a recreational activity. It should be noted that the Southfield golf course in Oxford has been rejected by the city council for a potential housing site. The plan proposes a very low density of houses which means it will be extremely difficult to achieve 50% affordable. It is clear that the position of this site will result in it being used for large, expansive houses attractive to commuters from London. This will do nothing to support the unmet housing need or to provide affordable housing for local people.

Comments

Considers that both CDC statements "considered reasonable alternatives" and that it has demonstrated "clear, exceptional circumstances for development within the Oxford GB" are unjustified, non-compliant and unsound as a result. "Reasonable alternatives" must include sites which are within reasonable commutable distance of Oxford but avoid the coalescence of Oxford and Kidlington and northward urban sprawl of Oxford, as required by the NPPF. This must mean that, for example, the Shipton Quarry site is appropriate to meet Oxford's housing need. Similarly, building on both sides of Oxford Rd (policies PR6a and PR6b) clearly breaches the NPPF requirement that settlements must not coalesce. The alternative site at Frieze Way, currently allocated as a replacement golf course, would not have that effect. These alternatives have not been sufficiently considered. Oxford City Council has re-stated the legal definition of GB that among its principal characteristics are "openness" and "permanence" The Council is right to do so. This is not consistent with the assumptions in this plan. We do not believe an "exceptional need" has been demonstrated to justify the breach of GB principles in the way the plan does. The need could be accommodated with far less damage to the GB by better and different use of some of the allocated sites, and by more consistent consideration of alternatives. Without such consideration, the plan is procedurally non-compliant, legally non-compliant with definitions of GB, and unsound in its consideration of alternatives.

Changes Sought

Reasons for Participation

A fundamental review of site allocations is required, acknowledging that Green Belt must remain open and permanent, as required by the NPPF. Alternative sites within "easy commutable distance of Oxford" which do not cause urban sprawl or coalescence should be more proactively considered.

Objection to policies PR3, (The Oxford GB), PR6a (Land East of Oxford Road) and PR6b (Land West of Oxford Road). We are particularly concerned about the loss of the GB for PR6a as we are regular walkers on this land and aware of the wildlife and habitats that will be lost forever with the loss of this land. This land contains established grass snake colonies which will be destroyed. The grass snake is a UKBAP priority species of conservation concern ³⁹ . It is also protected under the Wildlife and Countryside Act, and the Bern Convention. We believe these proposals are not consistent with National Policy because they do not take into account the detrimental effect that removing these large areas of Green Belt will have. These proposals therefore fail to meet the test of soundness as defined in paragraph 182 of the NPPF.

PR-C-1589	01/10/2017	Professor Peter	Robbins						N	N
4959	Comments									
Object to the proposal to build 650 homes on land to the east of Oxford Road, on the grounds that it is not a justified or proven requirement and it is inconsistent with national policy. New Government methods for calculating housing need indicates that some 30% fewer houses are required in Oxfordshire than previously forecast with the consequence that the basis for housing allocations in Cherwell to accommodate its needs and the City of Oxford's requirements are overstated and invalid. Less land will be required to accommodate development and there are no exceptional circumstances to warrant the release of land from the Green Belt. Without prejudice to the above point, any proposals by Cherwell to release land from the Green Belt to meet the Oxford's needs are premature and unjustified given that the City of Oxford is in the process of reviewing its Local Plan and has not yet determined how much housing development can be accommodated on land within the City's boundaries. The land to the east of Oxford Road lies in the Kidlington Gap which forms a core component of the Green Belt separating Oxford and Kidlington. Development in this location would be in direct contravention of the fundamental aim of Green Belt policy which is to prevent urban sprawl by keeping land permanently open and the Kidlington Gap serves all the five purposes of the Green Belt It is also strategically important and is one of the clearest examples of an open area preventing the coalescence of settlements, checking unrestricted sprawl and safeguarding the setting and character of the historic city of Oxford. Its loss would fundamentally undermine the long established principles of Green Belt policy. The housing allocation proposed in Policy PR6a is also unsustainable both on its own and in conjunction with other planned releases from the Green Belt for housing. Infrastructure and services in and around Oxford are already under great strain. This applies to schools, hospitals/healthcare and roads. There is no capacity for major additional development. Oxford and the surrounding area are already beyond capacity in relation to infrastructure and services, and the further population pressure from the proposed developments is unacceptable. The road network in the immediate environs and the wider area is already highly congested. There are no clear, identified and funded proposals in the Plan to address these issues.

PR-C-1603	10/10/2017	Gordon and Helen	Henning			Y		Y		N	N
4984	Comments										
The prediction for the number of houses needed (Oxford City Council's "unmet need" for housing) is questioned and is to be re-evaluated. It does not take into consideration the intrinsic value of the Green Belt for current and future generations and the irreplaceable nature of the Green Belt. It is difficult to see how this development can be sustainable, given the lack of realistic plans for providing necessary infrastructure (e.g. transport, health care etc.) - and these are already significant, longstanding problems in Oxford and Oxfordshire (which are likely to be seriously exacerbated by the Northern Gateway development nearby). It is likely to provide housing for London commuters rather than people employed in Oxford and local areas, and hence exacerbate many of the problems that Oxford and Oxfordshire already have such as traffic and very high demand on schools, healthcare etc. The considerable uncertainty over many financial and economic matters after Brexit mean that there is considerable uncertainty about whether the plan could be "deliverable over its period". Have seen little real evidence in recent years of effective co-operation between local authorities e.g. the Jack of solution to the traffic problems in Oxford/Oxfordshire (particularly relevant here as the planned development would inevitably generate more traffic). Not consistent with the National Policy Framework for Green Belts, and has an indistinct border. Not justified or effective in terms of SA Objective 10 (air pollution/road congestion). Whatever pedestrian, cycle or public transport provision is available, increased vehicular traffic will inevitably be associated with any development on this site (for personal reasons for many users e.g. disability, but also for delivery vehicles as more and more shopping is done online. Climate change may well also increase the frequency and severity of adverse weather conditions making cycling etc. not only very unpleasant but also more often dangerous (e.g. in high wind).											
Changes Sought					Reasons for Participation						
This policy should be withdrawn completely. There are other alternatives for increased availability of housing including:-(i) use of land within Oxford city for housing instead of employment - Oxford city appears to be planning for employment to outstrip its housing need even more than is now the case and, in particular, there is already a major development (the Northern Gateway) very close to the area covered by policy PR 6a) (ii) increased housing density on sites already used or designated for housing within Oxford city.

Object to policies PR3, (The Oxford Green Belt), PR6a (Land East of Oxford Road) and PR6b (Land West of Oxford Road- Believe these proposals are not consistent with National Policy because they do not take into account the detrimental effect that removing these large areas of Green Belt will have. These proposals therefore fail to meet the test of soundness as defined in paragraph 182 of the NPPF. - Oxford's Local Plan has not yet been prepared so Cherwell's allocation of homes is premature and is not an appropriate strategy and is unjustified.

5535	Comments							
Kidlington & Yarnton Labour Party acknowledges the real housing need for Oxford. It is not convinced that the need is for 4,400 houses to be built in Cherwell District. It opposes the allocations in the vulnerable Kidlington gap (proposed policies 6a, 6b), which it believes will mainly be used by London commuters rather than meeting local need; and by the size of the allocation made between Kidlington and Yarnton (Policy PR8). It considers that there are less harmful alternatives available at Gosford (the area allocated for playing fields in Policy PR 7a and at Stratfield Farm, Policy 7b). It also believes that land at Frieze Farm and close to Loop Farm offers alternatives that are closer to the Northern Gateway employment site and less damaging to the open countryside between Yarnton and Kidlington. It considers that the North Oxford Golf course provides an important Green Belt friendly amenity, and that the need for additional playing fields could be met south of the Park & Ride. It is concerned to ensure that the County Council develops additional Park & Ride capacity east of Kidlington, where the traffic impact would be less damaging than an extension at Water Eaton Park & Ride. It would support the provision of a railway station on the Cherwell Valley line, but not at the proposed location at Sandy Lane, but closer to the airport, Langford Locks and Lyne Road (for the benefit of Kidlington's residents). We are concerned that at each of the main allocations, an unreasonably high level of land has been extracted from the Green Belt, which we believe will lead to future speculative development that will be difficult to resist.								

Changes Sought					Reasons for Participation				
Opposes policies 6a, 6b. There are less harmful alternatives available at Gosford (the area allocated for playing fields in Policy PR 7a and at Stratfield Farm, Policy 7b); and by the size of the allocation in policy PR8.					I have spoken as a platform speaker at three public meetings in Kidlington and Gosford. I made a substantial representation at the Issues and Options stage. As a former parish councillor, I represented Kidlington Parish Council at the North Oxford Area Action Plan examination in public, and likewise was invited to the Examination in Public of the Local Plan. I have an MSc in Transport Planning, so part of my representation covers that area. I also offer a distinctive perspective as a local resident, who agrees with the principle of a Green Belt review, but does not support the current planned site allocation. I have no interest in promoting a particular site, but only have some sympathy with those who would wish to preserve the Green Belt intact. I believe my views represent many in Kidlington who recognise the need for local housing, but see these plans as strategically unacceptable. My representation contains primary research evidence which I would wish to represent.				
Land at Frieze Farm and close to Loop Farm offers alternatives that are closer to the Northern Gateway employment site and less damaging to the open countryside between Yarnton and Kidlington.									
It considers that the North Oxford Golf course provides an important Green Belt friendly amenity, and that the need for additional playing fields could be met south of the Park & Ride.									
It is concerned to ensure that the County Council develops additional Park & Ride capacity east of Kidlington, where the traffic impact would be less damaging than an extension at Water Eaton Park & Ride.									
It would support the provision of a railway station on the Cherwell Valley line, but closer to the airport, Langford Locks and Lyne Road (for the benefit of Kidlington's residents).

We refer to the proposed development on the land north of Cutteslowe Park which is part of the Green Belt north of Oxford and forms a separating barrier known locally as the Kidlington Gap, between the northern boundary of the city of Oxford and the large urban village of Kidlington. The development directly contradicts the five stated purposes of land of the green belt as set out by the NPPF. To build on the green belt North of Cutteslowe would contravene all the five stated purposes. Resulting in Oxford sprawling and encroaching into the countryside, Oxford and Kidlington merging into one another, the historic character of Oxford being diminished and overwhelmed by the large urban sprawl, whilst the use of available derelict and urban land should be considered, instead of Greenbelt land. In addition, the local infrastructure (transport, hospital and schools) will be unable to cope with the large influx of people. While the aim is to provide housing for local oxford people, the location of the houses near a direct-London line station will encourage people to live in Oxford but commute to London. Only about 13% of England is Green Belt and when there is so much other land available it is counter-productive to develop on Green Belt Land. We strongly suggest that the council reconsiders their development proposals to urbanise the small green belt area separating Oxford town and Kidlington.

The statements in CLPPR paras 5.78, 5.81, 5.82 suggesting that the merits of meeting housing numbers "far outweigh" those of a vibrant social facility - the Golf Course - appears to be another assertion without explanation. That the University has 'made the land available' raises questions as to why. There are of course obligations on councils to fulfil policy agreements, but Cherwell also has a responsibility to support NPPF guidelines (paras 73, 74) and its own vision (Executive Summary ix.4), and intelligently question the focus on housing targets in the City more than the County. Motives of the owners of land leased to NOGC will, one assumes, have been examined. It would not reflect well on the Council if it emerged that cash proceeds of the sale were judged more important than fulfilling a primary responsibility of the University to help sustain the health and social wellbeing of people who live in the City, and even the County, in its management of an extensive portfolio of land. It is a responsibility of Councils to challenge the University to uphold the interests of local people. The suggestion that land at Frieze Farm could be a location for NOGC has been rejected by many on grounds of inadequate size, and unattainable levels of spending to create a course in any way comparable with current one. It also questions the logic of invading greenbelt by digging up the golf course and moving it a short distance, when the case for not building houses at Frieze Farm has not been made. However much hard work has gone into producing the land allocation plan it behoves the Planning Department to give proper consideration to new information and alternative views - especially of local people whose health and wellbeing are directly affected.

97	<p>Comments</p> <p>The golf course is a green space that alleviates city pollution, sustains biodiversity, and provides an amenity for many residents of all ages in conformance with the National Planning Policy Framework, Mar 2012 (NPPF) paras 73, 74 and CLPPR Executive Summary ix.4 These guidelines are being ignored simply to reach a target number of houses that aligns with an old plan, based on figures which are distinctly provisional and now being seriously challenged.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							
PR-C-0225	24/08/2017	Mrs Anne	Davies					N N N N
787	<p>Comments</p> <p>The policy needs to acknowledge that connectivity between areas of Oxford is already poor. The lack of joined up transport thinking in the plan suggests that it has not been appropriately scrutinised by either Oxford City Council or Oxfordshire County Council. If the justification for the release of land from the Green Belt is the requirement to meet Oxford's Housing need for Oxford City Council and the main employers, as the land is owned by Oxford University or its colleges, the development should be subject to a policy requirement that it is developed for key worker housing for the University, Brookes University, and the NHS Trust. If the land is to be sold on the open market to make already rich institutions slightly richer, this would not justify the release of land from the Green Belt.</p> <p>Changes Sought</p> <p>Reasons for Participation</p> <p>If the justification for the release of land from the GB is to meet Oxford's housing needs, the development should be subject to a policy requirement that it is developed for key worker housing for the University, Brookes and the NHS. If the land is to be sold on the open market, this would not justify the release of land from the GB. The policy should state that critical transport improvements should take place at developers' costs before works begin. The terms of the S106 agreements should be published so that local residents know what to expect Oxford University to provide.</p>

786	<p>Comments</p> <p>The National planning Policy Framework (NPPF) at Section 9 attaches great importance to green belts (quote provided). If these sites are taken out of the Green Belt, Oxford and Kidlington will inevitably merge - the division between the settlements will at best be the already developed roundabout into Kidlington. Large scale housing development of the sort to be authorised by the policy is a classic example of inappropriate development in the Green Belt which should only be permitted in Very Special Circumstances. The Very Special Circumstances claimed by Cherwell District Council are the ability to provide homes for Oxford on land to be made available by Oxford Colleges on land which is very sustainable in transport terms and with a community integrated with Oxford and access to jobs and amenities within Oxford. However, no controls are proposed through policy on the future use of the land. There is nothing in the proposed policy approving the development on the basis that it is used in its entirety to meet the housing needs of Oxford by providing long term social or key worker housing for the University, Colleges or Hospitals - a circumstance which arguably could amount to very special circumstances. Instead, it would simply constitute additional housing to meet the housing need of Oxford, Reading or London if it were occupied at all. Furthermore, with its location so close to Oxford Parkway station the likelihood is that any private development will become housing to fulfil a need in London, not even locally. Without constraints on occupation, the legal test for development in the Green Belt cannot be considered to be met and the development is not justified adequately or at all. Furthermore, if delivery of units for occupation of the site is to begin in 2021, the infrastructure improvements for the development which are identified as "critical" in Appendix 4 should be provided in advance and any planning permission for the development should not be allowed to come forward unless all the infrastructure is provided before the works begin. This infrastructure should include the provision of the extension to Water Eaton Park and Ride (currently identified as a long term aspiration 2026-2031); Bus Lane improvements (medium term so to be provided between 2021 and 2026 - potentially after 530 units on sites 6A and 6B are built and occupied. These improvements are identified as Necessary or Critical. There are proposals for a Cycle Super-Highway which again is identified as Critical but a Medium Term aspiration. There are regular injury accidents on the Sainsbury's Roundabout into Kidlington and these facilities should be upgraded as a matter of course - certainly before the introduction of a further 1000 homes. Note that the funding for all the highway and infrastructure improvements is currently "TBC". If these improvements are "critical" as stated, they should be required by policy to form part of a Section 106 obligation to be carried out at the Developer's cost prior to the development of the allocated sites. If the infrastructure development does not take place, but housing development does, Oxford will become significantly less accessible from Kidlington.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>

817	<p>Comments</p> <p>The North Oxford Golf Course comprises: “an important buffer feature on the urban edge, limiting perception of the city, and helps to maintain the gap with Kidlington.” Building 520 houses on this area will significantly reduce the gap between Kidlington and Oxford where it is already at its narrowest. The Golf Course is an extremely important leisure facility which has existed for 110 years. It is highly valued by the local community and well used. Strongly object to it being developed for houses. The Parish questions the viability and practicality of moving the Course given the considerable expense and disruption which will result. In terms of specific comments: • In total 1410 dwellings are proposed in the Parish. 530 of these are on this site. This number will have a major impact on transport infrastructure in particular on the already heavily congested Oxford Road. Traffic from this development will increase congestion further. It is not clear how the transport improvements including new bus lane can be implemented without further problems for Oxford Road residents who already suffer from congestion, delay, air pollution and vibration caused by passing lorries/buses. • In the Green Belt Study (April 2017) this site was categorised as mostly “High” or “Moderate High” in terms of harm to the Green Belt from its release for development. Concur with view and consider that it would significantly erode the gap between Kidlington and Oxford, especially in combination with removal of the Park and Ride site from the Green Belt and also site PR3c. This would result in continuous development up to the railway/A34. This will lead towards the coalescence of Gosford/Water Eaton/Kidlington and Oxford. The area has no easily definable boundary to the east which raises further concerns about how development may be contained in the long run. • There is well established tree cover on the site including many TPO trees which could be impacted by this development. Whilst opposed to the development on this land, if it were to go ahead would wish to see the following incorporated in the proposals: Support the 50% affordable housing provision, however it is important that Cherwell DC, robustly enforces this policy and ensures that affordable housing is equally available to residents of Gosford and Water Eaton Parish. Further information needs to be provided as to how this will be secured in perpetuity. Note that the density proposed at the site is low at 25 dwellings per hectare, in order to preserve the trees and woodland currently on the site. On this basis are sceptical about the viability of delivering 50% affordable housing on the sites and developers are likely to argue for this proportion to be reduced and/or for significant reduction in the vegetation on the site. Both of which would be unacceptable outcomes. • Requiring contributions for community facilities for residents is welcome however there are major pressures on existing community and health facilities in the area and therefore it is critical that new facilities are delivered. Not convinced that adequate facilities will be put in place to address this problem.</p> <p>Changes Sought</p> <p>Reasons for Participation</p> <p>The Parish Council believes that this allocation should be removed from the Plan and the land retained as Green Belt.</p> <p>The Parish Council would wish to take part in order to explain the potential impact of the proposed development on local communities and why this should be better reflected in the draft vision.</p>							

Proposed Submission Plan - Policy PR6b - Land West of Oxford Road

PR-C-0238	18/09/2017	Bob	Burrage						
824	Comments								
Objects to the Proposed Submission Plan because instead of creating coherent new communities, it takes the least effort route. The obvious need for more housing is poorly met by the Proposed Submission Plan: it is lazy, cowardly planning that meets the need by piece-meal infill and ribbon development that creates poor communities and overloads existing infrastructure and resources of all kinds. Reasons for objection: • Creation of residential development split in two by the essential and very busy A416• Half or more of the residents will have to cross the very busy A4165 to access the Proposed local centres and schools• Loss a beautiful golf course, founded 110 years ago and set in Green Belt land• Loss of existing valuable green belt that provides the “lungs” for the City of Oxford• Oxford would effectively be joined to Kidlington in a ribbon of urban sprawl from the South of Oxford through Oxford to the North of Kidlington• Opportunities to create new, exciting, well resourced communities are being missed by sweeping the problem under the carpet of infill and ribbon developmentUrges the Planners to be courageous: join with the other Districts to create a single New Community of 14,850: a project to be proud of.

Protests in the strongest possible terms against the proposal to build housing on North Oxford Golf Club. The course has existed for over 100 years, is a carefully laid out and attractive landscape that supports a variety of wildlife - including the Great Crested Newt - and provides vital recreational space for Oxford residents and visitors. If the proposed housing is built, Kidlington and Oxford will effectively merge in an urban sprawl resulting in loss of identity. The course also fulfils all the requirements of the Green Belt set out in the Government's National Planning Policy Framework. This states (Para 74 under 'Health') that sports facilities should not be built on unless equivalent or greater provision is made elsewhere. The tentative proposal to relocate to Frieze Farm does not fulfil this obligation in any way and is ridiculous. It appears that the owners of this land were not approached before the proposal and have other plans. The proximity of central Oxford and the new Oxford Parkway railway station is likely to attract London buyers and to prove unaffordable for the local population. It seems that this proposal is designed purely to satisfy the greed of the landowners and property developers and has nothing to do with improving the lot of local people. The course is vital to the wellbeing of the area and it would be an absolute tragedy if it were to disappear.

Shocked to hear that plans were afoot to build houses on the golf course. The land matches all the criteria of the greenbelt set out by the government national planning policy. This land separates Kidlington from Oxford which is a critical part of the green belt which prevents the merging of a urban sprawl and a loss of identity. Understand that Cherwell District Council talked to the agents but did not talk to the golf club about the proposed development. A replacement site at Frieze Farm was suggested but there is nothing in the document as to how it would be provided or who should fund a replacement golf course added to the fact this site would not be big enough to build a new course. If this plan goes ahead you will be destroying over 100 years of golfing history in the Oxford area. In conclusion North Oxford Golf Club is a important recreational facility for the whole of the county.

1561	Comments								
Cherwell as representatives of the wishes of constituents, are contravening Para. 74 of the Government's National Policy Framework regarding the re-use of sports facilities. The matter has been referred to MPs John Howell and Layla Moran both of whom are totally against these proposals. Hearty agreement with comments summarised below made by Christopher Lane: Objection by a local resident, member of North Oxford Golf Club and Oxford Ornithological Society to building houses on the golf course. The late offer of Frieze Farm as a replacement course is presumably to avoid contravening the government's National Policy Framework regarding the re-use of sports facilities. Why destroy a hundred years old course to rebuild it a few hundred yards away? The City's search for affordable housing is understandable, but is this provision likely to satisfy local housing needs, rather than attract wealthy buyers living along the Chiltern line? The land occupied by the golf course fully complements the raison d'etre behind the creation of the GB. It is a bulwark against urban sprawl, separating the city from the village of Kidlington, and with its 80 acres of manicured grounds, its pond and beautiful trees (it would be an outrage to fell them) making a healthy contribution to the environment. There are a variety of birds which are found there throughout the year, from woodpeckers and warblers to several different raptors, some fifty species in total. The Council may not appreciate the extent to which this club is valued by its members, young and old, and by other visitors. The health benefits of getting people out in the open air in pleasant surroundings yet close to the centre of a major city are obvious. So why close down such an attractive course?

PR-C-0268	03/08/2017	Stephen	Duke						
855	Comments								
North Oxford Golf Club is a vibrant club with approximately 450 current members and has been enjoyed by literally thousands of sports people of all ages from Juniors though to Seniors for 110 years. Cannot believe that Cherwell District Council Planning Committee are continuing to break the Government's National Planning Policy Framework (para 74 states specifically) that sports facilities should not be built on unless equivalent or greater provision is made elsewhere. Not aware of any other suitable alternative being offered except the possibility of Frieze Farm which is wholly unsuitable as a replacement, which is actually only 300 yards from the existing course. Suggest the obvious solution is to leave the NOGC as it is and build the houses on Frieze Farm. Moreover, the object is to provide affordable housing, which would be far better accommodated on Frieze Farm, (than on the Golf course). Housing built on NOGC would be immediately classed as part of the most expensive areas in Oxfordshire and would therefore defeat the object of supplying affordable housing. Kidlington is the proud owner of the title Britain's largest village, which is in danger of becoming just another suburb of Oxford, if the green belt triangle upon which North Oxford Golf Club stands is built on. "all the hard work that Cherwell District Council have done over the last 10 years therefore must be seen to be doing some thing whether it makes sense or not". (There is an addendum to this representation which is a copy of an email from John Howell MP which states 'Dear Steve. Thanks for your email. I deplore the use of the Green Belt for this purpose and will try to intercede.')

Proposed Submission Plan - Policy PR6b - Land West of Oxford Road

PR-C-0303	19/09/2017	Alan K	Butler				
895	Comments						
Object to any plans to build houses on North Oxford golf club, for two reasons.1/ The triangle of land precisely matches all the purposes of the Green Belt set out in the Government's National Planning Policy Framework.2/ Separating Kidlington from Oxford, it is almost certainly the most important piece of the most critical part of the whole Green Belt. It is especially critical for supporting the purposes of Green Belt in preventing the merging of communities with subsequent urban sprawl and loss of identity.

PR-C-0305	25/09/2017	Martin	Small	Historic England	Y	Y	N
904	Comments						
Historic England welcomes the presumed intention behind requirement 13 of Policy PR6b for the application to be supported by a desk-based archaeological investigation which may "then require predetermination evaluations and appropriate mitigation measures" as part of the positive strategy for conserving and enjoying, and clear strategy for enhancing, the historic environment as required by the National Planning Policy Framework. However, requirement 13, as drafted, only notes that the archaeological investigation may require predetermination evaluations and appropriate mitigation measures respectively. It does not require these measures to be incorporated in or to influence the actual development scheme. The policy therefore provides inadequate protection for potential archaeological remains on the site. As the Council will be aware, paragraph 126 of the National Planning Policy Framework requires local planning authorities to recognise that heritage assets are an "irreplaceable resource" and "conserve them in a manner appropriate to their significance". Paragraph 129 notes that the significance of a heritage asset can be affected by development affecting its setting. Historic England therefore considers that Policy PR6b as written does not conform with the Framework and thus is not sound.							
Changes Sought				Reasons for Participation			
Requirement 13 of Policy PR6b should be reworded as follows: "The application(s) shall be supported by a desk-based archaeological investigation which may then require predetermination evaluations and appropriate mitigation measures. The outcomes of the investigation and mitigation measures shall be incorporated or reflected, as appropriate, in any proposed development scheme". (Discussions with the Council are ongoing at the time of submitting this representation, but early indications are that the Council will consider rewording this requirement as suggested as a minor modification. If it was to do so, Historic England's objection to this requirement would be overcome).

917	Comments						
Key Delivery Requirements' on all these policies are nothing more than a fig leaf. It is perfectly obvious the developers will agree to some or all of them and then will renege on them. This always happens. 50% affordable housing will be thrown out of the window as it has been in Templars Square where 50% has magically transformed into 23%. Similarly, developers never actually deliver infrastructure like schools, community centres or roads that are wide enough. The 'Place shaping principles' in these policies are valueless: there are no measure by which they might be enforced. How can one tell, for example, whether an extension "responds to the 'gateway' location of the site". It's gobbledeygook. PR11: This is completely empty. 'Working with partners' does not guarantee anything except that you have no control over the outcome. Nor does 'setting out the Council's approach'. Its all very well having the development proposals demonstrate that infrastructure requirements can be met - it does not mean they will be met.

918	Comments						
Strongly object to the part of the plan proposing to build on the parcel of land that is currently occupied by North Oxford Golf Course and has been for over 100 years for the following reasons: It is very important to maintain the green belt to prevent urban sprawl so that communities maintain their own identity. The golf course is an attractive landscape with a variety of animal and tree species - it would be a shame to lose these. It is an important leisure and sports facility encouraging people of all ages to participate in social and sporting activities. The proposed replacement golf course on barren farm land would need years of work and huge amounts of money to develop (where would the money come from?). Large exclusive houses would probably be built on the site which would not help with the shortage of more affordable housing for Oxford.' Surely a better option would be to build houses on the farm land allocated for the replacement golf course and leave the existing course as it has been for over 100 years.

It is easy to make the case for Oxford's need for more housing for it's workforce but infinitely more difficult to find solutions to this problem. Focussing on one particular piece of land, to the west of the Oxford Road - which has been included for more houses - and which is currently in the GB. This is the land owned by parts of the University of Oxford and leased for over 100 years, to the North Oxford Golf Club. Points to make: 1. This land is a very well used recreational space (across the age spectrum). Paragraph 5.17 attempts, unsuccessfully to test the hypothesis that the loss of this land both as a golf course and to the GB is suitable under the 'exceptional circumstances' outlined in the National Planning Framework Criteria. 2. The existing golf course land cover a diverse natural habitat/environment - much of this would be lost if built on. 3. The proposal that the club could move to a site a Frieze Farm - some 300 yards away - is unsustainable, on grounds of cost and suitability. It also begs the question as to why this site has not been chosen instead. The recent news that the owners of Frieze Farm are now applying for planning permission for housing development bears this out. Surely your planning officers should have consulted them as part of this plan review? 4. The current owners of the golf course land- two Oxford Colleges and the University Press- have apparently 'made the land available' for development. Their motives in doing so could be challenged. Their wish to use the proceeds of the sale should be judged alongside the loss of an important recreational facility which benefits both the city of Oxford and the surrounding communities of Oxfordshire and beyond. 5. The plan review is based on the assumption that it deals with the unmet housing needs of Oxford city. The recently built Oxford Parkway station will almost certainly, mean that many/most of the proposed properties would be purchased by London commuters! Clearly this will do little or nothing to solve Oxford city's housing problem. Finally, Oxford City Council should be challenged re the availability of suitable building sites within the city boundary. Two examples will suffice: first, a substantial area of land next to Marston- currently owned by a farmer who apparently doesn't wish to sell. Surely, given the expressed need, a compulsory purchase order is possible? Second, Oxford City currently own the 'other' golf course. Situated within the city on the border between Headington and Cowley this land is eminently suitable as a large open space for development. And.....it isn't in the GB!

In all probability, the proposed developments on sites PR6 and PR7 will, given their proximity to Oxford Parkway station, simply attract commuters to London.

Comments

NORTH OXFORD GOLF CLUB: PR6b site is a thriving golf club which has been there for over a hundred years and is a valuable amenity which should be protected. There is no funding to move to the proposed site at Frieze Farm and the owner of Frieze Farm (an Oxford College) does not want a golf course there. PR6b is not justified as a valuable recreational amenity and GB land would be lost when other non-GB sites are available.

Changes Sought

The Cherwell Plan is fundamentally unsound and I suggest it should be rejected. Cherwell should re-start the process at a future time when the amount of housing needed has been realistically calculated. Cherwell should have due regard for the NPPF an in particular the parts of the framework which apply to the Green Belt.

GREEN BELT: Over the past 50 years or so the Kidlington Gap has been steadily eroded with a large part now earmarked for the norther Gateway development, and the remaining gap largely comprised of PR6a and PR6b. The Cherwell Green Belt Study by LUC in April 2017 judged that the level of harm in releasing these two sites would be high. Paragraph 80 of the National Planning Policy Framework sets out the five purposes of the GB in checking unrestricted sprawl, preventing towns merging, safeguarding the countryside, preserving historic towns and assisting in urban regeneration. PR6a and PR6b prevent Kidlington and Oxford merging, and the LUC report states that "this release would result in the A34 becoming the Green Belt boundary from the Northern Gateway up to Oxford Parkway station, leaving only the width of a single field to separate Oxford from Kidlington". and that the "physical prominence of the golf course makes it an important buffer feature on the urban edge...". Development of these sites would also damage the rural setting of an important City with a rich heritage of history, architecture and culture. Cherwell considers the that the removal of these sites is justified by exceptional circumstances, but has failed to realise both the international importance of Oxford as a city and the likelihood of these homes providing for London commuters rather than Oxford. Cherwell has also failed to give proper consideration to other sites in its area that are not in the GB.

UNMET HOUSING NEED': The figures put forward by Oxford City as unmet housing need are highly questionable, and Oxford City does not yet know how much of its 'unmet housing need' it can cater for as it has only just finished consulting on its Preferred Options and its Local Plan has not been prepared. It also continues to allocate land for employment and expects other authorities to meet its 'unmet housing need'. The Government's new method for calculating Objectively Assessed Housing Need suggests that Oxford has significantly over-stated its housing need. Cherwell's current proposals seem to have been produced with undue haste and this approach is not justified Site PR6a is adjacent to an area of GB land put forward for development by Oxford City, and neither council has considered or publicised the cumulative effect of both parcels of land being removed from the GB. The Councils have not demonstrated effective joint working on cross-boundary strategic priorities so these policies are not effective.

Object to the proposed development of the Golf Course site for additional housing. The current land mass of approximately 80 acres that is shaped triangular precisely matches all the purposes of the Green Belt that was set out in the Government's National Planning Policy Framework. This excellent recreational facility that separates Oxford City from Kidlington is certainly the most important piece of the most critical part of the whole Green Belt north of Oxford City, can you at Cherwell Council name another site that is more suitable for Green Belt purposes? It is critical for supporting the purposes of Green Belt in preventing the merging of communities with subsequent urban sprawl and loss of identity, why therefore would you want to fail to support this objective? The Golf Course itself is carefully laid out with many different variety of tree's species and offers a very attractive landscape, it supports a variety of wildlife, providing for over 50 regularly recorded different bird species. Some three years ago the Golf Club redeveloped the pond on the third hole and pond life which includes the Great Crested Newt has increased considerably. It is therefore a 'green lung' to counteract pollution in an area of considerable traffic and transport impact. My understanding was that the National Planning Framework (para 74 under 'Health') says that sports facilities should not be built on unless equivalent or greater provision is made elsewhere, since when was this changed? NOGC is a thriving Golf Club and, importantly, open to all players members and visitors alike. Our Club members all come from the Oxford area. Take away this club, and you remove from all age groups the health benefits both mental and physical. This directly contradicts all that the Government have been saying about the importance of recreation in the National Planning Policy. It is unlikely that the golf club site will do much to help local housing needs, Cherwell suggests building at half the density of other sites, that being the case, were it to be developed, it would be an estate including many large houses and commuters to Marylebone, given that this land will cost approximately £1 million per acre no developer will build any social housing as it would be uneconomical. I understand that Cherwell Council representatives talked to the Colleges Agents but you did not talk to our Golf Club, why was this? It has been noted that a replacement site at Frieze farm seems to have been suggested late in the day. A new 18 hole course needs at least 150 acres so how could we fit a Golf Course onto this site for clearly it is not large enough. I note there is nothing in your document about how it would be funded(who would pay!), the University Colleges have previously said they have no land available, and it would anyway be pointless to uproot a 100 year old course and move it a few yards across a dual carriageway to an unsuitable site. Given this land would be made available for a Golf Course why not build on this site thereby leaving our Golf Club where it is, you wold make all our members happy with this decision.

We hope you will reject the proposal on many grounds. Of great importance should be the retention of the Green Belt and a sports facility (North Oxford Golf Club) which benefits many people (health wise and socially) of different ages and has done so for a 100 years. The course itself is a wonderful green space which supports a rich environment and attractive landscape supporting a variety of wildlife, different trees and bird species. Over many years Oxford City has encouraged, on a large scale, commercial development which has resulted in a shortage of housing. Not convinced that they have explored, in sufficient detail, opportunities on which to build within their own boundaries e.g.. Why a golf course in the Green Belt is chosen for development when one within the city boundary is exempt. It seems that Oxford City and 3 colleges seem to be driving the planning process and the colleges will benefit tremendously financially if this proposal is allowed. It is important that Kidlington and Oxford are separated to maintain environmental quality and to prevent the spread of urban sprawl and loss of identity.

	The land is of course Green Belt as is much other undeveloped land within the city area notably Christ Church Meadow, Angel Meadow and Port Meadow. Much of this land is low lying and possibly unsuitable for development but there is also a second golf course, also Green Belt, in the south of the city where planning consent for housing on the North Oxford Golf Course could be used as a precedent for planning consent for the development of the Oxford Golf course (previously known as Southfields) . Oxford would then lose both of it's golf courses and open areas. Both are mature courses which will take another hundred years to replace were it even possible to contemplate other land within the city boundary

	Objection to build on North Oxford Golf Club. The building of homes on this site would be perfect for commuters to London and would not alleviate the housing problem in Oxfordshire. The proposed plan to re-house the new golf club at Frieze Farm would be too small to house a golf course. It is understood that The National Planning Framework says that sport facilities should not be built on unless equivalent or greater provision is made elsewhere. The course is like a park – attractively laid out, with more than 25 species of trees. It supports a variety of wildlife, including some 55 different species of birds and pond life including the Great Crested Newt. The large green area is important in counteracting pollution in an area of considerable traffic and transport. Consider the urban sprawl this plan will create, from the south of Oxford city to the north of Kidlington, Begbroke and Yarnton. Separating Kidlington from Oxford is an important part of the Green Belt.

	Concerned about the proposed building of housing on the North Oxford Golf Club land. It seems to be complete madness to build on that land and rebuild a new golf course only hundreds of yards away. If housing should be built there it would mostly be taken up by persons that would commute to London via Parkway Station. The Golf Club is a lung for Oxford and a wild life haven that it would be criminal to destroy.

	The golf club raises money for good charities. When you build on a golf club, charities around Oxford will lose thousands of pounds. North Oxford Golf Club raised 10,000 for charities around Oxford last year alone and the same for past years, but not in the future if houses are built on North Oxford Golf Club of over 100 years of golfing.

Proposed Submission Plan - Policy PR6b - Land West of Oxford Road

PR-C-0383	05/09/2017	John	Sweeney						
1018	Comments								
<p>Objection to the proposed housing development on North Oxford Golf Club. This is a 100 year old amenity providing a recreational facility for mainly town folk. The idea that has surfaced in the face of criticism that an alternative facility could be provided at Frieze Farm is not an option. It is too small. If this plan goes ahead the definition of the area disappears. Oxford will merge with Kidlington and the result will be urban sprawl. . I accept they have to meet housing targets and hence there has to be a balance. I suggest the balance in this case is heavily in favour of land grab by the university to the detriment of town facilities. The argument that such a development will go towards meeting housing demand needs scrutiny. Concern is that this plan will provide for larger properties for commuters to London and will not resolve the housing issue in Oxford.</p>

<p>Objection to North Oxford Golf Club being used for housing. If permission is granted for this plan, this means the end of the North Oxford Golf Club on its 120-year-old site. The golf club is an essential meeting place as well as for keeping fit and active. Our area of land is almost certainly the most important piece of the most critical section of the whole Green Belt argument. It is especially critical for supporting the purposes of Green Belt in preventing the merging of communities with subsequent urban sprawl and loss of identity. Our course is a carefully laid out and attractive landscape with more than 25 different tree species. It supports a variety of wildlife, birds and pond life which includes the Great Crested Newt. It is a vital living green lung to counteract pollution in an area of considerable traffic and transport impact. Our club members represent all ages and walks of life and regard this club rather like we might regard our family. Hence our sense of comradeship. Replace this club, with a vast housing estate and you remove from all age groups the health benefits, both mental and physical. This certainly contradicts all that the Government has been saying about the importance of recreation in its National Planning Policy. Cherwell District Council has talked to the Colleges/Agents over the future plans for our course, but it did not talk to our club executive committee. This is unfair.</p>

<p>Strong objection to build on North Oxford Golf Club. This is the oldest golf course in Oxford and is not just a great recreational facility for golfers but also ramblers via the public bridleway through it. It is also home to many types of wildlife with deer and woodpeckers. As a resident of North Oxford and living on the Banbury road, building 4000 houses here would be a disaster for the area. It simply does not have the infrastructure to cope. The roads are congested at present and another 4000 cars (minimum) would bring the Cutteslowe roundabout and Wolvercote roundabout to a grinding halt. Please keep this green belt green.</p>

<p>Oxford's housing need in large part arises from the concentration of jobs in the City area – roughly twice as many as houses to serve them. The City Council continues to pursue a reckless policy of reserving huge areas for employment within the city boundary without the housing to go with them. Their only solution is to annex GB land for the housing that their policy demands regardless of the impact that this will have upon the principles and purposes of the GB, recreational needs and upon the merging of communities. The only reason for putting forward GB sites between Oxford and Kidlington is because they are close to Oxford and the landowners are more than willing to release the land for their own profit. It is worth noting that Cherwell is the only District concentrating on such a small area of massive and unsustainable urban extension. . It is unlikely that the golf club site will do much to help local housing need. Because it says it is a nice area, Cherwell suggests building at half the density of other sites and it would be an estate including many large houses and commuters to Marylebone. For any proposed social housing on the site it is worth noting that prices on the largest estate built in Oxford for a generation at Barton, just a few miles from the golf course, will start at £299,950 for one-bedroom and £360,000 for two-bedroom apartments. Hardly affordable!</p>

The National Planning Policy Framework is very specific about the importance of providing appropriate Recreational facilities for communities. Recreation itself is crucial for physical, mental and social health. North Oxford Golf Club performs a vital role in these respects which would collapse with the demise of the club. It is a thriving club and, importantly, open to all. There are 475 members, most of whom play regularly; additionally, around 3,000 visitors play here every year – in addition to similar numbers who visit the club for social and other (including e.g., Pilates) purposes. Club members come from all ages and walks of life and regard this club rather like we might regard our family. At one extreme, our junior section fosters an interest in sport from an early age. At the other extreme, our many senior members consider this club to be their life blood. Some of these have led active sporting lives but may no longer be able to pursue the more physically demanding sports. Take away this club, and you remove from all age groups the health benefits - mental and physical. Many members have expressed how important it has been to be able to rely upon it for their recreational and social life. Approving this site for development would directly contradict all that the Government and your own Council have been saying about the importance of recreation and would not be compliant with the National Planning Policy Framework.

Critically, the National Planning Framework (para 74 under 'Health') says that sports facilities should not be built on unless equivalent or greater provision is made elsewhere. The proposed Submission Plan has put forward a field known as Frieze Farm as a suitable replacement course. This was suggested after the initial consultation and rather late in the day - almost as an afterthought. The Planning Officers talked to the Colleges/Agents about Frieze Farm but it didn't talk to the Golf Club about this possible replacement. If they had they would have found that this site would be totally unsuitable as a replacement. No assessment has been made to show whether or not the North Oxford golf course is surplus to requirements. But the very fact that they have offered a replacement would indicate that the planners believe that a golf course in this immediate area is in fact needed and in demand. I have already shown that North Oxford Golf Club is a thriving club with a good sized membership and is making a high quality contribution to recreational and social needs. Furthermore, Frieze Farm is simply an area of agricultural land used mainly for cereals. It is an almost empty, fairly flat featureless area of land with few if any trees and no natural features to build upon in designing an interesting new course equal in quality to the present North Oxford course. There are no trees to compensate for the loss of a beautiful parkland course of numerous species. The northern edge is traversed by electricity pylons. Access is by a small entrance and track off the very busy A44 and very close to the A44/ Frieze Way roundabout. A new 18 hole course could not be fitted into the smaller Frieze Farm site and it is doubtful that it could satisfy Health & Safety regulation. There is nothing in the submission about how it would be provided and who would pay. The conclusion must be, therefore, that whatever the other objections, any attempt to develop North Oxford Golf Club for housing or any commercial purpose would not be compliant with the National Planning Policy Framework and could not be justified in law.

Plays golf regularly at NOGC throughout the year and does not wish to move to another golf club for the following reasons: 1. This club is the nearest to home. 2. The local bus services which travel from a stop on the Banbury Road, to the entrance of the club. This saves using a car with the resultant expense, air pollution and traffic congestion. 3. Golf is a necessary form of exercise for maintaining health. It gives the mental benefits of having good and sociable company, vital for retired people. 4. The golf course gives access to beautiful natural surroundings with a great variety of flora and fauna to admire through all the seasons. It is a mature 100+ year old investment that cannot be replicated instantly in a new course, irrespective of the funds available to attempt this. This club contributes immeasurably to the quality of life. Please do not allow the destruction of this irreplaceable asset.

Object to the proposed re-development of North Oxford Golf Course. Find it incomprehensible that your planning policy should even consider turning it into a housing scheme. Oxford City council already own land within the city boundary (Oxford City Golf Club) which they have designated as amenity land. If they have made this decision why do they want houses built on land used as amenity land? North Oxford golf club has been in existence for over 100 hundred years, it has a thriving membership of all ages and abilities. As for the proposal to allocate land of comparable size (Frieze Farm), this parcel of land is nigh on impossible to build a 18 hole golf course on due to the shape. Who would fund the development of the course? Rep gives rough estimate detailed financial costing in letter. Would also like to point out that the Golf course is the only one in the surrounding area that is on a major Bus route, which in the environmentally aware society that we live in could be of benefit in the near future. Please consider the impact that your proposal will have on the members of North Oxford Gold Club and throw out this proposal from the poor colleges of Oxford.

North Oxford Golf Club has been on the present site for over 100 years. It provides a recreation ground that is open every day and accommodates all ages male and female. The total complex is owned by three landlords with lease arrangements, the club is financed from members fees, and club functions. Pressure is being placed on landlords from the developers who are offering a large incentive to sell the land and are keen to force properties onto the market. Obviously due to progress with the train link to London from Oxford Parkway this has considerably increased the land value. To move this course as suggested by Cherwell District Council would be the finish of golf in this area, when money takes precedence over an established golf course with over 100 years of history it will be a very sad day. To re-site the golf course as suggested by the council to the land at Frieze Farm would be a non event, size being a major problem amongst others. In 1978 the club was threatened with closure with the proposed A40 road improvement plan, with the aid of the environment Secretary of State and planning consultants alike the case was dropped. Oxford City Council stated that the 70 acre site was to be protected from development as the site was suited for its purpose as a golf course. The 18 holes at NOGC are tightly packed into 70 acres and relocation to a smaller site would be impossible. 530 properties are planned to be built on the NOGC. This could produce a possible 1000 extra vehicles entering the Banbury road. This area is already under major pressure in the rush hour and add to this the increase in traffic for the new Oxford Parkway station and park and ride facility equates to infrastructure failure. I'm confident that the housing that is proposed for the NOGC site will be suited towards high earning professionals and will not be the affordable housing that is required for the area. If it's necessary to lose a golf course I consider the universities should form an alliance and release some of their sports fields for building development. If five cricket teams used one ground potentially there are 4 cricket grounds that could be used for development. This ground is only used once a week in the season and remains untouched for the rest of the week, this applies to many other sports. I consider Oxford City Council should be taking an interest in the golf course, visitors who have a vested interest in golf see this course as an attraction to the city. It appears now a conservation order should have been placed to retain the area for golf only. Suggest the landlords where the course is currently situated should stand up and say their piece. The only reason for the course to be developed on is the fact that since the arrival of the train station the value of the land opposite is at a premium. Development on this site is unnecessary and will eliminate a perfectly good golf course that adds history and value to both Oxford and the local area. If it does come to financing there may be two avenues for potential funding; the Government and the National Lottery both parties could be considered to retain a golf course with this many years history. The moment JCBs start ripping up fairways, greens and trees that have been there for many years and some in remembrance of members passed it will be a sad day in the history of North Oxford Golf Club.

Proposed Submission Plan - Policy PR6b - Land West of Oxford Road

PR-C-0436	05/10/2017	Steve	Pickles	West Waddy ADP on behalf of JA Pye (Oxford) Ltd	Y	Y	N	Y
1100	<p>Comments</p> <p>Much of the land proposed to be allocated to meet Oxford's unmet need is not located close to existing service centres. As a result new service centres are proposed to be created under the allocation policies for Begbroke (policy PR8) and land east of Oxford Road (policy PR6a). The effect of this is that these new developments will not be served by or support the important Kidlington Village Centre. This would conflict with the aspiration of the Cherwell Local Plan 2011- 2031 Part 1 policy Kidlington 2, which is entitled 'Strengthening Kidlington Village Centre,' which states that it is proposed in part 2 of the Local Plan to expand the geographical area defined as Kidlington Village Centre, with the aim of supporting the viability and vitality of the existing village centre and encouraging economic activity. This is also the aspiration of the adopted Kidlington Masterplan, Theme 3 of which is 'Strengthening Kidlington Village Centre,' with the objective being: 'To strengthen the Village Centre, increasing its mix of uses and vitality and its attractiveness to local residents, employees and visitors as a place to shop, work and spend leisure time during the day and evening.' None of the proposed allocations to meet Oxford's unmet need, which amount to a total of 4,400 dwellings, would help to achieve this objective, however, as they are all located well away from Kidlington Village Centre, with the most significant amounts of development being allocated on the northern edge of Oxford; and at Begbroke and Yarnton.</p> <p>Changes Sought</p> <p>Amend the strategy to remove, or at least minimise, the amount of land to be removed from the Green Belt in the 'Kidlington Gap' by instead removing other areas, such as the J A Pye (Oxford)Ltd land at Webb's Way, Kidlington (PR32), which the Cherwell Green Belt Study (April 2017) has identified would cause less harm to the Green Belt.</p> <p>Reasons for Participation</p> <p>J A Pye (Oxford) Ltd owns land at Webb's Way, Kidlington and wishes to ensure that the argumentis strongly made for the removal of this site from the Green Belt and its allocation for housingdevelopment, which would help to address Oxford's unmet need.</p>							
PR-C-0436	05/10/2017	Steve	Pickles	West Waddy ADP on behalf of JA Pye (Oxford) Ltd	Y	Y	N	Y
1101	<p>Comments</p> <p>In order to increase footfall to Kidlington Village Centre it is important that some of this development is located much closer to the village centre. One such site is the J A Pye (Oxford) Ltd land at Webb's Way (as indicated on the attached Site Location Plan L02) and there are also other potential sites that could be allocated, as indicated in the council's HEELA and Green Belt Study. Allocating the land at Webb's Way would also enable a significant contribution to be made towards providing green infrastructure in the area in accordance with proposed policy PR5, which requires development proposals meeting Oxford's unmet need to show how multi-functioning Green Infrastructure can be provided including the restoration or re-creation of habitats; biodiversity enhancements; informal and public open space and movement corridors. The Landscape & Visual Appraisal (January 2017) carried out by Aspect, which is submitted with these representations, indicates that the south western part of the site is well contained, being adjoined by residential development on three sides and a hedgerow on the other and has the capacity to accommodate sensitively designed residential development. The north eastern part of the site is more open and this part of the site would be a suitable location for landscaped public open space and wildlife habitats.</p> <p>Changes Sought</p> <p>Amend the strategy to remove, or at least minimise, the amount of land to be removed from the Green Belt in the 'Kidlington Gap' by instead removing other areas, such as the J A Pye (Oxford)Ltd land at Webb's Way, Kidlington (PR32), which the Cherwell Green Belt Study (April 2017) has identified would cause less harm to the Green Belt.</p> <p>Reasons for Participation</p> <p>J A Pye (Oxford) Ltd owns land at Webb's Way, Kidlington and wishes to ensure that the argumentis strongly made for the removal of this site from the Green Belt and its allocation for housingdevelopment, which would help to address Oxford's unmet need.</p>

1105	<p>Comments</p> <p>It is not considered therefore that the impact on the Conservation Area is a valid one for rejecting allocation of the Webb's Way site. The Council acknowledges that the Webb's Way site is located in a suitable location to accommodate Oxford's unmet need and has good access to services and facilities in Kidlington. Although the Webb's Way site is a relatively small site, it is important to allocate a mix of housing sites, as smaller sites have the benefit of enabling development to come forward at an early stage in the plan period as significant infrastructure provision would not be required, thereby enabling an early contribution towards meeting Oxford's unmet housing need. In addition, the impact of developing a small site adjoining the existing settlement of Kidlington would have a much smaller impact on the purposes of the Green Belt than the large areas which it is proposed to allocate under policies PR6a and PR6b, which are located in a critical location in the Kidlington Gap as set out in the accompanying Green Belt representations. It is therefore considered that the failure to allocate land at Webb's Way, Kidlington does not represent the most appropriate strategy when considered against the reasonable alternatives and the plan is therefore unsound in this respect.</p> <p>Changes Sought</p> <p>Amend the strategy to remove, or at least minimise, the amount of land to be removed from the Green Belt in the 'Kidlington Gap' by instead removing other areas, such as the J A Pye (Oxford)Ltd land at Webb's Way, Kidlington (PR32), which the Cherwell Green Belt Study (April 2017) has identified would cause less harm to the Green Belt.</p> <p>Reasons for Participation</p> <p>J A Pye (Oxford) Ltd owns land at Webb's Way, Kidlington and wishes to ensure that the argumentis strongly made for the removal of this site from the Green Belt and its allocation for housingdevelopment, which would help to address Oxford's unmet need.</p>

1104	<p>Comments</p> <p>Appendix 4 of the council's HEELA states that the site (HEELA168) 'is considered to be unsuitable for development as the site is an important open space within the Church St Conservation Area & provides a rural setting for the church and its environment.' While it is accepted that this is the case with the outer fields which are not proposed for development, it is not the case with the inner field, which is screened by a continuous thick hedgerow on its eastern boundary. Aspect's comments on the potential impact on the Conservation Area are contained in paragraph 3.7 of the Landscape & Visual Appraisal of Land at Webb's Way (January 2017) , where they state that: 'It is considered however that, on the ground, the south western part of the site is not readily perceived and does not appear to contribute to the setting of the Conservation Area, particularly when compared to the more open network of fields to the north east which are publicly accessible and from which views towards the church are available. This part of the site does not appear to be related to the listed buildings or the setting of the Church or Mill End. It is acknowledged that the proposals will change the character of the site, however, various post- war residential developments to the south east and north west of the site, immediately adjacent to the Conservation Area and the listed buildings of Mill Street have been integrated without harm to the setting of these buildings or the wider designation. It is considered that a sensitively designed development can be integrated without compromising the perceived landscape setting of the listed buildings or Conservation Area. '</p> <p>Changes Sought</p> <p>Amend the strategy to remove, or at least minimise, the amount of land to be removed from the Green Belt in the 'Kidlington Gap' by instead removing other areas, such as the J A Pye (Oxford)Ltd land at Webb's Way, Kidlington (PR32), which the Cherwell Green Belt Study (April 2017) has identified would cause less harm to the Green Belt.</p> <p>Reasons for Participation</p> <p>J A Pye (Oxford) Ltd owns land at Webb's Way, Kidlington and wishes to ensure that the argumentis strongly made for the removal of this site from the Green Belt and its allocation for housingdevelopment, which would help to address Oxford's unmet need.</p>

1109	<p>Comments</p> <p>Objects to Policy PR6b as unsound and unjustifiable. The proposal to move North Oxford Golf Club would be laughable if the implications for creating urban sprawl were not so serious; and the contrast with the city's obsession in preserving Oxford (Southfield) Golf Course exposes the narrow self-interest that is embedded in the city's demands.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							

Proposed Submission Plan - Policy PR6b - Land West of Oxford Road

PR-C-0449	09/10/2017	Lynne	Tighe						
1131	Comments								
It is believed these proposals are not consistent with National Policy because they do not take into account the detrimental effect that removing these large areas of Green Belt will have. These proposals therefore fail to meet the test of soundness as defined in paragraph 182 of the NPPF. Oxford's local plan has not yet been prepared so Cherwell's allocation of homes is premature and is not an appropriate strategy and is unjustified.

492	Comments								
Objection made to Policy PR 6(b) to build 530 houses on the current North Oxford Golf Course, owned by two Oxford Colleges and the University Press. This land has been utilised as a golf course since 1907, providing a formal sports facility for players of both sexes and ages ranging from junior to senior. It would mean the loss of one of Oxfordshire's finest and most picturesque courses for the use of current and future generations. The course also provides an excellent wildlife habitat for many species of birds and a host of bugs, beetles and all sorts of insect and pond life. . It appears to be illogical to tear up a golf course that has been established for 110 years only to then suggest a site (PR 6c) as a 'potential' new course. The cost to provide a new course does not appear to concern Cherwell District Council, but expect the players, who have contributed to the upkeep, improvement and maintenance of the course and facilities throughout the years, to bear the cost. C.D.C have effectively cast a 'blight' over the club and course and appear to have no concern for their action.

Does not believe that the proposal to develop this land is in compliance with national policy and in particular with the NPPF. It seems to me that Oxford's housing need has not been properly calculated. Indeed how could it have been when Oxford's Local Plan does not yet exist ? In addition, the government has recently proposed that the way in which housing needs are calculated is to be changed. Examination of the Cherwell proposals should, in my opinion, be suspended until Oxford's housing needs are known and firmly established. I do not think that allocating this land for development, presently the North Oxford Golf Course, forms the basis for a sensible or safe policy. The golf course has been there for very many years and is well used. It has an active membership and its loss would be missed. The club has no wish to move and has no resources to create a new course on the land at Frieze Farm. The development of the land on PR6a and PR6b would cause the coalesance of Oxford with Kidlington, something that has consistantly and rightly been resisted for several decades. Does not think that this should be allowed. All the more so as the additional traffic that would be generated would exacerbate the already dreadful traffic congestion and air polution in the area. Understands that Exeter College, the owner of Freize Farm, as part of Cherwell's Local Plan Options in November 2016, put forward a detailed and comprehensive representation showing how the land could be used to create a discrete and sustainable village community which would not cause the coalesance of Oxford and Kidlington. If part of the Green Belt has to be built on, why not on Frieze Farm ?									
Changes Sought					Reasons for Participation				
Until Oxford has a Local Plan in place and until the local housing need is firmly established using the government's revised method of calculation, believes that the present process should be held in abayance.

1151	Comments								
Sites PR6a and PR6b are large expanses of open land forming part of the key gap separating Oxford from Kidlington. They meet all of the purposes of a GB. In addition, development of site PR6a would involve the loss of attractive open farm land and seriously harm the character and setting of St. Frideswide's Farmhouse, an idyllic 16th century Tudor stone house listed as Grade II *. Site PR6b is a well-established golf course, that provides a valuable sports facility, and its loss, with the consequent need to replace it elsewhere, makes little sense.

Object to policies PR6b and PR6c and contend that the proposed submission plan is unsound, inadequately researched and, as a result, not justified at this stage. While not immediately affected as a resident of Eynsham, we have taken time to study the proposed plans, particularly Policy PR6b, as they affect us as long-term members of North Oxford Golf Club (NOGC). Much work has been put in to produce a very lengthy document but the brief comments on the subject in paragraph 21 of PR6b on page 99 clearly demonstrate that the proposed plan as it relates to NOGC has not been adequately examined on the ground and the ramifications of destroying a 110-ten year old and very well used golf course in the Green Belt have not been given adequate consideration.

1189	Comments								
1. The sites are on Oxford GB. GB's remain Govt. policy. Land between N Oxford & Kidlington is unique as it fully accords with the 5 GB purposes as per para 80 of the NPPF. GB's are designated to manage the location of new development, they would not exist were there not pressure to develop on them. Such pressures cannot be considered exceptional circumstances. As per para 84 of the NPPF there's no evidence of alternatives being considered i.e.. using allocated, undeveloped employment land in Oxford for housing & promoting employment growth outside Oxford, creating a better balance between where people live & work. Have the LA's co-operated in looking at alternatives? This land being GB also complies with para 81 of the NPPF. It is used for sport & recreation, is biodiverse & visually pleasing. 2. The identified housing needs rely on an outdated study which has never been independently assessed. Revised Govt. figures indicate a reduced requirement. It now seems there is no need to build on GB. Even if there is a need on this scale, it is a poor location to meet Oxford's needs, being adjacent to a London commuter rail line & in the expensive part of Oxford. The private housing will likely attract London commuters & wont provide affordable homes for people with jobs in Oxford. It is evident that many house buyers in N Oxford are those moving from London & continuing to work there. 3. Unsound in allocating NOGC for housing & not taking into account NPPF para 74. Understand NOGC weren't involved in discussions prior to this. NPPF Para 74 says existing sports facilities shouldn't be built on unless it assessed as surplus to requirements or replaced by equivalent or better provision. No such assessment has been made. NOGC, a well established & thriving club with 475 members & 3000 visitors p.a. Its clubhouse is used by the wider community. As a flat course, it is especially suitable for seniors. NOGC is needed. It is not sound practice to propose allocating land for housing & to carry out a retrospective assessment of the need for a golf course. We need this space for the health & wellbeing of locals. The land at Frieze Farm as a replacement GC, appears to be an afterthought. It is too small. Building a new GC on a similar sized site to NOGC would cause H & S issues unless mature trees were in all the right places. No indication shown on how it could be financed or developed. Apparently the landowners have stated to NOGC that they have no intention of providing another GC or providing the level of funds that would be needed. The mature landscape central to the current GC couldn't be replace in reasonable time & therefore the 2nd criterion of para 74 cannot be met.									
Changes Sought					Reasons for Participation				
The housing allocations in the Kidlington Gap should be removed from the Plan & the Green Belt designation of the Killington Gap retained.

PR-C-0499	30/09/2017	Alan	Oliver		N		N	
1190	<p>Comments</p> <p>4. NOGC is a biodiverse landscape. Containing different tree species & 55 recorded bird species & pond life. The NPPF states this is important for health & wellbeing. It is much valued by locals. Land N of Cutteslowe Park is also important in this respect, changing the open nature the Parks. It is a well used facility. 5. The development will put further pressures on transport & other infrastructures. Seemingly funding bids for infrastructure are being made to cater for growth, but funding has not been secured. Growth shouldn't be approved until infrastructure can be provided & it's demonstrated that any proposed measures will be effective. Traffic in the N Oxford area is already severe. Work on the 2 roundabouts hasn't improved this. More housing will add to congestion & air pollution. Oxford has good public transport provision, but not all who work/live locally will use this. Increased housing & employment levels will add to congestion with its health implications. It will reduce Oxfords' attractiveness as a business location & place to live. Putting more housing & employment in this area cannot be viewed as sustainable. There are also severe existing pressures on other services including health and education.</p> <p>Changes Sought</p> <p>The housing allocations in the Kidlington Gap should be removed from the Plan & the Green Belt designation of the Kidlington Gap retained.</p> <p>Reasons for Participation</p>							
PR-C-0500	30/09/2017	Gill	Oliver		N		N	
1191	<p>Comments</p> <p>1. The sites are in the Oxford GB. GBs remain Government policy. The Kidlington Gap land is in GB and fully meets all 5 of the purposes of GB set out in para. 80 of the NPPF. GB's are designed to manage the location of new development and would not exist were there not pressure to develop within them. The existence of such pressures cannot therefore be considered exceptional circumstances. There is no evidence (as per para 84 National Planning Policy Framework) that serious consideration and cooperation by local authorities has been given to alternatives such as using allocated and underdeveloped employment land in Oxford for housing and promoting employment growth outside Oxford to create a better balance between where people live and work. This land is also used positively for outdoor sport, recreations and has value for biodiversity and visual amenity. 2. The identified need is based on an outdated study and revised Government figures indicate a much reduced requirement. This is a poor location to meet Oxford's needs as it is adjacent to a commuter rail line to London and in the most expensive part of Oxford for housing. Therefore will likely cater for London commuters rather than provide the required affordable housing. 3. Para. 74 of the National Planning Policy Framework says that existing sports facilities should not be built on unless an assessment is undertaken showing it is surplus to requirements of replaced by equivalent or better provision. No such assessment as been made. It is understood that the Golf Club were not involved in discussions prior to the allocation. The Golf Club is well established, thriving club whose facilities are also used by the wider community. As a flat course it is particularly suitable for senior members. This facility is clearly needed for the health and well-being of residents. The allocated land at Frieze Farm as a replacement golf course is seemingly an afterthought with no indication of how it could be developed or financed. The mature landscape central to the current course could not be replaced within a reasonable timescale. This creates major health and safety issues and does not meet the second criterion of Para 74. 4. The golf course is valuable in terms of biodiversity and landscape, containing 25 different tree species and 55 regularly records bird species as well as pond life. There would also be a negative impact on the open nature of the land to the north of Cutteslowe Park. 5. Further pressures will be put on transport and other infrastructures. No funding has been secured for further infrastructure and growth should not be approved until it can be demonstrated that any proposed measures will be effective. It has been reported that the recent works on the 2 roundabouts have not improved queue times. More housing will add to congestion and air pollution, put pressure on health and education services, as well as reduce the attractiveness of Oxford. It is difficult to understand that putting more housing and employment in this area can be viewed as sustainable.</p> <p>Changes Sought</p> <p>Housing allocations in Kidlington Gap should be removed from the Plan and GP designation of Kidlington Gap retained.</p> <p>Reasons for Participation</p>							
PR-C-0510	08/10/2017	Rachel	Walton				N	
1215	<p>Comments</p> <p>GB is designed to protect from overdevelopment. If PR6 and /or PR7 are permitted, Kidlington, Yarnton and Begbroke will become victims of urban sprawl and become a suburb of Oxford. This GB should not be sacrificed as it will irrevocably damage the countryside, wildlife and biodiversity of North Oxfordshire, reducing quality of life for local residents.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							
PR-C-0516	25/09/2017	Christopher	Lane					
1234	<p>Comments</p> <p>Objection as a local resident, member of North Oxfordshire Golf Club and Oxford Ornithological Society to building houses on the golf course. The late offer of Frieze Farm as a replacement course is presumably to avoid contravening the government's National Policy Framework regarding the re-use of sports facilities. Why destroy a hundred years old course to rebuild it a few hundred yards away? The City's search for affordable housing is understandable, but is this provision likely to satisfy local housing needs, rather than attract wealthy buyers living along the Chiltern line? The land occupied by the golf course fully complements the raison d'etre behind the creation of the GB. It is a bulwark against urban sprawl, separating the city from the village of Kidlington, and with its 80 acres of manicured grounds, its pond and beautiful trees (it would be an outrage to fell them) making a healthy contribution to the environment. There are a variety of birds which are found there throughout the year, from woodpeckers and warblers to several different raptors, some fifty species in total. The Council may not appreciate the extent to which this club is valued by its members, young and old, and by other visitors. The health benefits of getting people out in the open air in pleasant surroundings yet close to the centre of a major city are obvious. So why close down such an attractive course?</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							
PR-C-0518	25/09/2017	Zoe	Christodoulou				N	
1240	<p>Comments</p> <p>Objects to PR6b. The use of GB land for meeting Oxford's unmet housing need is not justified & not consistent with NP. There can be little justification in building on the current perfectly adequate golf course, & moving the golf course a few hundred yards. It is now common knowledge that this site 6c is also being considered for housing. I can only conclude from this that this amenity will be lost forever. Allowing development on the "Kidlington gap"(PR6a & b) will completely remove Kidlington's identity as a separate village. Kidlington will become a suburb of Oxford in it's increasing urban sprawl, which the GB is meant to prevent. This proposed site will encroach on the countryside, which once gone will be lost forever. The increased traffic into the local roads will lead to more congestion & increased journey times both by car or public transport. The likelihood is that housing here will do little to ease Oxford's housing problem as the proximity to Oxford parkway means that a large proportion will be purchased by Londoners who will then commute back via the train.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							

Proposed Submission Plan - Policy PR6b - Land West of Oxford Road

PR-C-0519	25/09/2017	Sian	Robbins		N	N
1245	<p>Comments</p> <p>Objects to PR6b. It is not a justified or proven requirement & is inconsistent with national policy. New Govt. methods for calculating housing need indicates that 30% fewer houses are required in Oxfordshire than previously forecast. Consequently the basis for allocating housing to accommodate Cherwell & Oxford City's requirements are overstated & invalid. Less land will be required to accommodate development & there are no exceptional circumstances to warrant the release of land from the GB. Without prejudice to the above point, proposals to release Cherwell's GB to meet Oxford's needs are premature & unjustified as Oxford City is in the process of reviewing its LP & has not yet determined how much housing development can be accommodated on land within the City's boundaries. PR6b lies in the Kidlington Gap (core GB that separates Oxford & Kidlington). Development here would be in direct contravention of the fundamental aim of GB policy, preventing urban sprawl by keeping land permanently open. The Kidlington Gap serves all the five purposes of the Green Belt (lists the 5 purposes) & it is strategically important. It is a clear example of an open area preventing the coalescence of settlements, checking unrestricted sprawl & safeguarding the setting & character of historic Oxford city. Its loss would fundamentally undermine the principles of GB policy. PR6b is unsustainable on its own & in conjunction with other planned releases from the GB for housing. Infrastructure & services in & around Oxford are already under strain i.e.. Schools, hospitals/healthcare & roads. There is no capacity for major additional development. The infrastructure & services of Oxford & its surrounds are already beyond capacity. Further population is unacceptable. The road network in the immediate & wider environs are already highly congested. There are no clear, identified & funded proposals in the Plan to address these issues.</p> <p>Changes Sought</p> <p>Delete PR6a housing allocation on land to the east of Oxford Road. Delete PR6b housing allocation on land west of Oxford Road. Delete PR7a housing allocation on land south east of Kidlington. Delete PR7b housing allocation on land at Stratfield Farm. Delete PR8 housing allocation on land east of the A44</p> <p>Reasons for Participation</p>					

PR-C-0529	08/10/2017	John	Tremlett			
1295	<p>Comments</p> <p>Support for Cherwell Local Plan 2011-2031 (Part 1). Obvious need for new houses in area. While GB is valued it should be used as an aid to creating good plans, not a straight-jacket to frustrate them. The land of PR6a is not of high amenity visually or practically. and is ideally suited to housing. Land for PR6b is equally suited to housing, and I have no objection to moving the golf course further away from the centre of Oxford. Oxford has great opportunities to grow, in enterprise and in employment. The notion that business should be denied land so that housing needs can be met is absurd. Gaps in the current plans should be addressed in due course. In particular transport, for cars, bikes, and pedestrians need careful attention. I should particularly like to see proposal for a safe and quiet footpath between the existing housing in the area of Harbord Road and Five Mile Drive, and Oxford Parkway Station.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>					

PR-C-0531	09/10/2017	Ben	Staveley-Taylor		N	N	N
1305	<p>Comments</p> <p>These comments apply equally to PR6a and PR6b. The GB reserved areas between North Oxford and Kidlington provide a critical buffer between the two areas. If they are allowed to merge, then Oxford and Kidlington become one large sprawl. Already the A4165 Oxford Road is hugely over-congested, with stationary traffic every day in the morning rush hour, and this would just make matters worse. PR6a and PR6b are undesirable developments which violate national GB planning policy. A non-urban buffer zone in this area must be maintained. Maybe a legal justification can be forced through but it is entirely unwanted by local residents and would be vigorously opposed.</p> <p>Changes Sought</p> <p>Drop PR6a and PR6b. Housing needs can be met by expanding other areas if necessary.</p> <p>Reasons for Participation</p>						

PR-C-0532	03/10/2017	David	Fitchett		N	Y
1308	<p>Comments</p> <p>1. Proposed density means expensive 'commuter' houses will be built not meeting Oxford City Council's unmet housing needs. 2. Golf course has been in existence for over a century and matches all purposes of GB set out in Government's National Planning Framework. 3. This land and natural habitat is well cared for and should remain as a green lung between Oxford and Kidlington. 4. The National Planning Framework (Para4 under "Health") states that sports facilities should not be build on. Not a viable proposition to relocate this to Frieze Farm - takes decades to mature and establish a customer base. With keen competition no business case could be made that would justify the setup investment costs. 5. The course is extremely well played with nearly 500m members and over 3000 visitors annually. Contrast this to football pitches which only get used twice a week. 6. Is also a well used community facility for various functions. 7. The club is a business employing some 20 staff and contributing to the local economy. 8. Important countryside cultivated with over 25 tree species specially planted and maintained. Includes strategic water features creating habitat for many flora and fauna with some 55 bird species ranging from gold crests to buzzards. 9. Traffic flows already horrendous and due to worsen with Northern Gateway development. Even more houses will make congestion unbearable. 10. Many under utilised areas around Oxford could be developed - why take away land that is serving a useful purpose for the community.</p> <p>Changes Sought</p> <p>Take North Oxford Golf course (PR6b) out of the Plan completely</p> <p>Reasons for Participation</p> <p>Because I do not believe the Councillors have all the facts</p>					

Page 2276

Proposed Submission Plan - Policy PR6b - Land West of Oxford Road

PR-C-0535	05/10/2017	Donna	Bennett		N	N	N	Y
1312	<p>Comments</p> <p>The exceptional need to build 530 homes on this area due to few alternative locations being available is not proven, convincing or justified. This planning solution for meeting housing needs is insensitive towards overdevelopment to nearby villages, as well as the preservation of already too little remaining natural space and wildlife. How could this possibly therefore be effective or result in potentially healthy new living space? Using small bit of green space left would only be a temporary measure with irreversible consequences. Infrastructure plans are afterthoughts not actually agreed, funded or guaranteed by potential developers. The current infrastructure in surrounding areas, currently and rapidly deteriorating need to be fully considered before further demand. Only, and at best are 50% of these homes planned to accommodate housing needs which means that the remaining land will be used purely for property investment. Property investor's interests should surely not be underlying necessities in any GB development state as an exceptional cause? Justifying this plan as an exception to meet urgent needs therefore is not in compliance with the national GB policy. It cannot be denied that using this green space will have a negative effect n the quality of lives of those living around this area. Decision making by any parties that stand to profit from the success of this planning should not be allowed. GB space is labelled as such to cap the area from inevitable demand of expansion. This development would link Kidlington to the outskirts of the city centre. This urban sprawl will change the environmental surroundings with a result n having to eliminate a small but precious pocket of wildlife in the wooded area as well as the protected green space of the golf course. The high quantity of housing threatens the already deteriorating infrastructure Decision makers for these plans should rely heavily on those it affects.</p> <p>Changes Sought</p> <p>Changes to Plan 6b - so that it is more legally compliant and sound. 1. If using our GB areas is truly the only option for development then Cherwell should decline and point to other solutions such as a. Brownfield sites within Oxford or further out. b. Current and numerous vast amounts of land either being reserved for commercial use (much of it not looking very utilised or successful). 2. Ensure affordable housing is defined and that proposed housing estates are more than 50% (at least 65%) toward the housing need, not the interest of property investors. 3. Current infrastructure problems to be considered by developers as a paramount concern. 4. Funding of infrastructure plans to be agreed and legally bound by property investors before the start of any development. 5. The decision making process should be ultra-sensitive and rigid to the aesthetics at risk.</p> <p>Reasons for Participation</p> <p>I am a concerned as a long time resident that these plans will affect. I am also aware and understand these plans and their implications involving both current and future residents. I strongly believe I am competent and justified to be involved in ensuring that alternatives, and fair compromises are met</p>							
PR-C-0536	06/10/2017	Judith	Haverty					N
1320	<p>Comments</p> <p>Proposal not consistent with national policy because they do not take into account the detrimental effect removing large areas of GB will have. Proposal fails to meet the test of soundness as defined in para 182 of the National Planning Policy Framework. Oxford's Local Plan has not yet been prepared so Cherwell's allocation of homes is premature, not an appropriate strategy and is unjustified. Oxford City Council should be utilising their own unused land such as Lord Nuffield Grounds and Oxford Greyhound stadium before pushing housing to other districts. It is unlikely that low density housing will be affordable for key workers. Barton Park prices and the proximity to the train station will make this area very attractive to London commuters. Traffic congestion will just get even worse and no consideration has been put forward to alleviate this (in addition to the air quality hotspots). Cutteslowe Park and its infrastructure will be detrimentally affected by an obvious increase in its resources.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>

1345	<p>Comments</p> <p>The triangle of land occupied by North Oxfordshire Golf Club for last one hundred and ten years has become a veritable arboretum with a diversity of trees and hedgerows which are home to many species of birds and animals. The course itself is a tribute to its architect and has stood the test of time. Memberships consists of a good mix of age groups and gender. It is well used by societies and casual players lending itself for all to be able to fit in a quick nine holes after perhaps a stressful day at work. There is an upgraded clubhouse providing an important income stream and can be hired by members and outside agencies. There are good public transport links. Over the years the club has raised many thousands of pounds for national and local charities. As a past President of the club and a member of 47 years standing I submit my objections and request that the planning committee take this recreational facility out of the proposed housing plan.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>

1378	<p>Comments</p> <p>These proposals are not consistent with NPPF. They don't take into account the detrimental effect that removing large areas of GB will have. These proposals therefore fail to meet the test of soundness as defined in paragraph 182 of the NPPF. Oxford's LP has not yet been prepared so Cherwell's allocation of homes is premature, is not an appropriate strategy & is unjustified. GB boundaries should be meaningful. The existing boundaries of the Oxford GB should be upheld wherever possible. Current citizens have a responsibility to future generations. Oxford's GB exists to protect the countryside & individual communities. Once built on, this & the environment will be lost forever. It is vitally important that the rural landscape & open space be preserved, as it currently is by GB designation. CDC's policies seem to have no regard to the importance of the Oxford GB, & don't take into account other current new developments, e.g. Barton Park, traffic, transport, the likely availability of affordable housing under their policies, all of which would have to be resolved by Oxford. As Oxford has not yet made available its LP, Cherwell's policies seem particularly ill-timed.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>

These proposals therefore fail to meet the test of soundness as defined in paragraph 182 of the NPPF. • Oxford's Local Plan has not yet been prepared so Cherwell's allocation of homes is premature and is not an appropriate strategy and is unjustified.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							

Proposed Submission Plan - Policy PR6b - Land West of Oxford Road

PR-C-0562 05/10/2017 Helen Marshall CPRE Oxfordshire N Y

1421

Comments

CPRE is opposed in principle to the release of GB land – as is national planning policy. A very strong case therefore has to be made to establish the exceptional circumstances required for the release of GB land. The Cherwell Plan goes nowhere near making such a case; Cherwell’s electorate strongly supports retention of GB land as does Government Policy. There are a number of reasonable alternatives. The houses to satisfy Oxford’s ‘unmet need’ targeted at the Cherwell GB could not only, on the Council’s own admission, be sustainably built elsewhere in the District on other sites, or by increasing the density of build on existing sites, but also, at least to a considerable extent, within the City itself. Failing that, if there were genuinely no available option other than release of GB, national policy indicates that Cherwell would be expected to decline to do so and require other Councils to co-operate in meeting the unmet need Cherwell itself cannot satisfy. Additionally, during the course of the consultation, the Government published a revised Objectively Assessed Need (OAN) calculation, showing a total Oxford need of half that identified by the Oxfordshire Strategic Housing Market Assessment (SHMA). If adopted the new formula would make it certain that Oxford could accommodate all of its own housing need, and therefore there would be no “unmet need” for Cherwell to meet. The proposed OAN also reduces Cherwell’s own need by a third, meaning that even if there were any Oxford unmet need to be covered, it could be met within the surplus the new OAN creates in Cherwell’s adopted plan. This review is therefore premature and should be suspended at least until new “need” figures are crystallised.

Changes Sought

In CPRE's view, it is not possible to 'tweak' the current document in order to make it sound and therefore the current version of the Plan should be rejected. CDC should re-visit the process, as and when the final numbers for Oxford have been examined, adopting higher densities and prioritising protection for the GB.

Reasons for Participation

CPRE Oxfordshire represents a wide membership across the County, including many parish councils and local organisations, and seeks to influence development to protect and enhance the countryside. As one of the founders of the Oxford GB, we have considerable knowledge about its origins, purpose and ongoing relevance.

Comments

GB: CONCLUSIONS: 1. Government Policy and the Public Interest both require the GB to be permanent unless truly exceptional circumstances necessitate consideration of release. 2. Oxford unmet need is not an exceptional circumstance, firstly because it has not been defined and secondly because there are ample reasonable alternatives to accommodate it. 3. The LUC GB study was conducted on flawed principles and should be given little weight. 4. Cherwell have cited no other exceptional circumstances which hold any water – and their primary arguments – proximity to Oxford – is in fact a key argument for GB retention rather than release. 5. If at some future time an Oxford “unmet need” has been shown to exist and satisfactorily quantified, and if that requires any allocation to Cherwell, there are alternatives available to the District other than releasing GB land and therefore none should be released.

Changes Sought

In CPRE's view, it is not possible to 'tweak' the current document in order to make it sound and therefore the current version of the Plan should be rejected. CDC should re-visit the process, as and when the final numbers for Oxford have been examined, adopting higher densities and prioritising protection for the GB.

Comments

THE GB STUDY No great weight should be given to the LUC GB Study. Its purpose was not to determine whether any of the GB made no, or an insignificant contribution to, the purposes of the GB since clearly all of the GB land contributes, and the loss of any would be harmful. Rather, in its own words, the GB Study has been commissioned by Cherwell District Council to assess the suitability of the strategic sites being promoted for development against the five purposes of the GB. In other words the sites had been pre-selected, as we showed above, in the face of GB policy, and targeting the most fragile point in the entire Oxford GB. LUC continue The considerations that will determine the most appropriate scenario, or combination of scenarios, will largely relate to the existing or potential environmental qualities and value of land, and to the sustainability of residential development. This will enable Cherwell District Council to consider whether there are ‘exceptional circumstances’ (under paragraph 83, NPPF) to justify altering GB boundaries through the Local Plan process, i.e. to enable existing GB land to contribute to meeting Oxford’s unmet housing need. That is, value is not primarily judged against GB purposes at all, but against environmental ones, and the sustainability of the land for housing development. LUC found that Release of areas identified as making a low contribution to GB could provide only 5.8ha of potential development land (4.13). Release of areas identified as making a low or low-moderate contribution to GB could, subject to consideration of cumulative impacts, provide 34.6ha of potential development land(4.14). Release of areas identified as making a low, low-moderate or moderate contribution to GB could, subject to consideration of cumulative impacts, provide 166.7ha of potential development land (4.15). Although as noted above, the judgment was largely not on GB grounds, moderate harm was considered acceptable in order to release a larger amount of land. LUC acknowledge that release of fragile GB 4.16 GB that occupies only a small/narrow area between separate urban settlements will tend to rate highly in terms of its role in preventing settlement coalescence. This exactly describes the land chosen for release; but LUC went on. However, if environmental assessment determines that this land lacks significant value then a case could be made for accepting the coalescence, or near-coalescence, of settlements in order to maximise the scale of development in one area. That is the, subjectively assessed low environmental value trumps urban sprawl and severe coalescence, the two founding principles of the GB. Further, they have targeted the very point at which the GB is already narrowest – the Kidlington Gap between Kidlington and Oxford – for release, directly creating the coalescence of two distinct settlements (It is material that Oxford itself is proposing to breach that same area from the South with a proposed development of St Frideswide Farm). The sites concerned are all at the exact point in the GB where coalescence of settlements (Oxford and Kidlington) is most threatened, with the built areas separated presently by a few fields. The proposed GB reviews, together with the release of the Parkway Station and Park and Ride would effectively merge the two settlements. Although Kidlington (population 13,000, 2011) is statutorily a village, it is larger than many towns, notably Thame (11,600) and Henley (11,700) in Oxfordshire.

Changes Sought

In CPRE's view, it is not possible to 'tweak' the current document in order to make it sound and therefore the current version of the Plan should be rejected. CDC should re-visit the process, as and when the final numbers for Oxford have been examined, adopting higher densities and prioritising protection for the GB.

Reasons for Participation

CPRE Oxfordshire represents a wide membership across the County, including many parish councils and local organisations, and seeks to influence development to protect and enhance the countryside. Proposed Submission Plan - Policy PR6b - Land West of Oxford Road

PR-C-0562	05/10/2017	Helen	Marshall	CPRE Oxfordshire		N	Y
1427	<p>Comments</p> <p>DUTY TO CO-OPERATE - The SHMA is explicit that Authorities are not expected to meet OAN (Objectively Assessed Need) in full if e.g. it would necessitate Green Belt development. It has been the unforced choice – not the requirement – of Oxfordshire’s Councils to agree to meet the SHMA need in full despite wide swathes of Oxfordshire being GB and AONB. It is therefore incumbent on Councils to take on each others’ “unmet need” if it would otherwise require GB land to be released. As shown, Oxford’s unmet need is very far indeed from being quantified or crystallised, but, if it were, it would be the duty of other Councils to assist Cherwell in meeting its part of that need without releasing GB land, not least by assisting Cherwell to understand how to do so within its own borders. There is no evidence that this has been attempted. Finally, the new OAN calculation proposed by the Government during the consultation defines “need” as the figure shown in the Government’s own tables on household projections. This is overlaid in the proposed calculation with an arbitrary (and ill-conceived) uplift intended to reduce house prices. It is also accepted that local authorities may if they wish further inflate their housing targets to provide further economic growth than that already included in the government’s base tables. However, it is submitted that these latter two elements cannot be defined as “need” and neighbouring Councils have no duty to co-operate in meeting them.</p> <p>Changes Sought</p> <p>In CPRE's view, it is not possible to 'tweak' the current document in order to make it sound and therefore the current version of the Plan should be rejected. 1426	<p>Comments</p> <p>OXFORD'S 'UNMET NEED' AND REASONABLE OPTIONS FOR MEETING IT (continuation)</p> <p>c. Even if there were no reasonable alternative sites, and even if densities on allocated non-GB sites could not be increased, the release of GB land could be substantially reduced. The total GB land proposed to be released is 264 ha. 10 hectares is proposed to be released for the station and Park and Ride, which already exist on GB land. There is no obvious rationale for the release. The net GB land to be released for housing is 254 hectares However within this area only 153 hectares is proposed to be actually used for housing, with the rest being allocated for sport, nature, agriculture etc., all legitimate GB uses. On the residual land 3990 houses are proposed at a density of 26 dph (although an average of 34 is claimed in the Plan). If build densities were increased to urban levels – the Council’s stated Policy is to treat these incursions for Oxford’s unmet need as urban extensions – then 70 houses per hectare, utilising only 37% of the land would be appropriate. This would require only 57 hectares, all of which could be comfortably accommodated on PR8, the least damaging in terms of coalescence and the Kidlington Gap of all these sites.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>

1425	<p>Comments</p> <p>OXFORD'S 'UNMET NEED' AND REASONABLE OPTIONS FOR MEETING IT. 2. If Oxford’s unmet need were realistic could it be met elsewhere in Cherwell than in GB? a. Yes, it could be met on non-GB sites. Cherwell found that the required number of houses could sustainably be built elsewhere, outside the GB, at Junction9 M40, Arnott, Bicester and surrounding area, Upper Heyford, Junction 10 M40, Banbury and surrounding area. They rejected these alternative sites because they might upset the evolution of the current adopted plan – although why competent planners would not be able to deal with that problem, if real, is not apparent; because there might be shortfalls, although why these should be greater for Oxford’s unmet need than for Cherwell’s own need was not explained; and more dispersed options provided less opportunity for strategic infrastructure investment (e.g. transport and education), although why this would be the case for, for example, Upper Heyford which is already targeted and developed, or for other centres which already benefit from services, is not explained. The overriding reason for their rejection however was clearly that they were less well situated (than the GB sites) to build communities associated with Oxford, to assist with the delivery of the Oxford Transport Strategy, to provide affordable transport options, and more likely to involve commuting. It is significant that even GB sites like the previously developed Shipton Quarry, were rejected as Development here would relate to Shipton-on-Cherwell, not Oxford. Therefore the parcel plays no role with respect to this purpose (Oxford’s unmet need). Simply put, this amounts to saying that all reasonable alternatives were unacceptable because they were not in the GB, or, if they were in the GB, were too far from Oxford. It is an argument that urban sprawl into the GB is justified by the fact that only GB sprawl could (by definition) be close enough to the City; in other words it is an argument not just for nibbling at the GB but for undermining its core purpose. It is clearly unacceptable in its own terms. Further, the proposed new OAN calculation would reduce Cherwell’s own need by 33%. The effect of this would be that 33% of the housing trajectory in the Council’s adopted plan would be superfluous to Cherwell’s own requirement and therefore available to satisfy any unmet needs of neighbouring authorities that might arise. b. The unmet need could be met by marginal density increases on generally low density allocated sites. Policy BSC2 in the adopted plan states New housing should be provided on net developable areas at a density of at least 30 dwellings per hectare unless there are justifiable planning reasons for lower density development. Yet Policy Bicester 1 allocates 380 hectares to just 6,000 homes which is 16 houses per hectare. Assuming for these purposes that 30 dwellings per hectare is the average across the District, the sites to which the present 22,800 homes are allocated would need to increase build density by just 5%, to 36%, to accommodate all of the “working assumption” of Oxford’s unmet need. This would still be less than half the density of Central Paris or Barcelona, or Islington in London. Higher density build would also mean smaller houses, of which 63% of Oxfordshire’s SHMA need is comprised, and thus better meet public requirements. High densities also reduce the need for car travel and create a stronger sense of community.</p> <p>Changes Sought</p> <p>In CPRE's view, it is not possible to 'tweak' the current document in order to make it sound and therefore the current version of the Plan should be rejected. CDC should re-visit the process, as and when the final numbers for Oxford have been examined, adopting higher densities and prioritising protection for the GB.</p> <p>Reasons for Participation</p> <p>CPRE Oxfordshire represents a wide membership across the County, including many parish councils and local organisations, and seeks to influence development to protect and enhance the countryside. <p>Comments</p> <p>OXFORD'S 'UNMET NEED' AND REASONABLE OPTIONS FOR MEETING IT. 1. Is the Oxford unmet need real or realistic? Cherwell argues that an “exceptional circumstance” exists in the Inspector approving the adopted plan having added a requirement for “a formal commitment from the Council, together with other relevant Councils, to undertake a joint review of the boundaries of the Oxford GB, "once the specific level of help required by the city of Oxford to meet its needs that cannot reasonably be met within its present confines, IS FULLY AND ACCURATELY DEFINED”. (Our emphasis) It was our view at the time that the Inspector could have exceeded his remit as there was no evidence before him suggesting that further development in Cherwell was impossible without breaching the GB, nor of the precise quantum of Oxford’s unmet need (if any existed) or the capacity of other Districts to accommodate it. However it is relevant that he proposed a Review only AFTER Oxford’s unmet needs were fully and accurately defined. They still are not, and a review is therefore premature even on the Inspector’s terms. According to the City Council in a report to Scrutiny Committee (12th June), the agreed unmet need allocation, is used as a working basis for current local plans in Oxfordshire which will be updated when the Oxford Local Plan is completed. In other words it is presently neither fully nor accurately defined, as the Inspector had required it should be. Oxford has only now started its own Local Plan process to reflect the Oxfordshire Strategic Housing Market Assessment (SHMA), three years after it was published, and long after Oxfordshire’s other Districts. Its draft Local Plan gives no figure for unmet need, or for the City’s capacity to meet it. However, taking Oxford’s overall “need” to be for 28,000 houses over the plan period, CPRE argues that at least 26,000 could be provided inside the City itself by switching employment sites – the use of which for employment would only exacerbate the housing need the City Council describes as being its Number One priority to overcome – to housing, and increasing densities on all sites to compact city levels. That is even before the outcome of a review of further sites to which the City refers in its plan. (See Oxford/Densities paper attached) Consequently the Inspector’s condition, that Oxford’s unmet need should first be “fully and accurately defined” is nowhere near met, and, further, there would be little or no “unmet need” for other Authorities to consider. In any event, a “working assumption” of need cannot be an exceptional circumstance justifying GB release, especially when it is likely to be extremely inaccurate. Finally, during the course of this consultation the Government has proposed a new OAN formula to replace the SHMA (on which all the Review numbers are based). This new formula, if adopted, would reduce Oxford’s total annual housing need from a SHMA mid-point of 1400 per annum to 746, that is by 47%. This would in turn reduce “unmet need” by two thirds, even before taking into account that the City should use employment land to satisfy existing housing need rather than exacerbate it and build at densities appropriate to cities. The new OAN is at the very least further evidence that the level of unmet need this review seeks to satisfy is neither fully nor accurately defined.</p>								
<p>Changes Sought</p> <p>In CPRE's view, it is not possible to 'tweak' the current document in order to make it sound and therefore the current version of the Plan should be rejected. Cherwell District Council should re-visit the process, as and when the final numbers for Oxford have been examined, adopting higher densities and prioritising protection for the Green Belt.</p>			<p>Reasons for Participation</p> <p>CPRE Oxfordshire represents a wide membership across the County, including many parish councils and local organisations, and seeks to influence development to protect and enhance the countryside. PR-C-0562 1422	05/10/2017	Helen	Marshall	CPRE Oxfordshire			N	
<p>Comments</p> <p>The primary duty of a Local Authority must be to the people it represents. In an independent market research exercise, with a very high sample size, conducted across Oxfordshire by Alpha Research of Thame in April 2015 respondents were specifically prompted that there was considered to be a need for more housing, and of the extent and purpose of the GB, before being asked whether the GB, should be developed for that, or indeed any other, purpose. Their answers were therefore fully informed by recognition of housing need. 76% of respondents considered that the GB should remain undeveloped; 66% considered housebuilding the greatest threat. Although polls have something of a tarnished reputation, this has resulted from situations where marginal inaccuracy can lead to wholly incorrect forecasts in narrow binary decisions. In this case the sample size was so large and so representative, and the outcome so conclusive, that whilst there might be up to a 5% margin of error, this would not be capable of affecting the result, or its scale. Further, this is in line with previous polls, adding to confidence that it accurately reflects public opinion. The same exercise showed that in North Oxfordshire – closely correlating to Cherwell - the outcome was hardly less conclusive, with 71% of respondents supporting the proposition that the GB should not be developed for housing or any other purpose. This was despite years of constant media campaigning by the City Council that Oxford has “no option” but to spread over the GB unless people are to go homeless (a wholly fallacious claim). Despite the City’s campaigning, 73% of non-homeowners, and 74% of C2DEs agreed that the GB should not be developed for housing. In other words, the people who would be expected to have been the most responsive to the City’s campaigning rejected GB development almost as strongly as the general population. Indeed 73% of the City Council’s own constituents rejected it. There can be no doubt that the people both of Oxfordshire, and of Cherwell itself, reject GB development in principle, and this must be given great weight in any consideration of doing so.</p>								
<p>Changes Sought</p> <p>In CPRE's view, it is not possible to 'tweak' the current document in order to make it sound and therefore the current version of the Plan should be rejected. CDC should re-visit the process, as and when the final numbers for Oxford have been examined, adopting higher densities and prioritising protection for the GB.</p>			<p>Reasons for Participation</p> <p>CPRE Oxfordshire represents a wide membership across the County, including many parish councils and local organisations, and seeks to influence development to protect and enhance the countryside. PR-C-0562 1420	05/10/2017	Helen	Marshall	CPRE Oxfordshire			N	Y
<p>Comments</p> <p>Government Policy requires development in the GB to be the very last resort, only to be considered if there is no alternative. Cherwell has stood that Policy on its head by making building in the GB its very first choice, rejecting what it accepts were reasonable alternatives. Cherwell says that building as close to Oxford as possible trumps all other considerations. Since Oxford is surrounded by GB, that has led them to select not just GB sites, but the very closest GB sites to the City, at the Kidlington Gap, where the GB is most fragile, just a few fields wide. It is those few fields the Council plans to build on, flatly contrary to GB policy, and the known wishes of the overwhelming majority of its electorate. If the Council gets away with this plan, it will also, again contrary to GB policy, cause the merger of Yarnton and Begbroke into Kidlington; expose Kidlington itself to being engulfed by the predatory City Council which has sought to subsume it for at least thirty years; and also, by declaring that proximity to Oxford is itself an exceptional reason to build on the GB which surrounds the City, fundamentally undermine its very purpose, risking opening the whole GB to development.</p>								
<p>Changes Sought</p> <p>In CPRE's view, it is not possible to 'tweak' the current document in order to make it sound and therefore the current version of the Plan should be rejected. CDC should re-visit the process, as and when the final numbers for Oxford have been examined, adopting higher densities and prioritising protection for the GB.</p>			<p>Reasons for Participation</p> <p>CPRE Oxfordshire represents a wide membership across the County, including many parish councils and local organisations, and seeks to influence development to protect and enhance the countryside. Comments

TRANSPORT - THE PROPOSED NEW STATION AT KIDLINGTON/BEGBROKE. The initial proposals for the development made great emphasis on the provision of a new railway station “between Kidlington & Begbroke”, the implication being that this station would cater for the needs of residents to reach their places of employment in Oxford and that therefore the housing plans are more sustainable. The relevant railway line is that from Oxford and the south to the midlands and north via Banbury. It is intensively used with half hourly cross-country trains and frequent freights including regular intermodal trains from and to Southampton docks. There is also a local service of 12 trains per day each way (9 on Saturdays, 3 on summer Sundays, none on winter Sundays) calling at the intermediate stations at Tackley, Heyford & Kings Sutton. North of Aynho Junction, as far as Banbury, these trains all have to interwork with the three trains per hour on the Chiltern Line to and from London Marylebone. There are presently no proposals for a new station on this line, nor are there likely to be. Neither Network Rail, Oxfordshire County Council nor any train operator has any aspiration for a station here. It does not feature on any relevant route study or strategic proposal. For example, we note that no such plans have been included in the Oxfordshire Infrastructure Strategy, signed off by the Oxfordshire Growth Board in September 2017, which claims to 'provide a view of emerging development and infrastructure requirements to support growth from 2016 to 2031 and beyond'. This includes a description of numerous rail improvement projects both pre and post 2031, as well as listing infrastructure priorities for the A40 Corridor, but gives no mention at all to a new station in this area. Journey time for the local trains is 30 minutes and they only just slot in between the other services; in other words, a train leaving Banbury soon after the previous southbound train only arrives in Oxford just before the next one. To add an extra stop on the route would make this pathing issue even more tricky. It would be possible to accelerate the journey time with electric trains which have better acceleration and deceleration rates and thus allow an extra stop in the same timetable but although the previous government did announce a scheme to electrify this railway as part of its “electric spine” in 2012, this has been deferred and there is at present no prospect of this happening. Great Western Railway (GWR) operate the local trains and they do have an aspiration to increase the frequency to a train every 90 minutes across the whole day but it is only an aspiration, not a timed commitment. Even that frequency is not really sufficient to attract substantial numbers of commuters to use rail on a daily basis. For that a half hourly service level is, these days, a basic requirement. The station at Oxford Parkway, opened in October 2015 and connected to Oxford station in December 2016 has in any case now become the railhead for Kidlington, swathes of north Oxford, Headington and surrounding villages. The rail industry as a whole is thus utterly unlikely to wish to commit to another new station “between Kidlington and Begbroke”.

Changes Sought

References to the station should be removed from the Plan as it is not deliverable within the lifetime of the Plan and therefore is not effective. Any element of development that is dependent on this station being delivered should be removed from the Plan as unsound. Plans for additional housing in north Oxford/south Kidlington should be put on hold until the Oxford to Cambridge Expressway route is settled, the East West railway is re-opened and the full extent of the expansion of Bicester is agreed, with its possible new transport infrastructure.

Reasons for Participation

CPRE Oxfordshire represents a wide membership across the County, including many parish councils and local organisations, and seeks to influence development to protect and enhance the countryside. We would like to attend the oral part of the Examination.

The NPPF states that one of its Core Planning Principles (para 17) is to take account of the different roles and character of different areas, promoting the vitality of our main urban areas, protecting the GBs around them, and noting (at para 79) that the fundamental aim of GB policy is to prevent urban sprawl by keeping land permanently open. Paragraph 83 states that once established, GB boundaries should only be altered in exceptional circumstances, through the preparation or review of the Local Plan. The recent Housing White Paper, clarifies what the steps before a finding of “exceptional circumstances” should be, when local authorities can demonstrate that they have fully examined all other reasonable options for meeting their identified housing requirements. Amongst these “reasonable options” which Local Authorities must demonstrate they have considered before there can be the “exceptional circumstances” required for review/release of GB land are: • making effective use of suitable brownfield sites and the opportunities offered by estate regeneration; • the potential offered by land which is currently underused, including surplus public sector land where appropriate; • optimising the proposed density of development; and • exploring whether other authorities can help to meet some of the identified development requirement. Although not yet law, the White Paper illustrates how high the hurdle for exceptional circumstances must be, given that the NPPF’s “fundamental aim is keeping GB land permanently open”, and the need to show there are no “reasonable options” before considering GB release.

Changes Sought

In CPRE's view, it is not possible to 'tweak' the current document in order to make it sound and therefore the current version of the Plan should be rejected. CDC should re-visit the process, as and when the final numbers for Oxford have been examined, adopting higher densities and prioritising protection for the GB.

Reasons for Participation

CPRE Oxfordshire represents a wide membership across the County, including many parish councils and local organisations, and seeks to influence development to protect and enhance the countryside. As one of the founders of the Oxford GB, we have considerable knowledge about its origins, purpose and ongoing relevance.

Comments

Strong disagreement with the assessment that “exceptional circumstances” exist. Twelve “circumstances” are listed. The final ten are not exceptional circumstances at all. Some of them might be described as “opportunities”, some of them are simply descriptions of how development might occur, and others are meaningless, for example “12.the ability to create a sustainable, holistic, joined up vision for the whole of the Oxford/Kidlington/A44 corridor area”. That statement certainly does not constitute an exceptional circumstance. Exceptional Circumstance 1 (urgent and pressing need for homes) is highly contentious. It is based on the assessment in the SHMA which has been heavily criticised and never validated. The proposed DCLG standardised methodology proposes a much lower level of need that takes account of affordability. Exceptional Circumstance 2 (clear inability of Oxford to meet its needs) is also unproven. Oxford’s needs have not been established through its own local plan process and neither has its ability to meet its own needs. It is clear that alternative development strategies could accommodate a significant number of additional dwellings within the city. The submission document in proposing to develop in the GB is in complete opposition to the purpose of the GB and contradicts Local Plan Pt 1. The main purpose of the Oxford GB, (Local Plan Part 1 para B256), is to limit the growth of Oxford to avoid damage to its character and heritage. Oxford City Council itself should have a part to play in this by restricting the growth of employment generating activities to the minimum necessary. This would have the double benefit of releasing some land for housing and reducing the demand for further housing. However its currently proposed policies do the opposite. We have made this point in our representations to the recent Options consultation on the Oxford Local Plan. Alternative development strategies – which have been successful in the past – are possible for Oxfordshire, and include the diversion of growth away from Oxford towards the country towns. Oxford City Council should play its part in this. We also think it would be possible for the Oxfordshire authorities to promote the diversion of some economic growth to other parts of the country which would welcome and benefit from it – possibly through formal ‘economic twinning’ arrangements.

Changes Sought

The plan should be withdrawn and a spatial strategy for Oxfordshire established which can address the issues addressed in this review in a co-ordinated and consistent way. Through such a strategy the Oxfordshire authorities should continue with their previous approach of actively encouraging further employment and housing growth away from Oxford. Oxford City Council and Cherwell in particular should co-operate more effectively and as part of this Oxford should (a) discourage further employment generating development in the city unless it is absolutely essential and (b) use some of the land it has currently allocated for employment, together with other previously developed land, for well planned high density housing.

Reasons for Participation

OGBN was established in 1997 to help to protect the Oxford GB and to support those wishing to resist proposals for inappropriate development within it. It comments regularly on planning applications in the GB and in planning policy consultations, particularly on matters affecting the GB. OGBN has made representations on all stages of the Cherwell Local Plan Part 1 and participated in the Public Examination in December 2014. We have also commented on earlier stages of this Partial Review. The membership of OGBN includes many of the Parish Councils whose areas include GB land. The OGBN fully supports the aims of GBs as set out in the NPPF and earlier planning guidance and in particular it strongly endorses the fundamental principle that GB is a permanent designation. We consider that our participation in the examination is necessary and justified because of our longstanding interest and understanding of the Oxford GB.
