Strong objection to all of the proposed development in the Oxford GB which “was designated to restrain development pressures which could damage the character of Oxford City and its heritage through increased activity, traffic and the outward sprawl of the urban area.” This quote is from paragraph B256 of Cherwell’s adopted Local Plan Part 1 and we fully support it. We also support Policy ESD14 in the Plan to maintain the Oxford GB. The Oxford GB supports all five purposes set out in the NPPF and has been largely successful over the last sixty years. In particular it seeks to protect the setting and character of the historic city of Oxford. The reference to the character of the City, as referred to in Cherwell’s Local Plan. is often overlooked but it is a crucial aim of GB policy. The historic city centre by its nature cannot be expanded or comprehensively redeveloped. It is already under substantial pressure and this is likely to become highly damaging if expansion on the edge of the city is not restricted. The City’s never-ending traffic problems are testimony to this, and there have been calls for even the number of buses in the centre to be limited. The GB also provides accessible open space, footpaths and other recreational opportunities for residents of the city and for the communities within it. It is well used and supported as public opinion surveys have shown. GB is intended to be a permanent designation only to be changed in exceptional circumstances (NPPF). We think that that the overall levels of growth proposed are unnecessarily high and that alternatives to development in the GB are available. We therefore consider that exceptional circumstances do not exist to justify development in the GB.

Changes Sought

The plan should be withdrawn and a spatial strategy for Oxfordshire established in a co-ordinated and consistent way. Through such a strategy the Oxfordshire authorities should continue with their previous approach of actively encouraging further employment and housing growth, at realistic levels, away from Oxford. Oxford City Council and Cherwell in particular should co-operate more effectively and as part of this Oxford should a) discourage further employment generating development in the city unless it is absolutely essential and b) use some of the land it has currently allocated for employment, together with other previously developed land, for well planned high density housing.

Reasons for Participation

OGBN was established in 1997 to help to protect the Oxford GB and to support those wishing to resist proposals for inappropriate development within it. It comments regularly on planning applications in the GB and in planning policy consultations, particularly on matters affecting the GB. OGBN has made representations on all stages of the Cherwell Local Plan Part 1 and participated in the Public Examination in December 2014. We have also commented on earlier stages of this Partial Review. The membership of OGBN includes many of the Parish Councils whose areas include GB land. The OGBN fully supports the aims of GBs as set out in the NPPF and earlier planning guidance and in particular it strongly endorses the fundamental principle that GB is a permanent designation. We consider that our participation in the examination is necessary and justified because of our longstanding interest and understanding of the Oxford GB.

Comments

We consider it to be a serious omission that at the options stage a question was not asked about the acceptability of development in the GB. This is probably the most important matter raised in this review. The plan may therefore be rendered procedurally noncompliant.

Changes Sought

The plan should be withdrawn and a spatial strategy for Oxfordshire established which can address the issues addressed in this review in a co-ordinated and consistent way. Through such a strategy the Oxfordshire authorities should continue with their previous approach of actively encouraging further employment and housing growth away from Oxford. Comments

This Plan is contrary to the NPPF which states in paragraph 14 that Local Plans should meet objectively assessed needs unless specific policies in the Framework indicate development – including land designated as GB - should be restricted. It is also contrary to the twelve core land use planning principles set out in Paragraph 17 of the NPPF one of which is that planning should take account of the different roles and character of different areas, promoting the vitality of our main urban areas and protecting the GBs around them. Furthermore, National Planning Practice Guidance makes clear that assessing need is just the first stage in developing a Local Plan and that once need has been assessed, the local planning authority should take account of any constraints such as GB, which indicate that development should be restricted and which may restrain the ability of an authority to meet its need. Cherwell has accepted (or, more accurately, been pressured to accept) the inflated figures of the Oxfordshire SHMA in full and has never followed this guidance to “take account of any constraints such as GB Which may restrain the ability of an authority to meet its need”. The proposed submission plan is therefore not consistent or compliant with national policy.

Changes Sought

The plan should be withdrawn and a spatial strategy for Oxfordshire established which can address the issues addressed in this review in a co-ordinated and consistent way. Through such a strategy the Oxfordshire authorities should continue with their previous approach of actively encouraging further employment and housing growth away from Oxford. <p>Comments</p> <p>We note that the plan calculates the loss of GB to be 3%. There is an implication here that the loss is relatively small and therefore acceptable. This is fallacious as is illustrated by the following example taken from a paper by Professor Dieter Helm, Chair of the Government's Independent Natural Capital Committee "Think about St James' Park in central London, set between Buckingham Palace at one end and Whitehall at the other. Suppose a developer comes along with a proposal; to build on a small plot on one corner of St James' Park. This developer might argue as follows. The marginal value of the patch of grass in a small corner is not that great. After all, all the rest is left. Better still, the developer might pay such an enormous price for the small bit of land that perhaps a hospital could be built elsewhere with the proceeds. The marginal value to the ultimate owner of this house is so great relative to the marginal value of the small corner of St James' Park that it makes marginal economic sense to build on it. There are two problems with this argument. The first is that the same marginal case can be made for the next small bit of St James' Park. Indeed the value to the developer is even higher now because the Park is now slightly smaller. And for the next bit, the argument just gets stronger. Carried to its limits there is a great marginal case for incrementally building all over St James' – and Hyde Park, and Regent's Park and indeed all the green spaces in London. That is indeed what would have happened if the market had been left to allocate the land as if St. James' was a private good. It is what would happen to the GB too. The second problem is that the reason why the land is so valuable is because it is not surrounded by other houses in close proximity. The very rich person who buys this house on the corner of St James' is paying so much because others are not able to do so, and because it is St James'. We cannot all have green spaces around our houses – green space is in fixed supply. Carry both of these arguments across to the GB. Each marginal bit has a marginal economic case for developing it, and as each bit is chipped away, the value of the whole public good – the GB system – diminishes. The core point here is that the marginal case if carried through to its logical conclusion leads to no GB – there is a good marginal case for building on each and every marginal bit of land, as there is for building on each and every bit of St James' Park." The loss of a small proportion of GB therefore increases the likelihood of further loss. GB should be considered as an entity or system not as a collection of individual land parcels. This is a further reason why we fully endorse Government Policy (NPPF para 79) that GB is a permanent designation.</p>

<p>Comments</p> <p>Believes the proposed submission to be unsound, not properly prepared, not justified and not effective. Plans to build low density houses on the site currently occupied by the NOGC are not justified. The golf course is an important recreational, environmental and social facility. There are over 500 members of all ages whose lives will be adversely affected by the loss of the Golf Club. It cannot be relocated easily as it takes many years to establish a golf course. The housing density proposed for this land will simply attract wealthy people from London with an easy commute from the nearby station. There will be no benefit to the current housing needs. The idea of destroying an established facility to relocate it 500 yards away is ridiculous.</p>

<p>Comments</p> <p>Member of North Oxford Golf Club for in excess of 40 years. This well established and well maintained area has been a source of recreation for over 110 years. Appreciate that housing has to be found or built to accommodate the increased population, but does not feel it should be in a position that has supplied the present generation so much pleasure, not only in fitness but a much-needed barrier between the city and county. Fail to see the argument of relocating the course to the eastern side of the Banbury Road. It is not only the cost, (which I understand will be in the region of 12 million pounds) but however cleverly it is designed, it will not have the character of an established look as we have with the present course. Wonder if this is a first step in making Oxford, Kidlington, Yarnton and Begbroke into one large super city, which I for one, together with many fellow home owners, do not want. This to me, is a financial bullying tactic to find the easiest solution to the housing problem with no thought for the pleasant, near countryside area, that the present and local population has come to expect and love.</p>

<p>Comments</p> <p>PR8 Key Delivery Requirements, Para 1 gives housing density figure of 45/hectare. Policy PR9 Key Delivery Requirements: Para 1 gives a housing density of 35/hectare. This is significantly greater than any development in either Yarnton or Begbroke and is out of charter with the rural nature of the area. It's disappointing if not illogical that the area closest to Oxford City seen as Policy PR6b is given an average dwelling density of just 25/hectare.</p>

Proposals for additional housing between Cutteslowe Park and Oxford Parkway and on the site of the present North Oxford Golf Club are ill conceived taking areas of green land ; destroying natural habitats for wild life - flora & fauna ; creating further congestion on already excessively busy roads , especially Banbury Road, Five Mile Drive , Sunderland Avenue and Elsfield Way (already being affected by the traffic control off the new Barton development) and should be abandoned.

North Oxford Golf Club - Association with this club for over 40 years. Appreciation for camaraderie and social events. Now organising a monthly lunch for older members and their partners, for many of whom this is the only cooked meal of the day. The club is a meeting point for elderly residents from Oxford/Kidlington and beyond. A place to find peace and tranquillity despite the road/rail networks. Many varieties of trees and wildlife associated with GB attracting all age groups. Surely there are plenty of other areas in Cherwell (including Frieze Farm) that housing could be established. Lack of thought about this and areas like Banbury and Bicester to the congestion new houses cause with regard to lack of roads, shops, schools and hospitals. New houses EVEN IF AFFORDABLE mean new babies, children and cars to overload maternity units (Horton already reduced to overload the JR) and schools. Roads and parking already congested. These points make infringement of GB Government policy ludicrous, together with National Planning Framework, para 74 under health, which states that sports facilities should not be built on. The club is well used by members and visitors providing much benefit to both mental and physical health. The function room is available for Pilates and private parties. GB with trees and shrubs helps reduce pollution in the surrounding area. Is this club which has been established for over 110 years, providing an essential service to the community, now to be wasted with its fate due to be lack of consideration by local authorities.

I have been a member of NOGC for a considerable number of years and object strongly to the proposal that the facility be used for housing development. In addition to the GB issues which in themselves are vitally important in that area of Oxford, NOGC is a thriving club with some 475 members and 3000 visitors every year. The provision of recreational facilities to ensure the mental and physical benefits for people are vitally important in an age when health issues and sedentary lifestyles are a major problem in this country. NOGC provides a facility for all age groups that satisfies both the recreational and social needs of a large number of people. On this issue alone it would be a travesty to witness the demise of the golf club and I would urge the Council members to reject the proposal to use the land currently occupied by NOGC for housing development.

Resident of Oxford well aware of flooding issues in low lying Oxford. Four major flooding occurrences since the mid nineties. Two main routes into the city have had to be closed on those occasions, with much damage to trade and industry, property and roads as well as massive queues on the two other main routes into Oxford. It will be more likely that this pattern will continue. New development is built on hard standing concrete often on sites with raised ground levels. Water runs off these areas to find the lowest level which causes more flooding in other local areas. North Oxford Golf Course regularly floods as much of it is low lying. Should building be permitted there new houses would be at risk of flooding, as well as the surrounding area. This is against government policy which is to reduce risk of flooding. Oxford is also low down on the league tables for air quality. To reduce the green grass and trees would worsen this going against government policy. The golf course helps act as a lung for the city. The golf course provides a place for sport for many people improving health in the general public - to close the course goes against this government policy. The golf course is an asset to the city. There is an exciting new building project underway in the city centre but surely we need to maintain our city facilities other than shopping, eating, etc. Plans to build on the golf course should be rejected.

Exceptional circumstances have been demonstrated to justify the release of sites from the GB, including sites for housing to help meet Oxford City's unmet housing need. It is clear from the evidence base for Cherwell's proposed submission plan and from the Oxfordshire Growth Board evidence base that the release of sites from the GB is necessary to deliver the scale of housing required in a sustainable manner. However, there is a need to make efficient use of land released from the GB for housing purposes. Some of the proposed densities on sites released from the GB do not appear to make efficient use of this land despite their close proximity to Oxford and to sustainable transport infrastructure and services. By increasing the density on some of the GB sites and by developing the site covered by Policy PR3a Cherwell DC would achieve their target of meeting Oxford City's unmet housing need without requiring development at Woodstock South East (Policy PR10).

1632	<p>Comments</p> <p>Over-development and over allocation of dwellings to one Parish - Gosford and Water Eaton. This parish currently has 676 dwellings. Adding 1410 houses into Gosford and Water Eaton, increases the number of homes by 208% to 2083. The proposal increases the Parish housing by two thirds of its current size. 32% of all the new houses have been allocated to Gosford and Water Eaton. If there have to be more houses here then a 25% increase is acceptable (under 200). A recreational facility (golf course) is being removed from the GB to make way for housing. Not only is GB being destroyed, the community is losing an established 110 year old recreational facility.</p>

1658	<p>Comments</p> <p>Strong objection to building in the Kidlington gap. This is the narrowest and most vulnerable part of the GB and will mean that Oxford City and Kidlington become joined. The site PR6b is currently occupied by North Oxford Golf Club which is a recreational and social facility for over 500 local people of all ages. It has been in existence for over 110 years and is a beautiful piece of green land enhancing the environmental quality of the area. Why remove this which is contributing to the health and well being of so many people, to replace it with low density houses that will be of no value in helping resolve the housing problems? It will become a perfect place for people to live and commute to London attracting more wealthy people who make no contribution to the City. These proposed developments are not providing affordable housing. This development is being led by the University Colleges who own the land to swell their coffers rather than being a rational planning choice. If a golf course is to be sacrificed then why not the one in the City rather than destroying the GB? It is also completely irrational and unsound to propose to build a new course at Frieze Farm a few hundred metres away. Frieze Farm could be considered for housing instead. Golf courses cannot be made overnight and it would be years before a new course could be established. I object to the way in which the University and its Colleges together with unscrupulous developers are ruining the City and being allowed to control developments. The Council should look after the well being of people living in the City and its surroundings. This plan is completely ineffective and not consistent with National Policy. It is disgraceful.</p>

1670	<p>Comments</p> <p>Oxford City Council is happy to retain the 'green' space in Headington that is the 'Southfield' course, it is apparently very happy to see 'North Oxford' destroyed. • This triangle of land precisely matches all the purposes of the GB set out in the Government's National Planning Policy Framework. • In separating Kidlington from Oxford, it is almost certainly the most important piece of the most critical part of the whole GB. It is especially critical for supporting the purposes of GB in preventing the merging of communities with subsequent urban sprawl and loss of identity. • It is a carefully laid out and attractive landscape with more than 25 different tree species. It supports a variety of wildlife, providing for up to 55 regularly recorded different bird species - and pond life which includes sighting of the Great Crested Newt. It is a vital living green lung to counteract pollution in an area of considerable traffic and transport impact. • Critically, the National Planning Framework (para 74 under 'Health') says that sports facilities should not be built on unless equivalent or greater provision is made elsewhere. It is a thriving club and, importantly, open to all. There are 475 members, most of whom play regularly; additionally, around 3,000 visitors play here every year – there are similar numbers who visit the club for social and other (including e.g., Pilates) purposes. Take away this Club, and you remove from all age groups the health benefits - mental and physical. This directly contradicts all that the Government have been saying about the importance of recreation in the National Planning Policy Framework. Founded in 1907, the Club is now 110 years old. It is unlikely that the site will do much if anything for perceived Oxford housing need. Indeed the Review states in terms that because the course is a nice area, densities should be half those (already low) proposed for the rest of the Review proposals. Almost certainly a century old course would be lost simply to provide commuter houses to Marylebone. It seems from my reading of the Partial Review, that at a late stage Cherwell planners discovered that they hadn't taken account of Para 74 – and a hasty proposal to relocate the course to Frieze Farm was added in. A pointless removal of a 100 year old course across a road. The site is smaller than North Oxford's and could not accommodate an 18 hole course. There are pylons overhead. In any event there is little prospect of Exeter College making it available; indeed it has hired consultants to propose housing on it.</p>

1683	<p>Comments</p> <p>Whilst not a golfer can appreciate that the land has ancient trees with public access. Why on earth are you seeking to move this – why not put the new builds at Frieze Farm? Do understand from a public meeting that whilst Frieze Farm was on the books as possible development a private deal has already been made – and it does not include affordable housing. The density proposed at the site is low at 25 dwellings per hectare, in order to preserve the trees and woodland currently on the site. On this basis I am sceptical about the viability of delivering 50% affordable housing on the sites and developers are likely to argue for this proportion to be reduced and/or for significant reduction in the vegetation on the site. Both of which would be unacceptable outcomes. You discuss the need to add in community features for the local community however. This feels like an excuse for additional building - we live very close to our neighbours in Kidlington and use those resources. Additional resource on this scale would also cause problems with parking. Additional medical resources are very welcome but given the County's approach to current health centres I do not trust your stance e.g. The Horton.</p>

1695	<p>Comments</p> <p>Government has recently proposed that the way in which housing needs are calculated is to be changed. Examination of Cherwell's proposals should be suspended until Oxford's housing needs are known and fully established. Initial results show that it determines a much lower requirement. The golf course has been there for many years and is well used. It has an active membership and its loss would be missed. The club has no wish to move and has no resources to create a new course on the land at Frieze Farm. Development of land on PR6a and PR6b would cause the coalescence of Oxford with Kidlington, something that has been consistently resisted for several decades. The additional traffic generated would exacerbate the already dreadful traffic congestion and air pollution in the area. Exeter College, owners of Frieze Farm has put forward a representation showing how the land could be used to create a discrete and sustainable village community which would not cause the coalescence of Oxford and Kidlington. If GB has to be built on, why not on Frieze Farm?</p>

5445	<p>Comments</p> <p>Object to policies PR3, (The Oxford Green Belt), PR6a (Land East of Oxford Road) and PR6b (Land West of Oxford Road). • Believes these proposals are not consistent with National Policy because they do not take into account the detrimental effect that removing these large areas of Green Belt will have. These proposals therefore fail to meet the test of soundness as defined in paragraph 182 of the NPPF. (National Planning Policy Framework) • Oxford’s Local Plan has not yet been prepared so Cherwell’s allocation of homes is premature and is not an appropriate strategy and is unjustified. Further comments regarding the Green Belt: • Its purpose aims at preventing urban sprawl• If Green Belt boundaries are re-defined, the way to define those using physical features would need to be readily recognisable and permanent. This is not the case on the area to the east of the A4165 (Oxford Road) because there are no such features and therefore no eastern boundary. There is a high risk to lead to unrestricted sprawl of large built up areas – which is contrary to the Green Belt purpose. Further comments regarding housing needs: The proposal is focussing on being close to the Parkway Station; this is unlikely to fill the need to have affordable housing. The developers are likely to have to pay a premium because of its location. It is clear that these new homes are likely to be purchased by London commuters due to the proximity of the station.</p>

PR-C-0720	07/10/2017	Adrian	Sutton		
1810	<p>Comments</p> <p>The Government has published a consultation document Planning for the right homes in the rightplaces. This document sets out Government proposals to assess housing needs in differentareas of the country. It has been welcomed by many professionals who regarded the earlierSHMA estimates as overblown and unjustified. Rep quotes Helen Marshall of CPRE as saying that the housing needs in Oxford had beenreduced in the new estimates by no less than 47%. For more than 60 years the Green Belt thatforms the Kidlington Gap has successfully checked urban sprawl, and it has prevented themerging of Oxford and Kidlington, provided access to countryside to residents of northOxford and Kidlington, and preserved the setting of the historic town of Oxford. In view ofthe new assessment of housing need in Oxford, and the lack of a completed local plan byOxford City Council informed by accurate data on the land available for housing withinOxford, it would be irresponsible and reckless for Cherwell District Council to proceed withits plans to build on the Kidlington Gap. The above Government consultation document also notes that the pressure on housing ismuch greater in London, and is set to increase further over the next decade. Given that theproposed housing in PR6a and PR6b is approximately 10 minutes walk from Oxford Parkwaystation it is obvious that those sites east and west of Oxford Road (A4165) will be veryattractive for London commuters. It is hard to imagine how key workers in Oxford in need ofaffordable housing will be able to compete with the market pressure of London commutersfor this housing. The proposed housing density on the golf course is only 25 per hectare, andit is highly unlikely that any of it will be affordable to those who need cheaper housing inOxford.One of the greatest attractions for families living in north Oxford is the wide range ofavailable secondary schools. If 1,180 new households were built on either side of Oxford Road there would be even more car journeys to schools inside the Ring Road to prolong thecommute into Oxford. Following a Freedom of Information request Oxford City Council hasadmitted recently that the new road layout and traffic lights at Cutteslowe roundabout havenot improved traffic flow along Banbury Road. This continues to be an area of severe trafficcongestion during school term, and the proposed housing can only make it worse. The onlygood transport link is from Oxford Parkway station, but even there the huge station car parkis already filled by London commuters during week-days, less than 2 years since the stationopened.We understand that Cherwell District Council have been obliged by the “Duty to Cooperate”with Oxford City Council to solve Oxford’s perceived housing problems. But Oxford CityCouncil has chosen to allocate land to employment at the Northern Gateway developmentinstead of housing. Further employment growth is unnecessary and unsustainable in an areaof full employment and a shortage of housing. It only exacerbates the housing problem, andleads to even more people commuting into Oxford. Rather than helping Oxford City Councilin this way Cherwell District Council should challenge the lack of thinking displayed by theCity Council.We recognize that Oxford has a housing problem, especially for key workers. But building onthe Kidlington Gap is unjustified by the information available, and by Oxford City Council’sown policies to develop land for employment rather than housing. Once the Green Belt hasgone it has gone forever, and it is difficult to see how further urban sprawl to the east ofOxford Road could be contained since the nearest road is the B4027, which is several miles tothe east (National Policy Planning Framework, paragraph 85).We urge Cherwell District Council to postpone any decision on the development of the GreenBelt around Oxford until all the facts are made available.</p>

PR-C-0728		Denis	Roger		
1838	<p>Comments</p> <p>To lose the area of the Golf course is surely detrimental to the area. The course not only caters for Oxford people but attract many visitors thus boosting the local economy. It should be noted that to build and open a new course (if were ever to happen) can take several years and those using present amenities would have to travel elsewhere. Whether they would ever return is questionable.</p>

Proposed Submission Plan - Policy PR6b - Land West of Oxford Road

PR-C-0758	10/10/2017	Susan	Cooper		Yes	Yes		No
1907	<p>Comments</p> <p>Can see the appeal of putting the new school next to Cutteslowe Park, but is concerned about access to it causing a lot of traffic through residential areas. Some measures are needed to prevent this, although unsure what to suggest as a solution.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							

PR-C-0758	10/10/2017	Susan	Cooper		Yes	Yes		No
1906	<p>Comments</p> <p>The lower density specified in 5.83 would not make good use of the sacrificed Green Belt land. The Green Belt is supposed to prevent urban sprawl so it should be used effectively to provide a high density of housing. The desired aim of preserving some of the green features of the golf course landscape can be achieved while still providing a high density by putting compact 4-story blocks of flats in such parts with parking in the basement, leaving pleasant green spaces in between blocks to make living in the flats attractive to buyers and renters. Parts of the plot with fewer attractions to preserve could be used for houses at the same density as in PR6a.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							

PR-C-0766	10/10/2017	Haidrun	Breith	Berks, Bucks & Oxon Wildlife Trust				Y
1941	<p>Comments</p> <p>PR6b - Land West of Oxford Road. Many of the general comments provided above and under PR6a apply. The requirement for long-term management appears to be missing from the policy and should be added. Welcome that mature tree cover on site is taken into account in the proposed density calculation. Considering that the site is located next to another allocation PR6a we wonder whether the sites should be considered in combination rather than in isolation. The map is unspecific about the land to the east of the site but policy PR6a allocates the adjoining site for development. This is misleading and the map should be revised accordingly.</p> <p>Changes Sought</p> <p>Reasons for Participation</p> <p>Potential biodiversity impacts as outlined in the representation.</p>							

PR-C-0773	10/10/2017	Philip	Rawle	Greenlight Developments	Y	Y	N	Y
1951	<p>Comments</p> <p>Does not consider the Partial Review of Cherwell Local Plan to pass the 'tests' of soundness, in terms of being positively prepared, justified, effective and consistent with National policy. This is because the Partial Review does not make reference to the need for C2 units (residential institutions, including care homes), nor to care/nursing homes more generally. Policy PR2 deals with C3 uses only. Further limitations on current local planning policies (adopted and emerging) are outlined in the accompanying Note prepared by Lichfield's. In terms of National policy, the Government's National Planning Practice web-based resource in the section on 'Housing and economic development needs assessments' provides guidance to the plan-making process on how to deal with 'housing for older people'. Failure of the Partial Review to meet the care needs of the District will clearly have significant implications on housing options for Cherwell's increasingly ageing population. The accompanying Note prepared by Lichfield's quantifies that like the rest of the UK there is a clear need for care homes in Cherwell. Examples are found in the Oxfordshire SHMA, which projects the number of people with dementia and mobility issues in Cherwell and Oxfordshire will roughly double by 2031 (end of this Plan period). The latest DCLG figures project the number of people in Cherwell living in communal establishments to double by 2031. The Lichfield's' Note sets out the care need for Cherwell as follows: • In Cherwell District itself, the latest DCLG projections show growth in the number of people over age 75 living in communal establishments of 565, i.e. this is the number of care home bed spaces needed (2011 – 2031). However, as the Council are planning for housing growth well in excess of demographic trends, which will lead the population growth in excess of demographic trends, 565 bed spaces should be considered a minimum to plan for up to 2031. • In terms of Oxford City's need, the DCLG projections suggest a need for a further 305 bed spaces by 2031, and (as with its housing need) a proportion of this may well go unmet. Cherwell will inevitably import some of Oxford's care home needs, as those additional residents (who otherwise would have lived in Oxford) age and move into care homes. This further justifies the use of the 565 figure for Cherwell as a minimum, which may need to be increased if unmet care home need for Oxford is identified. Lichfield's' Note on Care Home Need provided.</p> <p>Changes Sought</p> <p>Reasons for Participation</p> <p>Greenlight asserts that it in order for this clear 'need' for care bed spaces to be met in Cherwell over the Plan period, specific policies are required to:(a) Set the delivery of this need over the Plan period as a requirement - this requirement being a minimum of 565 bed spaces by 2031; and(b) To identify and allocate sites to accommodate this need in the Plan and on the Policies Map.To this end, Greenlights' land interest at Skimmingdish Lane, Bicester, which is currently subject to planning application 17/01428/F, provides an opportune site to be allocated for a 64-bed care home; thus accommodating some 11.3% of the bed space requirement (based on a total requirement of 565 bed spaces) over the Plan period (by 2031).To demonstrate how the site at Skimmingdish Lane, Bicester can accommodate a 64-bed care home, and therefore to assist in informing its allocation as a care home site in the Plan, enclosed with this letter is the site location plan and proposed site layout plan, both of which form part of the current planning application on the site.</p> <p>The matters raised in these representations are of a strategic nature to the plan.</p>							

PR-C-0775	10/10/2017	Jon	Alsop	Savills on behalf of Christ Church, Exeter & Merton Colleges and Oxford University				Y
1958	<p>Comments</p> <p>In addition to its interests in sites PR6a and PPR6b, the University of Oxford and Merton College also have landownership interests in the following sites: • PR3c:land north of Oxford Service Area. • PR8: land East of the A44 at Begbroke/Yarnton. • PR9: land West of the A44 at Yarnton.</p> <p>Given their shared interest across these sites, there has been careful co-ordination between the landowners and their advisory teams in the preparation of these representations and specifically comments in relation to these sites. In addition, the teams advising the landowners have met in order to start to formulate a co-ordinated approach to the sites in relation to common themes (e.g. transport) and in terms of planning phase and subsequent implementation. These parties will continue to work together on areas where their interests are aligned with the aim of achieving a comprehensive and co-ordinated approach to the delivery of these sites and the strategy for the A44 corridor overall.</p> <p>Changes Sought</p> <p>Reasons for Participation</p> <p>On behalf of the consortium, given the significance of their land interests, would wish to participate in the oral examination.</p>							

Proposed Submission Plan - Policy PR6b - Land West of Oxford Road

PR-C-0775 1964	10/10/2017	Jon	Alsop	Savills on behalf of Christ Church, Exeter & Merton Colleges and Oxford University				Y
<p>Comments</p> <p>Support with amendments. The consortium is strongly supportive of the proposed policies to develop a new North Oxford neighbourhood either side of the A4165 Oxford Road, with direct access to central Oxford and Summertown, to employment opportunities, including at Northern Gateway, and to services and facilities nearby including public transport hubs. The policy supporting text highlights that in this location sustainable travel choices can be strongly encouraged and car use for local journeys discouraged. Whilst the proposals here would involve the loss of agricultural land and realignment of the GB boundary, and give rise to other localised impacts on environmental assets, the consortium agrees with the Council that the proposals would represent the most sustainable opportunity to create a new gateway neighbourhood, and that the impacts are capable of being mitigated as well as being substantially outweighed by the benefits. The opportunities exist to consolidate this urban edge, integrate the area with the existing north Oxford communities, and develop a highly sustainable neighbourhood that will achieve social, environmental and economic benefits in line with NPPF, paragraph 7. Detailed comments provided on affordable housing, housing numbers density and local services contributions, development brief and location of key facilities.</p>								
Changes Sought				Reasons for Participation				
Overarching strong support however suggested changes have been provided on affordable housing, housing numbers density and local services contributions, development brief and location of key facilities.				On behalf of the consortium, given the significance of their land interests, we would wish to participate in the oral examination.				
PR-C-0778 5465	10/10/2017	Sarah	Knox-Brown	Begbroke & Yarnton Green Belt Campaign			N	N
<p>Comments</p> <p>Begbroke & Yarnton Green Belt Campaign's (BYG) main concern is that they believe there is no proper justification for altering the Green Belt boundaries from where they currently stand. On a local level, they particularly object to the removal of the land described as PR8 and PR9 from the Green Belt due to the significant detrimental impact of that removal on the villages and villagers of Begbroke and Yarnton. They also object to the removal of land described as PR6a, PR6b, PR7a and PR7b from the Green Belt due to the importance of these sites in maintaining the gap between the villages of Begbroke, Yarnton and Kidlington to Oxford City and to the land described as PR10, a green field site due to the impact its development will have on the adjacent A44 corridor. Instructed Bruce Bamber, a transport consultant, to prepare a report on the transport implications of the allocation of sites PR8 and PR9 for housing purposes. Although his technical review has focused on these areas, the broader methodology to identify potential development locations has also been assessed for its soundness. The report has been provided as Appendix B. Key conclusions from the report includes: the Sustainability Appraisal Report was published before the Transport Assessment and therefore cannot properly take into account the transport impact of development options. The SAR fails to report the adverse traffic congestion impact from the proposed development around Begbroke and Yarnton and is therefore flawed. Transport evidence base and the associated environmental assessment work is fundamentally unsound and cannot be relied upon. A number of legal issues are raised in Appendix A with a detailed summary provided. If the Council proceeds as planned, we consider the Inspector will find the Plan unsound due to inadequacy of evidence base and failure to ensure effective consultation and participation by the public.</p>

PR-C-0779 1982	10/10/2017	Graham	Jones	Summertown and Wolvercote Conservatives				N
<p>Comments</p> <p>This area of land has been a golf course for since 1907 and is still popular and used by several generations to participate in a healthy and outdoor sport. The course has many mature and significant trees and is used by a wide range of wildlife. To relocate this would not only be very destructive to the current site but it would take a very long time to develop a similar course. Surely, the new course would have to be completed first before the existing one was removed to allow for continuity. This would make this proposal unviable.</p>								
Changes Sought				Reasons for Participation				
PR-C-0779 5467	10/10/2017	Graham	Jones	Summertown and Wolvercote Conservatives				N
<p>Comments</p> <p>Whilst it is challenging to help solve Oxford's housing problem, there are better ways to do this than those proposed in Policies PR6a and PR6b. There are already agreed plans for homes in the Wolvercote Ward (500 Northern Gateway, 190 mill site, Lower Wolvercote and 17 at Elsfield Hall). In addition there are a number of brownfield sites that can be developed for housing in the city. This with the recently revised and lower Government housing needs figure for Oxfordshire and Oxford, in particular, mean only the most appropriate sites for housing should be considered. These two policies use GB land, which our forebears had the wisdom to set up to prevent urban sprawl, to prevent urban conurbations from joining up and to ensure that those living in an urban environment have some open space and countryside within a reasonable distance. The National Planning Framework makes this quite clear. The proposal to effectively close the "Kidlington Gap" so that Kidlington is divided from Oxford but not much more than the A34 and the railway to Bicester means that Kidlington will be as joined up to Oxford as Blackbird Leys. There are other sites that are not in the GB that would be better suited. The proposal to put housing on both sides of the Banbury Road, next to the Oxford Parkway Station, will be of great appeal to London commuters and will not readily ease the housing needs of local people. The road system, in spite of lengthy and expensive works carried out on the Cutteslowe and Wolvercote Roundabouts, is barely coping with the current traffic. The situation will deteriorate when the Northern Gateway employment and housing site is developed. Further development in such close proximity for up to another 1,080 homes, with additional entry points on to the Banbury Road, will further exacerbate the problem to the extent that there will be unacceptable levels of pollution and congestion. Understand the need for more housing but believe there are other solutions. Do not agree that the proposals are consistent with national policy and that the need of housing is sufficiently exceptional to allow for the ripping up of the GB and, by doing so, enabling the joining of Kidlington to Oxford. Do not consider that sound, justified or effective.</p>

PR-C-0799 5476	10/10/2017	Steven	Sensecall	Carter Jonas on behalf of Sheehan Group of Companies			N	Y
<p>Comments</p> <p>This submission relates to land at and adjacent to Knightsbridge Farm, Yarnton, and which is located on the south-east edge of Yarnton and immediately to the south-east of the Begbroke Policy PR8 - Land East of the A44 Proposed Urban Neighbourhood. The land is owned by the Sheehan Group of Companies and Cappagh and is previously developed land comprising a redundant sewerage treatment works, a haulage depot and storage land and a concrete batching plant. The land extends in all to some 13 hectares and is outlined in red on the attached plan. This submission should be read alongside and is put forward as an alternative to a separate submission made by Planning Consultant, Suzi Coyne, who has argued that, consistent with the existing use of the Sheehan land, the site as a whole should be allocated for employment land for B2 and B8 uses. Development at and adjacent to Knightsbridge Farm would be a logical addition to the Begbroke Urban Neighbourhood or the existing built up area of Yarnton and would assist further in meeting Oxford's unmet housing need. It is also less sensitive in GB terms than, for example, proposed allocations PR6a and PR6b both of which (a) cause a material diminution in the gap between Oxford and Kidlington (contrary to the GB purpose of preventing neighbouring towns from merging in to one another) and (b) seriously undermine the requirement to preserve the setting and special character of Oxford, central to which is its green backdrop. Key attributes for the land at and adjacent to Knightsbridge Farm listed.</p>								
Changes Sought				Reasons for Participation				
Remove the land at and adjacent to Knightsbridge Farm from the GB. Amend the boundary of the Begbroke Urban Neighbourhood (Policy PR8) so as to include the land at and adjacent to Knightsbridge Farm in the allocated site for residential development or a mix of residential and other uses.				As drafted, and in so far as it relates to the land at and adjacent to Knightsbridge Farm, the Plan has not been positively prepared, is not justified and is not effective. This goes to its soundness and raises issues that should be explored fully at the oral part of the Examination.

PR-C-0813 2208	08/10/2017	Jennifer	Betts					N
<p>Comments</p> <p>Objection to the allocation of PR6a and PR6b: Both sites are important parts of the Green Belt separating Oxford from Kidlington allowing both to retain their identity. The closure of this gap by building on the Green Belt will leave a small gap of about half a kilometre so it would effectively be joining Oxford to Kidlington to become an urban extension of Oxford. This part of the Green Belt has high landscape value providing a clear divide of rural land between Oxford and Kidlington. There is no evidence that this land should be released from the Green Belt on exceptional circumstances as studies have shown this land to be of high importance to the integrity and function of the Green Belt. The land occupied by the Golf Club serves a contribution to the Green Belt both is its landscape function and as a recreational activity. The plan proposes a low density of 25/Ha, which is unlikely to be attractive to accommodate 50% affordable housing. In addition the balance of the site is likely to be attractive to Commuters from London who will pay high prices for large expensive houses. This site would clearly never meet the objectives of providing houses that are reasonably priced for workers in Oxford.</p>

PR-C-0817	10/10/2017	G	Davies						N
5666	<p>Comments</p> <p>Loss of Cherwell District Local Amenities - The development of North Oxford Golf Club and adjacent land on the opposite side of the Banbury Road will only result in multimillion pound houses for Oxford and London commuters. The impractical alternative proposed site at Frieze Farm is smaller, flat featureless agricultural land and within a mile of the current North Oxford Golf Club; who will pay for it to be moved to an unviable site? A new golf course requires a significant investment and take years to develop to an acceptable condition. Why can this alternative site not be considered for housing? Has the Oxford Golf Course been scheduled for development to meet Oxford city's housing needs, if not why not? Its acreage is significantly larger than North Oxford Golf Club and not within the Green Belt area.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>								
PR-C-0821	09/10/2017	Caroline	Johnson			Y	Y	N	N
2241	<p>Comments</p> <p>The proposal to take land between Oxford and Kidlington is wrong because of its impact on the Green Belt and the loss of the Kidlington Gap. If this proposal is accepted there will be urban sprawl, the neighbouring towns of Oxford and Kidlington will merge with one another, there will be encroach+U1ment on the countryside, the setting and special character of he historic town of Oxford will be adversely affected, there will be no assistance to urban regeneration. The proposal is not in line with National Planning Policy as they do not take account of the adverse effects of removing this land from the Green Belt. These issues are also discussed in my response to PR3. Have specific concerns about the proposal PR6b. The proposals are predicated on meeting Oxford's unmet housing need yet the density of housing proposed for this site is extremely low and it is clear that these will be executive homes. It is reasonable to assume that a large proportion will be purchased by people moving from London and then using the train service to go to work. Thus they will make no contribution to meeting the unmet housing need. Cherwell's proposal for PR6b the current North Oxford Golf Course is bizarre. The suggestion that houses should be built on the Golf Course and that a golf course should then be built on nearby land at Frieze Farm is nonsensical particularly as the owner of the land for the new golf course does not wish it to be used for this purpose and was not consulted. In addition the land is unsuited to use as a golf course but could be suited to use for housing if use of the Green Belt should prove to be essential following proper consideration of the Oxford unmet housing need and consequently Cherwell's proposals.The proposal to develop PR6b is contrary to the purposes of the Green Belt. It is unjustified and unsustainable.</p> <p>Changes Sought</p> <p>Reasons for Participation</p> <p>The process should be restarted once the Oxford Local Plan has been completed and thus when any unmet housing need of Oxford is known. When Cherwell does this it should correct the errors made in this process and take account of the importance of the Green Belt and provide solutions which do not impact the Green Belt.</p>								
PR-C-0822	09/10/2017	Iain	Johnson			Y	Y	N	N
2248	<p>Comments</p> <p>PR6b is another low density housing proposal. If the plan really cared about housing people who need to live near and work in Oxford, the density would be higher and there would be more attention to mass transport and cycle pathways to remove the number of cars . All PR6b does is build more large houses near Oxford Parkway railway station to allow London commuters to live in Oxford. No doubt they will drive their children to the city's collection of independent and highly rated state schools before commuting to London. The setting and the existing schools 2 miles away are a expensive housing developers dream. A far cry from housing Oxford's "unmet housing need". PR6B is a golf course. The plan suggests moving the golf course to Frieze farm . The owner of Frieze farm doesn't want it to be a golf course and has not been asked to have any input into the plan! If development must happen (and that is contested in my answer to 1 and 3) then build the houses on Frieze farm and leave the golf course where it is. Common sense seems to have been sliced into the rough where decisions over PR6B are concerned. Once again this plan opposes the purpose of the Green Belt . Green belt exists to ... Prevent urban sprawl, prevent neighbourhoods merging into one another, safeguard the countryside from encroachment, preserve the setting of historic towns and assist in urban generation. This plan for PR6B achieves none of these and should be discarded.</p> <p>Changes Sought</p> <p>Reasons for Participation</p> <p>housing need and not just the desire of the city council, and Cherwell, to meet a figure they have made up based on discredited calculations. The local plan should also recognise the importance of the Green Belt. The Green belt isn't an inconvenient anachronism to be discarded. It is essential to the wellbeing of the citizens of Oxford and surrounding towns and villages. It is evident that the UK government values its green belt more than this local plan does ... The Government national planning policy framework states that the Green belt exists to prevent urban sprawl, prevent neighbouring towns merging, safeguard countryside from encroachment, preserve setting and character of historic towns (such as Oxford!) and assist in urban regeneration (by forcing entities such as the Oxford city Council, the University and its colleges to consider land in the city for housing not more unnecessary jobs).</p>

Proposed Submission Plan - Policy PR6b - Land West of Oxford Road

PR-C-0832 10/10/2017 David Flavin Oxfordshire County Council

5042

Comments

North Oxford development sites (Policy PR6a East of Oxford Road, 650 homes and Policy PR6b West of Oxford Road, 530 homes) would be expected in combination to generate approximately 360 primary pupils. This would require a 2 form entry (420 place) primary school, which would be expected to have some space to accommodate children from other growth areas as well. A 2.2ha site is therefore required for a new 2 form entry primary school within this site.

Changes Sought

Policy PR6a currently requires “provision of a primary school with at least three forms of entry on 3.2 hectares of land”. This requirement can be reduced as above and should state “provision of a primary school with two forms of entry on 2.2 hectares of land”.

Proposed changes suggested.

Changes Sought

a. The main pedestrian/cycle link towards Northern Gateway needs to be identified. b. The development needs to secure an adequate crossing point (preferably for cycles) rather than just a path up to the footbridge. c. Vehicular access points – there needs to be two and they need to be connected – see above regarding masterplanning 6a and b together. d. Pedestrian connection to adjacent residential area should be specified. e. Parts of the site furthest from Oxford Road should be reserved for non-residential uses so that the site can be served by bus from stops on Oxford Road.

Object to Policy PR6(b) as being Unsound, Not Positively Prepared, Not justified, Not effective. North Oxford Golf Course is almost certainly the most important piece of the most critical part of the whole Green Belt. It is especially critical for supporting the purposes of Green Belt in preventing the merging of communities with subsequent loss of identity. For years it has managed to separate Kidlington from North Oxford and preserve the special character of the uniquely historical city of Oxford from Kidlington, Gosford, Yarnton and Begbroke. This site, would simply become an urban extension to Oxford. Development on this site would virtually close the important countryside gap between Oxford and Kidlington. These proposals would lead to Kidlington becoming part of a vast urban sprawl encompassing north Oxford, Cutteslowe, Wolvercote, Begbroke, and Yarnton and it would be seen in the future merely as a suburb of Oxford. Furthermore apart from being a golf course it also a parkland, contributing to the aims of Green Belt as an attractive landscape supporting quite a rich biodiversity of fauna and flora characteristic of the countryside around and also including some rare species. The evidence base does not prove that exceptional circumstances exist to justify releasing this golf course for development. Instead they demonstrate that the site is highly important too the purposes of the GB. The Review document suggests that housing on this site would be mainly low density opening up the probability of larger executive style housing which would fit in better with the attractive parkland setting. This would of course make these houses attractive to commuters from London and elsewhere because of the adjacent Oxford Parkway. Adding this to is the fact that the larger houses already in Neighbouring North Oxford fetching in excess of £1 million it is difficult to see how such a development can be claimed to meet Oxford’s unmet housing need. It is possible to seeing it meet needs of London commuters! Even higher density houses in this area would fetch very high prices as the current development at nearby Barton Park shows. Here the cheapest one bedroom flat is on the market for £320000 and a 4 bedroom for over £600000. Therefore, the Proposed Submission does not comply with nationally accepted purposes of Green Belt as laid down in the legal framework of the National Planning Policy Framework. The NPPF (Para. 73) is very specific about the importance of providing appropriate recreational facilities for communities. Recreation itself is crucial for physical, mental and social health. NOGC performs a vital role in these respects, which would collapse with the demise of the club. It is a thriving club and, importantly, open to all. Refers to various age group activities in the club and their social importance and health benefits to all 475 members. Policy PR6(b) is unsound as it would extend the urban area of Oxford northwards, significantly reducing its separation from Kidlington and replacing high value GB land with urban sprawl, and is not compliant with the NPPF in terms of development of a site that makes a major contribution to Green Belt recreational and biodiversity functions. It is not positivity prepared as there has been a lack of research into the contribution made by the golf club to the purposes of the GB and recreation provision, and into the vitality and viability of the club as a major recreational provider in the area. It is not justified in terms of new methods of calculating housing need which could halve Oxford City’s estimates. It is not effective as very few houses would be affordable. Developers consistently default on affordable housing quotas. Developing a much needed golf course for housing which would be too expensive for housing needs cannot be part of an effective plan.

Changes Sought

Suggest that there should be a thorough assessment of the Green Belt gap that exists between Kidlington and North Oxford in relation to the objections I have made above and the revision of housing figures. Until this is done this proposal for North Oxford Golf Course should be withdrawn immediately.

Comments

Object to policies PR3, (The Oxford Green Belt), PR6a (Land East of Oxford Road) and PR6b (Land West of Oxford Road). • Believes these proposals are not consistent with National Policy because they do not take into account the detrimental effect that removing these large areas of Green Belt will have. These proposals therefore fail to meet the test of soundness as defined in paragraph 182 of the NPPF. • Oxford’s Local Plan has not yet been prepared so Cherwell’s allocation of homes is premature and is not an appropriate strategy and is unjustified.

References on the Cherwell Green Belt Study (April 2017), the Oxford Green belt Study (2015), Category A Village Analysis (2016), Policy Villages 1 and 2 of the adopted Local Plan Part 1 and SA report. Conclude that the removal of Green Belt separating Begbroke (PR8) and Yarnton (PR9) and subsequent development as proposed would result in coalescence of both settlements; encroach on the open countryside; and result in highly inefficient use of land (which itself is a combination of grade 2 and grade 3 agricultural land). The harm that results is exactly the harm that the Green Belt land is designed to prevent. The loss of protection of the Green Belt and the scale of subsequent development is contrary to existing Local Plan policies. The "exceptional circumstances" put forward by Cherwell District Council are without merit with respect to all sites proposed for removal from the Green Belt.

Changes Sought

For the reasons given above AND the Representations made by the Begbroke & Yarnton Green Belt (BYG) Campaign which are additionally supported, the Plan in its current form cannot be changed to make it legally compliant or sound and should therefore be withdrawn and NOT be submitted for Inspection.

Reasons for Participation

Would like the Begbroke & Yarnton Green Belt (BYG) Campaign to represent meat the Examination should it take place.

Referenced the 5 purposes of the Green Belt and NPPF paragraphs 82-84. Quotes provided on the Elmbridge Local Plan and Poole Local Plan. Quotes provided on NPPG's guidance on the Housing and Economic Land Availability Assessment (HELAA). Reference to Policy ESD14 of the adopted Local Plan Part 1. it is reasonable to conclude that whilst local districts may have accepted an apportionment of Oxford's unmet housing need the actual number is not absolute and the Local Plan process may determine that Cherwell, for example, is unable to accommodate the apportioned figure due to existing national policies, such as Green Belt. Conversely, Oxford City, through the development of its own Local Plan and consideration of urban density, re-allocation of land previously earmarked for employment use, etc. may determine that the total unmet housing need is lower than that recommended by the SHMA and post-SHMA work. The latter point will especially apply should Oxford City seek to justify exceptional circumstances to remove Green Belt land that falls within its own jurisdiction. Reference to Oxford's Preferred Options document.

Changes Sought

For the reasons given above AND the Representations made by the Begbroke & Yarnton Green Belt (BYG) Campaign which I additionally support and adopt as part of my own Representation in this document, the Plan in its current form cannot be changed to make it legally compliant or sound and should therefore be withdrawn and NOT be submitted for Inspection.

Object to policies PR3, PR6a and PR6b as well. The key facts:- The proposal is not consistent with the National Policy because the policies do not take into account the detrimental effect that removing these large areas of Green Belt will have.- There are no 'exceptional circumstances', which could allow a City Council to ruin the environment and the future of our children. The Government's NPPF (Para 80) is very clear what the aims of the Green Belt are. The Green Belt must be 'enhanced', not reduced. There are no supporting facts that all relevant alternatives had been assessed.

Objection to Policy PR6b, to build houses on the site of the North Oxford Golf Club and the related proposal to build a replacement golf course at Frieze Farm (PR6c). The land occupied by the North Oxford Golf Club is a mature and beautiful arboretum where people play golf and where people can walk using the designated footpath. The land has been cared for by the Club for 110 years. There are hundreds of mature trees and shrubs of many different types which also provide a rich wildlife habitat. In my opinion, it would be unforgivable environmental vandalism to tear all this up to build houses (530, I believe) when houses can be built in areas where such destruction is not needed. The related proposal to build a replacement golf course on the featureless land at Frieze Farm is, frankly, nonsense. There is absolutely no way that an equivalent golf course could be built on that land. It might be possible to build a flat and uninteresting 9 or 12 hole course but nobody would want to play on such a course. Also object on infrastructure grounds. I cannot imagine how the Banbury Road could cope with more traffic in this area. In summary, on environmental and infrastructure grounds, these related proposals are unsound, not positively prepared and not justified.

Comments

Consider that Policies 6a and 6b are unjustified, on the grounds that :- • They do nothing to check the growth of Oxford and its urban sprawl. • There are sites within the City Council boundary that would potentially be more suitable • The level of Oxford's need has not been confirmed. If there is little or no need in Oxford this will reduce the pressure of developing in the Green Belt. • Residents of Kidlington, Gosford and Water Eaton have no desire for their communities to be swallowed up into Oxford. The Plan will remove much of the physical and importantly, the visual green space between Kidlington and Oxford and instead promote the A34 as the physical boundary of Green Belt. This effectively reduces the belt to a ribbon a few hundred metres wide. What would remain as visible belt is a narrow strip extending from the Kidlington roundabout to the A34 bridge adjacent to Parkway station. Moving the Green Belt boundary away from Oxford in this way would provide the basis of future arguments to engulf Kidlington within the City of Oxford. Disagree with Para 5.77 about integrating with existing North Oxford communities. Reference to two Green Belt sites within Oxford, both rejected due to coalescence which is inconsistent to Cherwell's approach. The Cundall Report "Unlocking Oxford's Development Potential "concluded in Para 158 that "It is not appropriate for the City Council to enter into discussions regarding the use of neighbouring Authorities land, especially if it is Green Belt, without undergoing a thorough and robust assessment of all potential sites for housing within its own authority's boundary first".

Greenbelt - The reasons for Green Belt seem even more valid for today. The review has not shown that the circumstances are exceptional. Oxford is an unique and important historic City and it's identity is closely linked to it's size and it's settings in the gentle and surrounding landscape. The Greenbelt allows people to feel that the countryside is meandering into the city, connecting city and country and keeping the surrounding villages intact.

PR-C-0889	10/10/2017	Mrs Donna	Bennett		N	N	N	Y
2392	<p>Comments</p> <p>The exceptional need to build 530 homes on this area due to few alternative locations being available is not proven, convincing or justified. This planning solution for meeting housing needs is insensitive towards overdevelopment to nearby villages, as well as the preservation of already too little remaining natural space and wildlife. How could this possibly therefore be effective or result in potentially healthy new living space? Using small bit of green space left would only be a temporary measure with irreversible consequences. Infrastructure plans are afterthoughts not actually agreed, funded or guaranteed by potential developers. Current infrastructure in surrounding areas currently and rapidly deteriorating need to be fully considered before further demand. Only, and at best are 50% of these homes planned to accommodate housing needs which means that the remaining land will be used purely for property investment. Property investor's interests should surely not be underlying necessities in any green belt development stated as an exceptional cause? Justifying this plan as an exception to meet urgent needs therefore is not in compliance with the national green belt policy.It cannot be denied that using this green belt space will have a negative effect of the quality of the lives of those living around this area. Decision making by any parties that stand to profit from the success of this planning should not be allowed. Green belt space is labelled as such to cap the area from inevitable demand of expansion. This development will link Kidlington to the outskirts of the city centre. This urban sprawl will change the environmental surroundings with a result in having to eliminate a small but precious pocket of wildlife in the wooded area as well as the protected green space of the golf course. The high quantity of housing threatens the already deteriorating infrastructure. Decision makers for these plans should rely heavily on those it affects.</p> <p>Changes Sought</p> <p>Reasons for Participation</p> <p>1) If using our green belt areas is truly the only option for development then Cherwell should decline and point to other solutions such as a. brown field sites within Oxford or further out b. current and numerous vast amounts of land either being reserved for commercial use (much of it not looking very utilised or successful 2) Ensure affordable housing is defined and that proposed housing estates are more than 50% (at least 65%) towards the housing need, not the interest of property investors3) Current infrastructure problems to be considered by developers as a paramount concern4) Funding of infrastructure plans to be agreed and legally bound by property investors before the start of any development5) The decision making process should be ultra-sensitive and rigid to the aesthetics at risk.</p> <p>Concerned as a long time resident that these plans will affect. Also aware and understand these plans and their implications involving both current and future residents. Strongly believes to be competent and justified to be involved in ensuring that alternatives, and fair compromises are met.</p>							

Proposed Submission Plan - Policy PR6b - Land West of Oxford Road

PR-C-0979	30/09/2017	Margaret	Eynon		
1655	Comments				
<p>Strong objection to building on Oxford's GB and on North Oxford Golf Club. Why is Cherwell helping to alleviate Oxford's housing problem to the extent it is? The roads into the city via the A40, A4260 and A44 are already jammed. As far as I am aware there are no plans to improve the road network. Local services in the shape of schools and particularly GP surgeries can barely cope now. Oxford City Council persists in attracting industries which need employees but cannot house them. It is their problem, not Cherwell's. They are not building on their own land but trying to get the county to do it for them. Firstly, the aim of the GB is to stop sprawl, reduce pollution and preserve the unique character of historic towns and it's separate, surrounding villages. Villagers north of the city especially those in Kidlington, Begbroke and Yarnton do NOT want to merge with Oxford absorbing into a large urban sprawl. The GB was set up to prevent this and preserve the identity of individual villages. This is an essential aspect. There is no area more suitable for this purpose than what is known as the "Kidlington gap". Building will destroy walks and views. Once built on, the GB will be lost for ever. Pollution will increase; people will need to drive further to see some green space and breathe clean air, which leads to more pollution. Future generations will not forgive this action. Secondly, The National Planning Policy Framework (NPPF) stipulates certain conditions must be fulfilled to dispose of recreational and sports facilities (para 74 under "health") . North Oxford Golf Club (NOGC) is a thriving well used club with nearly 500 members of all ages; it has over 2500 visitors a year for golf and numerous others for bridge, Pilates, business meetings, yoga and social events. To close it would contravene the NPPF. The NPPF states "existing open spaces, sports and recreation facilities including playing fields should not be built on unless not required". NOGC is "required" by its many members, thus NOT surplus to requirements. Close the club and people lose the many benefits, physical, psychological and social that being a member of a thriving club brings. Thirdly, The NPPF states recreational facilities shouldn't be closed unless new facilities are better than those already on offer. The council's proposal to provide a golf club on a smaller site at Frieze farm with no natural features such as exists at NOGC contravenes the NPPF. That area has electricity pylons and a problematic/difficult access. It will take at least 10 years and many millions of pound to build the equivalent of an established course which has been in existence since 1907. Fourthly, The flora and fauna of NOGC makes a contribution to biodiversity in the form of many different species of trees, shrubs bushes and flowers along with the great variety of wildlife including the rare great crested newt, bats, roe deer, birds water fowl etc. All this would be lost were this site to be built on. The GB helps to preserve such important habitats for future generations. The plan states housing on NOGC will be of a low density. This will not help Oxford's housing need, especially as they are likely to be bought by London commuters!</p>

<p>Strongly objects to developing on N Oxford Golf Course (NOGC). It is outside but abuts Oxford CC's boundary. It provides golfing facilities for Oxford and Cherwell CC's residents. Golf is played by males, females, from pre-teens up to 90 yrs. It is good exercise & enjoyable & can be competitive. It is good for the health & fitness of those in their later years. NOGC has a good membership, particularly for the over 50's. We appreciate that there is high demand for housing in the Oxford area, but cannot see the sense in removing a successful recreational facility which could be used by the new home dwellers, & other housing sites already with PP. We recognise that PR6b has been suggested as an alternative location, but this is flawed. It makes no sense developing on an existing facility & set a new one up 1 mile away. This will cost in excess of £10 million & will take decades to establish on of the same quality. Also the new course would need to be available before the existing course is closed for development to ensure continuity. That means there would be no new completed housing at NOGC for a long time.</p>

Proposed Submission Plan - Policy PR6b - Land West of Oxford Road

PR-C-1324	10/10/2017	Maureen	Haile					N
4342	Comments							
The Kidlington Gap (PR6a & PR6b) should be protected to prevent urban sprawl and village identities. The Golf course is a valuable recreational amenity that can't be moved. Object to transport strategy because; Most improvements are un-funded. Railway proposal is unrealistic. Unreal expectations for people to journey on foot, bicycle & bus. No demonstrations of air quality improvement, Oxford being an Air Quality Management Area, especially plans PR6a & PR6B adding to more cars onto the A4165. Does not take into account house building in the pipeline. How will building in PR6a & PR6b be affordable homes? London commuters will buy them. Schools, GP's, Hospitals etc. are already pressurised. Cutteslowe Park is not given sufficient protection.

Duty to Co-operate - I do not believe that the duty to co-operate requires a Council to accept without apparent justification the aspirations of an overwhelming neighbour Council where that Council has not done all it can to solve the problems. They have not substantiated the basis for it's alleged housing shortfall and has not shown any obvious willingness to co-operate in the funding and/or provision of essential infrastructure. There is a lack of mutuality.

Positive Preparation - There has been an apparent failure to stress-test the alleged requirements of Oxford City Council. This is the subject of widespread local criticism, and the latest downgrading of the Government's own estimates of housing requirements undermines the whole basis of Cherwell's proposals and Oxford's demands. We need to start again with a process geared to the current Government figures as an absolute maximum. Damage to the GB just seems to have been assumed as a given, whilst it is not. Justification - The proposals cannot be justified as matters stand, as the figures have not been adequately tested and may no longer be current.

Effectiveness - There is little concrete information as to the funding or timing of infrastructure provision - e.g. a substantial new station will certainly be required, but there is no clarity at all as to how this will be delivered or funded or when in relation to the related development. This all comes across as a wish-list rather than as a blueprint for a successful outcome.

I commented at the earlier stage on the need to ensure that additional housing is so organised as to avoid simply becoming London overspill. For that reason too I would use Areas 6a-c as parkland and if need be part of the existing Cutteslowe Park for housing - it is particularly close to the JR hospital. I also commented on the need to direct employment outside Oxford and to locate housing accordingly.

4367	Comments							
If as I believe the loop for this part of the GB is not substantiated then these areas should be zoned for use as London-style community park, with purpose facilities for public use. The area is easily accessible from several directions by public transport, and it would be far preferable for this to be properly landscaped as a continuing "Green Lung" of benefit to both Oxford (which could contribute to the cost) and Cherwell. The Golf Course is in effect already landscaped. If the City still believes that it needs additional housing I suggest that part of Cutteslowe Park is developed and the funds released used to provide a new and larger community facility. The existing Cutteslowe Park is not easily accessed from Kidlington, and the additional extension proposed of little use to any except Cutteslowe residents and gives little protection to the GB/"Green Lung".

Proposed Submission Plan - Policy PR6b - Land West of Oxford Road

PR-C-1364	09/10/2017	Mrs Susan	Moss		Y	Y	N	N
4435	Comments							
The policies are unsound because they fail to meet the real needs of people for low cost (rented or for sale) houses that deal with urgent housing problems. Housing to meet local needs could be achieved by building smaller units at higher density and using far less land. Houses for sale at so-called 'affordable' prices, and houses at market prices, do not meet the needs of the teachers, nurses, public sector workers and young families. Build some houses, but make all of them of the type that people need - not what developers and landowners desire.

The club, situated in a beautiful area of GB that separates Oxford from Kidlington, is 110 years old and a thriving sporting provision for 600 members. It would be almost criminal to destroy it and GB is there 'to deter urban sprawl'. There would be many negative outcomes to developing on this land and no positive ones. It would provide low density housing which would cost a fortune and it would not provide affordable housing. Traffic would be made worse and the new houses would attract London commuters and not contribute to the local community. The plan proposes a new golf course but it takes years to get a golf course to maturity.

4470	Comments							
The proposal is not justified because it is not reasonable to plan to help meet the unmet need of a neighbouring authority (Oxford City Council) where that Council has yet to fully assess its unmet need. This is particularly relevant in the light of new methodology which suggests that Oxford's supposed unmet need is significantly overstated. The proposal is not justified because it does not meet the requirements of the NPPF on protecting Green Belt land. The land on PR6a & PR6b is very important in preventing urban sprawl, preventing towns from merging, protecting the countryside from encroachment and preserving the setting and special character of historic towns. The proposal does not take sufficient account of the damage that removing this Green Belt land would have. The proposal is not justified because the key exceptional circumstances as put forward by Cherwell are not valid. The proposal is not effective in terms of protecting an important park which lies on the border of Oxford City and Cherwell. The proposals put forward to protect the park can not be seen as deliverable. The proposal is not effective because it is not the most appropriate strategy. There are other sites within Cherwell which would not result in loss of valuable, high-performing Green Belt land. We would be grateful if the Inspector could visit the park please.

PR6a and PR6b are not justified because a) the prediction for the number of houses needed is questioned and is to be re-evaluated b) it does not take into consideration the intrinsic value of the Green Belt for current and future generations and the irreplaceable nature of the Green Belt c) is difficult to see how this development can be sustainable given the lack of realistic plans for providing necessary infrastructure - these are already significant longstanding problems in Oxford and Oxfordshire which are likely to be seriously exacerbated by the Northern Gateway development. Policy PR6a is not likely to be effective because a) it is very likely to provide housing for London commuters rather than people employed in Oxford and local areas, and hence exacerbate many of the problems that Oxford and Oxfordshire already have e.g. traffic and demand for schools, healthcare etc. b) the considerable uncertainty over many financial and economic matters after Brexit mean that there is considerable uncertainty about whether the plan could be deliverable over its period c) we have seen little real evidence in recent years of effective co-operation between local authorities. PR6a is not consistent with the NPPF and has an indistinct border.								
Changes Sought				Reasons for Participation				
PR6a and PR6b should be withdrawn completely. There are other alternatives for increased availability of housing including i) use of land within Oxford city for housing instead of employment and ii) increased housing density on sites already used or designated for housing within Oxford city.								

PR-C-1380	10/10/2017	Gordon	Henning				N	N
4471	Comments							
PR6a/PR6b are not justified or effective in terms of SA Objective 10 (Air Pollution/Road Congestion). Whatever pedestrian, cycle or public transport provision is available, increased vehicular traffic will inevitably be associated with development on this site. Climate change may well also increase the frequency and severity of adverse weather conditions making cycling etc. very unpleasant and more dangerous.

Comments

"The proposed urban extension to Oxford City at land west of Oxford Road, comprising 530 dwellings at a net density of 25 dwellings per hectare is considered detrimental to the highly valued Green Belt land, recreational amenity and the current individual identity of land within Oxford City and Cherwell District. In addition given the low density of housing, it is extremely likely that housing on this site would be aimed at the affluent London commuter market with no real prospect of housing for local people and in particular no affordable housing. Green Belt land would be lost and Cherwell would fail to meet its objective of meeting Oxford's (alleged) housing need. In allocating North Oxford Golf Club for housing and proposing that the golf course is relocated to land at Frieze Farm (Draft Policy PR6c), the Council has made a significant oversight as there simply is not sufficient funding available to implement this relocation. Furthermore, there is no desire by the landowners to relocate the Club. Significant pressure is already placed on the road network infrastructure at Cutteslowe Roundabout which has been identified as a localised hotspot, where pollution levels of nitrogen dioxide have exceeded national objectives. Allocating new homes at land east and west of Oxford Road (Draft Policies PR6a and 6b), in addition to developments already in the pipeline i.e. up to 885 new homes at Barton Park, 500 new homes proposed at Northern Gateway and 250 new homes at Wolvercote Papermill, will further compound this. In response to the Council's Local Plan Options consultation in November 2016, we note that a comprehensive representation was prepared on behalf of Exeter College outlining the benefits of providing new homes on land at Frieze Farm. As set out within the representation, the site does not adjoin the urban edge of Kidlington and therefore development on the site would not result in coalescence and the intervening woodland would result in minimal negative effects on amenity. The representation proposed a direct pedestrian and cycle link into Oxford Parkway Station and is close to Northern Gateway. It stated that 'the settlement will be designed as mixed-use, mixed-tenure with an urban form that deprioritises the car in favour of walking and cycling'. It is not intended to promote this site as it is within the Green Belt, however, it is difficult to reconcile omission of this site with Cherwell's stated objectives. It is even more difficult to understand why Cherwell is proposing that the Golf Course be relocated here, just a few hundred yards from its current position, when there is clearly no will or funding to achieve this. The level of proposed housing provision on 'land west of Oxford Road' is questionable considering that Oxford City is currently only at the Preferred Options stage of Local Plan preparation. Therefore it is not yet known exactly how much land is available for housing development within Oxford City. It is considered that the allocation of housing within Cherwell, to meet Oxford City's housing needs, is premature and should be delayed until Oxford City has made further progress with its own Local Plan. It is considered that proposed development on land west of Oxford Road and the relocation of the golf course to land at Frieze Farm is not justified as the Council has not considered all reasonable alternatives e.g. housing development at Frieze Farm. Furthermore, the proposed development is not considered justified as allocating new homes ahead of further preparation of Oxford City's Local Plan is premature and therefore not the most appropriate strategy. It is not considered effective as the proposals coming forward at this time are not based on effective joint working and cross-boundary strategic priorities. The proposal is not considered to be consistent with national policy as it has not fully taken into account the detrimental effect that removing such extensive land from the Green Belt in that area will have. The proposal therefore fails to meet the tests of soundness as defined within paragraph 182 of the NPPF."

Changes Sought

We respectfully request that this Local Plan be rejected. Cherwell District Council should re-start the process once Oxford City's housing need has been properly examined and when Cherwell does this it should have due regard for the importance and functions of the Green Belt.

Comments

Consider the proposed plan to be uncompliant and unsound. Object strongly as this would conflict with two principal objectives of the GB in checking the unrestricted sprawl of large built-up areas and preventing neighbouring towns from merging. It is not sound and not justified as it is not the most appropriate strategy when considered against reasonable alternatives and is not consistent with national policy. Conflicts flagrantly with two principle objectives of the GB.

Changes Sought

Not changes in words but a matter of retaining the area in the GB and finding alternative sites for development to the north, between the A4260 and the A44. e.g. accessible to the proposed station.

Reasons for Participation

Consider that the views of Gosford & Water Eaton and Kidlington have not been sufficiently heard during the preparation of these proposals. Have lived in the area for over 30 years and local councillors have previously been keen to preserve Kidlington gap while Oxford City wished to expand into the areas covered by PR6a and PR6b. Local councillors have not been well represented on the relevant reviewing bodies.

PR-C-1396	09/10/2017	Paul	Walker	Oxford Bus Company				Y
-----------	------------	------	--------	--------------------	--	--	--	---

Comments

SUPPORT the Policy with AMENDMENTS. The Brief should clearly set out how the plan proposals relate to the strategic bus network and how this will evolve, what the trigger points to deliver this shall be and give clarity to developers on the costs of developing in these locations. The risk of not doing this is one of a hap-hazard development pattern of sites coming forward which cannot be served by high quality public transport though lack of forward planning, lack certainty for developers and a poorly thought out network connecting major nodes. We therefore support the Policy PR6a 10© and PR6b 8© which both state the need for the development to enable connection to Oxford Parkway & Water Eaton P&R site and to existing or potential public transport services. However the policy needs to explicitly highlight that the development brief will need to contain costed proposals for bus services improvements. The size of the strategic allocation also makes it unlikely that it will support key local facilities, such as a substantial district centre. The result is that, to a very great extent, any bus route created to serve this site would have to rely only on the new demand generated by the development itself. Therefore there needs to be mention within the policy of the need to "kick start" bus services for a number of years promoting alternative transport to the car until the development is built out and bus services commercially viable. This viability may come from diversion into the site of existing services and as such we consider that any extension and/or diversion of the 500 park and ride service provide this role. Not least that such a connection would better enable occupiers if these developments were to access not only Oxford city centre but also Oxford Parkway Station which will better enable modal shift, keeping park and ride spaces free for longer distance travellers and providing a direct link to the station which will be more attractive to potential occupiers. Whilst supporting the notion of policy PR6a 7 in terms of a green infrastructure corridor for pedestrians and cyclists we would also contend that to improve journey time reliability & speedier connections, modal shift and operational viability that this link also be for bus use to provide a suitable piece of bus priority consistent with the emerging plan for the A44/A4415 corridor and the Oxford Transport Strategy.

Changes Sought

Like to see the policy strengthened to highlight the need to connect inter urban bus route networks between settlements that reflect the OCC strategic bus network in a phased manner than can allow new developments to be accessible by modes other than the car with appropriate S106 commitments to enable these developments to be sustainable in a manner that is clear to developers promoting sites. Additionally we would therefore suggest that PR6a 7 be amended to include bus provision along the green infrastructure corridor.

Comments

The representations are submitted on behalf of my client Bonnar Allan with regard to their proposals at New Alchester. The land is identified in the Vision document attached to these representations and will include up to 7,200 new market & affordable homes, primary & secondary schools, creation of a 240 acre country park & watersports centre & the potential to incorporate a new Park & Ride site with connection to the railway line south of Bicester by a new railway station. Our comments on the PSP are confined to issues of soundness. A summary of the alternative Options A to I that CDC considered at the last stage of the Plan is set out at paragraph 2.12. For the reasons we set out in our representations to that stage, we consider that the CDC's proposed approach of allocating land to the north of Oxford & within the Green Belt (GB) around Kidlington as set out in PR6b is flawed, & that the Partial Review does not pass the test of soundness. The PSP is not Justified as in our view it does not represent the most appropriate strategy for meeting Oxford's un-met housing needs. The logic that appears to underlie the PSP is in essence that the closer the proximity of the required housing to the City, the more sustainable it will be. This logic ignores the fact that there would be better prospects of residents travelling into Oxford as well as the major employment locations in the Science Vale by public transport including by rail from New Alchester. The preferred locations around Kidlington will increase congestion on the highway network & will result in the loss of GB & lead to coalescence between Kidlington, Begbroke & Yarnton, whereas the proposals at New Alchester are located beyond the GB. As we make clear in the Vision document, our proposals can be delivered in a phased manner & there are no impediments to early delivery. The scale of the proposals at New Alchester allows it to meet both the identified needs of Oxford City as well as an element of the future needs of Cherwell District, & in so doing, we recognise the journey that this proposal involves.

Changes Sought

We consider that the PSP should direct a majority of the un-met need to New Alchester which constitutes a more sustainable & justified location for the new homes needed both to meet the City's un-met needs as well as future need within Cherwell District. The PSP should be re-drawn to allocate land at New Alchester in place of the proposed allocations in the Green Belt (GB) around Kidlington. New Alchester can provide a highly sustainable location for the much needed development, at a location outside the GB & on the railway line into Oxford. The development would facilitate creation of a new railway station at New Alchester which would encourage people to travel to Oxford City & also other employment centres within the Science Vale by public transport.

Comments

The CDC Local Plan Part 1 and the NPPF (Para 34) support a strategy whereby growth should be directed towards the most sustainable locations, encouraging travel by non-car modes. The County Council's Oxford Transport Strategy is also clear in its objectives for achieving a meaningful modal shift for those travelling into Oxford City away from the private car and towards public transport. In this context, the justification for the Council's approach in pursuing growth at sites such as PR7, PR8, PR9 and PR10 which propose concentrated levels of development (circa 3,220 dwellings) is unclear. The development as proposed is concentrated along the already very congested A44 corridor and around Kidlington which is a known congestion hotspot. While some development in this area may be appropriate, the concentration of sites will lead to significant issues of congestion given that the sustainable modes being pursued (with the exception of cycling) are all road based Park & Ride, Bus and RTP routes. The Sustainability Appraisal (June 2017) recognises that new development around the Kidlington area 'may increase congestion but the Local Plan Part 1 Partial Review allocates new housing sites that encourage the use of sustainable transport and are allocated following consideration of their impacts on transport patterns through the SA'. Notwithstanding assessment of the proposed allocations through the SA, the impact of congestion has not been sufficiently weighed in the balance when considering reasonable alternative sites and a broader distribution across the District. For example, locating development on the rail network at locations such as Islip would assist in removing some traffic movement from the road entirely. It's recognised that there is the potential for a new railway station at Yarnton, but this is a long term strategy with no immediate proposals for delivery. CDC does not consider this necessary infrastructure to support the proposals and simply consider it a potential future benefit. Therefore, all focus for this plan period under this strategy will be on the road, contrary to the conclusions of the Sustainability Appraisal and to which our client objects. Overall, the various transport evidence base documents prepared to date have not robustly assessed the opportunities to improve rail usage despite current work being undertaken to develop the East-West rail link. East-West rail Phase 1 works saw an upgrade of Islip station which is on the new Oxford – London Marylebone line. The Western Section of East-West Rail will also see the introduction of three new passenger services, for direct services within the region and connections to national mainline services. These services are due to start operating in the early 2020s. Despite this significant rail investment, no development is proposed within Islip which is just a 3 minute train ride from Oxford Parkway, 7 minutes from Bicester, 11 minutes from Oxford and under an hour to London Marylebone. Our client is of the view that Policy PR4a (and by association policies PR6-PR10) focuses too strongly on improvements to and mitigations for the highway network rather than considering options for removing traffic from the road network and towards more sustainable modes such as rail. The proposed locations for the additional housing are known areas of congestion and the transport proposals do not go far enough to solve the existing issues, with the proposed levels of development in this location likely to compound matters further. Our client objects to these policies which will lead to increased levels of congestion and the strategy will not achieve a step change in modal split. Soundness - The evidence base prepared to support Policy PR4a (and by association policies PR6-PR10) is not sufficiently robust to justify the approach to allocate this level of housing in an area of existing traffic congestion without an effective strategy to achieve a step change in modal split. The Council needs to justify its approach for focusing so much of the new development in one area which is already known to suffer issues relating to road congestion. Rail has not been considered as a reasonable alternative within the evidence base documents and consequently the draft plan is not justified. The draft Plan is not Effective, as it focuses too much of the housing requirement in one, focused area. The Plan is not consistent with national Policy as the proposed development is not located where the need to travel will be minimised and the use of sustainable transport modes can be maximised.

Changes Sought

The evidence base has failed to sufficiently consider investment in rail / exploitation of existing rail assets despite recent investment in the East-West Rail project. A thorough exploration of the reasonable alternatives is required. More detailed consideration needs to be given to the potential for locating new development at Islip within proximity to the existing railway station. This location would be sustainable and would support the existing local community. It has been demonstrated that there are no overriding physical constraints, in terms of highway impact, flooding and ecology, to the development of this land.

Reasons for Participation

Due to the complexity of the matters discussed in relation to PR4a

PR-C-1400	10/10/2017	Ms Deidre	Wells	Red Kite Development Consultancy on behalf of Kidlington Parish Council			N	Y

Comments

This site would perform as urban extensions to Oxford, physically linked to existing communities. Development of these sites would significantly narrow the important open countryside gap between Oxford and Kidlington, effectively creating the perception that Kidlington was not a separate village community, but a suburb of Oxford. The combination of both sites, either side of the Oxford Road, currently provides a valued area of unlit open green space, and a distinct break in development between the City and surrounding villages, along a major entrance corridor to Oxford. Evidence does not demonstrate that exceptional circumstances exist to justify a release from the Green Belt, where background studies confirm that both sites are of high importance to the integrity and function of the Green Belt. (See 2015 and 2017 Green Belt Studies) Development on either or both sites would aggravate existing local congestion and air quality issues, and adversely impact on movement between Oxford and Kidlington. The open character of the agricultural land east of Oxford Road forms part of the wider landscape which provides an important setting on the approach to Oxford. The landscape of the Golf Course is manmade, but long established, with significant tree belts and groups. It is unlikely to be able to preserve these features unless development is restricted to a low density and larger dwellings. As a result, there would be an inefficient use of an important large area, and potential viability difficulties in accommodating 50% affordable housing. The net benefits do not outweigh the substantial harm to local character. The Golf Course is also a local recreation facility, and KPC consider that its loss is unlikely to be offset by a new Golf Course on a significantly smaller site at Frieze Farm. Development on this site conflicts not only with NPPG Green Belt Policy, but also with paragraph 74 of the NPPG, which seeks to prevent the loss of recreation facilities. Indeed, site owners/promoters have recently made a presentation proposing 600 houses on the Frieze Farm site, and have no apparent intention of creating a new Golf Course. (See representations on Policy PR6c). In summary - Retain Green Belt Policy on all the above sites, and do not allocate for development."

Changes Sought

Retain Green Belt Policy on all the above sites, and do not allocate for development.

Reasons for Participation

KPC is an elected body, representing the views of a large number of people in the part of the District which will be most affected by the proposed alteration to the Development Plan. In addition to having a statutory role in the Planning process, the Parish Council has an in depth understanding of the local area where new development is proposed, and is well placed to contribute to the Local Plan process. It is essential for the KPC to be actively involved in the Examination, in order to be able to represent local views, fully respond to submissions made by others, and to address any modifications discussed in advance of the Examiners report.

Proposed Submission Plan - Policy PR6b - Land West of Oxford Road

PR-C-1401	10/10/2017	Alan	Lodwick	Alan Lodwick on behalf of Kidlington Development Watch	N		N	Y

"Object to the allocations in Policies PR6a, 6b,7a,7b,8 and 9 for the reasons given in our objection to release of Green Belt land (seeobjection to PR3). All of these sites contribute to the purposes of the Green Belt and should not therefore be removed from it. Other Green Belt Sites rejected by the Council. We also explicitly support the Council's rejection of other sites in the Green Belt considered at the options stage for the same reasons. Policy 10 : Woodstock Allocation. In the case of Policy 10, the site is on the edge of the Green Belt, and would impact on its openness. It would also be an excessive and disproportionate extension to the small historic town of Woodstock particularly when considered in addition to the adjacent site provisionally allocated in the draft West Oxfordshire Local Plan (currently under examination) for 300 houses. Due to wide-spread concerns raised at the hearings, the Inspector has asked West Oxfordshire District Council to conduct a heritage impact assessment of this site given its proximity to a World Heritage site. Cherwell should have conducted a similar assessment, taking into account the cumulative impact of the proposed development. Woodstock town is not within the Cherwell boundary but nevertheless, Cherwell has a duty to seek to protect historic Woodstock from inappropriate development and we consider it is not reasonable or sustainable to locate 410 extra houses in this area to meet Oxford's unmet housing needs."

Changes Sought

All allocations should be withdrawn because they are premature (need has not been established) and because alternatives to Green Belt development exist.

Reasons for Participation

We (Kidlington Development Watch – KDW) consider this is necessary because of:our extensive involvement with the consultations at all stages of the Cherwell LocalPlan to date; the considerable work we have undertaken to publicise the consultationourselves; of the feedback we have received from Kidlington residents; and, the largenumbers of them who have responded as a result of our efforts.KDW is a voluntary organisation run by Kidlington residents with experience andinterest in planning issues. We believe that effective, informed public participation inplanning consultations is vital to democratic policy making. We publiciseconsultations that directly affect Kidlington and offer advice on how people can bestmake their views known. In relation to this and the previous options consultation weprinted and distributed leaflets, put up posters, ran a stall on many Saturday marketsand at other events, participated in public and parish council meetings, provided information on our website and responded to requests for information from Kidlingtonresidents.As a result, we have gained a very good understanding of the views of Kidlingtonresidents, a large number of whom have made representations because of ouractivities. KDW's representations therefore reflect the views of much of the Kidlingtoncommunity."

Comments

While we object to any release of land in the Green Belt including the allocated sites, we have a further concern relating to the possible overall location of land for housing in the event that any or all of the allocated sites are confirmed for development in any adopted plan. PR6a, 6b, 7a, and 8, the land areas allocated specifically for residential development (i.e. not the total site areas) are approximately 50% higher than would be necessary to accommodate the stated number of houses at the net densities specified. For example the largest site (PR8) for 1950 houses at 45dpha net should require 43.3ha. Whereas the allocation is for 66ha, over 50%larger. The definition of net density is not specified in the plan though it usually includes access roads, parking, incidental open space and play areas. There are separate allocations for schools and a local centre, so it appears that the areas allocated specifically for residential development are significantly too large. Given the desirability of this land to developers, there is a clear risk thatpermission could be sought for significantly higher numbers of dwellings over and above the intended provision, resulting in even greater environmental harm and pressure on infrastructure. We are therefore concerned about the provision in PR12a (para 7) that should more than 4400 houses be built this will be taken into account in meeting Cherwell's own need, which would appear to be an incentive to the Council to approve higher numbers than set out in this plan."

Changes Sought

All allocations should be withdrawn because they are premature (need not yet established) and because alternatives to Green Belt development exist.However if some or all of the allocations are confirmed (which we completely oppose) then the plan should be amended to ensure that no more than the specified numbers of houses will be permitted (e.g. by reducing site areas or other stipulations).

Reasons for Participation

We (Kidlington Development Watch – KDW) consider this is necessary because of:our extensive involvement with the consultations at all stages of the Cherwell LocalPlan to date; the considerable work we have undertaken to publicise the consultationourselves; of the feedback we have received from Kidlington residents; and, the largenumbers of them who have responded as a result of our efforts.KDW is a voluntary organisation run by Kidlington residents with experience andinterest in planning issues. We believe that effective, informed public participation inplanning consultations is vital to democratic policy making. We publiciseconsultations that directly affect Kidlington and offer advice on how people can bestmake their views known. Sport England welcomes the Council's references throughout the document and policies requiring developers to include open space, outdoor sport and recreation. However, Sport England is concerned that the Council has yet to publish its evidence base in relation to playing fields and outdoor sports provision and built sports facilities. The Council will need to ensure that all of the new development contributes towards indoor and outdoor sports facilities in the District. The Council's evidence base will help frame this work. Sport England also recommends that the Council includes a requirement for applicants to include a statement demonstrating how their development has met the 10 principles included in Sport England's Active Design document. See Section 3 of the document 'how to use Active Design' and the proposed change.

Changes Sought

Sport England recommends that the Council consult Sport England at the earliest opportunity on the preparation of the Playing Pitch Strategy. Sport England suggest the following text could be included in the policies to support Active Design: PR5 (10) Provide evidence of how the development has improved the health and well being of new residents by demonstrating how the proposals will meet the 10 Active Design Principles set out in Sport England's guidance document 'Active Design' <https://www.sportengland.org/facilitiesplanning/active-design/>

Proposed Submission Plan - Policy PR6b - Land West of Oxford Road

PR-C-1404	09/10/2017	Andrew	Hornsby-Smith		N	N	N	Y
5367	Comments			<p>The Golf Club, which proactively serves a Green Belt leisure purpose, has the effect of softening the peri-urban transition to open countryside. The Green Belt Study (PR40d, p12) concludes that the harm to the Green Belt would be 'high': 'The physical prominence of the golf course makes it an important buffer feature on the urban edge, limiting perception of the city before entering the built-up area and therefore playing an important role in maintaining the 'Kidlington Gap'. The concentration of roads, rail, lighting, pylons, car parking and the station building, and to an extent, the golf course, limit the countryside character of the settlement gap but do not diminish the fact that an open gap exists and serves a stated Green Belt purpose ... This release would result in the A34 becoming the Green Belt boundary from the Northern Gateway up to Oxford Parkway station, leaving only the width of a single field to separate Oxford from Kidlington.' There is discussion that a 'possible' alternative site for the Golf course would be at Frieze Farm. However, this is tentative, and it is understood that the owners of Frieze Farm would prefer housing development. The point is that whereas in its current location the Golf Club serves a clear purpose in reinforcing the Kidlington gap, its relocation to Frieze Farm has no such strategic value, as Stratfield Brake provides that function. The Frieze Farm site is also far smaller.</p>

				<p>Has spoken as a platform speaker at three public meetings in Kidlington and Gosford. Made a substantial representation at the Issues and Options stage. As a former parish councillor, has represented Kidlington Parish Council at the North Oxford Area Action Plan examination in public, and likewise was invited to the Examination in Public of the Local Plan. Has an MSc in Transport Planning, so part of representation covers that area. Also offers a distinctive perspective as a local resident, who agrees with the principle of a Green Belt review, but does not support the current planned site allocation. Has no interest in promoting a particular site, but only have some sympathy with those who would wish to preserve the Green Belt intact. Believe views represent many in Kidlington who recognise the need for local housing, but see these plans as strategically unacceptable. Representation contains primary research evidence which could be presented.</p>				
PR-C-1404	09/10/2017	Andrew	Hornsby-Smith		N	N	N	Y
5366	Comments			<p>If the aim is to provide 1,180 houses in the area south of Kidlington, the least damaging locations would be at Stratfield Farm (site 49) and south of Gosford (sites 178, and HELAA 243 incidentally, a new site not identified at the Issues and Options stage). The two assessed sites have existing small allocations, but the theoretical capacity is far higher. The Initial Sustainability Appraisal (which excluded site 243) set these at 523 and 1,388 respectively. Allowing 3.2 hectares for a new primary school, probably best sited at the Gosford sites, and the 0.7 hectares identified for a cemetery extension in the Submission draft PR7a no. 3, the total net combined land available would be 34.26 + approximately 5 hectares of previously unidentified site HELAA 243. Adding in the existing allocation of 220 + 120, the total number of dwellings required to replace those not developed south of Oxford Parkway becomes 1,520. This represents an overall net density of 38.7 dph (1,520/39.26), which is lower than the 40 dph proposed in the submission draft in PR6a, less than the 45 dph proposed in Policy PR8 and less wasteful of Green Belt land than the 25 dph proposed in policy PR6b, or, to put the figures in greater perspective, withdrawing 60 hectares of land from Green Belt protection (Policy 6A, 6B) contributes 1,180 houses at a net density of just under 20dph. Detailed comments are provided in relation to the selection of alternative sites PR178 and PR49 and the Kidlington Masterplan.</p>				
	Changes Sought			Reasons for Participation				
	<p>PR3, 6a, 6b - Delete references to PR6a and 6b in PR3. Rewrite all references to sites in Kidlington gap, deleting allocations, setting out playing field allocation in land east of A4165. Allow mixed use on land identified within Policy 3c playing fields, residential allocation of 140 written as a new policy. PR7 a and PR7b - Increase allocation to 1,520 between these sites. Retain a small buffer area to the west of Stratfield Farm. Remove reference to playing fields. PR12a - Rewrite to avoid incentive for future allocations beyond those allocated in the plan, or delete.</p>			<p>Has spoken as a platform speaker at three public meetings in Kidlington and Gosford. Proposed Submission Plan - Policy PR6b - Land West of Oxford Road

PR-C-1409 10/10/2017 Richard Cutler Bloombridge Development Partners N Y

5345

Comments

Object to PR6a & PR6b, where exceptional circumstances have not been demonstrated . The dominance of residential shown on the Policies Map is a massive lost opportunity for higher order uses, notably University-related and for inward investment, uses best suited to take full advantage of a location next to Oxford Parkway Station. Housing here is very likely to increase commuting to London. There is no long term defensible Green Belt boundary.

Changes Sought

The proposals for housing development at Water Eaton and Begbroke (PR6 & PR8) either need to be deleted as unsound or modified to include 'safeguarded land' for the University or major inward investors, typically 25 to 50 hectares (based on our Arlington experience, for example in relation to the former Regional Investment Sites in the West Midlands RSS). This will have an impact on the housing capacity of these sites.

Reasons for Participation

We confirm that we wish to attend the examination in public.

Comments

Is opposed to the proposed Green Belt allocations mainly because CDC has not proved the exceptional circumstances required to build on a GB, nor has it proved Oxford's "unmet need". Use of the GB for development should be the last resort, if at all. The impact of this proposed "sprawl" on the environment would be massive, with extra cars on roads that are unable to sustain what already exists. This is true also of the existing infrastructure as a whole.

Land west of Oxford Road (i.e. North Oxford Golf Club). This site is essential GB which maintains the Kidlington Gap. Strong objection to development of this site and the totally unnecessary displacement of Oxford Golf Club to the other site of the A34 and Frieze way. To claim this will actually help solve Oxford's housing need is ridiculous. The nearness to Oxford Parkway Station will mean that developers will want to build large expensive houses which will go to commuters to London from the station or will be bought by landlords for renting out at high price – look at the prices flats and houses are forecast to go for in Barton Park on the ring road (£300,000 for a one bedroom flat, £600,000 for a family home) – AND with nowhere near the 50% truly affordable housing that should have been built there. People desperate for housing in the city will not be helped by development of PR6b. The chances of 50% social housing or housing at truly affordable rates here are non-existent. Green land will be lost at massive profits to developers. The golf course has a huge resource of grassland, scrub and mature trees. Despite all plans and best measures a vast amount of biodiversity and habitat will be lost if this is developed. Also, regarding removal of the course, it takes many years and a lot of work to develop an attractive golf course with landscaping and mature trees. A moved golf course will not be attractive to golfers initially and thus will be likely to fail to keep/attract members. Then what – more housing on land at Frieze way that should be producing food?

I have family living at Lucerne Rd, Oxford and know the area well. 650 new homes on this site, together with the 550 homes suggested for PR6b, would place an intolerable strain on the Banbury Road roundabout and route into the city of Oxford. Therefore no building should commence until after a full rapid transit system has been provided. Full recognition should be made of the importance of agricultural land in feeding an expanding population in an uncertain world. Farms in the vicinity of PR6a should be disrupted as little as possible. Cutteslowe Park should not be extended as proposed, and the land should be retained as agriculture. I note that sports, play areas, and allotments are to be provided within the new housing areas. The setting of the Grade 2* St Frideswide's Farm is insufficiently respected and the Green Belt land between the Banbury Road, the railway line and the River Cherwell is a particularly loved and special area, given its open countryside feel right next to the City and its historic nature and 'land that time forgot' feel, and the exceptional nature of Water Eaton. Damage to this area would be desecration.

Supports PR6b but queries the policy's density of 25 dph as lower than can be seen in much of the city and queries whether it will permit the most efficient use & development of the site & maximise its potential contribution. Considers that a higher density (possibly 35-40 dph) may be more appropriate for urban extension sites, and refers to those delivered in the Cambridge fringe but acknowledges that appropriate density will be explored in more detail in the development brief in due course. Refers to PR6b relationship to facilities & amenities on PR6a and the Northern Gateway site. Welcomes that the Sustainable Movement Thematic Plan at Appendix 6 recognises the importance of links into Oxford & particularly the identification of a strategic cycle route through site PR6b to the Northern Gateway. Note opportunity to link site PR6b into the local area in particular in terms of cycle & footpath links to Five Mile Drive Recreation Ground & employment opportunities at Jordon Hill Business Park via Oxford's Sites & Housing Plan site reference 049 proposed to be carried forward into the new Local Plan. Refers to incorporating mature trees into the scheme in response to site conditions and character. Regards PR6b in combination with PR6a as an urban extension to the city, fully integrated to the neighbouring communities & infrastructure, maximizing opportunities for new residents to access jobs & facilities in Oxford by sustainable travel modes. Keen to ensure that a strong contemporary & distinctive urban form & character is delivered. Refers to a parcel of land to the west of site PR6b, between the railway line & the A34, which is proposed for removal from the Green Belt but is not allocated as part of the plan. The southern edge of this parcel adjoins site 590 in the Oxford CC's Preferred Options document, which is identified as potentially being suitable for housing development subject to a review of the GB. If the aforementioned parcel in Cherwell is not taken forward for development then it may impact on the deliverability of site 590.

Proposed Submission Plan - Policy PR6b - Land West of Oxford Road

PR-C-1436 4574	10/10/2017	Patsy	Dell	Oxford City Council				
<p>Comments</p> <p>Supports & welcomes the proposals to deliver 1180 homes on sites PR6a and PR6b in North Oxford. The City Council supports the analysis that the area south of the A34 is perceptually part of the city of Oxford & that the recent developments at Oxford Parkway Station & Water Eaton Park & Ride reinforce this impression. We consider that this area links more clearly & effectively as part of the urban area to the south than to the rural area beyond. In sustainability terms, the area benefits from being adjacent to existing communities, frequent public transport links into the city, local facilities & services provided in Cutteslowe, Summertown & beyond, & proximity to the planned employment opportunities at Northern Gateway. Improving these existing links & facilities to support residents of the new housing is an efficient and effective way to secure their delivery. Refers to the importance of design considerations in the context and policy guidance of both Cherwell & Oxford and that these sites are approached in terms of forming an urban extension to the city integrated to neighbouring communities and infrastructure. Refers to maximizing opportunities for new residents to access jobs and facilities in Oxford by sustainable travel modes. Keen to ensure that a strong contemporary urban feel is delivered.</p>								
<p>Changes Sought</p> <p>Oxford CC notes that on the maps to accompany policies PR6a,b & c (pages 89, 95 & 100) that a small area within the Oxford CC's administrative area is identified as a BAP habitat. We consider that this notation is not necessary as it is the only notation in the city's area & would simply ask that the maps are amended to remove this for consistency.</p>				<p>Reasons for Participation</p>				
PR-C-1437 4586	10/10/2017	Cllr Paul	Buckley	Councillor for Wolvercote and Summertown Division of Oxfordshire County Council	Y	N	N	Y
<p>Comments</p> <p>PR3 proposes removing large areas of land from the GB in order to provide housing. It is clear Nation Policy that this can only be justified in the most exceptional of circumstances. The Partial Review & its accompanying documents do not provide convincing justification. The issues at stake vary a little between the different GB sites threatened. The Reps focuses on land covered by PR6a & PR6b, since they impact most especially on my constituents as County Councillor. Describes the location of PR6a and its relationship to the countryside and its surroundings including site's visibility and its part in defining the character of the area. Refers to this part of the Oxford GB having served its purposes extremely well over the years; safeguarding the open countryside, preventing Oxford sprawling north & swallowing up Kidlington, & preserving the historic character of Oxford as a discrete city. Notes that removing land from the GB will undo this and result on a classic example of urban sprawl. This would be in clear breach of NP, & unacceptable to the community I represent, that borders the land concerned. Implementing PR6a in its present form will be to disregard the NPPF intention that, when drawing up a Local Plan 'authorities should consider GB boundaries having regard to their intended permanence in the long term'. Similar considerations apply to the land covered by PR6b. Describes the site's amenity role for over 100 years. Considers that its use for house building would be considered a tragedy by local residents. Oxford & Kidlington would have been merged, contrary to the aims of the GB, & again in conflict with NP. No doubt PR3 is based on judgements made in the LUC GB Study about the relative amounts of damage to the purposes of the GB. But these judgements are mostly subjective. Notes that the LUC study grossly under-estimates the damage to be caused to the character of the N Oxford/Kidlington gap by implementing PR6a & PR6b, especially the de-facto merging of Oxford & Kidlington that would result. Refers to LP1 PR para 5.17 points 1 and 3 as weak arguments. Does not dispute the exceptional need for more housing, especially affordable housing, to meet Oxford's needs but for reasons highlighted in comments on PR 1(a) & PR2, Cherwell District & the PR6a and PR6b sites in particular, are not effective, sustainable locations for providing this housing. Therefore the 'exceptional need' justification is spurious in this context, & the sustainability justification does not bear scrutiny.</p>								
<p>Changes Sought</p> <p>Policy PR3 must be re-considered, and changed at least to remove reference to the land covered by PR6a and PR6b. If it really proves impossible to negotiate a substantial reduction in the figure of 4400 homes to be provided by CDC, then CDC should remove the need to use Green Belt land, by proposing brownfield land instead (available at the Shipton on Cherwell quarry), in order to be consistent with national policy.</p>				<p>Reasons for Participation</p> <p>Because the need to change Policy PR3 needs to be emphasised.</p>				
PR-C-1441 4598	10/10/2017	Katherine	Jones	Savills on behalf of Thames Water				
<p>Comments</p> <p>Oxford STW has the capacity to deal with the flows from this development. The wastewater network capacity in this area may be unable able to support the demand anticipated from this development. Local upgrades to the existing drainage infrastructure may be required to ensure sufficient capacity is brought forward ahead of the development. Where there is a potential wastewater network capacity constraint, the developer should liaise with Thames Water to determine whether a detailed drainage strategy informing what infrastructure is required, where, when & how it will be delivered is required. The detailed drainage strategy should be submitted with the planning application. Thames Water advises that this development & an adjacent development site represent a significant increase in foul flow to the receiving sewerage system. In order for Thames Water to determine whether the existing sewer network has sufficient spare capacity to receive the increased flows from both the proposed development sites, a drainage strategy must be submitted detailing the foul & surface water strategies. Details of any proposed connection points or alterations to the public system, including calculated discharge rates (pre & post development) must be included in the drainage strategy. If initial investigations indicate that the existing sewer network is unlikely to be able to support the demand anticipated from this development, it will be necessary for the developer to fund an Impact Study. Adjacent development sites are encouraged to use a consortia led approach so that cumulative detriment to the existing sewerage infrastructure can be avoided.</p>								
<p>Changes Sought</p>				<p>Reasons for Participation</p>				
PR-C-1446 5183	10/10/2017	Mary	Brown	Wolvercote Commoners Committee		N	Y	
<p>Comments</p> <p>There should be no building on the Green Belt. This is against national policy as outlined by the NPPF. There are no exceptional circumstances to justify building on the Green belt in this area. The Plan is therefore considered to be unsound. Wolvercote Commoners' Committee (WCC), which is an elected body representing the residents of the parish of Wolvercote, are concerned about the likely effects of this development on Wolvercote Common, Wolvercote Green and Goose Green. These are nationally important areas of Common Land which lie very close to the areas just north of Oxford which are currently part of Cherwell District's plans. The WCC has seen the Habitat Regulations Assessment Screening Report dated June 2017, which considers the possible significant effects of the Local Plan Review development on the habitat of the Oxford Meadows SAC. This includes Wolvercote Common and Wolvercote Green, both of which have been actively managed by the Wolvercote Commoners' Committee since 1929. The HRA Screening Report concludes that the Partial Review of the Local Plan "will not lead to likely significant effects, either alone or in combination, on the qualifying features of the Oxford Meadows SAC". It is the view of the WCC that this is incorrect, as it is based on assumptions which may well be incorrect. The key concerns of the WCC are set out below. The Report asserts that air pollution will not increase, and yet the Appendix B traffic data show an increase in average daily flow on Godstow Road (which runs adjacent to both Wolvercote Common and Wolvercote Green) from 4,791 in 2013 to 7,261 in 2031 with 'transport improvement package 2 and Super Cycle route in place'. This represents an increase in daily traffic in close proximity to the Oxford Meadows of 51.5%. Wolvercote is covered by the city-wide Air Quality Management Area (AQMA) due to the air quality objectives for nitrogen dioxide being exceeded in areas dominated by traffic. This increase is calculated without the effects of forecast traffic increases on the A34 and A40, which together will have increased from an AADT of 103,218 in 2013 to 120,252 in 2031 with the same "improvement package." This represents growth in traffic of 16.5%. It is hard to see that an increase in traffic on this scale will not result in an increase in pollution which would affect the Meadows SAC. • The HRA Screening Report's conclusion is based on the assumption that the County's Transport Plan will be implemented in full. There is no guarantee that this will be implemented in full until after the new housing is built, due to current funding issues for local authorities. • There are many assumptions in the Report about the likelihood of any effects on the Oxford Meadows SAC as a result of other planned projects in the area in combination with the housing developments proposed in the Cherwell Local Plan Review. This applies not just to air pollution, but to the effect on water levels and water quality, which are also vital to the continued health of the SAC. All of the HRA reports for other developments in the area apparently came to the conclusion that there would be no effect on the SAC as a result of that specific development. The most important local planned new development in the area is the Northern Gateway, which will lie very close to the southern end of the Cherwell plans. The likely effects of this development on traffic, and therefore air pollution, as well as possible effects on water quality on Oxford Meadows are apparently not likely to be any significant effects. (Table 5.1). This is all based on what developers are going to be asked to do – to take appropriate measures to protect the Oxford Meadows SAC. No-one knows what will happen in reality, so it would seem much more sensible to place new developments further away from internationally-recognised and protected areas. Cherwell District Council should not build on the Green Belt, nor in this close proximity to north Oxford."</p>								
<p>Changes Sought</p>				<p>Reasons for Participation</p> <p>The WCC represents people living in Wolvercote who are likely to be affected by this development. It is the responsibility of the Committee to safeguard the Commons in Wolvercote from any damage caused by building nearby.</p>

"This policy is not positively prepared, as it relies on an entirely incorrect assessment of the problems that will result from building on these areas of north Oxford. The increased traffic, congestion and pollution caused by building next to major roads has already been mentioned in the comments on PR4a. The residential areas proposed are on Green Belt land, and all the comments made previously about Policy PR3 apply. Building on the Green Belt is not sustainable. Development here will result in a high risk of harm to the Green Belt, according to the LUC Cherwell Green Belt Study (April 2017). To prevent the coalescence of Oxford and Kidlington these sites should not be developed. One of the purposes of the Green Belt is to prevent the coalescence of settlements. Development will harm the existing views of open countryside from Cutteslowe Park. If the North Oxford Golf Course is to be relocated it will take some years to develop a similar mature natural environment. In the meantime the proposed relocation will remove a recreational facility also valued for its contribution to biodiversity. There are other possible sites that have not been given sufficient consideration. This plan is also not justified because it is likely to fail to provide for the unmet housing need. The proximity to the station makes it far more likely that unaffordable expensive homes will be built for the benefit of commuters to London. The policy is not effective, as it is unlikely that development would result in a net biodiversity gain (as required under PR6a clause 11) because green belt land would be destroyed by development. The policy is not consistent with national Policy, as it proposes to build on Green Belt, when NPPF outlaws the use of such land to meet unmet housing need when this is accurately determined.

PR6a, PR6b, PR6c and PR7a: These site are all within one Parish – the Parish of Gosford and Water Eaton. Not once in any of the planning documentation does it mention these sites being within the Parish of Gosford and Water Eaton. It has been referred to as Land East or West of Oxford Road, North Oxford or South East of Kidlington. To be clear, all are within the Parish of Gosford and Water Eaton. We have an identity, we have a community and we deserve to be appropriately recognised! 4400 Homes in the Cherwell District: Of this 4400 figure 1410 is allocated in Gosford and Water Eaton Parish and represents 32% of the total. There are currently 676 dwellings within the Parish so these proposals for 1410 dwellings will lead to a 208% increase in number of houses in the Parish. This is a substantial figure which in my view needs to be fully tested in terms of its impact on the Parish and its residents. I believe that the figure is inappropriate given the impact on existing communities, the environment and transport infrastructure. Was this figure influence by the growth of the University of Oxford? If so, Brexit has already seen a down turn in EU research funding and thus a decline in the level of recruitment. Also the University has called for voluntary redundancies for centrally employed staff so employment growth is not set to grow any further (They are the largest employer in the County). An independent review should be undertaken to reassess the original housing figures.

Believes that Cherwell District Council would fight to preserve GB around Oxford to prevent the areas of PR6a, PR6b, PR8 and PR9 ever being developed. Moved to village of Yarnton to be part of a typical English village community but now appears that, if not stopped, developers will be given carte blanche to turn a crucial part of beautiful Oxfordshire countryside into yet another amalgamated housing estate. Traffic chaos will on A44 by expansion of Begbroke and Yarnton, combined with additional houses at Woodstock and ludicrous proposal to close Sandy Lane to through traffic, will have a devastating effect on the ability of residents and others to use the A44. Majority of people using A44 do not want to cycle to Oxford and the a super cycle way or bus lane would not alleviate the misery. Bitterly oppose the digging up of the historical North Oxford Golf Course (PR6b) for low density, highly priced housing aimed at London commuters – an act of vandalism to a wonderful local amenity which will not help resolve Oxford's low-cost housing shortage. It would be a tragedy for members and visitors, and local people who have access to wander through the beautiful parkland established over 110 years. Cherwell D.C. appear to offer an alternative site PR6c clearly knowing that it would not be acceptable to a golf course developer and would never be recreated. The questions around this proposal are:(a) Why does Cherwell D.C. not offer up PR6c for housing as it is only yards away from the existing club?(b) Why does the city not build its houses on the city's golf (Southfield) course – i.e. on the land it owns and which is ideally suited to higher density housing and in an area of greater need? Why doesn't the Council use its powers of compulsory purchase to acquire the under-used golf course at ST Edward's School or a number of the many under-used college sports grounds, reserved for the rich and academics? This once again shows the stranglehold the University has on Oxfordshire residents. For the reasons given above and the Representations made by the Begbroke & Yarnton Green Belt Campaign which are supported and adopted as part of my own representation in this document, the Plan cannot be changed to make it legally compliant or sound and should therefore not be submitted for Inspection.

Changes Sought

Reasons for Participation

Would like the Begbroke & Yarnton Green Belt Campaign to represent me at the Examination should it take place.

PR-C-1460	10/10/2017	Chris	Robins		Y	Y	N	Y

We urge you to oppose Cherwell’s Local Plan including the development of housing on North Oxford Golf Club. We support all the points made by Gill Davidson in her letter(summarised below). My husband, one of my sons and I are all members at North Oxford and obviously we are therefore biased against the plan but we fail to see any advantage in using this site over any other proposed site around Oxford. Surely there must be a huge benefit for the environment, air quality and public health in keeping this green space between Oxford and Kidlington which has existed as a Golf Club for 110 years. The development of housing on North Oxford GC would not contribute to the housing crisis because the housing would not be “affordable”. A golf course takes many years to establish and is costly to build from scratch – North Oxford GC does not have the funds to develop a new site and the proposed “sweetener” would be insufficient to make this possible. I fail to see how this Plan would contribute in a positive way to the interests of the community or to the national need for affordable housing. Please consider other options. Oxford and the surrounding countryside are protected from urban sprawl by the Green Belt. I urge you to recognise the importance of the Green Belt. Cherwell have not proven an exceptional need to build on the Green Belt. With such flimsy reasons for building on the Green Belt this would open the floodgates for uncontrolled development in the future. Do not be a person who allows this to happen. The Green Belt is vital to protect the character of the City and its surrounding countryside as well as providing a green lung that helps to maintain environmental quality. It is irrational to allow Oxford City Council to protect green field sites within the City where housing is needed, such as allotments, then to destroy the Green Belt and put neighbouring villages under pressure. North Oxford Golf Club Cherwell include in the plan the proposal to destroy North Oxford Golf Club which lies in the Kidlington gap, the most vulnerable part of the Green Belt. Far from solving the housing crisis it intends to build low density houses on this site. This is again is madness. I am dismayed by the fact that in the Cherwell Plan the golf course is treated just as another piece of land! The Club has been in existence for over 100 years. It is a beautiful green space supporting a rich environment. It is above all else a COMMUNITY of people. It provides recreation, social and employment for people of all ages. Some people have been members for over 50 years and many people rely upon the Club for their social connections. A number of the members are older and widowed, there are even some people with dementia who continue to play golf. These peoples’ lives will be destroyed. Surely it is important to encourage people to engage in recreational activities not destroy these opportunities. Where is the logic in proposing to replace the golf course on land at Freize farm just down the road? If necessary, why not build houses there instead of creating this mindless destruction of a beautiful site that helps so many people live fulfilling and healthy lives. A golf course cannot be made overnight but takes years of careful management to develop and a golf club is more than just a piece of land. It is quite clear that the university Colleges who own this land are driving this development to fill their coffers. I urge you to resist this dominance of the University landowners in Oxford’s planning. I am sure you will find overwhelming opposition to building on Green Belt land. Although I am opposed to building upon golf courses I would like to know why the golf course in the City is not being build on but the one in the Green Belt is? Traffic and Transport - Traffic congestion and associated deterioration in environmental quality is a worsening problem in Oxford and the surrounding area. Routes into North Oxford, through Woodstock and Banbury Roads are particularly bad and both these roads are in a shocking state of repair. These routes cannot sustain any further increase in traffic that would result from the 4,400 houses proposed in the Cherwell Plan. Whilst it is laudable to promote sustainable transport in the future, these problems need to be tackled first. If it is actually possible to encourage people out of their cars why not do it now? The £10 million spent on the Wolvercote and Cutteslowe roundabouts have made traffic problems worse. • Cherwell Council needs to put pressure upon Oxford City to review its own plan and to ensure that Oxford City uses its own land to alleviate the housing crisis and not to exacerbate it by focusing upon economic and commercial growth. They should also increase housing density. • Protect the Green Belt for the future. Do not be one of the people responsible for allowing this important resource to be devastated by development. • Recognise the need to develop infrastructure and transport before housing development and to resolve the current problems before making them worse. • Do not allow building on North Oxford Golf club. Recognise that the Club is a community of people not just a piece of land. Its development would have a negative impact on a number of peoples’ lives. • Challenge the dominance of the University and its Colleges in determining the planning for Oxford. • Above all focus upon sustainable development – do not destroy the character of the City and its surrounding villages. Sustainable development should consider, social, environmental as well as economic sustainability. • Cherwell’s plans are irresponsible and merely responding to pressure placed by the badly managed Oxford City.

The density of proposed housing on the golf course is 25 per ha and on the land to the east of the A4165 is 40 per ha. These proposed densities on land which is adjacent to Oxford Parkway Station are not likely to lead to developers building "affordable" houses since they will simply not be viable. Particularly since developers are likely to have to pay a premium on this land because of its location. Even if "affordable" houses are built they still won't actually be affordable to most people. These houses are also unlikely to provide homes to meet Oxford City Council's alleged "unmet housing need" because many of them are likely to be purchased by London commuters due to the proximity of the station. Underfunded public services are already struggling. For example, many GPs are struggling to cope, with long waits to get an appointment to see a doctor. Also, the hospitals have huge parking issues which the Councils believe can be solved by persuading people to use public transport, which won't work if you are ill, injured or elderly. This will all lead to more pressure on parking, more traffic coming into Oxford from the north and more pressures on existing healthcare resources. If the Council were serious about avoiding destruction of the Green Belt more houses could be built in Oxford if the City Council stopped reserving spare land for commercial use. Houses could be built at higher densities and some of the houses which are supposed to satisfy Oxford's "unmet need" could be sustainably built on other sites in Cherwell District, outside the Green Belt.

The proposed residential development sites PR6a & PR6b which lie in ‘The Kidlington Gap’ is important to Oxford & its setting. To build on this land will destroy the northern limb of Oxford’s green setting & will bring about the coalescence of Oxford with Kidlington, contrary to, arguably, the two most important purposes of the Oxford Green Belt. If land is needed close to Oxford for housing then in our view further more detailed consideration should be given to other less sensitive locations in both Green Belt terms and in terms of the special character of Oxford. In relation to the proposed development of the North Oxford Golf Club site (PR6b), we note that in paragraph 5.81, this site forms “an important buffer feature on the urban edge, limiting perception of the city, & helps to maintain the gap with Kidlington.” We also draw attention to the fact that this site matches the purposes of the Green Belt; proposals for its redevelopment should also meet the requirements of Paragraph 74 of NPPF, which states that “Existing open space, sports & recreational buildings & land, including playing fields, should not be built on unless: • an assessment has been undertaken which has clearly shown the open space, buildings or land to be surplus to requirements; • the loss resulting from the proposed development would be replaced by equivalent or better provision in terms of quantity and quality in a suitable location; and • the development is for alternative sports and recreational provision, the needs for which clearly outweigh the loss.” The Golf Club, which has 475 regularly playing members plus an additional 3,000 visitors each year, is clearly not surplus to requirements. We understand that Policy PR6c is intended to make available an alternative site at Frieze Farm; however we question whether this new, smaller, site could provide “equivalent or better provision in terms of quantity and quality” given that the existing site has been established for 100 years and in addition to the golf course itself, supports more than 25 different tree species, 55 bird species and pond life including the Great Crested Newt, a European Protected Species.

We consider that the sites allocated in policies PR6a and PR6b should be deleted. Consequential amendments to the Proposals Map would then be necessary. We also consider that CDC must make the changes necessary to remedy the failings of the plan in relation to the tests of soundness and the requirement to have regard to national planning policy.

Objection regarding the Green Belt in particular• Its purpose aims at preventing urban sprawl• If Green Belt boundaries are re-defined, the way to define those using physical features would need to be readily recognisable and permanent. Right now this is not the case on the area to the east of the A4165 (Oxford Road) because there are no such features and therefore no eastern boundary. There is a high risk to lead to unrestricted sprawl of large built up areas – which is contrary to the Green Belt purpose. In relation to the Golf Club proposal• The proposal is to relocate on a fairly flat and largely arable land which does not fit a golf course need• The current owners of the Frieze Farm manifested their approval to have the club relocated there• In addition it is not clear how this relocation will be fundedHousing needs• The proposal is focusing on being close to the Parkway Station: I strongly doubt this will fulfil the need to have affordable housing. • The developers are likely to have to pay a premium on this land because of its location • It is clear that these new houses are likely to be purchased by London commuters due to the proximity of the station. Traffic • We already have severe congestion in this area. What are the plans to improve the local road network? • Pollution wise, All of Oxford is an Air Quality Management Area because of the high levels of nitrogen dioxide. Cutteslowe Roundabout is a pollution hotspot where Nitrogen Dioxide levels regularly breach international guidelines. • The proposal will result in more traffic in an already congested zone and I have not seen any strategy to deal with the future situation. Cutteslowe Park. • There is at the moment no guarantee of the additional park land and that the arable land will stay as such in permanence either. • The Area is to be built on the Green Belt Land which first aims at preventing urban sprawl and neighbouring towns merging into one another. It also supports in preserving the setting and special character of Oxford.

4739	<p>Comments</p> <p>Policy PR6c proposes the possible development of a golf course on land at Frieze Farm to replace North Oxford Golf Club (NOGC), should the current golf club site be developed under Policy PR6b. The Frieze Farm land was Plot 39 in the November 2016 consultation. It is 29.95 hectares. Our response covers the PROCESS by which Cherwell District Council (CDC) has proposed the Frieze Farm land, as well as the content of the proposal.</p> <p>CONTENT - NOGC is a very compact golf course, covering a total of around 32 hectares. Careful management and maintenance over the past 110 years have enabled NOGC to retain a full, attractive and challenging 18 holes and at the same time be compliant with evolving requirements for safety and space. It would be completely infeasible to design a new 18-hole golf course on a site that was 10% smaller than the existing compact site. It is also our understanding that there may be an underground gas main across the land. The 29.95 hectares of the Frieze Farm site are therefore a complete non-starter for a golf course.</p> <p>PROCESS - CDC has made no effort to engage at all with NOGC on the question of possible replacement golfing facilities that would be "equivalent or better provision in terms of quantity and quality in a suitable location" (National Planning Policy Framework, para 74). The proposal to identify a specific replacement site was not mentioned at all in the November 2016 consultation, so NOGC has had no opportunity to prepare any arguments to present to CDC in writing or in public meetings. In plucking Policy PR6c out of thin air and seemingly at the last minute, CDC is falling well short of required procedural standards.</p>

This site seem to form a natural extension to the north side of Oxford and on sustainable transport routes into Oxford City Centre, but not to other employment centres in Oxford. It also appears to be in a sustainable location for Oxford Parkway Station which would actually encourage outward commuting from housing this area and could not be considered for the latter reason as likely to address Oxford's housing needs. A further concern about the development of the Oxford Golf Club is that the proposed density of development on this site is low with only 530 dwellings proposed on the 32 hectare site, if it cannot be developed at a substantially higher density it should be considered inappropriate on those grounds alone. With an allocation of 50% affordable housing provision this element is likely to be at a much higher density, potentially 40-50 dwellings per hectare and this leaves the market housing on large plots which are likely to be very expensive properties and not addressing any specific need, other perhaps for commuters to London from Oxford Parkway station. The Plan even states that houses will be on large plots, presumably the market housing, and this is inconsistent with the primeobjective of addressing Oxford's housing needs. The sites are located in one of the most vulnerable areas of the Green Belt and development on these two sites brings about a substantial erosion of the Green Belt in terms of moving towards coalescence between Oxford and Kidlington, in terms of national policy development in this area is not appropriate.

PR6b - Land to the West of Oxford Road, PR6a - Land East of Oxford Road & N Oxford golf course. NOGC is a well established & heavily used course. It is an attraction to the area & a valuable resource. It is proposed to make land (Site PR6c) available for a new course. It would cost circa £10m to build a new course & take many years for it to establish. This would be unsustainable, it will not happen & there is no evidence within the proposals that it will. It is inconceivable that anyone would try & establish a new golf course at that site given the nature of the land (entirely flat), it's too small & the upfront cost. It wasn't a golfer that drafted this plan! Along with PR6b it will produce some 1180 homes. For many years there has been enormous traffic congestion involving Cutteslowe, Kidlington, Wolvercote & the two Peartree Roundabouts. A further 1,000 vehicle movements at peak times will cause gridlock. This plan does not provide for any realistic proposals to alleviate traffic congestion. The proposal to provide a link from the A40 west of Wolvercote Roundabout to the small Peartree Roundabout, while it might relieve congestion at Wolvercote & Cutteslowe, will equally exacerbate it at the small Peartree & Kidlington Roundabouts. Perhaps though the siting of these developments will provide housing for commuters into London, via a walk to the railway station. However, that is not meeting Oxford's housing shortage, its alleviating London's.

We object to the development of 530 homes on this site. This is the site of the North Oxford Golf Course, which was identified in the Local Plan Part 1 as a key buffer between Gosford and Oxford. One of the main functions of the Oxford green belt is to constrict the growth/expansion of Oxford and to preserve green space, if this site is built on then the coalescence of Oxford and Gosford is more likely. The local plan is missing a strategic gap policy, if a strategic gap policy were in place here it would give more protection to the gap between Gosford and Oxford. Along with a major loss to the green belt, if the golf course is turned into a residential development there would be a major loss of bio diversity and habit. The golf course has a large number of trees and managed open space, we want assurances from that council that wildlife surveys and impact studies are carried out before this site is developed. Gosford has been identified as having a level of pollution that is hazardous to health, if the trees and green space is removed this will only exacerbate the situation. The council needs to have a plan in place to solve the pollution issue in Gosford before any development takes place. As stated in our response to Policy PR2, we support the social housing target of 50%. Given the location of this site and the proposed housing density we want to seek assurances that this target will be met and enforced. We also want to make sure that residents of Gosford and Kidlington are prioritised in the housing allocation process for the affordable housing on this site. The Oxford Golf Course has existed for 110 years and is a well-established golf course that is valued by all the residents. If this golf course was lost a key local amenity would be lost. We strongly object to the loss of this valuable local amenity for the building of houses. As stated in our response to Policy PR6c we strongly question the viability of providing a new golf course at Frieze Farm. It is not clear how the improvements to the infrastructure will benefit the residents of the Oxford Road. If this site is used for housing the traffic issues will only be exacerbated, the residents of Gosford are already in one of the most polluted areas of Cherwell District Council and measures need to be taken to ensure that this is resolved before development takes place and that it does not get worse.

North Oxford Golf Club is within the Green Belt and should remain as recreation use. It is not suitable for high density housing, and therefore would only provide fewer executive highly priced houses. The Golf Course is a mature, well maintained and very well attended facility and although an alternative site for a golf course has been suggested at Frieze Farm, which is not a suitable replacement, there has been no consultation with the owners, who actually would intend to build houses on their land.

Proposed Submission Plan - Policy PR6b - Land West of Oxford Road

PR-C-1521	09/10/2017	Alaric	Rose				N	N
4784	<p>Comments</p> <p>These sites would become urban extensions to Oxford, physically linked to existing communities. Development of these sites would significantly narrow the important open countryside gap between Oxford and Kidlington, erasing the perception that Kidlington is a separate village community, and bringing it into Oxford. The combination of both sites, either side of the A4260, provides a valued area of unlit open green space, and a distinct break in development between the City and surrounding villages, along a major entrance corridor to Oxford. Evidence does not demonstrate that exceptional circumstances exist to justify a release from the GB, where background studies confirm that both sites are of high importance to the integrity and function of the GB. (See 2017 GB Study) Development on either or both sites would aggravate existing local congestion and air quality issues, and adversely impact on movement between Oxford and Kidlington. The open character of the farmland east of Oxford Road forms part of the wider landscape which provides an important setting on the approach to Oxford. The landscape of the Golf Course is manmade, but long established, with significant tree belts and thickets. It is highly unlikely that these features could be saved unless development is restricted to a low density and larger dwellings. As a result, there would be an inefficient use of an important large area, and potential viability difficulties in accommodating 50% affordable housing. The net benefits do not outweigh the substantial harm to local character. The Golf Course is also a local recreation facility, and its loss is unlikely to be offset by a new Golf Course on a significantly smaller site at Frieze Farm contrary to NPPF p74 "Existing open space, sports and recreational buildings and land, including playing fields, should not be built on unless: <input type="checkbox"/> an assessment has been undertaken which has clearly shown the open space, buildings or land to be surplus to requirements <input type="checkbox"/> the loss resulting from the proposed development would be replaced by equivalent or better provision in terms of quantity and quality in a suitable location <input type="checkbox"/> the development is for alternative sports and recreational provision, the needs for which clearly outweigh the loss." Owners of the Frieze Farm land seem unaware of the plans to site a golf course there, and recently made a presentation to Kidlington Voice (made up of local businesses and parish/district councillors) proposing 600 houses on the site. (See representations on Policy PR6c)</p> <p>Changes Sought</p> <p>Retain GB Policy on all the above sites, and do not allocate for development.</p> <p>Reasons for Participation</p>							

PR-C-1529	08/10/2017	David	Stone				N	N	N	Y
5436	<p>Comments</p> <p>Cherwell District Council's Partial Review of it's Local Plan to 'Meet Oxford's Unmet Housing Need is UNSOUND.</p> <p>1. It's completely ignores the consequently impacts of Oxford City's new Local Plan, which is still in the "melting pot," and yet to be determined. It does not show a duty to co-operate, quite the reverse. This is significant because these two plans need to work together, not in isolation. Otherwise, Oxford and the setting of it's immediate northern communities could lose even more protected Greenbelt land than so far proposed. The sheer scale and amount of Greenbelt proposed for removal is breath-taking and totally in contravention of National Planning Policy Framework, Paragraphs 79 and 80, which define the need and purpose of Green Belts. Cherwell District Council are paying only "lip-service" to the detrimental consequences. This is not acceptable. To claim the amount to be removed is only repents 3% is a very misleading distortion, because the locations identified, PR6b, PR6a, PR6c, PR8 will completely "strangle" north Oxford and are unsustainable. The consequences of what clearly will be a very significant additional spread of - urban sprawl - have not been evaluated effectively. IT IS IMPORTANT TO RETAIN THE PRESENT GAP BETWEEN KIDLINGTON AND NORTH OXFORD. IT IS IMPORTANT TO STOP URBAN SPRAWL TO PRESERVE THE OPEN INTEGRITY AND SETTING OF CUTTESLOWE PARK.</p> <p>2. The Plan is NOT POSITIVELY PREPARED.As already mentioned, the number of houses on the sites mentioned above, are unsustainable, and contrary to Cherwell's own Summary Document page 4, they will do exactly the opposite to "limiting Oxford's Outward Growth." Indeed, this will, propel further 'ribbon development' in the future. The Plan is deeply "flawed," there is no mention of how it will safeguard and aid the needs, environment,and access to free-movement of present communities, adjoining the A4165, from the Cuttleslowe roundabout to the Kidlington roundabout by bus, car, cycle or on foot, the same applies across the Wolvercote area to the west end boundaries, where the ultimate impacts of development at the Northern Gateway, Barton Park (further to the east) is as yet unknown. To suggest it meets with the Country Council's Oxford Transport Strategy, is a misnomer, because this strategy is not sufficiently robust to deal with present excessive traffic congestion and health damaging pollution. Further more it is reliant on speculative funding, which may never arrive. TheLink road from Loop Farm A40 to A44, has been promised, but the funding is not in place. The congestion on the A40 is unsustainable and a northern link road is needed north of Kidlington to relieve the over-whelming volume of traffic. Travel from the Park and Ride designated for Eynsham, will be constrained by the reduced width of the bridge on the approach towards the Wolvercote roundabout, so traffic coming to Oxford will remain at a standstill. It is regrettable that the County Council policy has cut bus services from villages, whom also need access to employment, perhaps if some of these villages were a little larger, bus services might be more sustainable?According to Cherwell District Council's Local Plan Summary Document:-It will create balanced and sustainable communities? NO! It will overwhelm north Oxford and Kidlington.It will be supported by necessary infrastructure? NO! No concrete evidence to deal with existing infrastructure, let alone any new infrastructure. It will contribute to improving health and well-being? NO! It will increase detrimental health of existing residents in northern Cuttleslowe, north Oxford, Wolvercote and Kidlington. Traffic will be at gridlock all day, everyday, pollution all day, everyday at EXCESSIVE LEVELS in addition to present Oxford Air Quality, non- compliance. Elderly crossing the road or accessing the shops in our area will find it completely impossible.</p> <p>Changes Sought</p> <p>Remove the need for affordable housing, because, there is no way it will be affordable next to northOxford. Be honest with people, tell them their lives in Kidlington and north Oxford are to be blightedwith complete traffic gridlock and damaging vehicle pollution.Be legal by NOT destroying Greenbelt land next to Cuttleslowe Park, The Golf course, (an essentialrecreational resource currently), and stopping coalesce with Kidlington and north Oxford.</p> <p>Reasons for Participation</p> <p>Believes, with respect, the Inspector would much benefit from really listening seriously to ordinary people, regarding the very real experience and particularly genuine concerns of how these 'grand proposals' to 'illegally' destroy all the immediate greenbelt land around Kidlington and north Oxford, will have a completely devastating impact on the lives, health, well being and free movement of wellestablished existing communities.</p>									

Proposed Submission Plan - Policy PR6b - Land West of Oxford Road

PR-C-1535	10/10/2017	Layla	Vidal-Martin	Lichfields on behalf of Taylor Wimpey (Oxfordshire)	Y	Y	N	
-----------	------------	-------	--------------	---	---	---	---	--

5261

Comments

Taylor Wimpey (TW) considers the Submission Plan is not sound as it is not "justified" or "consistent with national policy". This is because : 1. CDC acknowledge (Submission Plan Executive Summary para XV) that "under national policy Green Belt boundaries should only be altered in exceptional circumstances through the preparation or review of a Local Plan". The Submission Plan (para 5.17) sets out why CDC consider that exceptional circumstances exist for the release of these sites from the Green Belt & their allocation for residential development. TW contend that CDC have not thoroughly explored "all other reasonable options" &, where they have sought to do so, there are flaws in their evidence base (regarding their assessments of sustainability, transportation & alternative development locations). They have not demonstrated the "exceptional circumstances" required for the proposed release of the sites identified in Table 1 from the Green Belt; 2. CDC's approach is predicated on an assumption that "Oxford's Housing Needs" form a bespoke & identifiable source of housing need. This conflicts with the recognition in the Oxfordshire SHMA (2014) (para 9.2) that "the SHMA identifies an Oxford-focused Housing Market Area which extends across much of the County, reflecting the economic influence of the City. The county still remains the most appropriate geography for analysis of housing markets in terms of the 'best fit' of local authority boundaries to a functional housing market area." More recently the Inspectors Report into the Vale of White Horse Local Plan emphasised that (para 45) "it is not the role of, or possible for, the plan to prescribe where people live and work;" and; 3. CDC compound this assumption (Policy 12a) by seeking to pursue a "separate five year housing land supply . . . For meeting Oxford's needs." This, in conjunction with proposals not to support Sites Not Allocated in the Partial Review (policy PR12b) are not consistent with the NPPF's presumption in favour of sustainable development & risk substantially harming housing delivery in the District in the coming years. Scope of response (See Detailed 4 Section Report). This response amplifies TW's concerns regarding the soundness of the Submission Plan, & their view that their site at Bloxham (Site PR35) forms a "reasonable option" for residential development prior to the release of the proposed allocations from the Green Belt. Specifically • Section 2: Summarises the appropriateness of residential development on the TW site; (Section 2 encloses * Sustainability Analysis by Calibro, * Residential Potential of Site, * Assessment of site against constraints, * SHLAA Analysis) • Section 3: Summarises TW's concerns regarding the inadequacy of the evidence base, whilst emphasising their support for the level of residential development proposed. This underpins their contention that the Submission Plan does not establish "exceptional circumstances" for the proposed release of these sites from the Green Belt; • Section 4. Sets out TW's comments on emerging policies and the changes that they consider are necessary to make the plan sound.

Changes Sought

The Plan proposes that around 55 % of the housing proposed should be targeted within the Green Belt (GB). Para 3.26 "approximately 14 % of Cherwell lies within the Oxford GB". Thus CDC need to demonstrate "exceptional circumstances" as to why this housing cannot be located within non GB locations comprising 86 % of the District. We do not consider that CDC have appropriately addressed "reasonable alternatives" & therefore cannot be considered to have demonstrated "exceptional circumstances" for the release of all of these sites from the GB. * Combined with the inadequacy of the evidence base, these concerns are amplified by the fact that the Submission Plan appears to prejudge the proposed development strategy irrespective of the evidence base. This is reflected in the fact that the (Executive Summary para xiv) states that the Plan "focusses development on a geographic area extending north from Oxford to south Kidlington, along the A44 corridor" & earlier iterations of the evidence base acknowledged that only sites within two of the nine areas of search have been assessed, * Conversely TW have established that the TW site at Bloxham does form a "reasonable alternative" for development within a sustainable location which is capable of meeting housing need. This is consistent with CDC's analysis within the HELAA (albeit that TW's technical analysis is that the site is capable of accommodating a higher level of residential development). * Accordingly the TW site should be allocated for residential development (under this or an additional policy) prior to CDC moving on to consider the need for any Green Belt release. * Without the amendments sought above our clients do not consider that the Submission Plan can be considered "sound", particularly with regards to being "positively prepared" or "justified."

Object to development on sites PR6a and PR6b. These sites are critical parts of the Oxford which prevent the coalescence of Kidlington and Oxford enabling each community to retain its own individual identity. It was to prevent this sprawl that the green belt was originally established. The proposed developments would leave such a small gap as to be completely useless in effectively separating the two communities. Kidlington would then become no more than an extension of Oxford. There is no evidence that this land should be released from the greenbelt on exceptional circumstances as studies have shown this land to be of high importance to the integrity and function of the greenbelt. The land occupied by the Golf Club makes a significant contribution to the green belt both in its landscape function and as a recreational activity. It should be noted that the Southfield golf course in Oxford has been rejected by the city council for a potential housing site. The plan proposes a very low density of houses which means it will be extremely difficult to achieve 50% affordable. It is clear that the position of this site will result in it being used for large, expansive houses attractive to commuters from London. This will do nothing to support the unmet housing need or to provide affordable housing for local people.

Object to the change of use of the land PR6b, the Oxford Golf Course, a mature and established recreational facility, used by hundreds of local people, an alternative for which would take the best part of 10 years to establish even if the £20 million funding could be raised. It is accessible in ways that most other golf courses in Oxfordshire are not as it is close to North Oxford and the settlements like Kidlington to the North and most importantly connected by a frequent bus service to these areas for the significant number of people using public transport. It contributes to the health and well being of the population. Also environmental reasons for retaining a mature parkland of this kind, e.g. the wildlife served by this habitat. Any housing development here is likely to be low density to preservation the trees and ponds on site, as a result this is the most likely site to generate expensive housing aimed at commuters to the London area because of the nearby station; the generated housing need rather than the unmet housing need.

Considers that both CDC statements "considered reasonable alternatives" and that it has demonstrated "clear, exceptional circumstances for development within the Oxford GB" are unjustified, non-compliant and unsound as a result. "Reasonable alternatives" must include sites which are within reasonable commutable distance of Oxford but avoid the coalescence of Oxford and Kidlington and northward urban sprawl of Oxford, as required by the NPPF. This must mean that, for example, the Shipton Quarry site is appropriate to meet Oxford's housing need. Similarly, building on both sides of Oxford Rd (policies PR6a and PR6b) clearly breaches the NPPF requirement that settlements must not coalesce. The alternative site at Frieze Way, currently allocated as a replacement golf course, would not have that effect. These alternatives have not been sufficiently considered. Oxford City Council has re-stated the legal definition of GB that among its principal characteristics are "openness" and "permanence" The Council is right to do so. This is not consistent with the assumptions in this plan. We do not believe an "exceptional need" has been demonstrated to justify the breach of GB principles in the way the plan does. The need could be accommodated with far less damage to the GB by better and different use of some of the allocated sites, and by more consistent consideration of alternatives. Without such consideration, the plan is procedurally non-compliant, legally non-compliant with definitions of GB, and unsound in its consideration of alternatives.

Changes Sought

A fundamental review of site allocations is required, acknowledging that Green Belt must remain open and permanent, as required by the NPPF. Alternative sites within "easy commutable distance of Oxford" which do not cause urban sprawl or coalescence should be more proactively considered.

Proposed Submission Plan - Policy PR6b - Land West of Oxford Road

PR-C-1560	09/10/2017	Aubrey	King					
4895	Comments							
Objects because: 1. The proposals are not consistent with National Policy. They do not take into account the detrimental effect that removing these large areas of GB will have. These proposals therefore fail to meet the test of soundness as defined in Para 182 of the NPPF. 2. Oxford's LP has not yet been prepared, so CDC's allocation of homes is premature, is not an appropriate strategy & is unjustified.

Objection to policies PR3, (The Oxford GB), PR6a (Land East of Oxford Road) and PR6b (Land West of Oxford Road). We are particularly concerned about the loss of the GB for PR6a as we are regular walkers on this land and aware of the wildlife and habitats that will be lost forever with the loss of this land. This land contains established grass snake colonies which will be destroyed. The grass snake is a UKBAP priority species of conservation concern ³⁹ . It is also protected under the Wildlife and Countryside Act, and the Bern Convention. We believe these proposals are not consistent with National Policy because they do not take into account the detrimental effect that removing these large areas of Green Belt will have. These proposals therefore fail to meet the test of soundness as defined in paragraph 182 of the NPPF.

PR-C-1589	01/10/2017	Professor Peter	Robbins					N	N
4960	Comments								
Object to proposal to build 530 homes on land to the west of Oxford Road, as it is not a justified or proven requirement and it is inconsistent with national policy. New Government methods for calculating housing need indicates 30% fewer houses required in Oxfordshire than previously forecast and the basis for housing allocations in Cherwell to accommodate its needs and the City of Oxford's requirements are overstated and invalid. Less land will be required to accommodate development and there are no exceptional circumstances to warrant the release of land from the Green Belt. Without prejudice to the above point, any proposals by Cherwell to release land from the Green Belt to meet the Oxford's needs are premature and unjustified given that the City of Oxford is in the process of reviewing its Local Plan and has not yet determined how much housing development can be accommodated on land within the City's boundaries. The land to the east of Oxford Road lies in the Kidlington Gap which forms a core component of the Green Belt separating Oxford and Kidlington. Development in this location would be in direct contravention of the fundamental aim of Green Belt policy which is to prevent urban sprawl by keeping land permanently open. The Kidlington Gap serves all the five purposes of the Green Belt and is strategically important. It is one of the clearest examples of an open area preventing the coalescence of settlements, checking unrestricted sprawl and safeguarding the setting and character of the historic city of Oxford. Its loss would fundamentally undermine the long established principles of Green Belt policy. The housing allocation proposed in Policy PR6b is also unsustainable, both on its own and in conjunction with the other planned releases of land from the Green Belt for housing. Infrastructure and services in and around Oxford are already under great strain. This applies to schools, hospitals/healthcare and roads. There is no capacity for major additional development. Oxford and the surrounding area are already beyond capacity in relation to infrastructure and services, and the further population pressure from the proposed developments is unacceptable. The road network in the immediate environs and the wider area is already highly congested. There are no clear, identified and funded proposals in the Plan to address these issues.

5071	Comments										
Not justified or effective in terms of SA Objective 10 (air pollution/road congestion). Whatever pedestrian, cycle or public transport provision is available, increased vehicular traffic will inevitably be associated with any development on this site (for personal reasons for many users e.g. disability, but also for delivery vehicles as more and more shopping is done online; drone use for delivery is being developed but unlikely to be an option here because of proximity 'London Oxford' (Kidlington) Airport). Climate change may well also increase the frequency and severity of adverse weather conditions making cycling etc. not only very unpleasant but also more often dangerous (e.g. in high wind). Also, no facilities or services are planned for this area. New residents will have to travel further to access essential services, facilities and employment opportunities. The prediction for the number of houses needed is questioned and is to be re-evaluated. It does not take into consideration the intrinsic value of the Green Belt for current and future generations and the Irreplaceable nature of the Green Belt. Development of the golf course, and then building a new golf course only a short distanced away, seems an astonishing waste of resources, particularly as the potential site for relocation of the golf course is green-field (agricultural) land. It is difficult to see how this development can be sustainable, given the lack of realistic plans for providing necessary infrastructure (e.g., transport, health care etc.) - and these are already significant, longstanding problems in Oxford and Oxfordshire. Not effective because is very likely to provide housing for London commuters rather than people employed in Oxford and local areas, and hence exacerbate many of the problems that Oxford and Oxfordshire already have such as traffic and very high demand on schools, healthcare etc. The considerable uncertainty over many financial and economic matters after Brexit mean that there is considerable uncertainty about whether the plan could be "deliverable over its period". Have seen little real evidence in recent years of effective co-operation between local authorities e.g. the lack of solution to the traffic problems in Oxford/Oxfordshire. Policy PR 6b is not consistent with the National Policy Framework (NPPF) for Green Belts.											
Changes Sought				Reasons for Participation							
This policy should be withdrawn completely. There are other alternatives for increased availability of housing including: i) use of land within Oxford city for housing instead of employment - Oxford city appears to be planning for employment to outstrip its housing need even more than is now the case and, in particular, there is already a major development (the Northern Gateway) very close to the area covered by Policy PR 6b. ii) Increased housing density on sites already used or designated for housing within Oxford city.

PR-C-1622	09/10/2017	Andrew	Hornsby-Smith	Kidlington & Yarnton Labour Party	N	Y	N	Y	
5535	Comments								
Kidlington & Yarnton Labour Party acknowledges the real housing need for Oxford. It is not convinced that the need is for 4,400 houses to be built in Cherwell District. It opposes the allocations in the vulnerable Kidlington gap (proposed policies 6a, 6b), which it believes will mainly be used by London commuters rather than meeting local need; and by the size of the allocation made between Kidlington and Yarnton (Policy PR8). It considers that there are less harmful alternatives available at Gosford (the area allocated for playing fields in Policy PR 7a and at Stratfield Farm, Policy 7b). It also believes that land at Frieze Farm and close to Loop Farm offers alternatives that are closer to the Northern Gateway employment site and less damaging to the open countryside between Yarnton and Kidlington. It considers that the North Oxford Golf course provides an important Green Belt friendly amenity, and that the need for additional playing fields could be met south of the Park & Ride. It is concerned to ensure that the County Council develops additional Park & Ride capacity east of Kidlington, where the traffic impact would be less damaging than an extension at Water Eaton Park & Ride. It would support the provision of a railway station on the Cherwell Valley line, but not at the proposed location at Sandy Lane, but closer to the airport, Langford Locks and Lyne Road (for the benefit of Kidlington's residents). We are concerned that at each of the main allocations, an unreasonably high level of land has been extracted from the Green Belt, which we believe will lead to future speculative development that will be difficult to resist.									
Changes Sought					Reasons for Participation				
Opposes policies 6a, 6b. There are less harmful alternatives available at Gosford (the area allocated for playing fields in Policy PR 7a and at Stratfield Farm, Policy 7b); and by the size of the allocation in policy PR8.					I have spoken as a platform speaker at three public meetings in Kidlington and Gosford. I made a substantial representation at the Issues and Options stage. As a former parish councillor, I represented Kidlington Parish Council at the North Oxford Area Action Plan examination in public, and likewise was invited to the Examination in Public of the Local Plan. I have an MSc in Transport Planning, so part of my representation covers that area. I also offer a distinctive perspective as a local resident, who agrees with the principle of a Green Belt review, but does not support the current planned site allocation. I have no interest in promoting a particular site, but only have some sympathy with those who would wish to preserve the Green Belt intact. I believe my views represent many in Kidlington who recognise the need for local housing, but see these plans as strategically unacceptable. My representation contains primary research evidence which I would wish to represent.

Proposed Submission Plan - Policy PR6c - Land at Frieze Farm

PR-C-0055	11/08/2017	Mr Ronald	Lloyd					N	
99	Comments								
The statements in CLPPR paras 5.78, 5.81, 5.82 suggesting that the merits of meeting housing numbers "far outweigh" those of a vibrant social facility - the Golf Course - appears to be another assertion without explanation. That the University has 'made the land available' raises questions as to why. There are of course obligations on councils to fulfil policy agreements, but Cherwell also has a responsibility to support NPPF guidelines (paras 73, 74) and its own vision (Executive Summary ix.4), and intelligently question the focus on housing targets in the City more than the County. Motives of the owners of land leased to NOGC will, one assumes, have been examined. It would not reflect well on the Council if it emerged that cash proceeds of the sale were judged more important than fulfilling a primary responsibility of the University to help sustain the health and social wellbeing of people who live in the City, and even the County, in its management of an extensive portfolio of land. It is a responsibility of Councils to challenge the University to uphold the interests of local people. The suggestion that land at Frieze Farm could be a location for NOGC has been rejected by many on grounds of inadequate size, and unattainable levels of spending to create a course in any way comparable with current one. It also questions the logic of invading greenbelt by digging up the golf course and moving it a short distance, when the case for not building houses at Frieze Farm has not been made. However much hard work has gone into producing the land allocation plan it behoves the Planning Department to give proper consideration to new information and alternative views - especially of local people whose health and wellbeing are directly affected.

Cannot understand the reasoning behind the proposed relocation of our well established and well used golf course. The logical proposal would be to leave the golf course on its existing site and put the housing that was destined for the golf course on to land at PR6c, the site reserved for the replacement golf course. It would be nice to think that the existing mature parkland golf course will be there for future generations to enjoy.

Comments

As stated in our response to Policy PR6b the Parish Council is opposed to development on the North Oxford Golf Course and therefore to a replacement course being provided on this site. There is very little detail provided on this proposal which is of major concern. Indeed, the size of the site is not stated and there is no evidence provided to confirm that the site is large enough or suitable for a replacement course. It is not clear how the site would be accessed or what constraints exist to influence any future development brief. Whilst the Parish is opposed to the development of Green Belt, if development does have to go ahead within the Parish then we suggest that further consideration could be given to the suitability of Frieze Farm for housing. The site could link to the North Oxford Gateway and to existing road infrastructure. It could also help support the underused Stratfield Brake recreational facility.

Changes Sought

This allocation should be removed from the Plan together with the proposal for development of the North Oxford Golf Course. Further consideration could be given to the potential to use of the Frieze Farm site for housing.

Reasons for Participation

The Parish Council would wish to take part in order to explain the potential impact of the proposed development on local communities and why this should be better reflected in the draft vision.

The site "Land at Frieze Farm" includes the Grade II listed Frieze Farmhouse. As the Council will be aware, paragraph 126 of the National Planning Policy Framework requires local planning authorities to recognise that heritage assets are an "irreplaceable resource" and "conserve them in a manner appropriate to their significance". Paragraph 129 notes that the significance of a heritage asset can be affected by development affecting its setting. Historic England therefore considers that Policy PR6c should include a requirement for the retention of the Frieze Farmhouse and a suitable setting. As written, the policy does not do this and so, in Historic England's view, does not conform with the Framework and thus is not sound.

Changes Sought

Policy PR6c should include a requirement for the retention of the Grade II listed Frieze Farmhouse and an appropriate sensitive setting in any golf course proposal.

Objection on Protection of GB. The National Planning Policy Framework spells out the importance of the GB. North Oxford Golf Club is almost certainly the most important piece of the most critical part of the whole GB. It is especially critical for supporting the purposes of GB in preventing the merging of communities with subsequent urban sprawl and loss of identity. For years it has managed to separate Kidlington from North Oxford and preserve the special character of the uniquely historical city of Oxford from Kidlington, Gosford, Yarnton and Begbroke. Apart from being a golf course it also a parkland, contributing to the aims of GB as an attractive landscape supporting quite a rich biodiversity of fauna and flora characteristic of the countryside. The Proposed Submission does not comply with nationally accepted purposes of GB as laid down in the legal framework of the National Planning Policy Framework

Changes Sought

The National Planning Policy Framework is very specific about the importance of providing appropriate Recreational facilities for communities. Recreation itself is crucial for physical, mental and social health. North Oxford Golf Club performs a vital role in these respects which would collapse with the demise of the club. It is a thriving club and, importantly, open to all. There are 475 members, most of whom play regularly; additionally, around 3,000 visitors play here every year – in addition to similar numbers who visit the club for social and other (including e.g., Pilates) purposes. Club members come from all ages and walks of life and regard this club rather like we might regard our family. At one extreme, our junior section fosters an interest in sport from an early age. At the other extreme, our many senior members consider this club to be their life blood. Some of these have led active sporting lives but may no longer be able to pursue the more physically demanding sports. Take away this club, and you remove from all age groups the health benefits - mental and physical. Many members have expressed how important it has been to be able to rely upon it for their recreational and social life. Approving this site for development would directly contradict all that the Government and your own Council have been saying about the importance of recreation and would not be compliant with the National Planning Policy Framework.

I believe that submitting NOGC as an exception site for housing in the Green Belt is wrong, both morally and legally and cannot be justified. The case for protecting it needs to be stated clearly at the examination.

Proposed Submission Plan - Policy PR6c - Land at Frieze Farm

PR-C-0417	11/09/2017	Chris	Pack		N	Y	N	Y
475	Comments				Changes Sought			
<p>Critically, the National Planning Framework (para 74 under 'Health') says that sports facilities should not be built on unless equivalent or greater provision is made elsewhere. The proposed Submission Plan has put forward a field known as Frieze Farm as a suitable replacement course. This was suggested after the initial consultation and rather late in the day-almost as an afterthought. The Planning Officers talked to the Colleges/Agents about Frieze Farm but it didn't talk to the Golf Club about this possible replacement. If they had they would have found that this site would be totally unsuitable as a replacement. No assessment has been made to show whether or not the North Oxford golf course is surplus to requirements. But the very fact that they have offered a replacement would indicate that the planners believe that a golf course in this immediate area is in fact needed and in demand. I have already shown that North Oxford Golf Club is a thriving club with a good sized membership and is making a high quality contribution to recreational and social needs. Furthermore, Frieze Farm is simply an area of agricultural land used mainly for cereals. It is an almost empty, fairly flat featureless area of land with few if any trees and no natural features to build upon in designing an interesting new course equal in quality to the present North Oxford course. There are no trees to compensate for the loss of a beautiful parkland course of numerous species. The northern edge is traversed by electricity pylons. Access is by a small entrance and track off the very busy A44 and very close to the A44/ Frieze Way roundabout. A new 18 hole course could not be fitted into the smaller Frieze Farm site and it is doubtful that it could satisfy Health & Safety regulation. There is nothing in the submission about how it would be provided and who would pay. The conclusion must be, therefore, that whatever the other objections, any attempt to develop North Oxford Golf Club for housing or any commercial purpose would not be compliant with the National Planning Policy Framework and could not be justified in law.</p>					Reasons for Participation

<p>Oxford's housing need in large part arises from the concentration of jobs in the City area – roughly twice as many as houses to serve them. The City Council continues to pursue a reckless policy of reserving huge areas for employment within the city boundary without the housing to go with them. Their only solution is to annex GB land for the housing that their policy demands regardless of the impact that this will have upon the principles and purposes of the GB, recreational needs and upon the merging of communities. The only reason for putting forward GB sites between Oxford and Kidlington is because they are close to Oxford and the landowners are more than willing to release the land for their own profit. It is worth noting that Cherwell is the only District concentrating on such a small area of massive and unsustainable urban extension. It is unlikely that the golf club site will do much to help local housing need. Because it says it is a nice area, Cherwell suggests building at half the density of other sites and it would be an estate including many large houses and commuters to Marylebone. For any proposed social housing on the site it is worth noting that prices on the largest estate built in Oxford for a generation at Barton, just a few miles from the golf course, will start at £299,950 for one-bedroom and £360,000 for two-bedroom apartments. Hardly affordable!</p>					Reasons for Participation

<p>Objection made to Policy PR 6c to reserve land at Frieze Farm for the potential construction of a new golf course. Why cannot this land be deemed suitable for housing. The land is bounded by the A 44 and Frieze Way which affords good access to Oxford and the remainder of the County. The construction of a new golf course on a farm site would take several years to be playable and cost several million pounds, which C.D.C apparently do not consider is a cost to them.</p>					Reasons for Participation

<p>Object to Policies PR6b and PR6c and contend that the proposed submission plan is unsound, inadequately researched and, as a result, not justified at this stage. Policy PR6c makes provision for a new golf course, but from the land available at Frieze Farm the replacement would be a lesser facility than provided by NOGC which is a tightly designed 18-hole course with virtually no provision for highly desirable safe practice areas. Anything provided at Frieze Farm would be substantially less acceptable than the cleverly-developed and well-kept facility that is NOGC. If land has to be taken from the Green Belt for housing why not use Frieze Farm? NOGC is clearly the most important part of the Green Belt separating the village of Kidlington and the creeping urban expansion of Oxford City. We realize that much work has been put in to produce a very lengthy document but the brief comments on the subject in paragraph 21 of PR6b on page 99 clearly demonstrate that the proposed plan as it relates to NOGC has not been adequately examined on the ground and the ramifications of destroying a 110-ten year old and very well used golf course in the Green Belt have not been given adequate consideration.</p>					Reasons for Participation

1189	Comments				Changes Sought			
<p>1. The sites are on Oxford GB. GB's remain Govt. policy. Land between N Oxford & Kidlington is unique as it fully accords with the 5 GB purposes as per para 80 of the NPPF. GB's are designated to manage the location of new development, they would not exist were there not pressure to develop on them. Such pressures cannot be considered exceptional circumstances. As per para 84 of the NPPF there's no evidence of alternatives being considered i.e.. using allocated, undeveloped employment land in Oxford for housing & promoting employment growth outside Oxford, creating a better balance between where people live & work. Have the LA's co-operated in looking at alternatives? This land being GB also complies with para 81 of the NPPF. It is used for sport & recreation, is biodiverse & visually pleasing. 2. The identified housing needs rely on an outdated study which has never been independently assessed. Revised Govt. figures indicate a reduced requirement. It now seems there is no need to build on GB. Even if there is a need on this scale, it is a poor location to meet Oxford's needs, being adjacent to a London commuter rail line & in the expensive part of Oxford. The private housing will likely attract London commuters & won't provide affordable homes for people with jobs in Oxford. It is evident that many house buyers in N Oxford are those moving from London & continuing to work there. 3. Unsound in allocating NOGC for housing & not taking into account NPPF para 74. Understand NOGC weren't involved in discussions prior to this. NPPF Para 74 says existing sports facilities shouldn't be built on unless it assessed as surplus to requirements or replaced by equivalent or better provision. No such assessment has been made. NOGC, a well established & thriving club with 475 members & 3000 visitors p.a. Its clubhouse is used by the wider community. As a flat course, it is especially suitable for seniors. NOGC is needed. It is not sound practice to propose allocating land for housing & to carry out a retrospective assessment of the need for a golf course. We need this space for the health & wellbeing of locals. The land at Frieze Farm as a replacement GC, appears to be an afterthought. It is too small. Building a new GC on a similar sized site to NOGC would cause H & S issues unless mature trees were in all the right places. No indication shown on how it could be financed or developed. Apparently the landowners have stated to NOGC that they have no intention of providing another GC or providing the level of funds that would be needed. The mature landscape central to the current GC couldn't be replaced in reasonable time & therefore the 2nd criterion of para 74 cannot be met.</p>					Reasons for Participation			
					The housing allocations in the Kidlington Gap should be removed from the Plan & the Green Belt designation of the Killington Gap retained.			

Proposed Submission Plan - Policy PR6c - Land at Frieze Farm

4. NOGC is a biodiverse landscape. Containing different tree species & 55 recorded bird species & pond life. The NPPF states this is important for health & wellbeing. It is much valued by locals. Land N of Cutteslowe Park is also important in this respect, changing the open nature the Parks. It is a well used facility. 5. The development will put further pressures on transport & other infrastructures. Seemingly funding bids for infrastructure are being made to cater for growth, but funding has not been secured. Growth shouldn't be approved until infrastructure can be provided & it's demonstrated that any proposed measures will be effective. Traffic in the N Oxford area is already severe. Work on the 2 roundabouts hasn't improved this. More housing will add to congestion & air pollution. Oxford has good public transport provision, but not all who work/live locally will use this. Increased housing & employment levels will add to congestion with its health implications. It will reduce Oxfords' attractiveness as a business location & place to live. Putting more housing & employment in this area cannot be viewed as sustainable. There are also severe existing pressures on other services including health and education.

Changes Sought

The housing allocations in the Kidlington Gap should be removed from the Plan & the Green Belt designation of the Kidlington Gap retained.

1. The sites are in the Oxford GB. GBs remain Government policy. The Kidlington Gap land is in GB and fully meets all 5 of the purposes of GB set out in para. 80 of the NPPF. GB's are designed to manage the location of new development and would not exist were there not pressure to develop within them. The existence of such pressures cannot therefore be considered exceptional circumstances. There is no evidence (as per para 84 National Planning Policy Framework) that serious consideration and cooperation by local authorities has been given to alternatives such as using allocated and underdeveloped employment land in Oxford for housing and promoting employment growth outside Oxford to create a better balance between where people live and work. This land is also used positively for outdoor sport, recreations and has value for biodiversity and visual amenity. 2. The identified need is based on an outdated study and revised Government figures indicate a much reduced requirement. This is a poor location to meet Oxford's needs as it is adjacent to a commuter rail line to London and in the most expensive part of Oxford for housing. Therefore will likely cater for London commuters rather than provide the required affordable housing. 3. Para. 74 of the National Planning Policy Framework says that existing sports facilities should not be built on unless an assessment is undertaken showing it is surplus to requirements of replaced by equivalent or better provision. No such assessment as been made. It is understood that the Golf Club were not involved in discussions prior to the allocation. The Golf Club is well established, thriving club whose facilities are also used by the wider community. As a flat course it is particularly suitable for senior members. This facility is clearly needed for the health and well-being of residents. The allocated land at Frieze Farm as a replacement golf course is seemingly an afterthought with no indication of how it could be developed or financed. The mature landscape central to the current course could not be replaced within a reasonable timescale. This creates major health and safety issues and does not meet the second criterion of Para 74. 4. The golf course is valuable in terms of biodiversity and landscape, containing 25 different tree species and 55 regularly records bird species as well as pond life. There would also be a negative impact on the open nature of the land to the north of Cutteslowe Park. 5. Further pressures will be put on transport and other infrastructures. No funding has been secured for further infrastructure and growth should not be approved until it can be demonstrated that any proposed measures will be effective. It has been reported that the recent works on the 2 roundabouts have not improved queue times. More housing will add to congestion and air pollution, put pressure on health and education services, as well as reduce the attractiveness of Oxford. It is difficult to understand that putting more housing and employment in this area can be viewed as sustainable.

Changes Sought

Housing allocations in Kidlington Gap should be removed from the Plan and GP designation of Kidlington Gap retained.

GB is designed to protect from overdevelopment. If PR6 and /or PR7 are permitted, Kidlington, Yarnton and Begbroke will become victims of urban sprawl and become a suburb of Oxford. This GB should not be sacrificed as it will irrevocably damage the countryside, wildlife and biodiversity of North Oxfordshire, reducing quality of life for local residents.

1. Proposed density means expensive 'commuter' houses will be built not meeting Oxford City Council's unmet housing needs. 2. Golf course has been in existence for over a century and matches all purposes of GB set out in Government's National Planning Framework. 3. This land and natural habitat is well cared for and should remain as a green lung between Oxford and Kidlington. 4. The National Planning Framework (Para4 under "Health") states that sports facilities should not be build on. Not a viable proposition to relocate this to Frieze Farm - takes decades to mature and establish a customer base. With keen competition no business case could be made that would justify the setup investment costs. 5. The course is extremely well played with nearly 500m members and over 3000 visitors annually. Contrast this to football pitches which only get used twice a week. 6. Is also a well used community facility for various functions. 7. The club is a business employing some 20 staff and contributing to the local economy. 8. Important countryside cultivated with over 25 tree species specially planted and maintained. Includes strategic water features creating habitat for many flora and fauna with some 55 bird species ranging from gold crests to buzzards. 9. Traffic flows already horrendous and due to worsen with Northern Gateway development. Even more houses will make congestion unbearable. 10. Many under utilised areas around Oxford could be developed - why take away land that is serving a useful purpose for the community.

Changes Sought

Take North Oxford Golf course (PR6b) out of the Plan completely

The NPPF states that one of its Core Planning Principles (para 17) is to take account of the different roles and character of different areas, promoting the vitality of our main urban areas, protecting the GBs around them, and noting (at para 79) that the fundamental aim of GB policy is to prevent urban sprawl by keeping land permanently open. Paragraph 83 states that once established, GB boundaries should only be altered in exceptional circumstances, through the preparation or review of the Local Plan. The recent Housing White Paper, clarifies what the steps before a finding of "exceptional circumstances" should be, when local authorities can demonstrate that they have fully examined all other reasonable options for meeting their identified housing requirements. Amongst these "reasonable options" which Local Authorities must demonstrate they have considered before there can be the "exceptional circumstances" required for review/release of GB land are: • making effective use of suitable brownfield sites and the opportunities offered by estate regeneration; • the potential offered by land which is currently underused, including surplus public sector land where appropriate; • optimising the proposed density of development; and • exploring whether other authorities can help to meet some of the identified development requirement. Although not yet law, the White Paper illustrates how high the hurdle for exceptional circumstances must be, given that the NPPF's "fundamental aim is keeping GB land permanently open", and the need to show there are no "reasonable options" before considering GB release.

Changes Sought

In CPRE's view, it is not possible to 'tweak' the current document in order to make it sound and therefore the current version of the Plan should be rejected. CDC should re-visit the process, as and when the final numbers for Oxford have been examined, adopting higher densities and prioritising protection for the GB.

Reasons for Participation

CPRE Oxfordshire represents a wide membership across the County, including many parish councils and local organisations, and seeks to influence development to protect and enhance the countryside. As one of the founders of the Oxford GB, we have considerable knowledge about its origins, purpose and ongoing relevance.

GB: CONCLUSIONS: 1. Government Policy and the Public Interest both require the GB to be permanent unless truly exceptional circumstances necessitate consideration of release. 2. Oxford unmet need is not an exceptional circumstance, firstly because it has not been defined and secondly because there are ample reasonable alternatives to accommodate it. 3. The LUC GB study was conducted on flawed principles and should be given little weight. 4. Cherwell have cited no other exceptional circumstances which hold any water – and their primary arguments – proximity to Oxford – is in fact a key argument for GB retention rather than release. 5. If at some future time an Oxford “unmet need” has been shown to exist and satisfactorily quantified, and if that requires any allocation to Cherwell, there are alternatives available to the District other than releasing GB land and therefore none should be released.

THE GB STUDY No great weight should be given to the LUC GB Study. Its purpose was not to determine whether any of the GB made no, or an insignificant contribution to, the purposes of the GB since clearly all of the GB land contributes, and the loss of any would be harmful. Rather, in its own words, the GB Study has been commissioned by Cherwell District Council to assess the suitability of the strategic sites being promoted for development against the five purposes of the GB. In other words the sites had been pre-selected, as we showed above, in the face of GB policy, and targeting the most fragile point in the entire Oxford GB. LUC continue The considerations that will determine the most appropriate scenario, or combination of scenarios, will largely relate to the existing or potential environmental qualities and value of land, and to the sustainability of residential development. This will enable Cherwell District Council to consider whether there are ‘exceptional circumstances’ (under paragraph 83, NPPF) to justify altering GB boundaries through the Local Plan process, i.e. to enable existing GB land to contribute to meeting Oxford’s unmet housing need. That is, value is not primarily judged against GB purposes at all, but against environmental ones, and the sustainability of the land for housing development. LUC found that Release of areas identified as making a low contribution to GB could provide only 5.8ha of potential development land 4.13). Release of areas identified as making a low or low-moderate contribution to GB could, subject to consideration of cumulative impacts, provide 34.6ha of potential development land(4.14). Release of areas identified as making a low, low-moderate or moderate contribution to GB could, subject to consideration of cumulative impacts, provide 166.7ha of potential development land (4.15). Although as noted above, the judgment was largely not on GB grounds, moderate harm was considered acceptable in order to release a larger amount of land. LUC acknowledge that release of fragile GB 4.16 GB that occupies only a small/narrow area between separate urban settlements will tend to rate highly in terms of its role in preventing settlement coalescence. This exactly describes the land chosen for release; but LUC went on. However, if environmental assessment determines that this land lacks significant value then a case could be made for accepting the coalescence, or near-coalescence, of settlements in order to maximise the scale of development in one area. That is the, subjectively assessed low environmental value trumps urban sprawl and severe coalescence, the two founding principles of the GB. Further, they have targeted the very point at which the GB is already narrowest – the Kidlington Gap between Kidlington and Oxford – for release, directly creating the coalescence of two distinct settlements (It is material that Oxford itself is proposing to breach that same area from the South with a proposed development of St Frideswide Farm). The sites concerned are all at the exact point in the GB where coalescence of settlements (Oxford and Kidlington) is most threatened, with the built areas separated presently by a few fields. The proposed GB reviews, together with the release of the Parkway Station and Park and Ride would effectively merge the two settlements. Although Kidlington (population 13,000, 2011) is statutorily a village, it is larger than many towns, notably Thame (11,600) and Henley (11,700) in Oxfordshire.

DUTY TO CO-OPERATE - The SHMA is explicit that Authorities are not expected to meet OAN (Objectively Assessed Need) in full if e.g. it would necessitate Green Belt development. It has been the unforced choice – not the requirement – of Oxfordshire’s Councils to agree to meet the SHMA need in full despite wide swathes of Oxfordshire being GB and AONB. It is therefore incumbent on Councils to take on each others’ “unmet need” if it would otherwise require GB land to be released. As shown, Oxford’s unmet need is very far indeed from being quantified or crystallised, but, if it were, it would be the duty of other Councils to assist Cherwell in meeting its part of that need without releasing GB land, not least by assisting Cherwell to understand how to do so within its own borders. There is no evidence that this has been attempted. Finally, the new OAN calculation proposed by the Government during the consultation defines “need” as the figure shown in the Government’s own tables on household projections. This is overlaid in the proposed calculation with an arbitrary (and ill-conceived) uplift intended to reduce house prices. It is also accepted that local authorities may if they wish further inflate their housing targets to provide further economic growth than that already included in the government’s base tables. However, it is submitted that these latter two elements cannot be defined as “need” and neighbouring Councils have no duty to co-operate in meeting them.

OXFORD'S 'UNMET NEED' AND REASONABLE OPTIONS FOR MEETING IT (continuation)

c. Even if there were no reasonable alternative sites, and even if densities on allocated non-GB sites could not be increased, the release of GB land could be substantially reduced. The total GB land proposed to be released is 264 ha. 10 hectares is proposed to be released for the station and Park and Ride, which already exist on GB land. There is no obvious rationale for the release. The net GB land to be released for housing is 254 hectares However within this area only 153 hectares is proposed to be actually used for housing, with the rest being allocated for sport, nature, agriculture etc., all legitimate GB uses. On the residual land 3990 houses are proposed at a density of 26 dph (although an average of 34 is claimed in the Plan). If build densities were increased to urban levels – the Council’s stated Policy is to treat these incursions for Oxford’s unmet need as urban extensions – then 70 houses per hectare, utilising only 37% of the land would be appropriate. This would require only 57 hectares, all of which could be comfortably accommodated on PR8, the least damaging in terms of coalescence and the Kidlington Gap of all these sites.

TRANSPORT - THE PROPOSED NEW STATION AT KIDLINGTON/BEGBROKE. The initial proposals for the development made great emphasis on the provision of a new railway station “between Kidlington & Begbroke”, the implication being that this station would cater for the needs of residents to reach their places of employment in Oxford and that therefore the housing plans are more sustainable. The relevant railway line is that from Oxford and the south to the midlands and north via Banbury. It is intensively used with half hourly cross-country trains and frequent freights including regular intermodal trains from and to Southampton docks. There is also a local service of 12 trains per day each way (9 on Saturdays, 3 on summer Sundays, none on winter Sundays) calling at the intermediate stations at Tackley, Heyford & Kings Sutton. North of Aynho Junction, as far as Banbury, these trains all have to interwork with the three trains per hour on the Chiltern Line to and from London Marylebone. There are presently no proposals for a new station on this line, nor are there likely to be. Neither Network Rail, Oxfordshire County Council nor any train operator has any aspiration for a station here. It does not feature on any relevant route study or strategic proposal. For example, we note that no such plans have been included in the Oxfordshire Infrastructure Strategy, signed off by the Oxfordshire Growth Board in September 2017, which claims to 'provide a view of emerging development and infrastructure requirements to support growth from 2016 to 2031 and beyond'. This includes a description of numerous rail improvement projects both pre and post 2031, as well as listing infrastructure priorities for the A40 Corridor, but gives no mention at all to a new station in this area. Journey time for the local trains is 30 minutes and they only just slot in between the other services; in other words, a train leaving Banbury soon after the previous southbound train only arrives in Oxford just before the next one. To add an extra stop on the route would make this pathing issue even more tricky. It would be possible to accelerate the journey time with electric trains which have better acceleration and deceleration rates and thus allow an extra stop in the same timetable but although the previous government did announce a scheme to electrify this railway as part of its “electric spine” in 2012, this has been deferred and there is at present no prospect of this happening. Great Western Railway (GWR) operate the local trains and they do have an aspiration to increase the frequency to a train every 90 minutes across the whole day but it is only an aspiration, not a timed commitment. Even that frequency is not really sufficient to attract substantial numbers of commuters to use rail on a daily basis. For that a half hourly service level is, these days, a basic requirement. The station at Oxford Parkway, opened in October 2015 and connected to Oxford station in December 2016 has in any case now become the railhead for Kidlington, swathes of north Oxford, Headington and surrounding villages. The rail industry as a whole is thus utterly unlikely to wish to commit to another new station “between Kidlington and Begbroke”.

Changes Sought

References to the station should be removed from the Plan as it is not deliverable within the lifetime of the Plan and therefore is not effective. Any element of development that is dependent on this station being delivered should be removed from the Plan as unsound. Plans for additional housing in north Oxford/south Kidlington should be put on hold until the Oxford to Cambridge Expressway route is settled, the East West railway is re-opened and the full extent of the expansion of Bicester is agreed, with its possible new transport infrastructure.

Reasons for Participation

CPRE Oxfordshire represents a wide membership across the County, including many parish councils and local organisations, and seeks to influence development to protect and enhance the countryside. We would like to attend the oral part of the Examination.

OXFORD'S 'UNMET NEED' AND REASONABLE OPTIONS FOR MEETING IT. 1. Is the Oxford unmet need real or realistic? Cherwell argues that an “exceptional circumstance” exists in the Inspector approving the adopted plan having added a requirement for “a formal commitment from the Council, together with other relevant Councils, to undertake a joint review of the boundaries of the Oxford GB, “once the specific level of help required by the city of Oxford to meet its needs that cannot reasonably be met within its present confines, IS FULLY AND ACCURATELY DEFINED”. (Our emphasis) It was our view at the time that the Inspector could have exceeded his remit as there was no evidence before him suggesting that further development in Cherwell was impossible without breaching the GB, nor of the precise quantum of Oxford’s unmet need (if any existed) or the capacity of other Districts to accommodate it. However it is relevant that he proposed a Review only AFTER Oxford’s unmet needs were fully and accurately defined. They still are not, and a review is therefore premature even on the Inspector’s terms. According to the City Council in a report to Scrutiny Committee (12th June), the agreed unmet need allocation, is used as a working basis for current local plans in Oxfordshire which will be updated when the Oxford Local Plan is completed. In other words it is presently neither fully nor accurately defined, as the Inspector had required it should be. Oxford has only now started its own Local Plan process to reflect the Oxfordshire Strategic Housing Market Assessment (SHMA), three years after it was published, and long after Oxfordshire’s other Districts. Its draft Local Plan gives no figure for unmet need, or for the City’s capacity to meet it. However, taking Oxford’s overall “need” to be for 28,000 houses over the plan period, CPRE argues that at least 26,000 could be provided inside the City itself by switching employment sites – the use of which for employment would only exacerbate the housing need the City Council describes as being its Number One priority to overcome – to housing, and increasing densities on all sites to compact city levels. That is even before the outcome of a review of further sites to which the City refers in its plan. (See Oxford/Densities paper attached) Consequently the Inspector’s condition, that Oxford’s unmet need should first be “fully and accurately defined” is nowhere near met, and, further, there would be little or no “unmet need” for other Authorities to consider. In any event, a “working assumption” of need cannot be an exceptional circumstance justifying GB release, especially when it is likely to be extremely inaccurate. Finally, during the course of this consultation the Government has proposed a new OAN formula to replace the SHMA (on which all the Review numbers are based). This new formula, if adopted, would reduce Oxford’s total annual housing need from a SHMA mid-point of 1400 per annum to 746, that is by 47%. This would in turn reduce “unmet need” by two thirds, even before taking into account that the City should use employment land to satisfy existing housing need rather than exacerbate it and build at densities appropriate to cities. The new OAN is at the very least further evidence that the level of unmet need this review seeks to satisfy is neither fully nor accurately defined.

Changes Sought

In CPRE's view, it is not possible to 'tweak' the current document in order to make it sound and therefore the current version of the Plan should be rejected. Cherwell District Council should re-visit the process, as and when the final numbers for Oxford have been examined, adopting higher densities and prioritising protection for the Green Belt.

Comments

The primary duty of a Local Authority must be to the people it represents. In an independent market research exercise, with a very high sample size, conducted across Oxfordshire by Alpha Research of Thame in April 2015 respondents were specifically prompted that there was considered to be a need for more housing, and of the extent and purpose of the GB, before being asked whether the GB, should be developed for that, or indeed any other, purpose. Their answers were therefore fully informed by recognition of housing need. 76% of respondents considered that the GB should remain undeveloped; 66% considered housebuilding the greatest threat. Although polls have something of a tarnished reputation, this has resulted from situations where marginal inaccuracy can lead to wholly incorrect forecasts in narrow binary decisions. In this case the sample size was so large and so representative, and the outcome so conclusive, that whilst there might be up to a 5% margin of error, this would not be capable of affecting the result, or its scale. Further, this is in line with previous polls, adding to confidence that it accurately reflects public opinion. The same exercise showed that in North Oxfordshire – closely correlating to Cherwell - the outcome was hardly less conclusive, with 71% of respondents supporting the proposition that the GB should not be developed for housing or any other purpose. This was despite years of constant media campaigning by the City Council that Oxford has “no option” but to spread over the GB unless people are to go homeless (a wholly fallacious claim). Despite the City’s campaigning, 73% of non-homeowners, and 74% of C2DEs agreed that the GB should not be developed for housing. In other words, the people who would be expected to have been the most responsive to the City’s campaigning rejected GB development almost as strongly as the general population. Indeed 73% of the City Council’s own constituents rejected it. There can be no doubt that the people both of Oxfordshire, and of Cherwell itself, reject GB development in principle, and this must be given great weight in any consideration of doing so.

Changes Sought

In CPRE's view, it is not possible to 'tweak' the current document in order to make it sound and therefore the current version of the Plan should be rejected. Proposed Submission Plan - Policy PR6c - Land at Frieze Farm

PR-C-0562 1421	05/10/2017	Helen	Marshall	CPRE Oxfordshire	N	Y
<p>Comments</p> <p>CPRE is opposed in principle to the release of GB land – as is national planning policy. A very strong case therefore has to be made to establish the exceptional circumstances required for the release of GB land. The Cherwell Plan goes nowhere near making such a case; Cherwell’s electorate strongly supports retention of GB land as does Government Policy. There are a number of reasonable alternatives. The houses to satisfy Oxford’s ‘unmet need’ targeted at the Cherwell GB could not only, on the Council’s own admission, be sustainably built elsewhere in the District on other sites, or by increasing the density of build on existing sites, but also, at least to a considerable extent, within the City itself. Failing that, if there were genuinely no available option other than release of GB, national policy indicates that Cherwell would be expected to decline to do so and require other Councils to co-operate in meeting the unmet need Cherwell itself cannot satisfy. Additionally, during the course of the consultation, the Government published a revised Objectively Assessed Need (OAN) calculation, showing a total Oxford need of half that identified by the Oxfordshire Strategic Housing Market Assessment (SHMA). If adopted the new formula would make it certain that Oxford could accommodate all of its own housing need, and therefore there would be no “unmet need” for Cherwell to meet. The proposed OAN also reduces Cherwell’s own need by a third, meaning that even if there were any Oxford unmet need to be covered, it could be met within the surplus the new OAN creates in Cherwell’s adopted plan. This review is therefore premature and should be suspended at least until new “need” figures are crystallised.</p>

<p>Comments</p> <p>Government Policy requires development in the GB to be the very last resort, only to be considered if there is no alternative. Cherwell has stood that Policy on its head by making building in the GB its very first choice, rejecting what it accepts were reasonable alternatives. Cherwell says that building as close to Oxford as possible trumps all other considerations. Since Oxford is surrounded by GB, that has led them to select not just GB sites, but the very closest GB sites to the City, at the Kidlington Gap, where the GB is most fragile, just a few fields wide. It is those few fields the Council plans to build on, flatly contrary to GB policy, and the known wishes of the overwhelming majority of its electorate. If the Council gets away with this plan, it will also, again contrary to GB policy, cause the merger of Yarnton and Begbroke into Kidlington; expose Kidlington itself to being engulfed by the predatory City Council which has sought to subsume it for at least thirty years; and also, by declaring that proximity to Oxford is itself an exceptional reason to build on the GB which surrounds the City, fundamentally undermine its very purpose, risking opening the whole GB to development.</p>

<p>Comments</p> <p>OXFORD'S 'UNMET NEED' AND REASONABLE OPTIONS FOR MEETING IT. 2. If Oxford’s unmet need were realistic could it be met elsewhere in Cherwell than in GB? a. Yes, it could be met on non-GB sites. Cherwell found that the required number of houses could sustainably be built elsewhere, outside the GB, at Junction9 M40, Arncoth, Bicester and surrounding area, Upper Heyford, Junction 10 M40, Banbury and surrounding area. They rejected these alternative sites because they might upset the evolution of the current adopted plan – although why competent planners would not be able to deal with that problem, if real, is not apparent; because there might be shortfalls, although why these should be greater for Oxford’s unmet need than for Cherwell’s own need was not explained; and more dispersed options provided less opportunity for strategic infrastructure investment (e.g. transport and education), although why this would be the case for, for example, Upper Heyford which is already targeted and developed, or for other centres which already benefit from services, is not explained. The overriding reason for their rejection however was clearly that they were less well situated (than the GB sites) to build communities associated with Oxford, to assist with the delivery of the Oxford Transport Strategy, to provide affordable transport options, and more likely to involve commuting. It is significant that even GB sites like the previously developed Shipton Quarry, were rejected as Development here would relate to Shipton-on-Cherwell, not Oxford. Therefore the parcel plays no role with respect to this purpose (Oxford’s unmet need). Simply put, this amounts to saying that all reasonable alternatives were unacceptable because they were not in the GB, or, if they were in the GB, were too far from Oxford. It is an argument that urban sprawl into the GB is justified by the fact that only GB sprawl could (by definition) be close enough to the City; in other words it is an argument not just for nibbling at the GB but for undermining its core purpose. It is clearly unacceptable in its own terms. Further, the proposed new OAN calculation would reduce Cherwell’s own need by 33%. The effect of this would be that 33% of the housing trajectory in the Council’s adopted plan would be superfluous to Cherwell’s own requirement and therefore available to satisfy any unmet needs of neighbouring authorities that might arise. b. The unmet need could be met by marginal density increases on generally low density allocated sites. Policy BSC2 in the adopted plan states New housing should be provided on net developable areas at a density of at least 30 dwellings per hectare unless there are justifiable planning reasons for lower density development. Yet Policy Bicester 1 allocates 380 hectares to just 6,000 homes which is 16 houses per hectare. Assuming for these purposes that 30 dwellings per hectare is the average across the District, the sites to which the present 22,800 homes are allocated would need to increase build density by just 5%, to 36%, to accommodate all of the “working assumption” of Oxford’s unmet need. This would still be less than half the density of Central Paris or Barcelona, or Islington in London. Higher density build would also mean smaller houses, of which 63% of Oxfordshire’s SHMA need is comprised, and thus better meet public requirements. High densities also reduce the need for car travel and create a stronger sense of community.</p>

Proposed Submission Plan - Policy PR6c - Land at Frieze Farm

PR-C-0660 1633	07/10/2017	Carol	Matheson						N
Comments									
The land at Frieze farm could be used for houses if it is necessary to have housing on the GB. Frieze Farm is on the edge of the new business development area in north Oxford giving easy access between the two, and preventing a 110 year sporting facility being destroyed.

PR-C-0711 1780	08/10/2017	Gary	Lancaster						N
Comments									
The proposal to build housing on the area of North Oxford Golf Course and move it to the Frieze Farm area has apparently not been agreed with the owners of the Course. The farmland, featureless and surrounded by pylons, is unsuitable for a golf course, and in fact already has a plan for further housing, including a link bridge over Frieze Way between the two new areas of housing. It is hard to escape the conclusion that despite what the plan states, the actual result will be these two areas of housing, rather than the promised one, and the amenity of a golf course will be lost.

PR-C-0717 1803	01/10/2017	Pierre	Pazgrat						
Comments									
• The proposal is to relocate on a fairly flat and largely arable land which does not fit a golf course need. • The current owners of the Frieze Farm have not given their approval to have the club relocated there. It is not clear how this relocation will be funded.

Does not consider the Partial Review of Cherwell Local Plan to pass the 'tests' of soundness, in terms of being positively prepared, justified, effective and consistent with National policy. This is because the Partial Review does not make reference to the need for C2 units (residential institutions, including care homes), nor to care/nursing homes more generally. Policy PR2 deals with C3 uses only. Further limitations on current local planning policies (adopted and emerging) are outlined in the accompanying Note prepared by Lichfield's. In terms of National policy, the Government's National Planning Practice web-based resource in the section on 'Housing and economic development needs assessments' provides guidance to the plan-making process on how to deal with 'housing for older people'. Failure of the Partial Review to meet the care needs of the District will clearly have significant implications on housing options for Cherwell's increasingly ageing population. The accompanying Note prepared by Lichfield's quantifies that like the rest of the UK there is a clear need for care homes in Cherwell. Examples are found in the Oxfordshire SHMA, which projects the number of people with dementia and mobility issues in Cherwell and Oxfordshire will roughly double by 2031 (end of this Plan period). The latest DCLG figures project the number of people in Cherwell living in communal establishments to double by 2031. The Lichfield's' Note sets out the care need for Cherwell as follows: • In Cherwell District itself, the latest DCLG projections show growth in the number of people over age 75 living in communal establishments of 565, i.e. this is the number of care home bed spaces needed (2011 – 2031). However, as the Council are planning for housing growth well in excess of demographic trends, which will lead the population growth in excess of demographic trends, 565 bed spaces should be considered a minimum to plan for up to 2031. • In terms of Oxford City's need, the DCLG projections suggest a need for a further 305 bed spaces by 2031, and (as with its housing need) a proportion of this may well go unmet. Cherwell will inevitably import some of Oxford's care home needs, as those additional residents (who otherwise would have lived in Oxford) age and move into care homes. This further justifies the use of the 565 figure for Cherwell as a minimum, which may need to be increased if unmet care home need for Oxford is identified. Lichfield's' Note on Care Home Need provided.									
Changes Sought					Reasons for Participation				
Greenlight asserts that it in order for this clear 'need' for care bed spaces to be met in Cherwell over the Plan period, specific policies are required to:(a) Set the delivery of this need over the Plan period as a requirement - this requirement being a minimum of 565 bed spaces by 2031; and(b) To identify and allocate sites to accommodate this need in the Plan and on the Policies Map.To this end, Greenlights' land interest at Skimmingdish Lane, Bicester, which is currently subject to planning application 17/01428/F, provides an opportune site to be allocated for a 64-bed care home; thus accommodating some 11.3% of the bed space requirement (based on a total requirement of 565 bed spaces) over the Plan period (by 2031).To demonstrate how the site at Skimmingdish Lane, Bicester can accommodate a 64-bed care home, and therefore to assist in informing its allocation as a care home site in the Plan, enclosed with this letter is the site location plan and proposed site layout plan, both of which form part of the current planning application on the site.					The matters raised in these representations are of a strategic nature to the plan.

Proposed Submission Plan - Policy PR6c - Land at Frieze Farm

PR-C-0788	10/10/2017	Andy	Garraway	Turnberry on behalf of Exeter College	Y	Y	N	Y
2025	Comments							
<p>The allocation of site PR6c for the potential construction of a golf course, should this be required as a result of the development of Land to the West of Oxford Road under Policy PR6b, is not justified by the evidence base and is an inefficient use of a sustainably-located parcel of land, which is well-related to Oxford. Despite being stated by Cherwell District Council to be unsuitable for allocation as housing in its justification for policy PR6c, the Sustainability Appraisal demonstrates that the site performs equally with sites PR6b and PR7a, and better than sites PR9 and PR10 in terms of impacts on Oxford City, and equal to PR6a, PR6b, PR9 and PR10 in terms of impacts on Cherwell District. Supporting documents provided. Helps demonstrate that the allocation of site PR6c for housing would support the delivery of much-needed new housing in a location that is well-related to Oxford and existing sustainable transport links, limits impacts on existing communities, has limited environmental and heritage constraints, is clearly contained by site boundaries preventing future piecemeal encroachment of the Green Belt, is deliverable in the short- to medium-term and can deliver the infrastructure necessary to support development. The site has the capacity to provide for 800 new homes to help meet Oxford's housing needs in a way that adheres to the vision and objectives of the Proposed Submission Plan. Delivery of infrastructure projects listed. The allocation of site PR6c as a residential development would ensure that the Proposed Submission Plan is seeking to focus development in sustainable locations which are spatially relevant to Oxford and which facilitate sustainable transport choices, in line with its stated vision and objectives. Furthermore, the site has the potential to assist in the delivery of a number of strategic transport interventions which will enable the Proposed Submission Plan to effectively achieve its aims without leading to significant impacts on the local highway network.</p>

<p>Although this site is proposed to remain as designated GB the development of the site for a golf course still has the potential to significantly alter its character. The requirement for the site to prepare a Development Brief is therefore welcomed. The design and layout of the golf course should consider the visual impact when viewed from the canal corridor. The potential for miss-hit balls also needs to be considered in the layout to minimise the requirement for fencing/netting and potential injury to canal users. The proposals should include a mature landscaped buffer with appropriate maintenance and management plans in place.</p>								
Changes Sought				Reasons for Participation				
The Trust are happy to engage further in the preparation of the Development Brief but consider the Policy should be amended o acknowledge the site's location adjacent to the Oxford Canal and the need for development to consider and respond appropriately to the canal side setting.

<p>The site at Frieze Farm is unsuitable for a new golf course site as it is smaller in nature. Not aware that CDC has assessed the suitability of this site in terms of size for an 18 hole replacement course. Understand that CDC have not approached the landowner regarding using the land as a new golf course and the landowner still has aspirations to develop this site, with proposals for 600 houses with its own services. Any replacement golf club would take 10 years to mature. It is unrealistic to expect that the landowner will co-operate in the relocation of the golf course. If the landowner put pressure on the council to withdraw the site from the Green Belt under provisions of PR12b it would open up this land for further unnecessary housing development.</p>

<p>Loss of Cherwell District Local Amenities - The development of North Oxford Golf Club and adjacent land on the opposite side of the Banbury Road will only result in multimillion pound houses for Oxford and London commuters. The impractical alternative proposed site at Frieze Farm is smaller, flat featureless agricultural land and within a mile of the current North Oxford Golf Club; who will pay for it to be moved to an unviable site? A new golf course requires a significant investment and take years to develop to an acceptable condition. Why can this alternative site not be considered for housing? Has the Oxford Golf Course been scheduled for development to meet Oxford city's housing needs, if not why not? Its acreage is significantly larger than North Oxford Golf Club and not within the Green Belt area.</p>

Object to PR6 (c) Frieze Farm. The proposed Submission Plan has put forward a field known as Frieze Farm as a suitable replacement course. This was suggested after the initial consultation and rather late in the day-almost as an afterthought. NPPF Para 74 says that sports facilities should not be built on unless equivalent or greater provision is made elsewhere. The owners/agents were not consulted on Frieze Farm's inclusion as a potential site for a replacement golf course prior to recommending the Plan to Members, nor was there discussion with the Golf Club on the suitability of the site. The site is totally unsuitable as a replacement golf course; it is smaller in effective area, and is a flat featureless field with no trees or natural features that form the basis for a new course commensurate with North Oxford. It has been estimated that to design and build a new golf course of this size from scratch, commensurate with the quality of NOGC would cost in the region of £10m and would take 8-10 years. During that period the club would lose most of its members, its long history, the recreational benefits, especially for the older golfers and a beautiful, landscaped course. Kidlington would lose much of the important gap that separates it from Oxford. No assessment has been made to show whether or not the North Oxford golf course is surplus to requirements. But the very fact that they have offered a replacement would indicate that the planners believe that a golf course in this immediate area is in fact needed and in demand. NOGC is a thriving club with a good sized membership and is making a high quality contribution to recreational and social needs. Reference is made to the owner's proposals for a 600 house "new village" development linking with sites PR6(a) and PR6(b). The CLPPR rejects the site in principle for housing but does not refer to the proposal; the revised plan is misleading residents. PR6© is unsound in terms of not being compliant with NPPF para 74 in terms of the provision of an alternative golf course "...equivalent or better. In terms of quantity and quality in a suitable location." It is not positively prepared in terms of 1. not revealing for the purposes of consulting with the public that a proposal has been drawn up on behalf of Exeter College-one of the Landlords for NOGC-for building a 600 house "New Village" on Frieze Farm linked to the sites West and East of the Oxford Road. Therefore providing the possibility of the complete obliteration of Green belt between Kidlington and Oxford. 2. Lack of research by Officers into the potential for Frieze Farm as a suitable replacement for NOGC and 3. Lack of consultation by officers with both North Oxford Golf Club and with the owners of Frieze Farm.

Objection to Policy PR6b, to build houses on the site of the North Oxford Golf Club and the related proposal to build a replacement golf course at Frieze Farm (PR6c). The land occupied by the North Oxford Golf Club is a mature and beautiful arboretum where people play golf and where people can walk using the designated footpath. The land has been cared for by the Club for 110 years. There are hundreds of mature trees and shrubs of many different types which also provide a rich wildlife habitat. In my opinion, it would be unforgivable environmental vandalism to tear all this up to build houses (530, I believe) when houses can be built in areas where such destruction is not needed. The related proposal to build a replacement golf course on the featureless land at Frieze Farm is, frankly, nonsense. There is absolutely no way that an equivalent golf course could be built on that land. It might be possible to build a flat and uninteresting 9 or 12 hole course but nobody would want to play on such a course. Also object on infrastructure grounds. I cannot imagine how the Banbury Road could cope with more traffic in this area. In summary, on environmental and infrastructure grounds, these related proposals are unsound, not positively prepared and not justified.

Objects to any proposal for a new golf course on Frieze Farm land as shown on PR6c as unacceptable. It would be a further erosion of the Green Belt. Such a new golf course site is unlikely to be any larger than the existing North Oxford golf course, or be able to meet its high standards. It is considered that the shape of terrain and contours are unsuitable, without defacing the existing landscape and the site and its landscaping is unlikely to be comparable with the existing north Oxford golfing course. Such a new golf course would require highway access along with a large car park at an inappropriate location. Also a large club house and golf shop, which will all be further inappropriate development in the Green Belt. A map/diagram is provided, suggesting alternative development areas & boundaries.

Strongly objects to developing on N Oxford Golf Course (NOGC). It is outside but abuts Oxford CC's boundary. It provides golfing facilities for Oxford and Cherwell CC's residents. Golf is played by males, females, from pre-teens up to 90 yrs. It is good exercise & enjoyable & can be competitive. It is good for the health & fitness of those in their later years. NOGC has a good membership, particularly for the over 50's. We appreciate that there is high demand for housing in the Oxford area, but cannot see the sense in removing a successful recreational facility which could be used by the new home dwellers, & other housing sites already with PP. We recognise that PR6b has been suggested as an alternative location, but this is flawed. It makes no sense developing on an existing facility & set a new one up 1 mile away. This will cost in excess of £10 million & will take decades to establish on of the same quality. Also the new course would need to be available before the existing course is closed for development to ensure continuity. That means there would be no new completed housing at NOGC for a long time.

I commented at the earlier stage on the need to ensure that additional housing is so organised as to avoid simply becoming London overspill. For that reason too I would use Areas 6a-c as parkland and if need be part of the existing Cutteslowe Park for housing - it is particularly close to the JR hospital. I also commented on the need to direct employment outside Oxford and to locate housing accordingly.

If as I believe the loop for this part of the GB is not substantiated then these areas should be zoned for use as London-style community park, with purpose facilities for public use. The area is easily accessible from several directions by public transport, and it would be far preferable for this to be properly landscaped as a continuing "Green Lung" of benefit to both Oxford (which could contribute to the cost) and Cherwell. The Golf Course is in effect already landscaped. If the City still believes that it needs additional housing I suggest that part of Cutteslowe Park is developed and the funds released used to provide a new and larger community facility. The existing Cutteslowe Park is not easily accessed from Kidlington, and the additional extension proposed of little use to any except Cutteslowe residents and gives little protection to the GB/"Green Lung".

Positive Preparation - There has been an apparent failure to stress-test the alleged requirements of Oxford City Council. This is the subject of widespread local criticism, and the latest downgrading of the Government's own estimates of housing requirements undermines the whole basis of Cherwell's proposals and Oxford's demands. We need to start again with a process geared to the current Government figures as an absolute maximum. Damage to the GB just seems to have been assumed as a given, whilst it is not. Justification - The proposals cannot be justified as matters stand, as the figures have not been adequately tested and may no longer be current.

The policies are unsound because they fail to meet the real needs of people for low cost (rented or for sale) houses that deal with urgent housing problems. Housing to meet local needs could be achieved by building smaller units at higher density and using far less land. Houses for sale at so-called 'affordable' prices, and houses at market prices, do not meet the needs of the teachers, nurses, public sector workers and young families. Build some houses, but make all of them of the type that people need - not what developers and landowners desire.

Proposed Submission Plan - Policy PR6c - Land at Frieze Farm

PR-C-1398	10/10/2017	Ben	Simpson	WYG on behalf of Bonnar Allan Ltd	Y	Y	N	N
------------------	------------	-----	---------	-----------------------------------	---	---	---	---

Comments

The representations are submitted on behalf of my client Bonnar Allan with regard to their proposals at New Alchester. The land is identified in the Vision document attached to these representations and will include up to 7,200 new market & affordable homes, primary & secondary schools, creation of a 240 acre country park & watersports centre & the potential to incorporate a new Park & Ride site with connection to the railway line south of Bicester by a new railway station. Our comments on the PSP are confined to issues of soundness. A summary of the alternative Options A to I that CDC considered at the last stage of the Plan is set out at paragraph 2.12. For the reasons we set out in our representations to that stage, we consider that the CDC's proposed approach of allocating land to the north of Oxford & within the Green Belt (GB) around Kidlington as set out in PR6c is flawed, & that the Partial Review does not pass the test of soundness. The PSP is not Justified as in our view it does not represent the most appropriate strategy for meeting Oxford's un-met housing needs. The logic that appears to underlie the PSP is in essence that the closer the proximity of the required housing to the City, the more sustainable it will be. This logic ignores the fact that there would be better prospects of residents travelling into Oxford as well as the major employment locations in the Science Vale by public transport including by rail from New Alchester. The preferred locations around Kidlington will increase congestion on the highway network & will result in the loss of GB & lead to coalescence between Kidlington, Begbroke & Yarnton, whereas the proposals at New Alchester are located beyond the GB. As we make clear in the Vision document, our proposals can be delivered in a phased manner & there are no impediments to early delivery. The scale of the proposals at New Alchester allows it to meet both the identified needs of Oxford City as well as an element of the future needs of Cherwell District, & in so doing, we recognise the journey that this proposal involves.

Changes Sought

We consider that the PSP should direct a majority of the un-met need to New Alchester which constitutes a more sustainable & justified location for the new homes needed both to meet the City's un-met needs as well as future need within Cherwell District. The PSP should be re-drawn to allocate land at New Alchester in place of the proposed allocations in the Green Belt (GB) around Kidlington. New Alchester can provide a highly sustainable location for the much needed development, at a location outside the GB & on the railway line into Oxford. The development would facilitate creation of a new railway station at New Alchester which would encourage people to travel to Oxford City & also other employment centres within the Science Vale by public transport.

Comments

The CDC Local Plan Part 1 and the NPPF (Para 34) support a strategy whereby growth should be directed towards the most sustainable locations, encouraging travel by non-car modes. The County Council's Oxford Transport Strategy is also clear in its objectives for achieving a meaningful modal shift for those travelling into Oxford City away from the private car and towards public transport. In this context, the justification for the Council's approach in pursuing growth at sites such as PR7, PR8, PR9 and PR10 which propose concentrated levels of development (circa 3,220 dwellings) is unclear. The development as proposed is concentrated along the already very congested A44 corridor and around Kidlington which is a known congestion hotspot. While some development in this area may be appropriate, the concentration of sites will lead to significant issues of congestion given that the sustainable modes being pursued (with the exception of cycling) are all road based Park & Ride, Bus and RTP routes. The Sustainability Appraisal (June 2017) recognises that new development around the Kidlington area 'may increase congestion but the Local Plan Part 1 Partial Review allocates new housing sites that encourage the use of sustainable transport and are allocated following consideration of their impacts on transport patterns through the SA'. Notwithstanding assessment of the proposed allocations through the SA, the impact of congestion has not been sufficiently weighed in the balance when considering reasonable alternative sites and a broader distribution across the District. For example, locating development on the rail network at locations such as Islip would assist in removing some traffic movement from the road entirely. It's recognised that there is the potential for a new railway station at Yarnton, but this is a long term strategy with no immediate proposals for delivery. CDC does not consider this necessary infrastructure to support the proposals and simply consider it a potential future benefit. Therefore, all focus for this plan period under this strategy will be on the road, contrary to the conclusions of the Sustainability Appraisal and to which our client objects. Overall, the various transport evidence base documents prepared to date have not robustly assessed the opportunities to improve rail usage despite current work being undertaken to develop the East-West rail link. East-West rail Phase 1 works saw an upgrade of Islip station which is on the new Oxford – London Marylebone line. The Western Section of East-West Rail will also see the introduction of three new passenger services, for direct services within the region and connections to national mainline services. These services are due to start operating in the early 2020s. Despite this significant rail investment, no development is proposed within Islip which is just a 3 minute train ride from Oxford Parkway, 7 minutes from Bicester, 11 minutes from Oxford and under an hour to London Marylebone. Our client is of the view that Policy PR4a (and by association policies PR6-PR10) focuses too strongly on improvements to and mitigations for the highway network rather than considering options for removing traffic from the road network and towards more sustainable modes such as rail. The proposed locations for the additional housing are known areas of congestion and the transport proposals do not go far enough to solve the existing issues, with the proposed levels of development in this location likely to compound matters further. Our client objects to these policies which will lead to increased levels of congestion and the strategy will not achieve a step change in modal split. Soundness - The evidence base prepared to support Policy PR4a (and by association policies PR6-PR10) is not sufficiently robust to justify the approach to allocate this level of housing in an area of existing traffic congestion without an effective strategy to achieve a step change in modal split. The Council needs to justify its approach for focusing so much of the new development in one area which is already known to suffer issues relating to road congestion. Rail has not been considered as a reasonable alternative within the evidence base documents and consequently the draft plan is not justified. The draft Plan is not Effective, as it focuses too much of the housing requirement in one, focused area. The Plan is not consistent with national Policy as the proposed development is not located where the need to travel will be minimised and the use of sustainable transport modes can be maximised.

Changes Sought

The evidence base has failed to sufficiently consider investment in rail / exploitation of existing rail assets despite recent investment in the East-West Rail project. A thorough exploration of the reasonable alternatives is required. More detailed consideration needs to be given to the potential for locating new development at Islip within proximity to the existing railway station. This location would be sustainable and would support the existing local community. It has been demonstrated that there are no overriding physical constraints, in terms of highway impact, flooding and ecology, to the development of this land.

Reasons for Participation

Due to the complexity of the matters discussed in relation to PR4a

Comments

KPC consider that the suggested use of this land as a replacement high quality rural character Golf Course is unrealistic, as the site is too small. It is also a fairly featureless open parcel of land, where formal golf course development would require years of maturity in planting to deliver a scheme compatible with the open character of the Green Belt. The site remains in the Green Belt, and this is strongly supported. If the site was removed from the Green Belt under pressure from other participants/site owners, once the idea of a new golf course is abandoned, alternative development could follow under the provisions of Policy PR12b. Indeed, site promoters have recently publicised a proposal for a 600 unit housing scheme on the site, and appear to have no interest in providing a new Golf Course. This proposal for a golf course appears to be ill-founded. 6.04 The location of this site means that it would be a freestanding housing development, integrated with neither Oxford or Kidlington, and probably of insufficient scale to fund on site community provision. This would be an unsustainable form of development, encouraging travel to essential infrastructure such as schools, contrary to the spatial strategy of the adopted Local Plan. KPC supports the retention of Green Belt designation on PR6c.

Changes Sought

Request Deletion of policy support for Golf Course use

Reasons for Participation

KPC is an elected body, representing the views of a large number of people in the part of the District which will be most affected by the proposed alteration to the Development Plan. In addition to having a statutory role in the Planning process, the Parish Council has an in depth understanding of the local area where new development is proposed, and is well placed to contribute to the Local Plan process. It is essential for the KPC to be actively involved in the Examination, in order to be able to represent local views, fully respond to submissions made by others, and to address any modifications discussed in advance of the Examiners report.

Proposed Submission Plan - Policy PR6c - Land at Frieze Farm

Comments

Sport England welcomes the Council's references throughout the document and policies requiring developers to include open space, outdoor sport and recreation. However, Sport England is concerned that the Council has yet to publish its evidence base in relation to playing fields and outdoor sports provision and built sports facilities. The Council will need to ensure that all of the new development contributes towards indoor and outdoor sports facilities in the District. The Council's evidence base will help frame this work. Sport England also recommends that the Council includes a requirement for applicants to include a statement demonstrating how their development has met the 10 principles included in Sport England's Active Design document. See Section 3 of the document 'how to use Active Design' and the proposed change.

Changes Sought

Sport England recommends that the Council consult Sport England at the earliest opportunity on the preparation of the Playing Pitch Strategy. Sport England suggest the following text could be included in the policies to support Active Design: PR5 (10) Provide evidence of how the development has improved the health and well being of new residents by demonstrating how the proposals will meet the 10 Active Design Principles set out in Sport England's guidance document 'Active Design' <https://www.sportengland.org/facilitiesplanning/active-design/>

Site PR38a (the western most parcel of land assessed as HELAA155) would be appropriate for a small allocation, and could be combined with several playing fields. Suggests allocating 4 hectares of land at 35dph (on this location with the residual 2.6 ha being allocated for playing fields giving a total housing allocation of 140.

Changes Sought

Delete and replace with allocation of 1,035 houses on 23 ha of land, 3.2 ha for a primary school with buffer zone. Access arrangements to be designed.

Reasons for Participation

Has spoken as a platform speaker at three public meetings in Kidlington and Gosford. Made a substantial representation at the Issues and Options stage. As a former parish councillor, has represented Kidlington Parish Council at the North Oxford Area Action Plan examination in public, and likewise was invited to the Examination in Public of the Local Plan. Has an MSc in Transport Planning, so part of representation covers that area. Also offers a distinctive perspective as a local resident, who agrees with the principle of a Green Belt review, but does not support the current planned site allocation. Has no interest in promoting a particular site, but only have some sympathy with those who would wish to preserve the Green Belt intact. Believe views represent many in Kidlington who recognise the need for local housing, but see these plans as strategically unacceptable. Representation contains primary research evidence which could be presented.

Site PR39 Frieze Farm has a limited impact on the most vulnerable section of the Green Belt, which is protected north of the site by Stratfield Brake. It was assessed as having a theoretical capacity of 1,498 dwellings in the Initial Sustainability Appraisal. In the Green Belt Study, the parcel is divided into land to the west of the A4260 and land to the east. The west side comprises 29.95 hectares of land. The harm to the Green Belt was assessed as high, largely because 'the openness of this land sloping away from Oxford contributes to the City's rural setting... it lacks relationship with the urban fringe of Oxford but is too close to it to be associated with other settlements... [and] Breaching the A34 would also weaken the role of the Green Belt to the southwest, in the area contained by the A34, A40, A44 and Oxford Canal (assessed as site PR41).' Disagrees with these points. Firstly this land sloping away from Oxford and contributing to its rural setting is set just north of the raised section of the A34, and the A4260 dual carriageway so cannot be seen from the city, the nearest point of which is the Travel Lodge and service station south of the A34, at under 200m away. Use of landscape screening could mitigate any perceived harm. Secondly, features could be built in to integrate the site more closely to the Northern Gateway, and the cluster of retail outlets that are to form part of the employment site. It would not be necessary to build along the canal within the site, as the site is sizeable, and part of the parcel could be protected. Given that Oxfordshire County Council wish to build a major new link road to Loop Farm roundabout from the A40 in the west, the land to the other side of Loop farm, west of the A44 is already destined to become urbanised. Detailed comments about the advantages of this site over other sites in Yarnton are provided.

Land at Frieze Farm (reserved site for replacement golf course. Strong objection to the idea of removing North Oxford Golf club to this site to allow housing on PR6b. The golf course has a huge resource of grassland, scrub and mature trees. Despite all plans and best measures a vast amount of biodiversity and habitat will be lost if this is developed. Also, regarding removal of the course, it takes many years and a lot of work to develop an attractive golf course with landscaping and mature trees. A moved golf course will not be attractive to golfers initially and thus will be likely to fail to keep/attract members. Then what – more housing on land at Frieze way that should be producing food?

PR6c reserves a parcel of land between the A44 and the A4260 for a replacement golf course in the event of development of site PR6b, should this be required. This approach is supported for the reasons identified above; site PR6b is a good opportunity to provide much needed housing for Oxford. Whilst it is not an ideal situation for the sports facilities to be moved, the Frieze Farm site would be a good re-location site for a golf course even though it would be inappropriate for housing.

Proposed Submission Plan - Policy PR6c - Land at Frieze Farm

PR-C-1452	10/10/2017	Clr Emilie	Walton		N	N	N	Y
5195	<p>Comments</p> <p>PR6a, PR6b, PR6c and PR7a: These site are all within one Parish – the Parish of Gosford and Water Eaton. Not once in any of the planning documentation does it mention these sites being within the Parish of Gosford and Water Eaton. It has been referred to as Land East or West of Oxford Road, North Oxford or South East of Kidlington. To be clear, all are within the Parish of Gosford and Water Eaton. We have an identity, we have a community and we deserve to be appropriately recognised! 4400 Homes in the Cherwell District: Of this 4400 figure 1410 is allocated in Gosford and Water Eaton Parish and represents 32% of the total. There are currently 676 dwellings within the Parish so these proposals for 1410 dwellings will lead to a 208% increase in number of houses in the Parish. This is a substantial figure which in my view needs to be fully tested in terms of its impact on the Parish and its residents. I believe that the figure is inappropriate given the impact on existing communities, the environment and transport infrastructure. Was this figure influence by the growth of the University of Oxford? If so, Brexit has already seen a down turn in EU research funding and thus a decline in the level of recruitment. Also the University has called for voluntary redundancies for centrally employed staff so employment growth is not set to grow any further (They are the largest employer in the County). An independent review should be undertaken to reassess the original housing figures.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>

PR-C-1490	09/10/2017	Ian and Helen	Kingsley				N	N
4678	<p>Comments</p> <p>Objection to Policy PR6c Moving the North Oxford Golf Course, a local recreation facility, from its present location to a smaller site on Green Belt land at Frieze Way is Not Positively Prepared and Unsound. We believe the new site proposed is not suitable - North Oxford Golf Course is a recreational facility and important open countryside between North Oxford and Kidlington. It is a distinct break in development. The proposed land is flat, has no trees/shrubbery, has no water and electricity pylons are located on it. We also understand the current owners of the land have not been approached by CDC and are considering selling the land to developers for 600 houses. If this were the case, these houses would have considerable impact on the roads in the area which will already be gridlocked by the additional cars used by residents of the new houses. We believe the development of North Oxford Golf Course will be restricted to low density housing. Larger higher priced houses will be built and developers would not accommodate the aspirational 50% affordable housing target. These houses costing £1m+ will attract rail commuters. In essence, it will be a select gated-community. This project is for money-raising rather than meeting Oxford's Unmet Housing needs.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							
PR-C-1501	09/10/2017	Cherry	Brougham					N
4714	<p>Comments</p> <p>PR6a should be removed from the list of potential sites, or at the least the area allocated for housing should not extend north of the track from the A4165 to Frideswide Farm in order to maintain the 'Kidlington Gap'. PR6b should remain a golf course and PR6c,be developed for housing instead - again, this would maintain the 'Kidlington Gap'. PR6c is close to the Northern Gateway. Additional housing could be allocated to PR7a and PR7b as high density urban extensions to Kidlington. No further sites at Kidlington should be reconsidered. The area and scale of development proposed for Yarnton on site PR8 would completely change the character of the village, and threaten coalescence with Kidlington. The land take should be pulled back from the railway. If the target 4,400 dwellings cannot be met by increasing densities and additional housing on some other sites, the target should be reconsidered</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							
PR-C-1514	10/10/2017	Councillors Neil Prestidge and Maurice Billington	Prestidge and Billington					N
4766	<p>Comments</p> <p>We think that the proposal to use this land is unrealistic, the site is to small and the costs involved in turning into a golf course would make the project unviable. The landowner has presented plans to a local group for a housing development on the site. Due to the location of this piece of land we think that housing would not be appropriate on this site. If this site was used for housing it would be a free-standing site, being to far from Kidlington or Oxford to be integrated into either of the settlements. The development will not be big enough to fund any community provision, this would be unsustainable as people would have to travel by car to essential infrastructure such as schools.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							
PR-C-1516	09/10/2017	Councillor Gillian	Hopcroft					N
5104	<p>Comments</p> <p>North Oxford Golf Club is within the Green Belt and should remain as recreation use. It is not suitable for high density housing, and therefore would only provide fewer executive highly priced houses. The Golf Course is a mature, well maintained and very well attended facility and although an alternative site for a golf course has been suggested at Frieze Farm, which is not a suitable replacement, there has been no consultation with the owners, who actually would intend to build houses on their land.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							

Proposed Submission Plan - Policy PR6c - Land at Frieze Farm

PR-C-1521	09/10/2017	Alaric	Rose						N
4786	<p>Comments</p> <p>The suggested use of this land as a replacement high quality rural character Golf Course is unrealistic, as the site is too small, and would not be alike for like replacement contrary to NPPF74 (detailed in "Objection to Policies proposing development on land south of the railway" above) The site remains in the GB, and I strongly support this. If the site were removed from the GB, alternative development could follow under the provisions of Policy PR12b. As stated above, site promoters have recently met Kidlington Voice to propose a 600 unit housing scheme on the site, and appear to have no interest in providing a new Golf Course. The location of this site means if used for housing, it would be a freestanding housing development, integrated with neither Oxford, nor Kidlington, and probably of insufficient scale to fund on site community provision. This would be an unsustainable form of development, encouraging travel to essential infrastructure such as schools, contrary to the spatial strategy of the adopted Local Plan.</p> <p>Changes Sought</p> <p>I support the retention of GB designation on PR6c, and I request the deletion of policy support for Golf Course use.</p> <p>Reasons for Participation</p>								

Proposed Submission Plan - Policy PR7a - Land South East of Kidlington

PR-C-0237	15/09/2017	Karen	East	TMP Planning Ltd on behalf of Gosford and Water Eaton Parish Council					N	Y
819	<p>Comments</p> <p>The development of this area will result in the loss of 11 hectares of Green Belt land which forms an important part of the gap between Kidlington and Oxford. Building 230 houses in this location will result in a weakening of this gap. The Parish Council objects to the development of this land. Specific concerns are • In total 1410 dwellings are proposed in the Parish. 230 of these are on this site. In our view this will add to the existing traffic problems which exist and further add to congestion and delay. There is no scope for extra traffic on Water Eaton Lane and there should be no vehicle access onto it from any development. • In the Green Belt Study (April 2017) the majority of this site was categorised as partly "High" and with the remainder as "Moderate" in terms of harm to the Green Belt from its release for development. Development would significantly erode the gap between Kidlington and Oxford, especially in combination with removal of the Park and Ride site from the Green Belt, site PR3c and allocations PR6b and PR6a. This would leave a very small gap comprising the southern part of PR7a between Kidlington and Oxford. This will lead towards the coalescence of Gosford/WaterEaton/Kidlington and Oxford. • The overflow gravesite from St Mary's Church is situated very closely to this site with an area built in for expansion. However, any new development in Kidlington and Gosford & Water Eaton is not included in the current growth plan. Agree that additional space needs to be provided in this area. Suggest additional space should be reserved here, in the form of allotments, to be ready for future need. Therefore, the size of available space on this plot should be reviewed.</p> <p>Changes Sought</p> <p>Opposed to the development on this land, if it were to go ahead would wish to see the following incorporated in the proposals: • There are concerns about managing surface water run off in this area to avoid flooding which already occurs in parts of this area. Note that part of the site is within Flood Zone 3 and should not be developed. Support the 50% affordable housing provision, however it is important that Cherwell DC, robustly enforces this policy and ensures that affordable housing is equally available to residents of Gosford and Water Eaton Parish. • The impact of the additional housing on the infrastructure and facilities within Gosford and Water Eaton is a major concern. • Green spaces- Whilst noting that a large part of this allocation is given over to recreational open space this land should however remain open in perpetuity and not be available for development in the future. The PC requests that additional land is provided for allotments. • Agree that additional land should be provided for graveyard use. This would enable current projections in use as well as additional, as yet unknown, use for additional housing in the three communities. We consider that this allocation should be removed and the land retained as Green Belt.</p> <p>Reasons for Participation</p> <p>The Parish Council would wish to take part in order to explain the potential impact of the proposed development on local communities and why this should be better reflected in the draft vision.</p>

Comments

Historic England welcomes the presumed intention behind requirement 16 of Policy PR7a for the application to be supported by a desk-based archaeological investigation which may "then require predetermination evaluations and appropriate mitigation measures" as part of the positive strategy for conserving and enjoying, and clear strategy for enhancing, the historic environment as required by the National Planning Policy Framework. However, requirement 16, as drafted, only notes that the archaeological investigation may require predetermination evaluations and appropriate mitigation measures respectively. It does not require these measures to be incorporated in or to influence the actual development scheme. The policy therefore provides inadequate protection for potential archaeological remains on the site. As the Council will be aware, paragraph 126 of the National Planning Policy Framework requires local planning authorities to recognise that heritage assets are an "irreplaceable resource" and "conserve them in a manner appropriate to their significance". Paragraph 129 notes that the significance of a heritage asset can be affected by development affecting its setting. Historic England therefore considers that Policy PR7a as written does not conform with the Framework and thus is not sound.

Changes Sought

Requirement 16 of Policy PR7a should be reworded as follows: "The application(s) shall be supported by a desk-based archaeological investigation which may then require predetermination evaluations and appropriate mitigation measures. The outcomes of the investigation and mitigation measures shall be incorporated or reflected, as appropriate, in any proposed development scheme". (Discussions with the Council are ongoing at the time of submitting this representation, but early indications are that the Council will consider rewording this requirement as suggested as a minor modification. If it was to do so, Historic England's objection to this requirement would be overcome).

Key Delivery Requirements' on all these policies are nothing more than a fig leaf. It is perfectly obvious the developers will agree to some or all of them and then will renege on them. This always happens. 50% affordable housing will be thrown out of the window as it has been in Templars Square where 50% has magically transformed into 23%. Similarly, developers never actually deliver infrastructure like schools, community centres or roads that are wide enough. The 'Place shaping principles' in these policies are valueless: there are no measure by which they might be enforced. How can one tell, for example, whether an extension "responds to the 'gateway' location of the site". It's gobbledygook. PR11: This is completely empty. 'Working with partners' does not guarantee anything except that you have no control over the outcome. Nor does 'setting out the Council's approach'. Its all very well having the development proposals demonstrate that infrastructure requirements can be met - it does not mean they will be met.

Concerns on the areas designated as PR7a, PR7b and PR8. These proposed developments would join up the present villages of Begbroke, Yarnton and Kidlington. The total number of houses that are proposed to be built appears to be a total of 2280, of which 1950 are located on land to the east of the A44. These constitute an extreme over development and would cause havoc to the road, school and medical facilities. It appears that the plans for PR7a and PR7b (Kidlington) do not have provision for additional educational and medical facilities. Cannot envisage how a further 330 households are to be incorporated into the existing schools and GP surgeries. These are already extremely overstretched and the wait to secure an urgent GP appointment is 3 to 4 weeks, with 4 to 6 weeks for more routine matters. The plan for PR8 to support 1950 additional households is not viable. Notes that the plan includes 2 primary schools, a secondary school and a local centre to include shops and medical facilities. However, past experience shows that these aspects of a development scheme frequently 'fall by the wayside' and do not materialise. What usually happens is that the houses are built and occupied long before the infrastructure is developed. The community is left to try and absorb the additional demands and this puts a tremendous strain on the existing and new communities. There is also the extreme difficulty in attracting GP and teaching staff to move into the area. It is unclear which village would be expected to provide the educational places and medical support when these new houses are occupied. Suggests that as Kidlington is the larger village it would be expected to pick up the surplus. Notes that 50% of these new houses are designated as 'affordable housing'. What affordable housing means is subject to speculation and these are likely to become 'buy to let' or to provide homes for London commuters. In these cases are there stipulations that they must be allocated to local people? This proposed development is not a realistic requirement and is unsustainable. Not only would the infrastructure be completely overwhelmed but we do not believe that improvements could, or would, be made to even partly cope with the demands this would make on the area. The already severe traffic problems would escalate with schools, dental and GP services being completely swamped. Concerns regarding the proposed development of Cowley Barracks to provide student accommodation. If Oxford City is desperate to supply additional housing surely they could 'compulsory purchase' the site and provide at least some of the housing they require. This would also be close to the major employment areas. Opposed to the Green Belt being eroded.

Concerned about the implications of the projected growth of Kidlington. The Village would potentially merge with Yarnton and Begbroke and become a suburb of Oxford. The majority of the clusters of employment within Oxford are not located in the northern section of the City. Therefore, it seems unjustifiable that a village to the north appears to be the main target area for the City's housing demands. In order to get from Kidlington to Cowley or Headington potential workers would need to circumvent the City or drive through it. Either way it would add unnecessarily to the traffic congestion. It is unlikely that the provision of more housing in Kidlington will alleviate the housing needs of Oxford City. Kidlington, especially since the opening of Oxford Parkway station, has increasingly become part of the expanding commuter belt for people who work in London. The argument that it will provide accommodation for people working in Oxford is not substantiated as a high percentage will be to accommodate London commuters. Many of the existing properties in Kidlington, particularly those at the lower end of the housing market, are already in the hands of 'Buy to Let' landlords charging extremely high rents. They are therefore well out of the reach of first time buyers or for rent by anyone earning the National Average Wage. It is extremely unlikely that any additional accommodation built in Kidlington will come under the category of 'Affordable' housing. Kidlington already has severe traffic problems. The proposed additional housing would greatly increase the amount of traffic using these roads. Anyone travelling to or from Oxford during peak hours is only too aware of the present long queues through Kidlington and any further increase in the number of dwellings would result in complete traffic chaos. The development of the identified Kidlington sites would have an immense and detrimental impact on the local educational, shopping, dental and medical amenities which are already extremely stretched. There are also completely inadequate facilities for the existing children and young people in the area. The proposed increase in households would result in a corresponding increase in the number of young people needing to use the sparse facilities available and a likely increase in the problems associated with anti-social behaviour.

Refers to previous letter sent in on 07/01/2017. Has no further comments to make since that letter. EXCEPTING that: Notes that original 'area' PR178 has been extended northwards & now comes under PR7a. Attaches two letters, (2nd letter includes attachments referred to) plus copies of the mains records 'marked up' for the site. First letter refers to existing overhead plant/equipment that cross the proposed development areas, which should be self explanatory. Refers to the amended hv record plan (the revision shown in blue text) to 'cover' the revised additional area. The housing & development land areas detailed in the Proposed Submission Plan are typical of a number of recent sites across S. England, where insufficient discussion has taken place between planning authorities & ourselves, prior to planning permission being granted. I attach a copy of a letter sent to all chief planning officers in our licence area in March 2012, which summarises the situation. The land concerned is crossed by various 132,000 volt (132kV) overhead tower line (OTL) (solid black with purple squares), 33,000 volt (ehv) overhead lines (solid green) and 11,000 volt (hv) overhead lines (solid red), as detailed in the table (enclosed), which form an essential and integral part of Southern Electric Power Distribution's wider network & as such must be retained. Please note that in the case of any 132 kV OTL, this is an extremely important link in our transmission system. Modifying a line such as this is a major undertaking, which should be avoided if possible. Consequently, our advice to developers carrying out feasibility studies on land crossed by such OTLs, is that these should be regarded as permanent physical features. The layout of any development should, therefore, be designed to allow the OTL to remain undisturbed, in the present position, if at all possible. Underground cables are indicated by a dashed line, with red for hv and green for ehv. Development beneath the overhead lines or diversion / undergrounding of the overhead lines may not be possible, in which case the development as planned would be unable to proceed. No contractual arrangements have been agreed with any developer for modification of the above circuit/s. Therefore, any conditions imposed, should permission be granted, must be on the developer & not the Distribution Network Operator, as is the case for other existing infrastructure. To ensure that the proposal is deliverable, you may consider it best to impose a requirement on the developer to agree contractual arrangements with Southern Electric Power Distribution for any modifications prior to permission being granted. We would consider the granting of planning permission without further discussion & agreement as to how our equipment can be accommodated within the proposal to be unacceptable. A copy of the Mains Records is attached, showing the equipment affected.

Site PR7a is attractive open farmland that separates the hamlet of Water Eaton from Kidlington. Its development for housing would make Water Eaton part of the built-up area of Kidlington and destroy its attractive character and identity. Such disregard for landscape, history and character cannot be justified.

Begbroke Science Park is categorically not one of the University's main assets. It is sparsely used and has a daily, little used bus service, which is wasteful to the University and the environment. It is an unconnected, ill thought out failing site. The reason this Science Park is an economic asset is it's financial potential in building all around it, highlighted by the huge expense made available to build an unnecessary link road to the site. The council should look after the public's interest not appear to be lining the University's pocket. Land within the site reserved for possible future development of a railway station/halt belongs to the University suggesting that it is the University's ultimate will to reserve the land. A branch line for this site seems fanciful and would completely destroy any division between Yarnton and Begbroke (Indistinct already) and the GB. The Science Park would need to develop tenfold to countenance a branch line which is unlikely to happen and instead this land will be built on.

GB is designed to protect from overdevelopment. If PR6 and /or PR7 are permitted, Kidlington, Yarnton and Begbroke will become victims of urban sprawl and become a suburb of Oxford. This GB should not be sacrificed as it will irrevocably damage the countryside, wildlife and biodiversity of North Oxfordshire, reducing quality of life for local residents.

Comments

Do not consider that the Proposed Submission Plan ('The Plan') has been positively prepared as it fails to remove from GB status a small area of land situated at Gosford Farm, Gosford, (Site plan provided) which has no justification in remaining within the GB. The Plan is therefore unsound in that it fails to address the removal of the Subject Site which forms part of Gosford Farm, Gosford despite the policies expressed in para.5.37 of Policy PR3. 2. Whilst we believe that The Plan is based on the most appropriate strategy when considered against the reasonable alternatives, we maintain that it can only be justified if it removes areas of the GB for unmet residential housing needs. Such areas are referred to in para. 5.37.2 of Policy PR3. The Subject Site at Gosford Farm has no reason to remain within the GB and could be used to meet the identified housing need. 3. We do not consider that The Plan is effective as it currently stands. Every area of the GB needs to be carefully considered for removal and the Subject Site that we are proposing to be removed has no justification in remaining as GB for those reasons set out in Section 5 below. 4. We do not consider that The Plan is consistent with the National Policy as it fails to address the purpose of the GB given that the small area of the GB (the Subject Site) that we are proposing should be removed has no justification for inclusion within the GB. 5. Paras. 5.37.4 and 5.39 of The Plan clearly state that the revised GB boundaries should be capable of enduring beyond the Plan period. We do not consider there is any planning justification in retaining the Subject Site within the GB and that its proposed continued inclusion could be overturned at a later date as being totally wrong and unjustified.

Changes Sought

1. It is necessary to amend the Local Plan to make it sound. 2. Our view is that to make the Local Plan sound, Policy PR3 needs to be amended as follows: ...'Policy PR7a Removal of 11.35 hectares of land as shown on inset Policy Map PR7a'..... 3. Policies Map PR7a will need to be amended on its northern extremity to show Gosford Farm, to include Gosford Farmhouse and the remainder of the land shown edged red on the attached plan. 4. This will comprise a minor amendment to "Policy PR3: The Oxford GB" and can be justified on the grounds that to retain the Subject Site within the GB would not meet the four basic purposes of GBs all as set out under Government Guidance (lists Green Belt principles). 5. The Subject Site is contained on three sides by existing development and on the fourth side by a long established and mature field boundary hedge which will be retained and enhanced.

Reasons for Participation

Wishes to participate at the oral Examination and consider this to be necessary so that the Inspector will be fully able to understand the justification for our proposed amendment to Policy PR7a and Policy PR7a - Proposals Map contained within the Proposed Submission Plan. 2. Acknowledges the Subject Site, comprising some 0.55 so hectares or thereabouts, hectares or thereabouts, is of minimal relevance to the Submission Plan and the Partial Review of the Cherwell Local Plan 2011 - 2031(Part One). For the reasons stated above, it is important that all areas of the GB are examined at this moment in time and we believe it is only right that the Subject Site should be excluded from falling within the boundaries of the future Oxford GB.

The NPPF states that one of its Core Planning Principles (para 17) is to take account of the different roles and character of different areas, promoting the vitality of our main urban areas, protecting the GBs around them, and noting (at para 79) that the fundamental aim of GB policy is to prevent urban sprawl by keeping land permanently open. Paragraph 83 states that once established, GB boundaries should only be altered in exceptional circumstances, through the preparation or review of the Local Plan. The recent Housing White Paper, clarifies what the steps before a finding of "exceptional circumstances" should be, when local authorities can demonstrate that they have fully examined all other reasonable options for meeting their identified housing requirements. Amongst these "reasonable options" which Local Authorities must demonstrate they have considered before there can be the "exceptional circumstances" required for review/release of GB land are: • making effective use of suitable brownfield sites and the opportunities offered by estate regeneration; • the potential offered by land which is currently underused, including surplus public sector land where appropriate; • optimising the proposed density of development; and • exploring whether other authorities can help to meet some of the identified development requirement. Although not yet law, the White Paper illustrates how high the hurdle for exceptional circumstances must be, given that the NPPF's "fundamental aim is keeping GB land permanently open", and the need to show there are no "reasonable options" before considering GB release.

Changes Sought

In CPRE's view, it is not possible to 'tweak' the current document in order to make it sound and therefore the current version of the Plan should be rejected. CDC should re-visit the process, as and when the final numbers for Oxford have been examined, adopting higher densities and prioritising protection for the GB.

Reasons for Participation

CPRE Oxfordshire represents a wide membership across the County, including many parish councils and local organisations, and seeks to influence development to protect and enhance the countryside. As one of the founders of the Oxford GB, we have considerable knowledge about its origins, purpose and ongoing relevance.

OXFORD'S 'UNMET NEED' AND REASONABLE OPTIONS FOR MEETING IT. 1. Is the Oxford unmet need real or realistic? Cherwell argues that an "exceptional circumstance" exists in the Inspector approving the adopted plan having added a requirement for "a formal commitment from the Council, together with other relevant Councils, to undertake a joint review of the boundaries of the Oxford GB, "once the specific level of help required by the city of Oxford to meet its needs that cannot reasonably be met within its present confines, IS FULLY AND ACCURATELY DEFINED". (Our emphasis) It was our view at the time that the Inspector could have exceeded his remit as there was no evidence before him suggesting that further development in Cherwell was impossible without breaching the GB, nor of the precise quantum of Oxford's unmet need (if any existed) or the capacity of other Districts to accommodate it. However it is relevant that he proposed a Review only AFTER Oxford's unmet needs were fully and accurately defined. They still are not, and a review is therefore premature even on the Inspector's terms. According to the City Council in a report to Scrutiny Committee (12th June), the agreed unmet need allocation, is used as a working basis for current local plans in Oxfordshire which will be updated when the Oxford Local Plan is completed. In other words it is presently neither fully nor accurately defined, as the Inspector had required it should be. Oxford has only now started its own Local Plan process to reflect the Oxfordshire Strategic Housing Market Assessment (SHMA), three years after it was published, and long after Oxfordshire's other Districts. Its draft Local Plan gives no figure for unmet need, or for the City's capacity to meet it. However, taking Oxford's overall "need" to be for 28,000 houses over the plan period, CPRE argues that at least 26,000 could be provided inside the City itself by switching employment sites – the use of which for employment would only exacerbate the housing need the City Council describes as being its Number One priority to overcome – to housing, and increasing densities on all sites to compact city levels. That is even before the outcome of a review of further sites to which the City refers in its plan. (See Oxford/Densities paper attached) Consequently the Inspector's condition, that Oxford's unmet need should first be "fully and accurately defined" is nowhere near met, and, further, there would be little or no "unmet need" for other Authorities to consider. In any event, a "working assumption" of need cannot be an exceptional circumstance justifying GB release, especially when it is likely to be extremely inaccurate. Finally, during the course of this consultation the Government has proposed a new OAN formula to replace the SHMA (on which all the Review numbers are based). This new formula, if adopted, would reduce Oxford's total annual housing need from a SHMA mid-point of 1400 per annum to 746, that is by 47%. This would in turn reduce "unmet need" by two thirds, even before taking into account that the City should use employment land to satisfy existing housing need rather than exacerbate it and build at densities appropriate to cities. The new OAN is at the very least further evidence that the level of unmet need this review seeks to satisfy is neither fully nor accurately defined.

Changes Sought

In CPRE's view, it is not possible to 'tweak' the current document in order to make it sound and therefore the current version of the Plan should be rejected. Cherwell District Council should re-visit the process, as and when the final numbers for Oxford have been examined, adopting higher densities and prioritising protection for the Green Belt.

Reasons for Participation

Proposed Submission Plan - Policy PR7a - Land South East of Kidlington

PR-C-0562	05/10/2017	Helen	Marshall	CPRE Oxfordshire	N	Y
1425	<p>Comments</p> <p>OXFORD'S 'UNMET NEED' AND REASONABLE OPTIONS FOR MEETING IT. 2. If Oxford's unmet need were realistic could it be met elsewhere in Cherwell than in GB? a. Yes, it could be met on non-GB sites. Cherwell found that the required number of houses could sustainably be built elsewhere, outside the GB, at Junction9 M40, Arncott, Bicester and surrounding area, Upper Heyford, Junction 10 M40, Banbury and surrounding area. They rejected these alternative sites because they might upset the evolution of the current adopted plan – although why competent planners would not be able to deal with that problem, if real, is not apparent; because there might be shortfalls, although why these should be greater for Oxford's unmet need than for Cherwell's own need was not explained; and more dispersed options provided less opportunity for strategic infrastructure investment (e.g. transport and education), although why this would be the case for, for example, Upper Heyford which is already targeted and developed, or for other centres which already benefit from services, is not explained. The overriding reason for their rejection however was clearly that they were less well situated (than the GB sites) to build communities associated with Oxford, to assist with the delivery of the Oxford Transport Strategy, to provide affordable transport options, and more likely to involve commuting. It is significant that even GB sites like the previously developed Shipton Quarry, were rejected as Development here would relate to Shipton-on-Cherwell, not Oxford. Therefore the parcel plays no role with respect to this purpose (Oxford's unmet need). Simply put, this amounts to saying that all reasonable alternatives were unacceptable because they were not in the GB, or, if they were in the GB, were too far from Oxford. It is an argument that urban sprawl into the GB is justified by the fact that only GB sprawl could (by definition) be close enough to the City; in other words it is an argument not just for nibbling at the GB but for undermining its core purpose. It is clearly unacceptable in its own terms. Further, the proposed new OAN calculation would reduce Cherwell's own need by 33%. The effect of this would be that 33% of the housing trajectory in the Council's adopted plan would be superfluous to Cherwell's own requirement and therefore available to satisfy any unmet needs of neighbouring authorities that might arise. b. The unmet need could be met by marginal density increases on generally low density allocated sites. Policy BSC2 in the adopted plan states New housing should be provided on net developable areas at a density of at least 30 dwellings per hectare unless there are justifiable planning reasons for lower density development. Yet Policy Bicester 1 allocates 380 hectares to just 6,000 homes which is 16 houses per hectare. Assuming for these purposes that 30 dwellings per hectare is the average across the District, the sites to which the present 22,800 homes are allocated would need to increase build density by just 5%, to 36%, to accommodate all of the "working assumption" of Oxford's unmet need. This would still be less than half the density of Central Paris or Barcelona, or Islington in London. Higher density build would also mean smaller houses, of which 63% of Oxfordshire's SHMA need is comprised, and thus better meet public requirements. High densities also reduce the need for car travel and create a stronger sense of community.</p> <p>Changes Sought</p> <p>In CPRE's view, it is not possible to 'tweak' the current document in order to make it sound and therefore the current version of the Plan should be rejected. CDC should re-visit the process, as and when the final numbers for Oxford have been examined, adopting higher densities and prioritising protection for the GB.</p> <p>Reasons for Participation</p> <p>CPRE Oxfordshire represents a wide membership across the County, including many parish councils and local organisations, and seeks to influence development to protect and enhance the countryside. As one of the founders of the Oxford GB, we have considerable knowledge about its origins, purpose and ongoing relevance.</p>					

PR-C-0562	05/10/2017	Helen	Marshall	CPRE Oxfordshire	N	Y
1421	<p>Comments</p> <p>CPRE is opposed in principle to the release of GB land – as is national planning policy. A very strong case therefore has to be made to establish the exceptional circumstances required for the release of GB land. The Cherwell Plan goes nowhere near making such a case; Cherwell's electorate strongly supports retention of GB land as does Government Policy. There are a number of reasonable alternatives. The houses to satisfy Oxford's 'unmet need' targeted at the Cherwell GB could not only, on the Council's own admission, be sustainably built elsewhere in the District on other sites, or by increasing the density of build on existing sites, but also, at least to a considerable extent, within the City itself. Failing that, if there were genuinely no available option other than release of GB, national policy indicates that Cherwell would be expected to decline to do so and require other Councils to co-operate in meeting the unmet need Cherwell itself cannot satisfy. Additionally, during the course of the consultation, the Government published a revised Objectively Assessed Need (OAN) calculation, showing a total Oxford need of half that identified by the Oxfordshire Strategic Housing Market Assessment (SHMA). If adopted the new formula would make it certain that Oxford could accommodate all of its own housing need, and therefore there would be no "unmet need" for Cherwell to meet. The proposed OAN also reduces Cherwell's own need by a third, meaning that even if there were any Oxford unmet need to be covered, it could be met within the surplus the new OAN creates in Cherwell's adopted plan. This review is therefore premature and should be suspended at least until new "need" figures are crystallised.</p> <p>Changes Sought</p> <p>In CPRE's view, it is not possible to 'tweak' the current document in order to make it sound and therefore the current version of the Plan should be rejected. PR-C-0562	05/10/2017	Helen	Marshall	CPRE Oxfordshire	N	Y
1427	<p>Comments</p> <p>DUTY TO CO-OPERATE - The SHMA is explicit that Authorities are not expected to meet OAN (Objectively Assessed Need) in full if e.g. it would necessitate Green Belt development. It has been the unforced choice – not the requirement – of Oxfordshire's Councils to agree to meet the SHMA need in full despite wide swathes of Oxfordshire being GB and AONB. It is therefore incumbent on Councils to take on each others' "unmet need" if it would otherwise require GB land to be released. As shown, Oxford's unmet need is very far indeed from being quantified or crystallised, but, if it were, it would be the duty of other Councils to assist Cherwell in meeting its part of that need without releasing GB land, not least by assisting Cherwell to understand how to do so within its own borders. There is no evidence that this has been attempted. Finally, the new OAN calculation proposed by the Government during the consultation defines "need" as the figure shown in the Government's own tables on household projections. This is overlaid in the proposed calculation with an arbitrary (and ill-conceived) uplift intended to reduce house prices. It is also accepted that local authorities may if they wish further inflate their housing targets to provide further economic growth than that already included in the government's base tables. However, it is submitted that these latter two elements cannot be defined as "need" and neighbouring Councils have no duty to co-operate in meeting them.</p> <p>Changes Sought</p> <p>In CPRE's view, it is not possible to 'tweak' the current document in order to make it sound and therefore the current version of the Plan should be rejected. <p>Comments</p> <p>Government Policy requires development in the GB to be the very last resort, only to be considered if there is no alternative. Cherwell has stood that Policy on its head by making building in the GB its very first choice, rejecting what it accepts were reasonable alternatives. Cherwell says that building as close to Oxford as possible trumps all other considerations. Since Oxford is surrounded by GB, that has led them to select not just GB sites, but the very closest GB sites to the City, at the Kidlington Gap, where the GB is most fragile, just a few fields wide. It is those few fields the Council plans to build on, flatly contrary to GB policy, and the known wishes of the overwhelming majority of its electorate. If the Council gets away with this plan, it will also, again contrary to GB policy, cause the merger of Yarnton and Begbroke into Kidlington; expose Kidlington itself to being engulfed by the predatory City Council which has sought to subsume it for at least thirty years; and also, by declaring that proximity to Oxford is itself an exceptional reason to build on the GB which surrounds the City, fundamentally undermine its very purpose, risking opening the whole GB to development.</p> <p>Changes Sought</p> <p>In CPRE's view, it is not possible to 'tweak' the current document in order to make it sound and therefore the current version of the Plan should be rejected. PR-C-0562 1428	05/10/2017	Helen	Marshall	CPRE Oxfordshire			N	Y
<p>Comments</p> <p>THE GB STUDY No great weight should be given to the LUC GB Study. Its purpose was not to determine whether any of the GB made no, or an insignificant contribution to, the purposes of the GB since clearly all of the GB land contributes, and the loss of any would be harmful. Rather, in its own words, the GB Study has been commissioned by Cherwell District Council to assess the suitability of the strategic sites being promoted for development against the five purposes of the GB. In other words the sites had been pre-selected, as we showed above, in the face of GB policy, and targeting the most fragile point in the entire Oxford GB. LUC continue The considerations that will determine the most appropriate scenario, or combination of scenarios, will largely relate to the existing or potential environmental qualities and value of land, and to the sustainability of residential development. This will enable Cherwell District Council to consider whether there are 'exceptional circumstances' (under paragraph 83, NPPF) to justify altering GB boundaries through the Local Plan process, i.e. to enable existing GB land to contribute to meeting Oxford's unmet housing need. That is, value is not primarily judged against GB purposes at all, but against environmental ones, and the sustainability of the land for housing development. LUC found that Release of areas identified as making a low contribution to GB could provide only 5.8ha of potential development land (4.13). Release of areas identified as making a low or low-moderate contribution to GB could, subject to consideration of cumulative impacts, provide 34.6ha of potential development land(4.14). Release of areas identified as making a low, low-moderate or moderate contribution to GB could, subject to consideration of cumulative impacts, provide 166.7ha of potential development land (4.15). Although as noted above, the judgment was largely not on GB grounds, moderate harm was considered acceptable in order to release a larger amount of land. LUC acknowledge that release of fragile GB 4.16 GB that occupies only a small/narrow area between separate urban settlements will tend to rate highly in terms of its role in preventing settlement coalescence. This exactly describes the land chosen for release; but LUC went on. However, if environmental assessment determines that this land lacks significant value then a case could be made for accepting the coalescence, or near-coalescence, of settlements in order to maximise the scale of development in one area. That is the, subjectively assessed low environmental value trumps urban sprawl and severe coalescence, the two founding principles of the GB. Further, they have targeted the very point at which the GB is already narrowest – the Kidlington Gap between Kidlington and Oxford – for release, directly creating the coalescence of two distinct settlements (It is material that Oxford itself is proposing to breach that same area from the South with a proposed development of St Frideswide Farm). The sites concerned are all at the exact point in the GB where coalescence of settlements (Oxford and Kidlington) is most threatened, with the built areas separated presently by a few fields. The proposed GB reviews, together with the release of the Parkway Station and Park and Ride would effectively merge the two settlements. Although Kidlington (population 13,000, 2011) is statutorily a village, it is larger than many towns, notably Thame (11,600) and Henley (11,700) in Oxfordshire.</p> <p>Changes Sought</p> <p>In CPRE's view, it is not possible to 'tweak' the current document in order to make it sound and therefore the current version of the Plan should be rejected. PR-C-0562 1429	05/10/2017	Helen	Marshall	CPRE Oxfordshire			N	Y
<p>Comments</p> <p>GB: CONCLUSIONS: 1. Government Policy and the Public Interest both require the GB to be permanent unless truly exceptional circumstances necessitate consideration of release. 2. Oxford unmet need is not an exceptional circumstance, firstly because it has not been defined and secondly because there are ample reasonable alternatives to accommodate it. 3. The LUC GB study was conducted on flawed principles and should be given little weight. 4. Cherwell have cited no other exceptional circumstances which hold any water – and their primary arguments – proximity to Oxford – is in fact a key argument for GB retention rather than release. 5. If at some future time an Oxford "unmet need" has been shown to exist and satisfactorily quantified, and if that requires any allocation to Cherwell, there are alternatives available to the District other than releasing GB land and therefore none should be released.</p> <p>Changes Sought</p> <p>In CPRE's view, it is not possible to 'tweak' the current document in order to make it sound and therefore the current version of the Plan should be rejected. <p>Comments</p> <p>OXFORD'S 'UNMET NEED' AND REASONABLE OPTIONS FOR MEETING IT (continuation)</p> <p>c. Even if there were no reasonable alternative sites, and even if densities on allocated non-GB sites could not be increased, the release of GB land could be substantially reduced. The total GB land proposed to be released is 264 ha. 10 hectares is proposed to be released for the station and Park and Ride, which already exist on GB land. There is no obvious rationale for the release. The net GB land to be released for housing is 254 hectares However within this area only 153 hectares is proposed to be actually used for housing, with the rest being allocated for sport, nature, agriculture etc., all legitimate GB uses. On the residual land 3990 houses are proposed at a density of 26 dph (although an average of 34 is claimed in the Plan). If build densities were increased to urban levels – the Council's stated Policy is to treat these incursions for Oxford's unmet need as urban extensions – then 70 houses per hectare, utilising only 37% of the land would be appropriate. This would require only 57 hectares, all of which could be comfortably accommodated on PR8, the least damaging in terms of coalescence and the Kidlington Gap of all these sites.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>								

Proposed Submission Plan - Policy PR7a - Land South East of Kidlington

PR-C-0562	05/10/2017	Helen	Marshall	CPRE Oxfordshire					N
1422	Comments								
<p>The primary duty of a Local Authority must be to the people it represents. In an independent market research exercise, with a very high sample size, conducted across Oxfordshire by Alpha Research of Thame in April 2015 respondents were specifically prompted that there was considered to be a need for more housing, and of the extent and purpose of the GB, before being asked whether the GB, should be developed for that, or indeed any other, purpose. Their answers were therefore fully informed by recognition of housing need. 76% of respondents considered that the GB should remain undeveloped; 66% considered housebuilding the greatest threat. Although polls have something of a tarnished reputation, this has resulted from situations where marginal inaccuracy can lead to wholly incorrect forecasts in narrow binary decisions. In this case the sample size was so large and so representative, and the outcome so conclusive, that whilst there might be up to a 5% margin of error, this would not be capable of affecting the result, or its scale. Further, this is in line with previous polls, adding to confidence that it accurately reflects public opinion. The same exercise showed that in North Oxfordshire – closely correlating to Cherwell - the outcome was hardly less conclusive, with 71% of respondents supporting the proposition that the GB should not be developed for housing or any other purpose. This was despite years of constant media campaigning by the City Council that Oxford has “no option” but to spread over the GB unless people are to go homeless (a wholly fallacious claim). Despite the City’s campaigning, 73% of non-homeowners, and 74% of C2DEs agreed that the GB should not be developed for housing. In other words, the people who would be expected to have been the most responsive to the City’s campaigning rejected GB development almost as strongly as the general population. Indeed 73% of the City Council’s own constituents rejected it. There can be no doubt that the people both of Oxfordshire, and of Cherwell itself, reject GB development in principle, and this must be given great weight in any consideration of doing so.</p>									

Changes Sought

In CPRE's view, it is not possible to 'tweak' the current document in order to make it sound and therefore the current version of the Plan should be rejected. CDC should re-visit the process, as and when the final numbers for Oxford have been examined, adopting higher densities and prioritising protection for the GB.

Reasons for Participation

CPRE Oxfordshire represents a wide membership across the County, including many parish councils and local organisations, and seeks to influence development to protect and enhance the countryside. As one of the founders of the Oxford GB, we have considerable knowledge about its origins, purpose and ongoing relevance.

1418	Comments									
<p>TRANSPORT - THE PROPOSED NEW STATION AT KIDLINGTON/BEGBROKE. The initial proposals for the development made great emphasis on the provision of a new railway station “between Kidlington & Begbroke”, the implication being that this station would cater for the needs of residents to reach their places of employment in Oxford and that therefore the housing plans are more sustainable. The relevant railway line is that from Oxford and the south to the midlands and north via Banbury. It is intensively used with half hourly cross-country trains and frequent freights including regular intermodal trains from and to Southampton docks. There is also a local service of 12 trains per day each way (9 on Saturdays, 3 on summer Sundays, none on winter Sundays) calling at the intermediate stations at Tackley, Heyford & Kings Sutton. North of Aynho Junction, as far as Banbury, these trains all have to interwork with the three trains per hour on the Chiltern Line to and from London Marylebone. There are presently no proposals for a new station on this line, nor are there likely to be. Neither Network Rail, Oxfordshire County Council nor any train operator has any aspiration for a station here. It does not feature on any relevant route study or strategic proposal. For example, we note that no such plans have been included in the Oxfordshire Infrastructure Strategy, signed off by the Oxfordshire Growth Board in September 2017, which claims to 'provide a view of emerging development and infrastructure requirements to support growth from 2016 to 2031 and beyond'. This includes a description of numerous rail improvement projects both pre and post 2031, as well as listing infrastructure priorities for the A40 Corridor, but gives no mention at all to a new station in this area. Journey time for the local trains is 30 minutes and they only just slot in between the other services; in other words, a train leaving Banbury soon after the previous southbound train only arrives in Oxford just before the next one. To add an extra stop on the route would make this pathing issue even more tricky. It would be possible to accelerate the journey time with electric trains which have better acceleration and deceleration rates and thus allow an extra stop in the same timetable but although the previous government did announce a scheme to electrify this railway as part of its “electric spine” in 2012, this has been deferred and there is at present no prospect of this happening. Great Western Railway (GWR) operate the local trains and they do have an aspiration to increase the frequency to a train every 90 minutes across the whole day but it is only an aspiration, not a timed commitment. Even that frequency is not really sufficient to attract substantial numbers of commuters to use rail on a daily basis. For that a half hourly service level is, these days, a basic requirement. The station at Oxford Parkway, opened in October 2015 and connected to Oxford station in December 2016 has in any case now become the railhead for Kidlington, swathes of north Oxford, Headington and surrounding villages. The rail industry as a whole is thus utterly unlikely to wish to commit to another new station “between Kidlington and Begbroke”.</p>										

Changes Sought

References to the station should be removed from the Plan as it is not deliverable within the lifetime of the Plan and therefore is not effective. Any element of development that is dependent on this station being delivered should be removed from the Plan as unsound. Plans for additional housing in north Oxford/south Kidlington should be put on hold until the Oxford to Cambridge Expressway route is settled, the East West railway is re-opened and the full extent of the expansion of Bicester is agreed, with its possible new transport infrastructure.

Reasons for Participation

CPRE Oxfordshire represents a wide membership across the County, including many parish councils and local organisations, and seeks to influence development to protect and enhance the countryside. We would like to attend the oral part of the Examination.

Comments

We note that the plan calculates the loss of GB to be 3%. There is an implication here that the loss is relatively small and therefore acceptable. This is fallacious as is illustrated by the following example taken from a paper by Professor Dieter Helm, Chair of the Government's Independent Natural Capital Committee "Think about St James' Park in central London, set between Buckingham Palace at one end and Whitehall at the other. Suppose a developer comes along with a proposal; to build on a small plot on one corner of St James' Park. This developer might argue as follows. The marginal value of the patch of grass in a small corner is not that great. After all, all the rest is left. Better still, the developer might pay such an enormous price for the small bit of land that perhaps a hospital could be built elsewhere with the proceeds. The marginal value to the ultimate owner of this house is so great relative to the marginal value of the small corner of St James' Park that it makes marginal economic sense to build on it. There are two problems with this argument. The first is that the same marginal case can be made for the next small bit of St James' Park. Indeed the value to the developer is even higher now because the Park is now slightly smaller. And for the next bit, the argument just gets stronger. Carried to its limits there is a great marginal case for incrementally building all over St James' – and Hyde Park, and Regent's Park and indeed all the green spaces in London. That is indeed what would have happened if the market had been left to allocate the land as if St. James' was a private good. It is what would happen to the GB too. The second problem is that the reason why the land is so valuable is because it is not surrounded by other houses in close proximity. The very rich person who buys this house on the corner of St James' is paying so much because others are not able to do so, and because it is St James'. We cannot all have green spaces around our houses – green space is in fixed supply. Carry both of these arguments across to the GB. Each marginal bit has a marginal economic case for developing it, and as each bit is chipped away, the value of the whole public good – the GB system – diminishes. The core point here is that the marginal case if carried through to its logical conclusion leads to no GB – there is a good marginal case for building on each and every marginal bit of land, as there is for building on each and every bit of St James' Park." The loss of a small proportion of GB therefore increases the likelihood of further loss. GB should be considered as an entity or system not as a collection of individual land parcels. This is a further reason why we fully endorse Government Policy (NPPF para 79) that GB is a permanent designation.

Changes Sought

The plan should be withdrawn and a spatial strategy for Oxfordshire established which can address the issues addressed in this review in a co-ordinated and consistent way. Through such a strategy the Oxfordshire authorities should continue with their previous approach of actively encouraging further employment and housing growth away from Oxford. Oxford City Council and Cherwell in particular should co-operate more effectively and as part of this Oxford should (a) discourage further employment generating development in the city unless it is absolutely essential and (b) use some of the land it has currently allocated for employment, together with other previously developed land, for well planned high density housing.

Reasons for Participation

The Oxford Green Belt Network (OGBN) was established in 1997 to help to protect the Oxford GB and to support those wishing to resist proposals for inappropriate development within it. It comments regularly on planning applications in the GB and in planning policy consultations, particularly on matters affecting the GB. OGBN has made representations on all stages of the Cherwell Local Plan Part 1 and participated in the Public Examination in December 2014. We have also commented on earlier stages of this Partial Review. The membership of OGBN includes many of the Parish Councils whose areas include GB land. The OGBN fully supports the aims of GBs as set out in the NPPF and earlier planning guidance and in particular it strongly endorses the fundamental principle that GB is a permanent designation. We consider that our participation in the examination in necessary and justified because of our longstanding interest and understanding of the Oxford GB.

Comments

We consider it to be a serious omission that at the options stage a question was not asked about the acceptability of development in the GB. This is probably the most important matter raised in this review. The plan may therefore be rendered procedurally noncompliant.

Comments

This Plan is contrary to the NPPF which states in paragraph 14 that Local Plans should meet objectively assessed needs unless specific policies in the Framework indicate development – including land designated as GB - should be restricted. It is also contrary to the twelve core land use planning principles set out in Paragraph 17 of the NPPF one of which is that planning should take account of the different roles and character of different areas, promoting the vitality of our main urban areas and protecting the GBs around them. Furthermore, National Planning Practice Guidance makes clear that assessing need is just the first stage in developing a Local Plan and that once need has been assessed, the local planning authority should take account of any constraints such as GB, which indicate that development should be restricted and which may restrain the ability of an authority to meet its need. Cherwell has accepted (or, more accurately, been pressured to accept) the inflated figures of the Oxfordshire SHMA in full and has never followed this guidance to "take account of any constraints such as GB Which may restrain the ability of an authority to meet its need". The proposed submission plan is therefore not consistent or compliant with national policy.

Changes Sought

The plan should be withdrawn and a spatial strategy for Oxfordshire established which can address the issues addressed in this review in a co-ordinated and consistent way. Through such a strategy the Oxfordshire authorities should continue with their previous approach of actively encouraging further employment and housing growth away from Oxford. Proposed Submission Plan - Policy PR7a - Land South East of Kidlington

PR-C-0567	09/10/2017	Dr Ian	Scargill	Oxford Green Belt Network	N		N	Y
1438	<p>Comments</p> <p>Strong objection to all of the proposed development in the Oxford GB which “was designated to restrain development pressures which could damage the character of Oxford City and its heritage through increased activity, traffic and the outward sprawl of the urban area.” This quote is from paragraph B256 of Cherwell’s adopted Local Plan Part 1 and we fully support it. We also support Policy ESD14 in the Plan to maintain the Oxford GB. The Oxford GB supports all five purposes set out in the NPPF and has been largely successful over the last sixty years. In particular it seeks to protect the setting and character of the historic city of Oxford. The reference to the character of the City, as referred to in Cherwell’s Local Plan. is often overlooked but it is a crucial aim of GB policy. The historic city centre by its nature cannot be expanded or comprehensively redeveloped. It is already under substantial pressure and this is likely to become highly damaging if expansion on the edge of the city is not restricted. The City’s never-ending traffic problems are testimony to this, and there have been calls for even the number of buses in the centre to be limited. The GB also provides accessible open space, footpaths and other recreational opportunities for residents of the city and for the communities within it. It is well used and supported as public opinion surveys have shown. GB is intended to be a permanent designation only to be changed in exceptional circumstances (NPPF). We think that that the overall levels of growth proposed are unnecessarily high and that alternatives to development in the GB are available. We therefore consider that exceptional circumstances do not exist to justify development in the GB.</p> <p>Changes Sought</p> <p>The plan should be withdrawn and a spatial strategy for Oxfordshire established in a co-ordinated and consistent way. Through such a strategy the Oxfordshire authorities should continue with their previous approach of actively encouraging further employment and housing growth, at realistic levels, away from Oxford. Oxford City Council and Cherwell in particular should co-operate more effectively and as part of this Oxford should a) discourage further employment generating development in the city unless it is absolutely essential and b) use some of the land it has currently allocated for employment, together with other previously developed land, for well planned high density housing.</p> <p>Reasons for Participation</p> <p>OGBN was established in 1997 to help to protect the Oxford GB and to support those wishing to resist proposals for inappropriate development within it. PR-C-0567	09/10/2017	Dr Ian	Scargill	Oxford Green Belt Network	N		N	Y
1439	<p>Comments</p> <p>Strong disagreement with the assessment that “exceptional circumstances” exist. Twelve “circumstances” are listed. The final ten are not exceptional circumstances at all. Some of them might be described as “opportunities”, some of them are simply descriptions of how development might occur, and others are meaningless, for example “12.the ability to create a sustainable, holistic, joined up vision for the whole of the Oxford/Kidlington/A44 corridor area”. That statement certainly does not constitute an exceptional circumstance. Exceptional Circumstance 1 (urgent and pressing need for homes) is highly contentious. It is based on the assessment in the SHMA which has been heavily criticised and never validated. The proposed DCLG standardised methodology proposes a much lower level of need that takes account of affordability. Exceptional Circumstance 2 (clear inability of Oxford to meet its needs) is also unproven. Oxford’s needs have not been established through its own local plan process and neither has its ability to meet its own needs. It is clear that alternative development strategies could accommodate a significant number of additional dwellings within the city. The submission document in proposing to develop in the GB is in complete opposition to the purpose of the GB and contradicts Local Plan Pt 1. The main purpose of the Oxford GB, (Local Plan Part 1 para B256), is to limit the growth of Oxford to avoid damage to its character and heritage. Oxford City Council itself should have a part to play in this by restricting the growth of employment generating activities to the minimum necessary. This would have the double benefit of releasing some land for housing and reducing the demand for further housing. However its currently proposed policies do the opposite. We have made this point in our representations to the recent Options consultation on the Oxford Local Plan. Alternative development strategies – which have been successful in the past – are possible for Oxfordshire, and include the diversion of growth away from Oxford towards the country towns. Oxford City Council should play its part in this. We also think it would be possible for the Oxfordshire authorities to promote the diversion of some economic growth to other parts of the country which would welcome and benefit from it – possibly through formal ‘economic twinning’ arrangements.</p> <p>Changes Sought</p> <p>The plan should be withdrawn and a spatial strategy for Oxfordshire established which can address the issues addressed in this review in a co-ordinated and consistent way. Through such a strategy the Oxfordshire authorities should continue with their previous approach of actively encouraging further employment and housing growth away from Oxford. PR-C-0658	09/10/2017	Giles	Hughes	West Oxfordshire District Council	Y	Y	N	Y
1623	<p>Comments</p> <p>Exceptional circumstances have been demonstrated to justify the release of sites from the GB, including sites for housing to help meet Oxford City’s unmet housing need. It is clear from the evidence base for Cherwell’s proposed submission plan and from the Oxfordshire Growth Board evidence base that the release of sites from the GB is necessary to deliver the scale of housing required in a sustainable manner. However, there is a need to make efficient use of land released from the GB for housing purposes. Some of the proposed densities on sites released from the GB do not appear to make efficient use of this land despite their close proximity to Oxford and to sustainable transport infrastructure and services. By increasing the density on some of the GB sites and by developing the site covered by Policy PR3a Cherwell DC would achieve their target of meeting Oxford City’s unmet housing need without requiring development at Woodstock South East (Policy PR10).</p> <p>Changes Sought</p> <p>Review of the proposed densities and the resulting site capacities of the sites to be released from the GB in order to ensure that efficient use is made of this scarce land resource.</p> <p>Reasons for Participation</p> <p>To address cross-boundary issues with West Oxfordshire</p>

1634	<p>Comments</p> <p>Over-development and over allocation of dwellings to one Parish - Gosford and Water Eaton. This parish currently has 676 dwellings. Adding 1410 houses into Gosford and Water Eaton, increases the number of homes by 208% to 2083. The proposal increases the Parish housing by two thirds of its current size. 32% of all the new houses have been allocated to Gosford and Water Eaton. If there have to be more houses here then a 25% increase is acceptable (under 200).</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							

Proposed Submission Plan - Policy PR7a - Land South East of Kidlington

PR-C-0682	08/10/2017	Tara J	Prayag							N
1685	Comments									
This land is in Gosford and Water Eaton. Not North Oxford. 230 of the proposed dwellings are planned for this site. This will add to the existing traffic problems which exist and further add to congestion and delay. There is no scope for extra traffic on Water Eaton Lane and there should be no vehicle access onto it from any development. In the Green Belt Study (April 2017) the majority of this site was categorised as partly "High" and with the remainder as "Moderate" in terms of harm to the Green Belt from its release for development. The development would significantly erode the gap between Kidlington, Gosford and Water Eaton and Oxford, especially in combination with removal of the Park and Ride site from the Green Belt, site PR3c and allocations PR6b and PR6a. This would leave a very small gap comprising the southern part of PR7a between Kidlington, Gosford and Water Eaton and Oxford. This will lead towards the merging of the areas – losing their distinct character. The overflow gravesite from St Mary's Church is situated very closely to this site with an area built in for expansion. However, the expansion does not include additional residents that any new build would bring in and this site was very difficult to find. Therefore, the size of available space on this plot should be reviewed. There are issues about managing surface water run off in this area to avoid flooding which already occurs in parts of this area. Part of the site is within Flood Zone 3 and should not be developed.

1951	Comments									
Does not consider the Partial Review of Cherwell Local Plan to pass the 'tests' of soundness, in terms of being positively prepared, justified, effective and consistent with National policy. This is because the Partial Review does not make reference to the need for C2 units (residential institutions, including care homes), nor to care/nursing homes more generally. Policy PR2 deals with C3 uses only. Further limitations on current local planning policies (adopted and emerging) are outlined in the accompanying Note prepared by Lichfield's. In terms of National policy, the Government's National Planning Practice web-based resource in the section on 'Housing and economic development needs assessments' provides guidance to the plan-making process on how to deal with 'housing for older people'. Failure of the Partial Review to meet the care needs of the District will clearly have significant implications on housing options for Cherwell's increasingly ageing population. The accompanying Note prepared by Lichfield's quantifies that like the rest of the UK there is a clear need for care homes in Cherwell. Examples are found in the Oxfordshire SHMA, which projects the number of people with dementia and mobility issues in Cherwell and Oxfordshire will roughly double by 2031 (end of this Plan period). The latest DCLG figures project the number of people in Cherwell living in communal establishments to double by 2031. The Lichfield's' Note sets out the care need for Cherwell as follows: <ul style="list-style-type: none"> In Cherwell District itself, the latest DCLG projections show growth in the number of people over age 75 living in communal establishments of 565, i.e. this is the number of care home bed spaces needed (2011 – 2031). However, as the Council are planning for housing growth well in excess of demographic trends, which will lead the population growth in excess of demographic trends, 565 bed spaces should be considered a minimum to plan for up to 2031. In terms of Oxford City's need, the DCLG projections suggest a need for a further 305 bed spaces by 2031, and (as with its housing need) a proportion of this may well go unmet. Cherwell will inevitably import some of Oxford's care home needs, as those additional residents (who otherwise would have lived in Oxford) age and move into care homes. This further justifies the use of the 565 figure for Cherwell as a minimum, which may need to be increased if unmet care home need for Oxford is identified. Lichfield's' Note on Care Home Need provided. 										
Changes Sought					Reasons for Participation					
Greenlight asserts that it in order for this clear 'need' for care bed spaces to be met in Cherwell over the Plan period, specific policies are required to: (a) Set the delivery of this need over the Plan period as a requirement - this requirement being a minimum of 565 bed spaces by 2031; and (b) To identify and allocate sites to accommodate this need in the Plan and on the Policies Map. To this end, Greenlights' land interest at Skimmingdish Lane, Bicester, which is currently subject to planning application 17/01428/F, provides an opportune site to be allocated for a 64-bed care home; thus accommodating some 11.3% of the bed space requirement (based on a total requirement of 565 bed spaces) over the Plan period (by 2031). To demonstrate how the site at Skimmingdish Lane, Bicester can accommodate a 64-bed care home, and therefore to assist in informing its allocation as a care home site in the Plan, enclosed with this letter is the site location plan and proposed site layout plan, both of which form part of the current planning application on the site.					The matters raised in these representations are of a strategic nature to the plan.

Proposed Submission Plan - Policy PR7a - Land South East of Kidlington

PR-C-0778	10/10/2017	Sarah	Knox-Brown	Begbroke & Yarnton Green Belt Campaign	N		N	
5465	<p>Comments</p> <p>Begbroke & Yarnton Green Belt Campaign's (BYG) main concern is that they believe there is no proper justification for altering the Green Belt boundaries from where they currently stand. On a local level, they particularly object to the removal of the land described as PR8 and PR9 from the Green Belt due to the significant detrimental impact of that removal on the villages and villagers of Begbroke and Yarnton. They also object to the removal of land described as PR6a, PR6b, PR7a and PR7b from the Green Belt due to the importance of these sites in maintaining the gap between the villages of Begbroke, Yarnton and Kidlington to Oxford City and to the land described as PR10, a green field site due to the impact its development will have on the adjacent A44 corridor. Instructed Bruce Bamber, a transport consultant, to prepare a report on the transport implications of the allocation of sites PR8 and PR9 for housing purposes. Although his technical review has focused on these areas, the broader methodology to identify potential development locations has also been assessed for its soundness. The report has been provided as Appendix B. Key conclusions from the report includes: the Sustainability Appraisal Report was published before the Transport Assessment and therefore cannot properly take into account the transport impact of development options. The SAR fails to report the adverse traffic congestion impact from the proposed development around Begbroke and Yarnton and is therefore flawed. Transport evidence base and the associated environmental assessment work is fundamentally unsound and cannot be relied upon. A number of legal issues are raised in Appendix A with a detailed summary provided. If the Council proceeds as planned, we consider the Inspector will find the Plan unsound due to inadequacy of evidence base and failure to ensure effective consultation and participation by the public.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>

Proposed Submission Plan - Policy PR7a - Land South East of Kidlington

PR-C-0832 10/10/2017 David Flavin Oxfordshire County Council

5043

Comments

Kidlington Policy PR7a - Land South East of Kidlington (230 homes) and Policy PR7b - Land at Stratfield Farm (100 homes) would jointly generate around 100 primary pupils. These could either be accommodated through a mixture of the spare places at a new 2 form entry school at North Oxford, and through making permanent the currently temporary expansion of Edward Field Primary School in Kidlington.

Changes Sought

Site policies should require these sites to contribute towards the cost of any necessary additional school accommodation.

Reasons for Participation

Comments

References on the Cherwell Green Belt Study (April 2017), the Oxford Green belt Study (2015), Category A Village Analysis (2016), Policy Villages 1 and 2 of the adopted Local Plan Part 1 and SA report. Conclude that the removal of Green Belt separating Begbroke (PR8) and Yarnton (PR9) and subsequent development as proposed would result in coalescence of both settlements; encroach on the open countryside; and result in highly inefficient use of land (which itself is a combination of grade 2 and grade 3 agricultural land). The harm that results is exactly the harm that the Green Belt land is designed to prevent. The loss of protection of the Green Belt and the scale of subsequent development is contrary to existing Local Plan policies. The "exceptional circumstances" put forward by Cherwell District Council are without merit with respect to all sites proposed for removal from the Green Belt.

Changes Sought

For the reasons given above AND the Representations made by the Begbroke & Yarnton Green Belt (BYG) Campaign which are additionally supported, the Plan in its current form cannot be changed to make it legally compliant or sound and should therefore be withdrawn and NOT be submitted for Inspection.

Reasons for Participation

Would like the Begbroke & Yarnton Green Belt (BYG) Campaign to represent meat the Examination should it take place.

Comments

Referenced the 5 purposes of the Green Belt and NPPF paragraphs 82-84. Quotes provided on the Elmbridge Local Plan and Poole Local Plan. Quotes provided on NPPG's guidance on the Housing and Economic Land Availability Assessment (HELAA). Reference to Policy ESD14 of the adopted Local Plan Part 1. It is reasonable to conclude that whilst local districts may have accepted an apportionment of Oxford's unmet housing need the actual number is not absolute and the Local Plan process may determine that Cherwell, for example, is unable to accommodate the apportioned figure due to existing national policies, such as Green Belt. Conversely, Oxford City, through the development of its own Local Plan and consideration of urban density, re-allocation of land previously earmarked for employment use, etc. may determine that the total unmet housing need is lower than that recommended by the SHMA and post-SHMA work. The latter point will especially apply should Oxford City seek to justify exceptional circumstances to remove Green Belt land that falls within its own jurisdiction. Reference to Oxford's Preferred Options document.

Changes Sought

For the reasons given above AND the Representations made by the Begbroke & Yarnton Green Belt (BYG) Campaign which I additionally support and adopt as part of my own Representation in this document, the Plan in its current form cannot be changed to make it legally compliant or sound and should therefore be withdrawn and NOT be submitted for Inspection.

Reasons for Participation

Comments

Object to policy PR7a on the basis that :-

- Building within the Green Belt on the proposed scale runs counter to National Guidelines.
- Oxford's level of unmet housing need is seriously in doubt to the extent that there may be no unmet need and therefore no reason for the Local Plan Review to continue.
- Proposed development would increase traffic to unacceptable levels of intrusion, safety and pollution
- Valuable arable land and ensuing food production would be lost
- Local services for education, health and welfare are already stretched and unable to cope with increased demand generated by any such housing development.
- Proposals are damaging to the habitat and future of wildlife that currently frequent the site.
- The loss of safe facilities for walkers cyclists etc. would affect large numbers.
- The cost of providing infrastructure and services would prohibit provision of affordable housing on the scale desired by Cherwell District Council.
- The site sits within flood zone 3a. This area falls within the Green Bel The proposals are not limited infilling in villages so is contrary to the NPPF para 89. The site, when considered in "Oxford Green Belt Study" (October 2015) is deemed as having high value in preventing neighbouring towns merging into one another. "this area is relatively well screened from view, but loss of openness would substantially reduce the physical gap between Kidlington and Oxford as experienced when travelling along the A4260 or A4165". Oxford's unmet need has not been confirmed and implications of Brexit needs to be considered. Recent Government's consultation document on housing need suggest lower levels of housing need. There are a number of detailed objections to development of this site. A portion (approx. 10%) of the site falls within Flood Zone 3a, has a high probability of flooding and is not appropriate for housing. Water Eaton Lane is single track south of its junction with Beagles Close. Outline proposals for development suggest that vehicular access would be along Water Eaton Lane and pedestrian, wheelchair and cycle access would be via Bicester Road. In its present form Water Eaton Lane could not support the potential traffic increase (additional 500 to 700 vehicle movements per day ?) without some considerable highway improvements. These cost would need to be met by developers. Because of its proximity to Oxford Parkway station, a high proportion of the new homes would be snapped up by commuters to London, and not serve to support local community needs. The volume of traffic movement would have serious impact on congestion, particularly at peak times. Traffic pollution is already unacceptably high at "Kings Arms" junction, and this would be exacerbated by increased traffic. Local medical, dental and education facilities are not geared up to cope with a potential additional load. More than 120 extra school places, at least 3000 additional annual visits to GP surgery. All generating pressure on services that are already seen unable to cope satisfactorily. The loss of valuable agricultural land. A high proportion of the site is given over to arable farming, producing valuable contribution to our food production. Water Eaton Lane and the bridleway associated with it are used extensively by leisure cyclists, walkers, dog walkers and runners, principally because of its lack of traffic, pleasant open surroundings and safe environment. Increased traffic along Water Eaton Lane would have a massive impact upon these users and their way of life. The inclusion of an area for sports facilities on the site will fail to compensate the many walkers and cyclists who enjoy the safety of a relatively traffic-free environment. Indeed the provision of sports facilities has the potential for massively increasing traffic flows, particularly at weekends. The site currently provides habitat for a wide range of wildlife. Deer and foxes are regularly seen here and the presence of badgers, rabbits, butterfly and bats is frequently experienced.

Objects to PR7a. It is not acceptable. It is considered that better use of the land can be made for proposing housing development, as shown on the attached revised map. It is also considered that the location of sports facilities next to a high speed road & the C43 Bicester Road would cause safety concerns, unless a very high unsightly ball proof fence was erected. Although the outer boundaries of the proposed development are fixed the internal layout of development should be designed using a flexible approach. A wide green landscape buffer zone and screen is proposed alongside the A34 for reducing noise and pollution levels. This should include a foot/ cycleway route leading up to the A4165 Oxford Road for easier access to the Parkway and Park & Ride. The proposal is for an allotment area located around the existing burial ground with temporary allotment site and for extending the burial ground in the future. There could also be room for a sports facility and small recreational park, but bearing in mind the closeness to roads. Use is made on an additional triangular area of land at the end of Water Eaton Lane for proposing a surface water storage pound with a controlled outfall. The rear gardens along the Water Eaton Lane boundary should be screened off from the development and there should be no vehicular accesses made from the proposed development onto this Lane.

The creation of 1,118 houses on PR6a & PR6b will create a potential of 3000+ car movements a day, together with a further 5000+ movements from PR7a, PR7b, PR8 & PR9. The traffic situation North of Oxford will be at gridlock even worse than that which occurred during the recent alterations to Banbury Rd & Woodstock Rd roundabout.

The wildlife will be lost, where will the deer go, if the land is no longer available they will stray onto the A34 causing serious injury to vehicles travelling at high speed. My property will be overlooked by the new houses. Some time ago I submitted a planning application to add an extra room in my roof space. This was declined on grounds that the property was a bungalow and must remain as such. Now there are going to be houses next to a Close that is nearly all bungalows. There will be additional traffic noise.

Objection to build new housing in this area as land is subject to flooding, it is often under water, which will be exacerbated by building Loss of GB is not helpful to future generations. As a 21 year I want to enjoy the GB for my lifetime. Loss of natural habitats is another great concern which makes this a short sighted decision. Traffic will be worse and it will not help the housing crisis for affordable housing. Building on GB is not consistent with National Policy.

If as I believe the loop for this part of the GB is not substantiated then these areas should be zoned for use as London-style community park, with purpose facilities for public use. The area is easily accessible from several directions by public transport, and it would be far preferable for this to be properly landscaped as a continuing "Green Lung" of benefit to both Oxford (which could contribute to the cost) and Cherwell. The Golf Course is in effect already landscaped. If the City still believes that it needs additional housing I suggest that part of Cutteslowe Park is developed and the funds released used to provide a new and larger community facility. The existing Cutteslowe Park is not easily accessed from Kidlington, and the additional extension proposed of little use to any except Cutteslowe residents and gives little protection to the GB/"Green Lung".

Duty to Co-operate - I do not believe that the duty to co-operate requires a Council to accept without apparent justification the aspirations of an overwhelming neighbour Council where that Council has not done all it can to solve the problems. They have not substantiated the basis for it's alleged housing shortfall and has not shown any obvious willingness to co-operate in the funding and/or provision of essential infrastructure. There is a lack of mutuality.

PR-C-1332	10/10/2017	Peter	Webber		N	N	N	
4364	<p>Comments</p> <p>Positive Preparation - There has been an apparent failure to stress-test the alleged requirements of Oxford City Council. This is the subject of widespread local criticism, and the latest downgrading of the Government's own estimates of housing requirements undermines the whole basis of Cherwell's proposals and Oxford's demands. We need to start again with a process geared to the current Government figures as an absolute maximum. Damage to the GB just seems to have been assumed as a given, whilst it is not. Justification - The proposals cannot be justified as matters stand, as the figures have not been adequately tested and may no longer be current.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							

PR-C-1332	10/10/2017	Peter	Webber		N	N	N	
4365	<p>Comments</p> <p>Effectiveness - There is little concrete information as to the funding or timing of infrastructure provision - e.g. a substantial new station will certainly be required, but there is no clarity at all as to how this will be delivered or funded or when in relation to the related development. This all comes across as a wish-list rather than as a blueprint for a successful outcome.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							

PR-C-1332	10/10/2017	Peter	Webber		N	N	N	
4366	<p>Comments</p> <p>As things stand, this site could well be used as the new Oxford United Stadium. The description ("Outdoor Sports Provision") seems specifically designed as words to land Kidlington with a very large building in the GB which is not expressly required on any basis as an exception to GB policy. Local residents are assuming that this will be for a publicly available community facility, not an enormous "destination" available for matches, concerts, etc., and the description and allocation need to be far more restrictive.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							

PR-C-1364	09/10/2017	Mrs Susan	Moss		Y	Y	N	N
4435	<p>Comments</p> <p>The policies are unsound because they fail to meet the real needs of people for low cost (rented or for sale) houses that deal with urgent housing problems. Housing to meet local needs could be achieved by building smaller units at higher density and using far less land. Houses for sale at so-called 'affordable' prices, and houses at market prices, do not meet the needs of the teachers, nurses, public sector workers and young families. Build some houses, but make all of them of the type that people need - not what developers and landowners desire.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							

PR-C-1383	10/10/2017	Fiona	Mawson		N	N	N	Y
4479	<p>Comments</p> <p>This section admits that development of this area will result in a significant reduction of the GB between Begbroke, Yarnton and Kidlington. This area of GB is regularly used by residents of all 3 villages and is an important area for leisure, health and well-being of the local population. Wildlife include a range of rarer species including bats and dormice, some of which are in serious decline and/or protected. Description of improved A44 cycleway linking king to proposed Super Cycleway between Kidlington and Oxford. This would add approximately 2 miles to the journey between Begbroke or Yarnton and Oxford. It has been shown that most people will not cycle more than 3 miles to their place of work; Yarnton and Begbroke are too far out for most people to cycle into Oxford and they will most likely use cars, adding to the congestion.</p> <p>Changes Sought</p> <p>Reasons for Participation</p> <p>The plan cannot be changed to make it legally compliant or sound and should therefore not be submitted for inspection.</p> <p>Would like to be represented by Begbroke and Yarnton Green Belt Campaign</p>							

PR-C-1396	09/10/2017	Paul	Walker	Oxford Bus Company				Y
5163	<p>Comments</p> <p>SUPPORT these Policies with AMENDMENTS. Pleased to note that the areas of search have been assessed utilising the commuter travel within each area noting proximity to current sustainable transport facilities that serve Oxford, access to jobs by public transport and proximity to proposed improvements. It is essential however that these potential improvements are locked into new sites by way of both physical measures and developer contributions that enable improved public transport services. This part of Cherwell, immediately to the north of Oxford is currently under significant pressure with peak period congestion already experienced on the A44 and A34. The A4260 has its own challenges, being a major route within Oxford whilst also needing to provide for Kidlington and movements across it. We note the development of a Development Brief for these sites. The Brief should clearly set out how the plan proposals relate to the strategic bus network and how this will evolve, what the trigger points to deliver this shall be and give clarity to developers on the costs of developing in these locations. The risk of not doing this is one of a hap-hazard development pattern of sites coming forward which cannot be served by high quality public transport though lack of forward planning, lack of certainty for developers and a poorly thought out network connecting major nodes. We therefore support the Policy PR7 9(d) and PR7b 10(b) which both state the need for the development to enable connection to Oxford Parkway & Water Eaton P&R site (PR7d (d)) and to existing or potential public transport services (both PR7 9(d) and PR7b 10(b)). However the policy needs to explicitly highlight that the development brief will need to contain costed proposals for bus services improvements. The size of the strategic allocation also makes it unlikely that it will support key local facilities, such as a substantial district centre. The result is that, to a very great extent, any bus route created to serve this site would have to rely only on the new demand generated by the development itself. Therefore there needs to be mention within the policy of the need to "kick start" bus services for a number of years promoting alternative transport to the car until the development is built out and services viable. This viability may come from diversion into the site of existing services and as such we consider that and extension and/or diversion of the 500 park and ride service provide this role. Not least that such a connection would better enable occupiers if these developments were to access not only Oxford city centre but also Oxford Parkway Station which will better enable modal shift, keeping park and ride spaces free for longer distance travellers and providing a direct link to the station which will be more attractive to potential occupiers</p> <p>Changes Sought</p> <p>Reasons for Participation</p> <p>We would therefore like to see the policy strengthened to highlight the need to connect inter urban bus route networks between settlements that reflect the OCC strategic bus network in a phased manner than can allow new developments to be accessible by modes other than the car with appropriate S106 commitments to enable these developments to be sustainable in a manner that is clear to developers promoting sites.</p>

Proposed Submission Plan - Policy PR7a - Land South East of Kidlington

PR-C-1398	10/10/2017	Ben	Simpson	WYG on behalf of Bonnar Allan Ltd	Y	Y	N	N
------------------	------------	-----	---------	-----------------------------------	---	---	---	---

5333

Comments

The representations are submitted on behalf of my client Bonnar Allan with regard to their proposals at New Alchester. The land is identified in the Vision document attached to these representations and will include up to 7,200 new market & affordable homes, primary & secondary schools, creation of a 240 acre country park & watersports centre & the potential to incorporate a new Park & Ride site with connection to the railway line south of Bicester by a new railway station. Our comments on the PSP are confined to issues of soundness. A summary of the alternative Options A to I that CDC considered at the last stage of the Plan is set out at paragraph 2.12. For the reasons we set out in our representations to that stage, we consider that the CDC's proposed approach of allocating land to the north of Oxford & within the Green Belt (GB) around Kidlington as set out in PR7a is flawed, & that the Partial Review does not pass the test of soundness. The PSP is not Justified as in our view it does not represent the most appropriate strategy for meeting Oxford's un-met housing needs. The logic that appears to underlie the PSP is in essence that the closer the proximity of the required housing to the City, the more sustainable it will be. This logic ignores the fact that there would be better prospects of residents travelling into Oxford as well as the major employment locations in the Science Vale by public transport including by rail from New Alchester. The preferred locations around Kidlington will increase congestion on the highway network & will result in the loss of GB & lead to coalescence between Kidlington, Begbroke & Yarnton, whereas the proposals at New Alchester are located beyond the GB. As we make clear in the Vision document, our proposals can be delivered in a phased manner & there are no impediments to early delivery. The scale of the proposals at New Alchester allows it to meet both the identified needs of Oxford City as well as an element of the future needs of Cherwell District, & in so doing, we recognise the journey that this proposal involves.

Changes Sought

We consider that the PSP should direct a majority of the un-met need to New Alchester which constitutes a more sustainable & justified location for the new homes needed both to meet the City's un-met needs as well as future need within Cherwell District. The PSP should be re-drawn to allocate land at New Alchester in place of the proposed allocations in the Green Belt (GB) around Kidlington. New Alchester can provide a highly sustainable location for the much needed development, at a location outside the GB & on the railway line into Oxford. The development would facilitate creation of a new railway station at New Alchester which would encourage people to travel to Oxford City & also other employment centres within the Science Vale by public transport.

Comments

The CDC Local Plan Part 1 and the NPPF (Para 34) support a strategy whereby growth should be directed towards the most sustainable locations, encouraging travel by non-car modes. The County Council's Oxford Transport Strategy is also clear in its objectives for achieving a meaningful modal shift for those travelling into Oxford City away from the private car and towards public transport. In this context, the justification for the Council's approach in pursuing growth at sites such as PR7, PR8, PR9 and PR10 which propose concentrated levels of development (circa 3,220 dwellings) is unclear. The development as proposed is concentrated along the already very congested A44 corridor and around Kidlington which is a known congestion hotspot. While some development in this area may be appropriate, the concentration of sites will lead to significant issues of congestion given that the sustainable modes being pursued (with the exception of cycling) are all road based Park & Ride, Bus and RTP routes. The Sustainability Appraisal (June 2017) recognises that new development around the Kidlington area 'may increase congestion but the Local Plan Part 1 Partial Review allocates new housing sites that encourage the use of sustainable transport and are allocated following consideration of their impacts on transport patterns through the SA'. Notwithstanding assessment of the proposed allocations through the SA, the impact of congestion has not been sufficiently weighed in the balance when considering reasonable alternative sites and a broader distribution across the District. For example, locating development on the rail network at locations such as Islip would assist in removing some traffic movement from the road entirely. It's recognised that there is the potential for a new railway station at Yarnton, but this is a long term strategy with no immediate proposals for delivery. CDC does not consider this necessary infrastructure to support the proposals and simply consider it a potential future benefit. Therefore, all focus for this plan period under this strategy will be on the road, contrary to the conclusions of the Sustainability Appraisal and to which our client objects. Overall, the various transport evidence base documents prepared to date have not robustly assessed the opportunities to improve rail usage despite current work being undertaken to develop the East-West rail link. East-West rail Phase 1 works saw an upgrade of Islip station which is on the new Oxford – London Marylebone line. The Western Section of East-West Rail will also see the introduction of three new passenger services, for direct services within the region and connections to national mainline services. These services are due to start operating in the early 2020s. Despite this significant rail investment, no development is proposed within Islip which is just a 3 minute train ride from Oxford Parkway, 7 minutes from Bicester, 11 minutes from Oxford and under an hour to London Marylebone. Our client is of the view that Policy PR4a (and by association policies PR6-PR10) focuses too strongly on improvements to and mitigations for the highway network rather than considering options for removing traffic from the road network and towards more sustainable modes such as rail. The proposed locations for the additional housing are known areas of congestion and the transport proposals do not go far enough to solve the existing issues, with the proposed levels of development in this location likely to compound matters further. Our client objects to these policies which will lead to increased levels of congestion and the strategy will not achieve a step change in modal split. Soundness - The evidence base prepared to support Policy PR4a (and by association policies PR6-PR10) is not sufficiently robust to justify the approach to allocate this level of housing in an area of existing traffic congestion without an effective strategy to achieve a step change in modal split. The Council needs to justify its approach for focusing so much of the new development in one area which is already known to suffer issues relating to road congestion. Rail has not been considered as a reasonable alternative within the evidence base documents and consequently the draft plan is not justified. The draft Plan is not Effective, as it focuses too much of the housing requirement in one, focused area. The Plan is not consistent with national Policy as the proposed development is not located where the need to travel will be minimised and the use of sustainable transport modes can be maximised.

Changes Sought

The evidence base has failed to sufficiently consider investment in rail / exploitation of existing rail assets despite recent investment in the East-West Rail project. A thorough exploration of the reasonable alternatives is required. More detailed consideration needs to be given to the potential for locating new development at Islip within proximity to the existing railway station. This location would be sustainable and would support the existing local community. It has been demonstrated that there are no overriding physical constraints, in terms of highway impact, flooding and ecology, to the development of this land.

Reasons for Participation

Due to the complexity of the matters discussed in relation to PR4a

Comments

KPC concurs with the Plan on this Policy, and considers that development on this site could reasonably be considered as an extension to Kidlington, securing a permanent green boundary. While its removal from the Green Belt is regrettable, if justified as exceptional circumstances by PR1, its release could bring long term benefits, offsetting the loss of green belt land with a well-integrated village extension of modest scale, compatible with the character of Kidlington. However, the policy needs to be amended to require the footbridge link as described in P 5.96. This site and others around Kidlington including PR7b (Stratfield Farm) should also be required to contribute to improved access arrangements for Stratfield Brake, which have long been identified as unsatisfactory, necessitating longer journeys along congested roads. A new spur to provide access direct from the roundabout is recommended. Otherwise, general support for this allocation.

Changes Sought

"Add to key Delivery Requirements• Contributions to footbridge link• Contributions to improved access to Stratfield Brake"

Reasons for Participation

"KPC is an elected body, representing the views of a large number of people in the part of the District which will be most affected by the proposed alteration to the Development Plan. In addition to having a statutory role in the Planning process, the Parish Council has an in depth understanding of the local area where new development is proposed, and is well placed to contribute to the Local Plan process. It is essential for the KPC to be actively involved in the Examination, in order to be able to represent local views, fully respond to submissions made by others, and to address any modifications discussed in advance of the Examiners report."

Proposed Submission Plan - Policy PR7a - Land South East of Kidlington

Comments

While we object to any release of land in the Green Belt including the allocated sites, we have a further concern relating to the possible overall location of land for housing in the event that any or all of the allocated sites are confirmed for development in any adopted plan. PR6a, 6b, 7a, and 8, the land areas allocated specifically for residential development (i.e. not the total site areas) are approximately 50% higher than would be necessary to accommodate the stated number of houses at the net densities specified. For example the largest site (PR8) for 1950 houses at 45dpha net should require 43.3ha. Whereas the allocation is for 66ha, over 50%larger. The definition of net density is not specified in the plan though it usually includes access roads, parking, incidental open space and play areas. There are separate allocations for schools and a local centre, so it appears that the areas allocated specifically for residential development are significantly too large. Given the desirability of this land to developers, there is a clear risk that permission could be sought for significantly higher numbers of dwellings over and above the intended provision, resulting in even greater environmental harm and pressure on infrastructure. We are therefore concerned about the provision in PR12a (para 7) that should more than 4400 houses be built this will be taken into account in meeting Cherwell's own need, which would appear to be an incentive to the Council to approve higher numbers than set out in this plan."

Changes Sought

All allocations should be withdrawn because they are premature (need not yet established) and because alternatives to Green Belt development exist. However if some or all of the allocations are confirmed (which we completely oppose) then the plan should be amended to ensure that no more than the specified numbers of houses will be permitted (e.g. by reducing site areas or other stipulations).

Reasons for Participation

We (Kidlington Development Watch – KDW) consider this is necessary because of: our extensive involvement with the consultations at all stages of the Cherwell Local Plan to date; the considerable work we have undertaken to publicise the consultation ourselves; of the feedback we have received from Kidlington residents; and, the large numbers of them who have responded as a result of our efforts. KDW is a voluntary organisation run by Kidlington residents with experience and interest in planning issues. We believe that effective, informed public participation in planning consultations is vital to democratic policy making. We publicise consultations that directly affect Kidlington and offer advice on how people can best make their views known. In relation to this and the previous options consultation we printed and distributed leaflets, put up posters, ran a stall on many Saturday markets and at other events, participated in public and parish council meetings, provided information on our website and responded to requests for information from Kidlington residents. As a result, we have gained a very good understanding of the views of Kidlington residents, a large number of whom have made representations because of our activities. KDW's representations therefore reflect the views of much of the Kidlington community."

Comments

"Object to the allocations in Policies PR6a, 6b, 7a, 7b, 8 and 9 for the reasons given in our objection to release of Green Belt land (see objection to PR3). All of these sites contribute to the purposes of the Green Belt and should not therefore be removed from it. Other Green Belt Sites rejected by the Council. We also explicitly support the Council's rejection of other sites in the Green Belt considered at the options stage for the same reasons. Policy 10 : Woodstock Allocation. In the case of Policy 10, the site is on the edge of the Green Belt, and would impact on its openness. It would also be an excessive and disproportionate extension to the small historic town of Woodstock particularly when considered in addition to the adjacent site provisionally allocated in the draft West Oxfordshire Local Plan (currently under examination) for 300 houses. Due to wide-spread concerns raised at the hearings, the Inspector has asked West Oxfordshire District Council to conduct a heritage impact assessment of this site given its proximity to a World Heritage site. Cherwell should have conducted a similar assessment, taking into account the cumulative impact of the proposed development. Woodstock town is not within the Cherwell boundary but nevertheless, Cherwell has a duty to seek to protect historic Woodstock from inappropriate development and we consider it is not reasonable or sustainable to locate 410 extra houses in this area to meet Oxford's unmet housing needs."

Changes Sought

All allocations should be withdrawn because they are premature (need has not been established) and because alternatives to Green Belt development exist.

Reasons for Participation

We (Kidlington Development Watch – KDW) consider this is necessary because of: our extensive involvement with the consultations at all stages of the Cherwell Local Plan to date; the considerable work we have undertaken to publicise the consultation ourselves; of the feedback we have received from Kidlington residents; and, the large numbers of them who have responded as a result of our efforts. KDW is a voluntary organisation run by Kidlington residents with experience and interest in planning issues. We believe that effective, informed public participation in planning consultations is vital to democratic policy making. We publicise consultations that directly affect Kidlington and offer advice on how people can best make their views known. Comments

Sport England welcomes the Council's references throughout the document and policies requiring developers to include open space, outdoor sport and recreation. However, Sport England is concerned that the Council has yet to publish its evidence base in relation to playing fields and outdoor sports provision and built sports facilities. The Council will need to ensure that all of the new development contributes towards indoor and outdoor sports facilities in the District. The Council's evidence base will help frame this work. Sport England also recommends that the Council includes a requirement for applicants to include a statement demonstrating how their development has met the 10 principles included in Sport England's Active Design document. See Section 3 of the document 'how to use Active Design' and the proposed change.

Changes Sought

Sport England recommends that the Council consult Sport England at the earliest opportunity on the preparation of the Playing Pitch Strategy. Sport England suggest the following text could be included in the policies to support Active Design: PR5 (10) Provide evidence of how the development has improved the health and well being of new residents by demonstrating how the proposals will meet the 10 Active Design Principles set out in Sport England's guidance document 'Active Design' <https://www.sportengland.org/facilitiesplanning/active-design/>

Comments

If the aim is to provide 1,180 houses in the area south of Kidlington, the least damaging locations would be at Stratfield Farm (site 49) and south of Gosford (sites 178, and HELAA 243 incidentally, a new site not identified at the Issues and Options stage). The two assessed sites have existing small allocations, but the theoretical capacity is far higher. The Initial Sustainability Appraisal (which excluded site 243) set these at 523 and 1,388 respectively. Allowing 3.2 hectares for a new primary school, probably best sited at the Gosford sites, and the 0.7 hectares identified for a cemetery extension in the Submission draft PR7a no. 3, the total net combined land available would be 34.26 + approximately 5 hectares of previously unidentified site HELAA 243. Adding in the existing allocation of 220 + 120, the total number of dwellings required to replace those not developed south of Oxford Parkway becomes 1,520. This represents an overall net density of 38.7 dph (1,520/39.26), which is lower than the 40 dph proposed in the submission draft in PR6a, less than the 45 dph proposed in Policy PR8 and less wasteful of Green Belt land than the 25 dph proposed in policy PR6b, or, to put the figures in greater perspective, withdrawing 60 hectares of land from Green Belt protection (Policy 6A, 6B) contributes 1,180 houses at a net density of just under 20dph. Detailed comments are provided in relation to the selection of alternative sites PR178 and PR49 and the Kidlington Masterplan.

Changes Sought

PR3, 6a, 6b - Delete references to PR6a and 6b in PR3. Rewrite all references to sites in Kidlington gap, deleting allocations, setting out playing field allocation in land east of A4165. Allow mixed use on land identified within Policy 3c playing fields, residential allocation of 140 written as a new policy. PR7 a and PR7b - Increase allocation to 1,520 between these sites. Retain a small buffer area to the west of Stratfield Farm. Remove reference to playing fields. PR12a - Rewrite to avoid incentive for future allocations beyond those allocated in the plan, or delete.

Reasons for Participation

Has spoken as a platform speaker at three public meetings in Kidlington and Gosford. Made a substantial representation at the Issues and Options stage. As a former parish councillor, has represented Kidlington Parish Council at the North Oxford Area Action Plan examination in public, and likewise was invited to the Examination in Public of the Local Plan. Has an MSc in Transport Planning, so part of representation covers that area. Also offers a distinctive perspective as a local resident, who agrees with the principle of a Green Belt review, but does not support the current planned site allocation. Has no interest in promoting a particular site, but only have some sympathy with those who would wish to preserve the Green Belt intact. Believe views represent many in Kidlington who recognise the need for local housing, but see these plans as strategically unacceptable. Representation contains primary research evidence which could be presented.

Comments

The Policy details 25 specific requirements which the proposals are required to comply with, we consider those on which we have comments on in turn below: 19. The application(s) shall be supported by a Delivery Plan demonstrating how the implementation and phasing of the development shall be secured comprehensively and how individual development parcels, including the provision of supporting infrastructure, will be delivered. The Delivery Plan shall include a start date for development, demonstration of how the development would be completed by 2031 and a programme showing how a five year supply of housing (for the site) will be maintained year on year - As per our comments in respect of Policy 12a, the phasing restriction on the delivery of this site should be removed. Without this amendment it is considered that the Plan as currently drafted is unsound. Timings for the delivery of supporting infrastructure can be secured appropriately through triggers in the Section 106 Agreement tied to any consent. It is considered that our client's site could be delivered at an early stage in the Plan period and help to meet the needs for affordable and market housing at an earlier stage than currently envisaged. There are no known constraints which would prevent the delivery of the site significantly before the 2031 date. There is no justification behind the site itself demonstrating a five year supply of housing – and indeed no clarity as to what the target would be against which this would be judged. As such it is considered that this requirement is unsound and should be removed from the policy requirement. Approval of planning permission for the site would clearly demonstrate the deliverability of the site and provide certainty in the Council's five year housing land supply.

Changes Sought

The phasing restriction on the delivery of this site should be removed

Reasons for Participation

Our client has important land interests in the District and has raised matters important to the delivery of the Local Plan Partial Review which it would benefit the Inspector to discuss further at the Examination in Public.

Comments

The rep provides a summary of the technical work undertaken in support of the development of the northern parcel of land in the PR7a allocation. Details are provided in relation to archaeology, ecology, arboriculture, drainage and highways. A proposal has also been developed which could deliver 120 Dwellings, 0.35ha play area, 0.082ha Allotments (41.2% of total allocation requirement) 0.288ha Cemetery Extension (41.2% of total allocation requirement). The emerging proposals have paid careful regard to the character of the surrounding area and the context of the site itself. The proposals have sought to integrate with the existing residential development and have ensured that the early delivery of the northern parcel of the allocation would not prejudice the delivery of the wider allocation and the site specific policy requirements. The proposals make proportional contributions towards the delivery of allotments and the cemetery extension. As such it is considered that the early delivery of the site would in no way prejudice the Council's aspirations for the wider allocation and would indeed have benefits through early assistance in addressing the need for both market and affordable housing. Also see appendices attached - Appendix 1: Site Location Plan / Appendix 2: Desk Based Archaeological Assessment / Appendix 3: Preliminary Ecological Appraisal / Appendix 4: Arboricultural Implications Assessment / Appendix 5: Flood Risk Assessment and Drainage Strategy Report / Appendix 6: Preliminary Access Arrangement Technical Note / Appendix 7: Illustrative Masterplan

Comments

The Policy details 25 specific requirements which the proposals are required to comply with, we consider those on which we have comments on in turn below: 2. The provision of 50% of the homes as affordable housing as defined by the National Planning Policy Framework - As per our comments in relation to Policy HR2, additional text should be introduced to allow flexibility in the event the proposals are demonstrated to be unviable. As currently drafted concern is raised that the proposed quantum of affordable housing will render the delivery of the allocations unviable. Our client's will assess this further as part of the emerging detailed proposals for the site. Furthermore, we note that the adopted Cherwell Local Plan requires the provision of 35% affordable housing, as opposed to the 50% proposed in the current consultation document. Whilst it is important that the proposed developments meet the identified needs of Oxford City, they will form part of Cherwell District and as such it is considered that the same approach should be applied to all new developments across the District to form a cohesive approach. Indeed it is noted that no differential in the quantum and mix of affordable housing has been proposed in the West Oxfordshire Local Plan which is currently at an advanced stage in its Examination. Under the currently proposed approach, concern is raised that this will hinder the delivery of the allocated Oxford City sites as clearly the delivery of the sites to meet Cherwell's needs would be economically preferable to developers under the current proposed approach. Concerned is raised as to the impact of 50% affordable provision, at a mix of 80% social rent to 20% intermediate, on the viability of development. Whilst it is recognised that Oxford City has set a 50% affordable target we understand that this is not necessarily being delivered across the City. Importantly the higher level of affordable housing in Oxford City is also reflected in the lower CIL rate charged in the City at £100/sqm. At this stage concern is raised regarding a number of assumptions including site infrastructure costs, abnormal, sales and marketing fees, stamp duty land tax, benchmark land values that have been made.

Changes Sought

Additional text should be introduced to allow flexibility in the event the proposals are demonstrated to be unviable.

Reasons for Participation

Our client has important land interests in the District and has raised matters important to the delivery of the Local Plan Partial Review which it would benefit the Inspector to discuss further at the Examination in Public.

5510

Comments

The Policy details 25 specific requirements which the proposals are required to comply with, we consider those on which we have comments on in turn below: 5. Provision for required emergency services infrastructure - Clearly the provision for emergency services infrastructure is an important requirement for the development of all proposals. This is however a standard requirement, and appropriately covered by buildings regulations, and as such it is not considered that it is necessary for this requirement to be included in the policy wording. The application(s) shall be supported by and prepared in accordance with a comprehensive Development Brief for the entire site to be jointly prepared and agreed in advance between the appointed representative(s) of the landowner(s) and Cherwell District Council. The Development Brief shall be prepared in consultation with Oxfordshire County Council and Oxford City Council. Subject to the proposals clearly demonstrating that bringing forward part of the site in advance of the remainder would not prejudice the overall delivery of the allocation, we do not consider the requirement for the Development Brief to be necessary. It is considered that the development management process provides sufficient safeguards to ensure the comprehensive development of the site. The requirement for a Development Brief would result in unnecessary delay in the delivery of the housing on site which is considered inappropriate given the significant and longstanding shortfall in the supply of both market and affordable housing to meet the needs of Oxford City. From the proposed policy wording it is unclear what the process would be for preparing the Development Brief, particularly in respect of public consultation, and ultimately what status the finalised document would have.

Changes Sought

The requirement for a development brief should be removed (this can be addressed through validation requirements instead)

Reasons for Participation

Our client has important land interests in the District and has raised matters important to the delivery of the Local Plan Partial Review which it would benefit the Inspector to discuss further at the Examination in Public.

PR-C-1405	10/10/2017	Donna	Palmer	Turley on behalf of landowner of northern parcel of land at south east Kidlington and Hill Residential Developments	Y	Y	N	Y
-----------	------------	-------	--------	---	---	---	---	---

5511

Comments

The Policy details 25 specific requirements which the proposals are required to comply with, we consider those on which we have comments on in turn below: 9. In light of the above it is considered that this requirement should be removed. Where the subsequent criteria (a to j) identify specific elements which are required to be delivered as part of the proposals, such as the enhanced area of woodland along the south eastern boundary, these should be integrated into the policy wording. It is considered that these changes are required in order to make the policy effective.

Changes Sought

The requirement for a development brief should be removed (this can be addressed through validation requirements instead)

Reasons for Participation

Our client has important land interests in the District and has raised matters important to the delivery of the Local Plan Partial Review which it would benefit the Inspector to discuss further at the Examination in Public.

PR-C-1405	10/10/2017	Donna	Palmer	Turley on behalf of landowner of northern parcel of land at south east Kidlington and Hill Residential Developments	Y	Y	N	Y
-----------	------------	-------	--------	---	---	---	---	---

5512

Comments

The Policy details 25 specific requirements which the proposals are required to comply with, we consider those on which we have comments on in turn below: 10. The application(s) shall be supported by the Biodiversity Impact Assessment (BIA) based on the DEFRA biodiversity metric (unless the Council has adopted a local, alternative methodology), to be agreed with Cherwell District Council - This requirement is more appropriately addressed through the Council's Local Validation List and as such should not be included as a policy requirement. This amendment will allow greater flexibility and ease of updating should the Council's validation requirements alter during the Plan period. / 12. The application(s) shall be supported by a phase I habitat survey including habitat suitability index (HSI) survey for great crested newts, great crested newt presence/absence surveys (dependent on HSI survey), surveys for badgers, breeding birds and reptiles, an internal building assessment for roosting barn owl, a tree survey and an assessment of water bodies - This requirement is more appropriately addressed through the Council's Local Validation List and as such should not be included as a policy requirement. This amendment will allow greater flexibility and ease of updating should the Council's validation requirements alter during the Plan period. Furthermore, it is noted from the Preliminary Ecological Assessment at Appendix Three that the site is identified as having potential to support only nesting birds and foraging and commuting bats, along with occasional commuting large mammals. There is limited other habitat on or immediately adjacent to the site that shows potential to support any other protected flora or fauna.

Changes Sought

Remove requirement for BIA and Phase 1 Habitat Survey from policy requirements (these can be addressed through validation requirements instead)

Reasons for Participation

Our client has important land interests in the District and has raised matters important to the delivery of the Local Plan Partial Review which it would benefit the Inspector to discuss further at the Examination in Public.

Comments

The Policy details 25 specific requirements which the proposals are required to comply with, we consider those on which we have comments on in turn below: 13. A Flood Risk Assessment shall be submitted with the application(s)... Residential development shall be located outside the modelled Flood Zone 2 and 3 envelope which extends into the north eastern corner of the site - This requirement is more appropriately addressed through the Council's Local Validation List and as such should not be included as a policy requirement. This amendment will allow greater flexibility and ease of updating should the Council's validation requirements alter during the Plan period. It is however considered that the requirement for residential development to be located outside the areas of Flood Zone 2 and 3 could legitimately be retained and included in the Place Shaping Principles section of the Policy. 14. The application should demonstrate that Thames Water has agreed in principle that foul drainage from the site will be accepted into its network. -This requirement is more appropriately addressed through the Council's Local Validation List, through a requirement for a utilities assessment, and as such should not be included as a policy requirement. This amendment will allow greater flexibility and ease of updating should the Council's validation requirements alter during the Plan period. An acceptable solution would be reached during the determination period of any future planning application and as such this is not considered to be a matter related to the principle of the acceptability of the allocation and should be removed from the draft Policy.

Changes Sought

Remove requirement for FRA and foul water drainage from policy requirements (these can be addressed through validation requirements instead)

Reasons for Participation

Our client has important land interests in the District and has raised matters important to the delivery of the Local Plan Partial Review which it would benefit the Inspector to discuss further at the Examination in Public.

Comments

The Policy details 25 specific requirements which the proposals are required to comply with, we consider those on which we have comments on in turn below: 18. A single, comprehensive, outline scheme shall be approved for the entire site. The scheme shall be supported by draft Heads of Terms for developer contributions that are proposed to be secured by way of legal agreement - There is no justification for the requirement for a single application to be submitted for the site. The requirement for a single application is contrary to the reference to application(s) in the majority of the other policy criterion. As with our comments on the Development Brief, subject to the proposals clearly demonstrating that bringing forward part of the site in advance of the remainder would not prejudice the overall delivery of the allocation, we do not consider the requirement for the Development Brief to be necessary. It is considered that the development management process provides sufficient safeguards to ensure the comprehensive development of the site and will be able to secure any necessary financial contributions. The requirement for a single application could result in unnecessary delay in the delivery of the housing on site which is considered inappropriate given the significant and longstanding shortfall in the supply of both market and affordable housing to meet the needs of Oxford City. Furthermore there is clearly no justification as to why an outline scheme is considered preferable to a full planning application. Indeed in some instances a full planning application can be considered preferable given the additional level of detail which would be provided. The Council would be unable to invalidate an application on the basis that a full planning application was submitted rather than outline and similarly would be unable to refuse permission on this basis.

Changes Sought

There is no justification for the requirement for a single application to be submitted for the site. The requirement for a development brief should be removed.

Reasons for Participation

Our client has important land interests in the District and has raised matters important to the delivery of the Local Plan Partial Review which it would benefit the Inspector to discuss further at the Examination in Public.

Comments

The Policy details 25 specific requirements which the proposals are required to comply with, we consider those on which we have comments on in turn below: 15. The application(s) shall be supported by a Transport Assessment and Travel Plan including ... This requirement is more appropriately addressed through the Council's Local Validation List and as such should not be included as a policy requirement. This amendment will allow greater flexibility and ease of updating should the Council's validation requirements alter during the Plan period. 16. The application(s) shall be supported by a desk-based archaeological investigation which may then require predetermination evaluations and appropriate mitigation measures - This requirement is more appropriately addressed through the Council's Local Validation List and as such should not be included as a policy requirement. This amendment will allow greater flexibility and ease of updating should the Council's validation requirements alter during the Plan period. A desk-based archaeological investigation has however been prepared in relation to our client's proportion of the proposed allocation site in any event.

Changes Sought

Remove requirement for transport assessment, travel plan and archaeological assessment from policy requirements (these can be addressed through validation requirements instead)

Reasons for Participation

Comments

Is opposed to the proposed Green Belt allocations mainly because CDC has not proved the exceptional circumstances required to build on a GB, nor has it proved Oxford's "unmet need". Use of the GB for development should be the last resort, if at all. The impact of this proposed "sprawl" on the environment would be massive, with extra cars on roads that are unable to sustain what already exists. This is true also of the existing infrastructure as a whole.

PR32 Flood Report indicates that areas of proposed plot PR7a lie within flood zone 3. The report recommends that development should ideally be restricted to outside modelled flood zone 3 to provide "blue corridors". It is also important to note that these flood maps do not necessarily account for future climate change. The map also does not indicate fields that were historically submerged in water in the heavy rains a few years ago. PR7a indicates that the proposed residential area will lie within flood zone 3 in direct contravention to the flood report.

Changes Sought

Plot PR7a is unsuitable for development. An alternative plot should be identified for the 200 house proposed here.

Proposed Submission Plan - Policy PR7a - Land South East of Kidlington

PR-C-1436	10/10/2017	Patsy	Dell	Oxford City Council					
4575	Comments								
Supports the analysis that there is a close relationship between Kidlington & Oxford & that new homes to the south of the town would be well related to Oxford & help provide for the needs of the city. We agree that is possible to develop to the south of the town whilst maintaining an important GB gap between the two settlements & maintaining the character of Kidlington. Delivery of good public transport, cycle & pedestrian links to the transport hubs (and thereafter on into Oxford) are essential & we welcome the provision for these in the proposed policies.									
Changes Sought					Reasons for Participation				

PR-C-1441	10/10/2017	Katherine	Jones	Savills on behalf of Thames Water					
4599	Comments								
The Details of this development have recently been used for the update of Cassington's SOLAR. This growth potential, coupled with the other developments both with Cherwell & West Oxfordshire indicate that this site would be under capacity should all these developments proceed as planned. However, there are larger sites in the area, such as Witney and Oxford STWs that may be able to accommodate the growth. Once the housing requirements & strategy of the LA's & TW are clearer, then this SOLAR is recommended to be updated to reflect the most up to date plans. The wastewater network capacity in this area may be unable able to support the demand anticipated from this development. Local upgrades to the existing drainage infrastructure may be required to ensure sufficient capacity is brought forward ahead of the development. Where there is a potential wastewater network capacity constraint, the developer should liaise with Thames Water to determine whether a detailed drainage strategy informing what infrastructure is required, where, when & how it will be delivered is required. The detailed drainage strategy should be submitted with the planning application. * Thames Water advise that this development site could potentially drain to either Oxford STW or Cassington STW depending on the point of connection. The total development identified in the Kidlington area within the Cherwell development plan may cause concern if all developments were to go ahead. Thames Water would welcome early consultation concerning any proposed development.

PR-C-1449	10/10/2017	Janet	Rowley	WYG on behalf of Barwood Development Securities Ltd					N
5284	Comments								
"Barwood Development Securities Ltd support the principle of the allocation Land South East of Kidlington through Policy PR7a for new residential development. They object, however, to numerous elements of the proposed allocation on the basis of their soundness. A number of elements of the policy are neither justified nor consistent with national policy. Generally, the policy is considered to be far too detailed for a strategic allocation, and there is no evidence to suggest that the Council sought to understand the viability implications of numerous of its requirements. Moreover, significant sections of the policy do little more than reiterate the requirement for any future planning application to submit documents which are already identified in the Council's Local Validation List. As noted with the numerous criteria reference above, criterion 21-25 of the policy dealing with place shaping principles seem to do little more than repeat the requirements of earlier criteria and reiterate the Framework requirement that all development should contribute positively towards making places better for people and that good design is a key aspect of sustainable development. Policy PR7a requires a fundamental overhaul if it considered to be sound and to enable the delivery of this important strategic site to meet Oxford's unmet need. Many of the policy criteria are unnecessary and could simply be addressed through a district wide SPD covering the Council's requirements for residential design coding, in any event, much of what is sought through this policy either repeats the content of the Framework or replicates the requirement for documents already established in the Council's Local Validation List for applications.									
As drafted the policy creates multiple levels of uncertainty, demonstrates no evidence of having been assessed for viability (contrary to Framework para 173) and may substantially delay the delivery of this important site. As noted in the introductory comments, we consider that this policy is unsound as it is neither effective nor consistent with national policy."

PR-C-1452	10/10/2017	Cllr Emilie	Walton			N	N	N	Y
5195	Comments								
PR6a, PR6b, PR6c and PR7a: These site are all within one Parish – the Parish of Gosford and Water Eaton. Not once in any of the planning documentation does it mention these sites being within the Parish of Gosford and Water Eaton. It has been referred to as Land East or West of Oxford Road, North Oxford or South East of Kidlington. To be clear, all are within the Parish of Gosford and Water Eaton. We have an identity, we have a community and we deserve to be appropriately recognised! 4400 Homes in the Cherwell District: Of this 4400 figure 1410 is allocated in Gosford and Water Eaton Parish and represents 32% of the total. There are currently 676 dwellings within the Parish so these proposals for 1410 dwellings will lead to a 208% increase in number of houses in the Parish. This is a substantial figure which in my view needs to be fully tested in terms of its impact on the Parish and its residents. I believe that the figure is inappropriate given the impact on existing communities, the environment and transport infrastructure. Was this figure influence by the growth of the University of Oxford? If so, Brexit has already seen a down turn in EU research funding and thus a decline in the level of recruitment. Also the University has called for voluntary redundancies for centrally employed staff so employment growth is not set to grow any further (They are the largest employer in the County). An independent review should be undertaken to reassess the original housing figures.

Comments

"The proposals for the area south-east of Gosford are timid and uninspiring and fail to make sufficient use of a site that is capable of providing a natural extension to the built-up area of Kidlington and Gosford."

Changes Sought

"A much greater area, approximately 53 hectares in total, should be allocated for development as shown on attached map PR7a. in the original letter. 1,230 dwellings should be constructed on approximately 48.6 hectares of land at an approximate average net density between 35 and 40 dwellings per hectare. A primary school with at least three forms of entry should be provided in a central location on approximately 3.2 hectares of land. A local centre should be provided in a central location on approximately 0.5 hectares of land. 0.7 hectares of land should be provided for an extension to Kidlington Cemetery. The area allocated for outdoor sports provision should be relocated as shown on attached map PR6a. in the original letter. To mitigate against possible flood risk a bund should be constructed around the north-eastern boundary of the site from Bicester Road to the existing bridleway overbridge across the A34. This bund should be of sufficient width to accommodate a cycle route. The above cycle route should continue from the south-eastern end of the bund via the route shown on attached map PR7a. in the original letter and thence via a new footbridge and ramp to the cycle park outside Oxford Parkway station, so as to provide convenient pedestrian and cycle access from the new development to Oxford Parkway station and the Park & Ride terminal. From the north-western end of the bund, the cycle route should continue via a toucan crossing and thence via the existing wide verge on the western side of Bicester Road to the Hampton Poyle turn, then via a short stretch of unclassified road to connect with National Cycle Route 51. The area comprising Gosford Farm and Bramley Close will become surrounded on three sides by development as a result of this policy, and should in consequence be removed from the Green Belt. A small triangle of land adjacent to the development site and between the development site and the A34, shown on attached map PR7a in the original letter, should also be removed from the Green Belt."

Reasons for Participation

"This submission raises an important issue as to whether, in the event of the removal of Green Belt land being found to be necessary, residential development could be allocated in a different manner so as to reduce detriment to the Green Belt and minimise the coalescence of communities."

PR-C-1502	09/10/2017	Henry	Brougham					
-----------	------------	-------	----------	--	--	--	--	--

5138

Comments

Incorrect consultation form used. Comments relate to proposed submission plan. PR6a should be removed from the list of potential sites, or at the least the area allocated for housing should not extend north of the track from the A4165 to Frideswide Farm in order to maintain the 'Kidlington Gap'. PR6b should remain a golf course and PR6c be developed for housing instead - again, this would maintain the 'Kidlington Gap'. PR6c is close to the Northern Gateway. Additional housing could be allocated to PR7a and PR7b as high density urban extensions to Kidlington. No further sites at Kidlington should be reconsidered. The area and scale of development proposed for Yarnton on site PR8 would completely change the character of the village, and threaten coalescence with Kidlington. The land take should be pulled back from the railway. If the target 4,400 dwellings cannot be met by increasing densities and additional housing on some other sites, the target should be reconsidered.

Comments

We object to policy PR7a, building on both sides of the A34 is totally unacceptable, and would make the coalescence of Oxford and Gosford more likely. The access to the site would be onto the Gosford Link Road, this road is already congested during most of the day. The infrastructure schedule does not address the issue of improvements to this road, there are also no plans to address the high levels of air pollution along the Gosford Link Road, without this the site is not viable. The site has been situated around the new Kidlington Cemetery, this site was put there as a lawn cemetery, this will be ruined if the cemetery is surrounded by housing. One thing that we have seen from the cemetery is that the area is very wet, in order for development to take place a lot of drainage work would need to take place otherwise the site would not be viable.

Comments

In favour of a longer term spatial review with ALL authorities cooperating, and with a fully costed and agreed infrastructure plan to prevent landowners and developers shirking their responsibility to the wider area. So agreement with the CPRLP on this Policy, and development on both these sites could reasonably be considered as extensions to Kidlington, securing a permanent green boundary. Whilst their removal from the GB is regrettable, the release could bring long term benefits, offsetting the loss of GB land with a well-integrated village extension of modest scale, compatible with the character of Kidlington. However, the policies need to be amended to require the footbridge link as described in P 5.96. These sites should also be required to contribute to improved access arrangements for Stratfield Brake, which have long been identified as unsatisfactory, necessitating longer journeys along congested roads. A new exit from the roundabout to provide direct access should be part of the plan.

Changes Sought

Add to Key Delivery Requirements
 - Contributions to footbridge link
 - Contributions to improved access to Stratfield Brake recreation and sports grounds

Proposed Submission Plan - Policy PR7a - Land South East of Kidlington

PR-C-1535	10/10/2017	Layla	Vidal-Martin	Lichfields on behalf of Taylor Wimpey (Oxfordshire)	Y	Y	N	Y
-----------	------------	-------	--------------	---	---	---	---	---

5262

Comments

Taylor Wimpey (TW) considers the Submission Plan is not sound as it is not “justified” or “consistent with national policy”. This is because : 1. CDC acknowledge (Submission Plan Executive Summary para XV) that “under national policy Green Belt boundaries should only be altered in exceptional circumstances through the preparation or review of a Local Plan”. The Submission Plan (para 5.17) sets out why CDC consider that exceptional circumstances exist for the release of these sites from the Green Belt & their allocation for residential development. TW contend that CDC have not thoroughly explored “all other reasonable options” &, where they have sought to do so, there are flaws in their evidence base (regarding their assessments of sustainability, transportation & alternative development locations). They have not demonstrated the “exceptional circumstances” required for the proposed release of the sites identified in Table 1 from the Green Belt; 2. CDC’s approach is predicated on an assumption that “Oxford’s Housing Needs” form a bespoke & identifiable source of housing need. This conflicts with the recognition in the Oxfordshire SHMA (2014) (para 9.2) that “the SHMA identifies an Oxford-focused Housing Market Area which extends across much of the County, reflecting the economic influence of the City. The county still remains the most appropriate geography for analysis of housing markets in terms of the ‘best fit’ of local authority boundaries to a functional housing market area.” More recently the Inspectors Report into the Vale of White Horse Local Plan emphasised that (para 45) “it is not the role of, or possible for, the plan to prescribe where people live and work;” and; 3. CDC compound this assumption (Policy 12a) by seeking to pursue a “separate five year housing land supply . . . For meeting Oxford’s needs.” This, in conjunction with proposals not to support Sites Not Allocated in the Partial Review (policy PR12b) are not consistent with the NPPF’s presumption in favour of sustainable development & risk substantially harming housing delivery in the District in the coming years. Scope of response (See Detailed 4 Section Report). This response amplifies TW’s concerns regarding the soundness of the Submission Plan, & their view that their site at Bloxham (Site PR35) forms a “reasonable option” for residential development prior to the release of the proposed allocations from the Green Belt. Specifically • Section 2: Summarises the appropriateness of residential development on the TW site; (Section 2 encloses * Sustainability Analysis by Calibro, * Residential Potential of Site, * Assessment of site against constraints, * SHLAA Analysis) • Section 3: Summarises TW’s concerns regarding the inadequacy of the evidence base, whilst emphasising their support for the level of residential development proposed. This underpins their contention that the Submission Plan does not establish “exceptional circumstances” for the proposed release of these sites from the Green Belt; • Section 4. Sets out TW’s comments on emerging policies and the changes that they consider are necessary to make the plan sound.

Changes Sought

The Plan proposes that around 55 % of the housing proposed should be targeted within the Green Belt (GB). Para 3.26 “approximately 14 % of Cherwell lies within the Oxford GB”. Thus CDC need to demonstrate “exceptional circumstances” as to why this housing cannot be located within non GB locations comprising 86 % of the District. We do not consider that CDC have appropriately addressed “reasonable alternatives” & therefore cannot be considered to have demonstrated “exceptional circumstances” for the release of all of these sites from the GB. * Combined with the inadequacy of the evidence base, these concerns are amplified by the fact that the Submission Plan appears to prejudge the proposed development strategy irrespective of the evidence base. This is reflected in the fact that the (Executive Summary para xiv) states that the Plan “focusses development on a geographic area extending north from Oxford to south Kidlington, along the A44 corridor” & earlier iterations of the evidence base acknowledged that only sites within two of the nine areas of search have been assessed, * Conversely TW have established that the TW site at Bloxham does form a “reasonable alternative” for development within a sustainable location which is capable of meeting housing need. This is consistent with CDC’s analysis within the HELAA (albeit that TW’s technical analysis is that the site is capable of accommodating a higher level of residential development). * Accordingly the TW site should be allocated for residential development (under this or an additional policy) prior to CDC moving on to consider the need for any Green Belt release. * Without the amendments sought above our clients do not consider that the Submission Plan can be considered “sound”, particularly with regards to being “positively prepared” or “justified.”

Reasons for Participation

We consider it necessary to participate at the part of the Examination to amplify the concerns and points raised within the representations.

Comments

Any new housing built under PR7a on site PR7a should be no more than two storeys high. The new housing should be in keeping with the local context. The Partial Review itself agrees that development should be of ‘exemplar design which responds ... sensitively to the local built ... context’ and that the development on site PR7a specifically should be ‘sensitive to the historic development pattern of Water Eaton Lane. The local context is two-storey housing. Housing on Water Eaton Lane, Beagles Close and Cromwell Way is two storeys only. The Development Brief should stipulate that there be no wriggle-room to build three storeys under the pretext that the windows will be dormer windows. Note that a recent development of affordable housing nearby at Bramley Close on Bicester Road conforms to the local two-storey pattern and has a housing density of 36 dwellings on 0.64 hectares (figure given over the phone by Cherwell Planning Dept. in July 2017). This is a higher housing density than the 35 dwellings per hectare planned for the housing on site PR7a, so it is completely feasible to restrict the new housing to two storeys only. Restricting the number of storeys to two will help to protect properties on Water Eaton Lane from being overlooked and from consequent loss of privacy. Policy PR7a lists as a ‘place shaping principle’ ‘protection of the residential amenities of properties on Water Eaton Lane’. Privacy is an important, much valued amenity. Another important amenity enjoyed by residents in Water Eaton Lane is the present quiet countryside setting with its diverse wildlife, so the plans to put in place ‘green infrastructure’ which ‘protect[s] visual amenity’ (Partial Review p. 77) and enhances the countryside and landscape, specified in PR7a should be put into effect at the earliest stage of any development. Trees and ‘green walls’ take time to grow to a size which genuinely functions as ‘green infrastructure’. Trees and hedges will also help to protect ‘the residential amenities of properties on Water Eaton Lane’ by absorbing some of the increased levels of noise, light and air pollution which will be created by putting new housing on site PR7a.

Suggestions made in relation to development briefs

Proposed Submission Plan - Policy PR7a - Land South East of Kidlington

PR-C-1536	09/10/2017	Elizabeth and Tamsin	Leckie						N
5152	Comments Object to Policy PR7a’s plan to put 320 dwellings on site PR7a as unsound, unjustified and unproven as it will aggravate congestion in an area which already performs very poorly on traffic congestion. It will worsen already serious rush-hour traffic problems around the Kidlington Roundabout to gridlock point and lengthen traffic jams down both the Bicester Road and the Oxford Road into Kidlington. The increased traffic will worsen air pollution problems in an area close to air quality management areas. Air pollution levels are already over the legal limit at the crossroads where Water Eaton Lane meets the Bicester Road. Measures to mitigate these congestion problems mentioned in PR7a paragraph 15 (Partial Review p.109) are mere wishful thinking as no proper funding sources have been identified. Schools and health services in Gosford and Kidlington are already overstretched. Object to PR7a’s plan to put housing on the part of PR7a which is meadow land abutting the cemetery on the south and east borders of the cemetery. Cemeteries are best situated in a quiet, pastoral setting to respect the need of the bereaved for space for undisturbed contemplation. High-density housing and noisy sports pitches would be inappropriate near the cemetery. No vehicular access to Water Eaton Lane from site PR7a. If PR7a goes ahead despite its unsuitability, there should be no vehicular access onto Water Eaton Lane from the proposed new housing on site PR7a. Water Eaton Lane is a popular leisure resource for local dog walkers, nature enthusiasts, country walkers, runners and cyclists because it is a quiet, leafy lane leading to countryside paths. The lane is a cul-de-sac and for most of its length it is single track only. People often walk or run in the middle of the road, enjoying the rural ambience. This rural ambience gives people respite from the stressful noise and bustle of the urban environment. The lane cannot and should not accommodate extra traffic from a housing development of 320 dwellings. Furthermore, it would not be safe to add traffic from the new housing onto Water Eaton Lane because air pollution levels at the crossroads where Water Eaton Lane meets the Bicester Road are already over the legal limit. The issues of waterlogging, surface-water run-off and the unknown extent of land drains on the fields of site PR7a coloured pink for housing development (see Partial Review inset Policies Map p. 106) must be taken seriously by planners and developers. Concreting over agricultural land can aggravate problems of waterlogging and surface water run-off. Several properties on Water Eaton Lane, including our own, have ditches and/or drainage channels that protect our gardens and properties from current levels of run-off, but developers cannot be allowed to rely on residents’ pre-existing provisions. Developers will be responsible for any aggravation of these problems. Planners must ensure that the Development Brief contains adequate safeguards and stipulations because a situation where development creates increased levels of surface-water run-off is unacceptable. The Flood Risk Assessment to be submitted under PR7a paragraph 13 should involve genuine, detailed, on-the-ground investigation including speaking to local residents who can contribute first-hand knowledge. Planners must also take seriously the issue of the development activity disturbing land drains in the field which abuts the south and east boundaries of the cemetery, not least because of the proximity of the cemetery!								
	Changes Sought			Reasons for Participation					
PR-C-1536	09/10/2017	Elizabeth and Tamsin	Leckie						N
5151	Comments Object to Policy PR7a’s proposal to build new housing on the part of site PR7a marked pink for housing development on the inset Policies Map PR7a (p 106 Partial Review) as unsound and unjustified because this area is prone to waterlogging and some surface-water run-off in winter. Concreting over this area would aggravate run-off problems on adjoining lower-lying land in Water Eaton Lane and Beagles Close. It could also cause problems for new properties on site PR7a. The field at the north end of site PR7a abutting Beagles Close to the north and the copse on Water Eaton Lane to the east gets heavily waterlogged in winter and indeed the north-easternmost corner of this field is in flood zone 3. The next door field, (the one in site PR7a which abuts the southern and eastern boundaries of the cemetery) is also prone to waterlogging. Local residents speak of graves in the cemetery being full of water this winter (winter 2016-2017) even though it was a comparatively dry winter. Locals of long residence say that there are field drains in this field. Building over these field drains or destroying them in patches where foundations are laid could lead to additional water drainage problems both for the new housing and for properties in Water Eaton Lane. It could also lead to groundwater pollution. Government guidance about preventing groundwater pollution from cemeteries and burials states that ‘a burial site must be ... at least 10 metres from any field drain, including dry ditches’. It must also be ‘at least 30 metres from any spring or watercourse not used for human consumption or not used in food production.

PR-C-1536	09/10/2017	Elizabeth and Tamsin	Leckie						N
5150	Comments Object to Policy PR7a as unsound, unjustified and unproven. The development of this site would be unsound and unjustified as it would violate a crucial function of the Green Belt: prevention of the merging of neighbouring towns or coalescence of settlements. This site is very important in maintaining a gap between Oxford and Kidlington. The Oxford Green Belt Study 2015 rated the site as performing this Green Belt function well. The site was rated ‘high’, in that it ‘prevent[s] merging or erosion of the visual or physical gap between neighbouring settlements’. The study noted that the site ‘has a sense of openness’ and stated that ‘loss of openness would substantially reduce the physical gap between Kidlington and Oxford as experienced when travelling along the A4260 or A4165’ (NB the site is denoted K15 in the Oxford Green Belt Study, but is exactly the same site as the site denoted PR7a in the Partial Review.) The Oxford Green Belt Study’s points about ‘openness’ and the prevention of coalescence apply to the whole site. The whole site must be kept as Green Belt to give the necessary gap between settlements. It is important that settlements retain their separate identities as this fosters a sense of community and social cohesion. The Partial Review of the Cherwell Local Plan itself states that ‘protecting the identity of individual settlements is an important aim of the Local Plan.’ Space between urban areas is important in reducing the mental stress caused by urban noise, busyness and pollution, whether for local residents or for non-locals visiting or passing through. Loss of the Green Belt function of safeguarding the countryside. Object to Policy PR7a’s plans to develop site PR7a as unsound and unjustified because this site is a valuable area of Green Belt countryside. The Oxford Green Belt study rated the site as ‘medium’ in performing the Green Belt function of ‘safeguarding the countryside from encroachment’. Most of the site is meadow land, a pastoral area of quiet and greenness which is pleasing to look upon and which provides a habitat which supports a diverse range of flora and fauna and animals. Putting ‘outdoor sports provision’ or sports pitches on the southern part of the site does not amount to ‘safeguarding’ a portion of ‘countryside’. PR7a itself concedes in this context that ‘sports pitches’ have an ‘urbanising influence’ which would need ‘minimising’. object to housing development on site PR7a as unsound and unjustified because this site is not a suitable site for integration into the existing settlement. The Cherwell District Council Strategic Housing Land Availability Assessment 2014 (SHLAA 2014) rejected parts K1097 and K1102 of site PR7a as unviable. These sites were rejected for development on the grounds that each of these two sites ‘is removed from the built up area of Kidlington by the severance of A460 Bicester Road and therefore is not considered to represent [a] suitable site that could be integrated into the existing settlement.								
	Changes Sought			Reasons for Participation					
PR-C-1542	10/10/2017	Cllr Andrew	Gant	Oxford City Council Liberal Democrat group					N N N Y
4846	Comments Considers that both CDC statements "considered reasonable alternatives" and that it has demonstrated "clear, exceptional circumstances for development within the Oxford GB" are unjustified, non-compliant and unsound as a result. "Reasonable alternatives" must include sites which are within reasonable commutable distance of Oxford but avoid the coalescence of Oxford and Kidlington and northward urban sprawl of Oxford, as required by the NPPF. This must mean that, for example, the Shipton Quarry site is appropriate to meet Oxford's housing need. Similarly, building on both sides of Oxford Rd (policies PR6a and PR6b) clearly breaches the NPPF requirement that settlements must not coalesce. The alternative site at Frieze Way, currently allocated as a replacement golf course, would not have that effect. These alternatives have not been sufficiently considered. Oxford City Council has re-stated the legal definition of GB that among its principal characteristics are "openness" and "permanence" The Council is right to do so. This is not consistent with the assumptions in this plan. We do not believe an "exceptional need" has been demonstrated to justify the breach of GB principles in the way the plan does. The need could be accommodated with far less damage to the GB by better and different use of some of the allocated sites, and by more consistent consideration of alternatives. Without such consideration, the plan is procedurally non-compliant, legally non-compliant with definitions of GB, and unsound in its consideration of alternatives.								
	Changes Sought			Reasons for Participation					
	A fundamental review of site allocations is required, acknowledging that Green Belt must remain open and permanent, as required by the NPPF. Alternative sites within "easy commutable distance of Oxford" which do not cause urban sprawl or coalescence should be more proactively considered.			To ensure full representation of the views and concerns of local people by their elected representatives

Proposed Submission Plan - Policy PR7a - Land South East of Kidlington

PR-C-1559	09/10/2017	Edith	Sim						
5006	Comments								
<p>Objections specifically for zone PR7a, between Kidlington and Water Eaton Lane</p> <p>1 The field around and south of Kidlington cemetery floods nearly every winter. Lives in a house overlooking these fields, so have observed it directly for 25 years. The field is several feet lower than the main traffic road (Bicester Rd, C43) on its western boundary so drainage will be a problem. The new cemetery in this area has been out-of action at least once because of high water levels preventing burial. Building houses here will cause water run-off and flooding to existing houses in the southern half of Water Eaton Lane. These houses have no mains drainage (sewers), so flooding is a serious health risk. Local ditches which carry water away under the A34, will not cope with extra run off from a substantial built-up area. These ditches are mainly on private land and therefore ensuring that they are regularly cleared is a matter which needs to be addressed even as it stands. With additional housing this will be exacerbated.</p> <p>2 Was told at a local meeting that this area PR7a had been chosen in preference to the land east of Water Eaton Lane, because the land to the east was less at risk of flood. This is not true. As noted above, have lived on Water Eaton Lane for 25 years and observe these fields every winter. Both suffer from flooding.</p> <p>3 Wildlife: There are many bats at the south and east boundaries of this area, and also several badger families. The amphibian population in the fields is also very high and a survey would be required to establish the range of species present. Since great crested newts have been found on local land it would need to be ascertained that these were not present.</p> <p>4 The proposed sport or recreational area to the south of PR7a is in an area which floods regularly, especially near to its boundary with the A34. Road noise from the A34 is very unpleasantly loud in this area, which will disrupt sporting activities and discourage leisure use</p> <p>5. There is evidence of flooding in that the existing footpath from the south end of Water Eaton lane to the railway station which runs close to the A34 is already impassable for several months every year because it is under about 15cms of water. Any extra housing would make this situation worse.</p>

<p>Objection to the Policy PR7(a) to build 230 dwellings on land south east of Kidlington. The development brief is not at all clear in respect of proposals to deal with additional surface water run off that will further aggravate the current surface water flooding in Water Eaton Lane, the traffic congestion at peak periods on Bicester Road and source of funding for adequate development of infrastructure. There are only statements but no defined process towards achieving these requirements and other delivery requirements. It is further noted that the proposed development lies within flood zone 3 (evidence based report from Thames Water). The report says that development ought to be restricted to outside of this zone.</p>

<p>The following section provides a response to elements of the Proposed Submission Plan (PSP) that relate to the sites included in Policies PR6 to Policy PR10 inclusive. The section also covers the Sustainable Transport strategy and Oxfordshire Infrastructure Strategy as covered by Policy PR4 and PR11. Evidence base documents reviewed. Detailed comments provided on: Location of site relative to the employment centres of Oxford, cycle and walking, Rapid Transit system, reliance on buses, return journeys from Central Oxford, commuter inflow patterns in Oxfordshire, review of RAG matrices, unfunded Transport Strategy, safety, loss of green space.</p>

<p>For the reasons I have given above AND the Representations made by the Begbroke & Yarnton Green Belt Campaign which I additionally support and adopt as part of my own Representation in this document, the Plan cannot be changed to make it legally compliant or sound and should therefore NOT be submitted for Inspection.</p>				<p>Would like the Begbroke & Yarnton Green Belt Campaign to represent me at the Examination should it take place.</p>								

Proposed Submission Plan - Policy PR7b - Land at Stratfield Farm

PR-C-0274	29/08/2017	Mrs Rena	Ireson			N		N
861	<p>Comments</p> <p>Strong objection to further housing on GB in Kidlington, especially PR7b. Loss of delightful green and peaceful outlook. If GB land is sacrificed it will never be green ever again. Kidlington is classified as a village. Its facilities and amenities which will be inadequate for large influx of people into the area. Struggling underfunded schools, surgeries and policing will deteriorate and become inadequate. Reduced standard of access to public services. It is totally unacceptable. Extra traffic would be problematic adding to the already local gridlock and congestion. New road networks would be required. Parking would also be an extra problem as there are scant parking facilities in Kidlington. Where is the funding coming from to pay for all this building? The Kidlington area will be covered with bricks, concrete and tarmac.</p>

PR-C-0305	25/09/2017	Martin	Small	Historic England		Y	Y	N
907	<p>Comments</p> <p>The site "Land at Stratfield Farm" includes the Grade II listed Stratfield Farmhouse and abuts the Oxford Canal Conservation Area to the west. We previously commented "This is one of a number of proposed sites containing or near to isolated listed farmsteads, which would be surrounded by development if these sites were allocated, which in turn is likely to have a major impact on their significance. Their historical interest is often bound up in the relationship with the land from them and their aesthetic value is often enhanced by an isolated rural setting." We suggested that "an analysis of the impact of development on the significance of the farmstead is undertaken and feeds into the consideration of any sites taken forward. Any development of this site should retain the Farmhouse and have regard to its setting and that of the Conservation Area, with reference to the conservation area character appraisal." Historic England therefore welcomes and supports requirements 10(e), 24 and 27. We also welcome requirement 12 (c). However, for these requirements to be effective as regards the farmhouse, the further analysis of the impact of development on the significance of the farmstead that we previously suggested needs to be undertaken. Ideally, this should have been undertaken already as part of the evidence base of the Plan in order to justify this policy, but we see that the Council has elected instead to require a Heritage Impact Study from a future developer which will "include measures to avoid or minimise conflict with the identified heritage assets within the site" as requirement 17 of Policy PR7b. We also note that requirement 18 is for a desk-based archaeological investigation which may "then require predetermination evaluations and appropriate mitigation measures" as part of the positive strategy for conserving and enjoying, and clear strategy for enhancing, the historic environment as required by the National Planning Policy Framework. Such an approach is less satisfactory in providing certainty to a developer of the developability of the site. Also, more critically, requirements 17 and 18, as drafted, only requires the Heritage Impact Assessment to include mitigation measures and only notes that the archaeological investigation may require predetermination evaluations and appropriate mitigation measures respectively. It does not require these measures to be incorporated in or to influence the actual development scheme. The policy therefore provides inadequate protection for potential archaeological remains on the site. As the Council will be aware, paragraph 126 of the National Planning Policy Framework requires local planning authorities to recognise that heritage assets are an "irreplaceable resource" and "conserve them in a manner appropriate to their significance". Paragraph 129 notes that the significance of a heritage asset can be affected by development affecting its setting. Historic England therefore considers that Policy PR7b as written does not conform with the Framework and thus is not sound.</p>							
	Changes Sought			Reasons for Participation				
	Requirement 17 of Policy PR6a should be reworded as follows: "17. The application shall be supported by a Heritage Impact Assessment which will identify measures to avoid or minimise conflict with the identified heritage assets within the site, particularly the Grade 2* Listed St Frideswide Farmhouse. These measures shall be incorporated or reflected, as appropriate, in any proposed development scheme." Requirement 18 should be reworded as follows: "18. The application(s) shall be supported by a desk-based archaeological investigation which may then require predetermination evaluations and appropriate mitigation measures. The outcomes of the investigation and mitigation measures shall be incorporated or reflected, as appropriate, in any proposed development scheme". (Discussions with the Council are ongoing at the time of submitting this representation, but early indications are that the Council will consider rewording these requirements as suggested as minor modifications. If it was to do so, Historic England's objections to these requirements would be overcome).							
PR-C-0306	10/08/2017	Anthony	Hall					N
917	<p>Comments</p> <p>Key Delivery Requirements' on all these policies are nothing more than a fig leaf. It is perfectly obvious the developers will agree to some or all of them and then will renege on them. This always happens. 50% affordable housing will be thrown out of the window as it has been in Templars Square where 50% has magically transformed into 23%. Similarly, developers never actually deliver infrastructure like schools, community centres or roads that are wide enough. The 'Place shaping principles' in these policies are valueless: there are no measure by which they might be enforced. How can one tell, for example, whether an extension "responds to the 'gateway' location of the site". It's gobbledegook. PR11: This is completely empty. 'Working with partners' does not guarantee anything except that you have no control over the outcome. Nor does 'setting out the Council's approach'. Its all very well having the development proposals demonstrate that infrastructure requirements can be met - it does not mean they will be met.</p>

Concerned about the implications of the projected growth of Kidlington. The Village would potentially merge with Yarnton and Begbroke and become a suburb of Oxford. The majority of the clusters of employment within Oxford are not located in the northern section of the City. Therefore, it seems unjustifiable that a village to the north appears to be the main target area for the City's housing demands. In order to get from Kidlington to Cowley or Headington potential workers would need to circumvent the City or drive through it. Either way it would add unnecessarily to the traffic congestion. It is unlikely that the provision of more housing in Kidlington will alleviate the housing needs of Oxford City. Kidlington, especially since the opening of Oxford Parkway station, has increasingly become part of the expanding commuter belt for people who work in London. The argument that it will provide accommodation for people working in Oxford is not substantiated as a high percentage will be to accommodate London commuters. Many of the existing properties in Kidlington, particularly those at the lower end of the housing market, are already in the hands of 'Buy to Let' landlords charging extremely high rents. They are therefore well out of the reach of first time buyers or for rent by anyone earning the National Average Wage. It is extremely unlikely that any additional accommodation built in Kidlington will come under the category of 'Affordable' housing. Kidlington already has severe traffic problems. The proposed additional housing would greatly increase the amount of traffic using these roads. Anyone travelling to or from Oxford during peak hours is only too aware of the present long queues through Kidlington and any further increase in the number of dwellings would result in complete traffic chaos. The development of the identified Kidlington sites would have an immense and detrimental impact on the local educational, shopping, dental and medical amenities which are already extremely stretched. There are also completely inadequate facilities for the existing children and young people in the area. The proposed increase in households would result in a corresponding increase in the number of young people needing to use the sparse facilities available and a likely increase in the problems associated with anti-social behaviour.

Concerns on the areas designated as PR7a, PR7b and PR8. These proposed developments would join up the present villages of Begbroke, Yarnton and Kidlington. The total number of houses that are proposed to be built appears to be a total of 2280, of which 1950 are located on land to the east of the A44. These constitute an extreme over development and would cause havoc to the road, school and medical facilities. It appears that the plans for PR7a and PR7b (Kidlington) do not have provision for additional educational and medical facilities. Cannot envisage how a further 330 households are to be incorporated into the existing schools and GP surgeries. These are already extremely overstretched and the wait to secure an urgent GP appointment is 3 to 4 weeks, with 4 to 6 weeks for more routine matters. The plan for PR8 to support 1950 additional households is not viable. Notes that the plan includes 2 primary schools, a secondary school and a local centre to include shops and medical facilities. However, past experience shows that these aspects of a development scheme frequently 'fall by the wayside' and do not materialise. What usually happens is that the houses are built and occupied long before the infrastructure is developed. The community is left to try and absorb the additional demands and this puts a tremendous strain on the existing and new communities. There is also the extreme difficulty in attracting GP and teaching staff to move into the area. It is unclear which village would be expected to provide the educational places and medical support when these new houses are occupied. Suggests that as Kidlington is the larger village it would be expected to pick up the surplus. Notes that 50% of these new houses are designated as 'affordable housing'. What affordable housing means is subject to speculation and these are likely to become 'buy to let' or to provide homes for London commuters. In these cases are there stipulations that they must be allocated to local people? This proposed development is not a realistic requirement and is unsustainable. Not only would the infrastructure be completely overwhelmed but we do not believe that improvements could, or would, be made to even partly cope with the demands this would make on the area. The already severe traffic problems would escalate with schools, dental and GP services being completely swamped. Concerns regarding the proposed development of Cowley Barracks to provide student accommodation. If Oxford City is desperate to supply additional housing surely they could 'compulsory purchase' the site and provide at least some of the housing they require. This would also be close to the major employment areas. Opposed to the Green Belt being eroded.

Thoroughly dismayed to see the plans to potentially develop on this crucial piece of greenbelt land between South Avenue and Stratfield Brake Sports Ground. This proposed development would destroy an essential wildlife corridor. Strongly believe that this type of greenbelt land is exactly what gives Oxford and Kidlington their character and helps to prevent endless urban sprawl with traffic congestion, limited green space, no wildlife and high pollution (air quality, noise and light). The proposed developments on greenbelt land in PR7b and PR6c (plus PR7a, PR6a and PR6b) mean that the village of Kidlington would merge with Oxford city and the village of Kidlington would therefore be lost to become a residential suburb of Oxford city. The traffic levels on the A4165 from Kidlington to Summertown are already very bad, with very high levels of congestion. This road cannot cope with additional commuters into Oxford (which is what PR7a and PR7b would lead to) and the extra pollution caused would adversely affect the wildlife and biodiversity in this precious area of greenbelt land. Reconsider the plans to build on the precious corridor of greenbelt land in PR7b and propose more suitable alternatives such as brownfield sites and areas adjacent to Oxford city itself it is fundamentally wrong that the character of this peaceful village should be destroyed to meet Oxford city's 'unmet need'. Specific details of disagreement with:10 (b) 'Points of vehicular access and egress from and to existing highways with at least two separate points: first, from the Kidlington Roundabout junction, and second, from Croxford Gardens.' Strongly object to a vehicular access point from Croxford Gardens. Why is this necessary? It will lead to an increase in pollution (air, noise, light) in the Garden City area of Kidlington village for no obvious reason since there are not any major shops, businesses or facilities in this area. A single direct access point from Kidlington roundabout would be more appropriate although, this roundabout would become an accident hotspot owing to its complexity so this is another reason why the proposed development plans for PR7b should not proceed. 10 g) 'The maintenance and enhancement of the protected trees, existing tree lines and hedgerows'. The plan does not specify what this means. What does 'enhancement' mean? Strongly object to any changes to this greenbelt land. 12 (i) 'Measures to minimise light spillage and noise levels on habitats and wildlife corridors including to maintain connectivity for nocturnal species in an east-west direction'. What are these 'measures'? The creation of 100 houses, along with the associated traffic, air pollution, light pollution and noise pollution will have a devastating impact on this wildlife and the biodiversity present. Overall, the devastating impact of policy PR7b on precious wildlife habitat and biodiversity, along with the accompanying increase in pollution (air, light, noise) and increase in road traffic congestion, for the sake of 100 houses, means that policy PR7b cannot be considered a sound, justified plan given the available alternatives.

Changes Sought

It is wrong for the council to focus on providing more housing for Oxford. Instead, believe the council should be focusing its efforts on Banbury, Didcot and particularly Bicester - by making these places more attractive to businesses and residents, there will be less demand for housing in Oxford. More focus should be spent on ensuring that Oxford (and Banbury, Didcot and Bicester) can meet their own needs. The following alternatives would be far more appropriate: Focus on distributing businesses more evenly throughout the county. If land that is earmarked for businesses within Oxford city is used for housing instead it would help solve the 'housing crisis'. Any new 'affordable' housing efforts should focus on Oxford since this is where the 'crisis' resides. Using land within Oxford city or, if necessary, adjacent to the South or West of Oxford city would be a much better option because it would not destroy precious wildlife corridors; it would have a lesser impact on pollution levels (because commuters could walk or cycle to work AND, even if they use cars, their journeys would be shorter leading to less pollution); and it would prevent the urban sprawl of Oxford city into Kidlington village. Build houses at a higher density in appropriate locations. would not be appropriate to build housing at a high density in PR7a or PR7b because this would be very much out of character with the surrounding housing in the village of Kidlington and it would have an even more devastating impact on the local wildlife (both biodiversity and corridors); however, it would be appropriate in a city. PR6C: there does not need to be a replacement golf course. There are a great many other golf clubs/courses in the Oxfordshire area. The sensible option would be to use PR6C to assist with Oxford's 'unmet housing need' and spare the precious greenbelt land in PR7b and PR7a (this option would protect greenbelt land; protect a valuable wildlife corridor between Kidlington and Stratfield Brake; reduce pollution [air, light, noise] and congestion [because people living in PR6C could more easily walk/cycle to work in Oxford city]; protect the character of the village of Kidlington; and presumably save money). Government policy states that development in the green belt should be a last resort when there are no alternatives. Do not believe that the council is adhering to this policy - there ARE alternatives to building on the greenbelt land in PR7b so this precious greenbelt land should not be destroyed in these circumstances.

GB is designed to protect from overdevelopment. If PR6 and /or PR7 are permitted, Kidlington, Yarnton and Begbroke will become victims of urban sprawl and become a suburb of Oxford. This GB should not be sacrificed as it will irrevocably damage the countryside, wildlife and biodiversity of North Oxfordshire, reducing quality of life for local residents.

This is a strong GB area of natural beauty and historic potential. Housing development would encroach upon the nearby reservation. The desire to build 100 homes on it is suspicious and the small number of houses intended would likely increase. Using this GB space up would needlessly and only at the best temporarily solve the growing housing need. It is not a convincing solution. Consistent with National Policy? This plan puts the reservation area at risk for future development and inevitable shrinkage. The old farm house in this area should be preserved and perhaps looked into becoming part of the current reservation areas. It would be more reasonable to look at increasing the green space of this reservation area not decrease its wall from urban overspill. Decision making by any parties that stand to profit from the success of this planning on this protected GB space should be forbidden. GB space is labelled as such to cap the area from inevitable demand of expansion even in so called extreme cases. This development plan is exploiting the natural wildlife, views and historic value for property investment. It has no sensitivity or concern for GB policies or the quality of life for current and future inhabitants.

Changes Sought

Changes to Plan 7b - so that it is more legally compliant and sound. 1. If using our GB areas is truly the only option for development then Cherwell should decline and point to other solutions such as a. Brownfield sites within Oxford or further out. b. Current and numerous vast amounts of land either being reserved for commercial use (much of it not looking very utilised or successful). 2. The decision making process should be ultra-sensitive and rigid to the aesthetics at risk. 3. This area should be expanded as a reservation and historic area in compensation to the fact that new housing developments are likely to occur. 4. The decision making process for this area should be ensuring the aesthetics, enhancement and protection of it are paramount with the rigidity to only accept plans of which would increase its green space.

Reasons for Participation

I am a concerned as a long time resident that these plans will affect. I am also aware and understand these plans and their implications involving both current and future residents. I strongly believe I am competent and justified to be involved in ensuring that alternatives, and fair compromises are met

Proposed Submission Plan - Policy PR7b - Land at Stratfield Farm

Comments

GB: CONCLUSIONS: 1. Government Policy and the Public Interest both require the GB to be permanent unless truly exceptional circumstances necessitate consideration of release. 2. Oxford unmet need is not an exceptional circumstance, firstly because it has not been defined and secondly because there are ample reasonable alternatives to accommodate it. 3. The LUC GB study was conducted on flawed principles and should be given little weight. 4. Cherwell have cited no other exceptional circumstances which hold any water – and their primary arguments – proximity to Oxford – is in fact a key argument for GB retention rather than release. 5. If at some future time an Oxford “unmet need” has been shown to exist and satisfactorily quantified, and if that requires any allocation to Cherwell, there are alternatives available to the District other than releasing GB land and therefore none should be released.

Changes Sought

In CPRE's view, it is not possible to 'tweak' the current document in order to make it sound and therefore the current version of the Plan should be rejected. CDC should re-visit the process, as and when the final numbers for Oxford have been examined, adopting higher densities and prioritising protection for the GB.

Reasons for Participation

CPRE Oxfordshire represents a wide membership across the County, including many parish councils and local organisations, and seeks to influence development to protect and enhance the countryside. As one of the founders of the Oxford GB, we have considerable knowledge about its origins, purpose and ongoing relevance.

THE GB STUDY No great weight should be given to the LUC GB Study. Its purpose was not to determine whether any of the GB made no, or an insignificant contribution to, the purposes of the GB since clearly all of the GB land contributes, and the loss of any would be harmful. Rather, in its own words, the GB Study has been commissioned by Cherwell District Council to assess the suitability of the strategic sites being promoted for development against the five purposes of the GB. In other words the sites had been pre-selected, as we showed above, in the face of GB policy, and targeting the most fragile point in the entire Oxford GB. LUC continue The considerations that will determine the most appropriate scenario, or combination of scenarios, will largely relate to the existing or potential environmental qualities and value of land, and to the sustainability of residential development. This will enable Cherwell District Council to consider whether there are ‘exceptional circumstances’ (under paragraph 83, NPPF) to justify altering GB boundaries through the Local Plan process, i.e. to enable existing GB land to contribute to meeting Oxford’s unmet housing need. That is, value is not primarily judged against GB purposes at all, but against environmental ones, and the sustainability of the land for housing development. LUC found that Release of areas identified as making a low contribution to GB could provide only 5.8ha of potential development land (4.13). Release of areas identified as making a low or low-moderate contribution to GB could, subject to consideration of cumulative impacts, provide 34.6ha of potential development land(4.14). Release of areas identified as making a low, low-moderate or moderate contribution to GB could, subject to consideration of cumulative impacts, provide 166.7ha of potential development land (4.15). Although as noted above, the judgment was largely not on GB grounds, moderate harm was considered acceptable in order to release a larger amount of land. LUC acknowledge that release of fragile GB 4.16 GB that occupies only a small/narrow area between separate urban settlements will tend to rate highly in terms of its role in preventing settlement coalescence. This exactly describes the land chosen for release; but LUC went on. However, if environmental assessment determines that this land lacks significant value then a case could be made for accepting the coalescence, or near-coalescence, of settlements in order to maximise the scale of development in one area. That is the, subjectively assessed low environmental value trumps urban sprawl and severe coalescence, the two founding principles of the GB. Further, they have targeted the very point at which the GB is already narrowest – the Kidlington Gap between Kidlington and Oxford – for release, directly creating the coalescence of two distinct settlements (It is material that Oxford itself is proposing to breach that same area from the South with a proposed development of St Frideswide Farm). The sites concerned are all at the exact point in the GB where coalescence of settlements (Oxford and Kidlington) is most threatened, with the built areas separated presently by a few fields. The proposed GB reviews, together with the release of the Parkway Station and Park and Ride would effectively merge the two settlements. Although Kidlington (population 13,000, 2011) is statutorily a village, it is larger than many towns, notably Thame (11,600) and Henley (11,700) in Oxfordshire.

Changes Sought

In CPRE's view, it is not possible to 'tweak' the current document in order to make it sound and therefore the current version of the Plan should be rejected. CDC should re-visit the process, as and when the final numbers for Oxford have been examined, adopting higher densities and prioritising protection for the GB.

The NPPF states that one of its Core Planning Principles (para 17) is to take account of the different roles and character of different areas, promoting the vitality of our main urban areas, protecting the GBs around them, and noting (at para 79) that the fundamental aim of GB policy is to prevent urban sprawl by keeping land permanently open. Paragraph 83 states that once established, GB boundaries should only be altered in exceptional circumstances, through the preparation or review of the Local Plan. The recent Housing White Paper, clarifies what the steps before a finding of “exceptional circumstances” should be, when local authorities can demonstrate that they have fully examined all other reasonable options for meeting their identified housing requirements. Amongst these “reasonable options” which Local Authorities must demonstrate they have considered before there can be the “exceptional circumstances” required for review/release of GB land are: • making effective use of suitable brownfield sites and the opportunities offered by estate regeneration; • the potential offered by land which is currently underused, including surplus public sector land where appropriate; • optimising the proposed density of development; and • exploring whether other authorities can help to meet some of the identified development requirement. Although not yet law, the White Paper illustrates how high the hurdle for exceptional circumstances must be, given that the NPPF’s “fundamental aim is keeping GB land permanently open”, and the need to show there are no “reasonable options” before considering GB release.

Changes Sought

In CPRE's view, it is not possible to 'tweak' the current document in order to make it sound and therefore the current version of the Plan should be rejected. CDC should re-visit the process, as and when the final numbers for Oxford have been examined, adopting higher densities and prioritising protection for the GB.

Reasons for Participation

CPRE Oxfordshire represents a wide membership across the County, including many parish councils and local organisations, and seeks to influence development to protect and enhance the countryside. As one of the founders of the Oxford GB, we have considerable knowledge about its origins, purpose and ongoing relevance.

DUTY TO CO-OPERATE - The SHMA is explicit that Authorities are not expected to meet OAN (Objectively Assessed Need) in full if e.g. it would necessitate Green Belt development. It has been the unforced choice – not the requirement – of Oxfordshire’s Councils to agree to meet the SHMA need in full despite wide swathes of Oxfordshire being GB and AONB. It is therefore incumbent on Councils to take on each others’ “unmet need” if it would otherwise require GB land to be released. As shown, Oxford’s unmet need is very far indeed from being quantified or crystallised, but, if it were, it would be the duty of other Councils to assist Cherwell in meeting its part of that need without releasing GB land, not least by assisting Cherwell to understand how to do so within its own borders. There is no evidence that this has been attempted. Finally, the new OAN calculation proposed by the Government during the consultation defines “need” as the figure shown in the Government’s own tables on household projections. This is overlaid in the proposed calculation with an arbitrary (and ill-conceived) uplift intended to reduce house prices. It is also accepted that local authorities may if they wish further inflate their housing targets to provide further economic growth than that already included in the government’s base tables. However, it is submitted that these latter two elements cannot be defined as “need” and neighbouring Councils have no duty to co-operate in meeting them.

OXFORD'S 'UNMET NEED' AND REASONABLE OPTIONS FOR MEETING IT (continuation)
 c. Even if there were no reasonable alternative sites, and even if densities on allocated non-GB sites could not be increased, the release of GB land could be substantially reduced. The total GB land proposed to be released is 264 ha. 10 hectares is proposed to be released for the station and Park and Ride, which already exist on GB land. There is no obvious rationale for the release. The net GB land to be released for housing is 254 hectares However within this area only 153 hectares is proposed to be actually used for housing, with the rest being allocated for sport, nature, agriculture etc., all legitimate GB uses. On the residual land 3990 houses are proposed at a density of 26 dph (although an average of 34 is claimed in the Plan). If build densities were increased to urban levels – the Council’s stated Policy is to treat these incursions for Oxford’s unmet need as urban extensions – then 70 houses per hectare, utilising only 37% of the land would be appropriate. This would require only 57 hectares, all of which could be comfortably accommodated on PR8, the least damaging in terms of coalescence and the Kidlington Gap of all these sites.

OXFORD'S 'UNMET NEED' AND REASONABLE OPTIONS FOR MEETING IT. 2. If Oxford’s unmet need were realistic could it be met elsewhere in Cherwell than in GB? a. Yes, it could be met on non-GB sites. Cherwell found that the required number of houses could sustainably be built elsewhere, outside the GB, at Junction9 M40, Arncott, Bicester and surrounding area, Upper Heyford, Junction 10 M40, Banbury and surrounding area. They rejected these alternative sites because they might upset the evolution of the current adopted plan – although why competent planners would not be able to deal with that problem, if real, is not apparent; because there might be shortfalls, although why these should be greater for Oxford’s unmet need than for Cherwell’s own need was not explained; and more dispersed options provided less opportunity for strategic infrastructure investment (e.g. transport and education), although why this would be the case for, for example, Upper Heyford which is already targeted and developed, or for other centres which already benefit from services, is not explained. The overriding reason for their rejection however was clearly that they were less well situated (than the GB sites) to build communities associated with Oxford, to assist with the delivery of the Oxford Transport Strategy, to provide affordable transport options, and more likely to involve commuting. It is significant that even GB sites like the previously developed Shipton Quarry, were rejected as Development here would relate to Shipton-on-Cherwell, not Oxford. Therefore the parcel plays no role with respect to this purpose (Oxford’s unmet need). Simply put, this amounts to saying that all reasonable alternatives were unacceptable because they were not in the GB, or, if they were in the GB, were too far from Oxford. It is an argument that urban sprawl into the GB is justified by the fact that only GB sprawl could (by definition) be close enough to the City; in other words it is an argument not just for nibbling at the GB but for undermining its core purpose. It is clearly unacceptable in its own terms. Further, the proposed new OAN calculation would reduce Cherwell’s own need by 33%. The effect of this would be that 33% of the housing trajectory in the Council’s adopted plan would be superfluous to Cherwell’s own requirement and therefore available to satisfy any unmet needs of neighbouring authorities that might arise. b. The unmet need could be met by marginal density increases on generally low density allocated sites. Policy BSC2 in the adopted plan states New housing should be provided on net developable areas at a density of at least 30 dwellings per hectare unless there are justifiable planning reasons for lower density development. Yet Policy Bicester 1 allocates 380 hectares to just 6,000 homes which is 16 houses per hectare. Assuming for these purposes that 30 dwellings per hectare is the average across the District, the sites to which the present 22,800 homes are allocated would need to increase build density by just 5%, to 36%, to accommodate all of the “working assumption” of Oxford’s unmet need. This would still be less than half the density of Central Paris or Barcelona, or Islington in London. Higher density build would also mean smaller houses, of which 63% of Oxfordshire’s SHMA need is comprised, and thus better meet public requirements. High densities also reduce the need for car travel and create a stronger sense of community.

Changes Sought

In CPRE's view, it is not possible to 'tweak' the current document in order to make it sound and therefore the current version of the Plan should be rejected. CDC should re-visit the process, as and when the final numbers for Oxford have been examined, adopting higher densities and prioritising protection for the GB.

OXFORD'S 'UNMET NEED' AND REASONABLE OPTIONS FOR MEETING IT. 1. Is the Oxford unmet need real or realistic? Cherwell argues that an “exceptional circumstance” exists in the Inspector approving the adopted plan having added a requirement for “a formal commitment from the Council, together with other relevant Councils, to undertake a joint review of the boundaries of the Oxford GB, “once the specific level of help required by the city of Oxford to meet its needs that cannot reasonably be met within its present confines, IS FULLY AND ACCURATELY DEFINED”. (Our emphasis) It was our view at the time that the Inspector could have exceeded his remit as there was no evidence before him suggesting that further development in Cherwell was impossible without breaching the GB, nor of the precise quantum of Oxford’s unmet need (if any existed) or the capacity of other Districts to accommodate it. However it is relevant that he proposed a Review only AFTER Oxford’s unmet needs were fully and accurately defined. They still are not, and a review is therefore premature even on the Inspector’s terms. According to the City Council in a report to Scrutiny Committee (12th June), the agreed unmet need allocation, is used as a working basis for current local plans in Oxfordshire which will be updated when the Oxford Local Plan is completed. In other words it is presently neither fully nor accurately defined, as the Inspector had required it should be. Oxford has only now started its own Local Plan process to reflect the Oxfordshire Strategic Housing Market Assessment (SHMA), three years after it was published, and long after Oxfordshire’s other Districts. Its draft Local Plan gives no figure for unmet need, or for the City’s capacity to meet it. However, taking Oxford’s overall “need” to be for 28,000 houses over the plan period, CPRE argues that at least 26,000 could be provided inside the City itself by switching employment sites – the use of which for employment would only exacerbate the housing need the City Council describes as being its Number One priority to overcome – to housing, and increasing densities on all sites to compact city levels. That is even before the outcome of a review of further sites to which the City refers in its plan. (See Oxford/Densities paper attached) Consequently the Inspector’s condition, that Oxford’s unmet need should first be “fully and accurately defined” is nowhere near met, and, further, there would be little or no “unmet need” for other Authorities to consider. In any event, a “working assumption” of need cannot be an exceptional circumstance justifying GB release, especially when it is likely to be extremely inaccurate. Finally, during the course of this consultation the Government has proposed a new OAN formula to replace the SHMA (on which all the Review numbers are based). This new formula, if adopted, would reduce Oxford’s total annual housing need from a SHMA mid-point of 1400 per annum to 746, that is by 47%. This would in turn reduce “unmet need” by two thirds, even before taking into account that the City should use employment land to satisfy existing housing need rather than exacerbate it and build at densities appropriate to cities. The new OAN is at the very least further evidence that the level of unmet need this review seeks to satisfy is neither fully nor accurately defined.

Changes Sought

In CPRE's view, it is not possible to 'tweak' the current document in order to make it sound and therefore the current version of the Plan should be rejected. Cherwell District Council should re-visit the process, as and when the final numbers for Oxford have been examined, adopting higher densities and prioritising protection for the Green Belt.

Reasons for Participation

CPRE Oxfordshire represents a wide membership across the County, including many parish councils and local organisations, and seeks to influence development to protect and enhance the countryside. As one of the founders of the Oxford Green Belt, we have considerable knowledge about its origins, purpose and ongoing relevance.

The primary duty of a Local Authority must be to the people it represents. In an independent market research exercise, with a very high sample size, conducted across Oxfordshire by Alpha Research of Thame in April 2015 respondents were specifically prompted that there was considered to be a need for more housing, and of the extent and purpose of the GB, before being asked whether the GB, should be developed for that, or indeed any other, purpose. Their answers were therefore fully informed by recognition of housing need. 76% of respondents considered that the GB should remain undeveloped; 66% considered housebuilding the greatest threat. Although polls have something of a tarnished reputation, this has resulted from situations where marginal inaccuracy can lead to wholly incorrect forecasts in narrow binary decisions. In this case the sample size was so large and so representative, and the outcome so conclusive, that whilst there might be up to a 5% margin of error, this would not be capable of affecting the result, or its scale. Further, this is in line with previous polls, adding to confidence that it accurately reflects public opinion. The same exercise showed that in North Oxfordshire – closely correlating to Cherwell - the outcome was hardly less conclusive, with 71% of respondents supporting the proposition that the GB should not be developed for housing or any other purpose. This was despite years of constant media campaigning by the City Council that Oxford has “no option” but to spread over the GB unless people are to go homeless (a wholly fallacious claim). Despite the City’s campaigning, 73% of non-homeowners, and 74% of C2DEs agreed that the GB should not be developed for housing. In other words, the people who would be expected to have been the most responsive to the City’s campaigning rejected GB development almost as strongly as the general population. Indeed 73% of the City Council’s own constituents rejected it. There can be no doubt that the people both of Oxfordshire, and of Cherwell itself, reject GB development in principle, and this must be given great weight in any consideration of doing so.

Changes Sought

In CPRE's view, it is not possible to 'tweak' the current document in order to make it sound and therefore the current version of the Plan should be rejected. CDC should re-visit the process, as and when the final numbers for Oxford have been examined, adopting higher densities and prioritising protection for the GB.

Comments

CPRE is opposed in principle to the release of GB land – as is national planning policy. A very strong case therefore has to be made to establish the exceptional circumstances required for the release of GB land. The Cherwell Plan goes nowhere near making such a case; Cherwell’s electorate strongly supports retention of GB land as does Government Policy. There are a number of reasonable alternatives. The houses to satisfy Oxford’s ‘unmet need’ targeted at the Cherwell GB could not only, on the Council’s own admission, be sustainably built elsewhere in the District on other sites, or by increasing the density of build on existing sites, but also, at least to a considerable extent, within the City itself. Failing that, if there were genuinely no available option other than release of GB, national policy indicates that Cherwell would be expected to decline to do so and require other Councils to co-operate in meeting the unmet need Cherwell itself cannot satisfy. Additionally, during the course of the consultation, the Government published a revised Objectively Assessed Need (OAN) calculation, showing a total Oxford need of half that identified by the Oxfordshire Strategic Housing Market Assessment (SHMA). If adopted the new formula would make it certain that Oxford could accommodate all of its own housing need, and therefore there would be no “unmet need” for Cherwell to meet. The proposed OAN also reduces Cherwell’s own need by a third, meaning that even if there were any Oxford unmet need to be covered, it could be met within the surplus the new OAN creates in Cherwell’s adopted plan. This review is therefore premature and should be suspended at least until new “need” figures are crystallised.

Changes Sought

In CPRE's view, it is not possible to 'tweak' the current document in order to make it sound and therefore the current version of the Plan should be rejected. CDC should re-visit the process, as and when the final numbers for Oxford have been examined, adopting higher densities and prioritising protection for the GB.

1420	<p>Comments</p> <p>Government Policy requires development in the GB to be the very last resort, only to be considered if there is no alternative. Cherwell has stood that Policy on its head by making building in the GB its very first choice, rejecting what it accepts were reasonable alternatives. Cherwell says that building as close to Oxford as possible trumps all other considerations. Since Oxford is surrounded by GB, that has led them to select not just GB sites, but the very closest GB sites to the City, at the Kidlington Gap, where the GB is most fragile, just a few fields wide. It is those few fields the Council plans to build on, flatly contrary to GB policy, and the known wishes of the overwhelming majority of its electorate. If the Council gets away with this plan, it will also, again contrary to GB policy, cause the merger of Yarnton and Begbroke into Kidlington; expose Kidlington itself to being engulfed by the predatory City Council which has sought to subsume it for at least thirty years; and also, by declaring that proximity to Oxford is itself an exceptional reason to build on the GB which surrounds the City, fundamentally undermine its very purpose, risking opening the whole GB to development.</p> <p>Changes Sought</p> <p>In CPRE's view, it is not possible to 'tweak' the current document in order to make it sound and therefore the current version of the Plan should be rejected. CDC should re-visit the process, as and when the final numbers for Oxford have been examined, adopting higher densities and prioritising protection for the GB.</p> <p>Reasons for Participation</p> <p>CPRE Oxfordshire represents a wide membership across the County, including many parish councils and local organisations, and seeks to influence development to protect and enhance the countryside. PR-C-0562	05/10/2017	Helen	Marshall	CPRE Oxfordshire	N	Y
1418	<p>Comments</p> <p>TRANSPORT - THE PROPOSED NEW STATION AT KIDLINGTON/BEGBROKE. The initial proposals for the development made great emphasis on the provision of a new railway station "between Kidlington & Begbroke", the implication being that this station would cater for the needs of residents to reach their places of employment in Oxford and that therefore the housing plans are more sustainable. The relevant railway line is that from Oxford and the south to the midlands and north via Banbury. It is intensively used with half hourly cross-country trains and frequent freights including regular intermodal trains from and to Southampton docks. There is also a local service of 12 trains per day each way (9 on Saturdays, 3 on summer Sundays, none on winter Sundays) calling at the intermediate stations at Tackley, Heyford & Kings Sutton. North of Aynho Junction, as far as Banbury, these trains all have to interwork with the three trains per hour on the Chiltern Line to and from London Marylebone. There are presently no proposals for a new station on this line, nor are there likely to be. Neither Network Rail, Oxfordshire County Council nor any train operator has any aspiration for a station here. It does not feature on any relevant route study or strategic proposal. For example, we note that no such plans have been included in the Oxfordshire Infrastructure Strategy, signed off by the Oxfordshire Growth Board in September 2017, which claims to 'provide a view of emerging development and infrastructure requirements to support growth from 2016 to 2031 and beyond'. This includes a description of numerous rail improvement projects both pre and post 2031, as well as listing infrastructure priorities for the A40 Corridor, but gives no mention at all to a new station in this area. Journey time for the local trains is 30 minutes and they only just slot in between the other services; in other words, a train leaving Banbury soon after the previous southbound train only arrives in Oxford just before the next one. To add an extra stop on the route would make this pathing issue even more tricky. It would be possible to accelerate the journey time with electric trains which have better acceleration and deceleration rates and thus allow an extra stop in the same timetable but although the previous government did announce a scheme to electrify this railway as part of its "electric spine" in 2012, this has been deferred and there is at present no prospect of this happening. Great Western Railway (GWR) operate the local trains and they do have an aspiration to increase the frequency to a train every 90 minutes across the whole day but it is only an aspiration, not a timed commitment. Even that frequency is not really sufficient to attract substantial numbers of commuters to use rail on a daily basis. For that a half hourly service level is, these days, a basic requirement. The station at Oxford Parkway, opened in October 2015 and connected to Oxford station in December 2016 has in any case now become the railhead for Kidlington, swathes of north Oxford, Headington and surrounding villages. The rail industry as a whole is thus utterly unlikely to wish to commit to another new station "between Kidlington and Begbroke".</p> <p>Changes Sought</p> <p>References to the station should be removed from the Plan as it is not deliverable within the lifetime of the Plan and therefore is not effective. Any element of development that is dependent on this station being delivered should be removed from the Plan as unsound. Plans for additional housing in north Oxford/south Kidlington should be put on hold until the Oxford to Cambridge Expressway route is settled, the East West railway is re-opened and the full extent of the expansion of Bicester is agreed, with its possible new transport infrastructure.</p> <p>Reasons for Participation</p> <p>CPRE Oxfordshire represents a wide membership across the County, including many parish councils and local organisations, and seeks to influence development to protect and enhance the countryside. We would like to attend the oral part of the Examination.</p>

1439	<p>Comments</p> <p>Strong disagreement with the assessment that “exceptional circumstances” exist. Twelve “circumstances” are listed. The final ten are not exceptional circumstances at all. Some of them might be described as “opportunities”, some of them are simply descriptions of how development might occur, and others are meaningless, for example “12.the ability to create a sustainable, holistic, joined up vision for the whole of the Oxford/Kidlington/A44 corridor area”. That statement certainly does not constitute an exceptional circumstance. Exceptional Circumstance 1 (urgent and pressing need for homes) is highly contentious. It is based on the assessment in the SHMA which has been heavily criticised and never validated. The proposed DCLG standardised methodology proposes a much lower level of need that takes account of affordability. Exceptional Circumstance 2 (clear inability of Oxford to meet its needs) is also unproven. Oxford’s needs have not been established through its own local plan process and neither has its ability to meet its own needs. It is clear that alternative development strategies could accommodate a significant number of additional dwellings within the city. The submission document in proposing to develop in the GB is in complete opposition to the purpose of the GB and contradicts Local Plan Pt 1. The main purpose of the Oxford GB, (Local Plan Part 1 para B256), is to limit the growth of Oxford to avoid damage to its character and heritage. Oxford City Council itself should have a part to play in this by restricting the growth of employment generating activities to the minimum necessary. This would have the double benefit of releasing some land for housing and reducing the demand for further housing. However its currently proposed policies do the opposite. We have made this point in our representations to the recent Options consultation on the Oxford Local Plan. Alternative development strategies – which have been successful in the past – are possible for Oxfordshire, and include the diversion of growth away from Oxford towards the country towns. Oxford City Council should play its part in this. We also think it would be possible for the Oxfordshire authorities to promote the diversion of some economic growth to other parts of the country which would welcome and benefit from it – possibly through formal ‘economic twinning’ arrangements.</p> <p>Changes Sought</p> <p>The plan should be withdrawn and a spatial strategy for Oxfordshire established which can address the issues addressed in this review in a co-ordinated and consistent way. Through such a strategy the Oxfordshire authorities should continue with their previous approach of actively encouraging further employment and housing growth away from Oxford. Oxford City Council and Cherwell in particular should co-operate more effectively and as part of this Oxford should (a) discourage further employment generating development in the city unless it is absolutely essential and (b) use some of the land it has currently allocated for employment, together with other previously developed land, for well planned high density housing.</p> <p>Reasons for Participation</p> <p>OGBN was established in 1997 to help to protect the Oxford GB and to support those wishing to resist proposals for inappropriate development within it. PR-C-0567	09/10/2017	Dr Ian	Scargill	Oxford Green Belt Network	N		N	Y
1438	<p>Comments</p> <p>Strong objection to all of the proposed development in the Oxford GB which “was designated to restrain development pressures which could damage the character of Oxford City and its heritage through increased activity, traffic and the outward sprawl of the urban area.” This quote is from paragraph B256 of Cherwell’s adopted Local Plan Part 1 and we fully support it. We also support Policy ESD14 in the Plan to maintain the Oxford GB. The Oxford GB supports all five purposes set out in the NPPF and has been largely successful over the last sixty years. In particular it seeks to protect the setting and character of the historic city of Oxford. The reference to the character of the City, as referred to in Cherwell’s Local Plan. is often overlooked but it is a crucial aim of GB policy. The historic city centre by its nature cannot be expanded or comprehensively redeveloped. It is already under substantial pressure and this is likely to become highly damaging if expansion on the edge of the city is not restricted. The City’s never-ending traffic problems are testimony to this, and there have been calls for even the number of buses in the centre to be limited. The GB also provides accessible open space, footpaths and other recreational opportunities for residents of the city and for the communities within it. It is well used and supported as public opinion surveys have shown. GB is intended to be a permanent designation only to be changed in exceptional circumstances (NPPF). We think that that the overall levels of growth proposed are unnecessarily high and that alternatives to development in the GB are available. We therefore consider that exceptional circumstances do not exist to justify development in the GB.</p> <p>Changes Sought</p> <p>The plan should be withdrawn and a spatial strategy for Oxfordshire established in a co-ordinated and consistent way. Through such a strategy the Oxfordshire authorities should continue with their previous approach of actively encouraging further employment and housing growth, at realistic levels, away from Oxford. Oxford City Council and Cherwell in particular should co-operate more effectively and as part of this Oxford should a) discourage further employment generating development in the city unless it is absolutely essential and b) use some of the land it has currently allocated for employment, together with other previously developed land, for well planned high density housing.</p> <p>Reasons for Participation</p> <p>OGBN was established in 1997 to help to protect the Oxford GB and to support those wishing to resist proposals for inappropriate development within it. PR-C-0567	09/10/2017	Dr Ian	Scargill	Oxford Green Belt Network	N		N	Y
1440	<p>Comments</p> <p>This Plan is contrary to the NPPF which states in paragraph 14 that Local Plans should meet objectively assessed needs unless specific policies in the Framework indicate development – including land designated as GB - should be restricted. It is also contrary to the twelve core land use planning principles set out in Paragraph 17 of the NPPF one of which is that planning should take account of the different roles and character of different areas, promoting the vitality of our main urban areas and protecting the GBs around them. Furthermore, National Planning Practice Guidance makes clear that assessing need is just the first stage in developing a Local Plan and that once need has been assessed, the local planning authority should take account of any constraints such as GB, which indicate that development should be restricted and which may restrain the ability of an authority to meet its need. Cherwell has accepted (or, more accurately, been pressured to accept) the inflated figures of the Oxfordshire SHMA in full and has never followed this guidance to “take account of any constraints such as GB Which may restrain the ability of an authority to meet its need”. The proposed submission plan is therefore not consistent or compliant with national policy.</p> <p>Changes Sought</p> <p>The plan should be withdrawn and a spatial strategy for Oxfordshire established which can address the issues addressed in this review in a co-ordinated and consistent way. Through such a strategy the Oxfordshire authorities should continue with their previous approach of actively encouraging further employment and housing growth away from Oxford. Oxford City Council and Cherwell in particular should co-operate more effectively and as part of this Oxford should (a) discourage further employment generating development in the city unless it is absolutely essential and (b) use some of the land it has currently allocated for employment, together with other previously developed land, for well planned high density housing.</p> <p>Reasons for Participation</p> <p>OGBN was established in 1997 to help to protect the Oxford GB and to support those wishing to resist proposals for inappropriate development within it. It comments regularly on planning applications in the GB and in planning policy consultations, particularly on matters affecting the GB. OGBN has made representations on all stages of the Cherwell Local Plan Part 1 and participated in the Public Examination in December 2014. We have also commented on earlier stages of this Partial Review. The membership of OGBN includes many of the Parish Councils whose areas include GB land. The OGBN fully supports the aims of GBs as set out in the NPPF and earlier planning guidance and in particular it strongly endorses the fundamental principle that GB is a permanent designation. We consider that our participation in the examination in necessary and justified because of our longstanding interest and understanding of the Oxford GB.</p>							

Proposed Submission Plan - Policy PR7b - Land at Stratfield Farm

PR-C-0567 09/10/2017 Dr Ian Scargill Oxford Green Belt Network N N Y

1441

Comments

We note that the plan calculates the loss of GB to be 3%. There is an implication here that the loss is relatively small and therefore acceptable. This is fallacious as is illustrated by the following example taken from a paper by Professor Dieter Helm, Chair of the Government's Independent Natural Capital Committee "Think about St James' Park in central London, set between Buckingham Palace at one end and Whitehall at the other. Suppose a developer comes along with a proposal; to build on a small plot on one corner of St James' Park. This developer might argue as follows. The marginal value of the patch of grass in a small corner is not that great. After all, all the rest is left. Better still, the developer might pay such an enormous price for the small bit of land that perhaps a hospital could be built elsewhere with the proceeds. The marginal value to the ultimate owner of this house is so great relative to the marginal value of the small corner of St James' Park that it makes marginal economic sense to build on it. There are two problems with this argument. The first is that the same marginal case can be made for the next small bit of St James' Park. Indeed the value to the developer is even higher now because the Park is now slightly smaller. And for the next bit, the argument just gets stronger. Carried to its limits there is a great marginal case for incrementally building all over St James' – and Hyde Park, and Regent's Park and indeed all the green spaces in London. That is indeed what would have happened if the market had been left to allocate the land as if St. James' was a private good. It is what would happen to the GB too. The second problem is that the reason why the land is so valuable is because it is not surrounded by other houses in close proximity. The very rich person who buys this house on the corner of St James' is paying so much because others are not able to do so, and because it is St James'. We cannot all have green spaces around our houses – green space is in fixed supply. Carry both of these arguments across to the GB. Each marginal bit has a marginal economic case for developing it, and as each bit is chipped away, the value of the whole public good – the GB system – diminishes. The core point here is that the marginal case if carried through to its logical conclusion leads to no GB – there is a good marginal case for building on each and every marginal bit of land, as there is for building on each and every bit of St James' Park." The loss of a small proportion of GB therefore increases the likelihood of further loss. GB should be considered as an entity or system not as a collection of individual land parcels. This is a further reason why we fully endorse Government Policy (NPPF para 79) that GB is a permanent designation.

Changes Sought

The plan should be withdrawn and a spatial strategy for Oxfordshire established which can address the issues addressed in this review in a co-ordinated and consistent way. Through such a strategy the Oxfordshire authorities should continue with their previous approach of actively encouraging further employment and housing growth away from Oxford. Oxford City Council and Cherwell in particular should co-operate more effectively and as part of this Oxford should (a) discourage further employment generating development in the city unless it is absolutely essential and (b) use some of the land it has currently allocated for employment, together with other previously developed land, for well planned high density housing.

Reasons for Participation

The Oxford Green Belt Network (OGBN) was established in 1997 to help to protect the Oxford GB and to support those wishing to resist proposals for inappropriate development within it. It comments regularly on planning applications in the GB and in planning policy consultations, particularly on matters affecting the GB. OGBN has made representations on all stages of the Cherwell Local Plan Part 1 and participated in the Public Examination in December 2014. We have also commented on earlier stages of this Partial Review. The membership of OGBN includes many of the Parish Councils whose areas include GB land. The OGBN fully supports the aims of GBs as set out in the NPPF and earlier planning guidance and in particular it strongly endorses the fundamental principle that GB is a permanent designation. We consider that our participation in the examination is necessary and justified because of our longstanding interest and understanding of the Oxford GB.

Comments

Exceptional circumstances have been demonstrated to justify the release of sites from the GB, including sites for housing to help meet Oxford City's unmet housing need. It is clear from the evidence base for Cherwell's proposed submission plan and from the Oxfordshire Growth Board evidence base that the release of sites from the GB is necessary to deliver the scale of housing required in a sustainable manner. However, there is a need to make efficient use of land released from the GB for housing purposes. Some of the proposed densities on sites released from the GB do not appear to make efficient use of this land despite their close proximity to Oxford and to sustainable transport infrastructure and services. By increasing the density on some of the GB sites and by developing the site covered by Policy PR3a Cherwell DC would achieve their target of meeting Oxford City's unmet housing need without requiring development at Woodstock South East (Policy PR10).

Changes Sought

Review of the proposed densities and the resulting site capacities of the sites to be released from the GB in order to ensure that efficient use is made of this scarce land resource.

Reasons for Participation

To address cross-boundary issues with West Oxfordshire

PR-C-0709 09/10/2017 Victoria Campbell N

Comments

Object to Policy PR7b and development at Stratfield Farm. This land frequently floods. The adjoining sports pitches are often water-logged during wet weather. Additional housing in this area exacerbates the flood risk for the local sports grounds and housing in the Garden City area of Kidlington. The main access point for the additional housing would be Kidlington Roundabout which is already gridlocked during rush hour.

Comments

Policy PR7b - Land at Stratfield Farm. No principle objection to this allocation but note that it includes or adjoins land that is subject to nature conservation designations. The western part of the site is located within the Cherwell Valley CTA along the Oxford Canal and pleased that the indicative layout does not propose development within this part of the site. The site also appears to include a priority habitat (Traditional Orchard) and adjoins a district wildlife site. Aerial photography also suggests that it might comprise other habitats of biodiversity interest. The site is sensitive in ecological terms and should be surveyed to inform suitability, quantum and development layouts.

Changes Sought

Reasons for Participation

Potential biodiversity impacts as outlined in the representation.

Proposed Submission Plan - Policy PR7b - Land at Stratfield Farm

Comments

Does not consider the Partial Review of Cherwell Local Plan to pass the 'tests' of soundness, in terms of being positively prepared, justified, effective and consistent with National policy. This is because the Partial Review does not make reference to the need for C2 units (residential institutions, including care homes), nor to care/nursing homes more generally. Policy PR2 deals with C3 uses only. Further limitations on current local planning policies (adopted and emerging) are outlined in the accompanying Note prepared by Lichfield's. In terms of National policy, the Government's National Planning Practice web-based resource in the section on 'Housing and economic development needs assessments' provides guidance to the plan-making process on how to deal with 'housing for older people'. Failure of the Partial Review to meet the care needs of the District will clearly have significant implications on housing options for Cherwell's increasingly ageing population. The accompanying Note prepared by Lichfield's quantifies that like the rest of the UK there is a clear need for care homes in Cherwell. Examples are found in the Oxfordshire SHMA, which projects the number of people with dementia and mobility issues in Cherwell and Oxfordshire will roughly double by 2031 (end of this Plan period). The latest DCLG figures project the number of people in Cherwell living in communal establishments to double by 2031. The Lichfield's' Note sets out the care need for Cherwell as follows: • In Cherwell District itself, the latest DCLG projections show growth in the number of people over age 75 living in communal establishments of 565, i.e. this is the number of care home bed spaces needed (2011 – 2031). However, as the Council are planning for housing growth well in excess of demographic trends, which will lead the population growth in excess of demographic trends, 565 bed spaces should be considered a minimum to plan for up to 2031. • In terms of Oxford City's need, the DCLG projections suggest a need for a further 305 bed spaces by 2031, and (as with its housing need) a proportion of this may well go unmet. Cherwell will inevitably import some of Oxford's care home needs, as those additional residents (who otherwise would have lived in Oxford) age and move into care homes. This further justifies the use of the 565 figure for Cherwell as a minimum, which may need to be increased if unmet care home need for Oxford is identified. Lichfield's' Note on Care Home Need provided.

Changes Sought

Greenlight asserts that it in order for this clear 'need' for care bed spaces to be met in Cherwell over the Plan period, specific policies are required to:(a) Set the delivery of this need over the Plan period as a requirement - this requirement being a minimum of 565 bed spaces by 2031; and(b) To identify and allocate sites to accommodate this need in the Plan and on the Policies Map.To this end, Greenlights' land interest at Skimmingdish Lane, Bicester, which is currently subject to planning application 17/01428/F, provides an opportune site to be allocated for a 64-bed care home; thus accommodating some 11.3% of the bed space requirement (based on a total requirement of 565 bed spaces) over the Plan period (by 2031).To demonstrate how the site at Skimmingdish Lane, Bicester can accommodate a 64-bed care home, and therefore to assist in informing its allocation as a care home site in the Plan, enclosed with this letter is the site location plan and proposed site layout plan, both of which form part of the current planning application on the site.

Reasons for Participation

The matters raised in these representations are of a strategic nature to the plan.

Comments

This submission representation form should be read in full conjunction with the accompanying Vision Document for this site, which demonstrates how at least 175 homes can be constructed on the available, developable part of the site, along with the provision of retirement living accommodation within the retained Stratfield Farmhouse. Representation includes a copy of Vision Document and two different versions of representations for PR7b.

Changes Sought

Accordingly, Manor Oak Homes submit that the terms of draft Policy PR7b "Key Delivery Requirements 1", should be re-worded to the effect - "1. Construction of up to 175 homes (net) within the identified developable part of the site (the residential area), plus use of the retained, listed Stratfield Farmhouse for retirement living accommodation. The dwellings are to be constructed at an approximate average net density of 25 dwellings per hectare.

Reasons for Participation

Manor Oak Homes will need to explain to the Inspector in full detail, why the site can be developed at a more efficient density than the terms of the draft Policy PR7b envisages, whilst at the same time ensuring that all of the important identified site characteristics and Key Delivery Requirements can be met.

Proposed Submission Plan - Policy PR7b - Land at Stratfield Farm

PR-C-0778	10/10/2017	Sarah	Knox-Brown	Begbroke & Yarnton Green Belt Campaign	N		N	
5465	<p>Comments</p> <p>Begbroke & Yarnton Green Belt Campaign's (BYG) main concern is that they believe there is no proper justification for altering the Green Belt boundaries from where they currently stand. On a local level, they particularly object to the removal of the land described as PR8 and PR9 from the Green Belt due to the significant detrimental impact of that removal on the villages and villagers of Begbroke and Yarnton. They also object to the removal of land described as PR6a, PR6b, PR7a and PR7b from the Green Belt due to the importance of these sites in maintaining the gap between the villages of Begbroke, Yarnton and Kidlington to Oxford City and to the land described as PR10, a green field site due to the impact its development will have on the adjacent A44 corridor. Instructed Bruce Bamber, a transport consultant, to prepare a report on the transport implications of the allocation of sites PR8 and PR9 for housing purposes. Although his technical review has focused on these areas, the broader methodology to identify potential development locations has also been assessed for its soundness. The report has been provided as Appendix B. Key conclusions from the report includes: the Sustainability Appraisal Report was published before the Transport Assessment and therefore cannot properly take into account the transport impact of development options. The SAR fails to report the adverse traffic congestion impact from the proposed development around Begbroke and Yarnton and is therefore flawed. Transport evidence base and the associated environmental assessment work is fundamentally unsound and cannot be relied upon. A number of legal issues are raised in Appendix A with a detailed summary provided. If the Council proceeds as planned, we consider the Inspector will find the Plan unsound due to inadequacy of evidence base and failure to ensure effective consultation and participation by the public.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>

PR-C-0808	10/10/2017	Anne	Denby	Canal & River Trust				
2073	<p>Comments</p> <p>This policy proposes to remove land adjacent to the canal corridor from the designated Green Belt, PR7b & PR8. In these locations, the canal currently enjoys picturesque rural outward views and development in these locations has the potential to significantly alter the character of this stretch of canal. It will be important that development of these sites retain a sense of the countryside along the canal and this appears to be considered with the areas for built development being set back with green space retained to the canal boundary. Opportunities for unlocking the potential of the canal should also be supported through the development of these sites. The provision of services for canal users, pedestrians/cyclists and boaters, could be explored within comprehensive Development Briefs. Open green landscapes adjacent to the canal could aid in retaining a sense of the rural feel within the surrounding landscape. Landscape proposals would need to demonstrate that they work to buffer the harder visual impacts of the development such as hardstanding, parking bays and structures from the canals outward views.</p> <p>Changes Sought</p> <p>Reasons for Participation</p> <p>The provision of services for canal users, pedestrians/cyclists and boaters, could be explored within comprehensive Development Briefs.</p>							
PR-C-0808	10/10/2017	Anne	Denby	Canal & River Trust				
2193	<p>Comments</p> <p>As stated under Policy PR3 the removal site from the Green Belt has the potential to alter the character and appearance of the canal corridor in this location. The Policy map however indicates that the housing development will be set back from the canal boundary with the intervening land providing green/space/nature conservation area. The Canal is well considered within the Policy wording, its character and setting and its ecological value in this location have been taken in to account. There are positive ideas being put forward such as the restoration of water vole habitats and maintenance of a dark canal corridor. The Policy requires the development to contribute to the provision of an accessible bridge over the canal. The Trust would advise that new bridges will need to comply with National Standards and the Trust's requirements. Details on the design, layout, future ownership, maintenance and technical approval authority for the bridges should be clearly set out in Development Brief. This should include an assessment of the visual impact of the bridge, taking into consideration any existing features / crossings, such as Bridge 229, Stratfield Brake. Any new bridge crossing will also need to ensure that it does not impact on the stability of the canal or existing infrastructure such as culverts, nor adversely impact on safe navigation of the waterway or access along the towpath, including horse drawn boats. We therefore wish to be consulted on the Development Brief for the site, when available, to ensure that all considerations in respect of a new bridge crossing have been covered. Any bridge crossings will also require our separate consent as owner of the canal and will be subject to commercial agreements. It should be noted that the Trust will not take on the future ownership or maintenance of the bridges and a robust management plan will be required. The development and provision of a bridge crossing will lead to increased demand for use of the towpath in this area and therefore the requirement within the policy for development to address this and provide appropriate enhancements is welcomed. The Development Brief should include full detail of these enhancements and we wish to be consulted on the preparation of this document to ensure the Trust's requirements are fully addressed.</p> <p>Changes Sought</p> <p>Reasons for Participation</p> <p>We therefore wish to be consulted on the Development Brief for the site, when available, to ensure that all considerations in respect of a new bridge crossing have been covered. 	References on the Cherwell Green Belt Study (April 2017), the Oxford Green belt Study (2015), Category A Village Analysis (2016), Policy Villages 1 and 2 of the adopted Local Plan Part 1 and SA report. Conclude that the removal of Green Belt separating Begbroke (PR8) and Yarnton (PR9) and subsequent development as proposed would result in coalescence of both settlements; encroach on the open countryside; and result in highly inefficient use of land (which itself is a combination of grade 2 and grade 3 agricultural land). The harm that results is exactly the harm that the Green Belt land is designed to prevent. The loss of protection of the Green Belt and the scale of subsequent development is contrary to existing Local Plan policies. The "exceptional circumstances" put forward by Cherwell District Council are without merit with respect to all sites proposed for removal from the Green Belt.								
	Changes Sought				Reasons for Participation				
	For the reasons given above AND the Representations made by the Begbroke & Yarnton Green Belt (BYG) Campaign which are additionally supported, the Plan in its current form cannot be changed to make it legally compliant or sound and should therefore be withdrawn and NOT be submitted for Inspection.				Would like the Begbroke & Yarnton Green Belt (BYG) Campaign to represent meat the Examination should it take place.

Referenced the 5 purposes of the Green Belt and NPPF paragraphs 82-84. Quotes provided on the Elmbridge Local Plan and Poole Local Plan. Quotes provided on NPPG's guidance on the Housing and Economic Land Availability Assessment (HELAA). Reference to Policy ESD14 of the adopted Local Plan Part 1. it is reasonable to conclude that whilst local districts may have accepted an apportionment of Oxford's unmet housing need the actual number is not absolute and the Local Plan process may determine that Cherwell, for example, is unable to accommodate the apportioned figure due to existing national policies, such as Green Belt. Conversely, Oxford City, through the development of its own Local Plan and consideration of urban density, re-allocation of land previously earmarked for employment use, etc. may determine that the total unmet housing need is lower than that recommended by the SHMA and post-SHMA work. The latter point will especially apply should Oxford City seek to justify exceptional circumstances to remove Green Belt land that falls within its own jurisdiction. Reference to Oxford's Preferred Options document.

Changes Sought

For the reasons given above AND the Representations made by the Begbroke & Yarnton Green Belt (BYG) Campaign which I additionally support and adopt as part of my own Representation in this document, the Plan in its current form cannot be changed to make it legally compliant or sound and should therefore be withdrawn and NOT be submitted for Inspection.

Reasons for Participation

Comments

Objects to PR7b. Like PR7a the objection is based on CDC proposals not being acceptable.

Changes Sought

Better use could be made of the land for housing development - By extending it down to the ditch line shown on the revised attached map. With boundaries well landscaped. Although this would mean a moderate reduction in conservation area it is considered that this will marry in better and complement the Stratfield Brake Woodland Trust boundary of its wetland area. It should also have a surface water storage pound with a controlled outfall, and to improve surface water drainage for the lower end of Garden City for preventing flooding problems.

Reasons for Participation

Based on the representation, would like to reserve the right to respond if necessary.

Comments

This is a strong green belt area of natural beauty and historic potential. Housing development would encroach upon the nearby reservation. The desire to build 100 homes on it is suspicious and the small number of houses intended would likely increase. Using this green belt space up would needlessly and only at the best temporarily solve the growing housing need. It is not a convincing solution. This plan puts the reservation area at risk for future development and inevitable shrinkage. The old farm house in this area should be preserved and perhaps looked into becoming part of the current reservation area. It would be more reasonable to look at increasing the green space of this reservation area not decrease its wall from urban overspill. Decision making by any parties that stand to profit from the success of this planning on this protected green belt space should be forbidden. Green belt space is labelled as such to cap the area from inevitable demand of expansion even in so called extreme cases. This development plan is exploiting the natural wildlife, views and historic value for property investment. It has no sensitivity or concern for green belt policies or the quality of life for current and future inhabitants.

Changes Sought

1) If using our green belt areas is truly the only option for development then Cherwell should decline and point to other solutions such as a. brown field sites within Oxford or further out b. current and numerous vast amounts of land either being reserved for commercial use (much of it not looking very utilised or successful. 2) The decision making process should be ultra-sensitive and rigid to the aesthetics at risk.. This area should be expanded as a reservation and historic area in compensation to the fact that new housing developments are likely to occur. 4) The decision making process for this area should be ensuring the aesthetics, enhancement and protection of it are paramount with the rigidity to only accept plans of which would increase its green space.

Reasons for Participation

Concerned as a long time resident that these plans will affect. Also aware and understand these plans and their implications involving both current and future residents. Strongly believes to be competent and justified to be involved in ensuring that alternatives, and fair compromises are met.

The creation of 1,118 houses on PR6a & PR6b will create a potential of 3000+ car movements a day, together with a further 5000+ movements from PR7a, PR7b, PR8 & PR9. The traffic situation North of Oxford will be at gridlock even worse than that which occurred during the recent alterations to Banbury Rd & Woodstock Rd roundabout.

The policies are unsound because they fail to meet the real needs of people for low cost (rented or for sale) houses that deal with urgent housing problems. Housing to meet local needs could be achieved by building smaller units at higher density and using far less land. Houses for sale at so-called 'affordable' prices, and houses at market prices, do not meet the needs of the teachers, nurses, public sector workers and young families. Build some houses, but make all of them of the type that people need - not what developers and landowners desire.

Comments

SUPPORT these Policies with AMENDMENTS. Pleased to note that the areas of search have been assessed utilising the commuter travel within each area noting proximity to current sustainable transport facilities that serve Oxford, access to jobs by public transport and proximity to proposed improvements. It is essential however that these potential improvements are locked into new sites by way of both physical measures and developer contributions that enable improved public transport services. This part of Cherwell, immediately to the north of Oxford is currently under significant pressure with peak period congestion already experienced on the A44 and A34. The A4260 has its own challenges, being a major route within Oxford whilst also needing to provide for Kidlington and movements across it. We note the development of a Development Brief for these sites. The Brief should clearly set out how the plan proposals relate to the strategic bus network and how this will evolve, what the trigger points to deliver this shall be and give clarity to developers on the costs of developing in these locations. The risk of not doing this is one of a hap-hazard development pattern of sites coming forward which cannot be served by high quality public transport though lack of forward planning, lack of certainty for developers and a poorly thought out network connecting major nodes. We therefore support the Policy PR7 9(d) and PR7b 10(b) which both state the need for the development to enable connection to Oxford Parkway & Water Eaton P&R site (PR7d (d)) and to existing or potential public transport services (both PR7 9(d) and PR7b 10(b)). However the policy needs to explicitly highlight that the development brief will need to contain costed proposals for bus services improvements. The size of the strategic allocation also makes it unlikely that it will support key local facilities, such as a substantial district centre. The result is that, to a very great extent, any bus route created to serve this site would have to rely only on the new demand generated by the development itself. Therefore there needs to be mention within the policy of the need to "kick start" bus services for a number of years promoting alternative transport to the car until the development is built out and services viable. This viability may come from diversion into the site of existing services and as such we consider that an extension and/or diversion of the 500 park and ride service provide this role. Not least that such a connection would better enable occupiers if these developments were to access not only Oxford city centre but also Oxford Parkway Station which will better enable modal shift, keeping park and ride spaces free for longer distance travellers and providing a direct link to the station which will be more attractive to potential occupiers

Changes Sought

We would therefore like to see the policy strengthened to highlight the need to connect inter urban bus route networks between settlements that reflect the OCC strategic bus network in a phased manner than can allow new developments to be accessible by modes other than the car with appropriate S106 commitments to enable these developments to be sustainable in a manner that is clear to developers promoting sites.

Comments

The representations are submitted on behalf of my client Bonnar Allan with regard to their proposals at New Alchester. The land is identified in the Vision document attached to these representations and will include up to 7,200 new market & affordable homes, primary & secondary schools, creation of a 240 acre country park & watersports centre & the potential to incorporate a new Park & Ride site with connection to the railway line south of Bicester by a new railway station. Our comments on the PSP are confined to issues of soundness. A summary of the alternative Options A to I that CDC considered at the last stage of the Plan is set out at paragraph 2.12. For the reasons we set out in our representations to that stage, we consider that the CDC's proposed approach of allocating land to the north of Oxford & within the Green Belt (GB) around Kidlington as set out in PR7b is flawed, & that the Partial Review does not pass the test of soundness. The PSP is not Justified as in our view it does not represent the most appropriate strategy for meeting Oxford's un-met housing needs. The logic that appears to underlie the PSP is in essence that the closer the proximity of the required housing to the City, the more sustainable it will be. This logic ignores the fact that there would be better prospects of residents travelling into Oxford as well as the major employment locations in the Science Vale by public transport including by rail from New Alchester. The preferred locations around Kidlington will increase congestion on the highway network & will result in the loss of GB & lead to coalescence between Kidlington, Begbroke & Yarnton, whereas the proposals at New Alchester are located beyond the GB. As we make clear in the Vision document, our proposals can be delivered in a phased manner & there are no impediments to early delivery. The scale of the proposals at New Alchester allows it to meet both the identified needs of Oxford City as well as an element of the future needs of Cherwell District, & in so doing, we recognise the journey that this proposal involves.

Changes Sought

We consider that the PSP should direct a majority of the un-met need to New Alchester which constitutes a more sustainable & justified location for the new homes needed both to meet the City's un-met needs as well as future need within Cherwell District. The PSP should be re-drawn to allocate land at New Alchester in place of the proposed allocations in the Green Belt (GB) around Kidlington. New Alchester can provide a highly sustainable location for the much needed development, at a location outside the GB & on the railway line into Oxford. The development would facilitate creation of a new railway station at New Alchester which would encourage people to travel to Oxford City & also other employment centres within the Science Vale by public transport.

Comments

The CDC Local Plan Part 1 and the NPPF (Para 34) support a strategy whereby growth should be directed towards the most sustainable locations, encouraging travel by non-car modes. The County Council's Oxford Transport Strategy is also clear in its objectives for achieving a meaningful modal shift for those travelling into Oxford City away from the private car and towards public transport. In this context, the justification for the Council's approach in pursuing growth at sites such as PR7, PR8, PR9 and PR10 which propose concentrated levels of development (circa 3,220 dwellings) is unclear. The development as proposed is concentrated along the already very congested A44 corridor and around Kidlington which is a known congestion hotspot. While some development in this area may be appropriate, the concentration of sites will lead to significant issues of congestion given that the sustainable modes being pursued (with the exception of cycling) are all road based Park & Ride, Bus and RTP routes. The Sustainability Appraisal (June 2017) recognises that new development around the Kidlington area 'may increase congestion but the Local Plan Part 1 Partial Review allocates new housing sites that encourage the use of sustainable transport and are allocated following consideration of their impacts on transport patterns through the SA'. Notwithstanding assessment of the proposed allocations through the SA, the impact of congestion has not been sufficiently weighed in the balance when considering reasonable alternative sites and a broader distribution across the District. For example, locating development on the rail network at locations such as Islip would assist in removing some traffic movement from the road entirely. It's recognised that there is the potential for a new railway station at Yarnton, but this is a long term strategy with no immediate proposals for delivery. CDC does not consider this necessary infrastructure to support the proposals and simply consider it a potential future benefit. Therefore, all focus for this plan period under this strategy will be on the road, contrary to the conclusions of the Sustainability Appraisal and to which our client objects. Overall, the various transport evidence base documents prepared to date have not robustly assessed the opportunities to improve rail usage despite current work being undertaken to develop the East-West rail link. East-West rail Phase 1 works saw an upgrade of Islip station which is on the new Oxford - London Marylebone line. The Western Section of East-West Rail will also see the introduction of three new passenger services, for direct services within the region and connections to national mainline services. These services are due to start operating in the early 2020s. Despite this significant rail investment, no development is proposed within Islip which is just a 3 minute train ride from Oxford Parkway, 7 minutes from Bicester, 11 minutes from Oxford and under an hour to London Marylebone. Our client is of the view that Policy PR4a (and by association policies PR6-PR10) focuses too strongly on improvements to and mitigations for the highway network rather than considering options for removing traffic from the road network and towards more sustainable modes such as rail. The proposed locations for the additional housing are known areas of congestion and the transport proposals do not go far enough to solve the existing issues, with the proposed levels of development in this location likely to compound matters further. Our client objects to these policies which will lead to increased levels of congestion and the strategy will not achieve a step change in modal split. Soundness - The evidence base prepared to support Policy PR4a (and by association policies PR6-PR10) is not sufficiently robust to justify the approach to allocate this level of housing in an area of existing traffic congestion without an effective strategy to achieve a step change in modal split. The Council needs to justify its approach for focusing so much of the new development in one area which is already known to suffer issues relating to road congestion. Rail has not been considered as a reasonable alternative within the evidence base documents and consequently the draft plan is not justified. The draft Plan is not Effective, as it focuses too much of the housing requirement in one, focused area. The Plan is not consistent with national Policy as the proposed development is not located where the need to travel will be minimised and the use of sustainable transport modes can be maximised.

Changes Sought

The evidence base has failed to sufficiently consider investment in rail / exploitation of existing rail assets despite recent investment in the East-West Rail project. A thorough exploration of the reasonable alternatives is required. More detailed consideration needs to be given to the potential for locating new development at Islip within proximity to the existing railway station. This location would be sustainable and would support the existing local community. It has been demonstrated that there are no overriding physical constraints, in terms of highway impact, flooding and ecology, to the development of this land.

Reasons for Participation

Due to the complexity of the matters discussed in relation to PR4a

Proposed Submission Plan - Policy PR7b - Land at Stratfield Farm

PR-C-1400 10/10/2017 Ms Deidre Wells Red Kite Development Consultancy on behalf of Kidlington Parish Council N Y

5356

Comments

KPC concurs with the Plan on this Policy, and considers that development on this site could reasonably be considered as an extension to Kidlington, securing a permanent green boundary. While its removal from the Green Belt is regrettable and only to be encouraged if exceptional circumstances are demonstrated, its release could bring long term benefits, offsetting the loss of green belt land with a well-integrated village extension of modest scale, compatible with the character of Kidlington. This site and others around Kidlington including PR7a (Land south-east of Kidlington) should also be required to contribute to improved access arrangements for Stratfield Brake, which have long been identified as unsatisfactory, necessitating longer journeys along congested roads by local users of the facility. A new spur to provide access direct from the roundabout is recommended. Otherwise, general support for this allocation.

Changes Sought

"Add to key Delivery Requirements • Contributions to improved access to Stratfield Brake recreation/sports ground"

Reasons for Participation

"KPC is an elected body, representing the views of a large number of people in the part of the District which will be most affected by the proposed alteration to the Development Plan. In addition to having a statutory role in the Planning process, the Parish Council has an in depth understanding of the local area where new development is proposed, and is well placed to contribute to the Local Plan process. It is essential for the KPC to be actively involved in the Examination, in order to be able to represent local views, fully respond to submissions made by others, and to address any modifications discussed in advance of the Examiners report."

PR-C-1401 10/10/2017 Alan Lodwick Alan Lodwick on behalf of Kidlington Development Watch N N Y

Comments

"Object to the allocations in Policies PR6a, 6b,7a,7b,8 and 9 for the reasons given in our objection to release of Green Belt land (see objection to PR3). All of these sites contribute to the purposes of the Green Belt and should not therefore be removed from it. Other Green Belt Sites rejected by the Council. We also explicitly support the Council's rejection of other sites in the Green Belt considered at the options stage for the same reasons. Policy 10 : Woodstock Allocation. In the case of Policy 10, the site is on the edge of the Green Belt, and would impact on its openness. It would also be an excessive and disproportionate extension to the small historic town of Woodstock particularly when considered in addition to the adjacent site provisionally allocated in the draft West Oxfordshire Local Plan (currently under examination) for 300 houses. Due to wide-spread concerns raised at the hearings, the Inspector has asked West Oxfordshire District Council to conduct a heritage impact assessment of this site given its proximity to a World Heritage site. Cherwell should have conducted a similar assessment, taking into account the cumulative impact of the proposed development. Woodstock town is not within the Cherwell boundary but nevertheless, Cherwell has a duty to seek to protect historic Woodstock from inappropriate development and we consider it is not reasonable or sustainable to locate 410 extra houses in this area to meet Oxford's unmet housing needs."

Changes Sought

All allocations should be withdrawn because they are premature (need has not been established) and because alternatives to Green Belt development exist.

Reasons for Participation

We (Kidlington Development Watch – KDW) consider this is necessary because of our extensive involvement with the consultations at all stages of the Cherwell Local Plan to date; the considerable work we have undertaken to publicise the consultation ourselves; of the feedback we have received from Kidlington residents; and, the large numbers of them who have responded as a result of our efforts. KDW is a voluntary organisation run by Kidlington residents with experience and interest in planning issues. We believe that effective, informed public participation in planning consultations is vital to democratic policy making. We publicise consultations that directly affect Kidlington and offer advice on how people can best make their views known. In relation to this and the previous options consultation we printed and distributed leaflets, put up posters, ran a stall on many Saturday markets and at other events, participated in public and parish council meetings, provided information on our website and responded to requests for information from Kidlington residents. As a result, we have gained a very good understanding of the views of Kidlington residents, a large number of whom have made representations because of our activities. KDW's representations therefore reflect the views of much of the Kidlington community."

Comments

Sport England welcomes the Council's references throughout the document and policies requiring developers to include open space, outdoor sport and recreation. However, Sport England is concerned that the Council has yet to publish its evidence base in relation to playing fields and outdoor sports provision and built sports facilities. The Council will need to ensure that all of the new development contributes towards indoor and outdoor sports facilities in the District. The Council's evidence base will help frame this work. Sport England also recommends that the Council includes a requirement for applicants to include a statement demonstrating how their development has met the 10 principles included in Sport England's Active Design document. See Section 3 of the document 'how to use Active Design' and the proposed change.

Changes Sought

Sport England recommends that the Council consult Sport England at the earliest opportunity on the preparation of the Playing Pitch Strategy. Sport England suggest the following text could be included in the policies to support Active Design: PR5 (10) Provide evidence of how the development has improved the health and well being of new residents by demonstrating how the proposals will meet the 10 Active Design Principles set out in Sport England's guidance document 'Active Design' <https://www.sportengland.org/facilitiesplanning/active-design/>

Proposed Submission Plan - Policy PR7b - Land at Stratfield Farm

PR-C-1404	09/10/2017	Andrew	Hornsby-Smith		N	N	N	Y
5366	<p>Comments</p> <p>If the aim is to provide 1,180 houses in the area south of Kidlington, the least damaging locations would be at Stratfield Farm (site 49) and south of Gosford (sites 178, and HELAA 243 incidentally, a new site not identified at the Issues and Options stage). The two assessed sites have existing small allocations, but the theoretical capacity is far higher. The Initial Sustainability Appraisal (which excluded site 243) set these at 523 and 1,388 respectively. Allowing 3.2 hectares for a new primary school, probably best sited at the Gosford sites, and the 0.7 hectares identified for a cemetery extension in the Submission draft PR7a no. 3, the total net combined land available would be 34.26 + approximately 5 hectares of previously unidentified site HELAA 243. Adding in the existing allocation of 220 + 120, the total number of dwellings required to replace those not developed south of Oxford Parkway becomes 1,520. This represents an overall net density of 38.7 dph (1,520/39.26), which is lower than the 40 dph proposed in the submission draft in PR6a, less than the 45 dph proposed in Policy PR8 and less wasteful of Green Belt land than the 25 dph proposed in policy PR6b, or, to put the figures in greater perspective, withdrawing 60 hectares of land from Green Belt protection (Policy 6A, 6B) contributes 1,180 houses at a net density of just under 20dph. Detailed comments are provided in relation to the selection of alternative sites PR178 and PR49 and the Kidlington Masterplan.</p>							
	<p>Changes Sought</p> <p>PR3, 6a, 6b - Delete references to PR6a and 6b in PR3. Rewrite all references to sites in Kidlington gap, deleting allocations, setting out playing field allocation in land east of A4165. Allow mixed use on land identified within Policy 3c playing fields, residential allocation of 140 written as a new policy. PR7 a and PR7b - Increase allocation to 1,520 between these sites. Retain a small buffer area to the west of Stratfield Farm. Remove reference to playing fields. PR12a - Rewrite to avoid incentive for future allocations beyond those allocated in the plan, or delete.</p>			<p>Reasons for Participation</p> <p>Has spoken as a platform speaker at three public meetings in Kidlington and Gosford. Made a substantial representation at the Issues and Options stage. As a former parish councillor, has represented Kidlington Parish Council at the North Oxford Area Action Plan examination in public, and likewise was invited to the Examination in Public of the Local Plan. Has an MSc in Transport Planning, so part of representation covers that area. Also offers a distinctive perspective as a local resident, who agrees with the principle of a Green Belt review, but does not support the current planned site allocation. Has no interest in promoting a particular site, but only have some sympathy with those who would wish to preserve the Green Belt intact. Believe views represent many in Kidlington who recognise the need for local housing, but see these plans as strategically unacceptable. Representation contains primary research evidence which could be presented.</p>

PR-C-1418	10/10/2017	Glenda	Abramson				N	
509	<p>Comments</p> <p>Is opposed to the proposed Green Belt allocations mainly because CDC has not proved the exceptional circumstances required to build on a GB, nor has it proved Oxford's "unmet need". Use of the GB for development should be the last resort, if at all. The impact of this proposed "sprawl" on the environment would be massive, with extra cars on roads that are unable to sustain what already exists. This is true also of the existing infrastructure as a whole.</p>							
	<p>Changes Sought</p>			<p>Reasons for Participation</p>				
PR-C-1436	10/10/2017	Patsy	Dell	Oxford City Council				
4575	<p>Comments</p> <p>Supports the analysis that there is a close relationship between Kidlington & Oxford & that new homes to the south of the town would be well related to Oxford & help provide for the needs of the city. We agree that is possible to develop to the south of the town whilst maintaining an important GB gap between the two settlements & maintaining the character of Kidlington. Delivery of good public transport, cycle & pedestrian links to the transport hubs (and thereafter on into Oxford) are essential & we welcome the provision for these in the proposed policies.</p>							
	<p>Changes Sought</p>			<p>Reasons for Participation</p>				
PR-C-1441	10/10/2017	Katherine	Jones	Savills on behalf of Thames Water				
4600	<p>Comments</p> <p>The Details of this development have recently been used for the update of Cassington's SOLAR. This growth potential, coupled with the other developments both with Cherwell & West Oxfordshire indicate that this site would be under capacity should all these developments proceed as planned. However, there are larger sites in the area, such as Witney and Oxford STWs that may be able to accommodate the growth. Once the housing requirements and strategy of the LA's and TW are clearer, then this SOLAR is recommended to be updated to reflect the most up to date plans. On the information available to date we do not envisage infrastructure concerns regarding wastewater infrastructure capability in relation to this site. Thames Water would advise that with regard to foul water sewerage infrastructure we would not have any concerns with this individual development site. However, the total development identified in the Kidlington area within the Cherwell development plan may cause concern if all developments were to go ahead. Thames Water would welcome early consultation concerning any proposed development. Thames Water does not envisage concerns with the proposed development site based upon the following key assumptions; foul flows will be connected to the public sewer by gravity (not pumped) & that no surface water flows will be discharged to the public sewer.</p>							
	<p>Changes Sought</p>			<p>Reasons for Participation</p>				
PR-C-1502	09/10/2017	Henry	Brougham					
5138	<p>Comments</p> <p>Incorrect consultation form used. Comments relate to proposed submission plan. PR6a should be removed from the list of potential sites, or at the least the area allocated for housing should not extend north of the track from the A4165 to Frideswide Farm in order to maintain the 'Kidlington Gap'. PR6b should remain a golf course and PR6c be developed for housing instead - again, this would maintain the 'Kidlington Gap'. PR6c is close to the Northern Gateway. Additional housing could be allocated to PR7a and PR7b as high density urban extensions to Kidlington. No further sites at Kidlington should be reconsidered. The area and scale of development proposed for Yarnton on site PR8 would completely change the character of the village, and threaten coalescence with Kidlington. The land take should be pulled back from the railway. If the target 4,400 dwellings cannot be met by increasing densities and additional housing on some other sites, the target should be reconsidered.</p>							
	<p>Changes Sought</p>			<p>Reasons for Participation</p>				

Proposed Submission Plan - Policy PR7b - Land at Stratfield Farm

PR-C-1508	09/10/2017	Alan	Graham				N	N
------------------	------------	------	--------	--	--	--	---	---

Comments

Policy PR7b - Land at Stratfield Farm. This site adjoins the Stratfield Brake playing fields, which is publicly held land. The site is more appropriate to be allocated for additional playing field/recreational purposes as compatible with the Green Belt designation. A site at Yarnton Road, Kidlington which accommodates football should instead be used for residential development and the football use relocated to Stratfield Farm. This would provide a number of houses in a sustainable location within the built environment of Kidlington rather than eroding a further area of Green Belt. Additionally the infrastructure contributions and development constraints on the site at Stratfield Farm, such as vehicular access, make this site not viable for development. Sites that are not viable i.e. deliverable, should not be considered for development in terms of national planning policy guidance.

Comments

In favour of a longer term spatial review with ALL authorities cooperating, and with a fully costed and agreed infrastructure plan to prevent landowners and developers shirking their responsibility to the wider area. So agreement with the CPRLP on this Policy, and development on both these sites could reasonably be considered as extensions to Kidlington, securing a permanent green boundary. Whilst their removal from the GB is regrettable, the release could bring long term benefits, offsetting the loss of GB land with a well-integrated village extension of modest scale, compatible with the character of Kidlington. However, the policies need to be amended to require the footbridge link as described in P 5.96. These sites should also be required to contribute to improved access arrangements for Stratfield Brake, which have long been identified as unsatisfactory, necessitating longer journeys along congested roads. A new exit from the roundabout to provide direct access should be part of the plan.

Changes Sought

Reasons for Participation

Add to Key Delivery Requirements - Contributions to footbridge link - Contributions to improved access to Stratfield Brake recreation and sports grounds

PR-C-1535	10/10/2017	Layla	Vidal-Martin	Lichfields on behalf of Taylor Wimpey (Oxfordshire)	Y	Y	N	Y
------------------	------------	-------	--------------	---	---	---	---	---

5262

Comments

Taylor Wimpey (TW) considers the Submission Plan is not sound as it is not "justified" or "consistent with national policy". This is because : 1. CDC acknowledge (Submission Plan Executive Summary para XV) that "under national policy Green Belt boundaries should only be altered in exceptional circumstances through the preparation or review of a Local Plan". The Submission Plan (para 5.17) sets out why CDC consider that exceptional circumstances exist for the release of these sites from the Green Belt & their allocation for residential development. TW contend that CDC have not thoroughly explored "all other reasonable options" &, where they have sought to do so, there are flaws in their evidence base (regarding their assessments of sustainability, transportation & alternative development locations). They have not demonstrated the "exceptional circumstances" required for the proposed release of the sites identified in Table 1 from the Green Belt; 2. CDC's approach is predicated on an assumption that "Oxford's Housing Needs" form a bespoke & identifiable source of housing need. This conflicts with the recognition in the Oxfordshire SHMA (2014) (para 9.2) that "the SHMA identifies an Oxford-focused Housing Market Area which extends across much of the County, reflecting the economic influence of the City. The county still remains the most appropriate geography for analysis of housing markets in terms of the 'best fit' of local authority boundaries to a functional housing market area." More recently the Inspectors Report into the Vale of White Horse Local Plan emphasised that (para 45) "it is not the role of, or possible for, the plan to prescribe where people live and work;" and; 3. CDC compound this assumption (Policy 12a) by seeking to pursue a "separate five year housing land supply . . . For meeting Oxford's needs." This, in conjunction with proposals not to support Sites Not Allocated in the Partial Review (policy PR12b) are not consistent with the NPPF's presumption in favour of sustainable development & risk substantially harming housing delivery in the District in the coming years. Scope of response (See Detailed 4 Section Report). This response amplifies TW's concerns regarding the soundness of the Submission Plan, & their view that their site at Bloxham (Site PR35) forms a "reasonable option" for residential development prior to the release of the proposed allocations from the Green Belt. Specifically • Section 2: Summarises the appropriateness of residential development on the TW site; (Section 2 encloses * Sustainability Analysis by Calibro, * Residential Potential of Site, * Assessment of site against constraints, * SHLAA Analysis) • Section 3: Summarises TW's concerns regarding the inadequacy of the evidence base, whilst emphasising their support for the level of residential development proposed. This underpins their contention that the Submission Plan does not establish "exceptional circumstances" for the proposed release of these sites from the Green Belt; • Section 4. Sets out TW's comments on emerging policies and the changes that they consider are necessary to make the plan sound.

Changes Sought

Reasons for Participation

The Plan proposes that around 55 % of the housing proposed should be targeted within the Green Belt (GB). Para 3.26 "approximately 14 % of Cherwell lies within the Oxford GB". Thus CDC need to demonstrate "exceptional circumstances" as to why this housing cannot be located within non GB locations comprising 86 % of the District. We do not consider that CDC have appropriately addressed "reasonable alternatives" & therefore cannot be considered to have demonstrated "exceptional circumstances" for the release of all of these sites from the GB. * Combined with the inadequacy of the evidence base, these concerns are amplified by the fact that the Submission Plan appears to prejudge the proposed development strategy irrespective of the evidence base. This is reflected in the fact that the (Executive Summary para xiv) states that the Plan "focusses development on a geographic area extending north from Oxford to south Kidlington, along the A44 corridor" & earlier iterations of the evidence base acknowledged that only sites within two of the nine areas of search have been assessed, * Conversely TW have established that the TW site at Bloxham does form a "reasonable alternative" for development within a sustainable location which is capable of meeting housing need. This is consistent with CDC's analysis within the HELAA (albeit that TW's technical analysis is that the site is capable of accommodating a higher level of residential development). * Accordingly the TW site should be allocated for residential development (under this or an additional policy) prior to CDC moving on to consider the need for any Green Belt release. * Without the amendments sought above our clients do not consider that the Submission Plan can be considered "sound", particularly with regards to being "positively prepared" or "justified."

We consider it necessary to participate at the part of the Examination to amplify the concerns and points raised within the representations.

PR-C-1542	10/10/2017	Cllr Andrew	Gant	Oxford City Council Liberal Democrat group	N	N	N	Y
------------------	------------	-------------	------	--	---	---	---	---

4846

Comments

Considers that both CDC statements "considered reasonable alternatives" and that it has demonstrated "clear, exceptional circumstances for development within the Oxford GB" are unjustified, non-compliant and unsound as a result. "Reasonable alternatives" must include sites which are within reasonable commutable distance of Oxford but avoid the coalescence of Oxford and Kidlington and northward urban sprawl of Oxford, as required by the NPPF. This must mean that, for example, the Shipton Quarry site is appropriate to meet Oxford's housing need. Similarly, building on both sides of Oxford Rd (policies PR6a and PR6b) clearly breaches the NPPF requirement that settlements must not coalesce. The alternative site at Frieze Way, currently allocated as a replacement golf course, would not have that effect. These alternatives have not been sufficiently considered. Oxford City Council has re-stated the legal definition of GB that among its principal characteristics are "openness" and "permanence" The Council is right to do so. This is not consistent with the assumptions in this plan. We do not believe an "exceptional need" has been demonstrated to justify the breach of GB principles in the way the plan does. The need could be accommodated with far less damage to the GB by better and different use of some of the allocated sites, and by more consistent consideration of alternatives. Without such consideration, the plan is procedurally non-compliant, legally non-compliant with definitions of GB, and unsound in its consideration of alternatives.

Changes Sought

Reasons for Participation

A fundamental review of site allocations is required, acknowledging that Green Belt must remain open and permanent, as required by the NPPF. Alternative sites within "easy commutable distance of Oxford" which do not cause urban sprawl or coalescence should be more proactively considered.

To ensure full representation of the views and concerns of local people by their elected representatives

Proposed Submission Plan - Policy PR7b - Land at Stratfield Farm

PR-C-1622	09/10/2017	Andrew	Hornsby-Smith	Kidlington & Yarnton Labour Party	N	Y	N	Y

Comments

Kidlington & Yarnton Labour Party acknowledges the real housing need for Oxford. It is not convinced that the need is for 4,400 houses to be built in Cherwell District. It opposes the allocations in the vulnerable Kidlington gap (proposed policies 6a, 6b), which it believes will mainly be used by London commuters rather than meeting local need; and by the size of the allocation made between Kidlington and Yarnton (Policy PR8). It considers that there are less harmful alternatives available at Gosford (the area allocated for playing fields in Policy PR 7a and at Stratfield Farm, Policy 7b). It also believes that land at Frieze Farm and close to Loop Farm offers alternatives that are closer to the Northern Gateway employment site and less damaging to the open countryside between Yarnton and Kidlington. It considers that the North Oxford Golf course provides an important Green Belt friendly amenity, and that the need for additional playing fields could be met south of the Park & Ride. It is concerned to ensure that the County Council develops additional Park & Ride capacity east of Kidlington, where the traffic impact would be less damaging than an extension at Water Eaton Park & Ride. It would support the provision of a railway station on the Cherwell Valley line, but not at the proposed location at Sandy Lane, but closer to the airport, Langford Locks and Lyne Road (for the benefit of Kidlington's residents). We are concerned that at each of the main allocations, an unreasonably high level of land has been extracted from the Green Belt, which we believe will lead to future speculative development that will be difficult to resist.

Changes Sought

Opposes policies 6a, 6b. There are less harmful alternatives available at Gosford (the area allocated for playing fields in Policy PR 7a and at Stratfield Farm, Policy 7b); and by the size of the allocation in policy PR8.

Land at Frieze Farm and close to Loop Farm offers alternatives that are closer to the Northern Gateway employment site and less damaging to the open countryside between Yarnton and Kidlington.

It considers that the North Oxford Golf course provides an important Green Belt friendly amenity, and that the need for additional playing fields could be met south of the Park & Ride.

It is concerned to ensure that the County Council develops additional Park & Ride capacity east of Kidlington, where the traffic impact would be less damaging than an extension at Water Eaton Park & Ride.

It would support the provision of a railway station on the Cherwell Valley line, but closer to the airport, Langford Locks and Lyne Road (for the benefit of Kidlington's residents).

Reasons for Participation

I have spoken as a platform speaker at three public meetings in Kidlington and Gosford. I made a substantial representation at the Issues and Options stage. As a former parish councillor, I represented Kidlington Parish Council at the North Oxford Area Action Plan examination in public, and likewise was invited to the Examination in Public of the Local Plan. I have an MSc in Transport Planning, so part of my representation covers that area. I also offer a distinctive perspective as a local resident, who agrees with the principle of a Green Belt review, but does not support the current planned site allocation. I have no interest in promoting a particular site, but only have some sympathy with those who would wish to preserve the Green Belt intact. I believe my views represent many in Kidlington who recognise the need for local housing, but see these plans as strategically unacceptable. My representation contains primary research evidence which I would wish to represent.

Protesting against plans to build 4,400 new houses on GB around Begbroke and Yarnton. It seems GB does not stand for anything anymore. All wildlife habitat will be destroyed. A thriving bat population will go. A40 traffic is horrendous now what will another 8000 plus cars create, plus the pollution. The Oxford's unmet housing need has nothing to do with CDC so not on our GB.

1. The proposed transport infrastructure would be insufficient to support such an increase in households, not only from these two projects but also Long Hanborough and Woodstock. It is disingenuous to suggest that an introduction of a new bus lane and P&R, would be sufficient, after we tolerated 18 months of inconvenience while improvements were made on the Pear Tree and Cuttleslowe roundabout and there are sometimes long delays during rush hour. 2. The proposed bus lane and P&R are dependant on a new bridge being build across the canal. 3. Sandy Lane becoming a pedestrian / cycle route means that the less physically able in Yarnton and Begbroke will be forced to drive further to reach Kidlington. 4. Flood plan required to alleviate the danger of the canal flooding. 5. Plan virtually joins all three villages together resulting in loss of villages identities and faceless urban sprawl. 6. Major employers in Oxford are mainly in the south and east of the city, so why are you proposing to build so many houses to the north?. Has consideration been given to brownfield sites like large amount of land behind BMW and the Oxford Brookes Wheatley Campus? 7. Consideration will need to be given to the impact on wildlife, e.g. a bat colony on Spring Hill. 8. Why should Cherwell residents be expected to bear the brunt of Oxford City's housing needs? People who live in a rural community do so because they value that way of life and should not be forced to become urban dwellers.

The Council should study a published report by Ian Mulheirn which questions housing shortages. Objection 1. Loss of GB for future generations. Currently open countryside is a few minutes away, a car journey will be needed if the proposals go ahead. Objection 2. Traffic. More traffic will make commuting to work by bicycle far more dangerous. Crossing the A44, due to sheer volume of current traffic is challenging. These proposals along with CDC's plans for Woodstock development would make crossing the A44 safely virtually impossible. Objection 3. Fields around Yarnton, Begbroke and Kidlington are known to flood, especially west of the A44 between Begbroke and Yarnton. The CDC has the power to agree or disagree with the developer's submitted flood strategies. Nothing less than a flood relief channel such as planned in Oxford will suffice. In and around Yarnton, after periods of sustained rainfall the ditches fill up and the sewage system backs up, to the point where we cannot flush our toilets. It takes several days for these ditches and drains to be pumped out.

Indicates development that encircles a section of Yarnton on three sides, as well as coming very close to the western edge of Kidlington and the southern edge of Begbroke. Clearly, this development would join these three separate settlements together into a single, contiguous settlement. This is in direct conflict with one of the purposes of the Green Belt, to "prevent the coalescence of settlements". Also note that the foreword by the Leader of the Council states that "The growth of Kidlington and neighbouring communities has resulted from their proximity to Oxford as desirable places to live though they remain separate, distinctive communities." Clearly, this Plan seeks to end the existence of these settlements as distinctive communities, which, by the Leader of the Council's own words, would diminish their desirability as places to live. Please consider the fate of Gosford, which has been entirely consumed into Kidlington, and whose name only remains in significant usage because of the Secondary School that bears it.

Changes Sought

For the reasons I have given above AND the Representations made by the Begbroke & Yarnton Green Belt Campaign which I additionally support and adopt as part of my own Representation in this document, the Plan cannot be changed to make it legally compliant or sound and should therefore NOT be submitted for Inspection.

Reasons for Participation

Would like the Begbroke & Yarnton Green Belt Campaign to represent me at the Examination should it take place.

Object most strongly to the proposals because. 1) The proposed development site lies wholly within the green belt and will cause yet more erosion of this valuable asset. There has been significant development in recent years in many different areas of Yarnton village in areas which had a very rural character, for example in Cassington Road, Yarnton and in Sandy Lane, Yarnton. Further development would be much better suited to areas which have a less rural character, where the size of the development would not have such a detrimental effect to the surrounding area. Why are the "Brown Field sites" within the Oxford City area not being considered for this development? 2) In Sandy Lane there have been regular problems with flooding and with the proposed 1950 additional dwellings producing land cover of yet more concrete and tarmac this is likely to exacerbate the problem of flooding during wet weather. This is likely to particularly affect the properties immediately opposite the Garden Centre and in the new development further up the lane which are below the level of the lane itself. 3) We are given to understand that there is a proposal to close Sandy lane at the level crossing which will incur additional mileage for the residents of this lane and the residents of the Northern end of the village of Yarnton to access our natural shopping area (Kidlington) with the additional pollution that this will generate. 4) Traffic has noticeably increased on the A44 in the last few years and with the large development both east and west of this road traffic will increase further with long queues producing even larger amounts of pollution, particularly during the rush hour periods. The six weeks given by Cherwell DC for deliberations over this development if far too short and is during the holiday period when a lot of people will be away.

Para 18f indicates the closure of Sandy Lane to Through Traffic for the benefit of pedestrians, cycle and wheelchair users. The nett effect being that motorised vehicles from Yarnton and Begbroke will have to access Kidlington village centre via Langford Lane or Frieze Way which will simply add to the existing congestion in the direction of Oxford. The proposal just does not make sense. Providing a route for pedestrians, cyclists and wheelchair users can easily be achieved using Green Lane/ Yarnton Lane. Providing for the minority at the expense of the majority is unjustified where an alternative is available. Green Lane/Yarnton Lane has for many years only been partially suitable for pedestrians and cyclists. Hence it has been a scene of "flytipping" and drug taking. The upgrading of Green Lane/Yarnton Lane for non-motorised users would not only provide for their need but also minimise the opportunity for abuse.

Absolutely object to this development, particularly PR9 and PR8. I choose to live in a small village and this development will destroy 3 villages and merge them into one, destroying the communities in them and losing their unique characters forever. The road network around these villages is a nightmare and traffic is regularly unable to flow freely in and out of the area; this development will only make it worse. The GB should be protecting land from this kind of development.

Objection in every possible way. It could not possibly achieve its alleged objective of providing affordable homes for workers in Oxford. It is too big and in entirely the wrong place. Building on GB is not consistent with National Policy, nor consistent with Cherwell's Local Plan approved in 2015. (see Policy ESD 14: Oxford GB). It is Not Justified as it meets no needs within Cherwell but is designed solely to meet Oxford City Council's alleged "unmet housing need". Oxford's demands are based on out of date figures taking no account of changing factors, including likely outcomes of Brexit. The expected new method will result in a significant reduction in the figures for both Oxford City and Cherwell District. In recent correspondence with the leaders of both Councils have been blithely told that the figure can be easily re-inflated, to all for "expected economic growth". Oxford City Council could meet its own housing needs by prioritising housing for its existing residents over greedy expansionism. Cherwell District Council has acted hastily and disproportionately, before the real future need is clear. The "duty to co-operate does not oblige Cherwell to provide a dormitory for Oxford's expansionist plans. It is not a duty to comply with inappropriate demands. Particularly when destruction of the GB is involved. This area of GB fulfils every purpose for which the GB was designed. It was intended to have permanent status, giving a clear city boundary and preventing urban sprawl. Environmental damage, and that to the quality of life for all concerned, would be immeasurable and irreversible. The plan is unsound and not effective - the sites either side of the A44 around the villages of Begbroke and Yarnton are regularly flooded rendering it entirely unsuitable for major development. Existing traffic problems would be exacerbated. Roads are already struggling/ regularly congested. Suggested plans for addressing these problems are unrealistic. Transport problems rely heavily on people leaving their cars at home and either walking, cycling or going by bus - unlikely scenarios. The vague idea of a new rail link appears to be unposted and fantastical. Banbury and Bicester already have direct rail links to Oxford. New employment opportunities should be located near to Bicester where there is already more housing than work - thus reducing commuting. The Plan is Unsound in terms of the Environmental Damage it would cause - it is wholly disproportionate and ill-conceived. It would engulf the villages of Begbroke and Yarnton producing a shapeless conurbation with no separation from Kidlington. Historical distinctiveness of villages would be destroyed and surrounding countryside consumed. These fields are currently productive agricultural land, and home to a rich variety of wildlife. Enjoyed by many, both local and from further afield. Green spaces would be reduced to a pitifully narrow strip. There is much anger and dismay that such a plan could ever have been considered.

Object to Cherwell having to meet the 'requirement' for housing for Oxford City when there are possible brownfield sites available: land behind BMW works, East of Summertown, along Marston Ferry Road. Also around North Hinksey village, north of Botley Road, Southfield Golf Course and the current Pear Tree site if and when that was to be moved. Why was Oxford Brookes University allowed to close its Wheatley campus and construct student accommodation in Headington and just recently the use of the Cowley Barrack site?

Against the proposal to build houses on PR8 and PR9 for 2480 houses. The problems facing Oxford City should be dealt with within its own borders. Elected to live OUTSIDE of urban sprawl which will create just that from Oxford towards Woodstock. The traffic grid lock will intensify on the A44 resulting in longer delays and extra air pollution. Our green belt area will be lost, never to be reclaimed, disastrous to local residents and even more damaging to wildlife. In Yarnton in recent years there has been flooding and sewerage risks and Rep do not think there is a well thought out infrastructure plan to deal with this issue. The proposed closure of Sandy Lane to through traffic will only increase traffic on the A44 and make journeys into Kidlington for shopping, banking, etc. even more difficult. You are proposing to change/destroy our way of life in this area. Plans are of no benefit to the residents of Begbroke and Yarnton.

Proposed Submission Plan - Policy PR8 - Land East of the A44

PR-C-0260	10/10/2017	Rhian	Pye		N	N	N	Y
5525	<p>Comments</p> <p>Increase in population - Yarnton is a village with approximately 1,350 houses with another 390 houses in Begbroke. The proposals from Cherwell District Council ("CDC") will be to build 1950 new houses on the Green Belt land that currently separates the two villages to the east of the A44 (Policy PR8) and another 530 houses on the Green Belt land to the west of Yarnton (Policy PR9). Clearly the combined size of the proposed developments on these two sites is inappropriate when considered against the size of these two villages. They will be dwarfed by the new development. Therefore it would suggest that the selection of sites PR8 and PR9 for this quantity of houses makes the proposed plans unsound. Merging of Begbroke and Yarnton villages - The proposed development at PR8 is entirely on Green Belt land and would result in there being only a narrow gap separating the villages of Yarnton and Begbroke of approximately 50 metres. There is also only a small gap between this enlarged development and Kidlington, meaning in effect that the three villages are merged into one large conurbation with an estimated population of around 30,000. The merging of these three villages would result in loss of individual character and would destroy the semi-rural nature of the area which is so enjoyed and appreciated by the current residents of these three villages. Housing density - The housing density of the larger of the two sites selected in this area (PR8) will be 45 houses per hectare. This is 50% higher than the density of houses built in the Cresswell Close/Pixey Close/Hay Day Close development in Yarnton a few years ago. When awarding planning permission for that development, CDC stated that the number of houses on that site must be restricted to prevent over development. Why has their policy now changed only a few years later despite the fact that the new development is to be built in the same location, i.e. Yarnton. Surely by their previous ruling, this proves that the proposed development is out of keeping with the local area and therefore the proposal should be considered to be unsound. High density housing will damage the historic setting of these two villages of Begbroke and Yarnton.</p> <p>Changes Sought</p> <p>For the reasons I have given above AND the Representations made by the Begbroke & Yarnton Green Belt Campaign which I additionally support and adopt as part of my own Representation in this document, the Plan cannot be changed to make it legally compliant or sound and should therefore NOT be submitted for Inspection.</p> <p>Reasons for Participation</p> <p>I would like the Begbroke & Yarnton Green Belt Campaign to represent me at the Examination should it take place.</p>

5556	<p>Comments</p> <p>This development is in essence the building of a garden city in the Greenbelt. It has housing, business premises and recreational facilities and has no relationship with Begbroke, Kidlington and Yarnton. There is no shortage of housing in Begbroke, Yarnton and Kidlington. Provision for a shop etc. is outside the scope of providing the unmet needs of Oxford. A good proportion of this housing could be met by using the existing brownfields sites and using Compulsory Purchase Orders in the existing villages and elsewhere in Cherwell District. The development of this site will be more than double the sizes of both existing villages. With Begbroke being a small parish the development will change form a small rural village parish to a suburban more appropriate to a city. There will be no recompense for Begbroke parish losing its rural land for building houses. Nothing has been stated on which parish will get the precept. What is the purpose of new schools and where is this funding coming. I am not aware of a shortage of schools. If current schools have limited spaces then why not develop and improve existing school so that they can account for the new capacity that is expected. This is not to do with the unmet housing needs of Oxford City.</p> <p>Changes Sought</p> <p>Reasons for Participation</p> <p>I would like the Begbroke & Yarnton Green Belt Campaign to represent me at the Examination should it take place.</p>							
PR-C-0271	09/10/2017	Lynne	Whitley					N
4410	<p>Comments</p> <p>Not consistent with National Policy. Not Justified. The 'exceptional circumstances' justifying this removal of GB listed at para 5.17 (page 66) are implausible and represent a bad planning exercise to shoehorn in a sufficient number of homes close to Oxford City without regard to the identity of the existing villages of Yarnton and Begbroke and without effective infrastructure.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							
PR-C-0271	09/10/2017	Lynne	Whitley					N
4411	<p>Comments</p> <p>Not Consistent with National Policy. Site lies wholly within Oxford GB. Cherwell Local Plan 2011 - 2031 ESD 14 seeks to prevent the coalescence of settlements and has a strong role in preventing the coalescence of Yarnton, Begbroke and Kidlington. PR8 has been titled 'Begbroke' despite the bulk of the proposed housing lying in Yarnton Parish and being adjacent to the existing Yarnton settlement. Where the 'separation' of Yarnton and Begbroke would be is not obvious. Cherwell Local Plan 2011 - 2031 Policy Villages 1 categorises Yarnton and Begbroke as Category A villages only allowing minor development, infilling or conversion in, or alongside these villages.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							

Proposed Submission Plan - Policy PR8 - Land East of the A44

PR-C-0273	29/08/2017	David & Sarah	Thornhill & Ablett						Y
860	<p>Comments</p> <p>Strong objection to the proposed erection of 1950 dwellings in Begbroke and 530 dwellings in Yarnton. Both Yarnton and Begbroke are dispersed settlements: infilling could ruin the character of the village while estate development would overwhelm it. The protection of Begbroke and Yarnton's visual, historic and archaeological qualities is also supported by the National Planning Policy Framework, which states that permission should be refused for development of poor design that fails to take the opportunities available for improving the character and quality of an area and the way it functions. Building what amounts to be the largest high density development in the area; merging the sizeable town of Kidlington with the villages of Begbroke and Yarnton will destroy the unique character of these villages entirely, with the loss of the surrounding GB areas which give the villages their identity, rather than becoming part of yet more urban sprawl. Whilst pressure from Oxford DC for the development in Cherwell DC is considerable, mainly for housing city commuters, it has been successfully resisted in similar cases by Vale of the White Horse DC re the large area of brown field land adjacent to the BMW plant, amongst other areas. The reasons for rejecting those schemes included the inadequacy of the local lanes to accommodate even small increases in traffic, and because road widening would destroy ancient field boundaries. There is concern about Cherwell DC's proposals to increase bus services in order to facilitate the proposed developments by closing one lane of the already busy dual carriageway (note: traffic surveys have been averaged over a 12 hour period, ignoring the rush hour bottlenecks that occur at the Turnpike roundabout / following bridge and roundabout on the A44 prior to Pear Tree interchange) as a dedicated bus route. As cyclists, we are increasingly aware of the poor quality of both the road surfaces in the area due to volume of traffic and poor repairs, and the badly maintained cycleways. Increasing traffic through already congested roads will not improve this, and will most likely lead to more RTA's in the area. The proposed siting of the developments are particularly ill-considered: they are on greenfield sites used by many villagers and tourists for recreation and walking dogs. Building here would both diminish the striking views available to locals and new developments would be prominent from many areas of the village. Furthermore, there is no need for this kind of 'open market' housing in the village, which has already seen several 'new' estates being built in recent years. Cherwell DC has more than five years' supply of housing land in other larger areas (Bicester, Banbury, Kidlington etc.) to meet the requirements of its emerging Local Plan's policy. The villages of Begbroke and Yarnton already have enough housing developments: the only identified need is for affordable housing for residents who work locally, as recently confirmed by your Housing Department's Housing Needs Survey. As an alternative to this proposal, we would support the construction of further housing developments for both Oxford and London commuters (making use of Oxford Parkway Station) on, or near to the proposed Northern Gateway site, or other brown field areas which could be identified within the Oxford area, rather than build on GB land merging villages in to greater conurbations.</p>

PR-C-0304	20/09/2017	Huw	Mellor	Carter Jonas on behalf of Newcore Strategic Situations III GP Ltd	Y	Y	Y		
896	<p>Comments</p> <p>Newcore support the proposed allocation within the general terms of Policy PR8. However, one specific matter as proposed within the terms of that Policy is challenged by Newcore - "Key Delivery Requirement 4. The provision of a primary school with at least three forms of entry on 3.2 ha of land in the location shown". The proposed primary school would come to occupy a disproportionately large area of the available site, which is currently in use as a fully functioning commercial garden centre, Yarnton Nurseries and seriously prejudices its operational capacity. This would in turn threaten the long term viability of the garden centre business. Newcore consequently oppose the proposed extent of the site, at 3.2 ha of land, being allocated to a primary school use; However, Newcore would not oppose the allocation of a primary school on the site per se, provided such allocation was limited to no more than 2 ha of its available area. This would then permit the garden centre business to continue on site in a viable manner, if so required. Newcore would also be prepared to consider an alternative location for the existing garden centre business entirely, elsewhere within the wider Policy PR8 allocation site area. This can properly form a part of any subsequent masterplanning exercise for the wider site, prior to any consequent planning application for the comprehensive development of the allocation site. Accordingly, Newcore submit that the terms of "Key Delivery Requirements 4", should be re-worded to the effect - "4. The provision of a primary school on a proportion of the site, not to exceed 2 ha of the available area to be agreed in consultation with the Education Authority".</p>

PR-C-0305	25/09/2017	Martin	Small	Historic England	Y	Y	N		
908	<p>Comments</p> <p>The site "Land East of the A44" includes the Grade II listed Begbroke Hill Farmhouse and abuts the Oxford Canal Conservation Area to the east. The Grade II listed Tudor Cottage is located just outside the site. Historic England therefore welcomes requirement 39 in respect of the Begbroke Farmhouse. Historic England also welcomes the presumed intention behind requirements 25 and 26 of Policy PR8 for the application to be supported by a Heritage Impact Assessment which will "include measures to avoid or minimise conflict with the identified heritage assets within the site, particularly the Oxford Canal Conservation Area and the listed structures along its length" and a desk-based archaeological investigation which may "then require predetermination evaluations and appropriate mitigation measures" as part of the positive strategy for conserving and enjoying, and clear strategy for enhancing, the historic environment as required by the National Planning Policy Framework. However, requirements 25 and 26, as drafted, only requires the Heritage Impact Assessment to include these measures and only notes that the archaeological investigation may require predetermination evaluations and appropriate mitigation measures respectively. It does not require these measures to be incorporated in or to influence the actual development scheme. The policy therefore provides inadequate protection for the Oxford Canal Conservation Area and listed structures along its length and potential archaeological remains on the site. As the Council will be aware, paragraph 126 of the National Planning Policy Framework requires local planning authorities to recognise that heritage assets are an "irreplaceable resource" and "conserve them in a manner appropriate to their significance". Paragraph 129 notes that the significance of a heritage asset can be affected by development affecting its setting. Historic England therefore considers that Policy PR8 as written does not conform with the Framework and thus is not sound.</p>								
	Changes Sought	Reasons for Participation							
		Requirement 25 of Policy PR8 should be reworded as follows: 25. The application shall be supported by a Heritage Impact Assessment which will identify measures to avoid or minimise conflict with the identified heritage assets within the site, particularly the Oxford Canal Conservation Area and the listed structures along its length. These measures shall be incorporated or reflected, as appropriate, in any proposed development scheme." Requirement 26 should be reworded as follows: "18. The application(s) shall be supported by a desk-based archaeological investigation which may then require predetermination evaluations and appropriate mitigation measures. The outcomes of the investigation and mitigation measures shall be incorporated or reflected, as appropriate, in any proposed development scheme". (Discussions with the Council are ongoing at the time of submitting this representation, but early indications are that the Council will consider rewording these requirements as suggested as minor modifications. If it was to do so, Historic England's objections to these requirements would be overcome).

Key Delivery Requirements' on all these policies are nothing more than a fig leaf. It is perfectly obvious the developers will agree to some or all of them and then will renege on them. This always happens. 50% affordable housing will be thrown out of the window as it has been in Templars Square where 50% has magically transformed into 23%. Similarly, developers never actually deliver infrastructure like schools, community centres or roads that are wide enough. The 'Place shaping principles' in these policies are valueless: there are no measure by which they might be enforced. How can one tell, for example, whether an extension "responds to the 'gateway' location of the site". It's gobbledygook. PR11: This is completely empty. 'Working with partners' does not guarantee anything except that you have no control over the outcome. Nor does 'setting out the Council's approach'. Its all very well having the development proposals demonstrate that infrastructure requirements can be met - it does not mean they will be met.

Concerned about the implications of the projected growth of Kidlington. The Village would potentially merge with Yarnton and Begbroke and become a suburb of Oxford. The majority of the clusters of employment within Oxford are not located in the northern section of the City. Therefore, it seems unjustifiable that a village to the north appears to be the main target area for the City's housing demands. In order to get from Kidlington to Cowley or Headington potential workers would need to circumvent the City or drive through it. Either way it would add unnecessarily to the traffic congestion. It is unlikely that the provision of more housing in Kidlington will alleviate the housing needs of Oxford City. Kidlington, especially since the opening of Oxford Parkway station, has increasingly become part of the expanding commuter belt for people who work in London. The argument that it will provide accommodation for people working in Oxford is not substantiated as a high percentage will be to accommodate London commuters. Many of the existing properties in Kidlington, particularly those at the lower end of the housing market, are already in the hands of 'Buy to Let' landlords charging extremely high rents. They are therefore well out of the reach of first time buyers or for rent by anyone earning the National Average Wage. It is extremely unlikely that any additional accommodation built in Kidlington will come under the category of 'Affordable' housing. Kidlington already has severe traffic problems. The proposed additional housing would greatly increase the amount of traffic using these roads. Anyone travelling to or from Oxford during peak hours is only too aware of the present long queues through Kidlington and any further increase in the number of dwellings would result in complete traffic chaos. The development of the identified Kidlington sites would have an immense and detrimental impact on the local educational, shopping, dental and medical amenities which are already extremely stretched. There are also completely inadequate facilities for the existing children and young people in the area. The proposed increase in households would result in a corresponding increase in the number of young people needing to use the sparse facilities available and a likely increase in the problems associated with anti-social behaviour.

Concerns on the areas designated as PR7a, PR7b and PR8. These proposed developments would join up the present villages of Begbroke, Yarnton and Kidlington. The total number of houses that are proposed to be built appears to be a total of 2280, of which 1950 are located on land to the east of the A44. These constitute an extreme over development and would cause havoc to the road, school and medical facilities. It appears that the plans for PR7a and PR7b (Kidlington) do not have provision for additional educational and medical facilities. Cannot envisage how a further 330 households are to be incorporated into the existing schools and GP surgeries. These are already extremely overstretched and the wait to secure an urgent GP appointment is 3 to 4 weeks, with 4 to 6 weeks for more routine matters. The plan for PR8 to support 1950 additional households is not viable. Notes that the plan includes 2 primary schools, a secondary school and a local centre to include shops and medical facilities. However, past experience shows that these aspects of a development scheme frequently 'fall by the wayside' and do not materialise. What usually happens is that the houses are built and occupied long before the infrastructure is developed. The community is left to try and absorb the additional demands and this puts a tremendous strain on the existing and new communities. There is also the extreme difficulty in attracting GP and teaching staff to move into the area. It is unclear which village would be expected to provide the educational places and medical support when these new houses are occupied. Suggests that as Kidlington is the larger village it would be expected to pick up the surplus. Notes that 50% of these new houses are designated as 'affordable housing'. What affordable housing means is subject to speculation and these are likely to become 'buy to let' or to provide homes for London commuters. In these cases are there stipulations that they must be allocated to local people? This proposed development is not a realistic requirement and is unsustainable. Not only would the infrastructure be completely overwhelmed but we do not believe that improvements could, or would, be made to even partly cope with the demands this would make on the area. The already severe traffic problems would escalate with schools, dental and GP services being completely swamped. Concerns regarding the proposed development of Cowley Barracks to provide student accommodation. If Oxford City is desperate to supply additional housing surely they could 'compulsory purchase' the site and provide at least some of the housing they require. This would also be close to the major employment areas. Opposed to the Green Belt being eroded.

In order to increase footfall to Kidlington Village Centre it is important that some of this development is located much closer to the village centre. One such site is the J A Pye (Oxford) Ltd land at Webb's Way (as indicated on the attached Site Location Plan L02) and there are also other potential sites that could be allocated, as indicated in the council's HEELA and Green Belt Study. Allocating the land at Webb's Way would also enable a significant contribution to be made towards providing green infrastructure in the area in accordance with proposed policy PR5, which requires development proposals meeting Oxford's unmet need to show how multi-functioning Green Infrastructure can be provided including the restoration or re-creation of habitats; biodiversity enhancements; informal and public open space and movement corridors. The Landscape & Visual Appraisal (January 2017) carried out by Aspect, which is submitted with these representations, indicates that the south western part of the site is well contained, being adjoined by residential development on three sides and a hedgerow on the other and has the capacity to accommodate sensitively designed residential development. The north eastern part of the site is more open and this part of the site would be a suitable location for landscaped public open space and wildlife habitats.

Reasons for Participation

Amend the strategy to remove, or at least minimise, the amount of land to be removed from the Green Belt in the 'Kidlington Gap' by instead removing other areas, such as the J A Pye (Oxford)Ltd land at Webb's Way, Kidlington (PR32), which the Cherwell Green Belt Study (April 2017) has identified would cause less harm to the Green Belt.

J A Pye (Oxford) Ltd owns land at Webb's Way, Kidlington and wishes to ensure that the argumentis strongly made for the removal of this site from the Green Belt and its allocation for housingdevelopment, which would help to address Oxford's unmet need.

Appendix 4 of the council's HEELA states that the site (HEELA168) 'is considered to be unsuitable for development as the site is an important open space within the Church St Conservation Area & provides a rural setting for the church and its environment.' While it is accepted that this is the case with the outer fields which are not proposed for development, it is not the case with the inner field, which is screened by a continuous thick hedgerow on its eastern boundary. Aspect's comments on the potential impact on the Conservation Area are contained in paragraph 3.7 of the Landscape & Visual Appraisal of Land at Webb's Way (January 2017), where they state that: 'It is considered however that, on the ground, the south western part of the site is not readily perceived and does not appear to contribute to the setting of the Conservation Area, particularly when compared to the more open network of fields to the north east which are publicly accessible and from which views towards the church are available. This part of the site does not appear to be related to the listed buildings or the setting of the Church or Mill End. It is acknowledged that the proposals will change the character of the site, however, various post-war residential developments to the south east and north west of the site, immediately adjacent to the Conservation Area and the listed buildings of Mill Street have been integrated without harm to the setting of these buildings or the wider designation. It is considered that a sensitively designed development can be integrated without compromising the perceived landscape setting of the listed buildings or Conservation Area.'

Comments

It is not considered therefore that the impact on the Conservation Area is a valid one for rejecting allocation of the Webb's Way site. The Council acknowledges that the Webb's Way site is located in a suitable location to accommodate Oxford's unmet need and has good access to services and facilities in Kidlington. Although the Webb's Way site is a relatively small site, it is important to allocate a mix of housing sites, as smaller sites have the benefit of enabling development to come forward at an early stage in the plan period as significant infrastructure provision would not be required, thereby enabling an early contribution towards meeting Oxford's unmet housing need. In addition, the impact of developing a small site adjoining the existing settlement of Kidlington would have a much smaller impact on the purposes of the Green Belt than the large areas which it is proposed to allocate under policies PR6a and PR6b, which are located in a critical location in the Kidlington Gap as set out in the accompanying Green Belt representations. It is therefore considered that the failure to allocate land at Webb's Way, Kidlington does not represent the most appropriate strategy when considered against the reasonable alternatives and the plan is therefore unsound in this respect.

Comments

Much of the land proposed to be allocated to meet Oxford's unmet need is not located close to existing service centres. As a result new service centres are proposed to be created under the allocation policies for Begbroke (policy PR8) and land east of Oxford Road (policy PR6a). The effect of this is that these new developments will not be served by or support the important Kidlington Village Centre. This would conflict with the aspiration of the Cherwell Local Plan 2011- 2031 Part 1 policy Kidlington 2, which is entitled 'Strengthening Kidlington Village Centre,' which states that it is proposed in part 2 of the Local Plan to expand the geographical area defined as Kidlington Village Centre, with the aim of supporting the viability and vitality of the existing village centre and encouraging economic activity. This is also the aspiration of the adopted Kidlington Masterplan, Theme 3 of which is 'Strengthening Kidlington Village Centre,' with the objective being: 'To strengthen the Village Centre, increasing its mix of uses and vitality and its attractiveness to local residents, employees and visitors as a place to shop, work and spend leisure time during the day and evening.' None of the proposed allocations to meet Oxford's unmet need, which amount to a total of 4,400 dwellings, would help to achieve this objective, however, as they are all located well away from Kidlington Village Centre, with the most significant amounts of development being allocated on the northern edge of Oxford; and at Begbroke and Yarnton.

The duty to co-operate has been misunderstood by CDC Executive Committee Members as a duty to agree, which by virtue of National Planning Practice Guidance (6th March 2014) it is not. The video evidence of the vote attests to key members feeling co-erced into approving the initial Plan which they voiced as doing begrudgingly. By not showing worst/mean/best case scenarios within the consultation documents (e.g.. the Transport Assessment) there is a clear bias in the proposals which is not addressing adequately the true impact. The rep includes a very detailed response which elaborates on this summary of the main points raised. The Plan takes root in the Strategic Housing Market Assessment (SHMA) which was written in March 2014 based on data from 2013. The economic claims of the SHMA were already considered optimistic but have since been overtaken and discredited by Brexit and the consequent downturn in the economy, which the Office for Budget Responsibility and the Treasury see as 'flat' to 'low' growth for the foreseeable future. Given that the SHMA (3.39) has projected housing need at 40%+ above past demographic trends to meet its expected (and now overblown) economic growth, the SHMA itself should be revisited to take account of the material adverse change in circumstances since it was drafted. Unmet housing numbers for Oxford accordingly require a material correction. The scale of the proposed development is excessive and coalesces the villages of Begbroke and Yarnton to form an urban neighbourhood. This is neither necessary (given the overblown SHMA) nor an appropriate use of the green belt (per NPPF guidelines for "limited" development which benefits the "local" community). Plans need toning down significantly or dropping altogether. The Transport Assessment (July 2017) makes critical investment recommendations without which the proposals are unsustainable. A key critical investment being the A44 Southbound bus lane from Begbroke to Loop Farm Roundabout has not undergone any feasibility study yet has the constraints of 1 railway bridge, 1 canal bridge and adjacent private properties, making it a very unlikely or otherwise significantly disruptive and costly investment to provide. I suggest a formal feasibility study and costing is a pre-condition before any shovel breaks the dirt on development build. Finally, it is clear that Councils lack power to commit developers to the level of affordable housing that is needed, yet the Local Plan has no merit or credibility if in the end it fails to deliver the requisite level of affordable housing (after adjustment for SHMA correction). The Council and the developers need to be held to account to deliver the mix of affordable and other housing that the public eventually sign up to so, unless Councils are given authority to build for themselves, appropriate Performance Bonds for 5% of development value in favour of the affected parishes should be a pre-condition of any allocation of affordable housing quota in those parishes.

Changes Sought

Reasons for Participation

To date this Local Plan has been pushed through with a haste, in the mistaken belief that the duty to co-operate is an obligation to agree to Oxford's demands. The video of the CDC Executive Membership vote (June 2017) - available through the CDC website - evidences the failure of our elected representatives to apply an adequate constructive challenge - in public debates on this matter I have found myself having to explain its complexities to others and am able to apply a factual rather than an emotive challenge. Furthermore, it is not believed that the CDC Chair Barry Wood is acting in the public interest: his responses to questions at a public meeting in Kidlington on 21st September betrayed a naïve weddedness to the SHMA, despite a material change in circumstances since it was written in 2014. His appears to be an undue influence on the CDC Executive Committee. This is a sensitive issue for all concerned and needs an independent voice to ensure emotive rhetoric does not disguise or overshadow fact, and to allow a constructive approach to finding a workable solution.

Strong objection to the development of land east of the A44 (Policy PR8) and the land to the west of the A44 (Policy PR9). By developing the green belt on these sites Begbroke, Yarnton and Kidlington would become one big suburb of Oxford. The A44 will not cope with the extra traffic that these houses will generate. The introduction of bus lanes will not work because there is not enough room to install new lanes on both sides of the road. The main areas of employment in Oxford are at the car factory and the hospitals and the majority of people will travel by car as it is too far to cycle or walk. The schools in Yarnton and Kidlington are stretched now. Even if you include plans for a new school, how will you staff it? Similarly, the doctors surgeries are stretched. How will you employ new doctors to cope with the extra people? This land floods already. How will the new homes affect this? Where will all the water drain to? How will this affect both new and existing properties? How much will these houses cost? If the press is to be believed and the houses in Barton Park, Headington range from £300,000 to £600,000, it is likely that these houses will be a similar price. No one will be able to afford them. People who have £600,000 to spend on a house are not going to buy one in the middle of a high density estate where up to 50% is social housing. Why do Oxford City Council need so many houses on Cherwell land? In your booklet it states that Oxford has a need for 28,000 new homes to be provided between 2011 and 2031. All of these calculations were done before Brexit. If immigration is controlled - which is one of the things the majority of the country voted for when they voted to leave the EU - the whole country will not need so many new homes. It has been proposed to close Sandy Lane to through traffic. To travel from Yarnton to Kidlington by an alternative route (i.e.. Langford Lane or Frieze Way) adds over three miles to each journey. As quoted by the National Planning Policy Framework part of the purpose of the Green Belt is to stop urban sprawl and to preserve the setting and special character of historic towns. Yarnton is a historic village, over 5000 years old, surely it should qualify to be protected.

Sites PR8 and PR9 will effectively amalgamate Kidlington with Yarnton and Begbroke. The two smaller villages will lose their identity and become swallowed up in greater Kidlington. The proposed development would bring far more traffic onto the A44 and the junction at Peartree which is already overloaded and congested. To propose more housing in this location, which is not well served by road or rail, and just allocating "land for a future railway halt/station" and a "local centre" as hopeful palliatives to reduce car use, is ignoring the realities of new estate building by developers.

The scale of the proposed development between Begbroke and Yarnton and beyond is overwhelming. The amount of traffic on the A44 has already increased in the past year. The green belt along the back of Fernhill Road separating Begbroke and the development is not wide enough. There is a greater risk of flooding due to the fact that Rowel brook will not be able to cope with the volume of rain water because there will be a concrete jungle not far away. The rain water has to go somewhere and also settles in the field next to the brook for a long period of time and that could have a devastating effect on the properties along Rowel brook. The land expansion of Begbroke Science Park is not acceptable. It should be moved more towards the railway line so it doesn't affect people living along Fernhill Road and the expansion is far too big. The closure of Sandy Lane is crazy because that route is well used to Kidlington and back and it would take pressure of the A44.

There is categorically no need for community woodland. This would interfere with the existing beautiful open landscape. There is already a huge abundance of swathes of public woodland stretching right through Yarnton to Bladon and Woodstock and back towards Cassington and Long Hanborough. The idea of creating woodland, in light of the aforementioned, for a local school blatantly disregarding the special unique ancient hedgerows and landscape already in existence, in a move to cover up the negative effects of developing is completely ludicrous. The Council needs vitally to stand up and vehemently protect this important piece of land for future generations.

Proposed Submission Plan - Policy PR8 - Land East of the A44

PR-C-0510	08/10/2017	Rachel	Walton						N
1218	Comments								
GB is designed to protect from overdevelopment. IF PR (land to the East of the A44) is permitted under the Local Plan, the three villages of Kidlington, Yarnton and Begbroke will coalesce and lose their individual identity to the detriment of all residents in those villages. This GB should not be sacrificed as it will irrevocably damage the countryside, wildlife and biodiversity of North Oxfordshire, reducing quality of life for local residents.

3 photographs provided to clarify Green Belt around Begbroke & Yarnton (PR8), Footpath Begbroke and Spring Hill (PR3e). Reduction of green belt in Begbroke & Yarnton1. Cherwell claim in figure 3, page 31 of its summary booklet, that the total area of Cherwell that comprises green belt would fall from 14.3% to 13.9%2. They also claim a 3% reduction in affected green belt. Whilst this is probably true it is not reflecting the real change in affected areas such as Begbroke, Yarnton and Kidlington!! Site PR08 will remove approximately 52% of green belt in Begbroke and Yarnton. Site PR09 will remove approximately 16% of green belt. Our residents do not want organisations or other landowners with vested interests to destroy out pleasant environment to satisfy their own interests.

Land East of A44 (Begbroke). This is wholly within Oxford GB. Cherwell Local Plan 2011-2031 Policy ESD 14 (p 114) seeks to prevent the coalescence of settlements & has a strong role in preventing coalescence of Yarnton/Begbroke/Kidlington. PR8 has been titled 'Begbroke' despite the bulk of developments lying in Yarnton parish. Just where the separation of Yarnton and Begbroke would be is not obvious. This despite Partial Review page 118, para 5.110, point 5 stating 'the necessity to retain the separate identities of Yarnton/Begbroke/Kidlington'. PR8 is not consistent with National Policy & thus unsound. Cherwell Local Plan 2011-2031 Policy Villages 1 (p 246) categorises Yarnton & Begbroke as Category A villages. PR8 is in contradiction with Policy Villages 1. The closure of Sandy Lane. OCC recognises this as an alternative route to A44 & A4260. It is important enough to be salted in winter. It is a vital link between Kidlington/Yarnton. No provision for an alternative, thus it is not justified and unsound.

Comment was made in January 2016 on the Issues Consultation Paper of the Partial Review - Oxford's Unmet Housing Need that there is a clear link between housing need, employment growth and other supporting infrastructure, and that this would include the need to provide new waste management facilities to meet Oxford's needs. The comments made clear that there is currently hardly any provision for the waste management industry at all in Oxford; that the scarcity of land in the city means that its waste management needs will have to be met outside the city; and that the only identified employment sites appropriately located - at Kidlington and Begbroke - would not be suitable for waste management use as they were specifically for high value employment needs. The development locations to be identified in the Partial Review should include employment land suitable for heavier industrial B2 type uses, that could then also provide potential options for the waste management industry to site facilities to meet Oxford's needs. Unfortunately, however, the Partial Review document does not make any allocation for new B2 use employment land. The only new employment provision (other than ancillary business development - use class B1(a) - at new local centres) is made within Policy PR8, but is only for the expansion of Begbroke Science Park (Key Delivery Requirement 15) to accommodate growth in research and high-tech enterprises. 3. The Oxfordshire Minerals and Waste Local Plan Part 1 - Core Strategy (OMWCS) was subject to examination in September 2016 and the Inspector's Report was issued in June 2017. The plan identifies a growing need for additional waste management capacity and the intention to identify new sites to meet this need. At the examination hearings it was accepted that it would not be possible to find new sites in Oxford for waste management purposes and given the further constraint of the Green Belt the area identified for locating waste management facilities to meet Oxford's needs (under policy W4) was therefore widened from a 10 mile radius of the centre of Oxford to a 15 mile radius ("the Oxford area") as a main modification to the plan. 4. In respect of the Cherwell District area of the county there are no available existing, no proposed new employment sites that would be suitable within the area where the County Council considers that new waste management sites to serve Oxford should be found. Furthermore the only sites that have been nominated for new waste management facilities within the Oxford area, and also within Cherwell District, are all Green Belt sites.

Changes Sought

In order for the Plan to be sound Policy PR8 should be amended as follows: The words "190 hectares of land" should be replaced by "203 hectares of land". There should be an additional key delivery requirement stating: "The reservation of 13 hectares of employment land for B2 and B8 class uses." The Policies Map should be amended to show the land east of the rail way line - the extent of which is as shaded red on the annotated copy of the existing Policy PR8 Policy Map below - removed from the Green Belt and identified as land reserved for employment. Further consequential changes would also be necessary to Appendices 1 and 2 of the Plan. These changes would remedy the failings in relation to the tests of soundness that have been identified at paragraph 11 of the comments in the preceding section 4, and would make the Plan legally compliant in respect of the requirement to have regard to national planning policy. Annotated copy of PR8 map is appended in the rep.

Reasons for Participation

Local employer whose interests will be directly affected by the policies of the Plan, and considers that it is very important to be represented at the hearings into the relevant issues, in order to help inform the discussions and ensure that its views are fully taken into account.

Positively Prepared/Compliance with Duty to Cooperate? The unmet need for this project is unproven and likely overstated. It would have a devastating effect on beloved countryside that is strongly relied upon and used frequently all year round for walks and ensuring a healthier lifestyle amongst locals. It is a bold plan that lacks compromise and respect to the quality of lives in all surrounding areas, now and in the future. Development on this well utilised green spaced would be a serious offence to the GB national policy. The evident and frequent recreational use it provides to locals as well as the essential needs to the pockets of wildlife that are struggling to remain are totally disregarded in this plan. GB space is billed as such to cap the area(s) from inevitable demands of urban expansion even in so called "extreme cases". Decision making by any parties that stand to profit from the success of this planning on this protected GB space should be forbidden. This plan has no sensitivity for GB policies or the quality of lives living in the surrounding areas. The infrastructure plans are afterthoughts without acknowledgement to the current infrastructures that are rapidly deteriorating and under daily duress. Building on this precious and utilized green space for the temporary solution of unmet housing needs does not justify or outweigh the irreversible and negative consequences for current and future inhabitants.

Changes Sought

Changes to Plan 8 - so that it is more legally compliant and sound. 1. If using our GB areas is truly the only option for development then Cherwell should decline and point to other solutions such as: a. Brownfield sites within Oxford or further out. b. Current and numerous vast amounts of land either being reserved for commercial use (much of it not looking very utilised or successful). 2. The decision making process should be ultra sensitive and rigid to the aesthetics at risk and protect this area at all costs realising it's essential potential and use.

Reasons for Participation

I am a concerned as a long time resident that these plans will affect. I am also aware and understand these plans and their implications involving both current and future residents. I strongly believe I am competent and justified to be involved in ensuring that alternatives, and fair compromises are met

Objects on the grounds that Paras 15 & 16 are unsound due to the failure to be positively prepared. The plan seems biased towards Oxford University who stand to make significant financial gain from selling GB for development and from extending their science park, with no regard for the local community. Para 18b, pg. 122, indicates more access points on the A44. This increases safety risk to pedestrians, exacerbating traffic flow issues and increased congestion. Considers the closure of Sandy Lane (Para 18f, pg. 124) and inappropriate strategy. This is a key route to Kidlington which reduces congestion on the A44. The consideration of educational facilities (additional High School). This should be independent of Oxford University to ensure no conflict of interest, or potential for creation of a selective school. Efforts should be made for the science park to improve links to the existing Marlborough & Gosford schools. Para 39, pg. 126 expanding Oxford University Science Park seems biased towards Oxford University to increase profitability and financial gains without consideration to local community needs. The lack of objective assessment and not being positively prepared makes the proposal unsound.

Concerns over PR8 & PR9. This development is highlighted to meet an unmet housing need. The Plan highlights that they will be 50% affordable homes. Given that the total number of houses in Policy PR8 is 1950, if developers do stick to the 50% (which is unlikely) we were advised that then approx. 20% of the affordable housing (as in previous developments) has been allocated as keyworker housing & there is no reason for this development to be different. This equates to 195 KW houses, & is barely enough to meet the needs of the new schools proposed on the site, let alone supporting this kind of housing need within Oxford. Have significant concerns about the lack of infrastructure for car transport in PR8, increasing the already busy road on the A44 into Oxford with a single lane & narrowing to single lanes at all roundabouts. Concerned that the project will not meet the original aim of meeting Oxford's Unmet Housing Need. The houses will be sold to commuters or purchased for rental, not for local people to be able to get on the housing ladder, or meet the keyworker needs. What's more likely is a much smaller proportion of social housing than is included on the plans. It would be a travesty to lose the feeling of living in the countryside with the PR9 development meaning both sides of the A44 is flanked with houses. Causing increased journey times, queuing & traffic pollution for this development then to not meet the need.

Object to current plans for Policy PR8 – Land East of A44 (Begbroke) and Policy PR9 – Land West of A44 (Yarnton) shows no regard for the identity of the villages of Yarnton or Begbroke and no real effective infrastructure has been suggested (plans for bus lane improvements and rapid transport routes, for example, are unrealistic due to the physical width of bridges along the route and, of course, finance).

OXFORD'S 'UNMET NEED' AND REASONABLE OPTIONS FOR MEETING IT (continuation)
 c. Even if there were no reasonable alternative sites, and even if densities on allocated non-GB sites could not be increased, the release of GB land could be substantially reduced. The total GB land proposed to be released is 264 ha. 10 hectares is proposed to be released for the station and Park and Ride, which already exist on GB land. There is no obvious rationale for the release. The net GB land to be released for housing is 254 hectares However within this area only 153 hectares is proposed to be actually used for housing, with the rest being allocated for sport, nature, agriculture etc., all legitimate GB uses. On the residual land 3990 houses are proposed at a density of 26 dph (although an average of 34 is claimed in the Plan). If build densities were increased to urban levels – the Council’s stated Policy is to treat these incursions for Oxford’s unmet need as urban extensions – then 70 houses per hectare, utilising only 37% of the land would be appropriate. This would require only 57 hectares, all of which could be comfortably accommodated on PR8, the least damaging in terms of coalescence and the Kidlington Gap of all these sites.

Comments

Government Policy requires development in the GB to be the very last resort, only to be considered if there is no alternative. Cherwell has stood that Policy on its head by making building in the GB its very first choice, rejecting what it accepts were reasonable alternatives. Cherwell says that building as close to Oxford as possible trumps all other considerations. Since Oxford is surrounded by GB, that has led them to select not just GB sites, but the very closest GB sites to the City, at the Kidlington Gap, where the GB is most fragile, just a few fields wide. It is those few fields the Council plans to build on, flatly contrary to GB policy, and the known wishes of the overwhelming majority of its electorate. If the Council gets away with this plan, it will also, again contrary to GB policy, cause the merger of Yarnton and Begbroke into Kidlington; expose Kidlington itself to being engulfed by the predatory City Council which has sought to subsume it for at least thirty years; and also, by declaring that proximity to Oxford is itself an exceptional reason to build on the GB which surrounds the City, fundamentally undermine its very purpose, risking opening the whole GB to development.

CPRE is opposed in principle to the release of GB land – as is national planning policy. A very strong case therefore has to be made to establish the exceptional circumstances required for the release of GB land. The Cherwell Plan goes nowhere near making such a case; Cherwell’s electorate strongly supports retention of GB land as does Government Policy. There are a number of reasonable alternatives. The houses to satisfy Oxford’s ‘unmet need’ targeted at the Cherwell GB could not only, on the Council’s own admission, be sustainably built elsewhere in the District on other sites, or by increasing the density of build on existing sites, but also, at least to a considerable extent, within the City itself. Failing that, if there were genuinely no available option other than release of GB, national policy indicates that Cherwell would be expected to decline to do so and require other Councils to co-operate in meeting the unmet need Cherwell itself cannot satisfy. Additionally, during the course of the consultation, the Government published a revised Objectively Assessed Need (OAN) calculation, showing a total Oxford need of half that identified by the Oxfordshire Strategic Housing Market Assessment (SHMA). If adopted the new formula would make it certain that Oxford could accommodate all of its own housing need, and therefore there would be no “unmet need” for Cherwell to meet. The proposed OAN also reduces Cherwell’s own need by a third, meaning that even if there were any Oxford unmet need to be covered, it could be met within the surplus the new OAN creates in Cherwell’s adopted plan. This review is therefore premature and should be suspended at least until new “need” figures are crystallised.

OXFORD'S 'UNMET NEED' AND REASONABLE OPTIONS FOR MEETING IT. 1. Is the Oxford unmet need real or realistic? Cherwell argues that an “exceptional circumstance” exists in the Inspector approving the adopted plan having added a requirement for “a formal commitment from the Council, together with other relevant Councils, to undertake a joint review of the boundaries of the Oxford GB, “once the specific level of help required by the city of Oxford to meet its needs that cannot reasonably be met within its present confines, IS FULLY AND ACCURATELY DEFINED”. (Our emphasis) It was our view at the time that the Inspector could have exceeded his remit as there was no evidence before him suggesting that further development in Cherwell was impossible without breaching the GB, nor of the precise quantum of Oxford’s unmet need (if any existed) or the capacity of other Districts to accommodate it. However it is relevant that he proposed a Review only AFTER Oxford’s unmet needs were fully and accurately defined. They still are not, and a review is therefore premature even on the Inspector’s terms. According to the City Council in a report to Scrutiny Committee (12th June), the agreed unmet need allocation, is used as a working basis for current local plans in Oxfordshire which will be updated when the Oxford Local Plan is completed. In other words it is presently neither fully nor accurately defined, as the Inspector had required it should be. Oxford has only now started its own Local Plan process to reflect the Oxfordshire Strategic Housing Market Assessment (SHMA), three years after it was published, and long after Oxfordshire’s other Districts. Its draft Local Plan gives no figure for unmet need, or for the City’s capacity to meet it. However, taking Oxford’s overall “need” to be for 28,000 houses over the plan period, CPRE argues that at least 26,000 could be provided inside the City itself by switching employment sites – the use of which for employment would only exacerbate the housing need the City Council describes as being its Number One priority to overcome – to housing, and increasing densities on all sites to compact city levels. That is even before the outcome of a review of further sites to which the City refers in its plan. (See Oxford/Densities paper attached) Consequently the Inspector’s condition, that Oxford’s unmet need should first be “fully and accurately defined” is nowhere near met, and, further, there would be little or no “unmet need” for other Authorities to consider. In any event, a “working assumption” of need cannot be an exceptional circumstance justifying GB release, especially when it is likely to be extremely inaccurate. Finally, during the course of this consultation the Government has proposed a new OAN formula to replace the SHMA (on which all the Review numbers are based). This new formula, if adopted, would reduce Oxford’s total annual housing need from a SHMA mid-point of 1400 per annum to 746, that is by 47%. This would in turn reduce “unmet need” by two thirds, even before taking into account that the City should use employment land to satisfy existing housing need rather than exacerbate it and build at densities appropriate to cities. The new OAN is at the very least further evidence that the level of unmet need this review seeks to satisfy is neither fully nor accurately defined.

The NPPF states that one of its Core Planning Principles (para 17) is to take account of the different roles and character of different areas, promoting the vitality of our main urban areas, protecting the GBs around them, and noting (at para 79) that the fundamental aim of GB policy is to prevent urban sprawl by keeping land permanently open. Paragraph 83 states that once established, GB boundaries should only be altered in exceptional circumstances, through the preparation or review of the Local Plan. The recent Housing White Paper, clarifies what the steps before a finding of “exceptional circumstances” should be, when local authorities can demonstrate that they have fully examined all other reasonable options for meeting their identified housing requirements. Amongst these “reasonable options” which Local Authorities must demonstrate they have considered before there can be the “exceptional circumstances” required for review/release of GB land are: • making effective use of suitable brownfield sites and the opportunities offered by estate regeneration; • the potential offered by land which is currently underused, including surplus public sector land where appropriate; • optimising the proposed density of development; and • exploring whether other authorities can help to meet some of the identified development requirement. Although not yet law, the White Paper illustrates how high the hurdle for exceptional circumstances must be, given that the NPPF’s “fundamental aim is keeping GB land permanently open”, and the need to show there are no “reasonable options” before considering GB release.

DUTY TO CO-OPERATE - The SHMA is explicit that Authorities are not expected to meet OAN (Objectively Assessed Need) in full if e.g. it would necessitate Green Belt development. It has been the unforced choice – not the requirement – of Oxfordshire’s Councils to agree to meet the SHMA need in full despite wide swathes of Oxfordshire being GB and AONB. It is therefore incumbent on Councils to take on each others’ “unmet need” if it would otherwise require GB land to be released. As shown, Oxford’s unmet need is very far indeed from being quantified or crystallised, but, if it were, it would be the duty of other Councils to assist Cherwell in meeting its part of that need without releasing GB land, not least by assisting Cherwell to understand how to do so within its own borders. There is no evidence that this has been attempted. Finally, the new OAN calculation proposed by the Government during the consultation defines “need” as the figure shown in the Government’s own tables on household projections. This is overlaid in the proposed calculation with an arbitrary (and ill-conceived) uplift intended to reduce house prices. It is also accepted that local authorities may if they wish further inflate their housing targets to provide further economic growth than that already included in the government’s base tables. However, it is submitted that these latter two elements cannot be defined as “need” and neighbouring Councils have no duty to co-operate in meeting them.

Proposed Submission Plan - Policy PR8 - Land East of the A44

PR-C-0562	05/10/2017	Helen	Marshall	CPRE Oxfordshire	N	Y
1428	<p>Comments</p> <p>THE GB STUDY No great weight should be given to the LUC GB Study. Its purpose was not to determine whether any of the GB made no, or an insignificant contribution to, the purposes of the GB since clearly all of the GB land contributes, and the loss of any would be harmful. Rather, in its own words, the GB Study has been commissioned by Cherwell District Council to assess the suitability of the strategic sites being promoted for development against the five purposes of the GB. In other words the sites had been pre-selected, as we showed above, in the face of GB policy, and targeting the most fragile point in the entire Oxford GB. LUC continue The considerations that will determine the most appropriate scenario, or combination of scenarios, will largely relate to the existing or potential environmental qualities and value of land, and to the sustainability of residential development. This will enable Cherwell District Council to consider whether there are 'exceptional circumstances' (under paragraph 83, NPPF) to justify altering GB boundaries through the Local Plan process, i.e. to enable existing GB land to contribute to meeting Oxford's unmet housing need. That is, value is not primarily judged against GB purposes at all, but against environmental ones, and the sustainability of the land for housing development. LUC found that Release of areas identified as making a low contribution to GB could provide only 5.8ha of potential development land 4.13). Release of areas identified as making a low or low-moderate contribution to GB could, subject to consideration of cumulative impacts, provide 34.6ha of potential development land(4.14). Release of areas identified as making a low, low-moderate or moderate contribution to GB could, subject to consideration of cumulative impacts, provide 166.7ha of potential development land (4.15). Although as noted above, the judgment was largely not on GB grounds, moderate harm was considered acceptable in order to release a larger amount of land. LUC acknowledge that release of fragile GB 4.16 GB that occupies only a small/narrow area between separate urban settlements will tend to rate highly in terms of its role in preventing settlement coalescence. This exactly describes the land chosen for release; but LUC went on. However, if environmental assessment determines that this land lacks significant value then a case could be made for accepting the coalescence, or near-coalescence, of settlements in order to maximise the scale of development in one area. That is the, subjectively assessed low environmental value trumps urban sprawl and severe coalescence, the two founding principles of the GB. Further, they have targeted the very point at which the GB is already narrowest – the Kidlington Gap between Kidlington and Oxford – for release, directly creating the coalescence of two distinct settlements (It is material that Oxford itself is proposing to breach that same area from the South with a proposed development of St Frideswide Farm). The sites concerned are all at the exact point in the GB where coalescence of settlements (Oxford and Kidlington) is most threatened, with the built areas separated presently by a few fields. The proposed GB reviews, together with the release of the Parkway Station and Park and Ride would effectively merge the two settlements. Although Kidlington (population 13,000, 2011) is statutorily a village, it is larger than many towns, notably Thame (11,600) and Henley (11,700) in Oxfordshire.</p> <p>Changes Sought</p> <p>In CPRE's view, it is not possible to 'tweak' the current document in order to make it sound and therefore the current version of the Plan should be rejected. 1422	<p>Comments</p> <p>The primary duty of a Local Authority must be to the people it represents. In an independent market research exercise, with a very high sample size, conducted across Oxfordshire by Alpha Research of Thame in April 2015 respondents were specifically prompted that there was considered to be a need for more housing, and of the extent and purpose of the GB, before being asked whether the GB, should be developed for that, or indeed any other, purpose. Their answers were therefore fully informed by recognition of housing need. 76% of respondents considered that the GB should remain undeveloped; 66% considered housebuilding the greatest threat. Although polls have something of a tarnished reputation, this has resulted from situations where marginal inaccuracy can lead to wholly incorrect forecasts in narrow binary decisions. In this case the sample size was so large and so representative, and the outcome so conclusive, that whilst there might be up to a 5% margin of error, this would not be capable of affecting the result, or its scale. Further, this is in line with previous polls, adding to confidence that it accurately reflects public opinion. The same exercise showed that in North Oxfordshire – closely correlating to Cherwell - the outcome was hardly less conclusive, with 71% of respondents supporting the proposition that the GB should not be developed for housing or any other purpose. This was despite years of constant media campaigning by the City Council that Oxford has "no option" but to spread over the GB unless people are to go homeless (a wholly fallacious claim). Despite the City's campaigning, 73% of non-homeowners, and 74% of C2DEs agreed that the GB should not be developed for housing. In other words, the people who would be expected to have been the most responsive to the City's campaigning rejected GB development almost as strongly as the general population. Indeed 73% of the City Council's own constituents rejected it. There can be no doubt that the people both of Oxfordshire, and of Cherwell itself, reject GB development in principle, and this must be given great weight in any consideration of doing so.</p> <p>Changes Sought</p> <p>In CPRE's view, it is not possible to 'tweak' the current document in order to make it sound and therefore the current version of the Plan should be rejected. OXFORD'S 'UNMET NEED' AND REASONABLE OPTIONS FOR MEETING IT. 2. If Oxford's unmet need were realistic could it be met elsewhere in Cherwell than in GB? a. Yes, it could be met on non-GB sites. Cherwell found that the required number of houses could sustainably be built elsewhere, outside the GB, at Junction9 M40, Arncott, Bicester and surrounding area, Upper Heyford, Junction 10 M40, Banbury and surrounding area. They rejected these alternative sites because they might upset the evolution of the current adopted plan – although why competent planners would not be able to deal with that problem, if real, is not apparent; because there might be shortfalls, although why these should be greater for Oxford's unmet need than for Cherwell's own need was not explained; and more dispersed options provided less opportunity for strategic infrastructure investment (e.g. transport and education), although why this would be the case for, for example, Upper Heyford which is already targeted and developed, or for other centres which already benefit from services, is not explained. The overriding reason for their rejection however was clearly that they were less well situated (than the GB sites) to build communities associated with Oxford, to assist with the delivery of the Oxford Transport Strategy, to provide affordable transport options, and more likely to involve commuting. It is significant that even GB sites like the previously developed Shipton Quarry, were rejected as Development here would relate to Shipton-on-Cherwell, not Oxford. Therefore the parcel plays no role with respect to this purpose (Oxford's unmet need). Simply put, this amounts to saying that all reasonable alternatives were unacceptable because they were not in the GB, or, if they were in the GB, were too far from Oxford. It is an argument that urban sprawl into the GB is justified by the fact that only GB sprawl could (by definition) be close enough to the City; in other words it is an argument not just for nibbling at the GB but for undermining its core purpose. It is clearly unacceptable in its own terms. Further, the proposed new OAN calculation would reduce Cherwell's own need by 33%. The effect of this would be that 33% of the housing trajectory in the Council's adopted plan would be superfluous to Cherwell's own requirement and therefore available to satisfy any unmet needs of neighbouring authorities that might arise. b. The unmet need could be met by marginal density increases on generally low density allocated sites. Policy BSC2 in the adopted plan states New housing should be provided on net developable areas at a density of at least 30 dwellings per hectare unless there are justifiable planning reasons for lower density development. Yet Policy Bicester 1 allocates 380 hectares to just 6,000 homes which is 16 houses per hectare. Assuming for these purposes that 30 dwellings per hectare is the average across the District, the sites to which the present 22,800 homes are allocated would need to increase build density by just 5%, to 36%, to accommodate all of the "working assumption" of Oxford's unmet need. This would still be less than half the density of Central Paris or Barcelona, or Islington in London. Higher density build would also mean smaller houses, of which 63% of Oxfordshire's SHMA need is comprised, and thus better meet public requirements. High densities also reduce the need for car travel and create a stronger sense of community.

Changes Sought

In CPRE's view, it is not possible to 'tweak' the current document in order to make it sound and therefore the current version of the Plan should be rejected. CDC should re-visit the process, as and when the final numbers for Oxford have been examined, adopting higher densities and prioritising protection for the GB.

Reasons for Participation

CPRE Oxfordshire represents a wide membership across the County, including many parish councils and local organisations, and seeks to influence development to protect and enhance the countryside. As one of the founders of the Oxford GB, we have considerable knowledge about its origins, purpose and ongoing relevance.

TRANSPORT - THE PROPOSED NEW STATION AT KIDLINGTON/BEGBROKE. The initial proposals for the development made great emphasis on the provision of a new railway station "between Kidlington & Begbroke", the implication being that this station would cater for the needs of residents to reach their places of employment in Oxford and that therefore the housing plans are more sustainable. The relevant railway line is that from Oxford and the south to the midlands and north via Banbury. It is intensively used with half hourly cross-country trains and frequent freights including regular intermodal trains from and to Southampton docks. There is also a local service of 12 trains per day each way (9 on Saturdays, 3 on summer Sundays, none on winter Sundays) calling at the intermediate stations at Tackley, Heyford & Kings Sutton. North of Aynho Junction, as far as Banbury, these trains all have to interwork with the three trains per hour on the Chiltern Line to and from London Marylebone. There are presently no proposals for a new station on this line, nor are there likely to be. Neither Network Rail, Oxfordshire County Council nor any train operator has any aspiration for a station here. It does not feature on any relevant route study or strategic proposal. For example, we note that no such plans have been included in the Oxfordshire Infrastructure Strategy, signed off by the Oxfordshire Growth Board in September 2017, which claims to 'provide a view of emerging development and infrastructure requirements to support growth from 2016 to 2031 and beyond'. This includes a description of numerous rail improvement projects both pre and post 2031, as well as listing infrastructure priorities for the A40 Corridor, but gives no mention at all to a new station in this area. Journey time for the local trains is 30 minutes and they only just slot in between the other services; in other words, a train leaving Banbury soon after the previous southbound train only arrives in Oxford just before the next one. To add an extra stop on the route would make this pathing issue even more tricky. It would be possible to accelerate the journey time with electric trains which have better acceleration and deceleration rates and thus allow an extra stop in the same timetable but although the previous government did announce a scheme to electrify this railway as part of its "electric spine" in 2012, this has been deferred and there is at present no prospect of this happening. Great Western Railway (GWR) operate the local trains and they do have an aspiration to increase the frequency to a train every 90 minutes across the whole day but it is only an aspiration, not a timed commitment. Even that frequency is not really sufficient to attract substantial numbers of commuters to use rail on a daily basis. For that a half hourly service level is, these days, a basic requirement. The station at Oxford Parkway, opened in October 2015 and connected to Oxford station in December 2016 has in any case now become the railhead for Kidlington, swathes of north Oxford, Headington and surrounding villages. The rail industry as a whole is thus utterly unlikely to wish to commit to another new station "between Kidlington and Begbroke".

Changes Sought

References to the station should be removed from the Plan as it is not deliverable within the lifetime of the Plan and therefore is not effective. Any element of development that is dependent on this station being delivered should be removed from the Plan as unsound. Plans for additional housing in north Oxford/south Kidlington should be put on hold until the Oxford to Cambridge Expressway route is settled, the East West railway is re-opened and the full extent of the expansion of Bicester is agreed, with its possible new transport infrastructure.

Reasons for Participation

CPRE Oxfordshire represents a wide membership across the County, including many parish councils and local organisations, and seeks to influence development to protect and enhance the countryside. We would like to attend the oral part of the Examination.

This Plan is contrary to the NPPF which states in paragraph 14 that Local Plans should meet objectively assessed needs unless specific policies in the Framework indicate development – including land designated as GB - should be restricted. It is also contrary to the twelve core land use planning principles set out in Paragraph 17 of the NPPF one of which is that planning should take account of the different roles and character of different areas, promoting the vitality of our main urban areas and protecting the GBs around them. Furthermore, National Planning Practice Guidance makes clear that assessing need is just the first stage in developing a Local Plan and that once need has been assessed, the local planning authority should take account of any constraints such as GB, which indicate that development should be restricted and which may restrain the ability of an authority to meet its need. Cherwell has accepted (or, more accurately, been pressured to accept) the inflated figures of the Oxfordshire SHMA in full and has never followed this guidance to "take account of any constraints such as GB ... Which may restrain the ability of an authority to meet its need". The proposed submission plan is therefore not consistent or compliant with national policy.

Changes Sought

The plan should be withdrawn and a spatial strategy for Oxfordshire established which can address the issues addressed in this review in a co-ordinated and consistent way. Through such a strategy the Oxfordshire authorities should continue with their previous approach of actively encouraging further employment and housing growth away from Oxford. Oxford City Council and Cherwell in particular should co-operate more effectively and as part of this Oxford should (a) discourage further employment generating development in the city unless it is absolutely essential and (b) use some of the land it has currently allocated for employment, together with other previously developed land, for well planned high density housing.

Reasons for Participation

OGBN was established in 1997 to help to protect the Oxford GB and to support those wishing to resist proposals for inappropriate development within it. It comments regularly on planning applications in the GB and in planning policy consultations, particularly on matters affecting the GB. OGBN has made representations on all stages of the Cherwell Local Plan Part 1 and participated in the Public Examination in December 2014. We have also commented on earlier stages of this Partial Review. The membership of OGBN includes many of the Parish Councils whose areas include GB land. The OGBN fully supports the aims of GBs as set out in the NPPF and earlier planning guidance and in particular it strongly endorses the fundamental principle that GB is a permanent designation. We consider that our participation in the examination is necessary and justified because of our longstanding interest and understanding of the Oxford GB.

Comments

We note that the plan calculates the loss of GB to be 3%. There is an implication here that the loss is relatively small and therefore acceptable. This is fallacious as is illustrated by the following example taken from a paper by Professor Dieter Helm, Chair of the Government's Independent Natural Capital Committee "Think about St James' Park in central London, set between Buckingham Palace at one end and Whitehall at the other. Suppose a developer comes along with a proposal; to build on a small plot on one corner of St James' Park. This developer might argue as follows. The marginal value of the patch of grass in a small corner is not that great. After all, all the rest is left. Better still, the developer might pay such an enormous price for the small bit of land that perhaps a hospital could be built elsewhere with the proceeds. The marginal value to the ultimate owner of this house is so great relative to the marginal value of the small corner of St James' Park that it makes marginal economic sense to build on it. There are two problems with this argument. The first is that the same marginal case can be made for the next small bit of St James' Park. Indeed the value to the developer is even higher now because the Park is now slightly smaller. And for the next bit, the argument just gets stronger. Carried to its limits there is a great marginal case for incrementally building all over St James' - and Hyde Park, and Regent's Park and indeed all the green spaces in London. That is indeed what would have happened if the market had been left to allocate the land as if St. James' was a private good. It is what would happen to the GB too. The second problem is that the reason why the land is so valuable is because it is not surrounded by other houses in close proximity. The very rich person who buys this house on the corner of St James' is paying so much because others are not able to do so, and because it is St James'. We cannot all have green spaces around our houses - green space is in fixed supply. Carry both of these arguments across to the GB. Each marginal bit has a marginal economic case for developing it, and as each bit is chipped away, the value of the whole public good - the GB system - diminishes. The core point here is that the marginal case if carried through to its logical conclusion leads to no GB - there is a good marginal case for building on each and every marginal bit of land, as there is for building on each and every bit of St James' Park." The loss of a small proportion of GB therefore increases the likelihood of further loss. GB should be considered as an entity or system not as a collection of individual land parcels. This is a further reason why we fully endorse Government Policy (NPPF para 79) that GB is a permanent designation.

Changes Sought

The plan should be withdrawn and a spatial strategy for Oxfordshire established which can address the issues addressed in this review in a co-ordinated and consistent way. Through such a strategy the Oxfordshire authorities should continue with their previous approach of actively encouraging further employment and housing growth away from Oxford. Oxford City Council and Cherwell in particular should co-operate more effectively and as part of this Oxford should (a) discourage further employment generating development in the city unless it is absolutely essential and (b) use some of the land it has currently allocated for employment, together with other previously developed land, for well planned high density housing.

Reasons for Participation

The Oxford Green Belt Network (OGBN) was established in 1997 to help to protect the Oxford GB and to support those wishing to resist proposals for inappropriate development within it. It comments regularly on planning applications in the GB and in planning policy consultations, particularly on matters affecting the GB. OGBN has made representations on all stages of the Cherwell Local Plan Part 1 and participated in the Public Examination in December 2014. We have also commented on earlier stages of this Partial Review. The membership of OGBN includes many of the Parish Councils whose areas include GB land. The OGBN fully supports the aims of GBs as set out in the NPPF and earlier planning guidance and in particular it strongly endorses the fundamental principle that GB is a permanent designation. We consider that our participation in the examination in necessary and justified because of our longstanding interest and understanding of the Oxford GB.

Comments

Strong disagreement with the assessment that "exceptional circumstances" exist. Twelve "circumstances" are listed. The final ten are not exceptional circumstances at all. Some of them might be described as "opportunities", some of them are simply descriptions of how development might occur, and others are meaningless, for example "12.the ability to create a sustainable, holistic, joined up vision for the whole of the Oxford/Kidlington/A44 corridor area". That statement certainly does not constitute an exceptional circumstance. Exceptional Circumstance 1 (urgent and pressing need for homes) is highly contentious. It is based on the assessment in the SHMA which has been heavily criticised and never validated. The proposed DCLG standardised methodology proposes a much lower level of need that takes account of affordability. Exceptional Circumstance 2 (clear inability of Oxford to meet its needs) is also unproven. Oxford's needs have not been established through its own local plan process and neither has its ability to meet its own needs. It is clear that alternative development strategies could accommodate a significant number of additional dwellings within the city. The submission document in proposing to develop in the GB is in complete opposition to the purpose of the GB and contradicts Local Plan Pt 1. The main purpose of the Oxford GB, (Local Plan Part 1 para B256), is to limit the growth of Oxford to avoid damage to its character and heritage. Oxford City Council itself should have a part to play in this by restricting the growth of employment generating activities to the minimum necessary. This would have the double benefit of releasing some land for housing and reducing the demand for further housing. However its currently proposed policies do the opposite. We have made this point in our representations to the recent Options consultation on the Oxford Local Plan. Alternative development strategies - which have been successful in the past - are possible for Oxfordshire, and include the diversion of growth away from Oxford towards the country towns. Oxford City Council should play its part in this. We also think it would be possible for the Oxfordshire authorities to promote the diversion of some economic growth to other parts of the country which would welcome and benefit from it - possibly through formal 'economic twinning' arrangements.

Changes Sought

The plan should be withdrawn and a spatial strategy for Oxfordshire established which can address the issues addressed in this review in a co-ordinated and consistent way. Through such a strategy the Oxfordshire authorities should continue with their previous approach of actively encouraging further employment and housing growth away from Oxford. Oxford City Council and Cherwell in particular should co-operate more effectively and as part of this Oxford should (a) discourage further employment generating development in the city unless it is absolutely essential and (b) use some of the land it has currently allocated for employment, together with other previously developed land, for well planned high density housing.

<p>Comments</p> <p>Strong objection to all of the proposed development in the Oxford GB which “was designated to restrain development pressures which could damage the character of Oxford City and its heritage through increased activity, traffic and the outward sprawl of the urban area.” This quote is from paragraph B256 of Cherwell’s adopted Local Plan Part 1 and we fully support it. We also support Policy ESD14 in the Plan to maintain the Oxford GB. The Oxford GB supports all five purposes set out in the NPPF and has been largely successful over the last sixty years. In particular it seeks to protect the setting and character of the historic city of Oxford. The reference to the character of the City, as referred to in Cherwell’s Local Plan. is often overlooked but it is a crucial aim of GB policy. The historic city centre by its nature cannot be expanded or comprehensively redeveloped. It is already under substantial pressure and this is likely to become highly damaging if expansion on the edge of the city is not restricted. The City’s never-ending traffic problems are testimony to this, and there have been calls for even the number of buses in the centre to be limited. The GB also provides accessible open space, footpaths and other recreational opportunities for residents of the city and for the communities within it. It is well used and supported as public opinion surveys have shown. GB is intended to be a permanent designation only to be changed in exceptional circumstances (NPPF). We think that that the overall levels of growth proposed are unnecessarily high and that alternatives to development in the GB are available. We therefore consider that exceptional circumstances do not exist to justify development in the GB.</p> <p>Changes Sought</p> <p>The plan should be withdrawn and a spatial strategy for Oxfordshire established in a co-ordinated and consistent way. Through such a strategy the Oxfordshire authorities should continue with their previous approach of actively encouraging further employment and housing growth, at realistic levels, away from Oxford. Oxford City Council and Cherwell in particular should co-operate more effectively and as part of this Oxford should a) discourage further employment generating development in the city unless it is absolutely essential and b) use some of the land it has currently allocated for employment, together with other previously developed land, for well planned high density housing.</p> <p>Reasons for Participation</p> <p>OGBN was established in 1997 to help to protect the Oxford GB and to support those wishing to resist proposals for inappropriate development within it. <p>Comments</p> <p>Believes the proposed submission to be unsound, not properly prepared, not justified and not effective. Objects to Policy PR3 The Oxford Green Belt, Policies PR8 and PR 9 propose removal of specified areas of land from the Oxford Green Belt. This is not consistent with national policy and therefore unsound. Particularly object to the building in the Kidlington Gap, the most vulnerable part of the Green Belt. This area need to be protected so that there is not a continuous urban sprawl from Kidlington to Oxford. There is not an exceptional case for building on the Green Belt as the housing overspill need for Oxford has been created by the City Council choosing not to use its own sites for housing and not ensuring that sufficient affordable houses are built.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>								
PR-C-0590 1485	02/10/2017	Alan	Jones					
<p>Comments</p> <p>The proposed destruction of Yarnton's Green Belt(PR8/PR9) to meet Oxford City's hypothetical housing need does not include any requirements of Cherwell D.C or reflect the wishes of the local community, and I submit that the exceptional circumstances required to join Yarnton, Begbroke and Kidlington to Oxford have not been demonstrated. Indeed, " housing need " met by the proposed extension to Begbroke Science Park seems as yet unexplained and of sole benefit to the University. Infrastructure proposals appear to have disregarded the effect of a further 1500(?) vehicles now forced onto the busy A44 at Yarnton (and the ensuing tailbacks from The Turnpike to Woodstock), or the needs of the solitary and already overstretched HealthCentre in that village. Similarly, the proposal to build on land west of the A44 on the slopes of the appropriately named Spring Hill (PR9) has seen fit to ignore a history of flooding in Rutten Lane & Cassington Road (and more personally, in my garden!) and seems to assume that the addition of this extra and high density housing will not require a massive overhaul of Yarnton's ancient drainage system. I am sure other people have expressed their views on the need to protect our environment for this and future generations, and I would request that my name be added to that list.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>								
PR-C-0618 1532	07/10/2017	Keith	Johnston				N	
<p>Comments</p> <p>This proposal is absurd and can lead only to increased car (if not public transport) miles and pollution. Sandy Lane must be preserved as an important link between the villages of Yarnton and Kidlington. It is already used as an emergency route in event of A44 and A4260 road closure. There is need for good pedestrian, cycle, wheelchair, and disabled person mobility vehicles access between Yarnton and Kidlington. An inexpensive option without closure of Sandy Lane exists already if only Yarnton (Green) Lane was appropriately developed, prioritised and restricted.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>

Proposed Submission Plan - Policy PR8 - Land East of the A44

PR-C-0618	07/10/2017	Keith	Johnston					N
1531	<p>Comments</p> <p>PR8 Key Delivery Requirements, Para 1 gives housing density figure of 45/hectare. Policy PR9 Key Delivery Requirements: Para 1 gives a housing density of 35/hectare. This is significantly greater than any development in either Yarnton or Begbroke and is out of charter with the rural nature of the area. It's disappointing if not illogical that the area closest to Oxford City seen as Policy PR6b is given an average dwelling density of just 25/hectare.</p>							
	Changes Sought			Reasons for Participation				
PR-C-0618	07/10/2017	Keith	Johnston					N
1528	<p>Comments</p> <p>The concept of the GB is recognised as safeguarding to: - check the unrestricted sprawl of large built-up areas. - prevent neighbouring towns from merging into one another. - assist in safeguarding the countryside from encroachment. - preserve the setting and special character of historic towns. - assist in urban regeneration, by encouraging the recycling of derelict and other urban land. Significant areas of Oxford GB would be developed resulting in urban sprawl extending almost continuously from the centre of Oxford in a straight line distance north westwards of some 8 miles to the northern edge of Woodstock. In particular, the villages of Yarnton and Begbroke. In the original Cherwell Local Plan 2011-2031 (Part 1) adopted in 2015, both villages were classified as Category A villages. CDC policy allows only minor development, infilling or conversion in, or alongside these villages. Extensive housing development alongside each village would effectively coalesce both into a single community with complete loss of individual identity. Both villages have identifiable historical value existing long before the Domesday book in which both are included. The area of Yarnton and Begbroke villages comprises approximately 1000ha. Significant portions (approx. 300 ha) of the existing bounded area are already unavailable for development as conservation, site of special scientific area, existing science park, flood plain, gravel extraction/settling lakes, existing habited space and businesses yet the document sets out to remove approximately 20% of the remaining as development space for Oxford City. The proposed developments are disproportionate and out of character with the rural setting and would more than double the number of dwellings presently in the two villages.</p>							
	Changes Sought			Reasons for Participation				
PR-C-0618	07/10/2017	Keith	Johnston					N
1529	<p>Comments</p> <p>Para 5.109 admits that development of this area will result in a significant reduction of the GB between Begbroke, Yarnton and Kidlington. Para 5.112, 3 makes appropriate comment regarding improved transport structure, but it is well known that there is no funding at this time yet transport infrastructure is already at saturation or in the case of pedestrian/cycleways is in such poor state of repair or absent that it is unsafe. For the significant pinch point between Yarnton Turnpike public house and south side of Pear Tree roundabout no solution is proposed. In addition, with the so called Oxford City Northern Gateway development and future link between the A40 and A34 in the area of Loop Farm will cause utter chaos if not absolute standstill to traffic north or southbound on the A44.</p>							
	Changes Sought			Reasons for Participation				
PR-C-0618	07/10/2017	Keith	Johnston					N
1530	<p>Comments</p> <p>Page 120 of the document, again headed Begbroke, begins Policy PR8 Land East of the A44. Policy authors are clearly unaware of local historic parish boundaries. The vast majority of the area under the heading Begbroke PR8 is actually in Yarnton parish. The opening paragraph describes the area as 'A new urban neighbourhood...' Will this be a whole, newly named community with revised civil boundaries and administration? Will residents pay Council Tax to Oxford City and be part of the city for administration? If these dwellings are for proposed employees working in Oxford City or University of Oxford Begbroke Science Park, will there be covenants preventing occupants travelling to London or other centres for employment? Appropriate reference is made to connecting public bridleways, but in spite of such allowed access we all know that maintenance to these is negligible and they soon become inaccessible to cycles, wheelchairs, mobility vehicles.</p>							
	Changes Sought			Reasons for Participation				
PR-C-0618	07/10/2017	Keith	Johnston					N
1533	<p>Comments</p> <p>There is no need for a railway halt (PR8 18 I). Public transport access to Yarnton, Begbroke Science Park and Begbroke to and from Oxford or towns north can be sustained with improved bus routing through the villages and along the A44 trunk road.</p>

PR-C-0658	09/10/2017	Giles	Hughes	West Oxfordshire District Council	Y	Y	N	Y
1623	<p>Comments</p> <p>Exceptional circumstances have been demonstrated to justify the release of sites from the GB, including sites for housing to help meet Oxford City's unmet housing need. It is clear from the evidence base for Cherwell's proposed submission plan and from the Oxfordshire Growth Board evidence base that the release of sites from the GB is necessary to deliver the scale of housing required in a sustainable manner. However, there is a need to make efficient use of land released from the GB for housing purposes. Some of the proposed densities on sites released from the GB do not appear to make efficient use of this land despite their close proximity to Oxford and to sustainable transport infrastructure and services. By increasing the density on some of the GB sites and by developing the site covered by Policy PR3a Cherwell DC would achieve their target of meeting Oxford City's unmet housing need without requiring development at Woodstock South East (Policy PR10).</p>							
	Changes Sought			Reasons for Participation				
	Review of the proposed densities and the resulting site capacities of the sites to be released from the GB in order to ensure that efficient use is made of this scarce land resource.			To address cross-boundary issues with West Oxfordshire				

Proposed Submission Plan - Policy PR8 - Land East of the A44

PR-C-0676	01/10/2017	Mr G	Thompson		N
1661	Comments				
<p>Policy PR8 is not consistent with National Policy and thus is UNSOUND .The site lies wholly within the Oxford GB. Cherwell Local Plan 2011-2031 Policy ESD 14 (page 114) seeks to prevent the coalescence of settlements and has a strong role in preventing the coalescence of Yarnton, Begbroke and Kidlington. Policy PR8 has been titled ‘Begbroke’ despite the bulk of the proposed housing lying in Yarnton Parish and being adjacent to the existing Yarnton settlement. Just where the ‘separation’ of Yarnton and Begbroke would be is not obvious. This despite Partial Review Page 118, Para 5.110, point 5 stating ‘the necessity to retain the separate identities of Begbroke, Yarnton and Kidlington’ Cherwell Local Plan 2011-2031 Policy Villages 1 (page 246) categorises Yarnton and Begbroke as Category A villages. The policy only allows minor development, infilling or conversion in, or alongside these villages. Policy PR8 is in complete contradiction of Policy Villages 1, and the Plan is inconsistent and thus, UNSOUND. 18f – The closure of Sandy Lane to motor vehicles. (Page 123).This road has long been recognised by Oxfordshire County Council as a key alternative route should there be problems on A44 or A4260. Its importance is recognised even to the extent of providing winter maintenance (salting) during cold weather. The closure of an existing highway, a vital link between Yarnton and Kidlington, without providing a suitable alternative route is just not justified. The proposal is UNSOUND</p>

PR-C-0694	09/10/2017	Elizabeth	McDonnell		N
1714	Comments				
<p>Objection. Paras. 15 & 16 are unsound due to the failure to be positively prepared which requires such proposals to be objectively assessed. The plan indicates a bias and preferential treatment for Oxford University who have a vested interest in the proposal as they stand to make significant and substantial financial gains from both the sale of GB land for development purposes and proposed extension of their science park facilities, with little or no regard for the local community. Para 18b, p.122 indicates an increased number of access points to the A44 which represent an unacceptable level of increased safety risk to pedestrians in addition to exacerbation of traffic flow issues and increased congestion. Further exacerbated by the proposed closure of Sandy Lane to all traffic (p. 124 para 18f). Sandy Lane is viewed by residents as a key artery and route to Kidlington, which currently reduces congestion on the A44. As such I would question if this is the most appropriate strategy and therefore suggest it is not justified or positively prepared. A more effective solution would be to retain vehicular access to Sandy Lane, with development of Green Lane as a pedestrian/cycle only route which could be considered as a less attractive option from the perspective of Oxford University, questioning the objective assessment of the proposal. A further potential conflict of interest and appliance of subjectivity is inherent in the proposals in relation to an additional High School facility on the basis that it enables the Oxford University Science Park to forge strong local educational links. Consideration of education facilities should be independent of Oxford University to ensure no conflict of interest or subsequent potential for creation of a selective school. Efforts should be made to improve the working partnership between the Science Park and the existing schools (Marlborough and Gosford). Furthermore the reference to expansion plans for Oxford University Science Park (p.126 para 39) are suggestive of a bias towards the wishes of Oxford University to increase profitability and financial opportunities without due consideration of local community needs thereby making the proposal unsound in terms of lack of objective assessment and not being positively prepared.</p>					
Changes Sought			Reasons for Participation		
Retain vehicular access to Sandy Lane, with development of Green Lane as a pedestrian/cycle only route.

<p>The Begbroke Lane restricted byway is a delightful walk between sites PR20 and PR24 which are open fields in the GB. The byway is probably one of the most heavily used walks as it is easily accessible to dog walkers, cyclists, families, the elderly and disabled and leads from Begbroke to the canal then on into Kidlington. If the above two sites were built on it would no longer be a delightful country walk which is so beneficial to mental health. East Begbroke is a small peaceful, safe village with no through roads. It is surrounded on 3 sides by sites PR74, PR20 and PR24 (the fourth side being bound by the A44). It would be devastating if this was swallowed up by Oxford City. Proposed building would contravene Cherwell District Council's policies: - Protecting and respecting the identity of individual settlements and the loss of village identity. - The need to consider the impact of additional housing on the provision of open space. -The need to protect and enhance biodiversity more generally and avoid wildlife disturbance. - To improve the health and well-being of the population and reduce inequalities in health. -To reduce crime and the fear of crime. - To protect and enhance landscape character and quality, and make accessible for enjoyment, the countryside. Oxford City is protecting its own green spaces - how can it be right that it is insisting on destroying ours?</p>

<p>Strong objections to the proposed plans for Yarnton and Begbroke, in particular Policy PR8 (Land East of the A44), on the following grounds: The plans are UNJUSTIFIED• The change of economic circumstances following the Brexit decision and subsequent downturn in economic growth predictions renders the economic data and projections used for the 2014 Oxfordshire Strategic Housing Market Assessment (and therefore the basis for the Local Plan) invalid and in need of review. • New government housing targets are much lower – Oxford’s so called unmet need may already be covered without this plan. The current local plan should be halted while targets are reviewed.The plans are INEFFECTIVE• Transport infrastructure proposals are physically impossible and cannot be met, in particular the bus lane improvement along the A44 from Begbroke to Loop Farm due to the restrictive widths of the railway and canal bridge crossings as well as the underpasses at the Peartree roundabout. • The proposed change of use of Sandy Lane is completely preposterous. This is a key alternative route between Yarnton and Kidlington. Closure of this route to traffic will exacerbate already unacceptable congestion on the A44 during peak times. Surely a better solution for a pedestrian, cycle and wheelchair route would be the improvement of Yarnton Lane (adjacent to the Turnpike pub). • Policy PR8 proposes no more than the “opportunity for health facilities”. Given the current waiting times for an appointment at the already overburdened Yarnton Medical practice, proposing no more than an “opportunity” to serve an additional 2,400 dwellings is totally inadequate. • While Policy PR8 plans for secondary and primary schools, there is no mention of how these extra facilities will be funded or staffed, particularly in view of the current severe cuts to Oxfordshire schools funding.The plans are INCONSISTENT WITH NATIONAL POLICY• Policy PR8 proposes the removal of land from the Green Belt in order to build a “new urban development”. And yet the Cherwell Local Plan 2011-2031 categorises Yarnton and Begbroke as Category A villages. Therefore only minor development, infilling or conversion is allowable in or alongside these settlements. Policy PR8 will create an unrestricted urban sprawl, encroach on the countryside, eliminate the distinctive green space boundary between the two villages and cause loss of village identity and character. • The proposals seek to approximately treble the current housing stock of Yarnton. The scale of this housing plan is both excessive and disproportionate to the current environment. Furthermore, the proposed housing is not for local community needs, but to meet another Council’s alleged unmet housing needs. • The proposed plans are therefore in direct contravention of both Policy Villages 1 and the Five Green Belt Purposes and INCONSISTENT WITH NATIONAL POLICY.</p>

Agrees that the transport infrastructure in this area needs to be improved. The roads into and around Oxford are already over-crowded; traffic conditions are so bad that rep choose to cycle into Oxford each day, rather than driving, even though the cycle path is unlit and littered with broken glass, mud and potholes. The extensive roadworks in the north of the city seem to have done little to improve the situation, and many bus routes have been discontinued in recent years, leaving people with no choice but to use their cars. However, the District Council's Transport Assessment has assumed that its model of urban commuting is being applied to an urban environment (i.e. 25% walk, 25% cycle, 20% use buses). This is not even close to the true situation (as described above – cycling facilities are poor and many bus routes have been discontinued); the bulk of the affected areas for PR8 and PR9 have a majority Red or Amber status, meaning that more strategic transport investment will be required to mitigate the impacts of development. Furthermore, the roads between the proposed developments and the centre of Oxford include a railway bridge, a canal bridge and many adjacent properties, meaning that any attempts to widen or otherwise adapt the roads will necessitate length road closures and cause major disruption to roads that are already congested. Thus, the proposed development is Not Sustainable.

Changes Sought

Proposed changes to the plans
 In light of the objections outlined above, I would suggest:

- reviewing the housing forecasts on which the current Local Plan is based. As mentioned above, the calculations used to make these forecasts have been revised recently and the number of new homes required has fallen as a result.
- looking to build on brownfield sites within Oxford itself. This would significantly reduce the impact on local transport infrastructure, and provide housing where it is actually needed.
- looking to build on sites closer to the main industrial areas of Oxford (namely the City Centre, Headington and Cowley); again, this would reduce the impact on local transport infrastructure and increase the likelihood that these houses would be bought by people working in Oxford rather than people looking to commute to London.

Reasons for Participation

I would like the Begbroke and Yarnton Green Belt Campaign to act as my representative during the Examination by the Planning Inspector

Comments

Specific concerns include: Loss of Green Belt, open countryside, views and walks and the impact on nature. The whole purpose of the Green belt was to check urban sprawl, to stop towns and villages merging and to safeguard the countryside and its historic settings. Implication for flooding and excess pressure on drainage, already a problem in parts of the village due to the housing development adjacent to the Cassington Road and the run off from Spring Hill. The impact on local road traffic, which is already a major problem through Rutten Lane and the adjacent roads, with increased danger to the Primary School children. Traffic congestion and air pollution will undoubtedly worsen due to thousands more vehicles on our roads. This is in addition to the extra traffic from the 22,000 houses already approved elsewhere in the District by Cherwell, and over 10,000 more houses to be built in the other Districts just for Oxford overspill. Construction traffic and road works will add to this chaos for years while the development takes place. The local infrastructure such as the school and GP facilities are already under severe pressure. Underfunded public services, already struggling, will deteriorate further: waiting times to see your GP will be even longer and school class sizes will rise. Although made reference to sites PR9 and PR8, the same objections are relevant to all other sites proposed.

Object to Policy PR8 – Land East of A44 (Begbroke). The site lies wholly within the Oxford Green Belt. Cherwell Local Plan 2011-2031 Policy ESD 14 (page 114) seeks to prevent the coalescence of settlements and has a strong role in preventing the coalescence of Yarnton, Begbroke and Kidlington. Policy PR8 has been titled 'Begbroke' despite the bulk of the proposed housing lying in Yarnton Parish and being adjacent to the existing Yarnton settlement. Just where the 'separation' of Yarnton and Begbroke would be is not obvious. This despite Partial Review Page 118, Para 5.110, point 5 stating 'the necessity to retain the separate identities of Begbroke, Yarnton and Kidlington'. Policy PR8 is not consistent with National Policy and thus is UNSOUND. Cherwell Local Plan 2011-2031 Policy Villages 1 (page 246) categorises Yarnton and Begbroke as Category A villages. The policy only allows minor development, infilling or conversion in, or alongside these villages. Policy PR8 is in complete contradiction of Policy Villages 1, and the Plan is inconsistent and thus, UNSOUND.

PR8 is excessive & unjustifiable because. A. Contravenes one of the purposes of GB, namely the prevention of the amalgamation of villages. B. GB is an asset for the whole county & its residents, present & future. Once destroyed, it will never be re-created. Its destruction is the ultimate 'unsustainable' solution. C. The traffic in the area is already bad. The area's residents know this well & CDC must also be aware of it. I do not see how the traffic planners could contemplate the addition of at least another 5K cars (e.g.. 2 cars per household). In reality, the number of extra cars will be even higher, because of the proposed housing developments in Woodstock. In addition, the creation of a new eco-city near Eynsham will increase traffic on the A40 &, consequently along the Cassington Road. D. Flooding is an issue, which will be made worse by the construction of 530 new houses to the West of Yarnton.

Changes Sought

1. CDC should not allocate spaces for building development until Oxford City Council (OCC) has produced the definitive figure for its unmet housing needs. 2. OCC must demonstrate clearly that it has allocated all the available sites to its current housing needs, without retaining sites for the future industrial development which may, or may not, happen. 3. Should there be any future need for industrial sites, these could be located further away from Oxford, possibly near Bicester. The City doesn't seem to suffer with unemployment problems. 4. I also understand that the Govt. may be revising downwards the projected housing needs for Oxfordshire. If so, this is another reason for stopping this consultation now.

Have concerns with regard to Policy PR8, which allocates land east of the A44. Note that the policy requires investigation at the planning application stage of any above or below ground hydrological connectivity between the Rowel Brook and Rushy Meadows SSSI. Advised that further information regarding potential hydrological impacts on Rushy Meadows SSSI is needed to inform the selection of this site allocation. Without this information advised that the plan is unsound with regards to this allocation; evidence that the quantum of development allocated can take place here without a significant impact on the SSSI is needed in order to demonstrate that development in this location is justified.

Policy PR8 - Land East of A44. This large allocation adjoins a number of nature conservation designations including Rushy Meadows SSSI (Site of Special Scientific Interest) and the Conservation Target Area along the Oxford Canal. Welcome the provision and aspiration for a Local Nature Reserve (LNR) to mitigate adverse impacts on Rushy Meadows SSSI. The LNR has the potential to deliver ecological benefits but it is one of two main recreational open spaces in the development and will therefore be subject to a lot of recreational pressure. Much will depend on the design and management of this site but we remain concerned that the area might not be able to fully mitigate indirect impacts on the SSSI. This view is also supported by the high level cumulative assessment by wyg (see comment on evidence base below). It will be important that the development provides sufficient attractive open space and footpaths for informal recreation (including dog walking) in addition to nature conservation areas to limit the pressure on valuable habitats. Also feel that development densities of 45 dwellings per hectare are likely to offer limited opportunities for Green Infrastructure within the built-up areas.

Comments

Does not consider the Partial Review of Cherwell Local Plan to pass the 'tests' of soundness, in terms of being positively prepared, justified, effective and consistent with National policy. This is because the Partial Review does not make reference to the need for C2 units (residential institutions, including care homes), nor to care/nursing homes more generally. Policy PR2 deals with C3 uses only. Further limitations on current local planning policies (adopted and emerging) are outlined in the accompanying Note prepared by Lichfield's. In terms of National policy, the Government's National Planning Practice web-based resource in the section on 'Housing and economic development needs assessments' provides guidance to the plan-making process on how to deal with 'housing for older people'. Failure of the Partial Review to meet the care needs of the District will clearly have significant implications on housing options for Cherwell's increasingly ageing population. The accompanying Note prepared by Lichfield's quantifies that like the rest of the UK there is a clear need for care homes in Cherwell. Examples are found in the Oxfordshire SHMA, which projects the number of people with dementia and mobility issues in Cherwell and Oxfordshire will roughly double by 2031 (end of this Plan period). The latest DCLG figures project the number of people in Cherwell living in communal establishments to double by 2031. The Lichfield's' Note sets out the care need for Cherwell as follows: • In Cherwell District itself, the latest DCLG projections show growth in the number of people over age 75 living in communal establishments of 565, i.e. this is the number of care home bed spaces needed (2011 – 2031). However, as the Council are planning for housing growth well in excess of demographic trends, which will lead the population growth in excess of demographic trends, 565 bed spaces should be considered a minimum to plan for up to 2031. • In terms of Oxford City's need, the DCLG projections suggest a need for a further 305 bed spaces by 2031, and (as with its housing need) a proportion of this may well go unmet. Cherwell will inevitably import some of Oxford's care home needs, as those additional residents (who otherwise would have lived in Oxford) age and move into care homes. This further justifies the use of the 565 figure for Cherwell as a minimum, which may need to be increased if unmet care home need for Oxford is identified. Lichfield's' Note on Care Home Need provided.

Changes Sought

Greenlight asserts that it in order for this clear 'need' for care bed spaces to be met in Cherwell over the Plan period, specific policies are required to:(a) Set the delivery of this need over the Plan period as a requirement - this requirement being a minimum of 565 bed spaces by 2031; and(b) To identify and allocate sites to accommodate this need in the Plan and on the Policies Map.To this end, Greenlights' land interest at Skimmingdish Lane, Bicester, which is currently subject to planning application 17/01428/F, provides an opportune site to be allocated for a 64-bed care home; thus accommodating some 11.3% of the bed space requirement (based on a total requirement of 565 bed spaces) over the Plan period (by 2031).To demonstrate how the site at Skimmingdish Lane, Bicester can accommodate a 64-bed care home, and therefore to assist in informing its allocation as a care home site in the Plan, enclosed with this letter is the site location plan and proposed site layout plan, both of which form part of the current planning application on the site.

Reasons for Participation

The matters raised in these representations are of a strategic nature to the plan.

Comments

In addition to its interests in sites PR6a and PPR6b, the University of Oxford and Merton College also have landownership interests in the following sites: • PR3c:land north of Oxford Service Area. • PR8: land East of the A44 at Begbroke/Yarnton. • PR9: land West of the A44 at Yarnton.

Given their shared interest across these sites, there has been careful co-ordination between the landowners and their advisory teams in the preparation of these representations and specifically comments in relation to these sites. In addition, the teams advising the landowners have met in order to start to formulate a co-ordinated approach to the sites in relation to common themes (e.g. transport) and in terms of planning phase and subsequent implementation. These parties will continue to work together on areas where their interests are aligned with the aim of achieving a comprehensive and co-ordinated approach to the delivery of these sites and the strategy for the A44 corridor overall.

Changes Sought

Reasons for Participation

On behalf of the consortium, given the significance of their land interests, would wish to participate in the oral examination.

5465

Comments

Begbroke & Yarnton Green Belt Campaign's (BYG) main concern is that they believe there is no proper justification for altering the Green Belt boundaries from where they currently stand. On a local level, they particularly object to the removal of the land described as PR8 and PR9 from the Green Belt due to the significant detrimental impact of that removal on the villages and villagers of Begbroke and Yarnton. They also object to the removal of land described as PR6a, PR6b, PR7a and PR7b from the Green Belt due to the importance of these sites in maintaining the gap between the villages of Begbroke, Yarnton and Kidlington to Oxford City and to the land described as PR10, a green field site due to the impact its development will have on the adjacent A44 corridor. Instructed Bruce Bamber, a transport consultant, to prepare a report on the transport implications of the allocation of sites PR8 and PR9 for housing purposes. Although his technical review has focused on these areas, the broader methodology to identify potential development locations has also been assessed for its soundness. The report has been provided as Appendix B. Key conclusions from the report includes: the Sustainability Appraisal Report was published before the Transport Assessment and therefore cannot properly take into account the transport impact of development options. The SAR fails to report the adverse traffic congestion impact from the proposed development around Begbroke and Yarnton and is therefore flawed. Transport evidence base and the associated environmental assessment work is fundamentally unsound and cannot be relied upon. A number of legal issues are raised in Appendix A with a detailed summary provided. If the Council proceeds as planned, we consider the Inspector will find the Plan unsound due to inadequacy of evidence base and failure to ensure effective consultation and participation by the public.

PR-C-0799 2055	10/10/2017	Steven	Sensecall	Carter Jonas on behalf of Sheehan Group of Companies	N	Y	N	Y
<p>Comments</p> <p>This submission relates to land at and adjacent to Knightsbridge Farm, Yarnton, and which is located on the south-east edge of Yarnton and immediately to the south-east of the Begbroke Policy PR8 - Land East of the A44 Proposed Urban Neighbourhood. The land is owned by the Sheehan Group of Companies and Cappagh and is previously developed land comprising a redundant sewerage treatment works, a haulage depot and storage land and a concrete batching plant. The land extends in all to some 13 hectares and is outlined in red on the attached plan. This submission should be read alongside and is put forward as an alternative to a separate submission made by Planning Consultant, Suzi Coyne, who has argued that, consistent with the existing use of the Sheehan land, the site as a whole should be allocated for employment land for B2 and B8 uses. Development at and adjacent to Knightsbridge Farm would be a logical addition to the Begbroke Urban Neighbourhood or the existing built up area of Yarnton and would assist further in meeting Oxford's unmet housing need. It is also less sensitive in GB terms than, for example, proposed allocations PR6a and PR6b both of which (a) cause a material diminution in the gap between Oxford and Kidlington (contrary to the GB purpose of preventing neighbouring towns from merging in to one another) and (b) seriously undermine the requirement to preserve the setting and special character of Oxford, central to which is its green backdrop. Key attributes for the land at and adjacent to Knightsbridge Farm listed.</p>								
Changes Sought				Reasons for Participation				
Remove the land at and adjacent to Knightsbridge Farm from the GB. Amend the boundary of the Begbroke Urban Neighbourhood (Policy PR8) so as to include the land at and adjacent to Knightsbridge Farm in the allocated site for residential development or a mix of residential and other uses.				As drafted, and in so far as it relates to the land at and adjacent to Knightsbridge Farm, the Plan has not been positively prepared, is not justified and is not effective. This goes to its soundness and raises issues that should be explored fully at the oral part of the Examination.				
PR-C-0799 5472	10/10/2017	Steven	Sensecall	Carter Jonas on behalf of Sheehan Group of Companies	N	Y	N	Y
<p>Comments</p> <p>It is considered that the Local Plan Partial Review has not been positively prepared as there is clearly additional capacity for the development of new homes at/adjacent to Yarnton. It is not considered that the draft Local Plan Partial Review is justified as the Council has failed to fully consider all reasonable alternatives/additional options such as land at and adjacent to Knightsbridge Farm, which is in a sustainable location and which does not need to be kept permanently open.</p>								
Changes Sought				Reasons for Participation

PR-C-0804 5477	10/10/2017	Steven	Sensecall	Carter Jonas on behalf of W Lucy & Co Ltd	Y	N	N	Y
<p>Comments</p> <p>There is land to the east of the subject site which is included in the PR8 allocation but which is earmarked as parkland/retained agricultural land. In the event that the subject land was included in the allocated site & earmarked for built development, these designations would therefore maintain separation between Kidlington & the Urban Neighbourhood. Moreover, the subject land & the land to the south, which comprises land at & adjacent to Knightsbridge Farm (& which is also being promoted for development) 'read' as & would be logical additions to the PR8 allocation. Moreover, & on the basis that it is surrounded on 3 sides by the proposed PR8 allocation, it cannot be argued that the subject land fulfils any of the purposes of GB as set out in para 80 of the Framework. Thus, it is considered that development of the subject site would form a logical addition to development already proposed as part of PR8. Furthermore, the general lack of suitable alternative sites surrounding Kidlington provide the exceptional circumstances necessary to justify a strategic GB release west of Kidlington & adjacent to Begbroke.</p>								
Changes Sought				Reasons for Participation				
Remove the land south of Sandy Lane from the Green Belt. Proposed Submission Plan - Policy PR8 - Land East of the A44

PR-C-0808 2073	10/10/2017	Anne	Denby	Canal & River Trust
Comments				
This policy proposes to remove land adjacent to the canal corridor from the designated Green Belt, PR7b & PR8. In these locations, the canal currently enjoys picturesque rural outward views and development in these locations has the potential to significantly alter the character of this stretch of canal. It will be important that development of these sites retain a sense of the countryside along the canal and this appears to be considered with the areas for built development being set back with green space retained to the canal boundary. Opportunities for unlocking the potential of the canal should also be supported through the development of these sites. The provision of services for canal users, pedestrians/cyclists and boaters, could be explored within comprehensive Development Briefs. Open green landscapes adjacent to the canal could aid in retaining a sense of the rural feel within the surrounding landscape. Landscape proposals would need to demonstrate that they work to buffer the harder visual impacts of the development such as hardstanding, parking bays and structures from the canals outward views.

PR-C-0808 2194	10/10/2017	Anne	Denby	Canal & River Trust
Comments				
As stated with Policy PR7b the removal of this site from the Green Belt has the potential to impact on the overall character of the canal corridor. The proposal to retain the land adjacent to the canal as green space / nature conservation area is welcomed and will go some way to mitigating the visual harm of the proposed development. The Trust would welcome further consultation on the production of the Development Brief for this area and would reiterate advice given under Policy PR7b in relation to any potential bridge crossing.

PR-C-0813 2212	08/10/2017	Jennifer	Betts	
Comments				
Objection as this proposal of nearly 2000 houses will have a major impact on the existing separation of Begbroke and Kidlington and they will lose their separate identity. The Kidlington Masterplan adopted in 2016 as an SPD seeks to strengthen the separate identity of Kidlington. The Cherwell Local Plan 2011-2031 Policy ESD 14 aims to prevent the coalescence of settlement such as Yarnton Begbroke and Kidlington. The Loss of a substantial gap between Kidlington and Begbroke will destroy the landscape character of the Green Belt in this area. Any development of this scale will certainly merge Kidlington and Begbroke but it will not be well integrated. I would support some modest development at Begbroke, which maintains the Green Belt gap between Kidlington and Begbroke to make it a meaningful separation.				
Changes Sought		Reasons for Participation		
If such a large scale development should go ahead then it will be imperative to ensure that the transport infrastructure is fully implemented and funded. At present this is far from clear in the plan.

Objection as this proposal of nearly 2000 houses will have a major impact on the existing separation of Begbroke and Kidlington and they will lose their separate identity. The Kidlington Masterplan adopted in 2016 as an SPD seeks to strengthen the separate identity of Kidlington. The Cherwell Local Plan 2011-2031 Policy ESD 14 aims to prevent the coalescence of settlement such as Yarnton Begbroke and Kidlington. The Loss of a substantial gap between Kidlington and Begbroke will destroy the landscape character of the Green Belt in this area resulting in the merger of Kidlington and Begbroke with poor integration. However whilst it is regrettable that there should be any loss of greenbelt I would support some modest development at Begbroke, which maintains a substantial greenbelt gap between Kidlington and Begbroke to make it a meaningful separation. If such a large scale development should go ahead then it will be imperative to ensure that the transport infrastructure is fully implemented and funded. At present this is far from clear in the plan. Such a large scale development will inevitably have its own village centre and will act as a significant competitor to the Kidlington Village Centre. CDC therefore needs to undertake an assessment of the impact on the Kidlington Village centre in view of the fact that the Kidlington Masterplan aims to strengthen the Kidlington Village centre. This should result in a policy to improve the vitality, viability and improvement strategy for Kidlington Village centre.

Comments

The total 4,400 homes covered by this Local Plan review has been estimated to generate 1059 additional secondary pupils (including sixth formers), or just over 6 forms of entry. This needs to be planned for in the context of other growth pressures and secondary school changes in and around this area. As proposals become clearer, OCC will work with the existing relevant schools to clarify their scopes for expansion, and thus confirm the need for a new facility, and the scale of that facility, in Begbroke. A standard 6-form entry secondary school including sixth form provides 1100 places. The school site should be located and shaped so that, should a smaller site be eventually confirmed as necessary, the remaining land can be appropriately reallocated to alternative uses. Paragraph 29 of PR8 requires that “In the interest of encouraging an educational relationship between the secondary school and the University of Oxford’s Begbroke Science Park, the application(s) should demonstrate that the secondary school site has been designed in consultation with the University of Oxford.” The school will be designed in line with Education Funding Agency guidance and as legislation regarding new schools currently stands, the county council would consult the local community before finalising the specification for the new school; this would be the appropriate mechanisms for considering any links with the Science Park, it should not be a responsibility for the development applicants. Paragraph 35 of Policy PR8 requires that “The development of the secondary school shall include provision for out-of-school hours shared community use”. While this can be sought by the county council through the process of selecting an academy sponsor, it cannot currently be required of any academy sponsor, and also should not be a responsibility of the development applicant.

Changes Sought

PR8 requires a 8.2ha site, this should be corrected to 8.03ha, which is the government standard for an 1,100 place school. OCC may seek for the development to provide a smaller new school & contribute financially towards expansion of existing schools should this be determined as a more effective delivery mechanism for secondary education. The policy wording should therefore be amended to allow for this possibility. The policy wording for all other sites should specify the requirement for secondary education contributions. The proposed location of the secondary school is adjacent to the A44 dual carriageway next to the main entrance to the new development site. Whilst OCC appreciates the reasons it is proposed here, it is not appropriate to locate a school in such a noisy & potentially hazardous location; OCC cannot support this. A more appropriate location would be c.200 metres to the east where the school could be incorporated within the science park. This would also maximise the opportunity for vocational links with the science park. Para 3 of Policy PR8 requires the secondary school site to incorporate a four court sports hall to Sport England specification, made available for community use. Additional funding will be required to provide a Sports Hall to Sport England standard as this isn’t currently costed within OCCs area/specification requirements. The school must be able to manage their own facilities & have the potential to create income from them. It is suggested that point 3 of the Key Delivery Requirements in Policy PR8 is amended as follows: “A secondary school on 8.03 hectares of land in the location shown, to incorporate a four court sports hall, made available for community use where leased out by the school.”

Comments

As this proposal is not currently included in the Local Transport Plan, Rail Strategy or A44/A4260 Corridor Study, this may be relevant in the context of Policy PR4a and the provision of financial contributions to deliver infrastructure and public transport services directly related to the development.

Changes Sought

Policy PR8 only requires the reservation of land for a new station, and it is unclear who will then develop the station proposal and when it might be delivered. If a new station is a fundamental element of the movement strategy for planned development and the University of Oxford’s Begbroke Science Park, there should be a clearer expectation on the developer to its delivery in the Key Delivery Requirements, linked perhaps to a trigger based on completed dwellings. The Development Brief, item 18(l) should require “An outline scheme for a railway station at Begbroke”, and this should include the station facilities that were suggested.

Level Crossings - Development on land east of the A44 (Policy PR8) will have a substantial effect on the risk at Sandy Lane level crossing, which is already recognised as an incident ‘hotspot’. An increase in usage of the level crossing will have safety implications and, in the interest of public safety, the level crossing should be stopped up prior to development commencing. Policy PR8 item18(f) only says “the closure of Sandy Lane level crossing to motor vehicles (other than for direct access to existing properties...)” which appears to stop short of saying that it will be closed completely. The closure of Sandy Lane to traffic would require careful consideration and consultation. It forms part of the emerging strategy for the A44 and A4260 corridors area, but has not been subject to detailed consideration. Sandy Lane level crossing could be replaced with a bridge (similar to the one near Islip) to provide a public bridleway suitable for pedestrians, all-weather cycling, wheelchair use and horse riding. This would achieve the ambition set out in para.5.6.2(2) to create a linear 'greenway' along Sandy Lane that will connect new housing and community facilities at Begbroke (Policy PR8) and Yarnton (Policy PR9) with the A4260, Kidlington, the proposed Nature Conservation Area, and the Oxford Canal. The Proposed Submission Plan makes no mention of the nearby Yarnton Lane level crossing. If a new station is to be provided at Begbroke, it will require closure of this level crossing, as changes will be needed to track and signalling to accommodate the station. Yarnton Lane level crossing could be replaced with a footbridge with the existing public right of way (footpath 420/4) diverted over this rather than the level crossing. This would maintain the connection with the wider rights of way network. The closure of both crossings would allow the full benefits of re-signalling to be brought into use. The reduced headway and higher line speeds would have the potential to make a train service to Begbroke more achievable, especially as it is on an intensively utilised mainline rail corridor. It is not clear how the level crossing mitigation works will be delivered and funded, and this will need to be explored with Network Rail prior to planning consent being granted for development.

Station Layout - Paragraph 5.113 refers to “the possibility of an Oxford train service associated with the development and the expected expansion of the Science Park”. This suggests a shuttle train service to and from Oxford rather than stops by longer distance trains (such as those to Banbury and beyond). In that scenario, the only option would be to design a station with a bay platform so that terminating trains do not block the mainline track. However, it wouldn’t be possible for the existing Oxford-Banbury trains to serve the station with that arrangement. The initial station could be designed so an additional platform, for northbound trains, could be added at a later date if it was agreed that longer-distance services should also serve the station. This would also require a new platform on the east side of the mainline tracks, on land shown as being in the Green Belt, for southbound trains with an accessible footbridge between them. A station needs to be easy to reach from within the development site and surrounding area. It should have the following minimum facilities: a platform of sufficient length for the longest train likely to use the station, a small building (with ticket machines, toilets, retail outlet/waiting area and a staff office), bus stop, secure cycle storage, pedestrian footways, drop-off area, taxi rank and a car park with around 100 spaces, including provision for disabled parking.

Changes Sought

Sceptical that a station and its associated facilities can be built within the 0.5 hectares of land to be reserved in the developable area (Policy PR8(14)). If being pursued further, some initial pre-feasibility work would need to be carried out to consider the kind of station needed, and the train service envisaged to serve it, as this would inform the land requirement.

Train Service - To provide sufficient benefits to support a business case and be sufficiently attractive to users, the train service will need to operate at least every half hour throughout the day, and have the potential to connect to destinations other than central Oxford, for example the proposed Cowley Branch line. A frequent shuttle service between Begbroke and Oxford is likely to have a bigger impact upon services to and from the North Cotswolds Line than on other lines. Further work will be required to identify how a station would be served, and to evaluate both the operational and commercial viability of a train service. Importantly it needs to prove that there will be no detrimental impact on the wider rail network, and that it is subsidy neutral (i.e. that it will generate enough revenue to offset the cost of providing the service and the station).

"Begbroke Policy PR8 - Land East of A44 (1950 homes) and Yarnton Policy PR9 - Land West of Yarnton (530 homes) jointly generate around 750 primary pupils, just over 3.5 forms of entry. The education requirements of these policies are supported. With regard to the additional land required for the expansion of William Fletcher Primary School, the existing William Fletcher site is 1.245ha and an additional site area of 1ha (rather than 1.6ha as the policy currently states) is required to provide adequate off site playing fields for the potential 2FE school. 1ha will provide the 8400m2 playing field along with offsite staff parking, storage and toilet facilities. Plans shown in Annex 3.

Changes Sought

Reasons for Participation

It is possible that the 3-form entry primary school and a 0.5 form entry expansion of William Fletcher Primary School may be sufficient to meet educational needs, at this stage however the option of a second new school at the Begbroke site should be protected in line with paragraph 5 of Policy PR8. It should be clear that the maximum size of a primary school will be 3FE so reference to 'at least' 3FE should be removed. It should be clear that the split site will not be adequate for 'at least' 2FE but maybe adequate for 2FE. The clear width of the additional land should not be less than 80m with a gradient not steeper than 1:40 across the line of play (west/east) and 1:100 along the line of play (north/south).

a. Policy 6 is quite specific about what is required at the local centre but does not include car parking. b. Policy 14 – it needs to be clear that 0.5 hectares would be sufficient for a railway station and thought would need to be given to car parking and public transport interchange from the Kidlington side (see also Policy and Strategy comments above). c. Policy 18f – closure of Sandy Lane to traffic would require careful consideration and consultation. It forms part of the emerging strategy for the A44 and A4260 corridors area, but has not been subject to detailed consideration. d. Consideration should be given to improving the canal towpath as a cycling link to Oxford and up to Langford Lane. e. The detail around the locations of primary schools will need to be discussed as the sites are progressed. f. The proposed spine road linking two access points onto the A44 would need to be delivered early in the development.

PR-8 Policies Map General - The Tripartite feel strongly that the Policies Map on Page 120 of the Proposed Submission Version of the Plan should only be referred to as "indicative". As drafted, the Map appears to identify specific locations for each proposed land use yet the wording of Policy PR8 indicates, quite correctly, that a Development Brief will be prepared and will show a scheme for the required land uses, including sites for specific requirements (e.g. the required schools and the local centre). This will then set the basis for outline planning application(s). There is every likelihood that locations may vary once further detailed surveys and assessments have been completed to establish the necessary infrastructure to be accommodated on the site. These will fully identify any constraints and opportunities which the final indicative framework plan or layout for the site should reflect. The NPPF advises (Paragraph 59) that design policies should avoid unnecessary prescription of detail and Inspectors in the examination of Local Plans elsewhere in the country (e.g. Herefordshire Local Plan Core Strategy in September 2015) have generally removed unnecessary or prescriptive information enabling policies to be flexible, effective and sound. Furthermore, the Policies Map predetermines the content of the Development Brief required under Point 18 of Policy PR8, which is surely not the intention. The following paragraphs draw attention to land uses where this point is particularly relevant. This issue could be easily remedied by the insertion of the word "Indicative" before Policies Map in the title. Detailed comments provided on Landfill Site, Agricultural Land, Other, Local Centre, Green Infrastructure, Railway halt/station, Science Park, Education, Park and Ride.

Changes Sought

Reasons for Participation

Proposed changes suggested for PR8 Policies Map: 1. Insert "indicative" into the title for the Policies Map, as follows: "Policy PR8 – Indicative Policies Map – Land East of the A44" 2. Deletion of the landfill site from the Policies Map. 3. Deletion of the agricultural land from the Policies Map; if this land was included to facilitate the provision of the proposed pedestrian, cycle and wheelchair bridge over the Oxford Canal to enable the site and public bridleways to be connected to the proposed allocation at Stratfield Farm (Policy PR7b) – Item 13 – the Tripartite consider that this could simply be addressed through an amendment to the red line area on the Policies Map to include just the land required for the bridge and public bridleways to achieve this objective. 4. Addition of land (0.7 hectares) at Policy PR3(b). 5. Amendment to relocate the * or 'Reserved land for railway station/halt' to the north of Sandy Lane so that both sides of the railway halt are within the proposed allocation and on the Tripartite's land for the avoidance of doubt, notwithstanding the fact that the Policies Map is only indicative at this stage. 6. Clarity that the potential school locations and areas shown on the Policy PR8 Policies Map are indicative of the Council's preferred locations but not prescriptive. 7. Park and Ride – The reservation of 5Ha of land within the developable area for a Park and Ride site.

The land owned and controlled by the Tripartite comprises some 86% of the largest draft allocation within the Plan and as such, occupies a unique and vitally important role in meeting Oxford's Unmet Housing Needs. As such, the Tripartite consider it is essential that it is present [and/or represented] and participates at the Examination in order to assist the Inspector by responding to any queries that may arise and supporting the assessment of the soundness of the Plan.

Referenced the 5 purposes of the Green Belt and NPPF paragraphs 82-84. Quotes provided on the Elmbridge Local Plan and Poole Local Plan. Quotes provided on NPPG's guidance on the Housing and Economic Land Availability Assessment (HELAA). Reference to Policy ESD14 of the adopted Local Plan Part 1. It is reasonable to conclude that whilst local districts may have accepted an apportionment of Oxford's unmet housing need the actual number is not absolute and the Local Plan process may determine that Cherwell, for example, is unable to accommodate the apportioned figure due to existing national policies, such as Green Belt. Conversely, Oxford City, through the development of its own Local Plan and consideration of urban density, re-allocation of land previously earmarked for employment use, etc. may determine that the total unmet housing need is lower than that recommended by the SHMA and post-SHMA work. The latter point will especially apply should Oxford City seek to justify exceptional circumstances to remove Green Belt land that falls within its own jurisdiction. Reference to Oxford's Preferred Options document.

References on the Cherwell Green Belt Study (April 2017), the Oxford Green belt Study (2015), Category A Village Analysis (2016), Policy Villages 1 and 2 of the adopted Local Plan Part 1 and SA report. Conclude that the removal of Green Belt separating Begbroke (PR8) and Yarnton (PR9) and subsequent development as proposed would result in coalescence of both settlements; encroach on the open countryside; and result in highly inefficient use of land (which itself is a combination of grade 2 and grade 3 agricultural land). The harm that results is exactly the harm that the Green Belt land is designed to prevent. The loss of protection of the Green Belt and the scale of subsequent development is contrary to existing Local Plan policies. The "exceptional circumstances" put forward by Cherwell District Council are without merit with respect to all sites proposed for removal from the Green Belt.

The Cherwell Green Belt Study divided the Begbroke Science Park site into six parcels of land. The release of the site as a whole would result in high harm to the purpose of the Green Belt, in particular, "The site as a whole is critical to the maintenance of High separation between Kidlington, Yarnton and Begbroke, and despite the proximity of urban edges retains a relatively strong countryside character." Of the six parcels, four are rated as high or moderate high harm to the Green Belt if released. Reference to the SA. Would contend that the combination of the Green Belt reviews demonstrates solid evidence that the removal of the proposed Begbroke site (PR8) from the Green Belt would cause significant harm to the purposes of the Green Belt (coalescing Begbroke with Yarnton) whilst not providing a sufficiently sustainable site to directly meet Oxford's unmet housing need.

Comments

The two sites east and west of the A44 between Yarnton and Begbroke, and Yarnton and Kidlington, are on Green Belt land. The Green Belt is vital in maintaining a division between the two smaller neighbouring villages, each with very different characteristics based on identity and historical evidence. By building on Green Belt land, Yarnton and Begbroke would effectively be merged into one huge development, completely destroying the open countryside that separates them at present. Cherwell District Council fail to explain why there are 'exceptional circumstances' that justify building on Green Belt land. The massive scale suggested in this development will undoubtedly create traffic chaos. There is little mention of effective transport infrastructure. A bus lane between Bladon roundabout and Pear Tree roundabout will only be effective if the A44 road is widened and new bridges over the railway line and canal are constructed. Neither of these major constructions is mentioned in the plan. There are already significant hold-ups on the A44 into Oxford throughout the day at each roundabout and extra traffic from huge housing developments will only add to the problem. Furthermore, if Sandy Lane is closed to through traffic, those commuters wishing to avoid congestion on the A40 by travelling west through Cassington and Yarnton will be forced to Join the gridlock already in place each morning and evening on the A40. The proposed plan appears to give more understanding and sympathy to pedestrians, cyclists and horse-riders than it does to motorists, bearing in mind that it will be motorists predominantly who are required to buy the houses. Cherwell Local plan part 1 suggests an apportionment of 4400 new homes for Cherwell District and only 550 homes for Oxford City. How can this huge discrepancy be Justified? There must be numerous Brownfield sites within the city that should be considered first. Then, of course, there are substantial tracts of land owned by the University. The powers that be within the University should also be required, by government if necessary, to take more responsibility in meeting Oxford's unmet housing need. It strikes me as bizarre that of a total of 14,850 homes, almost one third should be apportioned to Cherwell.

Comments

The unmet need for this vast project is unproven and likely overstated. It would have a devastating effect on beloved countryside that is strongly relied upon and used frequently all year round for walks and ensuring a healthier lifestyle amongst locals. It is a bold plan that lacks compromise and respect to the quality of lives in all surrounding areas, now and in the future. Development on this well utilised green space would be a serious offence to the green belt national policy. The evident and frequent recreational use it provides to locals as well as the essential needs to the pockets of wildlife that are struggling to remain are totally disregarded in this plan. Green belt space is billed as such to cap the area(s) from inevitable demands of urban expansion even in so called "extreme cases". Decision making by any parties that stand to profit from the success of this planning on this protected green belt space should be forbidden. This plan has no sensitively for green belt policies or the quality of lives living in the surrounding areas. The infrastructure plans are afterthoughts without acknowledgement to the current infrastructures that are rapidly deteriorating and under daily duress. Building on this precious and utilized green space for the temporary solution of unmet housing needs does not justify or outweigh the irreversible and negative consequences for current and future inhabitants.

Changes Sought

Reasons for Participation

1) If using our green belt areas is truly the only option for development then Cherwell should decline and point to other solutions such as a. brown field sites within Oxford or further out b. current and numerous vast amounts of land either being reserved for commercial use (much of it not looking very utilised or successful. 2) The decision making process should be ultra-sensitive and rigid to the aesthetics at risk and protect this area at all costs realising it's essential potential and use.

Concerned as a long time resident that these plans will affect. Also aware and understand these plans and their implications involving both current and future residents. Strongly believes to be competent and justified to be involved in ensuring that alternatives, and fair compromises are met.

Comments

The proposals are unsound due to the absence of any provision for additional local services. E.g. PR8 Land East of the A44 makes a vague reference to an 'opportunity for health facilities'. Presumably there 'might' be a new GP surgery. This vague language provides no confidence that such a facility would be built. No mention is made of any other additional 'opportunity' within any of the other proposed development sites. This highlights the lack of consideration within the proposed Submission Plan for providing adequate additional local services. One concludes that the existing services will have to take up the strain resulting in more pressure on existing GP surgeries, fire, ambulance, hospital & police services. Expanding the population of the areas with an additional 4,400 homes without including an appropriate increase in local services is indicative of how the Submission Plan is not fit for purpose and has not been positively prepared and makes the proposals inadequate & unsound.

The creation of 1,118 houses on PR6a & PR6b will create a potential of 3000+ car movements a day, together with a further 5000+ movements from PR7a, PR7b, PR8 & PR9. The traffic situation North of Oxford will be at gridlock even worse than that which occurred during the recent alterations to Banbury Rd & Woodstock Rd roundabout.

<p>Comments</p> <p>The outline development to build 1950 homes will see one of a few areas of open country within easy walking distance of Kidlington, concreted over. This area is crossed by numerous foot paths, a favourite with walkers/dog walkers. If built on they will be left to pound for miles n Kidlington's fume choked main roads.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>								
PR-C-1318 4317	10/10/2017	David & Olive	Kelland	Cllr Peter Kelland on behalf of Mr & Mrs D & O Kelland	Y	Y	N	N
<p>Comments</p> <p>The policy PR8 Land East of the A44 can not deemed justified or effective as the land shown as retained In the GB makes no sense what so ever. The creation of a 12.2 nature conservation area, a 23.4 hectare canal side parkland for public open space & the retention of 12 hectares of arable land create an effective buffer zone between Kidlington & Begbroke. I can see the logic of the land to the north of the sewerage works being retained in the GB as part of the parkland to increase the buffer effect, but the land to the south of the retained agricultural land would appear not suitable for agriculture & not required for the buffer zone. This area of land would be better & more sustainable for Oxford's unmet need. Cuckoo or Green Lane (the lane that runs from Sandy Lane, adjacent the canal bridge to the A44) is adopted by OCC up to & beyond the level crossing from the A44, giving full access a the field adjacent the lane, south of the retained agricultural land & north of the railway. It is a missed opportunity not to include this land into the revised GB. The reservation of 0.5 hectares within the shown developable area seems at odds with the surrounding planned housing. The planned rail halt/station will attract commuters from the new village settlements at Eynsham & the new large sites at Woodstock as well as the 1950 new dwellings at Begbroke. 0.5 Hectares is not sufficient space for this halt to be used as a park & ride. WODC built 400 new parking spaces at Long Hanborough & more are needed. WODC in its response to the intrusion into the GB voted for this halt/station to be built as a matter of urgency to help with existing & future traffic congestion. The fields either side of the railway, the triangle field shown in PR3a & the field between the railway & the retained agricultural land would be ideal for a railway based park & ride with the new halt/station on land both sides of the track & sufficient car parking space.</p> <p>Changes Sought</p> <p>That PR8 be increased or altered to include PR3a & the land shown as retained in the GB south of the sewerage works & the retained agricultural land down to the A44. This area of land should be for the new halt/station & affordable housing as required by Oxfords unmet need, small family homes for those who would like to cycle to work commute by train .</p> <p>Reasons for Participation</p>								
PR-C-1318 4316	10/10/2017	David & Olive	Kelland	Cllr Peter Kelland on behalf of Mr & Mrs D & O Kelland	Y	Y	N	N
<p>Comments</p> <p>The justification & effectiveness of PR3a is at odds with your own requirements for clear permanent boundaries to be re-established for the affected area. The triangle of land at PR3a is shown at Appendix 2 within the new light green area being GB to be removed, clearly not in the GB. A new permanent boundary would follow the A44 & the railway to a point where they meet. As it stands this area is in limbo, on one hand it ls clearly shown as outside of the GB in an area of GB to be removed Appendix 2, yet your policy PR3a regards it as land that needs to be protected beyond the plan period. You agree that the railway line forms a consistent & strong GB boundary, one of your requirements. You say that area PR3a will make little difference, the small field adjacent to Cuckoo or Green Lane could supply 15 to 20 houses identified as a type required in Oxford, being one & two bedroom of affordable rent or low purchase price. This field could allow sustainable housing with good transport links to Oxford & of course be close enough to allow cycle access. I feel that any land adjacent to Oxford should be included to meet Oxfords unmet need. The access to the A44 would be along the route of Cuckoo or Green Lane which is an OCC adopted road up to & beyond the level crossing. The A44 at this point is not a fast stretch of road as vehicles are slowing for the existing roundabout. I am sure a junction could be shown even if it means left turn only. This triangle of land should be included in this review as fully within the site boundaries of PR8</p> <p>Changes Sought</p> <p>As PR3a has been taken out of the Green Belt it should be included fully within the boundaries of PR8 and particularly PR8 16; 'the provision of a limited number of new homes to be agreed with the Council, to provide for students & those working for the University at the Science Park to support Its expansion and reduce car Journeys.</p> <p>Reasons for Participation</p>								

Proposed Submission Plan - Policy PR8 - Land East of the A44

Comments

These proposals are not consistent with National Policy. The removal of this land from the GB, which is vital to maintain the separate and distinct identity of the villages of Begbroke and Yarnton, will result in urban sprawl, with insufficient transport infrastructure, and little feasible chance to rectify this. We chose this area for our family home specifically for the access and close proximity to the land within the GB. This proposal will permanently destroy the rural nature of this beautiful area of Oxfordshire.

Changes Sought

For the reasons I have given and the Representations made by The Begbroke & Yarnton GB Campaign which I additionally support and adopt as my own Representation in this document, the plan cannot be changed to make it legally compliant or sound and should therefore not be submitted for inspection.

Reasons for Participation

I would like the Begbroke and Yarnton Green Belt Campaign to represent me at the Examination should it take place.

Positive Preparation - There has been an apparent failure to stress-test the alleged requirements of Oxford City Council. This is the subject of widespread local criticism, and the latest downgrading of the Government's own estimates of housing requirements undermines the whole basis of Cherwell's proposals and Oxford's demands. We need to start again with a process geared to the current Government figures as an absolute maximum. Damage to the GB just seems to have been assumed as a given, whilst it is not. Justification - The proposals cannot be justified as matters stand, as the figures have not been adequately tested and may no longer be current.

Effectiveness - There is little concrete information as to the funding or timing of infrastructure provision - e.g. a substantial new station will certainly be required, but there is no clarity at all as to how this will be delivered or funded or when in relation to the related development. This all comes across as a wish-list rather than as a blueprint for a successful outcome.

Duty to Co-operate - I do not believe that the duty to co-operate requires a Council to accept without apparent justification the aspirations of an overwhelming neighbour Council where that Council has not done all it can to solve the problems. They have not substantiated the basis for its alleged housing shortfall and has not shown any obvious willingness to co-operate in the funding and/or provision of essential infrastructure. There is a lack of mutuality.

Not Consistent with National Policy. Purpose of GB is to restrict the sprawl of built up areas, to safeguard the countryside from encroachment, to prevent the merging of towns/villages into one another and preserve their setting, character and history. These policies contravene every aspect of the purpose of the GB - they propose to join up Yarnton, Begbroke and Kidlington with token strips of undeveloped land between them. Combined with proposals for Woodstock and Long Hanborough, how long before these developments stretch to Banbury and beyond?

Is there really a need for development on this scale? The road traffic situation in and around Oxford is chaotic, even in its present form. How is the infrastructure to cope with all the extra vehicles on the A44. No infrastructure details are shown on the plans to give any indication of how access to these developments is to be achieved or how the current pinch points for traffic (every roundabout from Bladon through to Woodstock Road, the stretch of single carriageway between the Turnpike roundabout and Frieze Farm roundabout) are going to cope. How is the bus lane going to be incorporated into a single track road? The current situation on the A34 between Boars Hill and the M40 is dire and this size of development will only contribute to greater traffic problems.

These proposals stem from Oxford City's inability to fulfil their housing requirements by saying no more land is available. There are a number of brown field sites that could be developed. Cannot the University be pressured into releasing more land for development? Of the proposed 14800 homes apportioned to Oxfordshire, it is beyond belief that only 550 are apportioned to Oxford itself, while almost one third of the total is apportioned to Cherwell District. A complete rethink is needed particularly by Oxford City Council who are attempting to shift their planning problems onto all the other district councils.

PR-C-1348	09/10/2017	Alan	Whitley						N
4409	Comments								
Object to 2 sites between Yarnton & Begbroke. PR8, Land East of A44 (Begbroke) and PR9, Land West of A44 (Yarnton) because both sites are on G B. There must be alternative sites? PR9 (Spring Hill) has a spring, where will the water go? Expanding William Fletcher School will be dangerous for children crossing the road to playing fields Sanctuary House Nursing Home. Lack of thought to infrastructure. Limited plans for amenities e.g.. shops, GP surgeries. Redeveloping Exeter Hall with existing practices in larger premises would cause Yarnton residents an approx. 6 mile journey which is not ideal. Closing Sandy Lane, used by Yarnton residents to get to Kidlington amenities is stupid. Adding extra miles and time, and increasing traffic N of Langford Lane or S of Frieze Way. Changing one lane on the southbound A44 to a bus lane will increase traffic problems. It's impossible to continue a bus lane through Loop Farm roundabout as it is single carriageway, with bridges. Plus additional cars from 2500 homes would also exit onto the A44 too.									
Changes Sought					Reasons for Participation				

PR-C-1350	09/10/2017	Mr PA & Mrs JM	Carpenter						
4418	Comments								
The road is the main alternative route if any problems on A44 or A4260, and its importance is recognised in its salting during cold weather. The closing of an existing highway that is a vital link between Yarnton and Kidlington, without providing a suitable alternative route, is not justified.									
Changes Sought					Reasons for Participation				

PR-C-1350	09/10/2017	Mr PA & Mrs JM	Carpenter						N
5080	Comments								
The Land East of A44 lies wholly within the Oxford GB. The Cherwell LP 2011-2031 Policy ESD 14 sets out to prevent the merging of villages, whereas PR8 actively pursues the coalescence of Yarnton, Begbroke & Kidlington. This has been titled 'Begbroke' despite most of the proposed housing being in & adjacent to Yarnton. There is no separation between Yarnton & Begbroke despite the Partial Review (Page 118, Para 5.110, point S) stating "the necessity to retain the separate identities of Begbroke, Yarnton & Kidlington". PR8 is not consistent with NP. Cherwell LP 2011-2031 Policy Villages 1 categorizes Yarnton & Begbroke as Category A villages & this policy only allows minor development, infilling or conversion in, or alongside these villages. Thus, PR8 is in complete contradiction of Policy Villages 1.									
Changes Sought					Reasons for Participation				

PR-C-1351	09/10/2017	Mrs Sheila	Westall						
4420	Comments								
Opposition to the plan to build high-density housing on the GB land to the east and west of the A44 between Yarnton and Begbroke. GB is a valuable breathing space to prevent urban sprawl and in many cases is agricultural land. Government is committed to protecting GB and development should only be allowed when no brownfield sites are available. Our GB should not developed to meet any part of Oxford City's unmet housing need when the city has brownfield sites. Sites around Cowley, Northern Gateway and Park & Ride at Redbridge could be used for housing and parking transferred to a site less suitable for housing. These brown sites are close to potential employment and therefore have less impact on road congestion. Impact of additional houses on A44 has not been adequately addressed. Suggested bus lanes are impracticable as no consideration given to pinch-points , mainly south of Yarnton where railway and canal bridges restrict the width of the carriageway. Ensuing traffic congestion will increase journey times, pollution, accidents, delivery costs and wear and tear on already deteriorating roads. Causing Sandy Lane to through traffic will inconvenience residents in accessing facilities in and around Kidlington High Street. Additional traffic on the road travelling west towards the A40, through Yarnton and Cassington villages will increase the dangers for children at local schools. Several acres of land to the south side of Sandy Lane was once a landfill site before its present agricultural use; it could be subject to subsidence and release of gases if the topsoil is disturbed by building. There is also the potential for flooding to the west of Yarnton on the lower slopes of Spring Hill, where heavy rain causes flash flooding.									
Changes Sought					Reasons for Participation				

PR-C-1359	09/10/2017	Mrs K M	Davidson						
4430	Comments								
Object on the grounds of the destruction of the GB between Yarnton and Begbroke, Kidlington and Yarnton, and the city of Oxford and Yarnton, which would not allow air to flow between the settlements. Surely an objective of the GB? The unmet need has not been proven and brownfield or reserved business sites within Oxford could be used. Traffic problems would increase and the A44, A34, Peartree Roundabout, A40 and all surrounding roads are already overloaded. There are problems getting to the village of Yarnton during rush hour and this would be made worse by the closure of Sandy Lane to through traffic. The traffic will come to a complete standstill during the proposed construction and destroy the potholed roads. Building on fields prone to flooding will lead to environmental problems, and village identities will be lost along with agriculture and wildlife. The proposed development would not provide affordable homes as required by all generations.									
Changes Sought					Reasons for Participation				

PR-C-1364	09/10/2017	Mrs Susan	Moss			Y	Y	N	N
4435	Comments								
The policies are unsound because they fail to meet the real needs of people for low cost (rented or for sale) houses that deal with urgent housing problems. Housing to meet local needs could be achieved by building smaller units at higher density and using far less land. Houses for sale at so-called 'affordable' prices, and houses at market prices, do not meet the needs of the teachers, nurses, public sector workers and young families. Build some houses, but make all of them of the type that people need - not what developers and landowners desire.

Comments

These proposals would effectively merge both into a single conurbation with complete loss of individual identity. Both villages have historical value, existing long before the Domesday Book in which they are both included. With 300 ha of the 1000ha total area of the villages already unavailable for development, the document sets out to remove approximately 20% of the remaining space for Oxford City. This is disproportionate, out of character with the rural setting and would more than double the current number of dwellings in the two villages. Key delivery requirements in Paragraph 1 gives housing density figure of 45/hectare which is significantly greater than any development in Yarnton or Begbroke and out of character with the rural nature of the area. It is also illogical that the area closes to Oxford City (PR6b) is given an average dwelling density of just 25/hectare. Also conflicting information on Sandfly Lane - keep open or close it? Paragraph 18f is absurd and can only lead to increased car (if not public transport) miles and pollution. Sandy Lane must be preserved as an important link between the villages of Yarnton and Kidlington, and is already an emergency route if A44 and A4260 closed. Paragraph 18.1. no need for a railway halt. Public transport access to Yarnton and Begbroke/Begbroke Science Park can be sustained with improved bus routing through villages and along A44 trunk road.

Changes Sought

"Policies PR8 and PR 9 propose the siting of 4400 new dwellings on green belt land around and between the ancient villages of Begbroke and Yarnton which would represent a more than doubling of the existing number of houses. In terms of local population it would mean more than tripling the existing levels. None of these plans could be described as 'limited' in the context of areas defined in policies PR8 and PR9 where entire discrete settlements would be left without adequate separation between them. These policies would in effect merge three separate communities - Begbroke, Yarnton and Kidlington into one large conurbation; taking 3 small and ancient settlements established over 5000 years ago and amalgamating them into a single conurbation or town. This would represent urban sprawl on a grand scale and would be completely in opposition to the purpose of designated green belt land. Policy ESD14 is further contravened as the separation between land defined in policies PR8 and PR9 will effectively be only the width of the A44. It's clear then that CDC's own assessment that the maintenance of the character of both villages and the surrounding countryside is of vital importance and they should not be buried under a swathe of new development as a planning expedience, especially where no exceptional need has been demonstrated. Policies PE8 and PR9 are therefore not consistent with CDC's own policies and assessments, neither are they in accord with national planning guidelines on green belt land and are therefore both unsound."

Changes Sought

Reasons for Participation

To have an opportunity to make a personal representation at the appropriate time and when further information is available about the scale of response to these plans. There appears to be an unquestioning assumption on the part of the planners that the Begbroke Science Park will be expanded. This in itself would seem to suggest an entirely blasé and cavalier approach to proper planning consultation from CDC. Something that is not surprising given that there was scant opportunity for locals to respond, object or otherwise comment in its arrival in the area in the first place. I live directly opposite it and the first I knew of the plans was when the builders started putting up the Given its narrow requirements both in terms of employees and local resources, the contribution to the local economy afforded by the Science Park is not something I would regard as particularly significant. So I am at a loss to understand why the partial review document is peppered throughout with claims that ' it is such a vital local asset and one that should be allowed free rein to balloon in every conceivable direction. Perhaps this is a discussion that should be had more widely in the public arena after these broader proposals have been dealt with.

The site which this representation relates to falls between Kidlington and Begbroke and comprises land owned by Oakhill Group Limited to the south of Oxford Motor Park and adjoining land to the west and north west. The adjoining land comprises a former piggery and bungalow; an immigration detention centre; the properties off Evenlode Crescent; the recently consented Oxford Technology Park, which is currently under construction, and the field to the south. The proposed strategic allocation of PR8 is welcomed, recognising that CDC has a Duty to Cooperate under the Localism Act (2011). Understands that the proposed allocation will remove 190Ha of land from the Green Belt (GB), & once built on will significantly change the character of the landscape between Begbroke, Yarnton & Kidlington. However, the completion of Oxford Technology Park & the development of PR8 will result in the formation of an isolated parcel of land comprising our client's land and adjoining land between Kidlington and Begbroke. According to the Partial Review Submission Version, our clients land, will be retained in the GB. Our client objects to this land being retained in the GB. Considers that following the adoption of the Partial Review as proposed, the land will not serve any of the 5 purposes of the GB & must be removed in the interests of sustainable spatial planning. Reference is made to CDC's Green Belt Review, November 2016 in which our client's land comprises A6, A7, & A8, and a detailed examination of the role that the site will play regarding the 5 purposes of the GB following the proposed allocation of land PR8 is made. The Partial Review Submission version seeks to address the pressure that Kidlington cannot wholly provide all of the high value employment space required, by allocating 14.7Ha land adjacent to Begbroke Science Park. Whilst this does show signs that CDC are trying to meet development needs, the GB Review actually identifies that the PR8 allocation falls short & that an additional 20Ha of employment land will be required to meet demand within the Kidlington area across the Plan period (up to 2031). The Review figure deducts the quantum of floor space already committed for employment use at Oxford Technology Park & is based on the assumption that an increase in market share will ensue as a result of attracting businesses in the Kidlington area (i.e.. 'the snowball effect'). This will lead to an increase in demand for high value employment floor space & the diversion of existing uses (such as R & D companies) from elsewhere. Provided the findings of the GB Review are correct, we believe that there will be a severe deficiency in the amount of employment land reserved for future development in the Kidlington and Begbroke areas, particularly during the medium to end stages of the Plan period. Whilst the Council may seek to address this deficiency through non-strategic allocations within the Part Two Local Plan, we do not consider it premature to be identifying additional parcels of GB for release now, as part of the Partial Review process. The removal of parcels such our client's land & the adjoining land, which evidently fail to meet the purposes of the GB, would not open the floodgates to development as the planning system would still remain in place to determine matters of development control, including infrastructure provision. As a consequence of such high demand, it is clear that the removal of the site from the GB will not render previously developed land within Kidlington unattractive to develop. If our client's land & the adjoining land was to be removed from the GB, urban regeneration would still inevitably occur. Retaining the site within the GB will therefore not assist in achieving the fifth purpose.

Changes Sought

"We would urge the Council to consider the removal of our client's land and the adjoining land from the Green Belt. As we have demonstrated, having regard to the Council's own evidence base, its continued designation will not fulfil any of the five purposes set out at paragraph 80 of the NPPF. On this basis, we do not consider the Partial Review to be justified or consistent with national planning policy." (Relates to land off Langford Lane, Kidlington).

Reasons for Participation

To elaborate on the detailed arguments put forward in these representations.

PR-C-1396	09/10/2017	Paul	Walker	Oxford Bus Company				Y

Comments

SUPPORT these Policies with AMENDMENTS. The development of a Development Brief for these sites. The Brief should clearly set out how the plan proposals relate to the strategic bus network and how this will evolve, what the trigger points to deliver this shall be and give clarity to developers on the costs of developing in these locations as set out at PR8 30. The risk of not doing this is one of a hap-hazard development pattern of sites coming forward which cannot be served by high quality public transport though lack of forward planning, lack certainty for developers and a poorly thought out network connecting major nodes. Support PR8 18(c) and Pr9 8(c) which states the need for the development to enable connection to existing and potential public transport services. The policy needs to explicitly highlight that the development brief will need to contain costed proposals for bus services improvements. Therefore there needs to be mention within the policy of the need to "kick start" bus services for a number of years promoting alternative transport to the car until the development is built out and services viable. This viability may come from diversion into the site of existing services and as such we consider that and extension and/or diversion of the 300 park and ride service provide this role. The Service 300 could connect with the PR10 site as the terminus point calling at PR8 and PR9. The development of this service could be covered through the connected and joined up development brief for this site and we would be keen to work with developers and LPA to plan this service enhancement.

Changes Sought

Would therefore like to see the policy strengthened to highlight the need to connect inter urban bus route networks between settlements that reflect the OCC strategic bus network in a phased manner than can allow new developments to be accessible by modes other than the car with appropriate S106 commitments to enable these developments to be sustainable in a manner that is clear to developers promoting sites.

Comments

The representations are submitted on behalf of my client Bonnar Allan with regard to their proposals at New Alchester. The land is identified in the Vision document attached to these representations and will include up to 7,200 new market & affordable homes, primary & secondary schools, creation of a 240 acre country park & watersports centre & the potential to incorporate a new Park & Ride site with connection to the railway line south of Bicester by a new railway station. Our comments on the PSP are confined to issues of soundness. A summary of the alternative Options A to I that CDC considered at the last stage of the Plan is set out at paragraph 2.12. For the reasons we set out in our representations to that stage, we consider that the CDC's proposed approach of allocating land to the north of Oxford & within the Green Belt (GB) around Kidlington as set out in PR8 is flawed, & that the Partial Review does not pass the test of soundness. The PSP is not Justified as in our view it does not represent the most appropriate strategy for meeting Oxford's un-met housing needs. The logic that appears to underlie the PSP is in essence that the closer the proximity of the required housing to the City, the more sustainable it will be. This logic ignores the fact that there would be better prospects of residents travelling into Oxford as well as the major employment locations in the Science Vale by public transport including by rail from New Alchester. The preferred locations around Kidlington will increase congestion on the highway network & will result in the loss of GB & lead to coalescence between Kidlington, Begbroke & Yarnton, whereas the proposals at New Alchester are located beyond the GB. As we make clear in the Vision document, our proposals can be delivered in a phased manner & there are no impediments to early delivery. The scale of the proposals at New Alchester allows it to meet both the identified needs of Oxford City as well as an element of the future needs of Cherwell District, & in so doing, we recognise the journey that this proposal involves.

Changes Sought

We consider that the PSP should direct a majority of the un-met need to New Alchester which constitutes a more sustainable & justified location for the new homes needed both to meet the City's un-met needs as well as future need within Cherwell District. The PSP should be re-drawn to allocate land at New Alchester in place of the proposed allocations in the Green Belt (GB) around Kidlington. New Alchester can provide a highly sustainable location for the much needed development, at a location outside the GB & on the railway line into Oxford. The development would facilitate creation of a new railway station at New Alchester which would encourage people to travel to Oxford City & also other employment centres within the Science Vale by public transport.

Comments

The CDC Local Plan Part 1 and the NPPF (Para 34) support a strategy whereby growth should be directed towards the most sustainable locations, encouraging travel by non-car modes. The County Council's Oxford Transport Strategy is also clear in its objectives for achieving a meaningful modal shift for those travelling into Oxford City away from the private car and towards public transport. In this context, the justification for the Council's approach in pursuing growth at sites such as PR7, PR8, PR9 and PR10 which propose concentrated levels of development (circa 3,220 dwellings) is unclear. The development as proposed is concentrated along the already very congested A44 corridor and around Kidlington which is a known congestion hotspot. While some development in this area may be appropriate, the concentration of sites will lead to significant issues of congestion given that the sustainable modes being pursued (with the exception of cycling) are all road based Park & Ride, Bus and RTP routes. The Sustainability Appraisal (June 2017) recognises that new development around the Kidlington area 'may increase congestion but the Local Plan Part 1 Partial Review allocates new housing sites that encourage the use of sustainable transport and are allocated following consideration of their impacts on transport patterns through the SA'. Notwithstanding assessment of the proposed allocations through the SA, the impact of congestion has not been sufficiently weighed in the balance when considering reasonable alternative sites and a broader distribution across the District. For example, locating development on the rail network at locations such as Islip would assist in removing some traffic movement from the road entirely. It's recognised that there is the potential for a new railway station at Yarnton, but this is a long term strategy with no immediate proposals for delivery. CDC does not consider this necessary infrastructure to support the proposals and simply consider it a potential future benefit. Therefore, all focus for this plan period under this strategy will be on the road, contrary to the conclusions of the Sustainability Appraisal and to which our client objects. Overall, the various transport evidence base documents prepared to date have not robustly assessed the opportunities to improve rail usage despite current work being undertaken to develop the East-West rail link. East-West rail Phase 1 works saw an upgrade of Islip station which is on the new Oxford - London Marylebone line. The Western Section of East-West Rail will also see the introduction of three new passenger services, for direct services within the region and connections to national mainline services. These services are due to start operating in the early 2020s. Despite this significant rail investment, no development is proposed within Islip which is just a 3 minute train ride from Oxford Parkway, 7 minutes from Bicester, 11 minutes from Oxford and under an hour to London Marylebone. Our client is of the view that Policy PR4a (and by association policies PR6-PR10) focuses too strongly on improvements to and mitigations for the highway network rather than considering options for removing traffic from the road network and towards more sustainable modes such as rail. The proposed locations for the additional housing are known areas of congestion and the transport proposals do not go far enough to solve the existing issues, with the proposed levels of development in this location likely to compound matters further. Our client objects to these policies which will lead to increased levels of congestion and the strategy will not achieve a step change in modal split. Soundness - The evidence base prepared to support Policy PR4a (and by association policies PR6-PR10) is not sufficiently robust to justify the approach to allocate this level of housing in an area of existing traffic congestion without an effective strategy to achieve a step change in modal split. The Council needs to justify its approach for focusing so much of the new development in one area which is already known to suffer issues relating to road congestion. Rail has not been considered as a reasonable alternative within the evidence base documents and consequently the draft plan is not justified. The draft Plan is not Effective, as it focuses too much of the housing requirement in one, focused area. The Plan is not consistent with national Policy as the proposed development is not located where the need to travel will be minimised and the use of sustainable transport modes can be maximised.

Changes Sought

The evidence base has failed to sufficiently consider investment in rail / exploitation of existing rail assets despite recent investment in the East-West Rail project. A thorough exploration of the reasonable alternatives is required. More detailed consideration needs to be given to the potential for locating new development at Islip within proximity to the existing railway station. This location would be sustainable and would support the existing local community. It has been demonstrated that there are no overriding physical constraints, in terms of highway impact, flooding and ecology, to the development of this land.

Reasons for Participation

Due to the complexity of the matters discussed in relation to PR4a

Comments

KPC consider that the huge development proposed will have a major adverse impact on the separate identity of Kidlington, which has led the approach in the development of the Adopted Kidlington Masterplan and is confirmed as important in the adopted Cherwell Local Plan. Cherwell Local Plan 2011-2031 Policy ESD 14 aims to prevent the coalescence of settlements and has a strong role in preventing the coalescence of Yarnton, Begbroke and Kidlington. It will also eradicate the open landscape character of the setting of both Begbroke and Kidlington, and reduce to a meaningless scale the Green Belt in this area. The parcels of land to be developed include land which is rated as of high importance in the Green Belt Studies, where in principle new development is unacceptable. The minimal separation distance between Kidlington and the expanded Begbroke will not prevent intervisibility and a perception of coalescence, contrary to the clear objectives of the adopted CDCLP. There is substantial concern that the development would neither be well integrated with Kidlington, or constitute a genuinely free standing village, due to proximity and intervisibility. The proposed scheme is of a scale which warrants its own new centre, but is so proximate to Kidlington Village Centre that it will also act as a competitor in providing local services, and thus undermine the published commitment to investment in this established centre. This matter does not appear to have been considered in developing the strategy. CDC is asked to undertake an urgent assessment of the impact of this substantial allocation on the vitality and viability of, and improvement strategy for, Kidlington Village Centre. A Policy should be developed which promotes and secures investment in the Village Centre if the scheme goes ahead, and this needs to be reflected in the Key Requirements list in the Policy. KPC has concerns about the proposed closure of Sandy Lane. This currently provides a much valued westward link from Kidlington to Begbroke, linking the communities. It is appreciated that if kept open it could provide an undesirable rat-run for traffic from the new development, adding to traffic congestion in Kidlington, but it currently enables Begbroke residents to make use of the Village Centre amenities, and thus support the well-being of the village. A more detailed assessment of the benefits and problems of the proposed closure is required, and mitigation measures developed and required as part of the implementation strategy. If adopted, the Policy should be extended to require substantial investment in offsite transport infrastructure, by reference to Policy PR4a. Without this, it is unlikely to be sustainable and will add to local congestion. Strongly object to PR8 allocation • Request revisions/addendums if adopted "

Changes Sought

Reasons for Participation

KPC is an elected body, representing the views of a large number of people in the part of the District which will be most affected by the proposed alteration to the Development Plan. In addition to having a statutory role in the Planning process, the Parish Council has an in depth understanding of the local area where new development is proposed, and is well placed to contribute to the Local Plan process. It is essential for the KPC to be actively involved in the Examination, in order to be able to represent local views, fully respond to submissions made by others, and to address any modifications discussed in advance of the Examiners report.

Proposed Submission Plan - Policy PR8 - Land East of the A44

Comments

While we object to any release of land in the Green Belt including the allocated sites, we have a further concern relating to the possible overall location of land for housing in the event that any or all of the allocated sites are confirmed for development in any adopted plan. PR6a, 6b, 7a, and 8, the land areas allocated specifically for residential development (i.e. not the total site areas) are approximately 50% higher than would be necessary to accommodate the stated number of houses at the net densities specified. For example the largest site (PR8) for 1950 houses at 45dpha net should require 43.3ha. Whereas the allocation is for 66ha, over 50%larger. The definition of net density is not specified in the plan though it usually includes access roads, parking, incidental open space and play areas. There are separate allocations for schools and a local centre, so it appears that the areas allocated specifically for residential development are significantly too large. Given the desirability of this land to developers, there is a clear risk that permission could be sought for significantly higher numbers of dwellings over and above the intended provision, resulting in even greater environmental harm and pressure on infrastructure. We are therefore concerned about the provision in PR12a (para 7) that should more than 4400 houses be built this will be taken into account in meeting Cherwell's own need, which would appear to be an incentive to the Council to approve higher numbers than set out in this plan."

Changes Sought

All allocations should be withdrawn because they are premature (need not yet established) and because alternatives to Green Belt development exist. However if some or all of the allocations are confirmed (which we completely oppose) then the plan should be amended to ensure that no more than the specified numbers of houses will be permitted (e.g. by reducing site areas or other stipulations).

Reasons for Participation

We (Kidlington Development Watch – KDW) consider this is necessary because of: our extensive involvement with the consultations at all stages of the Cherwell Local Plan to date; the considerable work we have undertaken to publicise the consultation ourselves; of the feedback we have received from Kidlington residents; and, the large numbers of them who have responded as a result of our efforts. KDW is a voluntary organisation run by Kidlington residents with experience and interest in planning issues. We believe that effective, informed public participation in planning consultations is vital to democratic policy making. We publicise consultations that directly affect Kidlington and offer advice on how people can best make their views known. In relation to this and the previous options consultation we printed and distributed leaflets, put up posters, ran a stall on many Saturday markets and at other events, participated in public and parish council meetings, provided information on our website and responded to requests for information from Kidlington residents. As a result, we have gained a very good understanding of the views of Kidlington residents, a large number of whom have made representations because of our activities. KDW's representations therefore reflect the views of much of the Kidlington community."

"Object to the allocations in Policies PR6a, 6b, 7a, 7b, 8 and 9 for the reasons given in our objection to release of Green Belt land (see objection to PR3). All of these sites contribute to the purposes of the Green Belt and should not therefore be removed from it. Other Green Belt Sites rejected by the Council. We also explicitly support the Council's rejection of other sites in the Green Belt considered at the options stage for the same reasons. Policy 10 : Woodstock Allocation. In the case of Policy 10, the site is on the edge of the Green Belt, and would impact on its openness. It would also be an excessive and disproportionate extension to the small historic town of Woodstock particularly when considered in addition to the adjacent site provisionally allocated in the draft West Oxfordshire Local Plan (currently under examination) for 300 houses. Due to wide-spread concerns raised at the hearings, the Inspector has asked West Oxfordshire District Council to conduct a heritage impact assessment of this site given its proximity to a World Heritage site. Cherwell should have conducted a similar assessment, taking into account the cumulative impact of the proposed development. Woodstock town is not within the Cherwell boundary but nevertheless, Cherwell has a duty to seek to protect historic Woodstock from inappropriate development and we consider it is not reasonable or sustainable to locate 410 extra houses in this area to meet Oxford's unmet housing needs."

Changes Sought

All allocations should be withdrawn because they are premature (need has not been established) and because alternatives to Green Belt development exist.

Reasons for Participation

We (Kidlington Development Watch – KDW) consider this is necessary because of: our extensive involvement with the consultations at all stages of the Cherwell Local Plan to date; the considerable work we have undertaken to publicise the consultation ourselves; of the feedback we have received from Kidlington residents; and, the large numbers of them who have responded as a result of our efforts. Comments

Sport England welcomes the Council's references throughout the document and policies requiring developers to include open space, outdoor sport and recreation. However, Sport England is concerned that the Council has yet to publish its evidence base in relation to playing fields and outdoor sports provision and built sports facilities. The Council will need to ensure that all of the new development contributes towards indoor and outdoor sports facilities in the District. The Council's evidence base will help frame this work. Sport England also recommends that the Council includes a requirement for applicants to include a statement demonstrating how their development has met the 10 principles included in Sport England's Active Design document. See Section 3 of the document 'how to use Active Design' and the proposed change .

Changes Sought

Sport England recommends that the Council consult Sport England at the earliest opportunity on the preparation of the Playing Pitch Strategy. Sport England suggest the following text could be included in the policies to support Active Design: PR5 (10) Provide evidence of how the development has improved the health and well being of new residents by demonstrating how the proposals will meet the 10 Active Design Principles set out in Sport England's guidance document 'Active Design' <https://www.sportengland.org/facilitiesplanning/active-design/>

Comments

Main objection to the use of this very large tract of land is that the theoretical capacity of the site was established at 8,731 dwellings in the Initial Sustainability Appraisal Report, which is not dissimilar to the 7,000 put forward by the developer at the time of the Local Plan. At that time, the proposal was rejected, and the Inspector ruled that the small scale local review for employment purposes (at Langford Lane and Begbroke Science Park) was reasonable, while strategic housing was to be located in Bicester, Banbury and Heyford which catered for the expected employment growth. It is not appropriate to use the pretext of meeting Oxford's unmet housing need to source new housing for Cherwell generated employment. This undermines the agreed strategy of the Local Plan. The Kidlington Masterplan deals with minor non-strategic housing to meet local needs. Detailed analysis provided. The closure of Sandy Lane to motorised traffic is undesirable. In 100 interviews conducted in Kidlington High Street, 8% of visitors came from Yarnton, and the closure of Sandy Lane would inhibit this trade. At the time of the Sainsbury's extension around 10 years ago, the Inspector accepted that Kidlington High Street's anchor stores were underperforming relative to average store floor spaces by £5m/year, and the Co-op anchor store has recently received planning permission to reduce its floor space. It is not the case that Kidlington has a thriving centre in which the loss of some trade from Yarnton would be unnoticed. For Yarnton Nurseries, 26% of their trade comes via Sandy Lane from Kidlington. This is unlikely to be made up for by allocations in the Yarnton area, as Kidlington would still be a far larger settlement. Other than the purely trading links, Sandy Lane provides a valued communal link which would not otherwise exist if such a direct link were severed. Would be happy to accept a much smaller scale of development on this site, one that reflects the originally sanctioned small scale 2ha increase in the Begbroke Science Park, with one primary school. But in terms of meeting the bulk of Oxford's needs, believes that there are better alternatives closer to the Northern Gateway that are less damaging in terms of the near coalescence of settlements, and more sustainable.

Changes Sought

Retain allocation of nature conservation areas, one primary school, remove allocation of 1,950 dwellings and secondary school. Remove existing proposed expansion of Begbroke Science Park. Remove references to and indicative map of station. Insert new policy with retained secondary school, and allocation of 200 houses, permitted 2ha expansion of Begbroke Science Park. Insert new station proposal linked by cycleway from a location at Lyne Road.

Reasons for Participation

Has spoken as a platform speaker at three public meetings in Kidlington and Gosford. Made a substantial representation at the Issues and Options stage. As a former parish councillor, has represented Kidlington Parish Council at the North Oxford Area Action Plan examination in public, and likewise was invited to the Examination in Public of the Local Plan. Has an MSc in Transport Planning, so part of representation covers that area. Also offers a distinctive perspective as a local resident, who agrees with the principle of a Green Belt review, but does not support the current planned site allocation. Has no interest in promoting a particular site, but only have some sympathy with those who would wish to preserve the Green Belt intact. Believe views represent many in Kidlington who recognise the need for local housing, but see these plans as strategically unacceptable. Representation contains primary research evidence which could be presented.

Comments

Not consistent with national policy. The allocations in Policies PR3, PR6A, PA6B, PR8, and PR12a by virtue of their location, scale, and likelihood to lead to future harm to the Green Belt, fail to demonstrate the 'very special circumstances' required to offset the protection against inappropriate development in the Green Belt, and the coalescence of settlements.

Comments

SUPPORT the proposal in Policy PR12a to deliver 1700 houses in the period 2021 to 2026, but there is no chance that PR6, PR8 and PR9 will deliver in this timeframe. In contrast, The Moors, which is less complicated and of a smaller scale, could assist – and our recent community-led project at Swinderby (Lincolnshire) demonstrates our place-making capabilities.

Changes Sought

On the assumption that the draft Plan would otherwise be held to be unsound, The Moors (PR14) should be included as an omission site for c300 houses, linked to a regeneration package for the village centre and a new 10 hectare 'country park'. In the alternative, it could be specifically listed as a 'safeguarded site' in Policy PR12b, or this policy could be amended to provide for localized Green Belt reviews for housing where planned for sites are not being delivered by 2021.

Reasons for Participation

We confirm that we wish to attend the examination in public.

Proposed Submission Plan - Policy PR8 - Land East of the A44

PR-C-1409 10/10/2017 Richard Cutler Bloombridge Development Partners N Y

5601

Comments

Explains that in terms of the exceptional circumstances listed at paragraph 5.17 of the draft Plan, there is nothing here that would not also justify The Moors (PR14). Contest the following exceptional circumstances listed at paragraph 5.17:

- Circumstances 1 & 2 – These are not exceptional circumstances in the context of the proven alternative case for development that is University-related or by a major inward investor. 4,400 houses (in the context of the Oxford housing stock) is not of a scale that will assist affordability (i.e. create a substantial supply-side price shift). It is also highly unlikely that the people most in need of new housing will be able to afford to live in these new houses.
- Circumstances 3 to 6. These are not exceptional circumstances. They could equally be applied to justify the continuing existence for the Green Belt and its strategic importance between the built up area of Oxford and South East Kidlington (see the first three points at paragraph 5.32 of the draft Plan).
- Circumstance 7. Begbroke does not have any more exceptional place shaping potential than The Moors, but its scale (at 1,950 houses) is totally out of proportion to the environmental sensitivities and landscape and village character in this area, including the strategic need to protect the Begbroke Gap.
- Circumstances 8 & 9. These are just general statements, not part of the exceptional circumstances test, noting the acknowledged importance in Green Belt terms of the ‘rural setting’ along the A44 between Woodstock and Peartree.
- Circumstances 10 & 11. These are relevant, but none of the proposed sites acts to strengthen Kidlington village centre or provide additional facilities that will benefit Kidlington/Gosford, Begbroke and Yarnton.
- Circumstance 12. A joined up Vision is an output from an assessment process (i.e. requirement if the test is passed) not an input or a reason to justify the loss of Green Belt land in itself.

They are based on the false premise that housing need is a compelling exceptional circumstance. It is not, given some of the 4,400 housing units could be sited in Cherwell outside of the Green Belt, as illustrated by West Oxfordshire’s proposals at Eynsham. There is also the need to safeguard land close to Oxford for the University and major inward investors, thus competing away the capacity of PR6 and PR8. Moreover, it is normal for the exceptional circumstances test to address the reasons for allocating land as GB (i.e. paragraph 5.32 of the draft Plan) as well as how the development proposals would ensure a long-term defensible GB boundary, thereby grounding the case for a GB release in the special characteristics and value of the particular part of the GB. This seems to have been omitted, noting that it is particularly tough for development to be supported in strategic gaps given the first three points listed at paragraph 5.32. The whole of the draft Plan fails on this point (and also because of the false premise) and is therefore unsound. There is a need for an alternative strategy (and thereby omission sites).

Changes Sought

Following the precautionary principle, the Plan should start from the assumption that key strategic components of the Green Belt are considered sacrosanct. These components are identified by LUC (i.e. high impact) and include the Kidlington Gap and Begbroke Gap; acknowledging that some development may be acceptable where there are special locational advantages that only the Gaps offer (e.g. for the University or inward investment), or where the resultant development does not significantly impact on the integrity of the Gaps or their permanence.

We note that paragraph 1.19 of the draft Plan records the LPP1 Inspector’s advice that Oxford’s unmet need must be considered within the context of a “countywide housing market area”. It is difficult to see the case for the loss of strategically important Green Belt given this context. Cherwell need to repackage and represent the need for a strategic review of the Green Belt and also take a comprehensive approach to include University and inward investor needs given that the prospect of a further Green Belt review is unlikely for a generation.

Reasons for Participation

We confirm that we wish to attend the examination in public.

PR-C-1409 10/10/2017 Richard Cutler Bloombridge Development Partners N Y

Comments

Object to PR8, where exceptional circumstances have not been demonstrated. We note that the evidence supporting the Local Plan 2015 localized review proposed 2.5 hectares (see Appendix 3), but this has now grown to 14 hectares of employment. Paragraphs 5.109 and 5.110 are particular unpersuasive in addressing the exceptional circumstances test – in process terms, putting the vision for development ahead of an evidence-based assessment of this strategically important piece of Green Belt (i.e. ‘cart before horse’), where the impact is acknowledged by LUC as high. Moreover, in terms of the criteria listed at paragraph 5.112, Begbroke is demonstrably not the ‘best fit’ with the County’s Transport Strategy (e.g. Figures 10 and 11). As well as changes to the draft Plan to reduce or remove the residential in the sensitive southern part of this site, the Policies Map should also include the linkage north to Oxford Technology Park proposed by Alan Baxter (Appendix 1, Figure 15.2).

Changes Sought

The proposals for housing development at Water Eaton and Begbroke (PR6 & PR8) either need to be deleted as unsound or modified to include ‘safeguarded land’ for the University or major inward investors, typically 25 to 50 hectares (based on our Arlington experience, for example in relation to the former Regional Investment Sites in the West Midlands RSS). This will have an impact on the housing capacity of these sites.

Reasons for Participation

We confirm that we wish to attend the examination in public.

Comments

Is opposed to the proposed Green Belt allocations mainly because CDC has not proved the exceptional circumstances required to build on a GB, nor has it proved Oxford's "unmet need". Use of the GB for development should be the last resort, if at all. The impact of this proposed "sprawl" on the environment would be massive, with extra cars on roads that are unable to sustain what already exists. This is true also of the existing infrastructure as a whole.

Comments

Objection to Options A and B as National Planning Policy states that a local planning authority should regard the construction of new buildings as inappropriate in GB. The policy lists exceptions but these exceptions do not concur with the exceptions that Cherwell are listing. Limited infilling in villages, and limited affordable housing for local community needs may be acceptable but the proposals put forward by CDC for Kidlington, Begbroke and Yarnton cannot be considered as "limited" and therefore do not meet that criteria. The fundamental aim of GB Policy is to prevent urban sprawl by keeping land permanently open – the CDC proposals would considerably increase urban sprawl - with the villages of Kidlington, Yarnton and Begbroke coalescing and thereby destroying their individual identities. CDC lists "Oxford's urgent and pressing housing need" as an "Exceptional Circumstance for GB development". We accept that there is a need for more affordable housing in Oxford but the figures quoted in the document have been suggested by others as being inaccurate and exaggerated. It is unclear as to which target population this proposed housing is meeting. Ideally it should be for residents who wish to live and work in Oxford. Current stock is already being used by people who commute to outside the area and there is no legislation in place to prevent that. Oxford City Council has not fully explored ALL possible solutions to create more housing within the city. They have shown an unwillingness to build at higher densities and a reluctance to use Compulsory Purchase Orders to acquire land and buildings that have remained derelict or where landowners have resisted requests to release land for building. Given the serious traffic issues that arise from development outside the Oxford city area which is contrary to the requirement of sustainability in the NPPF, it is incumbent on the Oxford City Council to reconsider strategies to satisfy the housing need within its own boundaries before using GB land. CDC lists the "improvement of transport infrastructure in the north Oxford / A44 / A4260 corridor areas" as another "Exceptional Circumstance for GB Development" These routes are already heavily congested and additional housing in these areas will exacerbate the situation. There is insufficient information and data available to show that the County Council's A44/A4260 Corridor Study and its proposals are achievable both physically and financially. It appears to push the traffic and transport problem into other parts of Oxford. It follows from the above that Policies PR8 & PR9 (Development in Begbroke & Yarnton) are Unsound as the sites are in the Oxford Green Belt and the above arguments apply.

Object to PR8 - the addition of 2480 new houses between and around Begbroke and Yarnton; unjustified as it would completely change the separate village setting for ever and overwhelm the existing character of the locality by tripling the current population at the expense of prime Green Belt land which National Government and yourselves have pledged to protect.

Immediately about PR8. Please continue to protect from development the green corridor of the Rowel brook and ancient green Begbroke Lane and the land adjacent Rushy Meadows Site of Special Scientific Interest on the northern side of Begbroke lane. There is still a red line around this area next to the Site of Special Scientific Interest, indicating it is merely not considered at this time, but might be again at risk in the future. Do not accept further renewed applications from developers for this important buffer area, essential for the survival of the biodiversity in the Site of Special Scientific Interest and the thick rich ancient hedgerows along the old green Begbroke lane. The area nearby must remain undeveloped. Begbroke lane is one of the best green walks out from Kidlington that has been enjoyed by my whole family for many years.

Land east of the A44, 1,950 house. Strong objection to this proposed development which destroys GB and closes the whole of the green gap between Yarnton and Kidlington, making one conurbation that will destroy the distinctiveness of the two 'villages' and destroy wildlife. What will be the future for historic, bendy Sandy lane with its ancient thick, richly biodiverse hedgerows within a new residential development? The ancient hedgerows are both habitat and corridors and are not replaceable. This would need protection and preservation as well as appropriate management BUT my observations are that ancient hedgerows ultimately do not survive if adjacent or incorporated into hedges that are part of housing developments. People may have an ancient hedge at the bottom of their garden, but if they don't like it, they remove it and plant what they like, or if they keep it, they may trim it so tightly that its biodiversity suffers. Also strong objection to the transport proposals which include the closure of Sandy Lane to motor vehicles and a site for a railway station near the current level crossing. This cuts off Kidlington from Yarnton and deprives locals of both of one of the nicest green walks out from Kidlington.

<p>It is only necessary to look at the present difficulties being experienced by local residents, due to an already overstretched and struggling infrastructure, to understand the potentially catastrophic problems that are likely to result from such a proposal if it goes ahead and trebles the population of the area. There are basic amenities in Yarnton but to access a wider range of facilities it is necessary to go to a larger centre, the nearest being Kidlington. However, the bus service between Begbroke, Yarnton and Kidlington was withdrawn making it impossible to get to Kidlington by public transport (community bus does the journey once a week). Yarnton surgery was merged recently with two Kidlington surgeries. Appointments in Yarnton are increasingly difficult to obtain. This means a journey to Kidlington which is now difficult for those who do not drive. Some elderly patients have to travel by taxi for their appointments. The popular and well-supported Garden Centre/Restaurant/Shopping Village on Sandy Lane was recently sold and the new owners have offered to sell the site for development should the Plan go ahead. This would remove one of the well-used local amenities within walking distance for a large proportion of village residents. The Plan encourages residents to walk or cycle rather than rely on cars, but in reality this is not practicable as a means of undertaking journeys essential to everyday life for many elderly or disabled residents or those with young families. Indeed even the young and healthy would be unlikely to choose to walk over two miles in each direction to Kidlington for work or to do such things as visit the doctor, go to the bank, have an eye test, buy do-it-yourself materials, attend church, use the sports centre, do a supermarket shop or keep in touch with family and friends in the wider locality. And cycling is simply not a viable option for most people as a means of getting to work or travelling outside the immediate vicinity, except possibly some of the younger residents. Given these current pressures on essential services it is clear that major investment in improved infrastructure and local amenities would be needed to support the scale of developments being proposed. However, the Plan does not put forward realistic detailed proposals and costings to resolve the potential problems.</p>

<p>Impact on Begbroke and Yarnton. Since 1991 Yarnton has accepted a number of new housing developments which have increased the size of the village, but have not significantly altered the essential nature and character of the community. The sheer scale of what is now proposed is hard to comprehend and will completely swamp both villages. How can it be deemed acceptable to locate the largest shared (2,480) of Cherwell's allocation of Oxford's alleged unmet housing need (4,400) within the boundaries of such small communities? The two villages will be trebled in size, and the new developments will straddle the Parish boundaries both east and west of the A44, thereby removing the separation between Yarnton and Begbroke, along with their separate identities. The density of the new housing in PR8 is 45 houses per hectare, more than double that of the most recent development in Yarnton on Cassington Road, where Cherwell only gave planning permission on the condition that the number of houses on the site must be restricted to prevent over development. The three-storey blocks of flats on the Cassington Road development are an eyesore and dominate the entrance to the village from the A44 at the Turnpike roundabout. They are completely out of character for such a village. If the new proposal goes ahead with much higher densities, it will completely alter the rural character of the villages of which it will clearly be part. The Plan states that in the PR8 site "there is a clear opportunity to create a very distinctive place and community" (p. 118/5.109). It is obviously envisaging something akin to a University campus around and to the south of the Science Park, which will be autonomous and separate from its surroundings. But since there is no mention of any separation between the new development and existing houses in Yarnton, this does not seem possible. In order to achieve this aim a much larger site away from existing communities would be needed that would afford proper isolation and separation. What is much more likely to be created is a vast expansion of the existing communities. This will alter irrevocably the nature of the communities around the A44 in this area. There will also be very little remaining of the current green buffer between the two villages and their larger neighbour Kidlington. In effect the proposals will create a single large urban area comprising the new high density developments of PR8/PR9, Yarnton, Begbroke, and Kidlington, which will in turn be joined up with the proposed developments around the new Oxford Parkway station on the northern outskirts of Oxford. Has any consideration been given to the new identity of the conurbation that will be created and what measures will have to be put in place for it to work at all, let alone satisfactorily? And which Parish Council will be responsible for the various parts of the new development?</p>

<p>Impact on Begbroke and Yarnton. The proposed development of a 'new urban neighbourhood' on the land east of the A44 [Policy PR8] and the 'village' extension to Yarnton [Policy PR9] is not appropriate given the existing numbers of houses in Yarnton and Begbroke. This will mean trebling the size with the coalescence of the villages and the loss of identity, character and setting of these historic sites. With the proposed creation of an urban sprawl, also joined up with Kidlington, and no significant green spaces between these existing villages, the result would be a huge and dense population the size of a town. The density of the proposed housing development is far too high and would be inappropriate in a 'village' setting with the existing communities. It seems little consideration has been given to the health and wellbeing of the residents who would have to live in these high density developments, with very little space allocated to individual residents or to families. Green space is important for a healthy population and especially for children. With food shortages looming in the future as populations increase, we will all have to have gardens big enough to grow our own vegetables and fruit in order to be able to survive. I therefore cannot support the plans.</p>

4601	Comments					
<p>The Details of this development have recently been used for the update of Cassington's SOLAR. This growth potential, coupled with the other developments both with Cherwell & West Oxfordshire indicate that this site would be under capacity should all these developments proceed as planned. However, there are larger sites in the area, such as Witney and Oxford STWs that may be able to accommodate the growth. Once the housing requirements and strategy of the LA's and TW are clearer, then this SOLAR is recommended to be updated to reflect the most up to date plans. The wastewater network capacity in this area is unlikely to be able to support the demand anticipated from this development. Strategic drainage infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of the development. Where there is a wastewater network capacity constraint the developer should liaise with Thames Water and provide a detailed drainage strategy with the planning application, informing what infrastructure is required, where, when & how it will be delivered. Thames Water advise that this development site could potentially drain to either Oxford STW or Cassington STW depending on the point of connection. The scale of this development would require a strategic solution & total development identified in the Kidlington area within the Cherwell development plan may cause concern if all developments were to go ahead. Thames Water would welcome early consultation concerning any proposed development. There are existing sewers or rising mains crossing this site and where there is no practical way of their being diverted the stand off distances tabulated in the Sewers For Adoption 7th edition will be applied to assess the width of easement required.</p>

Proposed Submission Plan - Policy PR8 - Land East of the A44

PR-C-1455	10/10/2017	Nicky	Brock	Carter Jonas on behalf of Mr M Smith and Mr G Smith	Y	Y	Y	Y
5202	<p>Comments</p> <p>This submission relates to land east of the A44, Yarnton which is located at the southern end of the proposed allocation; Policy PR8 - Land East of the A44 Proposed Urban Neighbourhood. The land is owned by Mr M Smith and Mr G Smith. The land is in agricultural use and it extends to some 11.81 hectares and is outlined in red on the attached plan. The Proposed Submission Partial Review proposes to deliver 4,400 new homes within seven residential development areas. Paragraph 8.60 states that delivering all 4,400 homes, or significantly more, in close proximity to Oxford and the villages of Kidlington, Begbroke, Islip and Yarnton will ensure that the new homes are located in areas with good access to medical services and open spaces for recreation. This approach is fully supported. Development of the land identified at Policy PR8 is a logical urban extension to the settlement in a location which is sustainable being located only a short distance from Oxford, from where the housing need arises. The development adjacent to the Begbroke Science Park will further support the sustainability of the site from the perspective of residents having the possibility of living and working in close proximity. The allocation of a strategic allocation brings with it a range of benefits including the ability of large scale development to delivery infrastructure such as schools and other facilities that might otherwise be unviable through a number of smaller developments to achieve the same housing need. Mr and Mr Smiths' land abuts the A44 to the west and as such Glanville Consulting have assessed the deliverability of an access from the allocated site onto the A44. They have concluded that an access onto the A44 would be deliverable and depending on the design of the site and how much of the allocation it serves will determine the access solution. A junction design could range from a left in left out junction to traffic lights or a roundabout. The exact solution will be a matter for discussion with Oxfordshire County Council as highway authority once the function of the junction is further understood. High level drawings showing how a left in left out option or a roundabout could be accommodated on the A44 frontage accompany this submission. The site is available and deliverable within the next five years. Map attached.</p> <p>Changes Sought: None</p> <p>Reasons for Participation: To support the Council in the allocation of the site.</p>							
PR-C-1457	10/10/2017	Barry	Orton		N	N	N	Y
4621	<p>Comments</p> <p>Believes that Cherwell District Council would fight to preserve GB around Oxford to prevent the areas of PR6a, PR6b, PR8 and PR9 ever being developed. Moved to village of Yarnton to be part of a typical English village community but now appears that, if not stopped, developers will be given carte blanche to turn a crucial part of beautiful Oxfordshire countryside into yet another amalgamated housing estate. Traffic chaos will on A44 by expansion of Begbroke and Yarnton, combined with additional houses at Woodstock and ludicrous proposal to close Sandy Lane to through traffic, will have a devastating effect on the ability of residents and others to use the A44. Majority of people using A44 do not want to cycle to Oxford and the a super cycle way or bus lane would not alleviate the misery. Bitterly oppose the digging up of the historical North Oxford Golf Course (PR6b) for low density, highly priced housing aimed at London commuters – an act of vandalism to a wonderful local amenity which will not help resolve Oxford's low-cost housing shortage. It would be a tragedy for members and visitors, and local people who have access to wander through the beautiful parkland established over 110 years. Cherwell D.C. appear to offer an alternative site PR6c clearly knowing that it would not be acceptable to a golf course developer and would never be recreated. The questions around this proposal are:(a) Why does Cherwell D.C. not offer up PR6c for housing as it is only yards away from the existing club?(b) Why does the city not build its houses on the city's golf (Southfield) course – i.e. on the land it owns and which is ideally suited to higher density housing and in an area of greater need? Why doesn't the Council use its powers of compulsory purchase to acquire the under-used golf course at ST Edward's School or a number of the many under-used college sports grounds, reserved for the rich and academics? This once again shows the stranglehold the University has on Oxfordshire residents. For the reasons given above and the Representations made by the Begbroke & Yarnton Green Belt Campaign which are supported and adopted as part of my own representation in this document, the Plan cannot be changed to make it legally compliant or sound and should therefore not be submitted for Inspection.</p> <p>Changes Sought:</p> <p>Reasons for Participation: Would like the Begbroke & Yarnton Green Belt Campaign to represent me at the Examination should it take place.</p>							
PR-C-1474	10/10/2017	Leslie	Allen				N	Y
5199	<p>Comments</p> <p>"Proposals to develop on Green Belt and misleading statistics relating to the scale of loss of green belt. The Green Belt was set up to prevent urban sprawl, protect open spaces and preserve identities of communities. These proposals directly contradict this requirement and are therefore against national policy. Figures show that the PR08 alone removes at least 50% of the green belt associated with that site, while the development of site PR09 removes a further 16%. Both sites form part of the green belt so development is against national policy and there is no special circumstance for doing so. The statement on page 31 of the summary booklet that the reduction is only 3% is totally misleading as it fails to recognise the impact at local level and is therefore unsound. According to the maps available, the gap between Yarnton and Begbroke will reduce to about 1/5th of its current size i.e. tens of metres rather than hundreds."</p> <p>Changes Sought:</p> <p>Reasons for Participation: Wishes to participate in the oral examination</p>							
PR-C-1482	09/10/2017	Chris	Dicks		N	N	N	Y

This response though separate and my own should be read in conjunction with the Representations made by the Begbroke & Yarnton Green Belt Campaign "BYG".</p> <p>Changes Sought: For the reasons I have given AND the Representations made by the Begbroke & Yarnton Green Belt Campaign which I additionally support and adopt as part of my own Representation in this document, the Plan cannot be changed to make it legally compliant or sound and should therefore NOT be submitted for Inspection.</p> <p>Reasons for Participation: I would like the Begbroke & Yarnton Green Belt Campaign to represent me at the Examination should it take place.</p>							
PR-C-1484	09/10/2017	Nicole and Eugene	Brooks and Griffin				N	
4653	<p>Comments</p> <p>Object – Land East of the A44 Do not consider the proposed submission plan to be sound and do not see any valid reason for exceptional circumstances to justify removal of green belt land in the area. The report that Oxford's unmet housing need is as high as stated in the plan has been thrown in to doubt with conflicting reports, and that new Government targets are significantly lower than this plan is based on. The plan is unsound and unjustified. It is being rushed through and not based on accurate figures. The proposed plan for improving infrastructure in the area to support this level of development is nowhere near realistic on a physical or financial basis. It does not begin to address the problems that will arise in this area. The proposal of closing the road between Yarnton and Kidlington is not justified at all. The plan is unsound as the need has not been thoroughly assessed or understood and no effective solution has been put forward. There is no justification for removal of green belt land in this area based on these proposals.</p> <p>Changes Sought:</p> <p>Reasons for Participation:</p>							

Page 2404

Proposed Submission Plan - Policy PR8 - Land East of the A44

PR-C-1490	09/10/2017	Ian and Helen	Kingsley			N	N
4679	Comments Objection of Policy PR8 Strongly object to the development proposed which will have an adverse impact on Kidlington by blurring the separating land between Begbroke. The two villages will no longer be considered independent. This, we believe, conflicts with CDCLP objectives. We believe this is solely a way to expand the Begbroke Science Park which conflicts with spirit of the original plans for the Science Park. What are the net biodiversity gains? The area is already Green Belt land and as such already provides the advantages the policy promises.						
	Changes Sought			Reasons for Participation			
PR-C-1501	09/10/2017	Cherry	Brougham				N
4716	Comments Concerned that the transport proposals are unposted and unfunded and therefore only aspirational. No development should proceed until the appropriate transport infrastructure has been costed, funded and firmly programmed. Also, to close Sandy Lane at Yarnton would effectively cut off PR8 from Kidlington, the nearest centre.						
	Changes Sought			Reasons for Participation			
PR-C-1502	09/10/2017	Henry	Brougham				
5131	Comments Incorrect consultation form used. Comments relate to proposed submission plan. Changes are required. The housing densities of sites PR6-7 are very low. A considerably smaller land-take could take 4,400 dwellings at urban densities. PR6a and PR6b should be removed from the proposals as their development would all but eliminate the 'Kidlington Gap'. PR6c should be used for housing instead of replacing the current golf course - it is close to the Northern Gateway. At appropriate densities PR7a & b, plus a greatly reduced PR8 and 9 could take the 4,400 dwellings.						
	Changes Sought			Reasons for Participation			
PR-C-1508	09/10/2017	Alan	Graham			N	N
4746	Comments Policy PR8 - Begbroke Expansion (land to the east of the A44)The development of this site for 1950 dwellings effectively destroys the gap between Kidlington and Yarnton/Begbroke. This brings about a virtual coalescence of settlements and runs completely contrary to the objectives of the Green Belt. The size of this allocation is a new community in its own right, as the population would be in the region of 5000 people and should contain a full range of services including new schools as well as a neighbourhood centre. What is effectively a new settlement should be located elsewhere and not within the Green Belt, tacked onto existing communities. If this development goes ahead it will almost certainly have a negative impact upon Kidlington Village Centre and therefore acts as contrary to Policy PR4b. An element of the proposed development is to close the vehicular access between Yarnton and Kidlington along Sandy Lane. This is the major link between the two communities and its closure will ensure there is little use made of the Kidlington Village Centre. However, retention of this link is inappropriate for this level of development because of the nature of the road itself and if it were to be improved the additional traffic generation through the built up area of Kidlington, for example Yarnton Road, would be to an unacceptable level.						
	Changes Sought			Reasons for Participation			
PR-C-1514	10/10/2017	Councillors Neil Prestidge and Maurice Billington	Prestidge and Billington				N
4768	Comments We consider that the development proposed is too big for this site, this development will destroy the open space between Kidlington and Begbroke reducing the green belt to a meaningless scale. In all the studies that have been completed this area of green belt has been identified as high value, reducing it this much would have an extremely detrimental effect on bio-diversity and habitats in the area. The size of this development would bring Begbroke close to Kidlington that it would seem to be joined, this is a direct contradiction to the already adopted Cherwell Local Plan. We are concerned that this will become a free-standing development and will not be integrated with Kidlington or Begbroke. The proposed development is of a size that is going to be given its own centre, given its proximity to Kidlington Village Centre it would be in direct competition. At the moment, a large number of people from Begbroke and Yarnton use Kidlington Village Centre, if there was direct competition from this new centre, this would bring the viability of Kidlington Village Centre into question. We are also concerned about the proposed closure of the Sandy Lane Link Road, this is a vital road that connects Kidlington with Yarnton and Begbroke. If this road was closed then it would affect the viability of Kidlington Village Centre. We urge the council to conduct a more detailed assessment of the benefits and problems that the closure of the road would bring, and to investigate traffic management schemes if this road were to be kept open.						
	Changes Sought			Reasons for Participation			
PR-C-1521	09/10/2017	Alaric	Rose				N
4788	Comments Strong objection to this proposed development which will have a hugely adverse impact on the separate identity of Kidlington, which has led the approach in the development of the Adopted Kidlington Masterplan and is confirmed as important in the adopted Cherwell Local Plan. Cherwell Local Plan 2011-2031 Policy ESD 14 aims to prevent the coalescence of settlements and has a strong role in preventing the coalescence of Yarnton, Begbroke and Kidlington. It will also eradicate the open landscape character of the setting of both Begbroke and Kidlington, and reduce to a meaningless scale the GB in this area. The parcels of land to be developed include land which is rated as of high importance in the GB Studies, where in principle new development is unacceptable. The minimal separation distance between Kidlington and the expanded Begbroke will not prevent intervisibility and a perception of coalescence, contrary to the clear objectives of the adopted CDCLP. There is substantial concern that the development would neither be well integrated with Kidlington, or constitute a genuinely free standing village, due to its proximity and intervisibility. The proposed gap between Begbroke and Yarnton will be reduced to 50m in this plan. The proposed scheme is of a scale which warrants its own new centre, but is so proximate to Kidlington Village Centre that it will also act as a competitor in providing local services, and thus undermine the published commitment to investment in this established centre. This matter does not appear to have been considered in developing the strategy. Cherwell is asked to undertake an urgent assessment of the impact of this substantial allocation on the vitality and viability of, and improvement strategy for, Kidlington Village Centre. A Policy should be developed which promotes and secures investment in the Village Centre if the scheme goes ahead, and this needs to be reflected in the Key Requirements list in the Policy. Concerns about the proposed closure of Sandy Lane. This currently provides a much valued westward link from Kidlington to Begbroke, linking the communities. It is appreciated that if kept open it could provide an undesirable rat-run for traffic from the new development, adding to traffic congestion in Kidlington, but it currently enables Yarnton and Begbroke residents to make use of the Village Centre amenities, and thus support the wellbeing of the village. A more detailed assessment of the benefits and problems of the proposed closure is required, including mitigation to prevent the possibility of leading to rat-runs. If adopted, the Policy should be extended to require substantial investment in offsite transport infrastructure, by reference to Policy PR4a. Without this, it is unlikely to be sustainable and will add to local congestion.

Cherwell District Council's Partial Review of it's Local Plan to 'Meet Oxford's Unmet Housing Need is UNSOUND.

1. It's completely ignores the consequently impacts of Oxford City's new Local Plan, which is still in the "melting pot," and yet to be determined. It does not show a duty to co-operate, quite the reverse. This is significant because these two plans need to work together, not in isolation.

Otherwise, Oxford and the setting of it's immediate northern communities could lose even more protected Greenbelt land than so far proposed.

The sheer scale and amount of Greenbelt proposed for removal is breath-taking and totally in contravention of National Planning Policy Framework, Paragraphs 79 and 80, which define the need and purpose of Green Belts. Cherwell District Council are paying only "lip-service" to the detrimental consequences. This is not acceptable. To claim the amount to be removed is only repents 3% is a very misleading distortion, because the locations identified, PR6b, PR6a, PR6c, PR8 will completely "strangle" north Oxford and are unsustainable. The consequences of what clearly will be a very significant additional spread of - urban sprawl - have not been evaluated effectively.

IT IS IMPORTANT TO RETAIN THE PRESENT GAP BETWEEN KIDLINGTON AND NORTH OXFORD. IT IS IMPORTANT TO STOP URBAN SPRAWL TO PRESERVE THE OPEN INTEGRITY AND SETTING OF CUTTESLOWE PARK.

2. The Plan is NOT POSITIVELY PREPARED.As already mentioned, the number of houses on the sites mentioned above, are unsustainable, and contrary to Cherwell's own Summary Document page 4, they will do exactly the opposite to "limiting Oxford's Outward Growth." Indeed, this will, propel further 'ribbon development' in the future. The Plan is deeply "flawed," there is no mention of how it will safeguard and aid the needs, environment,and access to free-movement of present communities, adjoining the A4165, from the Cuttleslowe roundabout to the Kidlington roundabout by bus, car, cycle or on foot, the same applies across the Wolvercote area to the west end boundaries, where the ultimate impacts of development at the Northern Gateway, Barton Park (further to the east) is as yet unknown. To suggest it meets with the Country Council's Oxford Transport Strategy, is a misnomer, because this strategy is not sufficiently robust to deal with present excessive traffic congestion and health damaging pollution. Further more it is reliant on speculative funding, which may never arrive. TheLink road from Loop Farm A40 to A44, has been promised, but the funding is not in place. The congestion on the A40 is unsustainable and a northern link road is needed north of Kidlington to relieve the over-whelming volume of traffic. Travel from the Park and Ride designated for Eynsham, will be constrained by the reduced width of the bridge on the approach towards the Wolvercote roundabout, so traffic coming to Oxford will remain at a standstill. It is regrettable that the County Council policy has cut bus services from villages, whom also need access to employment, perhaps if some of these villages were a little larger, bus services might be more sustainable?According to Cherwell District Council's Local Plan Summary Document:-It will create balanced and sustainable communities? NO! It will overwhelm north Oxford and Kidlington.It will be supported by necessary infrastructure? NO! No concrete evidence to deal with existing infrastructure, let along any new infrastructure. It will contribute to improving health and well-being? NO! It will increase detrimental health of existing residents in northern Cuttleslowe, north Oxford, Wolvercote and Kidlington. Traffic will be at gridlock all day, everyday, pollution all day, everyday at EXCESSIVE LEVELS in addition to present Oxford Air Quality, non- compliance. Elderly crossing the road or accessing the shops in our area will find it completely impossible.

Changes Sought

Remove the need for affordable housing, because, there is no way it will be affordable next to northOxford. Be honest with people, tell them their lives in Kidlington and north Oxford are to be blightedwith complete traffic gridlock and damaging vehicle pollution.Be legal by NOT destroying Greenbelt land next to Cuttleslowe Park, The Golf course, (an essentialrecreational resource currently), and stopping coalesce with Kidlington and north Oxford.

Reasons for Participation

Believes, with respect, the Inspector would much benefit from really listening seriously to ordinary people, regarding the very real experience and particularly genuine concerns of how these 'grand proposals' to 'illegally' destroy all the immediate greenbelt land around Kidlington and north Oxford, will have a completely devastating impact on the lives, health, well being and free movement of wellestablished existing communities.

PR-C-1535	10/10/2017	Layla	Vidal-Martin	Lichfields on behalf of Taylor Wimpey (Oxfordshire)	Y	Y	N	Y
-----------	------------	-------	--------------	---	---	---	---	---

Comments

Taylor Wimpey (TW) considers the Submission Plan is not sound as it is not "justified" or "consistent with national policy". This is because : 1. CDC acknowledge (Submission Plan Executive Summary para XV) that "under national policy Green Belt boundaries should only be altered in exceptional circumstances through the preparation or review of a Local Plan". The Submission Plan (para 5.17) sets out why CDC consider that exceptional circumstances exist for the release of these sites from the Green Belt & their allocation for residential development. TW contend that CDC have not thoroughly explored "all other reasonable options" &, where they have sought to do so, there are flaws in their evidence base (regarding their assessments of sustainability, transportation & alternative development locations). They have not demonstrated the "exceptional circumstances" required for the proposed release of the sites identified in Table 1 from the Green Belt; 2. CDC's approach is predicated on an assumption that "Oxford's Housing Needs" form a bespoke & identifiable source of housing need. This conflicts with the recognition in the Oxfordshire SHMA (2014) (para 9.2) that "the SHMA identifies an Oxford-focused Housing Market Area which extends across much of the County, reflecting the economic influence of the City. The county still remains the most appropriate geography for analysis of housing markets in terms of the 'best fit' of local authority boundaries to a functional housing market area." More recently the Inspectors Report into the Vale of White Horse Local Plan emphasised that (para 45) "it is not the role of, or possible for, the plan to prescribe where people live and work;" and; 3. CDC compound this assumption (Policy 12a) by seeking to pursue a "separate five year housing land supply . . . For meeting Oxford's needs." This, in conjunction with proposals not to support Sites Not Allocated in the Partial Review (policy PR12b) are not consistent with the NPPF's presumption in favour of sustainable development & risk substantially harming housing delivery in the District in the coming years. Scope of response (See Detailed 4 Section Report). This response amplifies TW's concerns regarding the soundness of the Submission Plan, & their view that their site at Bloxham (Site PR35) forms a "reasonable option" for residential development prior to the release of the proposed allocations from the Green Belt. Specifically • Section 2: Summarises the appropriateness of residential development on the TW site; (Section 2 encloses * Sustainability Analysis by Calibro, * Residential Potential of Site, * Assessment of site against constraints, * SHLAA Analysis) • Section 3: Summarises TW's concerns regarding the inadequacy of the evidence base, whilst emphasising their support for the level of residential development proposed. This underpins their contention that the Submission Plan does not establish "exceptional circumstances" for the proposed release of these sites from the Green Belt; • Section 4. Sets out TW's comments on emerging policies and the changes that they consider are necessary to make the plan sound.

Changes Sought

The Plan proposes that around 55 % of the housing proposed should be targeted within the Green Belt (GB). Para 3.26 "approximately 14 % of Cherwell lies within the Oxford GB". Thus CDC need to demonstrate "exceptional circumstances" as to why this housing cannot be located within non GB locations comprising 86 % of the District. We do not consider that CDC have appropriately addressed "reasonable alternatives" & therefore cannot be considered to have demonstrated "exceptional circumstances" for the release of all of these sites from the GB. * Combined with the inadequacy of the evidence base, these concerns are amplified by the fact that the Submission Plan appears to prejudge the proposed development strategy irrespective of the evidence base. This is reflected in the fact that the (Executive Summary para xiv) states that the Plan "focusses development on a geographic area extending north from Oxford to south Kidlington, along the A44 corridor" & earlier iterations of the evidence base acknowledged that only sites within two of the nine areas of search have been assessed, * Conversely TW have established that the TW site at Bloxham does form a "reasonable alternative" for development within a sustainable location which is capable of meeting housing need. This is consistent with CDC's analysis within the HELAA (albeit that TW's technical analysis is that the site is capable of accommodating a higher level of residential development). * Accordingly the TW site should be allocated for residential development (under this or an additional policy) prior to CDC moving on to consider the need for any Green Belt release. * Without the amendments sought above our clients do not consider that the Submission Plan can be considered "sound", particularly with regards to being "positively prepared" or "justified."

Reasons for Participation

We consider it necessary to participate at the part of the Examination to amplify the concerns and points raised within the representations.

Proposed Submission Plan - Policy PR8 - Land East of the A44

PR-C-1539	10/10/2017	Tim	Emptage							N
4837	Comments									
Objects to development on PR8 - This very large development of 1950 houses will result in the communities of Begbroke and Kidlington losing their individual identities as they virtually merge with only a very small green gap of about 100 metres between them. It is totally contrary to the Kidlington Masterplan, adopted in 2016, which seeks to strengthen the separate identity of Kidlington. In addition, the Cherwell Local Plan 2011-2031 aims to prevent the coalescence of settlements such as Yarnton, Begbroke and Kidlington. Should the development proceed then it is essential that Sandy Lane be closed as it would be totally unable to accommodate the massive increase in traffic that would inevitably result. The location of the level crossing and the narrowing of the lane at the hump-back bridge over the canal would cause considerable tailback of traffic totally inappropriate for such a small lane.

5283	Comments									
Edgars object to PR8 on the basis that the proposed strategy is not justified or effective for omitting to allocate land at 14-16 Woodstock Road which will be required to ensure the robust delivery of the unmet housing needs of Oxford whilst also safeguarding the long term expansion potential of Begbroke Science Park. Detailed justification and site description for 14-16 Woodstock Road, Yarnton included in rep.										
Changes Sought					Reasons for Participation					
Edgars object to PR8 on the basis that the proposed strategy is not justified or effective for omitting to allocate land at 14-16 Woodstock Road, Yarnton which will be required to ensure the robust delivery of the unmet housing needs of Oxford whilst also safeguarding the long term expansion potential of Begbroke Science Park.					Mr and Mrs Tomes have (and land under their control at 14-16 Woodstock Road, Yarnton. This land falls with plan proposal PR3a and adjoins plan proposal PR8. As such Mr and Mrs Tomes have a particular interest in the plan and reserve the right to participate at the oral part of the plan examination.					

PR-C-1622	09/10/2017	Andrew	Hornsby-Smith	Kidlington & Yarnton Labour Party		N	Y	N	Y	
5535	Comments									
Kidlington & Yarnton Labour Party acknowledges the real housing need for Oxford. It is not convinced that the need is for 4,400 houses to be built in Cherwell District. It opposes the allocations in the vulnerable Kidlington gap (proposed policies 6a, 6b), which it believes will mainly be used by London commuters rather than meeting local need; and by the size of the allocation made between Kidlington and Yarnton (Policy PR8). It considers that there are less harmful alternatives available at Gosford (the area allocated for playing fields in Policy PR 7a and at Stratfield Farm, Policy 7b). It also believes that land at Frieze Farm and close to Loop Farm offers alternatives that are closer to the Northern Gateway employment site and less damaging to the open countryside between Yarnton and Kidlington. It considers that the North Oxford Golf course provides an important Green Belt friendly amenity, and that the need for additional playing fields could be met south of the Park & Ride. It is concerned to ensure that the County Council develops additional Park & Ride capacity east of Kidlington, where the traffic impact would be less damaging than an extension at Water Eaton Park & Ride. It would support the provision of a railway station on the Cherwell Valley line, but not at the proposed location at Sandy Lane, but closer to the airport, Langford Locks and Lyne Road (for the benefit of Kidlington's residents). We are concerned that at each of the main allocations, an unreasonably high level of land has been extracted from the Green Belt, which we believe will lead to future speculative development that will be difficult to resist.										
Changes Sought					Reasons for Participation					
Opposes policies 6a, 6b. There are less harmful alternatives available at Gosford (the area allocated for playing fields in Policy PR 7a and at Stratfield Farm, Policy 7b); and by the size of the allocation in policy PR8.					I have spoken as a platform speaker at three public meetings in Kidlington and Gosford. I made a substantial representation at the Issues and Options stage. As a former parish councillor, I represented Kidlington Parish Council at the North Oxford Area Action Plan examination in public, and likewise was invited to the Examination in Public of the Local Plan. I have an MSc in Transport Planning, so part of my representation covers that area. I also offer a distinctive perspective as a local resident, who agrees with the principle of a Green Belt review, but does not support the current planned site allocation. I have no interest in promoting a particular site, but only have some sympathy with those who would wish to preserve the Green Belt intact. I believe my views represent many in Kidlington who recognise the need for local housing, but see these plans as strategically unacceptable. My representation contains primary research evidence which I would wish to represent.					
Land at Frieze Farm and close to Loop Farm offers alternatives that are closer to the Northern Gateway employment site and less damaging to the open countryside between Yarnton and Kidlington.

Proposed Submission Plan - Policy PR9 - Land West of Yarnton Road

PR-C-0003	24/07/2017	Julie and Albert	Nutbrown							
3	Comments									
Protesting against plans to build 4,400 new houses on GB around Begbroke and Yarnton. It seems GB does not stand for anything anymore. All wildlife habitat will be destroyed. A thriving bat population will go. A40 traffic is horrendous now what will another 8000 plus cars create, plus the pollution. The Oxford's unmet housing need has nothing to do with CDC so not on our GB.

Proposed Submission Plan - Policy PR9 - Land West of Yarnton Road

PR-C-0022	27/07/2017	Pauline	Brown						
27	Comments								
<p>1. The proposed transport infrastructure would be insufficient to support such an increase in households, not only from these two projects but also Long Hanborough and Woodstock. It is disingenuous to suggest that an introduction of a new bus lane and P&R, would be sufficient, after we tolerated 18 months of inconvenience while improvements were made on the Pear Tree and Cuttleslowe roundabout and there are sometimes long delays during rush hour. 2. The proposed bus lane and P&R are dependant on a new bridge being built across the canal. 3. Sandy Lane becoming an pedestrian / cycle route means that the less physically able in Yarnton and Begbroke will be forced to drive further to reach Kidlington. 4. Flood plan required to alleviate the danger of the canal flooding. 5. Plan virtually joins all three villages together resulting in loss of villages identities and faceless urban sprawl. 6. Major employers in Oxford are mainly in the south and east of the city, so why are you proposing to build so many houses to the north?. Has consideration been given to brownfield sites like large amount of land behind BMW and the Oxford Brookes Wheatley Campus? 7. Consideration will need to be given to the impact on wildlife, e.g. a bat colony on Spring Hill. 8. Why should Cherwell residents be expected to bear the brunt of Oxford City's housing needs? People who live in a rural community do so because they value that way of life and should not be forced to become urban dwellers.</p>

PR-C-0024	27/07/2017	Stewart	Mitchell						
29	Comments								
<p>The Council should study a published report by Ian Mulheirn which questions housing shortages. Objection 1. Loss of GB for future generations. Currently open countryside is a few minutes away, a car journey will be needed if the proposals go ahead. Objection 2. Traffic. More traffic will make commuting to work by bicycle far more dangerous. Crossing the A44, due to sheer volume of current traffic is challenging. These proposals along with CDC's plans for Woodstock development would make crossing the A44 safely virtually impossible. Objection 3. Fields around Yarnton, Begbroke and Kidlington are known to flood, especially west of the A44 between Begbroke and Yarnton. The CDC has the power to agree or disagree with the developer's submitted flood strategies. Nothing less than a flood relief channel such as planned in Oxford will suffice. In and around Yarnton, after periods of sustained rainfall the ditches fill up and the sewage system backs up, to the point where we cannot flush our toilets. It takes several days for these ditches and drains to be pumped out.</p>

<p>A key foundation of the Plan is that its intention is to meet Oxford's unmet housing need. However, little consideration seems to have been given to the significant risk that a proportion of this housing is likely to be occupied by people working in London. Since the opening of Oxford Parkway station, there has already been a notable influx of individuals who choose to live in the settlements north of Oxford and commute into London. This is evidenced by the major inflationary impact that the creation of the station has had on house prices. While this has seriously affected the affordability of housing for people who work in Oxford and the local area, it is still very affordable by London standards. Fear that we will be destroying our Green Belt for the sake of London's unmet affordable housing need. Therefore, the Plan is neither justified nor effective and thus is UNSOUND. No consideration seems to have been made to the effect, particularly of Policy PR9, on through routes within Yarnton. Rutten Lane is already used extensively as a cut-through from Cassington Road to the A44. The volume and speed of vehicles along this road puts the children using the preschool, school and park, the elderly living in the residential home and everyone going to the social club and doctor's surgery at risk. This will only get busier with the expansion of the village, thus putting these most vulnerable groups in our society in even greater danger.</p>

<p>Object most strongly to the proposals because. 1) The proposed development site lies wholly within the green belt and will cause yet more erosion of this valuable asset. There has been significant development in recent years in many different areas of Yarnton village in areas which had a very rural character, for example in Cassington Road, Yarnton and in Sandy Lane, Yarnton. Further development would be much better suited to areas which have a less rural character, where the size of the development would not have such a detrimental effect to the surrounding area. Why are the "Brown Field sites" within the Oxford City area not being considered for this development? 2) In Sandy Lane there have been regular problems with flooding and with the proposed 1950 additional dwellings producing land cover of yet more concrete and tarmac this is likely to exacerbate the problem of flooding during wet weather. This is likely to particularly affect the properties immediately opposite the Garden Centre and in the new development further up the lane which are below the level of the lane itself. 3) We are given to understand that there is a proposal to close Sandy lane at the level crossing which will incur additional mileage for the residents of this lane and the residents of the Northern end of the village of Yarnton to access our natural shopping area (Kidlington) with the additional pollution that this will generate. 4) Traffic has noticeably increased on the A44 in the last few years and with the large development both east and west of this road traffic will increase further with long queues producing even larger amounts of pollution, particularly during the rush hour periods. The six weeks given by Cherwell DC for deliberations over this development if far too short and is during the holiday period when a lot of people will be away.</p>

<p>Paragraph 3, potential to expand William Fletcher School. Why is this necessary when Policy PR 8 at paras 4 and 5 clearly state the intention to build two primary schools to accommodate the additional number of children of primary school age generated by the proposed housing. What thought has gone into the effect that additional transport to and from William Fletcher School at peak times will have on residents living in or adjacent to Rutten Lane. Neighbourhood Policing are constantly being called to resolve very serious parking issues caused by the existing number of vehicles delivering or picking up children. To increase the pupil capacity of William Fletcher School will exacerbate these issues even further. Could it be that having extended WF School to accommodate some of the children from the proposed new housing, one of the proposed new primary schools will not be built at all. Thereby heaping more pressure onto existing Yarnton residents and resources. General:</p>

Absolutely object to this development, particularly PR9 and PR8. I choose to live in a small village and this development will destroy 3 villages and merge them into one, destroying the communities in them and losing their unique characters forever. The road network around these villages is a nightmare and traffic is regularly unable to flow freely in and out of the area; this development will only make it worse. The GB should be protecting land from this kind of development.

Objection in every possible way. It could not possibly achieve its alleged objective of providing affordable homes for workers in Oxford. It is too big and in entirely the wrong place. Building on GB is not consistent with National Policy, nor consistent with Cherwell's Local Plan approved in 2015. (see Policy ESD 14: Oxford GB). It is Not Justified as it meets no needs within Cherwell but is designed solely to meet Oxford City Council's alleged "unmet housing need". Oxford's demands are based on out of date figures taking no account of changing factors, including likely outcomes of Brexit. The expected new method will result in a significant reduction in the figures for both Oxford City and Cherwell District. In recent correspondence with the leaders of both Councils have been blithely told that the figure can be easily re-inflated, to all for "expected economic growth". Oxford City Council could meet its own housing needs by prioritising housing for its existing residents over greedy expansionism. Cherwell District Council has acted hastily and disproportionately, before the real future need is clear. The "duty to co-operate does not oblige Cherwell to provide a dormitory for Oxford's expansionist plans. It is not a duty to comply with inappropriate demands. Particularly when destruction of the GB is involved. This area of GB fulfils every purpose for which the GB was designed. It was intended to have permanent status, giving a clear city boundary and preventing urban sprawl. Environmental damage, and that to the quality of life for all concerned, would be immeasurable and irreversible. The plan is unsound and not effective - the sites either side of the A44 around the villages of Begbroke and Yarnton are regularly flooded rendering it entirely unsuitable for major development. Existing traffic problems would be exacerbated. Roads are already struggling/ regularly congested. Suggested plans for addressing these problems are unrealistic. Transport problems rely heavily on people leaving their cars at home and either walking, cycling or going by bus - unlikely scenarios. The vague idea of a new rail link appears to be unposted and fantastical. Banbury and Bicester already have direct rail links to Oxford. New employment opportunities should be located near to Bicester where there is already more housing than work - thus reducing commuting. The Plan is Unsound in terms of the Environmental Damage it would cause - it is wholly disproportionate and ill-conceived. It would engulf the villages of Begbroke and Yarnton producing a shapeless conurbation with no separation from Kidlington. Historical distinctiveness of villages would be destroyed and surrounding countryside consumed. These fields are currently productive agricultural land, and home to a rich variety of wildlife. Enjoyed by many, both local and from further afield. Green spaces would be reduced to a pitifully narrow strip. There is much anger and dismay that such a plan could ever have been considered.

The proposal for 1950 dwellings and schools on land to the east of the A44 (and 500+ to the west of the A44) is unsustainable with the current road system and a potential further 3,500 cars trying to access on to the road - especially if it becomes a single carriageway with a dedicated bus lane.

Object to Cherwell having to meet the 'requirement' for housing for Oxford City when there are possible brownfield sites available: land behind BMW works, East of Summertown, along Marston Ferry Road. Also around North Hinksey village, north of Botley Road, Southfield Golf Course and the current Pear Tree site if and when that was to be moved. Why was Oxford Brookes University allowed to close its Wheatley campus and construct student accommodation in Headington and just recently the use of the Cowley Barrack site?

The closing of Sandy Lane to a 'green pedestrian, cycle and wheelchair route with a railway crossing' would be a backward step. It would add to congestion on both the A44 and through Kidlington. A more suitable option would be to upgrade Sandy Lane with a traffic calming measure.

PR-C-0228	01/09/2017	Peter	Green						
790	Comments								
Against the proposal to build houses on PR8 and PR9 for 2480 houses. The problems facing Oxford City should be dealt with within its own borders. Elected to live OUTSIDE of urban sprawl which will create just that from Oxford towards Woodstock. The traffic grid lock will intensify on the A44 resulting in longer delays and extra air pollution. Our green belt area will be lost, never to be reclaimed, disastrous to local residents and even more damaging to wildlife. In Yarnton in recent years there has been flooding and sewerage risks and Rep do not think there is a well thought out infrastructure plan to deal with this issue. The proposed closure of Sandy Lane to through traffic will only increase traffic on the A44 and make journeys into Kidlington for shopping, banking, etc. even more difficult. You are proposing to change/destroy our way of life in this area. Plans are of no benefit to the residents of Begbroke and Yarnton.

PR-C-0260	10/10/2017	Rhian	Pye		N	N	N	Y	
5525	Comments								
Increase in population - Yarnton is a village with approximately 1,350 houses with another 390 houses in Begbroke. The proposals from Cherwell District Council ("CDC") will be to build 1950 new houses on the Green Belt land that currently separates the two villages to the east of the A44 (Policy PR8) and another 530 houses on the Green Belt land to the west of Yarnton (Policy PR9). Clearly the combined size of the proposed developments on these two sites is inappropriate when considered against the size of these two villages. They will be dwarfed by the new development. Therefore it would suggest that the selection of sites PR8 and PR9 for this quantity of houses makes the proposed plans unsound. Merging of Begbroke and Yarnton villages - The proposed development at PR8 is entirely on Green Belt land and would result in there being only a narrow gap separating the villages of Yarnton and Begbroke of approximately 50 metres. There is also only a small gap between this enlarged development and Kidlington, meaning in effect that the three villages are merged into one large conurbation with an estimated population of around 30,000. The merging of these three villages would result in loss of individual character and would destroy the semi-rural nature of the area which is so enjoyed and appreciated by the current residents of these three villages. Housing density - The housing density of the larger of the two sites selected in this area (PR8) will be 45 houses per hectare. This is 50% higher than the density of houses built in the Cresswell Close/Pixey Close/Hay Day Close development in Yarnton a few years ago. When awarding planning permission for that development, CDC stated that the number of houses on that site must be restricted to prevent over development. Why has their policy now changed only a few years later despite the fact that the new development is to be built in the same location, i.e. Yarnton. Surely by their previous ruling, this proves that the proposed development is out of keeping with the local area and therefore the proposal should be considered to be unsound. High density housing will damage the historic setting of these two villages of Begbroke and Yarnton.

This will create the ribbon effect along the A44. It is one of the reasons for Greenbelt so as to prevent this kind of development of urban sprawl.

Not consistent with National Policy. Not Justified. The 'exceptional circumstances' justifying this removal of GB listed at para 5.17 (page 66) are implausible and represent a bad planning exercise to shoehorn in a sufficient number of homes close to Oxford City without regard to the identity of the existing villages of Yarnton and Begbroke and without effective infrastructure.

Not Consistent with National Policy. Site lies wholly within Oxford GB. Cherwell Local Plan 2011 - 2031 ESD 14 (page 114) seeks to safeguard the countryside from encroachment. Policy ESD13 seeks to secure the enhancement of the character, and appearance of the landscape, particularly in urban fringe locations. Cherwell Local Plan 2011 - 2031 Policy Villages 1 categorises Yarnton and Begbroke as Category A villages only allowing minor development, infilling or conversion in, or alongside these villages.

Strong objection to the proposed erection of 1950 dwellings in Begbroke and 530 dwellings in Yarnton. Both Yarnton and Begbroke are dispersed settlements: infilling could ruin the character of the village while estate development would overwhelm it. The protection of Begbroke and Yarnton's visual, historic and archaeological qualities is also supported by the National Planning Policy Framework, which states that permission should be refused for development of poor design that fails to take the opportunities available for improving the character and quality of an area and the way it functions. Building what amounts to be the largest high density development in the area; merging the sizeable town of Kidlington with the villages of Begbroke and Yarnton will destroy the unique character of these villages entirely, with the loss of the surrounding GB areas which give the villages their identity, rather than becoming part of yet more urban sprawl. Whilst pressure from Oxford DC for the development in Cherwell DC is considerable, mainly for housing city commuters, it has been successfully resisted in similar cases by Vale of the White Horse DC re the large area of brown field land adjacent to the BMW plant, amongst other areas. The reasons for rejecting those schemes included the inadequacy of the local lanes to accommodate even small increases in traffic, and because road widening would destroy ancient field boundaries. There is concern about Cherwell DC's proposals to increase bus services in order to facilitate the proposed developments by closing one lane of the already busy dual carriageway (note: traffic surveys have been averaged over a 12 hour period, ignoring the rush hour bottlenecks that occur at the Turnpike roundabout / following bridge and roundabout on the A44 prior to Pear Tree interchange) as a dedicated bus route. As cyclists, we are increasingly aware of the poor quality of both the road surfaces in the area due to volume of traffic and poor repairs, and the badly maintained cycleways. Increasing traffic through already congested roads will not improve this, and will most likely lead to more RTA's in the area. The proposed siting of the developments are particularly ill-considered: they are on greenfield sites used by many villagers and tourists for recreation and walking dogs. Building here would both diminish the striking views available to locals and new developments would be prominent from many areas of the village. Furthermore, there is no need for this kind of 'open market' housing in the village, which has already seen several 'new' estates being built in recent years. Cherwell DC has more than five years' supply of housing land in other larger areas (Bicester, Banbury, Kidlington etc.) to meet the requirements of its emerging Local Plan's policy. The villages of Begbroke and Yarnton already have enough housing developments: the only identified need is for affordable housing for residents who work locally, as recently confirmed by your Housing Department's Housing Needs Survey. As an alternative to this proposal, we would support the construction of further housing developments for both Oxford and London commuters (making use of Oxford Parkway Station) on, or near to the proposed Northern Gateway site, or other brown field areas which could be identified within the Oxford area, rather than build on GB land merging villages in to greater conurbations.

The site "Land West of Yarnton" is adjacent to the Grade II listed Spring Hill and is within the setting of a number of listed buildings to the south-east. Historic England therefore welcomes the presumed intention behind requirements 15 and 16 of Policy PR9 for the application to be supported by a Heritage Impact Assessment which will "include measures to avoid or minimise conflict with the identified heritage assets within or adjacent to the site" and a desk-based archaeological investigation which may "then require predetermination evaluations and appropriate mitigation measures" as part of the positive strategy for conserving and enjoying, and clear strategy for enhancing, the historic environment as required by the National Planning Policy Framework. However, requirements 15 and 16, as drafted, only requires the Heritage Impact Assessment to include these measures and only notes that the archaeological investigation may require predetermination evaluations and appropriate mitigation measures respectively. It does not require these measures to be incorporated in or to influence the actual development scheme. The policy therefore provides inadequate protection for the Grade II listed Spring Hill, listed buildings adjacent to the site and potential archaeological remains on the site. As the Council will be aware, paragraph 126 of the National Planning Policy Framework requires local planning authorities to recognise that heritage assets are an "irreplaceable resource" and "conserve them in a manner appropriate to their significance". Paragraph 129 notes that the significance of a heritage asset can be affected by development affecting its setting. Historic England therefore considers that Policy PR8 as written does not conform with the Framework and thus is not sound.

Changes Sought

Reasons for Participation

Requirement 15 of Policy PR9 should be reworded as follows: 25. The application shall be supported by a Heritage Impact Assessment which will identify measures to avoid or minimise conflict with the identified heritage assets within and adjacent to the site. These measures shall be incorporated or reflected, as appropriate, in any proposed development scheme." Requirement 16 should be reworded as follows: "18. The application(s) shall be supported by a desk-based archaeological investigation which may then require predetermination evaluations and appropriate mitigation measures. The outcomes of the investigation and mitigation measures shall be incorporated or reflected, as appropriate, in any proposed development scheme". (Discussions with the Council are ongoing at the time of submitting this representation, but early indications are that the Council will consider rewording these requirements as suggested as minor modifications. If it was to do so, Historic England's objections to these requirements would be overcome).

Key Delivery Requirements' on all these policies are nothing more than a fig leaf. It is perfectly obvious the developers will agree to some or all of them and then will renege on them. This always happens. 50% affordable housing will be thrown out of the window as it has been in Templars Square where 50% has magically transformed into 23%. Similarly, developers never actually deliver infrastructure like schools, community centres or roads that are wide enough. The 'Place shaping principles' in these policies are valueless: there are no measure by which they might be enforced. How can one tell, for example, whether an extension "responds to the 'gateway' location of the site". It's gobbledeygook. PR11: This is completely empty. 'Working with partners' does not guarantee anything except that you have no control over the outcome. Nor does 'setting out the Council's approach'. Its all very well having the development proposals demonstrate that infrastructure requirements can be met - it does not mean they will be met.

Object to the proposals for the easing of Oxford's unmet housing need, these proposals breach Oxford Green Belt. The proposals will do nothing to preserve or spread the character and landscape of Oxford. They will not check the growth of Oxford and will not prevent the ribbon development and urban sprawl, they will worsen and increase it. These will increase the coalescence of settlements from Oxford to Yarnton and Begbroke. Will not safeguard the countryside from encroachment. All these principles will be broken by the proposed development of such a large scale. Why are Cherwell and in particular Yarnton and Begbroke residents having to cope with Oxford's unmet housing need when Oxford City Council don't enforce existing planning requirements on developments within their own area? PR9 is not well planned and provides example of the difficulties of emptying a septic tank which needs to be emptied regularly by lorry. The only way to empty the septic tank is for the lorry to come into the field and pump from the field. How do you suggest I empty my septic waste? The field also acts a valuable buffer for rainwater coming off the larger 100 acre field beyond before it enters the bund in the surgery. That larger field cambers towards the village and has one field drain. If built upon the buffer disappears, water from the field beyond will run straight through the field drain, the bund will overflow and flooding risk will increase to my property and down Aysgarth Road. You would be surprised how quickly that bund fills when we have rainfall. Building on the field will only exacerbate the risk. The field is also a valuable habitat for wildlife with barn owls hunting in the evenings and surrounded by mature oak trees and hedgerows. This habitat will vanish if proposed development is built. Cannot see how the existing infrastructure will cope with an additional 550 homes. The existing roads and pavements in Yarnton and Begbroke are in a poor state of repair. This can only get worse with additional demand placed upon them by a development of such a large scale?

1113	Comments								
Object to Policy PR9. The claim to preserve the separation of communities is false. 100m gap between Yarnton and Begbroke is worthless and not a gap. The proposed build on this strip infringes on Spring Hill and virtually invites future desecration of that area which is of exceptional Green Belt amenity value.

The duty to co-operate has been misunderstood by CDC Executive Committee Members as a duty to agree, which by virtue of National Planning Practice Guidance (6th March 2014) it is not. The video evidence of the vote attests to key members feeling co-erced into approving the initial Plan which they voiced as doing begrudgingly. By not showing worst/mean/best case scenarios within the consultation documents (e.g.. the Transport Assessment) there is a clear bias in the proposals which is not addressing adequately the true impact. The rep includes a very detailed response which elaborates on this summary of the main points raised. The Plan takes root in the Strategic Housing Market Assessment (SHMA) which was written in March 2014 based on data from 2013. The economic claims of the SHMA were already considered optimistic but have since been overtaken and discredited by Brexit and the consequent downturn in the economy, which the Office for Budget Responsibility and the Treasury see as 'flat' to 'low' growth for the foreseeable future. Given that the SHMA (3.39) has projected housing need at 40%+ above past demographic trends to meet its expected (and now overblown) economic growth, the SHMA itself should be revisited to take account of the material adverse change in circumstances since it was drafted. Unmet housing numbers for Oxford accordingly require a material correction. The scale of the proposed development is excessive and coalesces the villages of Begbroke and Yarnton to form an urban neighbourhood. This is neither necessary (given the overblown SHMA) nor an appropriate use of the green belt (per NPPF guidelines for "limited" development which benefits the "local" community). Plans need toning down significantly or dropping altogether. The Transport Assessment (July 2017) makes critical investment recommendations without which the proposals are unsustainable. A key critical investment being the A44 Southbound bus lane from Begbroke to Loop Farm Roundabout has not undergone any feasibility study yet has the constraints of 1 railway bridge, 1 canal bridge and adjacent private properties, making it a very unlikely or otherwise significantly disruptive and costly investment to provide. I suggest a formal feasibility study and costing is a pre-condition before any shovel breaks the dirt on development build. Finally, it is clear that Councils lack power to commit developers to the level of affordable housing that is needed, yet the Local Plan has no merit or credibility if in the end it fails to deliver the requisite level of affordable housing (after adjustment for SHMA correction). The Council and the developers need to be held to account to deliver the mix of affordable and other housing that the public eventually sign up to so, unless Councils are given authority to build for themselves, appropriate Performance Bonds for 5% of development value in favour of the affected parishes should be a pre-condition of any allocation of affordable housing quota in those parishes.												
Changes Sought					Reasons for Participation							
					To date this Local Plan has been pushed through with a haste, in the mistaken belief that the duty to co-operate is an obligation to agree to Oxford's demands. The video of the CDC Executive Membership vote (June 2017) - available through the CDC website - evidences the failure of our elected representatives to apply an adequate constructive challenge - in public debates on this matter I have found myself having to explain its complexities to others and am able to apply a factual rather than an emotive challenge. Furthermore, it is not believed that the CDC Chair Barry Wood is acting in the public interest: his responses to questions at a public meeting in Kidlington on 21st September betrayed a naïve weddedness to the SHMA, despite a material change in circumstances since it was written in 2014. His appears to be an undue influence on the CDC Executive Committee. This is a sensitive issue for all concerned and needs an independent voice to ensure emotive rhetoric does not disguise or overshadow fact, and to allow a constructive approach to finding a workable solution.

Strong objection to the development of land east of the A44 (Policy PR8) and the land to the west of the A44 (Policy PR9). By developing the green belt on these sites Begbroke, Yarnton and Kidlington would become one big suburb of Oxford. The A44 will not cope with the extra traffic that these houses will generate. The introduction of bus lanes will not work because there is not enough room to install new lanes on both sides of the road. The main areas of employment in Oxford are at the car factory and the hospitals and the majority of people will travel by car as it is too far to cycle or walk. The schools in Yarnton and Kidlington are stretched now. Even if you include plans for a new school, how will you staff it? Similarly, the doctors surgeries are stretched. How will you employ new doctors to cope with the extra people? This land floods already. How will the new homes affect this? Where will all the water drain to? How will this affect both new and existing properties? How much will these houses cost? If the press is to be believed and the houses in Barton Park, Headington range from £300,000 to £600,000 , it is likely that these houses will be a similar price. No one will be able to afford them. People who have £600,000 to spend on a house are not going to buy one in the middle of a high density estate where up to 50% is social housing. Why do Oxford City Council need so many houses on Cherwell land? In your booklet it states that Oxford has a need for 28,000 new homes to be provided between 2011and 2031. All of these calculations were done before Brexit. If immigration is controlled - which is one of the things the majority of the country voted for when they voted to leave the EU - the whole country will not need so many new homes. It has been proposed to close Sandy Lane to through traffic. To travel from Yarnton to Kidlington by an alternative route (i.e.. Langford Lane or Frieze Way) adds over three miles to each journey. As quoted by the National Planning Policy Framework part of the purpose of the Green Belt is to stop urban sprawl and to preserve the setting and special character of historic towns. Yarnton is a historic village, over 5000 years old, surely it should qualify to be protected.

1153	Comments											
Sites PR8 and PR9 will effectively amalgamate Kidlington with Yarnton and Begbroke. The two smaller villages will lose their identity and become swallowed up in greater Kidlington. The proposed development would bring far more traffic onto the A44 and the junction at Peartree which is already overloaded and congested. To propose more housing in this location, which is not well served by road or rail, and just allocating "land for a future railway halt/station" and a "local centre" as hopeful palliatives to reduce car use, is ignoring the realities of new estate building by developers.												
Changes Sought					Reasons for Participation							

PR-C-0473	30/09/2017	Dianne	Jones									
1156	Comments											
The scale of the proposed development between Begbroke and Yarnton and beyond is overwhelming. The amount of traffic on the A44 has already increased in the past year. The green belt along the back of Fernhill Road separating Begbroke and the development is not wide enough. There is a greater risk of flooding due to the fact that Rowel brook will not be able to cope with the volume of rain water because there will be a concrete jungle not far away. The rain water has to go somewhere and also settles in the field next to the brook for a long period of time and that could have a devastating effect on the properties along Rowel brook. The land expansion of Begbroke Science Park is not acceptable. It should be moved more towards the railway line so it doesn't affect people living along Fernhill Road and the expansion is far too big. The closure of Sandy Lane is crazy because that route is well used to Kidlington and back and it would take pressure of the A44.

PR9 Point 22 "A landscaping structure for the community woodland which helps retain the perceived separation between Yarnton and Begbroke (west) and helps protect Begbroke Wood Local Wildlife Site" is not only a complete fabrication of the truth, it is incorrect and completely ignores valuable expert opinions. The perceived perception of division is most definitely already there with this protected Unique and beautiful open landscape. A wood in between would actually have the reverse visual effect of making them seem one piece of land and joined with one another.(perhaps the overall long term plan?) Begbroke Wood is fully protected and is an existing wildlife site which has been regularly inspected by BBOWT whom strongly oppose any development within a 5 mile radius of this site.

3 photographs provided to clarify Green Belt around Begbroke & Yarnton (PR8), Footpath Begbroke and Spring Hill (PR3e). Reduction of green belt in Begbroke & Yarnton1. Cherwell claim in figure 3, page 31 of its summary booklet, that the total area of Cherwell that comprises green belt would fall from 14.3% to 13.9%2. They also claim a 3% reduction in affected green belt. Whilst this is probably true it is not reflecting the real change in affected areas such as Begbroke, Yarnton and Kidlington!! Site PR08 will remove approximately 52% of green belt in Begbroke and Yarnton. Site PR09 will remove approximately 16% of green belt. Our residents do not want organisations or other landowners with vested interests to destroy out pleasant environment to satisfy their own interests.

Land West of A44 (Yarnton) lies wholly within Oxford GB. Cherwell Local Plan 2011-2031 Policy ESD 14 seeks to safeguard the countryside from encroachment. Policy ESD 13 seeks to secure the enhancement of the character & appearance of the landscape particularly in urban fringe locations. Policy PR 9 is not consistent with National policy and thus is UNSOUND. Policy Villages 1 categorises Yarnton as a Category A village. This is only minor development, infilling or conversion is allowable in or alongside this settlement. PR9 is in complete contradiction with this policy and the plan is inconsistent & thus is unsound. The separation of PR8 & PR9 is the width of the A44. Hardly the separation of settlements required by the LP, Policy ESD14 which seeks to separate Yarnton/Begbroke identities. PR9 is not consistent with national policy & thus is unsound.									
Changes Sought					Reasons for Participation

1315	Comments								
The exceptional need to build 530 homes on this area due to few alternative locations being available is not proven, convincing or justified. This planning solution for meeting housing needs is insensitive towards overdevelopment to nearby villages, as well as the preservation of already too little remaining natural space and wildlife. How could this possibly therefore be effective or result in potentially healthy new living space? Using small bit of green space left would only be a temporary measure with irreversible consequences. Infrastructure plans are afterthoughts not actually agreed, funded or guaranteed by potential developers. The current infrastructure in surrounding areas, currently and rapidly deteriorating need to be fully considered before further demand. Consistent with National Policy? 50% of homes in the plan is described as affordable to accommodate housing need which means the other 50% is for property investment. Surely using the protected GB space for purely property investment is an infringement on the national GB policy and cannot be considered "exceptional" to the case? Decision making by any parties that stand to profit from the success of this planning should not be allowed. GB space is labelled as such to cap the area from inevitable demand of expansion. Using the little green space left would only be a temporary measure. This development will link Yarnton and Begbroke to the outskirts of the city centre. Housing developments would eliminate a small and precious pockets of wildlife and natural beauty that essentially keeps the current and unsightly urban overspill at bay The planning also threatens the deteriorating infrastructures in urgent need of solutions due to evident daily duress. Building on these precious bordering green spaces for the temporary solution of unmet housing needs does not justify or outweigh the irreversible and negative consequences for current and future inhabitants.									
Changes Sought					Reasons for Participation				
Changes to Plan 9 so that it is more legally compliant and sound. 1. Brownfield sites within Oxford and further out should be used instead The demand of more housing will continue and the GBs are only a temporary measure. 2. Decision making process should be ultra-sensitive to the aesthetics at risk and desirable living surroundings that will deteriorate rapidly with too much urban sprawl endless green space borders. 3. The decision making process should be ultra-sensitive and rigid to the aesthetics at risk and protect this are at all costs realising it's essential potential and use.					I am a concerned as a long time resident that these plans will affect. I am also aware and understand these plans and their implications involving both current and future residents. I strongly believe I am competent and justified to be involved in ensuring that alternatives, and fair compromises are met

Proposed Submission Plan - Policy PR9 - Land West of Yarnton Road

PR-C-0548	09/10/2017	Clive	McDonnell				N	
1363	<p>Comments</p> <p>Objects to pg. 127, para 5.117, the statement 'bring some benefits to Yarnton' is misleading. The scale of the development will have irrecoverable impact on the village, negatively impacting natural environment & residents health & increasing pollution & congestion. This is in conflict with the NPPF. The improved cycle way, pg. 127, para 5.116 being a shared pathway lacks consideration to pedestrian safety. The development will mean a reduction in safe emergency landing areas for the Oxford Airport, causing increased risk to residents & traffic. The NPPF states adequate consideration must be given to flooding issues. GB behind Rutten Lane residences & Yarnton Medical Practice have had issues with flooding, requiring expensive remedies. There is little consideration given to the risk of flooding for the proposed development. Pgs. 127-128, paras 5.114-5.123 fails to consider the habitat for protected species of wildlife to GB at the rear of Rutten Lane, especially established bat colonies in trees. This is in conflict with NPPF directives on conserving wildlife. Pg. 133, para 22, contains subjective comment, a "perceived separation between Yarnton & Begbroke". The separation of these communities is historical fact, not perception. The development will lose the demarcation & individuality of each village & is in conflict with the NPPF. Release of GB for expanding William Fletcher Primary School does not consider child safety. Relocating the playing fields will require children to frequently cross the access road to Sanctuary Care Home, & puts the children at risk. No mention has been made for increased utility provision, despite them being highlighted as an issue on the sustainability appraisal.</p>

1382	<p>Comments</p> <p>Concerns over PR8 & PR9. This development is highlighted to meet an unmet housing need. The Plan highlights that they will be 50% affordable homes. Given that the total number of houses in Policy PR8 is 1950, if developers do stick to the 50% (which is unlikely) we were advised that then approx. 20% of the affordable housing (as in previous developments) has been allocated as keyworker housing & there is no reason for this development to be different. This equates to 195 KW houses, & is barely enough to meet the needs of the new schools proposed on the site, let alone supporting this kind of housing need within Oxford. Have significant concerns about the lack of infrastructure for car transport in PR8, increasing the already busy road on the A44 into Oxford with a single lane & narrowing to single lanes at all roundabouts. Concerned that the project will not meet the original aim of meeting Oxford's Unmet Housing Need. The houses will be sold to commuters or purchased for rental, not for local people to be able to get on the housing ladder, or meet the keyworker needs. What's more likely is a much smaller proportion of social housing than is included on the plans. It would be a travesty to lose the feeling of living in the countryside with the PR9 development meaning both sides of the A44 is flanked with houses. Causing increased journey times, queuing & traffic pollution for this development then to not meet the need.</p>

1422	<p>Comments</p> <p>The primary duty of a Local Authority must be to the people it represents. In an independent market research exercise, with a very high sample size, conducted across Oxfordshire by Alpha Research of Thame in April 2015 respondents were specifically prompted that there was considered to be a need for more housing, and of the extent and purpose of the GB, before being asked whether the GB, should be developed for that, or indeed any other, purpose. Their answers were therefore fully informed by recognition of housing need. 76% of respondents considered that the GB should remain undeveloped; 66% considered housebuilding the greatest threat. Although polls have something of a tarnished reputation, this has resulted from situations where marginal inaccuracy can lead to wholly incorrect forecasts in narrow binary decisions. In this case the sample size was so large and so representative, and the outcome so conclusive, that whilst there might be up to a 5% margin of error, this would not be capable of affecting the result, or its scale. Further, this is in line with previous polls, adding to confidence that it accurately reflects public opinion. The same exercise showed that in North Oxfordshire – closely correlating to Cherwell - the outcome was hardly less conclusive, with 71% of respondents supporting the proposition that the GB should not be developed for housing or any other purpose. This was despite years of constant media campaigning by the City Council that Oxford has “no option” but to spread over the GB unless people are to go homeless (a wholly fallacious claim). Despite the City's campaigning, 73% of non-homeowners, and 74% of C2DEs agreed that the GB should not be developed for housing. In other words, the people who would be expected to have been the most responsive to the City's campaigning rejected GB development almost as strongly as the general population. Indeed 73% of the City Council's own constituents rejected it. There can be no doubt that the people both of Oxfordshire, and of Cherwell itself, reject GB development in principle, and this must be given great weight in any consideration of doing so.</p>							
	Changes Sought			Reasons for Participation				
	<p>In CPRE's view, it is not possible to 'tweak' the current document in order to make it sound and therefore the current version of the Plan should be rejected. CDC should re-visit the process, as and when the final numbers for Oxford have been examined, adopting higher densities and prioritising protection for the GB.</p>			<p>CPRE Oxfordshire represents a wide membership across the County, including many parish councils and local organisations, and seeks to influence development to protect and enhance the countryside. As one of the founders of the Oxford GB, we have considerable knowledge about its origins, purpose and ongoing relevance.</p>				
PR-C-0562	05/10/2017	Helen	Marshall	CPRE Oxfordshire			N Y	
1429	<p>Comments</p> <p>GB: CONCLUSIONS: 1. Government Policy and the Public Interest both require the GB to be permanent unless truly exceptional circumstances necessitate consideration of release. 2. Oxford unmet need is not an exceptional circumstance, firstly because it has not been defined and secondly because there are ample reasonable alternatives to accommodate it. 3. The LUC GB study was conducted on flawed principles and should be given little weight. 4. Cherwell have cited no other exceptional circumstances which hold any water – and their primary arguments – proximity to Oxford – is in fact a key argument for GB retention rather than release. 5. If at some future time an Oxford “unmet need” has been shown to exist and satisfactorily quantified, and if that requires any allocation to Cherwell, there are alternatives available to the District other than releasing GB land and therefore none should be released.</p>

THE GB STUDY No great weight should be given to the LUC GB Study. Its purpose was not to determine whether any of the GB made no, or an insignificant contribution to, the purposes of the GB since clearly all of the GB land contributes, and the loss of any would be harmful. Rather, in its own words, the GB Study has been commissioned by Cherwell District Council to assess the suitability of the strategic sites being promoted for development against the five purposes of the GB. In other words the sites had been pre-selected, as we showed above, in the face of GB policy, and targeting the most fragile point in the entire Oxford GB. LUC continue The considerations that will determine the most appropriate scenario, or combination of scenarios, will largely relate to the existing or potential environmental qualities and value of land, and to the sustainability of residential development. This will enable Cherwell District Council to consider whether there are 'exceptional circumstances' (under paragraph 83, NPPF) to justify altering GB boundaries through the Local Plan process, i.e. to enable existing GB land to contribute to meeting Oxford's unmet housing need. That is, value is not primarily judged against GB purposes at all, but against environmental ones, and the sustainability of the land for housing development. LUC found that Release of areas identified as making a low contribution to GB could provide only 5.8ha of potential development land (4.13). Release of areas identified as making a low or low-moderate contribution to GB could, subject to consideration of cumulative impacts, provide 34.6ha of potential development land(4.14). Release of areas identified as making a low, low-moderate or moderate contribution to GB could, subject to consideration of cumulative impacts, provide 166.7ha of potential development land (4.15). Although as noted above, the judgment was largely not on GB grounds, moderate harm was considered acceptable in order to release a larger amount of land. LUC acknowledge that release of fragile GB 4.16 GB that occupies only a small/narrow area between separate urban settlements will tend to rate highly in terms of its role in preventing settlement coalescence. This exactly describes the land chosen for release; but LUC went on. However, if environmental assessment determines that this land lacks significant value then a case could be made for accepting the coalescence, or near-coalescence, of settlements in order to maximise the scale of development in one area. That is the, subjectively assessed low environmental value trumps urban sprawl and severe coalescence, the two founding principles of the GB. Further, they have targeted the very point at which the GB is already narrowest – the Kidlington Gap between Kidlington and Oxford – for release, directly creating the coalescence of two distinct settlements (It is material that Oxford itself is proposing to breach that same area from the South with a proposed development of St Frideswide Farm). The sites concerned are all at the exact point in the GB where coalescence of settlements (Oxford and Kidlington) is most threatened, with the built areas separated presently by a few fields. The proposed GB reviews, together with the release of the Parkway Station and Park and Ride would effectively merge the two settlements. Although Kidlington (population 13,000, 2011) is statutorily a village, it is larger than many towns, notably Thame (11,600) and Henley (11,700) in Oxfordshire.

Changes Sought

In CPRE's view, it is not possible to 'tweak' the current document in order to make it sound and therefore the current version of the Plan should be rejected. CDC should re-visit the process, as and when the final numbers for Oxford have been examined, adopting higher densities and prioritising protection for the GB.

Reasons for Participation

CPRE Oxfordshire represents a wide membership across the County, including many parish councils and local organisations, and seeks to influence development to protect and enhance the countryside. As one of the founders of the Oxford GB, we have considerable knowledge about its origins, purpose and ongoing relevance.

DUTY TO CO-OPERATE - The SHMA is explicit that Authorities are not expected to meet OAN (Objectively Assessed Need) in full if e.g. it would necessitate Green Belt development. It has been the unforced choice – not the requirement – of Oxfordshire's Councils to agree to meet the SHMA need in full despite wide swathes of Oxfordshire being GB and AONB. It is therefore incumbent on Councils to take on each others' "unmet need" if it would otherwise require GB land to be released. As shown, Oxford's unmet need is very far indeed from being quantified or crystallised, but, if it were, it would be the duty of other Councils to assist Cherwell in meeting its part of that need without releasing GB land, not least by assisting Cherwell to understand how to do so within its own borders. There is no evidence that this has been attempted. Finally, the new OAN calculation proposed by the Government during the consultation defines "need" as the figure shown in the Government's own tables on household projections. This is overlaid in the proposed calculation with an arbitrary (and ill-conceived) uplift intended to reduce house prices. It is also accepted that local authorities may if they wish further inflate their housing targets to provide further economic growth than that already included in the government's base tables. However, it is submitted that these latter two elements cannot be defined as "need" and neighbouring Councils have no duty to co-operate in meeting them.

Changes Sought

In CPRE's view, it is not possible to 'tweak' the current document in order to make it sound and therefore the current version of the Plan should be rejected. CDC should re-visit the process, as and when the final numbers for Oxford have been examined, adopting higher densities and prioritising protection for the GB.

Reasons for Participation

CPRE Oxfordshire represents a wide membership across the County, including many parish councils and local organisations, and seeks to influence development to protect and enhance the countryside. As one of the founders of the Oxford GB, we have considerable knowledge about its origins, purpose and ongoing relevance.

OXFORD'S 'UNMET NEED' AND REASONABLE OPTIONS FOR MEETING IT (continuation)
 c. Even if there were no reasonable alternative sites, and even if densities on allocated non-GB sites could not be increased, the release of GB land could be substantially reduced. The total GB land proposed to be released is 264 ha. 10 hectares is proposed to be released for the station and Park and Ride, which already exist on GB land. There is no obvious rationale for the release. The net GB land to be released for housing is 254 hectares However within this area only 153 hectares is proposed to be actually used for housing, with the rest being allocated for sport, nature, agriculture etc., all legitimate GB uses. On the residual land 3990 houses are proposed at a density of 26 dph (although an average of 34 is claimed in the Plan). If build densities were increased to urban levels – the Council's stated Policy is to treat these incursions for Oxford's unmet need as urban extensions – then 70 houses per hectare, utilising only 37% of the land would be appropriate. This would require only 57 hectares, all of which could be comfortably accommodated on PR8, the least damaging in terms of coalescence and the Kidlington Gap of all these sites.

Proposed Submission Plan - Policy PR9 - Land West of Yarnton Road

PR-C-0562	05/10/2017	Helen	Marshall	CPRE Oxfordshire	N	Y	
1425	<p>Comments</p> <p>OXFORD'S 'UNMET NEED' AND REASONABLE OPTIONS FOR MEETING IT. 2. If Oxford's unmet need were realistic could it be met elsewhere in Cherwell than in GB? a. Yes, it could be met on non-GB sites. Cherwell found that the required number of houses could sustainably be built elsewhere, outside the GB, at Junction9 M40, Arncott, Bicester and surrounding area, Upper Heyford, Junction 10 M40, Banbury and surrounding area. They rejected these alternative sites because they might upset the evolution of the current adopted plan – although why competent planners would not be able to deal with that problem, if real, is not apparent; because there might be shortfalls, although why these should be greater for Oxford's unmet need than for Cherwell's own need was not explained; and more dispersed options provided less opportunity for strategic infrastructure investment (e.g. transport and education), although why this would be the case for, for example, Upper Heyford which is already targeted and developed, or for other centres which already benefit from services, is not explained. The overriding reason for their rejection however was clearly that they were less well situated (than the GB sites) to build communities associated with Oxford, to assist with the delivery of the Oxford Transport Strategy, to provide affordable transport options, and more likely to involve commuting. It is significant that even GB sites like the previously developed Shipton Quarry, were rejected as Development here would relate to Shipton-on-Cherwell, not Oxford. Therefore the parcel plays no role with respect to this purpose (Oxford's unmet need). Simply put, this amounts to saying that all reasonable alternatives were unacceptable because they were not in the GB, or, if they were in the GB, were too far from Oxford. It is an argument that urban sprawl into the GB is justified by the fact that only GB sprawl could (by definition) be close enough to the City; in other words it is an argument not just for nibbling at the GB but for undermining its core purpose. It is clearly unacceptable in its own terms. Further, the proposed new OAN calculation would reduce Cherwell's own need by 33%. The effect of this would be that 33% of the housing trajectory in the Council's adopted plan would be superfluous to Cherwell's own requirement and therefore available to satisfy any unmet needs of neighbouring authorities that might arise. b. The unmet need could be met by marginal density increases on generally low density allocated sites. Policy BSC2 in the adopted plan states New housing should be provided on net developable areas at a density of at least 30 dwellings per hectare unless there are justifiable planning reasons for lower density development. Yet Policy Bicester 1 allocates 380 hectares to just 6,000 homes which is 16 houses per hectare. Assuming for these purposes that 30 dwellings per hectare is the average across the District, the sites to which the present 22,800 homes are allocated would need to increase build density by just 5%, to 36%, to accommodate all of the "working assumption" of Oxford's unmet need. This would still be less than half the density of Central Paris or Barcelona, or Islington in London. Higher density build would also mean smaller houses, of which 63% of Oxfordshire's SHMA need is comprised, and thus better meet public requirements. High densities also reduce the need for car travel and create a stronger sense of community.</p> <p>Changes Sought</p> <p>In CPRE's view, it is not possible to 'tweak' the current document in order to make it sound and therefore the current version of the Plan should be rejected. 1423	<p>Comments</p> <p>The NPPF states that one of its Core Planning Principles (para 17) is to take account of the different roles and character of different areas, promoting the vitality of our main urban areas, protecting the GBs around them, and noting (at para 79) that the fundamental aim of GB policy is to prevent urban sprawl by keeping land permanently open. Paragraph 83 states that once established, GB boundaries should only be altered in exceptional circumstances, through the preparation or review of the Local Plan. The recent Housing White Paper, clarifies what the steps before a finding of "exceptional circumstances" should be, when local authorities can demonstrate that they have fully examined all other reasonable options for meeting their identified housing requirements. Amongst these "reasonable options" which Local Authorities must demonstrate they have considered before there can be the "exceptional circumstances" required for review/release of GB land are: • making effective use of suitable brownfield sites and the opportunities offered by estate regeneration; • the potential offered by land which is currently underused, including surplus public sector land where appropriate; • optimising the proposed density of development; and • exploring whether other authorities can help to meet some of the identified development requirement. Although not yet law, the White Paper illustrates how high the hurdle for exceptional circumstances must be, given that the NPPF's "fundamental aim is keeping GB land permanently open", and the need to show there are no "reasonable options" before considering GB release.</p> <p>Changes Sought</p> <p>In CPRE's view, it is not possible to 'tweak' the current document in order to make it sound and therefore the current version of the Plan should be rejected. PR-C-0562	05/10/2017	Helen	Marshall	CPRE Oxfordshire	N	Y	
1421	<p>Comments</p> <p>CPRE is opposed in principle to the release of GB land – as is national planning policy. A very strong case therefore has to be made to establish the exceptional circumstances required for the release of GB land. The Cherwell Plan goes nowhere near making such a case; Cherwell's electorate strongly supports retention of GB land as does Government Policy. There are a number of reasonable alternatives. The houses to satisfy Oxford's 'unmet need' targeted at the Cherwell GB could not only, on the Council's own admission, be sustainably built elsewhere in the District on other sites, or by increasing the density of build on existing sites, but also, at least to a considerable extent, within the City itself. Failing that, if there were genuinely no available option other than release of GB, national policy indicates that Cherwell would be expected to decline to do so and require other Councils to co-operate in meeting the unmet need Cherwell itself cannot satisfy. Additionally, during the course of the consultation, the Government published a revised Objectively Assessed Need (OAN) calculation, showing a total Oxford need of half that identified by the Oxfordshire Strategic Housing Market Assessment (SHMA). If adopted the new formula would make it certain that Oxford could accommodate all of its own housing need, and therefore there would be no "unmet need" for Cherwell to meet. The proposed OAN also reduces Cherwell's own need by a third, meaning that even if there were any Oxford unmet need to be covered, it could be met within the surplus the new OAN creates in Cherwell's adopted plan. This review is therefore premature and should be suspended at least until new "need" figures are crystallised.</p> <p>Changes Sought</p> <p>In CPRE's view, it is not possible to 'tweak' the current document in order to make it sound and therefore the current version of the Plan should be rejected. Comments

Government Policy requires development in the GB to be the very last resort, only to be considered if there is no alternative. Cherwell has stood that Policy on its head by making building in the GB its very first choice, rejecting what it accepts were reasonable alternatives. Cherwell says that building as close to Oxford as possible trumps all other considerations. Since Oxford is surrounded by GB, that has led them to select not just GB sites, but the very closest GB sites to the City, at the Kidlington Gap, where the GB is most fragile, just a few fields wide. It is those few fields the Council plans to build on, flatly contrary to GB policy, and the known wishes of the overwhelming majority of its electorate. If the Council gets away with this plan, it will also, again contrary to GB policy, cause the merger of Yarnton and Begbroke into Kidlington; expose Kidlington itself to being engulfed by the predatory City Council which has sought to subsume it for at least thirty years; and also, by declaring that proximity to Oxford is itself an exceptional reason to build on the GB which surrounds the City, fundamentally undermine its very purpose, risking opening the whole GB to development.

Changes Sought

In CPRE's view, it is not possible to 'tweak' the current document in order to make it sound and therefore the current version of the Plan should be rejected. CDC should re-visit the process, as and when the final numbers for Oxford have been examined, adopting higher densities and prioritising protection for the GB.

Reasons for Participation

CPRE Oxfordshire represents a wide membership across the County, including many parish councils and local organisations, and seeks to influence development to protect and enhance the countryside. As one of the founders of the Oxford GB we have considerable knowledge about its origins, purpose and ongoing relevance.

OXFORD'S 'UNMET NEED' AND REASONABLE OPTIONS FOR MEETING IT. 1. Is the Oxford unmet need real or realistic? Cherwell argues that an "exceptional circumstance" exists in the Inspector approving the adopted plan having added a requirement for "a formal commitment from the Council, together with other relevant Councils, to undertake a joint review of the boundaries of the Oxford GB, "once the specific level of help required by the city of Oxford to meet its needs that cannot reasonably be met within its present confines, IS FULLY AND ACCURATELY DEFINED". (Our emphasis) It was our view at the time that the Inspector could have exceeded his remit as there was no evidence before him suggesting that further development in Cherwell was impossible without breaching the GB, nor of the precise quantum of Oxford's unmet need (if any existed) or the capacity of other Districts to accommodate it. However it is relevant that he proposed a Review only AFTER Oxford's unmet needs were fully and accurately defined. They still are not, and a review is therefore premature even on the Inspector's terms. According to the City Council in a report to Scrutiny Committee (12th June), the agreed unmet need allocation, is used as a working basis for current local plans in Oxfordshire which will be updated when the Oxford Local Plan is completed. In other words it is presently neither fully nor accurately defined, as the Inspector had required it should be. Oxford has only now started its own Local Plan process to reflect the Oxfordshire Strategic Housing Market Assessment (SHMA), three years after it was published, and long after Oxfordshire's other Districts. Its draft Local Plan gives no figure for unmet need, or for the City's capacity to meet it. However, taking Oxford's overall "need" to be for 28,000 houses over the plan period, CPRE argues that at least 26,000 could be provided inside the City itself by switching employment sites – the use of which for employment would only exacerbate the housing need the City Council describes as being its Number One priority to overcome – to housing, and increasing densities on all sites to compact city levels. That is even before the outcome of a review of further sites to which the City refers in its plan. (See Oxford/Densities paper attached) Consequently the Inspector's condition, that Oxford's unmet need should first be "fully and accurately defined" is nowhere near met, and, further, there would be little or no "unmet need" for other Authorities to consider. In any event, a "working assumption" of need cannot be an exceptional circumstance justifying GB release, especially when it is likely to be extremely inaccurate. Finally, during the course of this consultation the Government has proposed a new OAN formula to replace the SHMA (on which all the Review numbers are based). This new formula, if adopted, would reduce Oxford's total annual housing need from a SHMA mid-point of 1400 per annum to 746, that is by 47%. This would in turn reduce "unmet need" by two thirds, even before taking into account that the City should use employment land to satisfy existing housing need rather than exacerbate it and build at densities appropriate to cities. The new OAN is at the very least further evidence that the level of unmet need this review seeks to satisfy is neither fully nor accurately defined.

Changes Sought

In CPRE's view, it is not possible to 'tweak' the current document in order to make it sound and therefore the current version of the Plan should be rejected. Cherwell District Council should re-visit the process, as and when the final numbers for Oxford have been examined, adopting higher densities and prioritising protection for the Green Belt.

Reasons for Participation

CPRE Oxfordshire represents a wide membership across the County, including many parish councils and local organisations, and seeks to influence development to protect and enhance the countryside. As one of the founders of the Oxford Green Belt, we have considerable knowledge about its origins, purpose and ongoing relevance.

Strong objection to all of the proposed development in the Oxford GB which "was designated to restrain development pressures which could damage the character of Oxford City and its heritage through increased activity, traffic and the outward sprawl of the urban area." This quote is from paragraph B256 of Cherwell's adopted Local Plan Part 1 and we fully support it. We also support Policy ESD14 in the Plan to maintain the Oxford GB. The Oxford GB supports all five purposes set out in the NPPF and has been largely successful over the last sixty years. In particular it seeks to protect the setting and character of the historic city of Oxford. The reference to the character of the City, as referred to in Cherwell's Local Plan. is often overlooked but it is a crucial aim of GB policy. The historic city centre by its nature cannot be expanded or comprehensively redeveloped. It is already under substantial pressure and this is likely to become highly damaging if expansion on the edge of the city is not restricted. The City's never-ending traffic problems are testimony to this, and there have been calls for even the number of buses in the centre to be limited. The GB also provides accessible open space, footpaths and other recreational opportunities for residents of the city and for the communities within it. It is well used and supported as public opinion surveys have shown. GB is intended to be a permanent designation only to be changed in exceptional circumstances (NPPF). We think that that the overall levels of growth proposed are unnecessarily high and that alternatives to development in the GB are available. We therefore consider that exceptional circumstances do not exist to justify development in the GB.

Changes Sought

The plan should be withdrawn and a spatial strategy for Oxfordshire established in a co-ordinated and consistent way. Through such a strategy the Oxfordshire authorities should continue with their previous approach of actively encouraging further employment and housing growth, at realistic levels, away from Oxford. Oxford City Council and Cherwell in particular should co-operate more effectively and as part of this Oxford should a) discourage further employment generating development in the city unless it is absolutely essential and b) use some of the land it has currently allocated for employment, together with other previously developed land, for well planned high density housing.

Reasons for Participation

OGBN was established in 1997 to help to protect the Oxford GB and to support those wishing to resist proposals for inappropriate development within it. It comments regularly on planning applications in the GB and in planning policy consultations, particularly on matters affecting the GB. OGBN has made representations on all stages of the Cherwell Local Plan Part 1 and participated in the Public Examination in December 2014. We have also commented on earlier stages of this Partial Review. The membership of OGBN includes many of the Parish Councils whose areas include GB land. The OGBN fully supports the aims of GBs as set out in the NPPF and earlier planning guidance and in particular it strongly endorses the fundamental principle that GB is a permanent designation. We consider that our participation in the examination is necessary and justified because of our longstanding interest and understanding of the Oxford GB.

Comments

Strong disagreement with the assessment that “exceptional circumstances” exist. Twelve “circumstances” are listed. The final ten are not exceptional circumstances at all. Some of them might be described as “opportunities”, some of them are simply descriptions of how development might occur, and others are meaningless, for example “12.the ability to create a sustainable, holistic, joined up vision for the whole of the Oxford/Kidlington/A44 corridor area”. That statement certainly does not constitute an exceptional circumstance. Exceptional Circumstance 1 (urgent and pressing need for homes) is highly contentious. It is based on the assessment in the SHMA which has been heavily criticised and never validated. The proposed DCLG standardised methodology proposes a much lower level of need that takes account of affordability. Exceptional Circumstance 2 (clear inability of Oxford to meet its needs) is also unproven. Oxford’s needs have not been established through its own local plan process and neither has its ability to meet its own needs. It is clear that alternative development strategies could accommodate a significant number of additional dwellings within the city. The submission document in proposing to develop in the GB is in complete opposition to the purpose of the GB and contradicts Local Plan Pt 1. The main purpose of the Oxford GB, (Local Plan Part 1 para B256), is to limit the growth of Oxford to avoid damage to its character and heritage. Oxford City Council itself should have a part to play in this by restricting the growth of employment generating activities to the minimum necessary. This would have the double benefit of releasing some land for housing and reducing the demand for further housing. However its currently proposed policies do the opposite. We have made this point in our representations to the recent Options consultation on the Oxford Local Plan. Alternative development strategies – which have been successful in the past – are possible for Oxfordshire, and include the diversion of growth away from Oxford towards the country towns. Oxford City Council should play its part in this. We also think it would be possible for the Oxfordshire authorities to promote the diversion of some economic growth to other parts of the country which would welcome and benefit from it – possibly through formal ‘economic twinning’ arrangements.

Changes Sought

The plan should be withdrawn and a spatial strategy for Oxfordshire established which can address the issues addressed in this review in a co-ordinated and consistent way. Through such a strategy the Oxfordshire authorities should continue with their previous approach of actively encouraging further employment and housing growth away from Oxford. Oxford City Council and Cherwell in particular should co-operate more effectively and as part of this Oxford should (a) discourage further employment generating development in the city unless it is absolutely essential and (b) use some of the land it has currently allocated for employment, together with other previously developed land, for well planned high density housing.

Comments

This Plan is contrary to the NPPF which states in paragraph 14 that Local Plans should meet objectively assessed needs unless specific policies in the Framework indicate development – including land designated as GB - should be restricted. It is also contrary to the twelve core land use planning principles set out in Paragraph 17 of the NPPF one of which is that planning should take account of the different roles and character of different areas, promoting the vitality of our main urban areas and protecting the GBs around them. Furthermore, National Planning Practice Guidance makes clear that assessing need is just the first stage in developing a Local Plan and that once need has been assessed, the local planning authority should take account of any constraints such as GB, which indicate that development should be restricted and which may restrain the ability of an authority to meet its need. Cherwell has accepted (or, more accurately, been pressured to accept) the inflated figures of the Oxfordshire SHMA in full and has never followed this guidance to “take account of any constraints such as GB Which may restrain the ability of an authority to meet its need”. The proposed submission plan is therefore not consistent or compliant with national policy.

Changes Sought

The plan should be withdrawn and a spatial strategy for Oxfordshire established which can address the issues addressed in this review in a co-ordinated and consistent way. Through such a strategy the Oxfordshire authorities should continue with their previous approach of actively encouraging further employment and housing growth away from Oxford. Oxford City Council and Cherwell in particular should co-operate more effectively and as part of this Oxford should (a) discourage further employment generating development in the city unless it is absolutely essential and (b) use some of the land it has currently allocated for employment, together with other previously developed land, for well planned high density housing.

We note that the plan calculates the loss of GB to be 3%. There is an implication here that the loss is relatively small and therefore acceptable. This is fallacious as is illustrated by the following example taken from a paper by Professor Dieter Helm, Chair of the Government's Independent Natural Capital Committee "Think about St James' Park in central London, set between Buckingham Palace at one end and Whitehall at the other. Suppose a developer comes along with a proposal; to build on a small plot on one corner of St James' Park. This developer might argue as follows. The marginal value of the patch of grass in a small corner is not that great. After all, all the rest is left. Better still, the developer might pay such an enormous price for the small bit of land that perhaps a hospital could be built elsewhere with the proceeds. The marginal value to the ultimate owner of this house is so great relative to the marginal value of the small corner of St James' Park that it makes marginal economic sense to build on it. There are two problems with this argument. The first is that the same marginal case can be made for the next small bit of St James' Park. Indeed the value to the developer is even higher now because the Park is now slightly smaller. And for the next bit, the argument just gets stronger. Carried to its limits there is a great marginal case for incrementally building all over St James' – and Hyde Park, and Regent's Park and indeed all the green spaces in London. That is indeed what would have happened if the market had been left to allocate the land as if St. James' was a private good. It is what would happen to the GB too. The second problem is that the reason why the land is so valuable is because it is not surrounded by other houses in close proximity. The very rich person who buys this house on the corner of St James' is paying so much because others are not able to do so, and because it is St James'. We cannot all have green spaces around our houses – green space is in fixed supply. Carry both of these arguments across to the GB. Each marginal bit has a marginal economic case for developing it, and as each bit is chipped away, the value of the whole public good – the GB system – diminishes. The core point here is that the marginal case if carried through to its logical conclusion leads to no GB – there is a good marginal case for building on each and every marginal bit of land, as there is for building on each and every bit of St James' Park." The loss of a small proportion of GB therefore increases the likelihood of further loss. GB should be considered as an entity or system not as a collection of individual land parcels. This is a further reason why we fully endorse Government Policy (NPPF para 79) that GB is a permanent designation.

Changes Sought

The plan should be withdrawn and a spatial strategy for Oxfordshire established which can address the issues addressed in this review in a co-ordinated and consistent way. Through such a strategy the Oxfordshire authorities should continue with their previous approach of actively encouraging further employment and housing growth away from Oxford. Oxford City Council and Cherwell in particular should co-operate more effectively and as part of this Oxford should (a) discourage further employment generating development in the city unless it is absolutely essential and (b) use some of the land it has currently allocated for employment, together with other previously developed land, for well planned high density housing.

Reasons for Participation

The Oxford Green Belt Network (OGBN) was established in 1997 to help to protect the Oxford GB and to support those wishing to resist proposals for inappropriate development within it. It comments regularly on planning applications in the GB and in planning policy consultations, particularly on matters affecting the GB. OGBN has made representations on all stages of the Cherwell Local Plan Part 1 and participated in the Public Examination in December 2014. We have also commented on earlier stages of this Partial Review. The membership of OGBN includes many of the Parish Councils whose areas include GB land. The OGBN fully supports the aims of GBs as set out in the NPPF and earlier planning guidance and in particular it strongly endorses the fundamental principle that GB is a permanent designation. We consider that our participation in the examination in necessary and justified because of our longstanding interest and understanding of the Oxford GB.

Comments

We consider it to be a serious omission that at the options stage a question was not asked about the acceptability of development in the GB. This is probably the most important matter raised in this review. The plan may therefore be rendered procedurally noncompliant.

Believes the proposed submission to be unsound, not properly prepared, not justified and not effective. Objects to Policy PR3 The Oxford Green Belt, Policies PR8 and PR 9 propose removal of specified areas of land from the Oxford Green Belt. This is not consistent with national policy and therefore unsound. Particularly object to the building in the Kidlington Gap, the most vulnerable part of the Green Belt. This area need to be protected so that there is not a continuous urban sprawl from Kidlington to Oxford. There is not an exceptional case for building on the Green Belt as the housing overspill need for Oxford has been created by the City Council choosing not to use its own sites for housing and not ensuring that sufficient affordable houses are built.

The proposed destruction of Yarnton's Green Belt (PR8/PR9) to meet Oxford City's hypothetical housing need does not include any requirements of Cherwell D.C or reflect the wishes of the local community, and I submit that the exceptional circumstances required to join Yarnton, Begbroke and Kidlington to Oxford have not been demonstrated. Indeed, "housing need" met by the proposed extension to Begbroke Science Park seems as yet unexplained and of sole benefit to the University. Infrastructure proposals appear to have disregarded the effect of a further 1500(?) vehicles now forced onto the busy A44 at Yarnton (and the ensuing tailbacks from The Turnpike to Woodstock), or the needs of the solitary and already overstretched Health Centre in that village. Similarly, the proposal to build on land west of the A44 on the slopes of the appropriately named Spring Hill (PR9) has seen fit to ignore a history of flooding in Rutten Lane & Cassington Road (and more personally, in my garden!) and seems to assume that the addition of this extra and high density housing will not require a massive overhaul of Yarnton's ancient drainage system. I am sure other people have expressed their views on the need to protect our environment for this and future generations, and I would request that my name be added to that list.

Proposed Submission Plan - Policy PR9 - Land West of Yarnton Road

PR-C-0618	07/10/2017	Keith	Johnston						N
1531	Comments								
PR8 Key Delivery Requirements, Para 1 gives housing density figure of 45/hectare. Policy PR9 Key Delivery Requirements: Para 1 gives a housing density of 35/hectare. This is significantly greater than any development in either Yarnton or Begbroke and is out of charter with the rural nature of the area. It's disappointing if not illogical that the area closest to Oxford City seen as Policy PR6b is given an average dwelling density of just 25/hectare.									
Changes Sought					Reasons for Participation				
PR-C-0618	07/10/2017	Keith	Johnston						N
1534	Comments								
Page 127 of the document is headed Yarnton but almost half the proposed area PR9 is actually part of Begbroke. Para 5.117 describes how an improved A44 cycleway will link to the proposed 'Super Cycleway between Kidlington and Oxford. This would add approximately two miles to the cycle journey between Begbroke or Yarnton and Oxford. The best solution, and shortest route would be significant improvement to the Oxford Canal tow path already part of National Cycle Route 5.

PR-C-0618	07/10/2017	Keith	Johnston						N
1528	Comments								
The concept of the GB is recognised as safeguarding to: - check the unrestricted sprawl of large built-up areas. -prevent neighbouring towns from merging into one another. - assist in safeguarding the countryside from encroachment. - preserve the setting and special character of historic towns. - assist in urban regeneration, by encouraging the recycling of derelict and other urban land. Significant areas of Oxford GB would be developed resulting in urban sprawl extending almost continuously from the centre of Oxford in a straight line distance north westwards of some 8 miles to the northern edge of Woodstock. In particular, the villages of Yarnton and Begbroke. In the original Cherwell Local Plan 2011-2031 (Part 1) adopted in 2015, both villages were classified as Category A villages. CDC policy allows only minor development, infilling or conversion in, or alongside these villages. Extensive housing development alongside each village would effectively coalesce both into a single community with complete loss of individual identity. Both villages have identifiable historical value existing long before the Domesday book in which both are included. The area of Yarnton and Begbroke villages comprises approximately 1000ha. Significant portions (approx. 300 ha) of the existing bounded area are already unavailable for development as conservation, site of special scientific area, existing science park, flood plain, gravel extraction/settling lakes, existing habited space and businesses yet the document sets out to remove approximately 20% of the remaining as development space for Oxford City. The proposed developments are disproportionate and out of character with the rural setting and would more than double the number of dwellings presently in the two villages.

1623	Comments								
Exceptional circumstances have been demonstrated to justify the release of sites from the GB, including sites for housing to help meet Oxford City's unmet housing need. It is clear from the evidence base for Cherwell's proposed submission plan and from the Oxfordshire Growth Board evidence base that the release of sites from the GB is necessary to deliver the scale of housing required in a sustainable manner. However, there is a need to make efficient use of land released from the GB for housing purposes. Some of the proposed densities on sites released from the GB do not appear to make efficient use of this land despite their close proximity to Oxford and to sustainable transport infrastructure and services. By increasing the density on some of the GB sites and by developing the site covered by Policy PR3a Cherwell DC would achieve their target of meeting Oxford City's unmet housing need without requiring development at Woodstock South East (Policy PR10).									
Changes Sought					Reasons for Participation				
Review of the proposed densities and the resulting site capacities of the sites to be released from the GB in order to ensure that efficient use is made of this scarce land resource.					To address cross-boundary issues with West Oxfordshire				
PR-C-0676	01/10/2017	Mr G	Thompson						N
1662	Comments								
Policy PR9 is not consistent with National Policy and thus is UNSOUND Site lies wholly within the Oxford Green Belt. Cherwell Local Plan 2011-2031 Policy ESD 14 seeks to safeguard the countryside from encroachment. Policy ESD 13 seeks to secure the enhancement of the character, and appearance of the landscape, particularly in urban fringe locations. Cherwell Local Plan 2011-2031 Policy Villages 1 categorises Yarnton as a Category A village. Thus only minor development, infilling or conversion is allowable in or alongside this settlement. Policy PR9 is in complete contradiction of Policy Villages 1, and the Plan is inconsistent and thus is UNSOUND. Policy PR8 (land east of A44) is entitled 'Begbroke' in this submission plan. Thus Policy PR9 – land west of Yarnton is only the width of the A44 from PR8. Hardly the separation of settlements required by Local Plan 2011-2031 Policy ESD14 which seeks the separate identities of Yarnton and Begbroke.

Object. The statement of “bring some benefits to Yarnton” (p.127 para 5.117) is subjective in nature and not quantifiable. It is misleading as the scale of the proposed development will have an irrecoverable impact upon the village with a negative impact upon the natural environment, increased air pollution and increased congestion resulting in a negative health impact and lesser quality of living standards for many residents. This is in conflict with the National Planning Policy Framework. The proposed improvement to the cycle way (p.127 para 5.116) lacks consideration of the impact of this upon pedestrian usage of the shared pathways. Cyclists can represent a danger to pedestrians, with some showing a disregard for pedestrian safety. No mention or consideration has been given to the flight paths for Oxford Airport, with developments being proposed which result in a significant reduction of safe emergency landing areas with no consideration of the associated risk to residents and traffic, thus making elements of the proposal unsound. The National Planning Policy Framework (NPPF) states that adequate and appropriate consideration must be given to issues of flooding. The lower slopes of the GB to the west (behind existing Rutten Lane residences) have a significant amount of rainfall run-off into the gardens of existing properties. This has resulted in a number of residents encountering personal financial costs to meet the requirement of providing increased drainage/soak away facilities to limit flooding. Yarnton Medical Practice also found the need to improve drainage for similar reasons. The soil and subsoil structure of existing properties is not conducive to increased runoff and drainage. There is little evidence of consideration or documentation of flood risk associated with proposed development of this land and the potential financial implications for existing residents. Pages 127-128, paras. 5.114-5.123 fails to consider the protection and prerequisite habitat surveys in relation to protected species in terms of the trees, hedgerows and wildlife corridors on the eastern edge of the proposed development area to the rear of existing Rutten Lane properties (currently GB). This is despite the existence of established roosting bat colonies (circa. 25 years) in the aforementioned trees. These bat colonies have a flight corridor across from the trees, across the field into the gardens of existing properties. Therefore the proposal to re-designate and develop GB land to the rear of Rutten Lane is in conflict with the NPPF directive of conserving wildlife habitats and corridors and not justified. The document contains a subjective comment (p.133 para 22) with the statement that it is a “perceived separation between Yarnton and Begbroke”. The separation of the two communities is not a perception but a historical fact, with both communities having individual historical records of their formation and growth as settlements. The proposed scale of the development and loss of demarcation of the individual communities of Begbroke, Yarnton and Kidlington demonstrates a failure to recognise the historic environment and is as such in conflict with the NPPF.

The proposed release of GB for William Fletcher Primary School is problematic and fails to give consideration to the practicalities of school expansion on the existing site or to the safety of the children. Expansion of the buildings on the existing site with proposed relocation of playing field facilities represents an unacceptable level of risk both to safety and safe-guarding. The proposal would require the children to cross the frequently used access road to the Sanctuary Care Home. This represents a significant risk in terms of continuity of child safety, in terms of maintaining secure access to the school site during school hours and maintaining the duty of care for children whilst at school. Thus this is not justified nor is it effective.

Agrees that the transport infrastructure in this area needs to be improved. The roads into and around Oxford are already over-crowded; traffic conditions are so bad that rep choose to cycle into Oxford each day, rather than driving, even though the cycle path is unlit and littered with broken glass, mud and potholes. The extensive roadworks in the north of the city seem to have done little to improve the situation, and many bus routes have been discontinued in recent years, leaving people with no choice but to use their cars. However, the District Council’s Transport Assessment has assumed that its model of urban commuting is being applied to an urban environment (i.e. 25% walk, 25% cycle, 20% use buses). This is not even close to the true situation (as described above – cycling facilities are poor and many bus routes have been discontinued); the bulk of the affected areas for PR8 and PR9 have a majority Red or Amber status, meaning that more strategic transport investment will be required to mitigate the impacts of development. Furthermore, the roads between the proposed developments and the centre of Oxford include a railway bridge, a canal bridge and many adjacent properties, meaning that any attempts to widen or otherwise adapt the roads will necessitate length road closures and cause major disruption to roads that are already congested. Thus, the proposed development is Not Sustainable.

Changes Sought

Proposed changes to the plans
 In light of the objections outlined above, I would suggest:

- reviewing the housing forecasts on which the current Local Plan is based. As mentioned above, the calculations used to make these forecasts have been revised recently and the number of new homes required has fallen as a result.
- looking to build on brownfield sites within Oxford itself. This would significantly reduce the impact on local transport infrastructure, and provide housing where it is actually needed.
- looking to build on sites closer to the main industrial areas of Oxford (namely the City Centre, Headington and Cowley); again, this would reduce the impact on local transport infrastructure and increase the likelihood that these houses would be bought by people working in Oxford rather than people looking to commute to London.

Reasons for Participation

I would like the Begbroke and Yarnton Green Belt Campaign to act as my representative during the Examination by the Planning Inspector

Specific concerns include: Loss of Green Belt, open countryside, views and walks and the impact on nature. The whole purpose of the Green belt was to check urban sprawl, to stop towns and villages merging and to safeguard the countryside and its historic settings. Implication for flooding and excess pressure on drainage, already a problem in parts of the village due to the housing development adjacent to the Cassington Road and the run off from Spring Hill. The impact on local road traffic, which is already a major problem through Rutten Lane and the adjacent roads, with increased danger to the Primary School children. Traffic congestion and air pollution will undoubtedly worsen due to thousands more vehicles on our roads. This is in addition to the extra traffic from the 22,000 houses already approved elsewhere in the District by Cherwell, and over 10,000 more houses to be built in the other Districts just for Oxford overspill. Construction traffic and road works will add to this chaos for years while the development takes place. The local infrastructure such as the school and GP facilities are already under severe pressure. Underfunded public services, already struggling, will deteriorate further: waiting times to see your GP will be even longer and school class sizes will rise. Although made reference to sites PR9 and PR8, the same objections are relevant to all other sites proposed.

PR9 is excessive & unjustifiable because. A. Contravenes one of the purposes of GB, namely the prevention of the amalgamation of villages. B. GB is an asset for the whole county & its residents, present & future. Once destroyed, it will never be re-created. Its destruction is the ultimate 'unsustainable' solution. C. The traffic in the area is already bad. The area's residents know this well & CDC must also be aware of it. I do not see how the traffic planners could contemplate the addition of at least another 5K cars (e.g.. 2 cars per household). In reality, the number of extra cars will be even higher, because of the proposed housing developments in Woodstock. In addition, the creation of a new eco-city near Eynsham will increase traffic on the A40 &, consequently along the Cassington Road. D. Flooding is an issue, which will be made worse by the construction of 530 new houses to the West of Yarnton.

Changes Sought

Reasons for Participation

1. CDC should not allocate spaces for building development until Oxford City Council (OCC) has produced the definitive figure for its unmet housing needs. 2. OCC must demonstrate clearly that it has allocated all the available sites to its current housing needs, without retaining sites for the future industrial development which may, or may not, happen. 3. Should there be any future need for industrial sites, these could be located further away from Oxford, possibly near Bicester. The City doesn't seem to suffer with unemployment problems. 4. I also understand that the Govt. may be revising downwards the projected housing needs for Oxfordshire. If so, this is another reason for stopping this consultation now.

Policy PR9 - Land West of Yarnton. This site allocation Site adjoins Begbroke Wood Ancient Woodland and LWS. Pleased to see that the allocation seeks a considerable buffer to the Ancient Woodland as well as large areas of public access land, which we assume will be used for informal recreation. Adverse impacts on Begbroke Wood might potentially occur but will depend on the design and management of the woodland and open access land. welcome these proposals but thoughts should be given whether the open access land (or parts of it) could also be improved for biodiversity.

Does not consider the Partial Review of Cherwell Local Plan to pass the 'tests' of soundness, in terms of being positively prepared, justified, effective and consistent with National policy. This is because the Partial Review does not make reference to the need for C2 units (residential institutions, including care homes), nor to care/nursing homes more generally. Policy PR2 deals with C3 uses only. Further limitations on current local planning policies (adopted and emerging) are outlined in the accompanying Note prepared by Lichfield's. In terms of National policy, the Government's National Planning Practice web-based resource in the section on 'Housing and economic development needs assessments' provides guidance to the plan-making process on how to deal with 'housing for older people'. Failure of the Partial Review to meet the care needs of the District will clearly have significant implications on housing options for Cherwell's increasingly ageing population. The accompanying Note prepared by Lichfield's quantifies that like the rest of the UK there is a clear need for care homes in Cherwell. Examples are found in the Oxfordshire SHMA, which projects the number of people with dementia and mobility issues in Cherwell and Oxfordshire will roughly double by 2031 (end of this Plan period). The latest DCLG figures project the number of people in Cherwell living in communal establishments to double by 2031. The Lichfield's' Note sets out the care need for Cherwell as follows: • In Cherwell District itself, the latest DCLG projections show growth in the number of people over age 75 living in communal establishments of 565, i.e. this is the number of care home bed spaces needed (2011 – 2031). However, as the Council are planning for housing growth well in excess of demographic trends, which will lead the population growth in excess of demographic trends, 565 bed spaces should be considered a minimum to plan for up to 2031. • In terms of Oxford City's need, the DCLG projections suggest a need for a further 305 bed spaces by 2031, and (as with its housing need) a proportion of this may well go unmet. Cherwell will inevitably import some of Oxford's' care home needs, as those additional residents (who otherwise would have lived in Oxford) age and move into care homes. This further justifies the use of the 565 figure for Cherwell as a minimum, which may need to be increased if unmet care home need for Oxford is identified. Lichfield's' Note on Care Home Need provided.

Changes Sought

Greenlight asserts that it in order for this clear 'need' for care bed spaces to be met in Cherwell over the Plan period, specific policies are required to:(a) Set the delivery of this need over the Plan period as a requirement - this requirement being a minimum of 565 bed spaces by 2031; and(b) To identify and allocate sites to accommodate this need in the Plan and on the Policies Map.To this end, Greenlights' land interest at Skimmingdish Lane, Bicester, which is currently subject to planning application 17/01428/F, provides an opportune site to be allocated for a 64-bed care home; thus accommodating some 11.3% of the bed space requirement (based on a total requirement of 565 bed spaces) over the Plan period (by 2031).To demonstrate how the site at Skimmingdish Lane, Bicester can accommodate a 64-bed care home, and therefore to assist in informing its allocation as a care home site in the Plan, enclosed with this letter is the site location plan and proposed site layout plan, both of which form part of the current planning application on the site.

Reasons for Participation

The matters raised in these representations are of a strategic nature to the plan.

1958

Comments

In addition to its interests in sites PR6a and PPR6b, the University of Oxford and Merton College also have landownership interests in the following sites: • PR3c:land north of Oxford Service Area. • PR8: land East of the A44 at Begbroke/Yarnton. • PR9: land West of the A44 at Yarnton. Given their shared interest across these sites, there has been careful co-ordination between the landowners and their advisory teams in the preparation of these representations and specifically comments in relation to these sites. In addition, the teams advising the landowners have met in order to start to formulate a co-ordinated approach to the sites in relation to common themes (e.g. transport) and in terms of planning phase and subsequent implementation. These parties will continue to work together on areas where their interests are aligned with the aim of achieving a comprehensive and co-ordinated approach to the delivery of these sites and the strategy for the A44 corridor overall.

Changes Sought

Reasons for Participation

On behalf of the consortium, given the significance of their land interests, would wish to participate in the oral examination.

Comments

Begbroke & Yarnton Green Belt Campaign's (BYG) main concern is that they believe there is no proper justification for altering the Green Belt boundaries from where they currently stand. On a local level, they particularly object to the removal of the land described as PR8 and PR9 from the Green Belt due to the significant detrimental impact of that removal on the villages and villagers of Begbroke and Yarnton. They also object to the removal of land described as PR6a, PR6b, PR7a and PR7b from the Green Belt due to the importance of these sites in maintaining the gap between the villages of Begbroke, Yarnton and Kidlington to Oxford City and to the land described as PR10, a green field site due to the impact its development will have on the adjacent A44 corridor. Instructed Bruce Bamber, a transport consultant, to prepare a report on the transport implications of the allocation of sites PR8 and PR9 for housing purposes. Although his technical review has focused on these areas, the broader methodology to identify potential development locations has also been assessed for its soundness. The report has been provided as Appendix B. Key conclusions from the report includes: the Sustainability Appraisal Report was published before the Transport Assessment and therefore cannot properly take into account the transport impact of development options. The SAR fails to report the adverse traffic congestion impact from the proposed development around Begbroke and Yarnton and is therefore flawed. Transport evidence base and the associated environmental assessment work is fundamentally unsound and cannot be relied upon. A number of legal issues are raised in Appendix A with a detailed summary provided. If the Council proceeds as planned, we consider the Inspector will find the Plan unsound due to inadequacy of evidence base and failure to ensure effective consultation and participation by the public.

Object to the allocations in Policies PR6a, 6b, 7a, 7b, 8 and 9 since they require the release of Green Belt land (see objection to PR3). All of these sites contribute to the purposes of the Green Belt and should not therefore be removed from it.Other Green Belt Sites rejected by the Council. Support the Council's rejection of other sites in the Green Belt considered at the options stage for the same reasons.

Changes Sought

Reasons for Participation

All allocations should be withdrawn because they are premature (need has not been established) and because alternatives to Green Belt development exist.

Would like to be represented by Kidlington Development Watch at the oral examination in public. For the reasons given in the Kidlington Development Watch representation.

<p>Comments</p> <p>"Begbroke Policy PR8 - Land East of A44 (1950 homes) and Yarnton Policy PR9 - Land West of Yarnton (530 homes) jointly generate around 750 primarypupils, just over 3.5 forms of entry. The education requirements of these policies are supported. With regard to the additional land required for the expansion of William Fletcher Primary School, the existing William Fletcher site is 1.245ha and an additional site area of 1ha (rather than 1.6ha as the policy currently states) is required to provide adequate off site playing fields for the potential 2FE school. 1ha will provide the 8400m2 playing field along with offsite staff parking, storage and toilet facilities. Plans shown in Annex 3.</p>								
Changes Sought				Reasons for Participation				
It is possible that the 3-form entry primary school and a 0.5 form entry expansion of William Fletcher Primary School may be sufficient to meet educational needs, at this stage however the option of a second new school at the Begbroke site should be protected in line with paragraph 5 of Policy PR8. It should be clear that the maximum size of a primary school will be 3FE so reference to 'at least' 3FE should be removed. It should be clear that the split site will not be adequate for 'at least' 2FE but maybe adequate for 2FE. The clear width of the additional land should not be less than 80m with a gradient not steeper than 1:40 across the line of play (west/east) and 1:100 along the line of play (north/south).

<p>Comments</p> <p>Referenced the 5 purposes of the Green Belt and NPPF paragraphs 82-84. Quotes provided on the Elmbridge Local Plan and Poole Local Plan. Quotes provided on NPPG's guidance on the Housing and Economic Land Availability Assessment (HELAA). Reference to Policy ESD14 of the adopted Local Plan Part 1. it is reasonable to conclude that whilst local districts may have accepted an apportionment of Oxford's unmet housing need the actual number is not absolute and the Local Plan process may determine that Cherwell, for example, is unable to accommodate the apportioned figure due to existing national policies, such as Green Belt. Conversely, Oxford City, through the development of its own Local Plan and consideration of urban density, re-allocation of land previously earmarked for employment use, etc. may determine that the total unmet housing need is lower than that recommended by the SHMA and post-SHMA work. The latter point will especially apply should Oxford City seek to justify exceptional circumstances to remove Green Belt land that falls within its own jurisdiction. Reference to Oxford's Preferred Options document.</p>								
Changes Sought				Reasons for Participation				
For the reasons given above AND the Representations made by the Begbroke & Yarnton Green Belt (BYG) Campaign which I additionally support and adopt as part of my own Representation in this document, the Plan in its current form cannot be changed to make it legally compliant or sound and should therefore be withdrawn and NOT be submitted for Inspection. Comments

The Cherwell Green Belt Study assessed the release of parcel 51b, on which Cherwell District Council propose to build 530 houses, as resulting in high harm to the Green Belt, "Most of the parcel is sloping land that is distinct from Yarnton and forms part of a wider landscape of elevated farmland, release of which would constitute significant encroachment on the countryside." Even the partial release of this parcel is assessed as moderate high harm to the Green Belt, especially relating to encroachment on the countryside. The Cherwell Green Belt Study assessed the release of site 126 as moderate high harm to the Green belt. Detailed comments provided on the Oxford Growth Options report (May 2016). Would contend that the combination of the Green Belt reviews, including Oxford City's growth options report, demonstrates solid evidence that the removal of the proposed Yarnton site from the Green Belt would cause significant harm to the purposes of the Green Belt (coalescing Yarnton with Begbroke) whilst not providing a sufficiently sustainable site to directly meet Oxford's unmet housing need.

Changes Sought

For the reasons given above AND the Representations made by the Begbroke & Yarnton Green Belt (BYG) Campaign which are additionally supported, the Plan in its current form cannot be changed to make it legally compliant or sound and should therefore be withdrawn and NOT be submitted for Inspection.

References on the Cherwell Green Belt Study (April 2017), the Oxford Green belt Study (2015), Category A Village Analysis (2016), Policy Villages 1 and 2 of the adopted Local Plan Part 1 and SA report. Conclude that the removal of Green Belt separating Begbroke (PR8) and Yarnton (PR9) and subsequent development as proposed would result in coalescence of both settlements; encroach on the open countryside; and result in highly inefficient use of land (which itself is a combination of grade 2 and grade 3 agricultural land). The harm that results is exactly the harm that the Green Belt land is designed to prevent. The loss of protection of the Green Belt and the scale of subsequent development is contrary to existing Local Plan policies. The "exceptional circumstances" put forward by Cherwell District Council are without merit with respect to all sites proposed for removal from the Green Belt.

Changes Sought

For the reasons given above AND the Representations made by the Begbroke & Yarnton Green Belt (BYG) Campaign which are additionally supported, the Plan in its current form cannot be changed to make it legally compliant or sound and should therefore be withdrawn and NOT be submitted for Inspection.

Comments

The exceptional need to build 530 homes on this area due to few alternative locations being available is not proven, convincing or justified. This planning solution for meeting housing needs is insensitive towards overdevelopment to nearby villages, as well as the preservation of already too little remaining natural space and wildlife. How could this possibly therefore be effective or result in potentially healthy new living space? Using small bit of green space left would only be a temporary measure with irreversible consequences. Infrastructure plans are afterthoughts not actually agreed, funded or guaranteed by potential developers. The current infrastructure in surrounding areas, rapidly deteriorating and under daily duress, need to be paramount considerations before exploiting them to further demand. 50% of homes in the plan is described as affordable to accommodate housing need which means the other 50% is for property investment. Surely using protected green belt space for purely property investment is an infringement on the national green belt policy and cannot be considered "exceptional" to the case? Decision making by any parties that stand to profit from the success of this planning should not be allowed. Green belt space is labelled as such to cap the area from inevitable demand of expansion. Using the little green space left would only be a temporary measure. This development will link Yarnton and Begbroke to the outskirts of the city centre. Housing developments would eliminate a small and precious pockets of wildlife and natural beauty that essentially keeps the current and unsightly urban overspill at bay. The planning also threatens the deteriorating infrastructures in urgent need of solutions due to evident daily duress. Building on these precious bordering green spaces for the temporary solution of unmet housing needs does not justify or outweigh the irreversible and negative consequences for current and future inhabitants.

Changes Sought

1) Brown field sites within Oxford and further out should be used instead. The demand of more housing will continue and the green belts are only a temporary measure. 2) Decision making process should be ultra-sensitive to the aesthetics at risk and desirable living surroundings that will deteriorate rapidly with too much urban sprawl and less green space borders.3) The decision making process should be ultra-sensitive and rigid to the aesthetics at risk and protect this area at all costs realising it's essential potential and use.

Reasons for Participation

Concerned as a long time resident that these plans will affect. Also aware and understand these plans and their implications involving both current and future residents. Strongly believes to be competent and justified to be involved in ensuring that alternatives, and fair compromises are met.

These proposals are not consistent with National Policy. The removal of this land from the GB, which is vital to maintain the separate and distinct identity of the villages of Begbroke and Yarnton, will result in urban sprawl, with insufficient transport infrastructure, and little feasible chance to rectify this. We chose this area for our family home specifically for the access and close proximity to the land within the GB. This proposal will permanently destroy the rural nature of this beautiful area of Oxfordshire.

Changes Sought

For the reasons I have given and the Representations made by The Begbroke & Yarnton GB Campaign which I additionally support and adopt as my own Representation in this document, the plan cannot be changed to make it legally compliant or sound and should therefore not be submitted for inspection.

4377

Comments

These proposals stem from Oxford City's inability to fulfil their housing requirements by saying no more land is available. There are a number of brown field sites that could be developed. Cannot the University be pressured into releasing more land for development? Of the proposed 14800 homes apportioned to Oxfordshire, it is beyond belief that only 550 are apportioned to Oxford itself, while almost one third of the total is apportioned to Cherwell District. A complete rethink is needed particularly by Oxford City Council who are attempting to shift their planning problems onto all the other district councils.

Comments

Is there really a need for development on this scale? The road traffic situation in and around Oxford is chaotic, even in its present form. How is the infrastructure to cope with all the extra vehicles on the A44. No infrastructure details are shown on the plans to give any indication of how access to these developments is to be achieved or how the current pinch points for traffic (every roundabout from Bladon through to Woodstock Road, the stretch of single carriageway between the Turnpike roundabout and Frieze Farm roundabout) are going to cope. How is the bus lane going to be incorporated into a single track road? The current situation on the A34 between Boars Hill and the M40 is dire and this size of development will only contribute to greater traffic problems.

Not Consistent with National Policy. Purpose of GB is to restrict the sprawl of built up areas, to safeguard the countryside from encroachment, to prevent the merging of towns/villages into one another and preserve their setting, character and history. These policies contravene every aspect of the purpose of the GB - they propose to join up Yarnton, Begbroke and Kidlington with token strips of undeveloped land between them. Combined with proposals for Woodstock and Long Hanborough, how long before these developments stretch to Banbury and beyond?

Object to building of 2,480 developments in Yarnton and Begbroke. I believe the proposals to be unsound for the following reasons: the proposal far exceeds the existing house numbers for Yarnton (approx. 1000) and Begbroke (approx. 350). The proposals will overwhelm the local sewerage system, which has had a lot of problems since the Cresswell Close and Pixey Close developments were completed, and there will be a huge effect on the drainage of rain (surface) water adding to the complication of sewerage. The proposals will create extra traffic on an already saturated A44 heading south and north at all times of day and will not be mitigated by a limited length bus lane (for which no funding is shown). This may encourage routing via the main A44, further reducing access already affected by the a reduced S3 bus service. There is no need for a railway station at Sandy Lane crossing - this route is the main access to Kidlington from Yarnton for shops, dentist, library, sports centre, banks and local council office. Any action to close this route to motor vehicles will result in additional car miles and pollution. The proposal will have a detrimental effect on local wildlife as we have deer foxes, badgers, hedgehogs and plentiful open space for insect and other wildlife.

Object to 2 sites between Yarnton & Begbroke. PR8, Land East of A44 (Begbroke) and PR9, Land West of A44 (Yarnton) because both sites are on G B. There must be alternative sites? PR9 (Spring Hill) has a spring, where will the water go? Expanding William Fletcher School will be dangerous for children crossing the road to playing fields Sanctuary House Nursing Home. Lack of thought to infrastructure. Limited plans for amenities e.g.. shops, GP surgeries. Redeveloping Exeter Hall with existing practices in larger premises would cause Yarnton residents an approx. 6 mile journey which is not ideal. Closing Sandy Lane, used by Yarnton residents to get to Kidlington amenities is stupid. Adding extra miles and time, and increasing traffic N of Langford Lane or S of Frieze Way. Changing one lane on the southbound A44 to a bus lane will increase traffic problems. It's impossible to continue a bus lane through Loop Farm roundabout as it is single carriageway, with bridges. Plus additional cars from 2500 homes would also exit onto the A44 too.

PR-C-1350	09/10/2017	Mr PA & Mrs JM	Carpenter						N
5081	Comments								
The Land West of A44 lies wholly within the Oxford GB. The Cherwell LP 2011-2031 Policy ESD 14 sets out to safeguard the countryside from encroachment, & Policy ESD 13 seeks to secure the enhancement of the character, & appearance of the landscape, particularly in urban fringe locations. PR9 is not consistent with NP. Cherwell LP 2011-2031 Policy Villages 1 categorizes Yarnton & Begbroke as Category A villages and this policy only allows minor development, infilling or conversion in, or alongside these villages. Thus, PR9 is in complete contradiction of Policy Villages 1. Furthermore, PR8 is entitled "Begbroke" in this submission & PR9 "Yarnton", these are only separated by the width of the A44. This is not the "separation of settlements" required by LP 2011-2031 Policy ESD14 which seeks to keep the separate identities of Yarnton & Begbroke.									
Changes Sought				Reasons for Participation					

PR-C-1359	09/10/2017	Mrs K M	Davidson						
4430	Comments								
Object on the grounds of the destruction of the GB between Yarnton and Begbroke, Kidlington and Yarnton, and the city of Oxford and Yarnton, which would not allow air to flow between the settlements. Surely an objective of the GB? The unmet need has not been proven and brownfield or reserved business sites within Oxford could be used. Traffic problems would increase and the A44, A34, Peartree Roundabout, A40 and all surrounding roads are already overloaded. There are problems getting to the village of Yarnton during rush hour and this would be made worse by the closure of Sandy Lane to through traffic. The traffic will come to a complete standstill during the proposed construction and destroy the potholed roads. Building on fields prone to flooding will lead to environmental problems, and village identities will be lost along with agriculture and wildlife. The proposed development would not provide affordable homes as required by all generations.									
Changes Sought				Reasons for Participation					

PR-C-1383	10/10/2017	Fiona	Mawson			N	N	N	Y
4477	Comments								
These proposals would effectively merge both into a single conurbation with complete loss of individual identity. Both villages have historical value, existing long before the Domesday Book in which they are both included. With 300 ha of the 1000ha total are of the villages already unavailable for development, the document sets out to remove approximately 20% of the remaining space for Oxford City. This is disproportionate, out of character with the rural setting and would more than double the current number of dwellings in the two villages. Housing density given is 35/hectare which is significantly greater than present average density, and uncharacteristic of, both villages and significantly higher than that set out for PR6b.									
Changes Sought				Reasons for Participation					
The plan cannot be changed to make it legally compliant or sound and should therefore not be submitted for inspection.				Would like to be represented by Begbroke and Yarnton Green Belt Campaign

PR-C-1385	10/10/2017	Ian	Middleton	The North Oxfordshire Green Party		N	N	N	Y
5324	Comments								
"Policies PR8 and PR 9 propose the siting of 4400 new dwellings on green belt land around and between the ancient villages of Begbroke and Yarnton which would represent a more than doubling of the existing number of houses. In terms of local population it would mean more than tripling the existing levels. None of these plans could be described as 'limited' in the context of areas defined in policies PR8 and PR9 where entire discrete settlements would be left without adequate separation between them. These policies would in effect merge three separate communities - Begbroke, Yarnton and Kidlington into one large conurbation; taking 3 small and ancient settlements established over 5000 years ago and amalgamating them into a single conurbation or town. This would represent urban sprawl on a grand scale and would be completely in opposition to the purpose of designated green belt land. Policy ESD14 is further contravened as the separation between land defined in policies PR8 and PR9 will effectively be only the width of the A44. It's clear then that CDC's own assessment that the maintenance of the character of both villages and the surrounding countryside is of vital importance and they should not be buried under a swathe of new development as a planning expedience, especially where no exceptional need has been demonstrated. Policies PR8 and PR9 are therefore not consistent with CDC's own policies and assessments, neither are they in accord with national planning guidelines on green belt land and are therefore both unsound."									
Changes Sought				Reasons for Participation					
				To have an opportunity to make a personal representation at the appropriate time and when further information is available about the scale of response to these plans. There will likely be many changes in circumstances between the submission of representations and the consideration of the outcome. I would like to be able to add additional relevant information at that time if appropriate. Also as Green Party Parliamentary candidate for many parts of the area under consideration I feel I should be able to give voice to the views of the Green Party supporters and voters when the time comes

5164

Comments

SUPPORT these Policies with AMENDMENTS. The development of a Development Brief for these sites. The Brief should clearly set out how the plan proposals relate to the strategic bus network and how this will evolve, what the trigger points to deliver this shall be and give clarity to developers on the costs of developing in these locations as set out at PR8 30. The risk of not doing this is one of a hap-hazard development pattern of sites coming forward which cannot be served by high quality public transport though lack of forward planning, lack certainty for developers and a poorly thought out network connecting major nodes. Support PR8 18(c) and Pr9 8(c) which states the need for the development to enable connection to existing and potential public transport services. The policy needs to explicitly highlight that the development brief will need to contain costed proposals for bus services improvements. Therefore there needs to be mention within the policy of the need to “kick start” bus services for a number of years promoting alternative transport to the car until the development is built out and services viable. This viability may come from diversion into the site of existing services and as such we consider that and extension and/or diversion of the 300 park and ride service provide this role. The Service 300 could connect with the PR10 site as the terminus point calling at PR8 and PR9. The development of this service could be covered through the connected and joined up development brief for this site and we would be keen to work with developers and LPA to plan this service enhancement.

Changes Sought

Would therefore like to see the policy strengthened to highlight the need to connect inter urban bus route networks between settlements that reflect the OCC strategic bus network in a phased manner than can allow new developments to be accessible by modes other than the car with appropriate S106 commitments to enable these developments to be sustainable in a manner that is clear to developers promoting sites.

Comments

Green Belt Release & Boundary - It is clear that the unmet housing needs of Oxford constitute exceptional circumstances for the release of the Green Belt in accordance with Paragraph 83 of the National Planning Policy Framework ('the NPPF'). Importantly, in addition to this, paragraph 83 acknowledges that where exceptional circumstances are in place and Green Belt boundaries are being altered through the review of Local Plans, authorities should consider the Green Belt boundaries having regard to their intended permanence in the long term, so that they should be capable of enduring beyond the plan period. It is anticipated that some form of development, mainly for associated supporting infrastructure, including the bridleway and public footpath to the western boundary illustrated on the western boundary should be included in the area of Green Belt release. The Green Belt boundary needs to be moved west in order to accommodate, firstly, the gross development area and, secondly, to allow for other associated infrastructure which is required in the plan period. This would provide a more robust degree of permanence in the long term. At present the Green Belt release proposed by the Council's policy plan will not serve to ensure endurance beyond the Plan period. Relationship to PR8 - it should be noted that our client is also one of the owners of, and is in full dialogue with the developers and promoters of the Land East of the A44 (Policy PR8) and there is support for connectivity between both sites. Park & Ride - Whilst not specifically referenced within Policies PR8 or PR9, our client is supportive of the notion of a Park and Ride facility being located in the area, as is being promoted by Oxfordshire County Council. Education & Key Facilities - The College supports the provision of necessary facilities and school places as part of comprehensive proposals for the site. However, the College considers that the evidence base dated September 2016 does not support the detailed and prescriptive approach set out in draft Policy PR9. The College are of the view that the proposed education requirements need to be considered alongside the emerging spatial development strategy in other areas, proposals for new schools, capacity available in existing schools and the potential to expand existing schools. All this work has yet to be undertaken, and is required to inform a final decision about what it is appropriate to provide in Policy PR9 and other proposed strategic development allocations and related policies. There should be flexibility in the precise quantum and location of these uses across PR9 until further and up-to-date detailed studies have been carried out, and consultation with relevant technical officers is undertaken. Affordable Housing - We consider that the evidence that is available does not support the current approach. Indeed, the City Council is currently in the process of proposing amendments to its own Affordable Housing policies so that they better reflect current market conditions and housing requirements. The College therefore requests that the policy for affordable housing reflects the emerging evidence base rather than previous City Council policy. The wording should be revised to recognise the viability testing that is allowed for in the City Council's framework (Policy CS24) i.e. that "if it can be demonstrated, by open book evidence, that the affordable housing contribution from either residential or commercial development makes a site unviable developers and the City Council will work through a cascade approach until a site is made viable. Transport - From a transport perspective, it is considered that the site could accommodate an allocation in excess of 530 homes for the following reasons:

- The Land West of Yarnton has excellent accessibility to the local sustainable travel network. Direct access to Oxford City Centre is possible via a high frequency bus route and a direct cycle route, with improvements to these routes set to come forward.
- As such, a proposed increase in allocation would accord with local and national policy which encourages the focus of development in areas where people can utilise sustainable travel opportunities;
- The site benefits from its proximity to day to day facilities in Yarnton;
- A primary, major access point can be provided to serve up to 700 units.
- Should any additional allocation come forward beyond 700 units, a secondary vehicle access point could be provided via a new arm on the A44/Sandy Lane/Rutten Lane roundabout. Accordingly, in transport terms, the proposed allocation of 530 homes is supported and deliverable.

Development Brief - PR9 requires the preparation of a Development Brief, in consultation with the City and County Council, in advance of any planning applications being made. The College is concerned that such an approach may increase timescales and add unreasonable burden to the development process, reducing the focus on delivery of the sites for completion by 2031 and meeting the rolling 5 year land supply, particularly given the site is within a single landownership and is likely to be one of the sites that can deliver housing early on in the period.

Changes Sought

he PR9 Plan should be updated in line with the changes set out above and illustrated by the revised Plan submitted in support of these representations in terms of the Proposals The Plan for PR9. Additionally, items three and four should be revised as shown: 3. The provision of 1.6 hectares of land for use by the existing William Fletcher Primary School to enable potential school expansion within the existing school site and the replacement of playing pitches and amenity space should this be required; and 4. The provision of facilities for formal sports, play areas and allotments to adopted standards within the developable area (unless shared or part shared use with William Fletcher Primary School is agreed with the Education Authority). Should this provision not be required, the Masterplan associated with the development will take account of this to ensure comprehensive development. Item 2 within Policy PR9 should be revised as follows: 2. The provision of 50% of the homes as affordable housing as defined by the National Planning Policy Framework. If it can be demonstrated, by open book evidence, that the affordable housing contribution would make the strategic allocation unviable, then developers and the Council will work through a cascade approach until a site is made viable.

Reasons for Participation

To enable the Planning Inspector to fully understand the key reasons why our requested amendment to the Local Plan is required to make the plan 'sound', and to facilitate thorough examination of the issues.

Proposed Submission Plan - Policy PR9 - Land West of Yarnton Road

PR-C-1397	10/10/2017	Robert	Davies	Gerald Eve on behalf of Merton College, Oxford	Y	Y	N	Y
5243	<p>Comments</p> <p>Notes the Council's work on Community Infrastructure Levy ('CIL'), producing a draft Charging Schedule. CDC are clear that a decision on whether to introduce CIL has not been made. Should CDC decide to implement CIL, the College consider that the strategic development site allocations should be zero-rated, with infrastructure secured through s106 obligations. Such obligations can be negotiated at an appropriate level, underpin the viability and deliverability of the strategic sites and ensure that the right infrastructure is provided in the right place at the right time. This would enable strategic development sites to come forward as anticipated in the Plan and reflect their individual and collective characteristics, their complexity, their wider benefits and the high costs required to allow a strategic-scale development to be implemented. Further it would ensure a continuous supply of housing through the lifespan of the Local Plan and the desirability of setting charges which are not overly complex to implement or administer. This is important in deliverability terms for the Plan and meeting Oxford's unmet needs as quickly as possible within the Plan period, which is the underlying purpose of the partial review. Infrastructure to be provided by the strategic development sites is largely site-related – education, health, green infrastructure, community facilities – and will be provided by the land owners/developers, thereby meeting most if not all of their own development specific infrastructure. There is therefore a serious risk of “double counting” in the payment of CIL and s106 contributions if this is not recognised, which is inappropriate. It is essential for strategic sites to be able to deliver such infrastructure as it is often fundamental to the wider implementation of the development. Therefore, the College considers that this should be taken into account in the level of CIL that is payable, which for the reasons indicated, should be at a Nil/Zero rate for the strategic development sites including the proposed Policy PR9 allocation with infrastructure secured through a s106 obligation, which can ensure that it is provided within relevant phases of development and at appropriate triggers/thresholds which will need to be agreed between the developer and Council.</p>							

Changes Sought

The following sentence should be added to the end of paragraph 5.143: 'Should CDC seek to introduce CIL then a new draft Charging Schedule will be required to include the strategic development sites with a Nil charge for the strategic development sites.'

Reasons for Participation

To enable the Planning Inspector to fully understand the key reasons why our requested amendment to the Local Plan is required to make the plan 'sound', and to facilitate a thorough examination of the issue.

PR-C-1397	10/10/2017	Robert	Davies	Gerald Eve on behalf of Merton College, Oxford	Y	Y	N	Y
5244	<p>Comments</p> <p>Strongly support Policy PR9's objective to develop a village extension to Yarnton comprising 530 (net) dwellings at an average net density of 35dph at Land West of Yarnton. The land provides a sustainable location to accommodate Oxford's unmet housing needs within close proximity to Oxford. Welcomes the Sustainability Appraisal findings that 'significant positive effects are identified in relation to improving health and well-being and access to services and facilities' with respect to the land identified for allocation within Policy PR9. Furthermore, the Landscape Character Study acknowledges the site has a medium capacity for residential development, particularly within the area adjacent to the existing urban edge of Yarnton, and notes that there are no landscape designations within the site. The assessment also acknowledges that the lower lying land around the perimeter of the site is not visible in views into the site and that there are opportunities for mitigation of landscape impacts through the management and reinstatement of hedgerows. Again, this assessment is welcomed. The site is in single ownership and is therefore highly deliverable. This will also enable delivery within the early part of the plan period, thus making a material contribution to early delivery to assist with meeting Oxford's unmet housing needs." The policy text states that 530 dwellings should be provided on "approximately 16 hectares of land" which is fully supported. This is within the context of the larger area within the draft allocation. However, further technical work has been undertaken and following assessment by Define (urban design and landscape consultants) it is clear that the pink area of land shown on the current Policy Plan PR9 is a net area. There has been no allowance for associated infrastructure, facilities and consideration for current technical standards which would be required to support the allocated homes within that area. The residential area shown in pink on the plan should therefore be expanded to comprise a gross area to take account of the need for associated connectivity infrastructure, noise and flood mitigation requirements, etc., importantly, within the red line of the PR9 allocation which itself would not require amendment. We enclose with these representations a proposed correction to the PR9 Policy Plan to address these factors. In addition, following further consideration by Define, the enclosed suggested revision also proposes an alternative shape for the primary school use allocation (shown in purple on the plan), which it is considered would allow for a better disposition of the space relative to the William Fletcher Primary School. We have also considered further the sustainable drainage measures which would be necessary, taking into account the slope angle of the site and SuDS requirements. This has led to a suggested proposed dual use of space to the eastern boundary of the site. The intention is to utilise this area for both noise and drainage mitigation which is considered a very effective use of the land within the allocation. This would not require amendment to the PR9 site boundary. The Council's proposal to include public access land to the west of the residential area is acceptable in principle, however, it should be noted that it is not considered appropriate to incorporate full unrestricted public access across the whole area (which is productive agricultural land). Nonetheless, a future masterplan for the site would develop appropriate and suitable routes and areas within the area shown. The proposal to include a community woodland within the land illustrated by the current PR9 plan is accepted in principle. We have put forward a revision on the plan submitted alongside these representations that is considered to offer a more appropriate and deliverable area for a community woodland which would act as a buffer to the north of the site which is considered capable of being delivered as part of new development.</p>							

Changes Sought

The PR9 Plan should be updated in line with the changes set out above and illustrated by the revised Plan submitted in support of these representations in terms of the Proposals The Plan for PR9. Additionally, items three and four should be revised as shown: 3. The provision of 1.6 hectares of land for use by the existing William Fletcher Primary School to enable potential school expansion within the existing school site and the replacement of playing pitches and amenity space should this be required; and 4. The provision of facilities for formal sports, play areas and allotments to adopted standards within the developable area (unless shared or part shared use with William Fletcher Primary School is agreed with the Education Authority). Should this provision not be required, the Masterplan associated with the development will take account of this to ensure comprehensive development. Item 2 within Policy PR9 should be revised as follows: 2. The provision of 50% of the homes as affordable housing as defined by the National Planning Policy Framework. If it can be demonstrated, by open book evidence, that the affordable housing contribution would make the strategic allocation unviable, then developers and the Council will work through a cascade approach until a site is made viable.

Proposed Submission Plan - Policy PR9 - Land West of Yarnton Road

PR-C-1398	10/10/2017	Ben	Simpson	WYG on behalf of Bonnar Allan Ltd	Y	Y	N	N
-----------	------------	-----	---------	-----------------------------------	---	---	---	---

5335

Comments

The representations are submitted on behalf of my client Bonnar Allan with regard to their proposals at New Alchester. The land is identified in the Vision document attached to these representations and will include up to 7,200 new market & affordable homes, primary & secondary schools, creation of a 240 acre country park & watersports centre & the potential to incorporate a new Park & Ride site with connection to the railway line south of Bicester by a new railway station. Our comments on the PSP are confined to issues of soundness. A summary of the alternative Options A to I that CDC considered at the last stage of the Plan is set out at paragraph 2.12. For the reasons we set out in our representations to that stage, we consider that the CDC's proposed approach of allocating land to the north of Oxford & within the Green Belt (GB) around Kidlington as set out in PR9 is flawed, & that the Partial Review does not pass the test of soundness. The PSP is not Justified as in our view it does not represent the most appropriate strategy for meeting Oxford's un-met housing needs. The logic that appears to underlie the PSP is in essence that the closer the proximity of the required housing to the City, the more sustainable it will be. This logic ignores the fact that there would be better prospects of residents travelling into Oxford as well as the major employment locations in the Science Vale by public transport including by rail from New Alchester. The preferred locations around Kidlington will increase congestion on the highway network & will result in the loss of GB & lead to coalescence between Kidlington, Begbroke & Yarnton, whereas the proposals at New Alchester are located beyond the GB. As we make clear in the Vision document, our proposals can be delivered in a phased manner & there are no impediments to early delivery. The scale of the proposals at New Alchester allows it to meet both the identified needs of Oxford City as well as an element of the future needs of Cherwell District, & in so doing, we recognise the journey that this proposal involves.

Changes Sought

We consider that the PSP should direct a majority of the un-met need to New Alchester which constitutes a more sustainable & justified location for the new homes needed both to meet the City's un-met needs as well as future need within Cherwell District. The PSP should be re-drawn to allocate land at New Alchester in place of the proposed allocations in the Green Belt (GB) around Kidlington. New Alchester can provide a highly sustainable location for the much needed development, at a location outside the GB & on the railway line into Oxford. The development would facilitate creation of a new railway station at New Alchester which would encourage people to travel to Oxford City & also other employment centres within the Science Vale by public transport.

Comments

The CDC Local Plan Part 1 and the NPPF (Para 34) support a strategy whereby growth should be directed towards the most sustainable locations, encouraging travel by non-car modes. The County Council's Oxford Transport Strategy is also clear in its objectives for achieving a meaningful modal shift for those travelling into Oxford City away from the private car and towards public transport. In this context, the justification for the Council's approach in pursuing growth at sites such as PR7, PR8, PR9 and PR10 which propose concentrated levels of development (circa 3,220 dwellings) is unclear. The development as proposed is concentrated along the already very congested A44 corridor and around Kidlington which is a known congestion hotspot. While some development in this area may be appropriate, the concentration of sites will lead to significant issues of congestion given that the sustainable modes being pursued (with the exception of cycling) are all road based Park & Ride, Bus and RTP routes. The Sustainability Appraisal (June 2017) recognises that new development around the Kidlington area 'may increase congestion but the Local Plan Part 1 Partial Review allocates new housing sites that encourage the use of sustainable transport and are allocated following consideration of their impacts on transport patterns through the SA'. Notwithstanding assessment of the proposed allocations through the SA, the impact of congestion has not been sufficiently weighed in the balance when considering reasonable alternative sites and a broader distribution across the District. For example, locating development on the rail network at locations such as Islip would assist in removing some traffic movement from the road entirely. It's recognised that there is the potential for a new railway station at Yarnton, but this is a long term strategy with no immediate proposals for delivery. CDC does not consider this necessary infrastructure to support the proposals and simply consider it a potential future benefit. Therefore, all focus for this plan period under this strategy will be on the road, contrary to the conclusions of the Sustainability Appraisal and to which our client objects. Overall, the various transport evidence base documents prepared to date have not robustly assessed the opportunities to improve rail usage despite current work being undertaken to develop the East-West rail link. East-West rail Phase 1 works saw an upgrade of Islip station which is on the new Oxford – London Marylebone line. The Western Section of East-West Rail will also see the introduction of three new passenger services, for direct services within the region and connections to national mainline services. These services are due to start operating in the early 2020s. Despite this significant rail investment, no development is proposed within Islip which is just a 3 minute train ride from Oxford Parkway, 7 minutes from Bicester, 11 minutes from Oxford and under an hour to London Marylebone. Our client is of the view that Policy PR4a (and by association policies PR6-PR10) focuses too strongly on improvements to and mitigations for the highway network rather than considering options for removing traffic from the road network and towards more sustainable modes such as rail. The proposed locations for the additional housing are known areas of congestion and the transport proposals do not go far enough to solve the existing issues, with the proposed levels of development in this location likely to compound matters further. Our client objects to these policies which will lead to increased levels of congestion and the strategy will not achieve a step change in modal split. Soundness - The evidence base prepared to support Policy PR4a (and by association policies PR6-PR10) is not sufficiently robust to justify the approach to allocate this level of housing in an area of existing traffic congestion without an effective strategy to achieve a step change in modal split. The Council needs to justify its approach for focusing so much of the new development in one area which is already known to suffer issues relating to road congestion. Rail has not been considered as a reasonable alternative within the evidence base documents and consequently the draft plan is not justified. The draft Plan is not Effective, as it focuses too much of the housing requirement in one, focused area. The Plan is not consistent with national Policy as the proposed development is not located where the need to travel will be minimised and the use of sustainable transport modes can be maximised.

Changes Sought

The evidence base has failed to sufficiently consider investment in rail / exploitation of existing rail assets despite recent investment in the East-West Rail project. A thorough exploration of the reasonable alternatives is required. More detailed consideration needs to be given to the potential for locating new development at Islip within proximity to the existing railway station. This location would be sustainable and would support the existing local community. It has been demonstrated that there are no overriding physical constraints, in terms of highway impact, flooding and ecology, to the development of this land.

Reasons for Participation

Due to the complexity of the matters discussed in relation to PR4a

Proposed Submission Plan - Policy PR9 - Land West of Yarnton Road

"Object to the allocations in Policies PR6a, 6b,7a,7b,8 and 9 for the reasons given in our objection to release of Green Belt land (seeobjection to PR3). All of these sites contribute to the purposes of the Green Belt and should not therefore be removed from it. Other Green Belt Sites rejected by the Council. We also explicitly support the Council's rejection of other sites in the Green Belt considered at the options stage for the same reasons. Policy 10 : Woodstock Allocation. In the case of Policy 10, the site is on the edge of the Green Belt, and would impact on its openness. It would also be an excessive and disproportionate extension to the small historic town of Woodstock particularly when considered in addition to the adjacent site provisionally allocated in the draft West Oxfordshire Local Plan (currently under examination) for 300 houses. Due to wide-spread concerns raised at the hearings, the Inspector has asked West Oxfordshire District Council to conduct a heritage impact assessment of this site given its proximity to a World Heritage site. Cherwell should have conducted a similar assessment, taking into account the cumulative impact of the proposed development. Woodstock town is not within the Cherwell boundary but nevertheless, Cherwell has a duty to seek to protect historic Woodstock from inappropriate development and we consider it is not reasonable or sustainable to locate 410 extra houses in this area to meet Oxford's unmet housing needs."

Changes Sought

All allocations should be withdrawn because they are premature (need has not been established) and because alternatives to Green Belt development exist.

Reasons for Participation

We (Kidlington Development Watch – KDW) consider this is necessary because of:our extensive involvement with the consultations at all stages of the Cherwell LocalPlan to date; the considerable work we have undertaken to publicise the consultationourselves; of the feedback we have received from Kidlington residents; and, the largennumbers of them who have responded as a result of our efforts.KDW is a voluntary organisation run by Kidlington residents with experience andinterest in planning issues. We believe that effective, informed public participation inplanning consultations is vital to democratic policy making. We publiciseconsultations that directly affect Kidlington and offer advice on how people can bestmake their views known. In relation to this and the previous options consultation weprinted and distributed leaflets, put up posters, ran a stall on many Saturday marketsand at other events, participated in public and parish council meetings, provided information on our website and responded to requests for information from Kidlingtonresidents.As a result, we have gained a very good understanding of the views of Kidlingtonresidents, a large number of whom have made representations because of ouractivities. KDW's representations therefore reflect the views of much of the Kidlingtoncommunity."

Comments

Sport England welcomes the Council's references throughout the document and policies requiring developers to include open space, outdoor sport and recreation. However, Sport England is concerned that the Council has yet to publish its evidence base in relation to playing fields and outdoor sports provision and built sports facilities. The Council will need to ensure that all of the new development contributes towards indoor and outdoor sports facilities in the District. The Council's evidence base will help frame this work. Sport England also recommends that the Council includes a requirement for applicants to include a statement demonstrating how their development has met the 10 principles included in Sport England's Active Design document. See Section 3 of the document 'how to use Active Design' and the proposed change.

Changes Sought

Sport England recommends that the Council consult Sport England at the earliest opportunity on the preparation of the Playing Pitch Strategy. Sport England suggest the following text could be included in the policies to support Active Design: PR5 (10) Provide evidence of how the development has improved the health and well being of new residents by demonstrating how the proposals will meet the 10 Active Design Principles set out in Sport England's guidance document 'Active Design' <https://www.sportengland.org/facilitiesplanning/active-design/>

SUPPORT the proposal in Policy PR12a to deliver 1700 houses in the period 2021 to 2026, but there is no chance that PR6, PR8 and PR9 will deliver in this timeframe. In contrast, The Moors, which is less complicated and of a smaller scale, could assist – and our recent community-led project at Swinderby (Lincolnshire) demonstrates our place-making capabilities.

Changes Sought

On the assumption that the draft Plan would otherwise be held to be unsound, The Moors (PR14) should be included as an omission site for c300 houses, linked to a regeneration package for the village centre and a new 10 hectare 'country park'. In the alternative, it could be specifically listed as a 'safeguarded site' in Policy PR12b, or this policy could be amended to provide for localized Green Belt reviews for housing where planned for sites are not being delivered by 2021.

Reasons for Participation

We confirm that we wish to attend the examination in public.

Comments

Object to PR9, where exceptional circumstances have not been demonstrated. This is a particularly poor site, the wrong side of the A44, with an impact on the Green Belt recorded by LUC as high. It is unsound and should be deleted from the draft Plan. The principles proposed are similar to The Moors, but our site offers better accessibility, a proper relationship with Kidlington (and its regeneration), and a low to moderate impact on the Green Belt (according to LUC). The proposed density of PR8 at 35 dph is too high.

Changes Sought

Development west of the A44 (PR9) is acknowledged by LUC as having a high impact on the Green Belt, it has no defensible boundary, and it is remote from Kidlington and offers this village no regeneration benefits. This allocation should be deleted.

Reasons for Participation

We confirm that we wish to attend the examination in public.

Comments

Is opposed to the proposed Green Belt allocations mainly because CDC has not proved the exceptional circumstances required to build on a GB, nor has it proved Oxford's "unmet need". Use of the GB for development should be the last resort, if at all. The impact of this proposed "sprawl" on the environment would be massive, with extra cars on roads that are unable to sustain what already exists. This is true also of the existing infrastructure as a whole.

Objection to Options A and B as National Planning Policy states that a local planning authority should regard the construction of new buildings as inappropriate in GB. The policy lists exceptions but these exceptions do not concur with the exceptions that Cherwell are listing. Limited infilling in villages, and limited affordable housing for local community needs may be acceptable but the proposals put forward by CDC for Kidlington, Begbroke and Yarnton cannot be considered as "limited" and therefore do not meet that criteria. The fundamental aim of GB Policy is to prevent urban sprawl by keeping land permanently open – the CDC proposals would considerably increase urban sprawl - with the villages of Kidlington, Yarnton and Begbroke coalescing and thereby destroying their individual identities. CDC lists "Oxford's urgent and pressing housing need" as an "Exceptional Circumstance for GB development". We accept that there is a need for more affordable housing in Oxford but the figures quoted in the document have been suggested by others as being inaccurate and exaggerated. It is unclear as to which target population this proposed housing is meeting. Ideally it should for residents who wish to live and work in Oxford. Current stock is already being used by people who commute to outside the area and there is no legislation in place to prevent that. Oxford City Council has not fully explored ALL possible solutions to create more housing within the city. They have shown an unwillingness to build at higher densities and a reluctance to use Compulsory Purchase Orders to acquire land and buildings that have remained derelict or where landowners have resisted requests to release land for building. Given the serious traffic issues that arise from development outside the Oxford city area which is contrary to the requirement of sustainability in the NPPF, it is incumbent on the Oxford City Council to reconsider strategies to satisfy the housing need within its own boundaries before using GB land. CDC lists the "improvement of transport infrastructure in the north Oxford / A44 / A4260 corridor areas" as another "Exceptional Circumstance for GB Development" These routes are already heavily congested and additional housing in these areas will exacerbate the situation. There is insufficient information and data available to show that the County Council's A44/A4260 Corridor Study and its proposals are achievable both physically and financially. It appears to push the traffic and transport problem into other parts of Oxford. It follows from the above that Policies PR8 & PR9 (Development in Begbroke & Yarnton) are Unsound as the sites are in the Oxford Green Belt and the above arguments apply.

Object to PR8 - the addition of 2480 new houses between and around Begbroke and Yarnton; unjustified as it would completely change the separate village setting for ever and overwhelm the existing character of the locality by tripling the current population at the expense of prime Green Belt land which National Government and yourselves have pledged to protect.

Impact on Begbroke and Yarnton. Since 1991 Yarnton has accepted a number of new housing developments which have increased the size of the village, but have not significantly altered the essential nature and character of the community. The sheer scale of what is now proposed is hard to comprehend and will completely swamp both villages. How can it be deemed acceptable to locate the largest shared (2,480) of Cherwell's allocation of Oxford's alleged unmet housing need (4,400) within the boundaries of such small communities? The two villages will be trebled in size, and the new developments will straddle the Parish boundaries both east and west of the A44, thereby removing the separation between Yarnton and Begbroke, along with their separate identities. The density of the new housing in PR8 is 45 houses per hectare, more than double that of the most recent development in Yarnton on Cassington Road, where Cherwell only gave planning permission on the condition that the number of houses on the site must be restricted to prevent over development. The three-storey blocks of flats on the Cassington Road development are an eyesore and dominate the entrance to the village from the A44 at the Turnpike roundabout. They are completely out of character for such a village. If the new proposal goes ahead with much higher densities, it will completely alter the rural character of the villages of which it will clearly be part. The Plan states that in the PR8 site "there is a clear opportunity to create a very distinctive place and community" (p. 118/5.109). It is obviously envisaging something akin to a University campus around and to the south of the Science Park, which will be autonomous and separate from its surroundings. But since there is no mention of any separation between the new development and existing houses in Yarnton, this does not seem possible. In order to achieve this aim a much larger site away from existing communities would be needed that would afford proper isolation and separation. What is much more likely to be created is a vast expansion of the existing communities. This will alter irrevocably the nature of the communities around the A44 in this area. There will also be very little remaining of the current green buffer between the two villages and their larger neighbour Kidlington. In effect the proposals will create a single large urban area comprising the new high density developments of PR8/PR9, Yarnton, Begbroke, and Kidlington, which will in turn be joined up with the proposed developments around the new Oxford Parkway station on the northern outskirts of Oxford. Has any consideration been given to the new identity of the conurbation that will be created and what measures will have to be put in place for it to work at all, let alone satisfactorily? And which Parish Council will be responsible for the various parts of the new development?

Changes Sought

Reasons for Participation

I would like the Begbroke and Yarnton Green Belt Campaign to act as my representative during the Examination by the Planning Inspector.

It is only necessary to look at the present difficulties being experienced by local residents, due to an already overstretched and struggling infrastructure, to understand the potentially catastrophic problems that are likely to result from such a proposal if it goes ahead and trebles the population of the area. There are basic amenities in Yarnton but to access a wider range of facilities it is necessary to go to a larger centre, the nearest being Kidlington. However, the bus service between Begbroke, Yarnton and Kidlington was withdrawn making it impossible to get to Kidlington by public transport (community bus does the journey once a week). Yarnton surgery was merged recently with two Kidlington surgeries. Appointments in Yarnton are increasingly difficult to obtain. This means a journey to Kidlington which is now difficult for those who do not drive. Some elderly patients have to travel by taxi for their appointments. The popular and well-supported Garden Centre/Restaurant/Shopping Village on Sandy Lane was recently sold and the new owners have offered to sell the site for development should the Plan go ahead. This would remove one of the well-used local amenities within walking distance for a large proportion of village residents. The Plan encourages residents to walk or cycle rather than rely on cars, but in reality this is not practicable as a means of undertaking journeys essential to everyday life for many elderly or disabled residents or those with young families. Indeed even the young and healthy would be unlikely to choose to walk over two miles in each direction to Kidlington for work or to do such things as visit the doctor, go to the bank, have an eye test, buy do-it-yourself materials, attend church, use the sports centre, do a supermarket shop or keep in touch with family and friends in the wider locality. And cycling is simply not a viable option for most people as a means of getting to work or travelling outside the immediate vicinity, except possibly some of the younger residents. Given these current pressures on essential services it is clear that major investment in improved infrastructure and local amenities would be needed to support the scale of developments being proposed. However, the Plan does not put forward realistic detailed proposals and costings to resolve the potential problems.

Supports the allocation of sites at Begbroke, Yarnton & Woodstock. Our comments on the details of these policies are more brief as the physical links with the city are more limited (although the economic links with Begbroke & the University of Oxford as part of the 'Knowledge Spine' are clear and strong), however we welcome the delivery of sustainable transport links into neighbouring communities & onwards into Oxford to provide access to employment, services & facilities.

Proposed Submission Plan - Policy PR9 - Land West of Yarnton Road

PR-C-1438	10/10/2017	Serena	Marner					N	Y		
4589	<p>Comments</p> <p>Impact on Begbroke and Yarnton. The proposed development of a 'new urban neighbourhood' on the land east of the A44 [Policy PR8] and the 'village' extension to Yarnton [Policy PR9] is not appropriate given the existing numbers of houses in Yarnton and Begbroke. This will mean trebling the size with the coalescence of the villages and the loss of identity, character and setting of these historic sites. With the proposed creation of an urban sprawl, also joined up with Kidlington, and no significant green spaces between these existing villages, the result would be a huge and dense population the size of a town. The density of the proposed housing development is far too high and would be inappropriate in a 'village' setting with the existing communities. It seems little consideration has been given to the health and wellbeing of the residents who would have to live in these high density developments, with very little space allocated to individual residents or to families. Green space is important for a healthy population and especially for children. With food shortages looming in the future as populations increase, we will all have to have gardens big enough to grow our own vegetables and fruit in order to be able to survive. I therefore cannot support the plans.</p> <p>Changes Sought</p> <p>Reasons for Participation</p> <p>I would like Begbroke and Yarnton GB Campaign to act as my representative during the Examination by the Planning Inspector.</p>										
PR-C-1441	10/10/2017	Katherine	Jones	Savills on behalf of Thames Water							
4602	<p>Comments</p> <p>Oxford STW has the capacity to deal with the flows from this development. The wastewater network capacity in this area is unlikely to be able to support the demand anticipated from this development. Strategic drainage infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of the development. Where there is a wastewater network capacity constraint the developer should liaise with Thames Water and provide a detailed drainage strategy with the planning application, informing what infrastructure is required, where, when and how it will be delivered. Thames Water advise that this development site could potentially drain to either Oxford STW or Cassington STW depending on the point of connection. The scale of this development would require a strategic solution and total development identified in the Kidlington area within the Cherwell development plan may cause concern if all developments were to go ahead. Thames Water would welcome early consultation concerning any proposed development. There are existing sewers or rising mains crossing this site and where there is no practical way of their being diverted the stand off distances tabulated in the SFA 7th will be applied to assess the width of easement required.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>

4621	<p>Comments</p> <p>Believes that Cherwell District Council would fight to preserve GB around Oxford to prevent the areas of PR6a, PR6b, PR8 and PR9 ever being developed. Moved to village of Yarnton to be part of a typical English village community but now appears that, if not stopped, developers will be given carte blanche to turn a crucial part of beautiful Oxfordshire countryside into yet another amalgamated housing estate. Traffic chaos will on A44 by expansion of Begbroke and Yarnton, combined with additional houses at Woodstock and ludicrous proposal to close Sandy Lane to through traffic, will have a devastating effect on the ability of residents and others to use the A44. Majority of people using A44 do not want to cycle to Oxford and the a super cycle way or bus lane would not alleviate the misery. Bitterly oppose the digging up of the historical North Oxford Golf Course (PR6b) for low density, highly priced housing aimed at London commuters – an act of vandalism to a wonderful local amenity which will not help resolve Oxford's low-cost housing shortage. It would be a tragedy for members and visitors, and local people who have access to wander through the beautiful parkland established over 110 years. Cherwell D.C. appear to offer an alternative site PR6c clearly knowing that it would not be acceptable to a golf course developer and would never be recreated. The questions around this proposal are:(a) Why does Cherwell D.C. not offer up PR6c for housing as it is only yards away from the existing club?(b) Why does the city not build its houses on the city's golf (Southfield) course – i.e. on the land it owns and which is ideally suited to higher density housing and in an area of greater need? Why doesn't the Council use its powers of compulsory purchase to acquire the under-used golf course at ST Edward's School or a number of the many under-used college sports grounds, reserved for the rich and academics? This once again shows the stranglehold the University has on Oxfordshire residents. For the reasons given above and the Representations made by the Begbroke & Yarnton Green Belt Campaign which are supported and adopted as part of my own representation in this document, the Plan cannot be changed to make it legally compliant or sound and should therefore not be submitted for Inspection.</p> <p>Changes Sought</p> <p>Reasons for Participation</p> <p>Would like the Begbroke & Yarnton Green Belt Campaign to represent me at the Examination should it take place.</p>

5200	<p>Comments</p> <p>"Proposals to development on Green Belt and misleading statistics relating to the scale of loss of green belt. The Green Belt was set up to prevent urban sprawl, protect open spaces and preserve identities of communities. These proposals directly contradict this requirement and are therefore against national policy. Figures show that the PR08 alone removes at least 50% of the green belt associated with that site, while the development of site PR09 removes a further 16%. Both sites form part of the green belt so development is against national policy and there is no special circumstance for doing so. The statement on page 31 of the summary booklet that the reduction is only 3% is totally misleading as it fails to recognise the impact at local level and is therefore unsound. According to the maps available, the gap between Yarnton and Begbroke will reduce to about 1/5th of its current size i.e. tens of metres rather than hundreds."</p> <p>Changes Sought</p> <p>Reasons for Participation</p> <p>Wishes to participate in the oral examination</p>										
PR-C-1484	09/10/2017	Nicole and Eugene	Brooks and Griffin							N	
4654	<p>Comments</p> <p>Object – Land West of Yarnton Do not consider the proposed submission plan to be sound and do not see any valid reason for exceptional circumstances to justify removal of green belt land in the area. The report that Oxford's unmet housing need is as high as stated in the plan has been thrown in to doubt with conflicting reports, and that new Government targets are significantly lower than this plan is based on. The plan is unsound and unjustified. It is being rushed through and not based on accurate figures. The proposed plan for improving infrastructure in the area to support this level of development is nowhere near realistic on a physical or financial basis. It does not begin to address the problems that will arise in this area. The proposal of closing the road between Yarnton and Kidlington is not justified at all. The plan is unsound as the need has not been thoroughly assessed or understood and no effective solution has been put forward. There is no justification for removal of green belt land in this area based on these proposals</p> <p>Changes Sought</p> <p>Reasons for Participation</p>										

Proposed Submission Plan - Policy PR9 - Land West of Yarnton Road

PR-C-1535	10/10/2017	Layla	Vidal-Martin	Lichfields on behalf of Taylor Wimpey (Oxfordshire)	Y	Y	N	Y
-----------	------------	-------	--------------	---	---	---	---	---

5264

Comments

Taylor Wimpey (TW) considers the Submission Plan is not sound as it is not “justified” or “consistent with national policy”. This is because : 1. CDC acknowledge (Submission Plan Executive Summary para XV) that “under national policy Green Belt boundaries should only be altered in exceptional circumstances through the preparation or review of a Local Plan”. The Submission Plan (para 5.17) sets out why CDC consider that exceptional circumstances exist for the release of these sites from the Green Belt & their allocation for residential development. TW contend that CDC have not thoroughly explored “all other reasonable options” &, where they have sought to do so, there are flaws in their evidence base (regarding their assessments of sustainability, transportation & alternative development locations). They have not demonstrated the “exceptional circumstances” required for the proposed release of the sites identified in Table 1 from the Green Belt; 2. CDC’s approach is predicated on an assumption that “Oxford’s Housing Needs” form a bespoke & identifiable source of housing need. This conflicts with the recognition in the Oxfordshire SHMA (2014) (para 9.2) that “the SHMA identifies an Oxford-focused Housing Market Area which extends across much of the County, reflecting the economic influence of the City. The county still remains the most appropriate geography for analysis of housing markets in terms of the ‘best fit’ of local authority boundaries to a functional housing market area.” More recently the Inspectors Report into the Vale of White Horse Local Plan emphasised that (para 45) “it is not the role of, or possible for, the plan to prescribe where people live and work;” and; 3. CDC compound this assumption (Policy 12a) by seeking to pursue a “separate five year housing land supply . . . For meeting Oxford’s needs.” This, in conjunction with proposals not to support Sites Not Allocated in the Partial Review (policy PR12b) are not consistent with the NPPF’s presumption in favour of sustainable development & risk substantially harming housing delivery in the District in the coming years. Scope of response (See Detailed 4 Section Report). This response amplifies TW’s concerns regarding the soundness of the Submission Plan, & their view that their site at Bloxham (Site PR35) forms a “reasonable option” for residential development prior to the release of the proposed allocations from the Green Belt. Specifically • Section 2: Summarises the appropriateness of residential development on the TW site; (Section 2 encloses * Sustainability Analysis by Calibro, * Residential Potential of Site, * Assessment of site against constraints, * SHLAA Analysis) • Section 3: Summarises TW’s concerns regarding the inadequacy of the evidence base, whilst emphasising their support for the level of residential development proposed. This underpins their contention that the Submission Plan does not establish “exceptional circumstances” for the proposed release of these sites from the Green Belt; • Section 4. Sets out TW’s comments on emerging policies and the changes that they consider are necessary to make the plan sound.

Changes Sought

The Plan proposes that around 55 % of the housing proposed should be targeted within the Green Belt (GB). Para 3.26 “approximately 14 % of Cherwell lies within the Oxford GB”. Thus CDC need to demonstrate “exceptional circumstances” as to why this housing cannot be located within non GB locations comprising 86 % of the District. We do not consider that CDC have appropriately addressed “reasonable alternatives” & therefore cannot be considered to have demonstrated “exceptional circumstances” for the release of all of these sites from the GB. * Combined with the inadequacy of the evidence base, these concerns are amplified by the fact that the Submission Plan appears to prejudge the proposed development strategy irrespective of the evidence base. This is reflected in the fact that the (Executive Summary para xiv) states that the Plan “focusses development on a geographic area extending north from Oxford to south Kidlington, along the A44 corridor” & earlier iterations of the evidence base acknowledged that only sites within two of the nine areas of search have been assessed, Conversely TW have established that the TW site at Bloxham does form a “reasonable alternative” for development within a sustainable location which is capable of meeting housing need. This is consistent with CDC’s analysis within the HELAA (albeit that TW’s technical analysis is that the site is capable of accommodating a higher level of residential development). Accordingly the TW site should be allocated for residential development (under this or an additional policy) prior to CDC moving on to consider the need for any Green Belt release. Without the amendments sought above our clients do not consider that the Submission Plan can be considered “sound”, particularly with regards to being “positively prepared” or “justified.”

Reasons for Participation

We consider it necessary to participate at the part of the Examination to amplify the concerns and points raised within the representations.

Proposed Submission Plan - Policy PR10 - Land South East of Woodstock

PR-C-0190	01/08/2017	Ian	King	Bladon Parish Council	Yes	Yes	No
-----------	------------	-----	------	-----------------------	-----	-----	----

Strong objection to Section PR10, as it exists. The proposed housing on the A4095 border of Woodstock will put further strain upon the town’s infrastructure, services and commercial centre. It will adversely affect the approach to the Blenheim Palace World Heritage Site and the local rural environment. Woodstock needs to be protected from such inopportune and damaging development. Public consultations are nothing more than the means of whichever government to placate and patronize the populace. Occasionally, people power wins through but this is a rarity. If the developers’ firms and planning authorities were subject to corporate responsibility, perhaps more lucid thought would be given to the human effects of their projects and decisions.

Changes Sought

Reasons for Participation

In accordance with the government’s recent reasonable calculations to reduce the number of houses from 100, 000 to 68,000 we suggest that the requirement for each district to contribute to the “Oxford’s unmet need” be rescinded and that the proposed 4, 400 homes proposed by CDC to meet this need be scrapped in its entirety. There would be no need to profane the GB.

Lack of Consideration of Atmospheric Pollution in the Plan. Other than a couple of the hundreds of policy statements, viz., the plan will “seek to: contribute to improving health and well-being and conserve and enhance the natural environment.” I find no mention or consideration of how the plan will cope with the additional noxious nitrogen oxide gases that will be spewn from the up to 6000 or more private cars owned by the 7,400 prospective residents living in the SE area of Woodstock and those in nearby Cherwell District. Public Health England has stated that 5.3% i.e., 276 deaths a year of adults 25 years and older are attributable to air pollution and others suffer with long term conditions such as lung diseases, asthma, cancer and birth defects. The Government has stated that deaths related to air pollution are the second biggest health threat after smoking. And yet, not a mention of this threat is in Cherwell’s plans. WSP/Parsons Brinkerhoff compiled a 75-page air quality assessment (AQA) for the development of the 300 houses in the SE quadrant of Woodstock during the 7 year duration of the construction phase as well as the post construction phase on the potential effects of Nitrogen dioxide (No2) and Particulate matter 10 and 2.5 on the prospective affected residents that will occur because of increased volumes of traffic generated by the development. The report concludes that the effects of these concentrations of noxious and deadly gases on those affected, “would be negligible. I am not at all convinced that this will be the case as even the authors of this AQA have said, Changes in local traffic volumes and characteristics resulting from the Proposed Development may also have an impact on local air quality” I agree. They also state that “road traffic is a major source of the pollutants, NO2 (Nitrogen Oxide), Particulate Matter 10 and 2.5 and the dominant source in many urban areas.” This AQA only pertained to the Woodstock East Development of 300 houses Cherwell’s plan of 410 at PR 10 will more than double air pollution in the SE quadrant of Woodstock and the nearby area in Cherwell. This has the makings of a worrying cocktail of cumulative and degenerative air quality affecting both human and wildlife receptors.

Greater Oxford in the Making. This plan will see more and more development and traffic on a geographic corridor from Oxford along the A44 via villages Yarnton and Begbroke culminating at Woodstock. The GB, once bitten will eventually be swallowed whole. Oxford will expand north to incorporate these villages and become the Greater Oxford Corporation thus making Woodstock and Kidlington suburbs of Oxford and adversely affecting about 18,000- 20,000 residents in these villages and aggravating already congested roads e.g., A4260, A34, A4095 and the A44. Woodstock is only 7km from N. Oxford. The leader of Cherwell Council has said, “... growth must insure that people have convenient, affordable and sustainable travel opportunities to the city’s (Oxford) places of work...” We do not see this being the case because of widespread, unabated housing growth in Cherwell and Oxfordshire which is leading to increased levels of inconvenient and unsustainable traffic congestion, gridlock and driver exasperation and anger. In a 2011 census (already 6 years old then) 67% of Cherwell residents travelled to work by “Driving a car or van. ” Since then we estimate that this residents’ mode to work is now between 70-75%. (Source: ONS Census 2011-Jouney to Work Data.)

Transport - It is recognized that change is inevitable but the pace at which it happens is not. We recognize the need for increased housing but not of the magnitude of 4,400 houses, 410 of which are planned just across the A4095 border of Woodstock in Cherwell next to an area, which already has planning permission for 300 houses and possibly more. There are some 1,150 homes in the Shipton Road quadrant which includes Banbury and Hensington Roads and Marlborough Place I & II off Shipton Road plus others. This development will concentrate 1,860 (1,150 + 410 + 300) houses and between 2,500 to 3,000 (1860 x rate of 1.50 per household =2790 cars)) private and other vehicles in the SE Woodstock quadrant. Many of these residents are those who are most likely to exit onto the A4095 via Shipton Road plus those from the planned Woodstock East development of 300 houses and their counterparts across the border from The Straight Mile. The A4095 is the main artery through Bladon to Witney and beyond and is already congested daily. Let us not forget the many commercial vehicles, HGVs, postal and delivery vans, tourists and visitors, etc., that ply these roads and one has the increased propensity for even more accidents and injuries along these local highways. Traffic on our local highway system; A34, A4095, A44 is now so bad that one does not need to leave one’s home to be threatened with injury or worse.

Car Ownership - Cherwell District Council. Between 1981 and 2011, the number of households in the Cherwell District increased by 55% while the number of cars owned by residents increased by 126%. The number of cars per household increased from 0.98 in 1981 to 1.42 in 2011. This was well above the national average of 1.16 cars per household. (Source: Census 2011 Summary for Cherwell District Council, p.5) Plan 2011-2016, Ch.7, p.143). According to CDC, there are about 60,000 households in the district. By 2031 4,400 more houses are planned totalling about 64,400 households. (However, within the next 14-15 years, these numbers will most surely increase.) Using the projected figures of 4,400 houses plus the 60,000 in situ, i.e., 64,400 households, we estimate an increase of 85% of households having one or more cars, i.e., 85% of 64,400 = 54,740 households having one or more cars. If we estimate that the 2011 figure of 1.42 number of cars per household has increased to 1.50 cars per household this = 96,600 cars in Cherwell District. If we round off this 1.50 figure to virtually 2.00 cars per household, then we arrive at the figure of 128,800 cars in Cherwell District.

Considers the proposal to build 410 new homes at Woodstock to be unsound and wishes to object for the following reasons: 1. There has been no coordination with W.O.D.C. who are also proposing development nearby as part of their Local Plan 2031. 2. The proposal will exacerbate the tendency to urban sprawl between Woodstock and Oxford, especially given other development proposed south of Woodstock. 3. The proposal will dilute the historical character of Woodstock. 4. The proposal will detract from the natural countryside environment on the present outskirts of the town. 5. The highways infrastructure necessary for such development is severely lacking, both towards Oxford and towards Woodstock town centre. 6.The car parking provision in the centre of Woodstock is already problematical, is hindered by inappropriate WODC policies, and this proposal will only exacerbate the problems. 7.The health centre in Woodstock is not equipped to cater for this development nor even that proposed by WODC. 8.The proposal would necessitate additional Primary School capacity.

The site "Land South East of Woodstock" contains the "Blenheim Villa", a scheduled monument comprising a Roman villa and associated field system 200m north east of Little Cote. As the Council will be aware, paragraph 126 of the National Planning Policy Framework requires local planning authorities to recognise that heritage assets are an "irreplaceable resource" and "conserve them in a manner appropriate to their significance". Paragraph 129 notes that the significance of a heritage asset can be affected by development affecting its setting. Paragraph 132 recognises scheduled monuments as "heritage assets of the highest significance", substantial harm to or loss of which should be "wholly exceptional". At the previous stage of the Plan we commented "The development of this site would have an unacceptable impact on the monument and its setting and should not be taken forward". This remains our preferred approach, as we consider it likely that archaeological interest extends beyond the scheduled area. However, we would be prepared to reconsider this fundamental objection in principle if an archaeological assessment is undertaken and demonstrates that the remainder of the site is not of archaeological interest beyond being within the setting of an scheduled monument, which would thus ascertain the acceptability of development over what area of this site. We note requirement 18 in Policy PR10 requires an application to be supported by an archaeological investigation which may "then require predetermination evaluations and appropriate mitigation measures". However, we consider this to be too late in the planning process, which gradually firms up this allocation as the Plan progresses. This investigation should be undertaken before the Plan is adopted. We therefore consider that, notwithstanding requirements 10a, 23, 29 and 30, Policy PR10 fails to provide adequate protection for the archaeological interest of the site in accordance with the National Planning Policy Framework and therefore object to this policy and consider it not to be sound. In addition, requirement 18, as drafted, only notes that the archaeological investigation may require predetermination evaluations and appropriate mitigation measures respectively. It does not require these measures to be incorporated in or to influence the actual development scheme. The same flaw is evident in requirement 15 in that it only requires the HIA to include measures to avoid or minimise conflict with the identified heritage assets, not these measures to be incorporated into any proposed development scheme. Historic England therefore considers that the policy provides inadequate protection for the potential archaeological remains on the site in this way too, and that Policy PR10 as written does not conform with the Framework and thus is not sound for this reason too. Without prejudice to our objection to the allocation of this site without further investigation and a requirement for the results of that investigation to be incorporated into any development scheme, we also have the following comments. The Blenheim Palace World Heritage Site and Registered Historic Park and Garden is located to the south-west of the site "Land South East of Woodstock". Historic England therefore welcomes and supports requirements 9, 10a, 10e, 15, 23, 24, 25 and 27, although we consider 10a should read "...which unambiguously responds to and conserves or enhances, the significance of the internationally and nationally significant heritage of the Blenheim Palace World Heritage Site" and 24 should read ".....the significance of Blenheim Palace World Heritage Site and the Grade I Registered Park and Garden and their settings." If, notwithstanding our clear objection, the Council maintains this allocation, we would wish to see requirements 10a, 23, 29 and 30 retained in Policy PR10).

Changes Sought

This site should not be allocated for development until an archaeological assessment has been undertaken and ascertained the extent and significance of archaeological remains on the site as a whole, thus identifying if development is acceptable on this site and, if so, over what area. (Discussions with the Council are ongoing at the time of submitting this representation, but early indications are that the Council will consider commissioning such an assessment prior to submitting the Plan. If it was to do so, and Policy PR10 amended as necessary to our satisfaction, Historic England's objections to the Policy on the basis of the impact on "Blenheim Villa" scheduled monument would be overcome. If, notwithstanding our objection, the Council maintains this allocation, Historic England would like to see the following changes to Policy PR10: Requirement 10a should read "...which unambiguously responds to and conserves or enhances, the significance of the internationally and nationally significant heritage of the Blenheim Palace World Heritage Site". Requirement 24 should read: "24. Development that causes no harm to the significance of the Blenheim Palace World Heritage Site and the Grade 1 Registered Park and Garden and their settings". Requirement 17 of Policy PR10 should be reworded as follows:17. The application shall be supported by a Heritage Impact Assessment which will identify measures to avoid or minimise conflict with the identified heritage assets within and adjacent to the site. These measures shall be incorporated or reflected, as appropriate, in any proposed development scheme." Requirement 18 should be reworded as follows: "18. The application(s) shall be supported by a desk-based archaeological investigation which may then require predetermination evaluations and appropriate mitigation measures. The outcomes of the investigation and mitigation measures shall be incorporated or reflected, as appropriate, in any proposed development scheme". For the sake of clarity, we do not consider that these changes alone would make Policy PR10 sound, given our fundamental objection to the allocation of this site for housing without a prior archaeological investigation). (Discussions with the Council are ongoing at the time of submitting this representation, but early indications are that the Council will consider rewording these requirements as suggested as minor modifications. If it was to do so, Historic England's objections to these requirements would be overcome).

Reasons for Participation

Historic England wishes to participate in the oral examination to explain the significance of the "Blenheim Villa" scheduled monument and the potential archaeological interest of the site, and to assist the Inspector with responses to any points raised by the Council or other parties to the examination.

Key Delivery Requirements' on all these policies are nothing more than a fig leaf. It is perfectly obvious the developers will agree to some or all of them and then will renege on them. This always happens. 50% affordable housing will be thrown out of the window as it has been in Templars Square where 50% has magically transformed into 23%. Similarly, developers never actually deliver infrastructure like schools, community centres or roads that are wide enough. The 'Place shaping principles' in these policies are valueless: there are no measure by which they might be enforced. How can one tell, for example, whether an extension "responds to the 'gateway' location of the site". It's gobbledegook. PR11: This is completely empty. 'Working with partners' does not guarantee anything except that you have no control over the outcome. Nor does 'setting out the Council's approach'. Its all very well having the development proposals demonstrate that infrastructure requirements can be met - it does not mean they will be met.

Proposed Submission Plan - Policy PR10 - Land South East of Woodstock

PR-C-0331	21/08/2017	Colin	Carritt		Y	Y	Y	N
967	<p>Comments</p> <p>Gives wholehearted support to Policy PR10 as it offers compliance and soundness in providing much needed housing for the town of Woodstock. Woodstock is a highly sustainable community but requires an increase in its population to sustain its retail heart and to rebalance its demography away from a predominance of older people. Particularly pleased that CDC appear to have worked with WODC to coordinate a response both to the CDC partial review and to the WODC modified local plan. Believes this policy goes a long way to enhancing the sustainability of the town. Commend the soundness of its approach and deliberations .</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							
PR-C-0427	01/09/2017	Dr Gillian	Forrest					
1082	<p>Comments</p> <p>Objection to plans to build across the GB between Oxford and Woodstock. These would utterly destroy the nature of this area of Oxfordshire, creating ribbon development which GBs were designed to prevent. The proposed development, added to the 300 new houses already planned there would damage the character of Woodstock and link the village of Bladon to Woodstock, irreparably damaging the nature of Bladon as well. The scale of traffic created by these plans would overwhelm the A44 and surrounding roads, especially the A4095 through Bladon, producing increased pollution levels and health problems. The infrastructure proposed is totally inadequate. Where are the Health Centres, enlarged minor injury units, increased beds at the JR hospital, maternity units and care homes? Where are the plans for increasing secondary school provision in Woodstock? There is no evidence that the new houses would be reserved and affordable for families who work in Oxford. The Barton Park 'affordable' new houses are unaffordable for families of teachers, nurses and others on similar salary levels. Our environment would be sacrificed for the sake of ever more commuters to London and Birmingham. There are other proposals for meeting Oxford's housing needs and the council should consider these to save the settling of Oxford being surrounded by a vast urban sprawl.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							
PR-C-0471	08/10/2017	Richard	Whitlock				N	N
1154	<p>Comments</p> <p>Site PR10 is a bizarre choice for a housing allocation, although it does have the merit of being outside the GB. The many significant constraints on the site are set out clearly in paragraphs 5.134 and 5.135 of the draft Plan, but are these are then overridden with a bland "Nevertheless" in paragraph 5.136 which relies on misplaced hope that its development will "respond positively to the historic environment", completely ignoring the fact that the site as it is does this far better than it ever could if it became a new housing estate.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							
PR-C-0523	08/10/2017	John & Elizabeth	Begley					
1270	<p>Comments</p> <p>As residents of Woodstock for the past 26 years it is felt that the planned additional housing for Woodstock would put further undue stress on local infrastructure and services which are already under pressure. This development is out of all proportion with the size of the town and would destroy the approach to a World Heritage Site, the rural environment, and the historic town of Woodstock would be turned into a suburb of Oxford. This is totally unsustainable. The need for affordable housing for key workers and ease of 'connectivity' are reasons given for developing the A44 corridor - but this will funnel a massive increase in traffic down an already congested road. It is disappointing that Oxford's/Oxfordshire's planning decisions seem at odds with providing for the pressing unmet need: Application for 83 flats providing 73 residences for tenants from the Council's approved list of key workers at a site off William Morris Close in Temple Cowley (inexpensive and easy 'connectivity' for Headington hospitals) - Council recommendation to turn this down. Whereas development of 8 luxury homes just outside the City boundary on the A44 (clearly being marketed to London buyers) was approved by Cherwell. It is unacceptable that rural towns and villages are being asked to accommodate Oxford's unmet need when incoherent decisions such as these are being taken. It is shocking to see the extent to which the National Planning Policy Framework is being allowed to be played and driven by land owners such as Blenheim Estates and Oxford University and developers for their own financial gain, with little consideration for providing the affordable housing that is actually needed in the right location. The scale of this need is based on shifting and nebulous housing numbers, as evidenced by the recent down forecast of Oxford's housing needs. Is this destruction of rural Oxfordshire the legacy we wish to pass on to following generations. If opportunistic landowners and developers continue to dictate planning decisions this will cause irreparable harm to local communities.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							
PR-C-0562	05/10/2017	Helen	Marshall	CPRE Oxfordshire			N	Y
1417	<p>Comments</p> <p>Local Plan Review proposed to build 400 houses to the south east of Woodstock on the edge of the GB. A similar scheme on this site was proposed a dozen years ago and rejected by the Inspector. The same objections apply to this proposal including: - lack of affordable housing. - strain on the already overstressed infrastructure - adverse effects on local schools, medical services and retail centre - threats to World Heritage Site prospect - loss of greenfield amenity - environmental damage. The planned housing for Woodstock threatens to overwhelm local services and risks turning this historic town into an Oxford suburb. The Local Plan Review should instead seek to protect historic Woodstock from inappropriate development. CPRE notes that: a) The Woodstock site is adjacent to a site that has been allocated in the draft West Oxfordshire Local Plan (currently under examination). B) In response to wide-spread concerns raised at the hearings, the Inspector of this Plan has now asked West Oxfordshire District Council to conduct a heritage impact assessment of this site. We believe that Cherwell must conduct a similar assessment, taking into account the cumulative impact of the proposed development. Pending any outcomes from such an assessment, our view is that this site allocation should be removed from the Cherwell Local Plan Part 1 Review.</p> <p>Changes Sought</p> <p>Reasons for Participation</p> <p>A full heritage and landscape assessment should be carried out of the Woodstock site, in line with that which has been requested by the Planning Inspector of the West Oxfordshire Draft Local Plan, including an assessment of the cumulative impacts of developments. Our view is that this would be likely to lead to the removal of the proposed site allocation from the Plan.</p> <p>CPRE Oxfordshire represents a wide membership across the County, including many parish councils and local organisations, and seeks to influence development to protect and enhance the countryside. We would like to attend the oral part of the Examination in order to have the opportunity to respond in person to any further comments made by the Council and developers on these issues.</p>

Concern over the impact of the proposed Woodstock urban extension, including the potential adverse effects on the settings of important heritage assets. It is not clear that Cherwell have appropriately considered the cumulative impact of the proposed urban extension in combination with the proposals in the proposed West Oxfordshire Local Plan. The proposed West Oxfordshire Local Plan proposes 670 new homes on urban extension to Woodstock, including 300 homes to the immediate west of the Cherwell site which now have planning approval subject to a Section 106 agreement. The cumulative effects that need to be considered include the impact on the setting of the Blenheim Palace World Heritage Site. The site at present is a large open field, whose openness is readily apparent from the A44 as visitors travel towards Woodstock from the South, and this contributes to the setting of the World Heritage Site. A key issue to consider is the harm that the Cherwell proposal might cause in combination with the adjoining development in West Oxfordshire. Cherwell have not considered that already there is a woeful lack of parking available in Woodstock and there is a real fear that development of this site would create a satellite village whereby shoppers would use the private car to commute to and from Kidlington. Another important issue is the impact of the proposal on this setting of the Blenheim Villa Scheduled Ancient Monument which is within the site itself. Although the SAM itself will be protected from residential development, the proposed housing area would represent a significant change to the landscape just to the north of the SAM thereby adversely affecting its setting. There is a strong hedgerow feature on the western boundary of the site, which follows the alignment of a historic tract. The proposed urban extension would breach this natural boundary and extend development in an incongruous 'finger' to the east. As such it would not relate well to the existing urban form of Woodstock in this area. The proposed allocation is considered to cause harm to the settings of important heritage assets, it would also impact on the landscape and setting of Woodstock as a result of an incongruous urban extension which is poorly related to the characteristics of the location. The benefits of the proposed allocation do not outweigh these harms, given that there is scope to deliver housing to contribute towards Oxford's needs in alternative ways, such as through a modest increase in density on sites released from the GB, or by the development of the site Policy PR3a, which is to be removed from the GB but is not proposed for housing development in the proposed submission plan. More efficient use of the GB sites could deliver at least 410 additional homes and therefore eliminate the need for the proposed Woodstock urban extension. As such the proposed allocation is contrary to the NPPF.

I strongly object to the inclusion of land (located in Shipton on Cherwell parish) that abuts Woodstock and is identified as Woodstock in the proposals. The field in question was rejected for development two years ago, and adds to proposals – also being challenged – in West Oxfordshire District Council's local plan. No recognition is currently being made by either District of the effect that major building in this area will have on the World Heritage Site nor on the heritage town of Woodstock. The WODC Local Plan Inspector has ordered a heritage assessment of their proposals for Woodstock, and Cherwell must also take account of this assessment. The effect on the local infrastructure and the damage to the historic town of Woodstock would be immense and must not be permitted.

Policy PR10 - Land South East of Woodstock. This allocation looks isolated and only makes sense if it joins up with the proposed site allocation in West Oxfordshire district on the western side of Upper Campsfield Road. This allocation should therefore only be considered if and when the proposed development in West Oxfordshire has taken place. Welcome the provision of large areas of green space, parts of which should also be considered for biodiversity improvements.

1951

Comments

Does not consider the Partial Review of Cherwell Local Plan to pass the 'tests' of soundness, in terms of being positively prepared, justified, effective and consistent with National policy. This is because the Partial Review does not make reference to the need for C2 units (residential institutions, including care homes), nor to care/nursing homes more generally. Policy PR2 deals with C3 uses only. Further limitations on current local planning policies (adopted and emerging) are outlined in the accompanying Note prepared by Lichfield's. In terms of National policy, the Government's National Planning Practice web-based resource in the section on 'Housing and economic development needs assessments' provides guidance to the plan-making process on how to deal with 'housing for older people'. Failure of the Partial Review to meet the care needs of the District will clearly have significant implications on housing options for Cherwell's increasingly ageing population. The accompanying Note prepared by Lichfield's quantifies that like the rest of the UK there is a clear need for care homes in Cherwell. Examples are found in the Oxfordshire SHMA, which projects the number of people with dementia and mobility issues in Cherwell and Oxfordshire will roughly double by 2031 (end of this Plan period). The latest DCLG figures project the number of people in Cherwell living in communal establishments to double by 2031. The Lichfield's' Note sets out the care need for Cherwell as follows: • In Cherwell District itself, the latest DCLG projections show growth in the number of people over age 75 living in communal establishments of 565, i.e. this is the number of care home bed spaces needed (2011 – 2031). However, as the Council are planning for housing growth well in excess of demographic trends, which will lead the population growth in excess of demographic trends, 565 bed spaces should be considered a minimum to plan for up to 2031. • In terms of Oxford City's need, the DCLG projections suggest a need for a further 305 bed spaces by 2031, and (as with its housing need) a proportion of this may well go unmet. Cherwell will inevitably import some of Oxford's care home needs, as those additional residents (who otherwise would have lived in Oxford) age and move into care homes. This further justifies the use of the 565 figure for Cherwell as a minimum, which may need to be increased if unmet care home need for Oxford is identified. Lichfield's' Note on Care Home Need provided.

Changes Sought

Reasons for Participation

Greenlight asserts that it in order for this clear 'need' for care bed spaces to be met in Cherwell over the Plan period, specific policies are required to:(a) Set the delivery of this need over the Plan period as a requirement - this requirement being a minimum of 565 bed spaces by 2031; and(b) To identify and allocate sites to accommodate this need in the Plan and on the Policies Map.To this end, Greenlights' land interest at Skimmingdish Lane, Bicester, which is currently subject to planning application 17/01428/F, provides an opportune site to be allocated for a 64-bed care home; thus accommodating some 11.3% of the bed space requirement (based on a total requirement of 565 bed spaces) over the Plan period (by 2031).To demonstrate how the site at Skimmingdish Lane, Bicester can accommodate a 64-bed care home, and therefore to assist in informing its allocation as a care home site in the Plan, enclosed with this letter is the site location plan and proposed site layout plan, both of which form part of the current planning application on the site.

The matters raised in these representations are of a strategic nature to the plan.

PR-C-0778 10/10/2017 Sarah Knox-Brown Begbroke & Yarnton Green Belt Campaign N N

5465

Comments

Begbroke & Yarnton Green Belt Campaign's (BYG) main concern is that they believe there is no proper justification for altering the Green Belt boundaries from where they currently stand. On a local level, they particularly object to the removal of the land described as PR8 and PR9 from the Green Belt due to the significant detrimental impact of that removal on the villages and villagers of Begbroke and Yarnton. They also object to the removal of land described as PR6a, PR6b, PR7a and PR7b from the Green Belt due to the importance of these sites in maintaining the gap between the villages of Begbroke, Yarnton and Kidlington to Oxford City and to the land described as PR10, a green field site due to the impact its development will have on the adjacent A44 corridor. Instructed Bruce Bamber, a transport consultant, to prepare a report on the transport implications of the allocation of sites PR8 and PR9 for housing purposes. Although his technical review has focused on these areas, the broader methodology to identify potential development locations has also been assessed for its soundness. The report has been provided as Appendix B. Key conclusions from the report includes: the Sustainability Appraisal Report was published before the Transport Assessment and therefore cannot properly take into account the transport impact of development options. The SAR fails to report the adverse traffic congestion impact from the proposed development around Begbroke and Yarnton and is therefore flawed. Transport evidence base and the associated environmental assessment work is fundamentally unsound and cannot be relied upon. A number of legal issues are raised in Appendix A with a detailed summary provided. If the Council proceeds as planned, we consider the Inspector will find the Plan unsound due to inadequacy of evidence base and failure to ensure effective consultation and participation by the public.

Proposed changes suggested.

Changes Sought

a. Policy PR10 needs to specify two vehicular access points with a connecting road between them. b. The policy needs to be clear on how this site would connect with the A44 & the A4095. An access via Shipton Road needs further consideration & would need to remove the 'dog leg' & the Shipton Road may require significant improvements as it is a rural road at present. A direct connection through to the A44 would also be a requirement to make this the most attractive connection to Woodstock town centre by car - access via Hensington Road would be inappropriate due to its narrowness which results in a chicane. c. The area of land identified as developable for housing is removed from both the A44 & the buses that run along that corridor. Many of the dwellings will be in excess of OCC's residential design guidance that seeks for new homes to be located within a 400m walk to bus stops. The policy needs to specify a connecting vehicular route into the adjacent consented site so that a diverted bus could run through both sites. d. The neighbouring parcel of land to the northwest of the site has resolution to grant by WODC (16/01364/Out). There is no indication of how these two sites integrate; consideration should be given to requiring a comprehensive masterplan covering both sites. There is strong merit for a highway linking the two sites for public transport purposes; a bus route would provide a highly sustainable transport solution for both land parcels. However, the site layout of (WODC 16/01364/Out) does not appear to make this possible. e. A number of pedestrian & cycle links between the Cherwell & the WODC site are required & should be secured in policy. f. Consideration should be given to realigning Shipton Road across WODC (16/01364/Out) & integrating with the Cherwell Site.

Although revised maps are not offered, it is considered that the areas of residential development as shown on PR's 8, 9 & 10 are not acceptable, because it is considered that better use could be made in reducing housing development sizes by using higher housing densities and in some cases ensuring that the "green gap" between settlements is increased.

Object to building of 2,480 developments in Yarnton and Begbroke. I believe the proposals to be unsound for the following reasons: the proposal far exceeds the existing house numbers for Yarnton (approx. 1000) and Begbroke (approx. 350). The proposals will overwhelm the local sewerage system, which has had a lot of problems since the Cresswell Close and Pixey Close developments were completed, and there will be a huge effect on the drainage of rain (surface) water adding to the complication of sewerage. The proposals will create extra traffic on an already saturated A44 heading south and north at all times of day and will not be mitigated by a limited length bus lane (for which no funding is shown). This may encourage routing via the main A44, further reducing access already affected by the a reduced S3 bus service. There is no need for a railway station at Sandy Lane crossing - this route is the main access to Kidlington from Yarnton for shops, dentist, library, sports centre, banks and local council office. Any action to close this route to motor vehicles will result in additional car miles and pollution. The proposal will have a detrimental effect on local wildlife as we have deer foxes, badgers, hedgehogs and plentiful open space for insect and other wildlife.

SUPPORT these Policies with AMENDMENTS. The development of a Development Brief for these sites. The Brief should clearly set out how the plan proposals relate to the strategic bus network and how this will evolve, what the trigger points to deliver this shall be and give clarity to developers on the costs of developing in these locations as set out at PR8 30. The risk of not doing this is one of a hap-hazard development pattern of sites coming forward which cannot be served by high quality public transport though lack of forward planning, lack certainty for developers and a poorly thought out network connecting major nodes. Support PR8 18(c) and Pr9 8(c) which states the need for the development to enable connection to existing and potential public transport services. The policy needs to explicitly highlight that the development brief will need to contain costed proposals for bus services improvements. Therefore there needs to be mention within the policy of the need to "kick start" bus services for a number of years promoting alternative transport to the car until the development is built out and services viable. This viability may come from diversion into the site of existing services and as such we consider that an extension and/or diversion of the 300 park and ride service provide this role. The Service 300 could connect with the PR10 site as the terminus point calling at PR8 and PR9. The development of this service could be covered through the connected and joined up development brief for this site and we would be keen to work with developers and LPA to plan this service enhancement.

Changes Sought

Reasons for Participation

Would therefore like to see the policy strengthened to highlight the need to connect inter urban bus route networks between settlements that reflect the OCC strategic bus network in a phased manner than can allow new developments to be accessible by modes other than the car with appropriate S106 commitments to enable these developments to be sustainable in a manner that is clear to developers promoting sites.

The representations are submitted on behalf of my client Bonnar Allan with regard to their proposals at New Alchester. The land is identified in the Vision document attached to these representations and will include up to 7,200 new market & affordable homes, primary & secondary schools, creation of a 240 acre country park & watersports centre & the potential to incorporate a new Park & Ride site with connection to the railway line south of Bicester by a new railway station. Our comments on the PSP are confined to issues of soundness. A summary of the alternative Options A to I that CDC considered at the last stage of the Plan is set out at paragraph 2.12. For the reasons we set out in our representations to that stage, we consider that the CDC's proposed approach of allocating land to the north of Oxford & within the Green Belt (GB) around Kidlington as set out in PR10 is flawed, & that the Partial Review does not pass the test of soundness. The PSP is not Justified as in our view it does not represent the most appropriate strategy for meeting Oxford's un-met housing needs. The logic that appears to underlie the PSP is in essence that the closer the proximity of the required housing to the City, the more sustainable it will be. This logic ignores the fact that there would be better prospects of residents travelling into Oxford as well as the major employment locations in the Science Vale by public transport including by rail from New Alchester. The preferred locations around Kidlington will increase congestion on the highway network & will result in the loss of GB & lead to coalescence between Kidlington, Begbroke & Yarnton, whereas the proposals at New Alchester are located beyond the GB. As we make clear in the Vision document, our proposals can be delivered in a phased manner & there are no impediments to early delivery. The scale of the proposals at New Alchester allows it to meet both the identified needs of Oxford City as well as an element of the future needs of Cherwell District, & in so doing, we recognise the journey that this proposal involves.

Changes Sought

We consider that the PSP should direct a majority of the un-met need to New Alchester which constitutes a more sustainable & justified location for the new homes needed both to meet the City's un-met needs as well as future need within Cherwell District. The PSP should be re-drawn to allocate land at New Alchester in place of the proposed allocations in the Green Belt (GB) around Kidlington. New Alchester can provide a highly sustainable location for the much needed development, at a location outside the GB & on the railway line into Oxford. The development would facilitate creation of a new railway station at New Alchester which would encourage people to travel to Oxford City & also other employment centres within the Science Vale by public transport.

Comments

The CDC Local Plan Part 1 and the NPPF (Para 34) support a strategy whereby growth should be directed towards the most sustainable locations, encouraging travel by non-car modes. The County Council's Oxford Transport Strategy is also clear in its objectives for achieving a meaningful modal shift for those travelling into Oxford City away from the private car and towards public transport. In this context, the justification for the Council's approach in pursuing growth at sites such as PR7, PR8, PR9 and PR10 which propose concentrated levels of development (circa 3,220 dwellings) is unclear. The development as proposed is concentrated along the already very congested A44 corridor and around Kidlington which is a known congestion hotspot. While some development in this area may be appropriate, the concentration of sites will lead to significant issues of congestion given that the sustainable modes being pursued (with the exception of cycling) are all road based Park & Ride, Bus and RTP routes. The Sustainability Appraisal (June 2017) recognises that new development around the Kidlington area 'may increase congestion but the Local Plan Part 1 Partial Review allocates new housing sites that encourage the use of sustainable transport and are allocated following consideration of their impacts on transport patterns through the SA'. Notwithstanding assessment of the proposed allocations through the SA, the impact of congestion has not been sufficiently weighed in the balance when considering reasonable alternative sites and a broader distribution across the District. For example, locating development on the rail network at locations such as Islip would assist in removing some traffic movement from the road entirely. It's recognised that there is the potential for a new railway station at Yarnton, but this is a long term strategy with no immediate proposals for delivery. CDC does not consider this necessary infrastructure to support the proposals and simply consider it a potential future benefit. Therefore, all focus for this plan period under this strategy will be on the road, contrary to the conclusions of the Sustainability Appraisal and to which our client objects. Overall, the various transport evidence base documents prepared to date have not robustly assessed the opportunities to improve rail usage despite current work being undertaken to develop the East-West rail link. East-West rail Phase 1 works saw an upgrade of Islip station which is on the new Oxford – London Marylebone line. The Western Section of East-West Rail will also see the introduction of three new passenger services, for direct services within the region and connections to national mainline services. These services are due to start operating in the early 2020s. Despite this significant rail investment, no development is proposed within Islip which is just a 3 minute train ride from Oxford Parkway, 7 minutes from Bicester, 11 minutes from Oxford and under an hour to London Marylebone. Our client is of the view that Policy PR4a (and by association policies PR6-PR10) focuses too strongly on improvements to and mitigations for the highway network rather than considering options for removing traffic from the road network and towards more sustainable modes such as rail. The proposed locations for the additional housing are known areas of congestion and the transport proposals do not go far enough to solve the existing issues, with the proposed levels of development in this location likely to compound matters further. Our client objects to these policies which will lead to increased levels of congestion and the strategy will not achieve a step change in modal split. Soundness - The evidence base prepared to support Policy PR4a (and by association policies PR6-PR10) is not sufficiently robust to justify the approach to allocate this level of housing in an area of existing traffic congestion without an effective strategy to achieve a step change in modal split. The Council needs to justify its approach for focusing so much of the new development in one area which is already known to suffer issues relating to road congestion. Rail has not been considered as a reasonable alternative within the evidence base documents and consequently the draft plan is not justified. The draft Plan is not Effective, as it focuses too much of the housing requirement in one, focused area. The Plan is not consistent with national Policy as the proposed development is not located where the need to travel will be minimised and the use of sustainable transport modes can be maximised.

Changes Sought

The evidence base has failed to sufficiently consider investment in rail / exploitation of existing rail assets despite recent investment in the East-West Rail project. A thorough exploration of the reasonable alternatives is required. More detailed consideration needs to be given to the potential for locating new development at Islip within proximity to the existing railway station. This location would be sustainable and would support the existing local community. It has been demonstrated that there are no overriding physical constraints, in terms of highway impact, flooding and ecology, to the development of this land.

Reasons for Participation

Due to the complexity of the matters discussed in relation to PR4a

Proposed Submission Plan - Policy PR10 - Land South East of Woodstock

Comments

While we object to any release of land in the Green Belt including the allocated sites, we have a further concern relating to the possible overall location of land for housing in the event that any or all of the allocated sites are confirmed for development in any adopted plan. PR6a, 6b, 7a, and 8, the land areas allocated specifically for residential development (i.e. not the total site areas) are approximately 50% higher than would be necessary to accommodate the stated number of houses at the net densities specified. For example the largest site (PR8) for 1950 houses at 45dpha net should require 43.3ha. Whereas the allocation is for 66ha, over 50%larger. The definition of net density is not specified in the plan though it usually includes access roads, parking, incidental open space and play areas. There are separate allocations for schools and a local centre, so it appears that the areas allocated specifically for residential development are significantly too large. Given the desirability of this land to developers, there is a clear risk that permission could be sought for significantly higher numbers of dwellings over and above the intended provision, resulting in even greater environmental harm and pressure on infrastructure. We are therefore concerned about the provision in PR12a (para 7) that should more than 4400 houses be built this will be taken into account in meeting Cherwell's own need, which would appear to be an incentive to the Council to approve higher numbers than set out in this plan."

Changes Sought

All allocations should be withdrawn because they are premature (need not yet established) and because alternatives to Green Belt development exist. However if some or all of the allocations are confirmed (which we completely oppose) then the plan should be amended to ensure that no more than the specified numbers of houses will be permitted (e.g. by reducing site areas or other stipulations).

Reasons for Participation

We (Kidlington Development Watch – KDW) consider this is necessary because of: our extensive involvement with the consultations at all stages of the Cherwell Local Plan to date; the considerable work we have undertaken to publicise the consultation ourselves; of the feedback we have received from Kidlington residents; and, the large numbers of them who have responded as a result of our efforts. KDW is a voluntary organisation run by Kidlington residents with experience and interest in planning issues. We believe that effective, informed public participation in planning consultations is vital to democratic policy making. We publicise consultations that directly affect Kidlington and offer advice on how people can best make their views known. In relation to this and the previous options consultation we printed and distributed leaflets, put up posters, ran a stall on many Saturday markets and at other events, participated in public and parish council meetings, provided information on our website and responded to requests for information from Kidlington residents. As a result, we have gained a very good understanding of the views of Kidlington residents, a large number of whom have made representations because of our activities. KDW's representations therefore reflect the views of much of the Kidlington community."

"Object to the allocations in Policies PR6a, 6b, 7a, 7b, 8 and 9 for the reasons given in our objection to release of Green Belt land (see objection to PR3). All of these sites contribute to the purposes of the Green Belt and should not therefore be removed from it. Other Green Belt Sites rejected by the Council. We also explicitly support the Council's rejection of other sites in the Green Belt considered at the options stage for the same reasons. Policy 10 : Woodstock Allocation. In the case of Policy 10, the site is on the edge of the Green Belt, and would impact on its openness. It would also be an excessive and disproportionate extension to the small historic town of Woodstock particularly when considered in addition to the adjacent site provisionally allocated in the draft West Oxfordshire Local Plan (currently under examination) for 300 houses. Due to wide-spread concerns raised at the hearings, the Inspector has asked West Oxfordshire District Council to conduct a heritage impact assessment of this site given its proximity to a World Heritage site. Cherwell should have conducted a similar assessment, taking into account the cumulative impact of the proposed development. Woodstock town is not within the Cherwell boundary but nevertheless, Cherwell has a duty to seek to protect historic Woodstock from inappropriate development and we consider it is not reasonable or sustainable to locate 410 extra houses in this area to meet Oxford's unmet housing needs."

Changes Sought

All allocations should be withdrawn because they are premature (need has not been established) and because alternatives to Green Belt development exist.

Reasons for Participation

We (Kidlington Development Watch – KDW) consider this is necessary because of: our extensive involvement with the consultations at all stages of the Cherwell Local Plan to date; the considerable work we have undertaken to publicise the consultation ourselves; of the feedback we have received from Kidlington residents; and, the large numbers of them who have responded as a result of our efforts. Sport England welcomes the Council's references throughout the document and policies requiring developers to include open space, outdoor sport and recreation. However, Sport England is concerned that the Council has yet to publish its evidence base in relation to playing fields and outdoor sports provision and built sports facilities. The Council will need to ensure that all of the new development contributes towards indoor and outdoor sports facilities in the District. The Council's evidence base will help frame this work. Sport England also recommends that the Council includes a requirement for applicants to include a statement demonstrating how their development has met the 10 principles included in Sport England's Active Design document. See Section 3 of the document 'how to use Active Design' and the proposed change.

Changes Sought

Sport England recommends that the Council consult Sport England at the earliest opportunity on the preparation of the Playing Pitch Strategy. Sport England suggest the following text could be included in the policies to support Active Design: PR5 (10) Provide evidence of how the development has improved the health and well being of new residents by demonstrating how the proposals will meet the 10 Active Design Principles set out in Sport England's guidance document 'Active Design' <https://www.sportengland.org/facilitiesplanning/active-design/>

Proposed Submission Plan - Policy PR10 - Land South East of Woodstock

PR-C-1424	10/10/2017	Jon	Waite	RPS Group	N	N	N	Y
4329	<p>Comments</p> <p>Expresses concerns over the Plan's proposed allocation on 'Land South East of Woodstock'. The concerns relate to the potential impact on a historic town and a World Heritage Site and the lack of joint working between Cherwell District Council and WestOxfordshire District Council. The site is allocated for 410 dwellings and several supporting facilities. The site adjoins theboundary of West Oxfordshire but what is not made clear is that the adjoining area is also a housing allocation for 300 dwellings in West Oxfordshire's emerging Local Plan under Policy EW1c. Furthermore, West Oxfordshire's Local Plan makes two additional allocations at Woodstock making a total of 1,080 new dwellings around the edge of this unique and historic town. Of even greater concern is that 710 of these dwellings (including the Cherwell allocation) are adjacent to the World Heritage Site of Blenheim Palace. It is not clear what studies have been carried out by the Council to support this allocation. When the West Oxfordshire Local Plan was Examined in Public earlier this year, the Council were heavily criticised by the Inspector for not carrying out a Heritage Appraisal on its allocations at Woodstock to consider the allocation's impacts on the town's historic environment and the setting of the World Heritage Site. There is nothing to suggest that this Council has carried out a similar appraisal for the Land South East of Woodstock allocation. The local economy for Woodstock relies heavily on tourism. This is acknowledged in the West Oxfordshire Local Plan. Such a high level of development in and around a town which is famed for its historic character is likely to impact on this trade. Moreover, a joint planning application was submitted to West Oxfordshire and Cherwell Councils in 2014 (ref: 14/02063/OUT) for a mixed-use development on this combined site. The application was unanimously refused by Members in September 2015. The refusal stated: "The scale and layout of the site as a whole in relation to Woodstock would represent a disproportionate and inappropriate addition to the town." It is unclear what has changed since this application was refused by both West Oxfordshire andCherwell Councils. The two allocations combined would still represent a disproportionate and inappropriate addition to the town. Believes that the Council should be looking for suitable alternatives to the Land South East of Woodstock allocation.</p> <p>Changes Sought</p> <p>Reasons for Participation</p> <p>The points raised are complex and need to be discussed with the Inspector in a public forum.</p>							
PR-C-1436	10/10/2017	Patsy	Dell	Oxford City Council				
4576	<p>Comments</p> <p>Supports the allocation of sites at Begbroke, Yarnton & Woodstock. Our comments on the details of these policies are more brief as the physical links with the city are more limited (although the economic links with Begbroke & the University of Oxford as part of the 'Knowledge Spine' are clear and strong), however we welcome the delivery of sustainable transport links into neighbouring communities & onwards into Oxford to provide access to employment, services & facilities.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							
PR-C-1441	10/10/2017	Katherine	Jones	Savills on behalf of Thames Water				
4603	<p>Comments</p> <p>Woodstock STW does not currently have the capacity to accept the flows from this development, however a growth project for this site has been highlighted for inclusion within our PR19 plans for the next AMP period, though these plans have not yet been finalised. The wastewater network capacity in this area may be unable able to support the demand anticipated from this development. Local upgrades to the existing drainage infrastructure may be required to ensure sufficient capacity is brought forward ahead of the development. Where there is a potential wastewater network capacity constraint, the developer should liaise with Thames Water to determine whether a detailed drainage strategy informing what infrastructure is required, where, when & how it will be delivered is required. The detailed drainage strategy should be submitted with the planning application. Thames Water advise that this development site could potentially drain to either Woodstock STW or Church Hanborough STW depending on the point of connection. In order for Thames Water to determine whether the existing sewer network has sufficient spare capacity to receive the increased flows from the proposed development, a drainage strategy must be submitted detailing the foul & surface water strategies. Details of any proposed connection points or alterations to the public system, including calculated discharge rates (pre and post development) must be included in the drainage strategy. If initial investigations indicate that the existing sewer network is unlikely to be able to support the demand anticipated from this development, it will be necessary for the developer to fund an Impact Study.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							
PR-C-1445	10/10/2017	Greg	Blaquiere	Terence O'Rourke Ltd on behalf of Vanburgh Unit Trust and Pye Homes Ltd	N	Y	N	Y
4609	<p>Comments</p> <p>The proposed policy is broadly supported, as the allocation of the site is considered to be entirely justified and effective. Further it represents sustainable development and is therefore consistent with national policy. The plan must be positively prepared andpositively seek opportunities to accommodate the development needs of the area. Given the housing need, and acute affordability issues in the area, as well as the lack of reasonable alternatives available, it is considered that this allocation is fundamental tothe soundness of the plan. In this regard, we would highlight that some of the alternatives said to be required include the removal of land from the Green Belt. This site, which features as a non-Green Belt alternative must be prioritised particularly as it is very well located in terms of the close proximity of major employment opportunities, services and Oxford City; as well as in respect of the excellent accessibility between them, whereby the strategic transport network, including road, rail and bus, and scope for cycling and walking, provides for sustainable patterns of movement. The site is deliverable and would provide sustainable residential-led development in accordance with the overarching vision and strategic objectives of the Proposed Submission Plan.Concerns with the soundness of the policy as drafted. Overall the policy criteria are considered to be excessively prescriptive. We have concerns that including 33 criteria (some of which have sub-criteria and several of which are covered by other existing Development Plan policies or would be a requirement for planning application validation) would be ineffective. They would provide an unjustified barrier to delivery, which would be inconsistent with national policy. The policy as drafted would restrict the development potential of the site, providing a barrier to the successful delivery of this non Green Belt site and its optimal use. Detailed comments are made on specific policy points. A Transport Strategy and Proposed Site Allocation document have been submitted to support this representation.</p> <p>Changes Sought</p> <p>Reasons for Participation</p> <p>To elaborate on the points raised should it be deemed necessary.</p> <p>Proposals for development should be consistent with 1. Construction of at least 410 dwellings (net) on 16 hectares of land (the residential area as shown). The dwellings to be constructed at an approximate average net density of 30 dwellings per hectare2. Delivery of 35% of the homes as affordable housing as defined by the National Planning Policy Framework3. 3.1 hectares of land and financial contributions for a new primary school with at least2.2 forms of entry. The school buildings should be provided on site unless provision is made elsewhere and required education/sports facilities are instead provided in agreement between the Council, West Oxfordshire District Council and Oxfordshire County Council.4. Provision of a community facilities, formal sports facilities, play areas and allotments, areas for nature conservation and woodlands accessible by the community.5. Protect the setting of the Blenheim Palace World Heritage Site, the Grade 1 Registered Park and Garden and the Blenheim Villa Scheduled Ancient Monument, their settings and influences on the historic, built and natural environments, avoiding significant levels of harm.6. Provide safe, efficient and secure points of vehicular access and egress from and to existing highways and provision of appropriate connections for vehicles, pedestrians and cycles within the site and towards Woodstock Town7. Development that enhances the built and natural environment and provides a green infrastructure that responds to the local historic context and secures biodiversity gains8. The scheme shall be supported by draft Heads of Terms for developer contributions that are proposed to be secured by way of legal agreement.9. The application shall include an Employment, Skills and Training Plan to be agreed with the Council10. A layout, design and appearance for an extension to Woodstock that responds to the internationally and nationally significant heritage of the Blenheim Palace World Heritage Site, the Grade 1 Registered Park and Garden and of Woodstock town. An approach that is fully integrated and connected with, the existing and planned built environment, which maximises the opportunity for walking, cycling and wheelchair use, which provides for a development that is integrated with a high-quality green infrastructure and sensitive landscape setting, that fully protects the setting of the WHS and the Blenheim Villa Scheduled Ancient Monument and which greatly enhances the eastern built-up edge of Woodstock."</p>

HIGHWAYS AND PLANNING ASSESSMENT - EXECUTIVE SUMMARY - The local highway network links via the A44/A4095/A4260 interchanges close to and including Woodstock are already and demonstrably running at 85% -95% of their full operational capacity at peak times. It is Woodstock Town Council view that Cherwell District Council (CDC) have not provided any up to date evidence by way of traffic or planning assessment relating to the Environment based on the forecast transport requirements of existing riparian residents and businesses likely to be affected by additional planned housing and industrialisation around Woodstock using the A44 transport corridor. Nothing relevant appears in the CDC local plan. Nor has additional traffic likely to be generated by such forecast development been factored into either of these plans. Through various standard traffic assessments using robust vehicle trip rates, this Assessment demonstrates that the existing highway infrastructure or local area cannot be expected to cope with any significant new development without substantial and seemingly unbudgeted expenditure. There is no clearly defined timetable or delivery mechanism within the CDC local plan that further demonstrates the processes or procedures for delivery of any reasonable form of sustainable transport solution that would significantly reduce the traffic generation growth effects on this link. The predicted modal shift of around 15% as highlighted in the Connecting Oxfordshire Strategy are optimistic and, without any background evidence to substantiate this figure, it is difficult to accept this as a realistic objective. It is reasonable to conclude following this Assessment including all the current planning applications in place within the CDC area close to the A44 and indeed any associated traffic issues on the A40, that there will be significant transport or highway related reasons why the proposed development allocations should not be encouraged unless infrastructure, sustainable transport provision and realistic planning policies are fully identified, committed and delivered by the developers and local authority. At this stage of the local plan proceedings there is no realistic adopted transport policy in place with regards to safeguarding traffic management and highway improvements; the Highway Authority are at present in the process of appointing consultants to determine exactly what is required. There are no longer grants from central government and therefore the delivery relies on developers. The current CIL levels in the Town Council's opinion are not set at prerequisite level to provide these vital improvements. Great care must be taken when relying on CIL; in many cases developers state that any improvement is financially unviable because of the level of affordable housing that has to be provided. It is clear from all current traffic flow data that the additional predicted developments, in the absence of a sound and tested planned policy, will have a serious impact on the network and without significant improvement, the additional traffic effects caused by new development must be classed as 'Severe' as outlined in the NPPF. The representation is supported by a Heritage Impact Review and a Transport Congestion and Local Plan Policy Proposals Review/Assessment.

HERITAGE IMPACT ASSESSMENT - EXECUTIVE SUMMARY - Woodstock is a small market town to the north-west of the city of Oxford. The current settlement has c 1500 houses and c 3000 residents. Housing allocation plans published by Cherwell and West Oxfordshire District Councils would add a further 1080 houses on the south-east, east and northern edges of the town, all on prominent gateway sites into the existing urban core. Such a dramatic increase would inevitably have a substantial impact on the historic town in many ways, such as traffic, infrastructure and services. This report addresses issues specifically relating to the site's rich cultural heritage. It contends that the proposed developments either will cause or have the potential to cause moderate impacts individually on the town and its heritage assets. In a few cases impacts are likely to be moderate to high. The cumulative impact of all four developments (or combinations of them) would be moderate to high. This amounts to substantial harm as defined in the NPPF(paragraphs 132-3). The public benefits (including the conservation benefit claimed for the Blenheim Park Estate) do not outweigh the cumulative harmful impacts.

The representation specific points of concern are that:

- Any one of the sites, if developed as planned, would represent a substantial increase on current housing provision in Woodstock, and would involve the permanent loss of green space and agricultural land outside of the current settlement limits. This would harm the character and heritage significance of the town.
- The cumulative harm of any more than one site being developed would be exponentially greater than any individual impact.
- The combined effects of WODC site EW1c and CDC site PR10 would be a particular concern, as they would represent a very substantial development extending well beyond the current limits of the town into open fields, with permanent loss of vital open space and agricultural land. This would represent the loss of a crucial buffer zone between Woodstock and London Oxford Airport. The effect would be a virtual merger with Kidlington, as the airport would be all that lay between them.
- All four sites are on important gateways into the historic town. WODC site EW1c and CDC site PR10 lie on the south-eastern approach along the A44, while WODC site EW1e is on the northern approach along the same road. These are the main routes into and out of the town. WODC site EW1d is on the Banbury Road, a route in from surrounding villages. The fields are currently open agricultural land, part of an important green buffer zone around the settlement. Housing development will create a new hard edge instead of green space, and will be particularly damaging on the A44 approaches.
- All of the fields either contain known archaeological sites or have such sites in their immediate vicinity. It is possible that further important remains exist within the fields. This issue has not been addressed adequately in the current proposal documents.
- DC site PR10 contains the Blenheim Roman villa, a Scheduled Monument designated (and thus protected) because of its national archaeological importance. The site has been excluded from the development area, but new housing within the field would harm its setting. Furthermore, it is known that associated Roman remains extend well beyond the
- Scheduled area into other parts of the field. Some of these remains lie within the area currently identified for development. Potentially associated remains also exist in the neighbouring WODS site EW1c, again within areas identified for development.
- There does not appear to have been any coordination between the two district councils over their development proposals. This is surprising given that these two site are contiguous, thus exacerbating cumulative impacts should both sites go forward for housing development.

The representation is supported by a Heritage Impact Review and a Transport Congestion and Local Plan Policy Proposals Review/Assessment.

Objection to using Kidlington Greenbelt land. Daily walks with dog on the Green Belt areas would be a great loss of pleasure. The villages do not have the infrastructure to support this expansion without serious loss of standard of services delivered (Schools / Roads / Doctors). Traffic gridlock already very bad, which will only increase and cause increased noise and air pollution. If this is not stopped now-where will it end, not until all the countryside habitat is gone.

No costs are shown in the schedule. In most cases no source of funding is identified. There is no indication of how the already congested highway network will cope with the additional vehicles from these new houses and the other developments planned for the wider area. We also strongly object to PR11 - the infrastructure plan. Traffic on Oxford Road, A40 and A44 is already at a standstill most mornings, and new houses on this scale with no real infrastructure improvement is not viable. It will leave Kidlington and Yarnton gridlocked 7am-10am and 4pm-7pm, sacrificing air pollution and the wellbeing of residents. We will continue to object until a more reasonable plan is published.

PR-C-0096	17/08/2017	Mr N & Dr J	Donoghue & Broderick		N
259	Comments				
We very much understand pressure to build new houses, given the national and local shortage. However, we strongly object to PR3 building on GB land, and green countryside was a big decision maker for us moving to this area. Aside from the proven health benefits of green spaces, building on GB sets a precedence and it will never be reclaimed. There are brownfield/non-GB areas around Oxford that would not pose the problem. Also strongly object to PR11. Traffic on the Oxford Road and A44/A40 is already at a standstill most mornings. New houses on the scale proposed is not viable and will leave the area gridlocked. Air pollution and well being of residents will be sacrificed.

The infrastructure component of this Plan could hardly be more vague. There is no real assessment of need, no costings, no ideas. A sound plan cannot be an invisible one. This is ineffective. Conclusion: This is a plan flawed from concept, so no amount of "tweaking" could make it sound.

Object to Policy PR11. The infrastructure policy is unsound, there are no costs shown in the schedule, how are we supposed to get from A to B when already the highway system is gridlocked. Details provided concerning work and the need for car transport and the virtually impossible gridlocked roads. You propose to close Sandy Lane in Yarnton, why? We do not need another railway station, we have one at Oxford Parkway, this road is a much needed and used route into Kidlington. It is a vital road to get to customers there and villages afar.

Objection to the removal of land from the Oxford GB. The GB preserves open spaces that are much appreciated by local residents, protects both the historic city of Oxford from overdevelopment and neighbouring villages from coalescence. Government guidance says that GB is a permanent designation and that unmet housing need is not a reason for building in the GB. The Plan is therefore not consistent with National policy.

PR-C-0237	15/09/2017	Karen	East	TMP Planning Ltd on behalf of Gosford and Water Eaton Parish Council						N	Y		
820	Comments												
Very concerned about the implications of this development on existing infrastructure. On the basis of current evidence do not believe that infrastructure can be delivered to support this scale of development without adverse effects on both existing and new residents. Opposed to the proposed allocation of 1410 dwellings within the Parish, in part due to the impact on infrastructure. Notwithstanding this position, if development does go ahead have the following concerns:Health - Residents already experience major difficulty accessing doctors' surgeries and other health facilities with long waits for appointment times. Although there is mention of provision of health facilities it is unclear how this will be delivered whether this will be adequate for existing and new residents.Water supply – There is concern as to whether adequate water supply is in place to accommodate the additional demand from a further 1410 homes together with other proposed development in Cherwell. Note that the Oxfordshire Infrastructure Strategy Executive Summary states: "With regards to demand and supply forecasts for Oxfordshire area: under dry year average conditions identify a deficit from 2024/25 growing to 15 million litres per day (Ml/d) by 2040. Under peak conditions a deficit is forecast from 2019/20 growing to 33 million litres per day by 2040. This growing deficit is driven by the impact of population growth and climate change on groundwater sources and therefore a reduction in available deployable output for the resource zone. " The additional population resulting from the housing proposed will further increase this problem.Kidlington Centre- It is not evident how these proposals affect Kidlington centre. There appears to be little capacity to accommodate further premises in the centre. The proposals will cut off Yarnton from Kidlington. Yarnton would have a new centre and residents of new development to the south of Kidlington are therefore less likely to use Kidlington. Gosford and Water Eaton residents use Kidlington Centre to access services and facilities and therefore may be affected if the centre becomes less viable and the range of services is reduced. The District Council should consider how these proposals will impact on Kidlington centre and how it may be supported.Transport – Expressed concerns about transport infrastructure in response to Policy PR4. Given the high levels of congestion within the area have major reservations about the ability of the road network to cope with this level of development. It is not evident that funding is secured for necessary improvements and therefore the ability to make the changes needed is uncertain. Air pollution from increased traffic from this and other developments is an additional major concern.Affordable housing- Would reiterate our comments on Policy PR2. Whilst support the provision of affordable housing at the levels suggested, there are concerns about how this will be delivered and secured on a continuing basis. Believe that affordable housing should be equally available to local residents as to those from Oxford city. Policy PR11 as written sets out basic principles which we support however it does little to reassure the Parish that infrastructure will actually be delivered and evidence on development in other areas suggests that this will not happen.													
Changes Sought					Reasons for Participation								
Further detail and commitments are required to clarify how infrastructure will be funded and delivered.					The Parish Council would wish to take part in order to explain the potential impact of the proposed development on local communities and why this should be better reflected in the draft vision.

Object to Policy PR11 on infrastructure because it only sets out "an approach". It is wishful thinking. No costs are shown and in most cases no source of funding is identified. There are no projects to improve the already congested highway network for private vehicles and no indication of how it will cope with the additional vehicles owned by the occupiers of these new houses and the other developments planned for the area. The plan is not positively prepared because it does not provide for necessary infrastructure.													
Changes Sought					Reasons for Participation								
In light of the Government's consultation on its new approach to housing assessment, Cherwell DC should halt the current process and reassess its figures before continuing. If or when the process does continue, housing development on this scale is not justified on Green Belt sites around Kidlington, Yarnton and Begbroke and alternative sites in the district should be reassessed. Local residents strongly express the view that should building happen on the Green Belt, it should be a last resort, meet local need, is fully supported by infrastructure and be affordable to the community. This plan meets none of these criteria.					In my role as Member of Parliament for Oxford West & Abingdon constituency, which includes Kidlington, Yarnton & Begbroke, it is my job to represent the views of my constituents at the Examination.								
PR-C-0265	09/10/2017	Ellis	Davies							N	N	N	Y
5553	Comments												
This policy is unsound and ill thought through. There are no shown costs or how it will be funded and from what sources. The current road infrastructure is very much congested and unable to cope without the addition of 4,400 houses. The statics supporting this is based on data that was presented in 2011. The data, itself, will be older than what is suggested. Using old data without including the additional traffic volumes and congestion puts all this into questionable policy status. Overall, I believe there is very little of actual evidence and access to real data should have been given and not hidden in various consultant reports. How is the public to have confidence when the crude data is not available? I feel this has not been positively prepared and justified. In Begbroke despite repeated requests it has been deemed that no pedestrian crossing is forthcoming despite the elderly are unable to cross the road safety. Many residents have to drive so as to get to the other side of the highway.

The policy sets out the need to identify the necessary infrastructure deemed required to support and deliver the new housing. It is acknowledged by TVP that the list is not exhaustive, however given that the provision of "emergency services" infrastructure is identified in a number of the site specific policies it is respectfully suggested that this is reflected in this policy also. Table of projects attached to letter dated 07/01/2017.								
Changes Sought				Reasons for Participation				
Requested that "emergency services" are referred to in the Policy text where reference is made to other infrastructure providers - The Council's approach to infrastructure planning to contribute in meeting Oxford's unmet housing needs will be to ensure delivery by:1. Working with partners including central Government, the Local Enterprise Partnership, Oxford City Council, West Oxfordshire District Council, Oxfordshire County Council and other service providers to:(a) provide physical, community and green infrastructure(b) identify infrastructure needs and costs, phasing of development, funding sources and responsibilities for delivery2. Completing and keeping up-to-date a Development Contributions Supplementary Planning Document setting out the Council's approach to the provision of essential infrastructure including affordable housing, education, transport, emergency services health, flood defences and open space.3. Development proposals will be required to demonstrate that infrastructure requirements can be met including the provision of transport, education, emergency services, health, social, leisure and community facilities, wastewater treatment and sewerage, and with necessary developer contributions in accordance with adopted requirements.								
PR-C-0306	10/08/2017	Anthony	Hall					N
917	Comments							
Key Delivery Requirements' on all these policies are nothing more than a fig leaf. It is perfectly obvious the developers will agree to some or all of them and then will renege on them. This always happens. 50% affordable housing will be thrown out of the window as it has been in Templars Square where 50% has magically transformed into 23%. Similarly, developers never actually deliver infrastructure like schools, community centres or roads that are wide enough. The 'Place shaping principles' in these policies are valueless: there are no measure by which they might be enforced. How can one tell, for example, whether an extension "responds to the 'gateway' location of the site". It's gobbledygook. PR11: This is completely empty. 'Working with partners' does not guarantee anything except that you have no control over the outcome. Nor does 'setting out the Council's approach'. Its all very well having the development proposals demonstrate that infrastructure requirements can be met - it does not mean they will be met.

923	Comments							
Objection and concern re Policy PR11 to build more houses for Oxford overspill. The roads are busy enough now without more traffic. Furthermore, they are not well-maintained and with additional use they will become even worse. Where will the money come from to improve them? An increase in population is unsustainable if the infrastructure is not in place before the development is completed. It's very difficult to get an appointment to see the doctor for example. So how this will improve if more people move into the area until there are more surgeries, doctors, nurses etc. Libraries, schools and shops will also be affected.

Proposed Submission Plan - Policy PR11 - Infrastructure Delivery

PR-C-0316	01/08/2017	Sandra	Cockburn							N
929	Comments									
<p>Objection to Policy PR11 on infrastructure because it really is unsound. More houses will result in more cars. New owners will want to use their cars - they'll have to because the houses being proposed are unlikely to be served adequately by public transport. Indeed, much of the public transport is already disappearing. There is no longer a bus service serving Horspath through the day, and it's only a few miles outside Oxford! Oxford is a small city with only three main river crossing points. As a result, the road infrastructure around Oxford is under a great deal of pressure. This will increase, bringing the city to grid-lock, and already scores of people from the far-reaches of Oxfordshire and surrounding counties are avoiding going into the City Centre for shopping etc. because of the severe traffic problems. If more houses have to be built, the road infrastructure must be improved first. One main artery into Oxford is the road between Kidlington and Cutteslowe, but it is served by only one lane going south and one going north. Don't forget, housing developments north and east of Oxford, e.g. in Bicester and Banbury, are also generating more traffic that is heading toward Oxford every day along little roads. It's not sustainable.</p>

<p>Object to Policy PR11 on infrastructure because it is unsound. No funding sources are identified in the schedule. Strongly feel that this area is already over congested with traffic. Have a six mile journey to work in the morning, but it takes one hour to complete on a public bus, door to door. If driving, it would take even longer to commute. If cycling would not feel safe either on the roads or the cycle lanes shared with taxis and buses. Many experienced key workers such as myself, would be put off living in such places and prefer to leave and move to areas where it is easier to get to work, more pleasant to live in and be able to afford the rent or even buy their own property.</p>

<p>GREEN BELT: Over the past 50 years or so the Kidlington Gap has been steadily eroded with a large part now earmarked for the northern Gateway development, and the remaining gap largely comprised of PR6a and PR6b. The Cherwell Green Belt Study by LUC in April 2017 judged that the level of harm in releasing these two sites would be high. Paragraph 80 of the National Planning Policy Framework sets out the five purposes of the GB in checking unrestricted sprawl, preventing towns merging, safeguarding the countryside, preserving historic towns and assisting in urban regeneration. PR6a and PR6b prevent Kidlington and Oxford merging, and the LUC report states that "this release would result in the A34 becoming the Green Belt boundary from the Northern Gateway up to Oxford Parkway station, leaving only the width of a single field to separate Oxford from Kidlington". and that the "physical prominence of the golf course makes it an important buffer feature on the urban edge...". Development of these sites would also damage the rural setting of an important City with a rich heritage of history, architecture and culture. Cherwell considers that the removal of these sites is justified by exceptional circumstances, but has failed to realise both the international importance of Oxford as a city and the likelihood of these homes providing for London commuters rather than Oxford. Cherwell has also failed to give proper consideration to other sites in its area that are not in the GB.</p>										
Changes Sought					Reasons for Participation					
<p>The Cherwell Plan is fundamentally unsound and I suggest it should be rejected. Cherwell should re-start the process at a future time when the amount of housing needed has been realistically calculated. Cherwell should have due regard for the NPPF and in particular the parts of the framework which apply to the Green Belt.</p>

<p>TRAFFIC CONGESTION AND POLLUTION: Oxford Road and other routes into Oxford are heavily congested at peak periods and an extra 1200 vehicles, together with a school located at the southern end of the PR6a site will exacerbate this. Other developments such as Northern Gateway will be a large employment site. Additionally, Oxford has poor air quality from traffic and has been designated an Air Quality Management Area. The Cutteslowe Roundabout regularly exceeds national and international Nitrogen Dioxide limits. The infrastructure changes proposed are not based on accurate and up-to-date information, and rely on unrealistic targets of people using bikes, buses and walking. They are also largely unfunded. PR11 is an approach and the plan is not positively prepared because it does not identify or provide for the required infrastructure.</p>

Proposed Submission Plan - Policy PR11 - Infrastructure Delivery

PR-C-0341	10/10/2017	Mrs Suzanne	Mclvor		Y	Y	N	N
4455	<p>Comments</p> <p>UNMET HOUSING NEED': The figures put forward by Oxford City as unmet housing need are highly questionable, and Oxford City does not yet know how much of its 'unmet housing need' it can cater for as it has only just finished consulting on its Preferred Options and its Local Plan has not been prepared. It also continues to allocate land for employment and expects other authorities to meet its 'unmet housing need'. The Government's new method for calculating Objectively Assessed Housing Need suggests that Oxford has significantly over-stated its housing need. Cherwell's current proposals seem to have been produced with undue haste and this approach is not justified Site PR6a is adjacent to an area of GB land put forward for development by Oxford City, and neither council has considered or publicised the cumulative effect of both parcels of land being removed from the GB. The Councils have not demonstrated effective joint working on cross-boundary strategic priorities so these policies are not effective.</p> <p>Changes Sought</p> <p>The Cherwell Plan is fundamentally unsound and I suggest it should be rejected. 5294	<p>Comments</p> <p>Object to Policy PR11 on infrastructure because it is unsound. No costs are shown in the schedule. In most cases no sources of funding are identified. There is no indication of how the already congested network will cope with the additional vehicles from these houses and the other developments planned for the wider area. With regard to Kidlington in particular my objection to the proposal to add 4,400 houses is for all the reasons given above and in addition it should be noted that 4,400 houses represents at least 15,000 more people. The lack of provision for increase of schools and doctors surgeries and the lack of a plan to deal with the massive potential increase of traffic at the Northern Gateway all make the scheme wholly unacceptable. The Northern Gateway is already gridlocked in rush hours. If the proposal is approved Oxford city would actually actively damage the health and wellbeing of the inhabitants of the surrounding villages by dumping its traffic pollution in their communities.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>

988	<p>Comments</p> <p>Infrastructure and congestion - There are many potholes on Kidlington roads and we experience busy roads that are quite slow to go through the village at rush hour, the addition of a large number of extra residents and their vehicles will very much clog up the roads, result in poorer road surfaces due to increased usage.Road access - There is not space for large road expansion due to constraints of the canal and river Cherwell, so much of the proposals may well involve building on flood plans and produce a need for greater road access, however there is not much space to enable this to happen.Highway safety - Linked to above it will be more difficult to cross roads and maintain a safe environment for cyclists and pedestrians with much larger numbers of vehicles, particularly in areas such as the High Street.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							
PR-C-0393	29/08/2017	Miss Ruth	Johnson					N
1029	<p>Comments</p> <p>Objection made to Policy PR1(a) to build 4,400 houses in this area for Oxford overspill. This is not a justified or proven requirement and is unsustainable. Objection made to Policy PR3 to remove land from the Oxford Green Belt, we should not lose our Green Belt to meet Oxford's needs. The Green Belt preserves open spaces which are proven to benefit people and nature. The Government has stated that Green Belt is a permanent designation and therefore the plan is not consistent with National Policy. It is believed that the development cannot be guaranteed to provide truly affordable housing to the local community's young people and key workers, and that the vision of the council to make half of the development "affordable" will not be honoured due to previous developments failing to deliver this. An objection is also made to Policy PR11 on infrastructure because it is unsound. No costs are shown on the schedule. There is no indication of how the already congested roads will cope with the additional vehicles from these new houses and the other developments planned for the wider area. A further objection is made to the complexity of the consultation and its timing over the school summer holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>

<p>PR11 refers to infrastructure and services. There is no indication or detail of any increase in infrastructure to accommodate the building plans, nor any changes on the A44 Road to accommodate more traffic between the Frieze roundabout and the Cassington Road/Yarnton village roundabout where due to the railway line and canal bridge, widening of the road would not be possible. Also there are fields that regularly flood. Against the plans for building on the sites between Yarnton and Begbroke and onto the village of Kidlington over green belt land.</p>

There is no source of funding for most improvements. The effects of other developments in the area (Barton Park, Northern Gateway, Wolvercote Papermill etc.) are likely to be significant but are as yet unknown and have not been quantified. Congestion on routes into Oxford is already severe, Oxford is an Air Quality Management Area and Cutteslowe roundabout is a pollution hotspot where nitrogen dioxide levels regularly exceed national guidelines. This proposal does not contain measures which deal effectively with these issues. It is believed this proposal is not justified, and not effective and therefore unsound.

As a concerned resident of Yarnton an objection is made to the above plan on the grounds that the plan is not sound for the following reasons: Inadequate Infrastructure Provision: The transport measures proposed are inadequate to support the massive increase in the movement of people the number of dwellings proposed would generate. An enhanced bus lane on the A44 is insufficient for the increased vehicles generated by the houses. The existing transport infrastructure is struggling to cope with current demand from the villages and there is often a bottleneck between the Turnpike and Loop Farm roundabouts causing delays. The "Bus/Rapid Transit Function" that is proposed will be of no benefit to the residents of Begbroke and Yarnton as it will bypass them entirely.

The Council's infrastructure plans are not viable or thought through. None of the proposed transport and other infrastructure projects have been costed in the schedule. In most cases no source of funding is identified. There is no indication of how the already congested highway network will cope with the additional vehicles. Traffic gridlock will be inevitable and air pollution will be much worse. Underfunded public services (schools and medical services) will deteriorate further. These issues are not addressed adequately in the submission.

Proposed Submission Plan - Policy PR11 - Infrastructure Delivery

PR-C-0497	08/10/2017	Philip	Towler				N
1185	<p>Comments</p> <p>CDC seems not to fully appreciate that the road network around Kidlington and north Oxford is already horribly congested, especially at peak times. Gridlock is common. CDC offers no plans for improving the local road network, even though building 4,400 new houses in the area would massively increase the number of additional vehicles on the roads. Traffic congestion and air pollution would be much worse. Further deterioration can be expected in the future even without the proposed new houses, since 22,000 houses have already been approved in the District, as well as 10, 000 more houses to be built in other Districts just for the city's overspill. The Council seems to be content to rely wholly on people using public transport, cycling and walking. This is just wishful thinking. There should be proper planning measures requiring new infrastructure to be in place before any housebuilding commences. Instead, the Council has merely made vague references to possible future transport and other infrastructure projects, but no costs are shown in the schedule, and in most cases not even a possible source of funding is identified. Given the squeeze on local public finances, residents are entitled to be highly sceptical that any of these vague ideas will ever see the light of day. It is totally unsatisfactory and unacceptable for the Council to merely hope that developers will make some monetary contributions to infrastructure improvement once they have built the houses. Aside from the heavily overloaded road network, the capacity of public transport to alleviate the problems arising from the proposed developments is surely very limited. Whilst the bus services are currently frequent and there are bus lanes, at peak times their effectiveness is limited because either (a) the extreme congestion leads to the lanes being blocked (e.g. by traffic seeking to enter Kidlington roundabout) or (b) because there still exist bottlenecks where no bus lanes exist (north Oxford/Summertown). As for the trains, Oxford Station is too far from the centre of the City to be an attractive option for many commuters. Oxford Parkway was opened only two years ago, but appears already to have reached full capacity. Since most users of the station likely access it in their own vehicle, the proposed housing developments would further increase pressure on Oxford Parkway station, causing it to be less sustainable as a transport option. Not only transport but also other local infrastructure would inevitably be put under increased pressure were the local proposed developments to go ahead. Important public services have already experienced cuts in recent years, and these would deteriorate further with an increasing population. The administration of GP care has noticeably deteriorated in the last 3 years ,without additional resources this can only get worse still.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>						
PR-C-0499	30/09/2017	Alan	Oliver				N N
1190	<p>Comments</p> <p>4. NOGC is a biodiverse landscape. Containing different tree species & 55 recorded bird species & pond life. The NPPF states this is important for health & wellbeing. It is much valued by locals. Land N of Cutteslowe Park is also important in this respect, changing the open nature the Parks. It is a well used facility. 5. The development will put further pressures on transport & other infrastructures. Seemingly funding bids for infrastructure are being made to cater for growth, but funding has not been secured. Growth shouldn't be approved until infrastructure can be provided & it's demonstrated that any proposed measures will be effective. Traffic in the N Oxford area is already severe. Work on the 2 roundabouts hasn't improved this. More housing will add to congestion & air pollution. Oxford has good public transport provision, but not all who work/live locally will use this. Increased housing & employment levels will add to congestion with its health implications. It will reduce Oxfor's attractiveness as a business location & place to live. Putting more housing & employment in this area cannot be viewed as sustainable. There are also severe existing pressures on other services including health and education.</p> <p>Changes Sought</p> <p>Reasons for Participation</p> <p>The housing allocations in the Kidlington Gap should be removed from the Plan & the Green Belt designation of the Kidlington Gap retained.</p>						
PR-C-0499	30/09/2017	Alan	Oliver				N N
1189	<p>Comments</p> <p>1. The sites are on Oxford GB. GB's remain Govt. policy. Land between N Oxford & Kidlington is unique as it fully accords with the 5 GB purposes as per para 80 of the NPPF. GB's are designated to manage the location of new development, they would not exist were there not pressure to develop on them. Such pressures cannot be considered exceptional circumstances. As per para 84 of the NPPF there's no evidence of alternatives being considered i.e.. using allocated, undeveloped employment land in Oxford for housing & promoting employment growth outside Oxford, creating a better balance between where people live & work. Have the LA's co-operated in looking at alternatives? This land being GB also complies with para 81 of the NPPF. It is used for sport & recreation, is biodiverse & visually pleasing. 2. The identified housing needs rely on an outdated study which has never been independently assessed. Revised Govt. figures indicate a reduced requirement. It now seems there is no need to build on GB. Even if there is a need on this scale, it is a poor location to meet Oxford's needs, being adjacent to a London commuter rail line & in the expensive part of Oxford. The private housing will likely attract London commuters & wont provide affordable homes for people with jobs in Oxford. It is evident that many house buyers in N Oxford are those moving from London & continuing to work there. 3. Unsound in allocating NOGC for housing & not taking into account NPPF para 74. Understand NOGC weren't involved in discussions prior to this. NPPF Para 74 says existing sports facilities shouldn't be built on unless it assessed as surplus to requirements or replaced by equivalent or better provision. No such assessment has been made. NOGC, a well established & thriving club with 475 members & 3000 visitors p.a. Its clubhouse is used by the wider community. As a flat course, it is especially suitable for seniors. NOGC is needed. It is not sound practice to propose allocating land for housing & to carry out a retrospective assessment of the need for a golf course. We need this space for the health & wellbeing of locals. The land at Frieze Farm as a replacement GC, appears to be an afterthought. It is too small. Building a new GC on a similar sized site to NOGC would cause H & S issues unless mature trees were in all the right places. No indication shown on how it could be financed or developed. Apparently the landowners have stated to NOGC that they have no intention of providing another GC or providing the level of funds that would be needed. The mature landscape central to the current GC couldn't be replace in reasonable time & therefore the 2nd criterion of para 74 cannot be met.</p> <p>Changes Sought</p> <p>Reasons for Participation</p> <p>The housing allocations in the Kidlington Gap should be removed from the Plan & the Green Belt designation of the Killington Gap retained.</p>						
PR-C-0500	30/09/2017	Gill	Oliver				N N
1191	<p>Comments</p> <p>1. The sites are in the Oxford GB. GBs remain Government policy. The Kidlington Gap land is in GB and fully meets all 5 of the purposes of GB set out in para. 80 of the NPPF. GB's are designed to manage the location of new development and would not exist were there not pressure to develop within them. The existence of such pressures cannot therefore be considered exceptional circumstances. There is no evidence (as per para 84 National Planning Policy Framework) that serious consideration and cooperation by local authorities has been given to alternatives such as using allocated and underdeveloped employment land in Oxford for housing and promoting employment growth outside Oxford to create a better balance between where people live and work. This land is also used positively for outdoor sport, recreations and has value for biodiversity and visual amenity. 2. The identified need is based on an outdated study and revised Government figures indicate a much reduced requirement. This is a poor location to meet Oxford's needs as it is adjacent to a commuter rail line to London and in the most expensive part of Oxford for housing. Therefore will likely cater for London commuters rather than provide the required affordable housing. 3. Para. 74 of the National Planning Policy Framework says that existing sports facilities should not be built on unless an assessment is undertaken showing it is surplus to requirements of replaced by equivalent or better provision. No such assessment as been made. It is understood that the Golf Club were not involved in discussions prior to the allocation. The Golf Club is well established, thriving club whose facilities are also used by the wider community. As a flat course it is particularly suitable for senior members. This facility is clearly needed for the health and well-being of residents. The allocated land at Frieze Farm as a replacement golf course is seemingly an afterthought with no indication of how it could be developed or financed. The mature landscape central to the current course could not be replaced within a reasonable timescale. This creates major health and safety issues and does not meet the second criterion of Para 74. 4. The golf course is valuable in terms of biodiversity and landscape, containing 25 different tree species and 55 regularly records bird species as well as pond life. There would also be a negative impact on the open nature of the land to the north of Cutteslowe Park. 5. Further pressures will be put on transport and other infrastructures. No funding has been secured for further infrastructure and growth should not be approved until it can be demonstrated that any proposed measures will be effective. It has been reported that the recent works on the 2 roundabouts have not improved queue times. More housing will add to congestion and air pollution, put pressure on health and education services, as well as reduce the attractiveness of Oxford. It is difficult to understand that putting more housing and employment in this area can be viewed as sustainable.</p> <p>Changes Sought</p> <p>Reasons for Participation</p> <p>Housing allocations in Kidlington Gap should be removed from the Plan and GP designation of Kidlington Gap retained.</p>

PR-C-0509 1214	06/10/2017	Laura, John & Benito	Wainwright					N
Comments								
There is just not the infrastructure in place to cope with such a huge rise in population (from estimated 6000 household to some 10,400 - 70% increase). Kidlington's main road is already seriously congested and this increase together with other approved developments would produce traffic gridlock of nightmare proportions. Air pollution from thousands more vehicles would be a serious health hazard. Construction traffic and associated road works would produce chaos on the roads for years. There are no adequate measures in place to cope with this enormous increase in traffic. Other local infrastructure would be taken to breaking point; class sizes in schools would become unsustainable and the local health service is already under great strain and underfunded. Policy PR11 is inadequate as it only sets out an 'approach' with no costs shown and few sources of funding identified. It is not positively prepared as it does not provide for necessary infrastructure.

Comments								
Objects to PR11, it is unsound & not positively prepared. There are no costings provided for the proposed infrastructure delivery, therefore it is likely that many of them will never be implemented. Traffic congestion is already appalling in Oxford, & one incident leads to traffic chaos. There is no indication of how the road network will cope with the additional traffic from new developments. The A34 already has major issues, primarily due to the volume of traffic connecting motorways. One incident leads to gridlock, & this happens regularly. Any infrastructure plan must include upgrading the A34 to motorway status. Rapid transport hubs are proposed further outside of the City. Why can't these be built first, then use some of the current P & R sites for building? This would not include Water Eaton P & R as this will be needed for Oxford parkway station car park when the proposed new homes are purchased by Londoners who will then commute into London. The 3 route tram rapid transport network is years away, if ever from being built. And this submission document admits it is not due to be delivered until 4 years after the homes are built. The traffic proposals also rely on a link road being built from the A44/A34 to connect directly to the A40. This has been proposed for many years but is no nearer to being built. All of the road improvements rely on the co-operation of Oxfordshire CC, whose highways department is at best, incompetent. Millions of pounds & 18 months wasted on "improvements" to 2 roundabouts in N Oxford, that have been shown not to have reduced journey times at all. There is little co-operation between the councils in Oxfordshire, they cannot even agree on who to join with for a unitary authority. I consider this policy to be unsound as it has not been costed, & relies on a different authorities to deliver it.

1273	Comments								
Bus lane improvement along A44 Begbroke to Loop Farm. The proposal is physically & financially impossible owing to the restrictive widths of railway & canal bridge crossings and the underpasses at Peartree Interchange. Further restricted by PR11a (p 167) cycle & pedestrian improvements along A44 between Bladon & Peartree roundabouts. This is a pipe dream & can't be used to justify large scale development adjacent to the A44 at Yarnton/Begbroke. The infrastructure proposals are not justified, not effective & is unsound.

1317	Comments								
Objection on PR11 infrastructure because it is unsound. No source of funding for most improvements. Effects of other developments (Barton Park, Northern Gateway, Wolvercote Papermill etc.) are likely to be significant, but as yet are unknown and unquantified. Congestion on routes into Oxford is already severe, Oxford is an Air Quality Management Area and Cutteslowe Roundabout is a pollution hotspot where nitrogen dioxide levels regularly exceed national guidelines, and there is no effective proposal to deal with these issues.

1329	Comments								
The Policy PR11 on infrastructure merely sets out "an approach" which is just pie-in-the sky wishful thinking in the absence of any surveys, costings or identification of sources of funding. There is nothing in this document which gives reassurance over the impact of this plan on an the existing rapidly rising housing costs, the already strained transport network or the already overstretched education and medical facilities in this community. As such it is ineffective and unsustainable.

1345	Comments								
Strong objection to Policy PR11 on infrastructure because it is unsound. No costs are shown in the schedule. In most cases no source of funding is identified. There is no indication how the already congested highway network will cope with the additional vehicles from these new houses and the other developments planned for the wider area. Already many working hours are lost to the county due to traffic problems causing delays due to a poor and inadequate transport network. The majority of people working in Oxford have to live in other counties or far away from the city because the local houses are unaffordable and unavailable. This increases traffic flows to the city. If more truly affordable housing was made available in Oxford for people working in the city fewer people would have to commute in daily. Surely this is a more sustainable option.

Objects to policy on infrastructure. It is unsound. There is no source of funding for most improvements. The unknown effects of other developments in the area (Barton park, Wolvercote Papermill, Northern Gateway etc.) will be significant but not yet quantified. Congestion on routes from the N & W into Oxford is severe. Oxford is an air quality management area. Cutteslowe roundabout is a pollution hotspot with excessive NO2 levels. With Oxford Parkway & the rebuilding of Cutteslowe roundabout & their traffic queues, it is perceived emissions there have increased. No measures have been proposed to deal with this.

Objects based on PR11 suggesting "an approach", which is in direct conflict with the recognition that the area already has high levels of car ownership & has serious congestion problems in key locations (pg. 13 of sustainability appraisal). There is a lack of adequate costings & funding's to assess effectively the viability of the proposal. On pg. 130-131, paras 8 & 12 refer to vehicular accesses & travel plans, whilst para 5.115, pg. 127 refers to as yet unfunded & unspecified transport improvements indicative of increased traffic problems. Whilst acknowledging the fact problems currently exist, it alludes to the fact that these problems will not be resolved on the already overloaded route. No consideration has been given to increased traffic levels currently experienced when Blenheim holds events, which currently causes disruption & will increase with the development. In PR9 it states 'Yarnton is well situated to take advantage of sustainable transport improvement', however the development is excessively disproportionate compared to the transport improvement. It is assumed that public transport, cycling & walking will reduce traffic levels, however it is reasonable to assume most households will have 1-2 cars, thus increasing pressure on the roads & pollution.

1372	<p>Comments</p> <p>Objects to PR11. It is unclear how it will be funded & remains unposted. There are several pinch points for traffic flow between Oxford & Kidlington e.g. Sainsbury's & Cutteslowe roundabouts & Peartree interchange. Increasing the number of households dependent on this transport infrastructure to this scale would reduce traffic flow at peak times. The prediction of an increase in traffic density of slightly over 1% has been calculated by averaging it over a 24hr period, which is unsound as the policy in general.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>

1443	<p>Comments</p> <p>This policy as worded, is largely meaningless as it describes an "approach". It might as well say "We hope that the necessary infrastructure will be provided". The infrastructure schedule in Appendix 4 has no costs identified and very few sources of funding. Where funding sources and 'partners' are identified there seems to be an excessive reliance on developers. Without information on costs it is impossible to assess whether the proposed development will or will not be able to meet the contributions needed, bearing in mind the requirement for it to also subsidise 50% affordable housing. The policy is therefore not justified, not positively prepared and not effective. The projects listed in Appendix 4 do not include any significant proposals to increase capacity on the highway network, indeed it is possible that public transport improvements would reduce capacity for other vehicles. However, traffic movements are likely to increase substantially because many journeys cannot be made by public transport and there appear to be no proposals to cater for these additional movements. Furthermore traffic will also increase as a result of the developments planned for the other Oxford Districts, as well as that planned elsewhere in Cherwell. There is no evidence that this has been taken into account or catered for. Clearly this needs to be addressed at a wider spatial level than either the area covered by this plan or Cherwell District. The draft Oxfordshire Infrastructure Strategy is an attempt to do this, but this document admits to a historic deficit in infrastructure provision and shows that only £500million of the £9 billion of infrastructure funding deemed necessary has so far been identified. It seems highly unlikely that this gap will be bridged, so the plan will be ineffective as it can not be supported by the necessary infrastructure. Regardless of this, we consider that some of this infrastructure, particularly road building, would in itself be environmentally damaging to the Oxford GB, and we would not support it, even if it could be funded. Our argument remains that an overall spatial strategy for Oxfordshire is needed, including infrastructure provision, that is (a) based on realistic levels of growth and (b) directs much of that growth away from the city of Oxford, retaining the GB and protecting the historic city.</p> <p>Changes Sought</p> <p>The plan should be withdrawn and an overall and realistic spatial strategy for Oxfordshire developed, including infrastructure provision, that is (a) based on realistic levels of growth and (b) directs much of that growth away from the city of Oxford, retaining the GB and protecting the historic city.</p> <p>Reasons for Participation</p> <p>OGBN was established in 1997 to help to protect the Oxford GB and to support those wishing to resist proposals for inappropriate development within it. Proposed Submission Plan - Policy PR11 - Infrastructure Delivery

PR-C-0570	08/10/2017	B A	Hughes					N
503	Comments							
Believes the proposed submission to be unsound, not properly prepared, not justified and not effective. Objects to Policy PR11 on infrastructure because it is unsound and ill thought through. It is based entirely upon wishful thinking. The record so far in providing the necessary infrastructure is very poor. The whole area suffers from traffic congestion and pollution and this has not been alleviated by the £10 M changes to the Wolvercote and Cutteslowe roundabouts. The infrastructure needed to support even the current population is totally inadequate. Improvements to roads and reduction in traffic congestion need to be in place before any further development takes place.

The improvement of transport infrastructure in the north Oxford / A44 / A4260 corridor areas. Huge costs involved and will attract further traffic and problems to exacerbate those existing now. How this can be funded and where the sources of this funding will come from. The present situation is already congested and the plans that have been put forward do not deal directly with cause of the bottlenecks – the need of building a dual carriage way from Yarnton to the Peartree roundabout which would involve the building of bridges over the railway and canal. Diverting traffic to use Kidlington direction into Oxford will only make matters worse. It is already congested and will lead to Kidlington have more air pollution and greater congestion than what it has now at peak time. The strengthening of Kidlington village centre related to sustainable transport improvements. Kidlington village centre is popular and satisfactory now. No explanation of exactly what is meant by strengthening – just another buzz word. Does not see how strengthening Kidlington when it already has more frequent buses and better routes in comparison to Begbroke and Yarnton. The issue is that there are too many buses running nearly the same time by different companies and hence at a low capacity. The journeys are punctuated with many stops so that the journey time into Oxford and hospitals is very poor. The problem lies with poor management of the transport policy. A better way of helping the communities, than to build in the greenbelt, is to have more structure transport policy that supports all the communities rather than the selected few.

Objection to PR11 on grounds they are unsound, not justified and not effective. Most important objection is removal of GB. This preserves open space used by local residents and others, providing necessary counteraction to urban air pollution. Government guidance states that GB is permanently set aside, providing a buffer against urban sprawl and preserving the distinct communities of Kidlington, Begbroke and Yarnton. The areas proposed for development should be preserved for the welfare of present and future generations, not sacrificed to Oxford's housing demands. Cherwell District Council has a duty to preserve the interest of it's own residents , not give in to pressure from Oxford and developers. PR11 is unsound because the roads could not cope with the additional vehicles from so many new houses.

1554	Comments							
Scale of development would clearly necessitate improvements to infrastructure. The road network to the north of Oxford is already over capacity. No evidence that funds for road improvements are actually available. Almost all of the funding is yet to be confirmed. Therefore the Plan is not deliverable and not effective. If funding is coming from developers this will only happen when the houses are sold. In the meantime there would be years of excessive road congestion even greater than currently exists. Development needs to be located so that traffic is channelled away from Oxford, not into it. In other words, development should be directed to areas outside the city and its neighbouring villages, to better, more sustainable locations beyond the GB.								
Changes Sought				Reasons for Participation				
To make the Plan sound and effective, it should be deferred until the amount and time scale of the necessary funding for infrastructure improvements is assured.

1659	Comments								
Developments of this scale require a massive amount of infrastructure. The area is already choked with traffic and pollution. The £10 million spent on the Cutteslowe and Pear Tree roundabouts has proved to be totally ineffective in resolving the traffic flow problems. There has been no extra provision to cope with the increased traffic that will result from current ongoing developments, which will exacerbate the traffic issues. Policy PR11 is not positively prepared but relies upon wishful thinking! There is no evidence based on current developments that any infrastructure promises will come to fruition. If it is possible to improve traffic flow and get people using public transport and bicycles then why not do it now to resolve current problems? The plans are completely ineffective. Currently the roads in and out of Oxford are in such a bad state of repair that they are dangerous for cyclists.

Objection on the basis that it suggests "an approach", which is in direct conflict with the recognition that the area already has high levels of car ownership with serious congestion problems in key locations (stated on p.13 of the sustainability appraisal). Furthermore, there is currently a lack of adequate costings and funding to enable effective assessment of the viability of the proposed approach, with no confirmed source of funding for the approach. Therefore the proposed transport approach is not justified. The proposed submission plan p.130-131 paras. 8 & 12 refer to vehicular accesses and travel plans whilst para 5.115 p.127 refers to as yet unfunded and unspecified transport improvement indicative of increased congestion, car usage and travel times in the local area. The sustainability assessment acknowledges that serious congestion problems currently exist in the area and alludes to the fact that transport proposals are unlikely to address or resolve increased congestion issues on an already overloaded route, making transport proposals ineffective and not justified. No consideration has been given to the current impact and potential future impact on local residents of the combined effects of increased traffic levels when major events are held at Blenheim Palace. Residents currently experience extreme difficulty when events are held at Blenheim with significant waiting times to exit the village. The proposed scale of the development with resultant increased traffic levels is likely to result in total gridlock, with an unacceptable level of disruption to daily routine. Additionally, within policy PR9 it is stated that Yarnton "is well situated to take advantage of sustainable transport improvement" however, the scale of the development is disproportionate to and excessive in comparison to the proposed transport improvement approach. The plan has an inherent assumption that improved alternative travel methods (cycling, walking, public transport) will reduce traffic levels, despite the assertions of the sustainability report which alludes to increased car ownership levels within not just the area but across the county. This will increase pressure on the road network with increased delays and travel time for commuters, resulting in increased pollution levels and disruption for local residents.

Transport plans are complacent. Current congestion at peak periods is already amongst the worst outside London. The resulting air pollution is a serious hazard to health, especially to those living on major arteries. The proposal is to increase the housing stock by > 50%, no specific plans with deadlines are included to mitigate the huge additional traffic load that will be created by the new residents. The response in terms of queuing times to increased traffic load is non-linear, so the long wait already experienced at the 'Sainsbury's roundabout' & Peartree intersection could easily double or triple at peak times. The intervals of the day with significant congestion will also be significantly expanded. Other infrastructure, schools, surgeries, retail outlets, leisure facilities, etc. will all need to cater for a 50% increase in the population when they are already stretched well beyond their designed capacity. On both transport and other infrastructure the only rational approach is to increase capacity first BEFORE building more homes.

1726	Comments								
Strong objection to Policy PR11 relating to infrastructure. These are plans without funding. They are ineffective. The traffic problems for people who live in Kidlington, Yarnton and Begbroke are already horrendous. There are queues of cars, lorries and buses for hours both in the morning and each afternoon and evening. This causes pollution and increases respiratory illnesses in the population, particularly for children. GP surgeries are under enormous pressure. Waiting times for appointments can be up to 6 weeks. The communities could not cope with the proposed expansion.

PR-C-0703	29/09/2017	Roger	Prince		N
1748	<p>Comments</p> <p>Consider that the proposed submission plan is unjustified and unsound for the reasons given in my specific objections. Object to Policy PR11 on infrastructure because it has little substance. The costs of the proposals have not been stated and, even if they had been, there is nothing to show how they will be funded. It is not in dispute that there are severe and chronic traffic problems in Oxford and to the north of the city. The long awaited "improvements" to the Wolvercote and Cutteslowe roundabouts on the A40 have, at best, had a very minor impact on traffic flow and this is mainly outside of peak times. As there are no other schemes on the horizon to reduce congestion, it follows that building another 4400 homes in the area, on top of the City's forthcoming vanity project at the "Northern Gateway" development in North Oxford, will only make matters much worse than they already are. Additional traffic will increase air pollution and may well have a detrimental effect on those residents already in poor health. In addition to the extra fumes, the increase in traffic noise will reduce the quality of life for everyone. This is such an obvious point but the plan misses it and does not provide for the necessary infrastructure. Has lived in Kidlington since August 1975 and in all that time, the volume of traffic in the village and surrounding roads has increased considerably, not least because there has been widespread residential development within the village, as well as increased commercial activity, without any additional access roads being built. Any improvement to the situation will be extremely difficult now, and the ill-judged approval of the application to put a Technology Park in Langford Lane will only make matters worse, but at the very least the position should not be exacerbated further by the approval of any more significant residential (or commercial) developments in and around Kidlington.</p>

1760	<p>Comments</p> <p>Object to Policy PR11 on infrastructure. We simply cannot take any more cars on the road in this area. It takes half an hour to commute 3 miles along the Banbury Road in term time. The recent upgrades to Cutteslowe and Wolvercote roundabouts have been an unmitigated disaster, despite taking 18 months to complete. My journey time has seen literally no benefit from this work. There needs to be a radical change to improve traffic in this area, and improvement in traffic needs to be seen before even thinking about adding so many more houses to the area. With GP waiting times currently around 3 weeks, also have serious concerns that local medical centres will not be able to take the strain of increased numbers, leaving all residents vulnerable.</p>

 Object to Policy PR11 on infrastructure because it only sets out “an approach”. Is concerned at the lack of detail given in terms of funding sources. The plan is not positively prepared because it does not provide for necessary infrastructure. The route from Kidlington to Oxford is frequently heavily congested as it is, with a journey of around 5 miles taking sometimes up to an hour in rush hour by bus.

 Object to Policy PR11 on infrastructure because it only sets out “an approach”. It is wishful thinking. No costs are shown and in most cases no source of funding is identified. There are no projects to improve the already congested highway network for private vehicles and no indication of how it will cope with the additional vehicles owned by the occupiers of these new houses and the other developments planned for the area, namely, 22,000 houses already approved elsewhere in the District by Cherwell District, and over 10,000 more houses to be built in the other Districts just for Oxford overspill. The plan is not positively prepared because it does not provide for necessary infrastructure. If recent Government initiatives are to assist with the provision of this infrastructure we need to wait to hear what has been allocated to the County before we accept a sprawl of 4,400 new homes around Kidlington. Works locally and knows from daily commuting experience just how often a small traffic incident can generate excessive congestion over a much wider area right now, because of the existing overload on local roads. More homes without appropriate additional infrastructure can only make the situation much worse. Air pollution will inevitably worsen due to thousands more vehicles on our local roads. It is outrageous that so little attention is being paid to the public health effects of these proposals. Exposure to high levels of some traffic related air pollutants affects the development of children’s lungs and as the information from London illustrates, impacts annual death rates. There should have been a full study of the impact of the accumulative proposed housing expansion on local air pollution before putting forward these housing plans. Therefore I believe the plan has not been positively prepared. Further, construction traffic and road works will add to the chaos for years while such concentrated development around Kidlington is put in place. It will be a long endurance test of traffic jams and increasing pollution – there is no quick fix to any of this.

 Object to Policy PR11 on infrastructure because it only sets out ‘an approach’. No costs are shown and in most cases no source of funding is identified. There are no projects to improve the already congested highway network for private vehicles and no indication of how it will cope with the additional vehicles owned by the occupiers of these new houses and the other developments planned for the area. The plan is not positively prepared because it does not provide for necessary infrastructure. Traffic congestion and air pollution will undoubtedly worsen due to thousands more vehicles on our roads. This is in addition to the extra traffic from the 22,000 houses already approved elsewhere in the District by Cherwell, and over 10,000 more houses to be built in the other Districts just for Oxford overspill. Construction traffic and road works will add to this chaos for years while the development takes place. What plan is in place to take account of the problems that increased traffic will bring? For example, what new public transport lines will be introduced to combat the increase in the number of private vehicles?

1791	Comments							
Policy PR11 The proposals for infrastructure are wholly inadequate. At the very least a new or vastly improved crossing of the railway and canal is required. This plan has not been thought out because it does not provide for the necessary infrastructure particularly because the estimate of the number of new vehicles in the area is poor.

1808	Comments							
Ridiculous levels of congestion in Kidlington and does not believe it is correctly represented in the proposed plan. Has lived in Kidlington since 2008 and travel to work in central Oxford by bus, but over that time the commute time by bus has gone from 20-30 minutes in the morning, to a minimum of 40 minutes on a good day. Rep continues to explain worst commutes on different routes and modes of transport into Oxford. Considering that the road network is not able to cope with the level of traffic today and the proposed plans do not give any solid plans for improvement. Nor that recent "improvements" to Cutteslowe and Wolvercote roundabouts have had any impact on this. The plan is not positively prepared because it fails to provide the necessary infrastructure. Also the council has failed to show competence in addressing the existing problems in the area with recent road works, which further discredits the proposal plan.

1814	Comments							
The proposals for infrastructure to accompany the 4400 houses are sketchy. The submission acknowledges that the proposals are only "an approach". No costs are provided for the proposals and in most cases no source of funding is identified. The existing infrastructure is not able to cope with the existing commuter traffic in the area, let alone the commuter traffic from all the additional houses. In order to avoid the costs of additional infrastructure requirements in the area, Cherwell DC should go back to Oxford CC and request them to provide a much greater proportion of the unmet need within the Oxford CC boundaries, thereby reducing the future commuting needs. The lack of detail on proposed infrastructure in the submission shows that the submission proposal is not positively prepared.

PR-C-0724 1820	09/10/2017	Stephanie	White					Y
<p>Comments</p> <p>Agrees that the transport infrastructure in this area needs to be improved. The roads into and around Oxford are already over-crowded; traffic conditions are so bad that rep choose to cycle into Oxford each day, rather than driving, even though the cycle path is unlit and littered with broken glass, mud and potholes. The extensive roadworks in the north of the city seem to have done little to improve the situation, and many bus routes have been discontinued in recent years, leaving people with no choice but to use their cars. However, the District Council's Transport Assessment has assumed that its model of urban commuting is being applied to an urban environment (i.e. 25% walk, 25% cycle, 20% use buses). This is not even close to the true situation (as described above – cycling facilities are poor and many bus routes have been discontinued); the bulk of the affected areas for PR8 and PR9 have a majority Red or Amber status, meaning that more strategic transport investment will be required to mitigate the impacts of development. Furthermore, the roads between the proposed developments and the centre of Oxford include a railway bridge, a canal bridge and many adjacent properties, meaning that any attempts to widen or otherwise adapt the roads will necessitate length road closures and cause major disruption to roads that are already congested. Thus, the proposed development is Not Sustainable.</p> <p>Changes Sought</p> <p>Proposed changes to the plans In light of the objections outlined above, I would suggest:</p> <ul style="list-style-type: none"> • reviewing the housing forecasts on which the current Local Plan is based. As mentioned above, the calculations used to make these forecasts have been revised recently and the number of new homes required has fallen as a result. • looking to build on brownfield sites within Oxford itself. This would significantly reduce the impact on local transport infrastructure, and provide housing where it is actually needed. • looking to build on sites closer to the main industrial areas of Oxford (namely the City Centre, Headington and Cowley); again, this would reduce the impact on local transport infrastructure and increase the likelihood that these houses would be bought by people working in Oxford rather than people looking to commute to London. <p>Reasons for Participation</p> <p>I would like the Begbroke and Yarnton Green Belt Campaign to act as my representative during the Examination by the Planning Inspector</p>

Proposed Submission Plan - Policy PR11 - Infrastructure Delivery

PR-C-0735	08/10/2017	Christopher	Rogers		N
1850	Comments Object to Policy PR11 on infrastructure because it only sets out “an approach”. It is wishful thinking. No costs are shown and in most cases no source of funding is identified. There are no projects to improve the already congested highway network for private vehicles and no indication of how it will cope with the additional vehicles owned by the occupiers of these new houses and the other developments planned for the area. The plan is not positively prepared because it does not provide the necessary infrastructure.				
	Changes Sought				Reasons for Participation
PR-C-0736	01/10/2017	Liz & Roy	Moore		N
5454	Comments The Plan is not positively prepared or coherent: Policy PR11 only sets out an 'approach', where no costs are shown and in most cases no source of funding is identified. Any costs met by developer contribution are likely to displace developers' affordable housing obligation. Existing health centres are not marked on Figure 2 of the Summary Booklet, and notably little substantive information is provided about provision for what will be a huge leap in demand for primary care services.				
	Changes Sought				Reasons for Participation
PR-C-0736	01/10/2017	Liz & Roy	Moore		N
1857	Comments Traffic. It defies logic and common sense to propose development plans based on an economic strategy that will hugely increase commuting to Oxford and as a consequence will necessitate massive and costly transport infrastructure works. Feeder roads (such as the A44 and A4260) are already gridlocked at rush hour, and the overall trend of traffic movement on all major roads is upwards, including a steady rise in the number of HGVs. Cherwell's forecast of traffic numbers is too low. At a conservative estimate, 4,400 new houses will add between 9,000 to 10,000 cars to our roads, plus associated delivery and trade vehicles together with the additional traffic from the large Upper Heyford housing development and planned development elsewhere in the District. It is unrealistic to believe that any transport plan can reduce or alleviate this huge increase in traffic, and Cherwell's transport proposals fail to convince. They rely heavily on a modal switch from car to public transport or cycling or walking, notoriously difficult to achieve, and in the case of cycling and walking only sustainable on a regular basis by the fit and able and those who choose to brave all weathers and the notoriously inadequate and incomplete cycle routes in and around Oxford which there is little scope to improve. The rapid transport bus routes planned through Kidlington will almost certainly be at the expense of Kidlington's tree lined verges, and if they are of limited stop (which is likely the case) will not provide a convenient or accessible service to a high proportion of Kidlington residents. There can be nothing 'sustainable' about 'sustainable movement corridors' as the A44 and A4260 are designated, only a huge increase in traffic. Both will be subjected to even heavier traffic from vehicles accessing the planned P&R off the Bladon roundabout, and in Kidlington's case from displaced traffic from the proposed Sandy Lane closure, as there is seemingly no public transport service planned between Kidlington, Begbroke and Yarnton. Nor does Cherwell indicate how the A44 and A40 will cope with the huge increase in traffic generated by developments PR8 and PR9 and the Northern Gateway, most especially the bottlenecks at the Pear Tree and Wolvercote roundabouts where recent road 'improvements' (such as reconfiguration of the two A40 roundabouts) have done little to ameliorate the situation. Unsustainable increases in traffic and air pollution. Both Oxford and its neighbours will suffer from massive increases in traffic and congestion, contravening a key sustainability challenge of Cherwell's Local Plan '... to reduce dependence on travel by car and to manage traffic congestion ...' (A25). Congestion on key entry roads and junctions, already a severe problem (even for buses) at rush hour, will worsen. Plans to introduce rapid transit bus routes, and workplace parking or congestions charges in Oxford itself, might reduce traffic volume and pollution in the City, but at the indefensible cost of displacing it to the neighbouring localities affected by the development plan. Kidlington already has one AQMA (Bicester Road) and air pollution will hugely increase elsewhere in the village and in adjoining villages, with health implications for residents and additional strains on the overstretched NHS.

PR-C-0738	02/10/2017	Mrs Y	Thompson		N
1868	Comments Object to policy 11(a) Bus lane improvement along the A44 Begbroke to Loop Farm.This ‘proposal’ is physically and financially impossible owing to the restrictive widths of railway and canal bridge crossings plus the underpasses at Peartree Interchange. Further restricted by Project 11a (Page 167) being ‘cycle and pedestrian improvements along A44 between Bladon Roundabout and Peartree Roundabout’, the so called ‘Rapid Transit’ route along the A44 (only capable of funding if Government grants are forthcoming) is little more than a pipe dream and cannot be used to justify large scale housing development adjacent to the A44 at Yarnton and Begbroke. The infrastructure proposals are not justified, nor effective and the Plan is UNSOUND 18f – The closure of Sandy Lane to motor vehicles. (Page 123) -This road has long been recognised by Oxfordshire County Council as a key alternative route should there be problems on A44 or A4260. It’s importance is recognised even to the extent of providing winter maintenance (salting) during cold weather. The closure of an existing highway, a vital link between Yarnton and Kidlington, without providing a suitable alternative route is just not justified. The proposal is UNSOUND.

Proposed Submission Plan - Policy PR11 - Infrastructure Delivery

PR-C-0774	10/10/2017	Ailsa	Reid				N
1956	<p>Comments</p> <p>Object to the scale of the proposed housing developments in the Kidlington and Yarnton area. Aware that more housing is needed, spent several years hoping to find 'affordable' housing within Oxford, before deciding that this was not possible and had to buy elsewhere, with a lot of assistance from family. Does not think it is sensible that Oxford be allowed to dictate terms to the surrounding area, rather that it should be made to put its own house in order. Extremely alarmed by the plans to sacrifice Green Belt land for housing, in defiance of Government and Cherwell District Council's own policies. Not only will this permanently sacrifice open spaces to housing, it will set a precedent for further development. Particularly concerned by the possibility of development of land behind The Moors, Kidlington – this is a valuable open space much used by local people, and acts as a vital habitat reservoir for wildlife. It is particularly appreciated by the local deer herd – I have seen up to 14 visible at one time in a single space – but much smaller wildlife depends on this rarely cultivated land for winter food and shelter. A quick fix for Oxford's woes now will result in the loss of this amenity and habitat for ever. Much of the proposed development area is also low-lying and prone to flooding – new houses are already being built near Yarnton on floodplain land – with the rise in rainfall and extreme weather events this can only lead to more and worse flooding events. Building on this low-lying land will remove space which flood water could spread onto to prevent it from causing flooding further downstream in Oxford and other communities. Does not believe that there will be a meaningful amount of 'affordable' housing in the proposed developments. The Oxford area is bleeding talent at one end because young people cannot afford to live here, and increasing traffic at the other as those who can at least afford to live nearby commute in (aware of people commuting to Kidlington from Swindon, Didcot, and Aylesbury, despite relatively low wages by the area standards), and if situations such as that at Templar Square with just 20% of "affordable" units are allowed, this will not only continue but get much worse. Utterly astonished by the lack of plans to improve the road network. Traffic already regularly backs up well through Kidlington in the morning, and it only takes a single incident to cause major traffic problems through the area. Without major investment in infrastructure, the extra vehicles from the proposed developments will cause traffic chaos of the sort we have seen recently with the works at the Wolvercote and Cutteslowe roundabouts on a daily basis, clogging the Northern routes into the city, and causing gridlock on the roads feeding them. I know from long experience the effect this has on the A34 which is supposed to be a major transport artery bringing goods North and South across the country, but it seems is likely to become one huge traffic jam if these developments are allowed to go ahead. The growth in traffic they will cause is utterly unsustainable.</p>

1969	<p>Comments</p> <p>Support with amendments. The consortium welcomes the joined-up and comprehensive approach to the identification and delivery of essential infrastructure to support the development of the sites allocated in the A44 Corridor. This also reflects the recommendations of the National Infrastructure Commission's interim findings. In relation to element 3 of the policy however there must be acknowledgement that financial contributions to the delivery of these infrastructure items must be the subject to an upper limit that, if necessary, can be determined by a viability appraisal.</p>						
	Changes Sought			Reasons for Participation			
	<p>For some of the infrastructure requirements, for example those outside the extent of allocated sites and which serve a function that is beyond that strictly required by the development of the allocated sites, some form of alternative funding may be appropriate/necessary, for example funding support from central Government or one of its agencies. The Council should now proactively explore the availability of funding sources to support the delivery of the development strategy contained in the Partial Review in the event that the allocated sites on their own are unable to fully fund the range of infrastructure improvements referred to in the policy.</p>			<p>On behalf of the consortium, given the significance of their land interests, would wish to participate in the oral examination.</p>			
PR-C-0806	10/10/2017	Liz	Pickering	Education and Skills Funding Agency			
5118	<p>Comments</p> <p>The ESFA welcomes reference to working with central government as well as other service providers, maintaining an up-to-date SPD on developer contributions and requiring developments to demonstrate that they will deliver the infrastructure required. Please add reference to the ESFA as a relevant infrastructure provider and ensure the ESFA is among the service providers consulted on any revisions to the SPD and relevant evidence documents.</p>

2197	<p>Comments</p> <p>Objection to proposed new housing on Kidlington Green Belt. Kidlington would just become part of Oxford losing its identity. Not enough thought has gone into the infrastructure required (health facilities, schools and shops). Roads will not cope with extra traffic, already bad enough. The need for more housing needs careful and sensitive planning. Oxford is off loading its responsibility onto Cherwell which is totally unacceptable.</p>						
	Changes Sought			Reasons for Participation			
PR-C-0813	08/10/2017	Jennifer	Betts				N
2213	<p>Comments</p> <p>Objection - The delivery of all infrastructure and in particular off site infrastructure is critical to such large scale proposals. Without fully costed funded and programmed infrastructure there will be a significant detrimental impact on existing/new residents. Plan is predicated on the basis that transport infrastructure will be by use of buses, cycling and a possibility of a station in Kidlington in addition to the station at Oxford Parkway. The planning authority cannot impose the use of public transport on residents - people will continue to use their cars to a degree. Leading to further congestion. The Infrastructure Schedule in appendix 4 provides a list of aspirations is largely unposted and the funders are largely 'TBC' despite the fact that the majority of the projects listed are referred to as critical. Recent bids for infrastructure funding in Oxfordshire have had a poor success and there is no confidence that the infrastructure delivery will happen as aspired to due to lack of funding.</p>						
	Changes Sought			Reasons for Participation			
	<p>There needs to be a comprehensive infrastructure delivery plan and a more robust framework for the delivery of the affordable housing.</p>

Objection - The delivery of all infrastructure and in particular off site infrastructure is critical to such large scale proposals. Without fully costed funded and programmed infrastructure there will be a significant detrimental impact on existing/new residents. Oxfordshire County Council proposals to deal with the existing transport are not yet delivered, it is concerning how this will be funded in the future. Developers will not be prepared to meet existing deficiencies in transport infrastructure. Plan is predicated on the basis that transport infrastructure will be by use of buses, cycling and a possibility of a station in Kidlington in addition to the station at Oxford Parkway. The planning authority cannot impose the use of public transport on residents - people will continue to use their cars to a degree. Leading to further congestion. The Infrastructure Schedule in appendix 4 provides a list of aspirations is largely unposted and the funders are largely 'TBC' despite the fact that the majority of the projects listed are referred to as critical. Recent bids for infrastructure funding in Oxfordshire have had a poor success and there is no confidence that the infrastructure delivery will happen as aspired to due to lack of funding.

Changes Sought

There needs to be a comprehensive infrastructure delivery plan. As well as a more robust framework for the delivery of the affordable housing, in view that this is one of the key objectives of the plan and unless this addressed the objectives will not be realised.

Cherwell's proposals if accepted would put an intolerable burden on local infrastructure. Local transport arrangements are already accepted to be under strain and recent improvements at Cutteslowe and Wolvercote roundabouts have been conceded to have underachieved. The existing infrastructure cannot handle current growth targets and the addition of 4,400 homes in the Kidlington area will exacerbate problems. There are no proposals to improve the local transport network and there is no funding to do so. There are unrealistic assumptions that a very high percentage of residents would use public transport, cycle or walk. The traffic modelling is open to question. It uses average data, this is nonsensical the road network needs to cope with peak flows. It has not taken account of the other developments which are planned and will generate traffic; developments cannot be assessed in isolation. With traffic comes pollution and Cutteslowe roundabout is already a pollution hotspot. Additional traffic should not be added to the network until there is a solution to the pollution. The plans need to ensure that there is adequate provision for public services to meet the growth in population. A single primary school is proposed as it would appear a token. Its proposed site at the southern most point of PR6a is bizarre given that the majority of developments would be in Yarnton and Begbroke and thus the school would be in the wrong place. The plans make no reference to the impact on secondary education, medical provision and other public services. The Cherwell process needs to pause, review its transport planning, work with Oxford City Council to model traffic from the whole city and then come forward with transport proposals which have prospect of funding. The impact on public services must be assessed and addressed. The current proposal is unjustified and unsustainable.

Changes Sought

The process should be restarted once the Oxford Local Plan has been completed and thus when any unmet housing need of Oxford is known. When Cherwell does this it should correct the errors made in this process and take account of the importance of the Green Belt and provide solutions which do not impact the Green Belt.

Where is the coherent and effective plan for improving the infrastructure? North Oxford is already full of cars. The routes into and out of Oxford city are congested and polluted. Eighteen months of improvements have made the Wolvercote and Cutteslowe roundabouts safer but only marginally better for traffic. Unless the whole house buying population of the UK undergoes a radical change in behaviour overnight, adding 4000 medium and large houses will add at least 2000 cars to the road (and that's being generous about car ownership). Anyone who has queued between Kidlington and Oxford knows that we cannot cope now let alone with 2000 more cars. The infrastructure won't cope with this plan. There are no plans for local transport between Cutteslowe and Kidlington and no funding has been secured. Other countries in Europe have managed to shift whole populations to bicycle and public transport but it has taken decades and houses that have NO parking spaces with a transport plan for a whole city that favours public transport, cycling and walking. This plan is not comparable and to think people in these new houses will move away from car use is unrealistic. The way the traffic has been calculated is flawed. Average flows over 24 hours are useless when most people sleep through at least one third of those hours and most people move in just 4 of those hours, to and from work. (1440 people entering and leaving a shop over a 24 hour period is 1 person a minute. If all these people tried to get into the same shop between 07:00 and 09:00 that is 12 people a minute or 1 every 5 seconds. A wholly different proposition!. This plan will bring an intolerable increase in traffic and pollution. NOx levels at Cutteslowe roundabout regularly exceed international guidelines for human safety. This plan will increase those levels with a real risk to health. The plan has one primary school in it and its in the wrong place. Schools in Oxford are already full and secondary school provision is not in this plan. There are no plans for medical centres either. Relying on services following housing is wrong and the services will not happen. If Oxford City and Cherwell really want to provide housing for key workers, young people and families in Oxford then build in Oxford at high density without car spaces and invest in cycling and public transport. Nothing sort of a radical car free city will solve the pollution, traffic and housing problems.

Changes Sought

The local plan should be scrapped and started again when there is clarity about the ACTUAL unmet housing need and not just the desire of the city council, and Cherwell, to meet a figure they have made up based on discredited calculations. The plan should recognise that there is only one way to fix the traffic and pollution problem in Oxford and that is to remove cars and switch to less polluting public transport on a massive scale. A radical plan should take its inspiration from cities like Groningen in the Netherlands, Copenhagen in Denmark and even Bogata in Columbia. All of which have increased housing density inside the existing city boundaries and removed cars. They have given their cities back to their people while Oxford and Cherwell want to take our Green belt, remove the beautiful setting of Historic Oxford, increase traffic and pollution. The local plan should also recognise the importance of the Green Belt. The Green belt isn't an inconvenient anachronism to be discarded. It is essential to the wellbeing of the citizens of Oxford and surrounding towns and villages. It is evident that the UK government values its green belt more than this local plan does ... The Government national planning policy framework states that the Green belt exists to prevent urban sprawl, prevent neighbouring towns merging, safeguard countryside from encroachment, preserve setting and character of historic towns (such as Oxford!) and assist in urban regeneration (by forcing entities such as the Oxford city Council, the University and its colleges to consider land in the city for housing not more unnecessary jobs).

Reference to OxIS is welcomed, this will provide valuable evidence on priority strategic infrastructure which we will expect development in the LPPR to contribute towards. The site specific policies should set out or refer to all the necessary developer contributions and infrastructure required. For example, the current site policy wording does not contain references to strategic highway contributions or public transport contributions. Whilst Policy PR11 (Infrastructure Delivery) and Policy PR4a: Sustainable Transport contain links to developer contributions, this could also be done by referring to the Infrastructure Delivery Schedule within each site specific policy.

Proposed Submission Plan - Policy PR11 - Infrastructure Delivery

PR-C-0832	10/10/2017	David	Flavin	Oxfordshire County Council					
5033	Comments								
Content relating to public rights of way and access to the countryside is supported, in particular policy 4a (Sustainable Transport), 5 (Green Infrastructure) and PR1 1(Infrastructure Delivery) as they meet the aims of the adopted OCC Rights of Way Management Plan 2015-2025. Where development sites are crossed by public rights of way this can be addressed on a site by site basis as applications come forward. The Plan provides a reasonable amount of protection and potential for enhancement and mitigation. It also has the potential to significantly increase access for non-motorised residents and visitors which is fully supported.

PR-C-0836	09/10/2017	Chris	Pack						N
2270	Comments								
Object to Policy PR11, the plan is not positively prepared because it does not provide a clear and detailed delivery plan for necessary infrastructure. This policy only sets out "an approach". It is wishful thinking. It does not address crucial issues about Traffic and Public services. Traffic congestion and air pollution will undoubtedly worsen due to thousands more vehicles on our roads. This is in addition to the extra traffic from the 22,000 houses already approved elsewhere in the District by Cherwell, and over 10,000 more houses to be built in the other Districts just for Oxford overspill. Construction traffic and road works will add to this chaos for years while the development takes place. There are no projects to improve the already congested highway network for private vehicles and no indication of how it will cope with the additional vehicles owned by the occupiers of these new houses and the other developments planned for the area. No costs are shown and in most cases no source of funding is identified. There is no reference to a potentially major issue with funding. That is that much of the land under consideration is in the ownership of Oxford University and some of its colleges. The issue here is that with their charitable status they may be able to avoid paying out Section 106 funding to CDC, There is then no clear delivery plan. Public services will get worse. Underfunded public services, already struggling, will deteriorate further: waiting times to for GP surgeries will be even longer and school class sizes will rise in unsuitable accommodation.

PR-C-0842	10/10/2017	Duncan	Chadwick	David Lock Associates on behalf of University of Oxford, Merton College and a private landowner	Y	Y	N	Y	
5018	Comments								
Paragraph 5.143 notes the Council's work on CIL, producing a draft Charging Schedule. CDC are clear that a decision on whether to introduce CIL has not been made. Should CDC decide to implement CIL the Tripartite reserves its right to make further representations on how the Council should secure funds for infrastructure and how the infrastructure to support the strategic development site allocations such as Policy PR8 is brought forward. It may be more appropriate for infrastructure to be secured through s106 obligations. Such obligations can be negotiated at an appropriate level, underpin the viability and deliverability of the strategic sites and ensure that the right infrastructure is provided in the right place at the right time.									
Changes Sought					Reasons for Participation				
None at this stage as the Tripartite reserves its right to make further representations once the Council has decided whether it intends to introduce CIL.					The land owned and controlled by the Tripartite comprises some 86% of the largest draft allocation within the Plan and as such, occupies a unique and vitally important role in meeting Oxford's Unmet Housing Needs. As such, the Tripartite consider it is essential that it is present [and/or represented] and participates at the Examination in order to assist the Inspector by responding to any queries that may arise and supporting the assessment of the soundness of the Plan.				
PR-C-0842	10/10/2017	Duncan	Chadwick	David Lock Associates on behalf of University of Oxford, Merton College and a private landowner	Y	Y	N	Y	
5014	Comments								
The policy makes it clear that developer contributions will be sought in support of development proposals to fund transport, education, health, social, leisure and community facilities, wastewater treatment and sewerage. However, the Council does not comment on how developer contributions will be secured on sites where there are multiple land ownerships. This will need to be the subject of further negotiations. A comprehensive but, at this stage, outline list of proposed infrastructure requirements has been prepared by the Council and included within Policy PR8. The requirements are indicative at this stage (costs and funding streams) but set out what is likely to be required to support the development of the site over the Plan Period. Infrastructure requirements that relate to more than one "allocated strategic development site" will need to be considered within the scope of advice in the NPPF and apportioned on a pro-rata basis to each site. This will also need to have regard to the impact of the proposed development of each site and the appropriate phasing of infrastructure delivery to ensure that the infrastructure requirements are necessary to make the development acceptable, directly related to the development and fairly and reasonably related in scale and kind to the development. It is anticipated that the phasing, triggers and mechanisms for the delivery of these elements of infrastructure will be secured through S106 agreements agreed as part of the future development management process. It should be recognised that in some instances, early or advance provision of strategic infrastructure can be critical to the approval and successful delivery of strategic scale development. This may be delivered by the Council or may be funded and delivered by a developer. Where a developer has provided for infrastructure at the outset, then there should be a recognition in policy that any 'abnormal costs' associated with this provision can be credited against future planning obligations for the site.									
Changes Sought					Reasons for Participation				
Proposed changes suggested for Policy PR11. Additional points to add: 4. Where a developer delivers early infrastructure in advance of, or prior to, development then the 'abnormal' costs of this infrastructure provision will be credited against future planning obligations for the site. 5. It is essential that the contributions to infrastructure requirements are based on an equitable arrangement across the strategic development site. 6. Infrastructure requirements that relate to more than one "allocated strategic development site" will be considered against advice in the NPPF and apportioned on a pro-rata basis to each site having regard to the impact of the proposed development of each site and the appropriate phasing of infrastructure delivery to ensure that the infrastructure requirements are necessary to make the development acceptable, directly related to the development and fairly and reasonably related in scale and kind to the development.					The land owned and controlled by the Tripartite comprises some 86% of the largest draft allocation within the Plan and as such, occupies a unique and vitally important role in meeting Oxford's Unmet Housing Needs. As such, the Tripartite consider it is essential that it is present [and/or represented] and participates at the Examination in order to assist the Inspector by responding to any queries that may arise and supporting the assessment of the soundness of the Plan.

Objection to Policy PR6b, to build houses on the site of the North Oxford Golf Club and the related proposal to build a replacement golf course at Frieze Farm (PR6c). The land occupied by the North Oxford Golf Club is a mature and beautiful arboretum where people play golf and where people can walk using the designated footpath. The land has been cared for by the Club for 110 years. There are hundreds of mature trees and shrubs of many different types which also provide a rich wildlife habitat. In my opinion, it would be unforgivable environmental vandalism to tear all this up to build houses (530, I believe) when houses can be built in areas where such destruction is not needed. The related proposal to build a replacement golf course on the featureless land at Frieze Farm is, frankly, nonsense. There is absolutely no way that an equivalent golf course could be built on that land. It might be possible to build a flat and uninteresting 9 or 12 hole course but nobody would want to play on such a course. Also object on infrastructure grounds. I cannot imagine how the Banbury Road could cope with more traffic in this area. In summary, on environmental and infrastructure grounds, these related proposals are unsound, not positively prepared and not justified.

Building between Oxford and Kidlington will make more traffic problems much worse, even with the use of bicycles and public transport. This is not a "sustainable" development. The issue of pollution has not been adequately addressed either. In general the whole plan is based on false promises and the pretty picture of rural life on the July 2017 Cherwell document is another bad joke, given that a green lung of Oxford is under consideration of destruction.

There is no significant provision for additional infrastructure. 4,400 homes = approx. 8,800 extra cars - and any consultant who believes otherwise is frankly deluded. Simply walk around any residential area in Oxford and count the number of cars on each drive at 7pm at night. The additional resources described in the plan amount to nothing more than vague words and aspirations around "sustainable transport". The harsh reality is that those 'key workers' that your document refers to, do not all work in Oxford City centre. Only a small minority of people will cycle or take more than 1 bus to work thus forcing a significant number of extra cars on to roads that are already massively congested at peak times. The document refers to a relatively small forecast increase in traffic 1.3 -1.4% but does not give further details of this rather questionable claim. Is this an overall figure for 24 hour period, does it cover the whole of Cherwell or just Kidlington? Frankly I find that questionable figures such as this seriously undermine the credibility of the plan.

Strongly object to Policy PR11 on infrastructure as it is fundamentally unsound. The schedule provides no costings & in most cases no identification of source of funding. There is no indication how already congested highway networks would cope with additional traffic that new houses and developments planned for the wider area (e.g. Northern Gateway) would generate. The ideas that people would rely on public transport, cycling and walkways are fanciful. Traffic surveys of existing roads & known bottlenecks (A4260 Kidlington roundabout, Stratfield Break, Banbury Rd roundabout, A44 Loop Farm roundabout, A34 junction {Peartree roundabout} and Wolvercote roundabout) alone indicates that adding several thousand vehicles to the area and the journeys generated will only exacerbate congestion and put more pressure on an already over-stretched road network. The proposals do not provide any evidence of the "sustainable travel opportunities" claimed.

Object to PR1a, PR3, PR11, plus unreasonable consultation process. Object to CDC failing to commission and examine an environmental report. It is NOT good enough to leave it to contractors. Strongly Object to CDC not representing the people of Cherwell and choosing to give into pressure from Oxford. Not acceptable. On your website you have 4 priorities; 1. Sound budgets & customer focussed council. You are ignoring the customer. 2. Thriving communities. You are intending to smash the community to pieces. 3. District of Opportunities. Letting Oxford City Council pressure you makes this a ridiculous statement. 4. Safe, clean and green. You are proposing lots of traffic, fumes, getting rid of Green Belt. Why are you proposing to do the opposite of what you state on you website are your priorities?

PR-C-0973 1923	08/10/2017	Dr Guy	Harrison						N
Comments									
Object to Policy PR11 on infrastructure because it only sets out an 'approach' rather than a concrete reality. No costs are shown and in most cases no funding is identified. There are no projects to improve the already congested roads and no indication of the highway network will cope with the additional vehicles related to the proposed new houses and other developments. The plan is not positively prepared because it does not provide for necessary infrastructure.

Objection on infrastructure. No costs are shown and no source of funding is identified. It is, therefore, wishful thinking. The highways are already over congested and there is no indication of how it will cope with the additional vehicles owned by all the residents of the new developments. Does not want Kidlington to become a vast urban sprawl encompassing North Oxford, Cutteslowe, Wolvercote, Begbroke and Yarnton. Does not want to see the already overstretched public services get worse.

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. The leaflet suggests this is 'Oxford's' problem. I know government has set targets for the S E of England, so it's not specific to Oxford. We all have a responsibility to try to alleviate the problems. I am aware of housing shortages. However, councils need to ensure developers who state e.g. 40% of housing will be affordable, remains 40% or whatever they agree to, to obtain PP. Weak councils must not allow developers to change the goals once building starts or allow to sell affordable properties as Buy to Let. Councils must stay strong. Developers must agree to fund extra services e.g. Schools, GPs, roads etc. before completing stage 1, not once they're broken. Re plans, PR7(a) is preferable to building at PR6(b) and PR6(a) but not enough homes. If anything, allow PR8 and PR7(a), this may preserve Green Belt and keep a distance.

Comments Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. I object to Policies, PR1(a), PR3, PR11 and it is an unreasonable consultation process. Countryside, landscape and walks will disappear. The current infrastructure will not cope with increased population. Traffic congestion during peak periods will be much worse.

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. I agree with reasons PR1(a), PR3, PR11 and unreasonable consultation process. Therefore, I oppose construction on the Green Belt.

Unreasonable consultation process. Object to the complexity of the consultation and its timing over the school holidays. The Council has not given members of the public a fair opportunity to read and understand the proposals and make their views known. I agree with objections, PR1(a), PR3 and PR11 and to help save the Green Belt, the local countryside and our rural villages in Cherwell and Oxford's unmet housing needs. I support the stance CPRE Oxfordshire have taken that the city could meet most, if not all of it's housing needs within its own boundaries by prioritising land for housing and making sure houses are genuinely affordable homes that people are hoping for. This could be achieved by making better use of brownfield sites and taking a step increase in density targets. Extra housing would require extra transport requirements, but there appears to be no proposals to cope with increased traffic and congestion. Plans should be put on hold until this is addressed. Also Sandy Lane should be improved, not closed to vehicles. I believe CDC can do better with regard to building the required houses without concreting very the Green Belt we require for future generations.

Proposed Submission Plan - Policy PR11 - Infrastructure Delivery

PR-C-1314	05/10/2017	M A	Collier		N
4308	Comments				
No costs are shown in the schedule. In most cases no source of funding is identified. There is no indication of how the already congested highway network will cope with the additional vehicles from these new houses and the other developments planned for the wider area.

Object to PR11 on infrastructure because it does not deal effectively with the issues. E.g.. I have seen no co-ordinated plans and budgeting for the increase in road traffic, and road improvement/expansions. This is not well thought out and unsustainable.

Objects to policy on infrastructure because: There is no source of funding for most improvements. The effects of other developments in the area (Barton Park, Northern Gateway, Wolvercote Papermill etc.) are likely to be significant but are as yet unknown & have not yet been quantified. Congestion on routes into Oxford is already severe. Oxford is an air quality management area & Cutteslowe roundabout is a pollution hotspot where NO2 levels regularly exceed national guidelines. This proposal does not contain measures which deal effectively with these issues.

As a school we neither oppose nor support the development plans. If agreed, please note the following: Facilities within the existing school: It would require 3 extra classrooms & play facilities in order that we might expand to a 2 form entry provision; Additional kitchen & dining, staff office space, school hall space & community hire space will be required; A school library will need to be considered; A joined up plan, taking into consideration the needs of pre school children will need to be actioned; The school will require nursery provision in line with all new school builds; Increased parking provision. Information required: Accurate forecasts of anticipated pupil numbers; Accurate information pertaining to timescales of proposed works - specifically, when would the existing school be developed in line with an increased/increasing population. School building options: If a split site is to be realistically considered, then we would anticipate the LA re-route the exiting lane to the Care Home in order that land might be attached to the school, thus ensuring the safety of children and staff across sites. Facilities for young people within the community: Proposed development will need to ensure that there are suitable, well lit facilities for children & young people outside of school e.g.. skate park, outside gym, tennis courts, splash park etc.; An awareness of youth crime & the impact of inferior/few facilities on these figures. Key workers - teachers & support staff: Affordable housing; Acknowledgement that A44, Rutten Lane & surrounding roads are already gridlocked at peak times, this will impact on staff ability to journey to & from work. Transport Links: Acknowledgment that A44 & Rutten Lane & surrounding roads are already gridlocked at peak times - Options for safe & healthy routes to school need to be in place; Environmental pollution consideration on health of community.

Objects to PR11 on infrastructure because it only sets out 'an approach'. No costs are shown and in most cases no source of funding has been identified. The transport system in the target areas is already at breaking point due to increased car traffic to and from the London-Oxford Airport and the Oxford Parkway railway station. This is in addition to the extra traffic from the 22,000 houses already approved elsewhere in the district by Cherwell, and over 10,000 more houses to be built in the other districts just for Oxford over-spill. The situation will get even worse with the present proposals. Public transport, when available, is expensive and unreliable. Bus timetables are often a piece of fiction; there are few services in the evenings and on Sundays; none after midnight and neither before 6 am. The community bus service from Begbroke to Kidlington was recently discontinued. There is no cycle path at all between the Peer Tree and the Oxford Parkway/Water Eaton Park & Rides (let alone a connective bus service between the two sites). The extension of the 500 bus route from Oxford Parkway to Woodstock offers no satisfactory solution to Begbroke residents who somehow are expected to catch the bus in Kidlington-Langford Lane (located more than a mile away from their homes) and then see how a daily 5-minute trip in car becomes a 45 minute commute as the 500 bus has to navigate the traffic through Kidlington. And this is the situation now – just imagine how bad it will be with 4,400 more families fighting for a place to park their cars in the proposed new Park & Ride in Langford Lane. Additionally, the proposal makes no mention of the sort of housing that it will be offered in each identified site. Will it be homes built quickly by developers with the idea of providing suburban, student and/or tourist accommodation, thus turning long-term communities into short-term ghost neighbourhoods? Neither there seems to be any plan for building new fire and police stations in proportional rate to the proposed demographic increase. A better recipe for social disaster seems difficult to imagine.

Infrastructure Delivery We welcome the commitment to a collaborative approach between Cherwell District Council, Oxford City Council and other partners to identify infrastructure needs. We would expect to be included in this approach throughout the planning process. We welcome the improvement of sustainable transport links along a number of corridors and consider them essential to minimise the additional trips that will affect the SRN, especially at the A34/A44 Peartree roundabout. It is requested that the impact of these proposals upon the operation of the SRN be assessed. It is unclear at this stage what the cost of the transport infrastructure required to support the proposed PR development is likely to be. Furthermore, it is also unclear whether further funding (in addition to developer contributions, i.e. through local or central government etc.) would be required to fully provide the infrastructure required. We request that further clarity is provided on this. The Oxfordshire Infrastructure Schedule and Transport Assessment associated with the PR categorises infrastructure schemes in order to prioritise funding going forward, with the understanding that not all identified schemes are likely to go forward. It is unclear at this stage whether that potential shortfall relates to any of the schemes identified to support the PR development. It is therefore unknown if the impact of the additional development proposed through the PR would be fully mitigated and also whether there could be a residual adverse impact to the operation of the SRN. We request that clarification of this point is provided. Notwithstanding our comments above relating to infrastructure, there is also the issue of DfT's strategic study into the Oxford to Cambridge expressway (OxCam). It is reasonable to assume that if the case for the expressway were successful and a scheme duly delivered the current A34 corridor (be it either upgraded or supplemented/replaced by a new corridor) would more than likely be able to cope with the growth associated with the PR. However, the status of this study is such that no reliance can be placed on it with regard to the PR, either in relation to its timing, alignment or design. To this end the PR needs to strongly emphasise the challenges in relation to the A34 corridor of delivering the government's ambitions for substantial growth.

PR-C-1388	10/10/2017	David	Abbott	Highways England					
4489	Comments								
Transport Modelling: We have considered the potential impact of the proposed development locations on the SRN junctions in the local vicinity, using high level outputs from the Oxford Strategic Model's Refined Development scenario. With the enhanced transport improvement package, modelling shows that the links on the A44 corridor appear to be approaching or over-capacity in 2031 for both morning and evening peak hours, while some junctions along these corridors are predicted to be experiencing delay. It is unclear whether the model was used to identify the proposed mitigation measures to support the additional housing development set out in the PR or whether these were taken from other sources and adopted in the model as a 'given' and it is requested that clarification is provided on this. We understand that two packages of strategic off-site transport improvements were tested in relation to the proposed development using the OSM. Highways England consider that there is a lack of clarity regarding the schemes included within these model runs (including those discussed in the PR such as a new rail station at Yarnton/Kidlington, the conversion of the A34/A44 Peartree Junction to signal controlled, the severing of Sandy Lane, the A40/A44 link road and the mode shift to cycling). Further clarity is sought on details model infrastructure inputs in this regard. We note that following the implementation of PR development there are predicted to be capacity issues along the A34 and at M40 Junction 9. It is not fully clear whether or how the operation is predicted to worsen when compared to the Do Minimum scenario. It is requested that a more comprehensive set of outputs is provided to enable HE to assess the impact of the PR development on the SRN and to assess whether the proposed transport improvement measures sufficiently mitigate those impacts. Furthermore, we are unaware of any more detailed junction modelling that has been undertaken, making use of flow outputs from the OSM. In order to accurately determine the operation of SRN junctions (including the A34/A44 Peartree junction, other junctions on the A34, and M40 Junction 9) it is recommended that junction-specific models are used to assess the operation of the SRN both without development and with development and the proposed infrastructure measures. In connection with this, sensitivity testing should be carried out for scenarios in which the provision of infrastructure that would affect the SRN is/ is not included, for example the A40/A44 link road and the severance of Sandy Lane to motor vehicle traffic. Testing a scheme to convert the A34/A44 Peartree junction to traffic signal control should also be included, whether or not this forms part of the infrastructure to be provided, since it has been referred to in the TA as possible mitigation measure, unless it has been discounted.

Comments

The Council does not comment on how developer contributions will be secured on sites where there are multiple land ownerships. The College considers that it is essential that the developer contributions to infrastructure requirements are based on an equitable equalisation or other mechanism (e.g. a roof tax approach). A comprehensive but, at this stage, outline list of proposed infrastructure requirements has been prepared by the Council and included within site specific policies, and in particular Policy PR9. The requirements are indicative at this stage (costs and funding streams) but set out what is likely to be required to support the development of the site over the Plan Period. Infrastructure requirements that relate to more than one "allocated strategic development site" will need to be considered within the scope of advice in the NPPF/legal tests within Regulation 122 of the Community Infrastructure Levy Regulations 2010 (as amended) and apportioned on a pro-rata basis to each site. This will also need to have regard to the impact of the proposed development of each site and the appropriate phasing of infrastructure delivery to ensure that the infrastructure requirements are necessary to make the development acceptable, directly related to the development and fairly and reasonably related in scale and kind to the development. It is anticipated that the phasing, triggers and mechanisms for the delivery of these elements will be secured through development/collaboration/equalisation agreements, negotiations and discussions with the other landowners. It should, in the College's opinion, be secured through S106 agreements agreed as part of the future development management process. It should be recognised that in some instances, early or advance provision of strategic infrastructure can be critical to the approval and successful delivery of strategic scale development or combination of developments. This may be delivered by the Council or may be funded and delivered by a developer. Where a developer has provided infrastructure at the outset which would be delivered in advance of scheme requirements, then there should be recognition in policy PR11 that any 'abnormal costs' associated with this provision can be credited against the overall planning obligations for the site. Maps are provided."

Changes Sought

The following three points should be added to Policy PR11:4. Where a developer delivers early infrastructure in advance of, or prior to, development then the 'abnormal' costs of this infrastructure provision will be credited against the overall planning obligations for the site. It is essential that the contributions to infrastructure requirements are based on an equitable equalisation mechanism across the strategic development site. An equalisation mechanism or other similar arrangement (e.g. roof tax) to permit development to proceed will need to be agreed by all landowners of a particular site allocation. 6 Infrastructure requirements that relate to more than one "allocated strategic development site" will be considered against advice in the NPPF/legal tests within Regulation 122 of the Community Infrastructure Levy Regulations 2010 (as amended) and apportioned on a pro-rata basis to each site having regard to the impact of the proposed development of each site and the appropriate phasing of infrastructure delivery to ensure that the infrastructure requirements are necessary to make the development acceptable, directly related to the development and fairly and reasonably related in scale and kind to the development."

Reasons for Participation

"To enable the Planning Inspector to fully understand the key reasons why our requested amendment to the Local Plan is required to make the plan 'sound', and to facilitate thorough examination of the issues."

Local infrastructure, particularly all types of movement infrastructure, is already deficient in the area. With regard to transport infrastructure – a primary concern in view of the acknowledged congestion and air quality problems locally- the KPC has little confidence that the aspiration for a new railway halt as referred to in Policy PR8 will be delivered. Residents on new developments at Begbroke, Yarnton and Kidlington would largely rely on buses and to a lesser extent cycles as the alternative to private cars for local journeys. The Infrastructure Schedule at Appendix 4 is largely silent on essential information on programmed delivery, and must be seen as aspirational. Helpfully, it does confirm that the majority of projects listed are critical to successfully delivering accessible and sustainable development. There is however little evidence of success in recent years in securing Government investment in transport improvements despite active jointworking, and economic circumstances are not auspicious for the future. The Montagu Evans Viability Study notes that these external/off site costs are not taken into account in site assessments. 'As is typical for the development of an area, a number of non site specific infrastructure elements form part of the delivery package. In the case of non-site specific infrastructure, most items are reliant on third party funding. Although some costs towards these work may be drawn from property development, the expectation would be that largely – if not in entirety - the costs would be borne externally.' The Viability Study also is ambivalent/uncertain as to whether higher levels of Affordable housing can be delivered on all sites. In the view of KPC, the Plan will be an enormous failure if it removes land from the Green Belt only to see an insufficient delivery of affordable housing, or new development without supporting critical infrastructure, contrary to the Plans objectives of delivering sustainable development. SUMMARY • An Infrastructure Delivery Plan, rather than a wish-list as in Appendix 4, is essential in order to deliver sustainable development. Policy PR1 should include an additional requirement that all new allocated development makes adequate provision for all relevant infrastructure, unless other arrangements have been secured. Development should not proceed in advance of certainty about the delivery of off site infrastructure.

Changes Sought

An Infrastructure Delivery Plan, rather than a wish-list as in Appendix 4, is essential in order to deliver sustainable development. Policy PR1 should include an additional requirement that all new allocated development makes adequate provision for all relevant infrastructure, unless other arrangements have been secured. Development should not proceed in advance of certainty about the delivery of off site infrastructure.

Reasons for Participation

"KPC is an elected body, representing the views of a large number of people in the part of the District which will be most affected by the proposed alteration to the Development Plan. In addition to having a statutory role in the Planning process, the Parish Council has an in depth understanding of the local area where new development is proposed, and is well placed to contribute to the Local Plan process. It is essential for the KPC to be actively involved in the Examination, in order to be able to represent local views, fully respond to submissions made by others, and to address any modifications discussed in advance of the Examiners report."

Comments

Object to Policy PR11 on infrastructure because it only sets out "an approach" ("The Council's approach to infrastructure planning .. Will be..."). It is not therefore a policy and is simply wishful thinking. In the associated infrastructure schedule (Appendix 4, pages 165-182) the column for costs contains the letters TBC in every case. In most cases the column for source of funding also contains these letters and in the small minority of cases where a source is identified it is most often "private developers". This lack of information means that it is impossible to have any confidence that the identified infrastructure needs can be provided. No projects are identified to improve the already congested highway network for private vehicles and no indication of how the network will cope with the additional vehicles owned by the occupiers of these new houses and the other developments planned for the area. The plan appears to deny people the opportunity to use their cars and relies wholly on people using public transport, cycling and walking. Consider that some of the infrastructure required to support the proposed level of growth together with the growth elsewhere around Oxford would in itself be harmful to the environment which is a further reason why the proposed growth is not sustainable. Refer to the plan's quote (p146) from the Oxfordshire Infrastructure Strategy that "growth in recent decades has created a deficit in existing infrastructure". Agree and suggest that it would be foolhardy to embark on the proposed programme of development as it will increase this deficit. This makes the plan not positively prepared. Any plan for the area should concentrate on alleviating the acknowledged existing infrastructure deficit. "

Changes Sought

The plan should be withdrawn. A proper infrastructure plan and schedule should be drawn up to overcome existing problems.

Reasons for Participation

We (Kidlington Development Watch – KDW) consider this is necessary because of: our extensive involvement with the consultations at all stages of the Cherwell Local Plan to date; the considerable work we have undertaken to publicise the consultation ourselves; of the feedback we have received from Kidlington residents; and, the large numbers of them who have responded as a result of our efforts. KDW is a voluntary organisation run by Kidlington residents with experience and interest in planning issues. We believe that effective, informed public participation in planning consultations is vital to democratic policy making. We publicise consultations that directly affect Kidlington and offer advice on how people can best make their views known. In relation to this and the previous options consultation we printed and distributed leaflets, put up posters, ran a stall on many Saturday markets and at other events, participated in public and parish council meetings, provided information on our website and responded to requests for information from Kidlington residents. As a result, we have gained a very good understanding of the views of Kidlington residents, a large number of whom have made representations because of our activities. KDW's representations therefore reflect the views of much of the Kidlington community."

Comments

Paragraph 15725 of the NPPF requires Local Plans to plan positively for the development and infrastructure required in the area to meet the objectives, principles and policies of the Framework. We note that draft Policy PR11 is tailored to meeting Oxford's unmet housing need but broadly replicates the requirements of adopted Local Plan Policy INF1: 'Infrastructure' 26 which focuses on the delivery of infrastructure for Cherwell. A2D do not object to Policy PR11, however, express concern regarding the level of infrastructure required to support the substantial growth associated with meeting unmet need at the proposed site allocations as part of the Partial Review, including the A44/A4260 improvements and Rapid Transit scheme, and A44/A4144 and A4260/A4165 bus improvement schemes (Policy PRA4a). These works could significantly delay the proposed sites coming forward. A2D urge the Council to explore the idea of accommodating further growth at Bicester, which has required infrastructure in place/ programmed to be delivered. Further growth in Bicester would add critical mass to the existing demand for such services and facilities.

Changes Sought

Reasons for Participation

Our objections in part relate to the proposed growth strategy to address Oxford City's unmet need, which we consider to be unsustainable and inconsistent with national policy. This is contrary to the adopted Growth Strategy set out in the Cherwell Local Plan 2011-2031 (Part 1), which focuses new development at key settlements, as identified in Cherwell's settlement hierarchy. The Council has not discharged its duty to demonstrate exceptional circumstances to release the identified sites from the Green Belt, pursuant to paragraph 82 of the National Planning Policy Framework. Further, there is insufficient evidence to suggest that opportunities to increase capacity at existing allocated housing sites have been robustly tested. Finally, there should be a single housing requirement for the Cherwell Local Plan. There is no justification for a separate figure to be applied to meet Oxford City's unmet need, as is currently proposed.

Comments

The proposed infrastructure to this proposal is unsound. There is a lack of detail around funding. The issue of increased congestion is glossed over. To assist commute to Oxford, new rapid bus routes, rail facilities and cycle connections are mentioned. No allowance is made for the expected local rise in motor vehicle congestion (made worse by the rapid bus lanes) and its attendant pollution. The current highway infrastructure around Kidlington will not be sufficient. Between 07.30 and 09.30, the Kidlington roundabout is frequently backed up along both the A4260 and the Bicester Rd up to the junction with the A34. To expect that occupants within the new communities will exclusively use public transport or cycle routes is idealistic, unrealistic and irresponsible.

Changes Sought

Reasons for Participation

A detailed assessment of the current congestion is required. A detailed proposal of how 4400 new homes (in addition to Cherwell's extra housing requirement) will impact on congestion is also required.

Supports the approach in the Partial Review of progressing each of the proposed site allocations through a development brief. We consider that this is the appropriate way to consider the site specific details & infrastructure needs of each proposed allocation in a timely manner. We also welcome the opportunity to be involved in the production of the development briefs especially where there are cross-boundary issues to be considered. We acknowledge the on-going partnership work through the Oxfordshire Growth Board & in particular the Oxfordshire Infrastructure Strategy. This is a useful forum for the consideration of the cumulative impacts of planned growth & also cross boundary infrastructure issues. We are keen to continue the constructive partnership working & on-going dialogue with Cherwell & to assist in securing prompt delivery of these much needed homes.

5272	<p>Comments</p> <p>The Policy PR11 on infrastructure merely sets out "an approach" which is just pie-in-the sky, wishful thinking in the absence of any research, costings or identification of sources of funding. There is no rigour in this document which gives reassurance over the impact of this plan on an the existing rapidly rising housing costs, the already strained transport network or the already overstretched education and medical facilities in this community. As such it is ineffective, poorly prepared and unsustainable. A more detailed analysis is included in the rep - see section 3 - "Kidlington is not the answer" - discusses property prices, impact on transport, infrastructure and public services.</p>							
	Changes Sought				Reasons for Participation			
PR-C-1472	10/10/2017	David	Tighe		N	N		N
5226	<p>Comments</p> <p>There are no thought through plans to cope with traffic issues. The estimates for increased traffic are a guesstimate at best. It contains no reliable information on likely numbers who will use public services, walk or cycle. It takes no account of all the other planned developments for the area such as Northern Gateway, Barton Park. The proposal for a rapid transit system is surely a joke. To the extent that anything can be gleaned from this proposal. It just looks like it will be sharing a bus lane! It is surely telling that none of the proposals are costed. The deliverability of what little infrastructure planning appears in the document must be highly questionable to say the least. Without clear commitment on funding, the plans should not proceed. Otherwise the consequences could be disastrous for the area. It's likely that it will move beyond the severe congestion that already exists to gridlock. Oxford is an Air Quality Management Area because of the high levels of nitrogen dioxide. Cutteslowe Roundabout is already a pollution hotspot where nitrogen dioxide levels regularly breach international guidelines. Cherwell's plans would lead to many more cars on the roads and there is no effective strategy to deal with the pollution that would be caused by this.</p>

5219	<p>Comments</p> <p>Infrastructure - The Oxfordshire Infrastructure Strategy (OXIS) was prepared on behalf of the Oxfordshire Growth Board to provide a view of emerging development & infrastructure requirements to support growth from 2016 to 2031 & beyond. We would like to understand how the infrastructure identified as necessary will be funded in order to provide a sustainable strategy for growth. Flooding - As CDC will be aware, the Environment Agency is currently developing the plans for a proposed Flood Alleviation Scheme (FAS) for Oxford. OPT is informed by the EA that it is not in a position to model for future growth so that the current plans are based on what is there now. It does not appear that any account has been taken of this scheme in this Partial Review & in OPT's view it is fundamental that any development that is to happen in Cherwell District takes account of the changes downstream at Oxford as well as in the more immediate vicinity & it would ask that this criterion to be added to the assessment of all potential development sites.</p>							
	Changes Sought				Reasons for Participation			
	<p>"OPT considers that there are important matters relating to the soundness of the plan that need to be discussed at the Examination and therefore wishes to reserve the right to participate at the Oral Examination. We take a forward thinking and positive approach to development, looking to influence change rather than stopping it. We are recognised as a professional and experienced voice, able to speak with conviction on matters relating to landscape, views and the impact of development on the city of Oxford and its green setting and surrounds, and are committed to ensuring that Oxford can continue to flourish and prosper, whilst protecting its historic character and setting."</p>

Objection to Policy PR4a and Policy PR11 Congestion.4400 houses x approx. 2 cars per household = 8800 cars. There will cause unacceptable congestion in the area. The surrounding roads in North Oxford, on the Eastern Bypass, Banbury and Woodstock are already totally gridlocked. There are no concrete or fully costed plans to improve the roads into Oxford and between villages. Everything that has been mooted in the plans has been aspirational. These plans can be sacrificed. In fact the proposal to close Sandy Lane, a major link road between Yarnton/Begbroke and Kidlington, will create even more congestion and upheaval. According to the plans the closure is for a green pedestrian, WHEELCHAIR and cycling route with railway crossing. There are no plans to widen the A44 but we have seen plans to slightly modify the circular mini roundabout at the bottom of Frieze Way/Loop Farm to become an oval mini roundabout. This will only cause more disruption and will not help to ease congestion. We understand bus schedules to Begbroke/Yarnton are actively being cutback. We do not believe there is a need for a Railway Halt and think it will not be deliverable. There is no programmed delivery on any of the Infrastructure improvements proposed, no third-party costings have been quoted and the phrase “the costs should be borne externally” is worrying. These plans should, therefore, be considered "pie in the sky". All developments should not go ahead before Infrastructure plans are fully costed and have been locked into the contract.

Object to Policy PR11 on infrastructure because it only sets out “an approach”. It is wishful thinking. No costs are shown and in most cases no source of funding is identified. There are no projects to improve the already congested highway network for private vehicles and no indication of how it will cope with the additional vehicles owned by the occupiers of these new houses and the other developments planned for the area. The plan is not positively prepared because it does not provide for necessary infrastructure. Used to work in Oxford city centre, and it took over an hour by bus to travel the 5 miles. I since have changed jobs in order to avoid this congestion, and in 30 mins arrive in Banbury (20 miles away). The infrastructure around Oxford is appalling, constant traffic jams, awful air quality and this will only get worse if more housing is built between Kidlington and Oxford. There has been absolutely no plan of how this congestion would be alleviated with the current situation, let alone how it would cope with 4,400 houses being built on the green belt. There has been absolutely no proof that affordable housing for first time buyers would be achieved, as each time a new development around Oxford has gone up, the starting prices for 'affordable' housing show that it is only affordable to the rich.

Strongly object to policy PR11 which only sets out an approach to infrastructure, it is not effective and not positively prepared to deal with the requirements the extra housing will impose. For example, the current road system and public transport is completely unsustainable. It can already take over an hour to get into the centre of Oxford from the north end of Kidlington using the bus. It is so unbearable I prefer to take my chances using a bike. The A34 around Oxford is a complete disaster and is on the travel news pretty much every day. Just last week there was an accident on the M40 and the traffic had backed up all the way into Oxford, with surrounding villages completely gridlocked. This had a significant impact on our daily life, picking children up from nursery and school etc., and is something that would only get worse without any proper planning for infrastructure.

The plan is not positively prepared because it does not provide for necessary infrastructure. Traffic congestion and air pollution will undoubtedly worsen due to thousands more vehicles on our roads. This is in addition to the extra traffic from the 22,000 houses already approved elsewhere in the District by Cherwell, and over 10,000 more houses to be built in the other Districts just for Oxford overspill. Construction traffic and road works will add to this chaos for years while the development takes place.</p>

<p>Comments</p> <p>Express concern over the planned additional housing in the Kidlington area. As a village of 6000 houses already it seems extraordinary to be contemplating nearly doubling the housing in the area. Have several specific concerns. Infrastructure: despite the work on the roundabouts at Cutteslowe and at the end of Woodstock Road, there is still considerable traffic at peak times going into Oxford from the northern side of the city, and leaving at the end of the working day. We regularly see jams through Kidlington, and I do not believe the infrastructure can withstand any additional housing, let alone such vast numbers. Any accident within the vicinity of Oxford can cause gridlock extremely quickly. The A34 is frequently at a standstill at any time of the day, and there have been an increasing number of fatal accidents. Do not understand why you would choose to build houses this side of the city. Surely, either within the city itself, on sites where office blocks and industrial sites are planned, or on the southern side with better access to Cowley would make more sense. Alternatively, development of areas such as Banbury as a centre for employment. Flooding: parts of Kidlington have flooded on occasion in the past, and I would have grave concerns that by building on all the available natural soakaways you would increase the chances of future flooding. You are also proposing to build on fields that flood regularly, such as area 20 by the canal, which again is not good for the proposed houses, or for houses already built.</p>

<p>Comments</p> <p>The infrastructure in the local area is already is already inadequate and requires large investment to bring it up to standard. Our primary concern is the large amount of congestion and air pollution along the Oxford Road and the Gosford Link Road. There needs to be more work done to resolve this situation before more housing is built. We have little confidence in the Infrastructure Delivery Framework and how deliverable the projects detailed in it will be, we understand that there are massive funding shortages and that all attempts to joint fund transport infrastructure improvements have been unsuccessful.</p>

4789	Comments							
We already have an overstretched local infrastructure, particularly in all types of movement infrastructure. With regard to transport infrastructure – a primary concern in view of the acknowledged congestion and air quality problems locally, the aspiration for a new railway halt as referred to in Policy PR8 looks impossible to deliver – there were plans for a halt nearby for many years, but Network Rail have stated that the line is at capacity, and a new halt would not be delivered. Residents on new developments at Begbroke, Yarnton and Kidlington would largely rely on buses and (to a lesser extent) cycles as the alternative to private cars for local journeys. The Infrastructure Schedule at Appendix 4 doesn't really detail essential information on programmed delivery, and must be seen as aspirational. It does confirm that the majority of projects listed are critical to successfully delivering accessible and sustainable development. There is however little evidence of success in recent years in securing Government investment for transport improvements despite active joint working, and economic circumstances are not auspicious for the future. The Montagu Evans Viability Study notes that these external/off site costs are not taken into account in site assessments. 'As is typical for the development of an area, a number of non-site specific infrastructure elements form part of the delivery package. In the case of non-site specific infrastructure, most items are reliant on third party funding. Although some costs towards these work may be drawn from property development, the expectation would be that largely – if not in entirety - the costs would be born externally.' The Viability Study also is ambivalent/uncertain as to whether higher levels of Affordable housing can be delivered on all sites. The Plan will be an enormous failure if it removes land from the GB only to see an insufficient delivery of affordable housing, or new development without supporting critical infrastructure, contrary to the Plans objectives. An Infrastructure Delivery Plan, rather than an aspirational wish-list as in Appendix 4, is essential in order to deliver sustainable development.								
Changes Sought				Reasons for Participation				
Policy PR1 should include an additional requirement that all new allocated development makes adequate provision for all relevant infrastructure, unless other arrangements have been secured. Development should not proceed in advance of certainty about the delivery of off-site infrastructure.

Objection to PR11 that fails to address specific infrastructure needs. It is unposted and the source of funding has not been identified. The recent road improvements that cost millions of pounds have had little impact on traffic around the 'northern gateway' of Wolvercote and Cuttleslowe roundabouts, with extensive rush hour congestion still a major problem and journey times increasing again, exacerbated by residents travelling from the extra 20,000 houses already built in the Cherwell District. Emergency vehicles are often stranded in heavy traffic, endangering lives. There is no provision for additional school infrastructure; as a former governor of North Kidlington School, I am aware how stretched school budgets already are and how overcrowded classes become, with teachers finding it difficult to give children the individual attention they need and deserve. More pressure on teaching staff will lead to even greater attrition in the profession. Our already struggling health services cannot cope with additional numbers of patients, and again strain on GPs is leading to problems with recruitment and retention, and even closure of surgeries, as already seen in Bicester. The plan fails to provide essential infrastructure and hence is not positively prepared.

Policy PR11 Infrastructure provision1. Apart from the need to get cars in and out of Oxford there are no concrete proposals for other infrastructure such as schools, health care services, churches, community halls, public recreational facilities AND significant green space.2. I have been led to believe that 'sustainable transport' need be no more than the ability to use public transport. The option to use cars freely is clearly built in to the proposal so it is unlikely that public transport would be first choice. The houses will presumably be built with parking for at least two cars per household.3. Presumably traffic from any new housing north of Kidlington will also be fed into the present road structure. This will not only add significant volumes of CO2 and other GHGs to the 'global warming mix' it will also be deleterious to the health of Kidlington and North Oxford residents.4. By planning for business growth in Oxford and residential growth in Cherwell increased transport needs are inevitable. Business growth could be directed to areas where housing can be provided close by, rather than to areas where there is no resident workforce. This would be sustainable.5. By looking only at Oxford's needs there has been no attention paid to what effects the developments would have on Kidlington, Yarnton and Begbroke themselves. Any development that does take place should make a contribution to the host area as well as to Oxford.

Objection. A policy should be more than "an approach" as PR11 is described. When looked at carefully the wording is meaningless and gives no confidence that required infrastructure will be provided or funded. The associated infrastructure schedule does not include any costs and few sources of funding. Without this information there can be no realistic infrastructure plan. The infrastructure schedule does not include any projects to address the inevitable increase in trips by non-public motor vehicles (car, van, lorry etc.). Nor does the plan consider the effects of other proposed developments elsewhere in Cherwell or around Oxford which will increase the demands on transport networks. While referring to an existing infrastructure deficit it doesn't make clear how it will be addressed. Because of its lack of clarity on costs and funding and addressing wider needs and the infrastructure deficit the infrastructure policy is unjustified, not positively prepared and ineffective.								
Changes Sought				Reasons for Participation				
Changes Sought.. The plan should be withdrawn. A proper infrastructure plan and schedule should be drawn up to overcome existing problems				Wish to participate as stated in representation above.

PR-C-1539	10/10/2017	Tim	Emptage					N
4838	Comments							
Objects to the scale of developments proposed in this plan, which would require very significant investment in infrastructure and a robust plan to ensure implementations. Much as I encourage the use of public transport, walking and cycling, people cannot be forced to do this and many will still use their car which will simply add to the major traffic problems around and within Kidlington. Most families still do a large weekly shop and it would be totally impractical to walk, cycle or use public transport to do this and most will continue to use their cars. The Infrastructure schedule in Appendix 4 is wholly aspirational and contains little detail on costings, sources of funds and timing. It is a wish list rather than a plan. The delivery of affordable housing is a major concern and while the plan has an overall element of 50% housing, it is very common for developers to go back to planning authorities and ask for that figure to be reduced in order to make the site financially viable. Invariably the planning authority acquiesces. There seems to be nothing in place to ensure that the 50% level is adhered to. Without a comprehensive, robust and fully costed and fully funded infrastructure plan a detailed plan for the delivery of affordable housing, these proposals are unsound.

PR-C-1541	09/10/2017	Maurice	White					
4843	Comments							
Object to PR11 on infrastructure because it is unlikely to be sufficient or to be properly resourced. Road transport to and from Oxford is already a significant problem and the plan will make this worse. Infrastructure to mitigate this problem is already known to be underfunded. Other resources such as alternative recreation facilities or services enhancement (doctors, schools etc.) are unlikely to be met due either to reluctance of land owners to release land, reliance on private funding with no idea where this is to come from or the use of inadequate public funds which will lag well behind any development. This part of the plan seems wishful thinking. For housing of this magnitude to go ahead infrastructure needs to be in place either before or at the same time as the housing development with guaranteed funding.

Poor Infrastructure - Objects to PR11 because it only sets out "an approach". No costs are shown & in most cases no source of funding is identified. There are no projects to improve the already congested highway network for private vehicles & no indication of how it will cope with the additional vehicles from these new houses & other developments planned for the area. The plan is not positively prepared because it does not provide for necessary infrastructure. There is currently not enough infrastructure in this area to allow for the building of more homes! The roads are small & there is only one route you can take for going into the city, which makes getting to & from work, long & traffic clogged. This situation will be exacerbated with 4400 additional cars. Assuming that each house has one car, but most likely two cars. Lack of Amenities - The cuts the Government has made in our communities means that many local amenities have had to close. In particular getting a doctors appointment in both Yarnton & Kidlington practices is at minimum a 3 week long wait. It is not feasible to allow the population to grow to this scale here, the facilities are already overloaded.

Object to Policy PR11 on infrastructure because it is unsound. There is no indication of how the already congested highway network will cope with the additional vehicles from these new houses and the other developments planned for the wider area. Indeed it suggests that traffic would be redirected to other roads (point 5.153) which is already under stress from excess traffic. Traffic congestion already occurs on a daily basis and the additional houses would add to this congestion. The provision of local health services is also under stress with little capacity to expand to accommodate the proposed housing developments. Regarding point 3 of Policy PR11 - Infrastructure Delivery, there appears to be little or no impetus for the infrastructure to be delivered in a timely manner i.e. in conjunction with or ahead of time of the planned development. I would urge that any required infrastructure is in place ahead of any planned developments.							
Changes Sought				Reasons for Participation			
The number of houses should be substantially reduced to allow for the already struggling infrastructure for all aspects of local living e.g. roads, health services, schools.

Comments							
Have concerns about the impact such a large number of new homes north of Oxford would have on already congested roads and journey times (Policy PR11). Commute from Kidlington to Headington by bus and the journey already takes nearly an hour on some days. Some parts of the plan referring to the possible traffic increases are quite bizarre and seem unsound. How can it be the case that 4,400 new homes will only increase car journeys by 1.2-1.4% (as suggested in section 5.47 on Transport Infrastructure)? What modelling method was used to come up with this?

Object to policy PR11 on infrastructure because it is unsound: - There is no source of funding for most improvements. - The effects of other developments in the area (Barton Park, Northern Gateway, Wolvercote Papermill etc.) are likely to be significant but are as yet unknown and have not been quantified. - Congestion on routes into Oxford is already severe, Oxford is an Air Quality Management Area and Cutteslowe Roundabout is a pollution hotspot where nitrogen dioxide levels regularly exceed national guidelines. - This proposal does not contain measures which deal effectively with these issues. - Believe this proposal not justified and not effective and therefore unsound.

Object to policy PR11 on infrastructure because it is unsound: - There is no source of funding for most improvements. - The effects of other developments in the area (Barton Park, Northern Gateway, Wolvercote Papermill etc.) are likely to be significant but are as yet unknown and have not been quantified. - Congestion on routes into Oxford is already severe, Oxford is an Air Quality Management Area and Cutteslowe Roundabout is a pollution hotspot where nitrogen dioxide levels regularly exceed national guidelines. - The 'improvements' to the Cutteslowe roundabout has already slowed traffic along the A40 and these developments can only make this worse. There is not enough physical space to adequately improve this and the Wolvercote junction to cope with even more traffic. - This proposal does not contain measures which deal effectively with these issues. - Believe this proposal not justified and not effective and therefore unsound.

We object to Policy PR11 on infrastructure because it only sets out "an approach". It is wishful thinking. No costs are shown and in most cases no source of funding is identified. There are no projects to improve the already congested highway network for private vehicles and no indication of how it will cope with the additional vehicles owned by the occupiers of these new houses and the other developments planned for the area. The plan is not positively prepared because it is out of scale, not useful for the area and does not provide for necessary affordable infrastructure. We also strongly support Cherwell's rejection of previous sites considered for development such as The Moors area of Kidlington for the aforementioned reasons. We trust that Cherwell District Council will abide by its responsibilities to its residents, heed these objections, not accede to Oxford City Council, and use them as sound justification for rejecting the proposed development plans.

I object to Policy PR11 on infrastructure because it is unsound. No costs are shown in the schedule. In most cases no source of funding is identified. There is no indication of how the already congested highway network will cope with the additional vehicles from these new houses and the other developments planned for the wider area. By definition, infrastructure planning and provision must happen first. Everything else is then built around that infrastructure. Without detailed, cost planning for infrastructure provision, I believe these proposals are simply a cynical attempt to open up land for development in a manner which will strictly not meet its stated objectives.

Proposed Submission Plan - Policy PR12a - Delivering Sites and maintaining Housing Supply

PR-C-0055	11/08/2017	Mr Ronald	Lloyd					N
96	Comments							
The mismatch between housing demand and allocated development land appears to be caused by plans for undue commercial development within the City which could be relocated to rural areas to achieve a more equitable distribution of jobs, facilities, transport and environmental hazards. Traffic, pollution, and invasion of green spaces that bring clear health risks would be reduced in Oxford, and more space released for housing and social development. If not already arranged, a Health Impact Assessment should be sought from The Director of Public Health.

PR-C-0055	11/08/2017	Mr Ronald	Lloyd					N
98	Comments							
The arguments against invading the Green Belt are well rehearsed. The view expressed in CLPPR that meeting the city's housing targets creates 'exceptional circumstances' to justify damage to the GB and loss of a golf course is unsubstantiated and not explained in para 5.17 as claimed. More attention might be given to what local residents want and apply that analysis to comparisons of residential rather than commercial developments in the City!

1287	Comments							
Land at Policy PR10 Land south east of Woodstock, 430 dwellings is not expected to start until 2026/27. Whilst land at Begbroke, east of the A44, 1,950 dwellings, Policy PR8 is expected to deliver for 8 years at a flat rate of 225 per annum. The phasing of land releases can only act as a further constraint on housing delivery and will result in further delays to site delivery whilst willing developers are prevented from bringing forward deliverable sites to accord with an arbitrary phasing policy. This is contrary to the significant boost to housing supply required by the NPPF. Developer competition is not a factor in the delivery of sites. Once a development interest has invested in a site, they will deliver this as soon as possible in order to secure a financial return having regard to the financial market. The issues that slow down the delivery of sites include the planning process, which can take many years to secure an implementable planning permission and market demand, as developers will only build where they are able to sell and ensure a return. These are largely beyond the control of the Local Plan. However, there are ways of supporting the timely delivery of sites. This includes allocating a range of different size sites in different locations which will appeal to a range of different developers, thereby ensuring that as many developers are working in the District as possible. This also accords with paragraphs 47 and 50 of the NPPF. Another way of supporting delivery is to identify reserve sites, such that if any of the allocated sites are delayed then sustainable alternatives can be brought forward quickly. In terms of the actual wording of the policy, in the fifth paragraph, the wording is not effective. If a site is allocated it should be permitted as it will have been assessed as sustainable and deliverable to be included in the Plan. The wording is not effective as a continuous supply cannot be enforced. the development of a site may vary year on year for a number of reasons. An objection is made to the seventh paragraph which states that "Should planning permission be granted for housing that will be delivered beyond 2031 and which results in the requisite 4,4000 homes for Oxford being exceed, this will be taken into account in meeting Cherwell's housing need in the next Local Plan Review". This would undermine the integrity of the Cherwell Local Plan as needs would not be met in accordance with the strategy outlined in the adopted Cherwell Local Plan. There are several references in the Partial Review document that state its strategy avoids undermining the existing Local Plan's development strategy for meeting Cherwell's needs and detracting from the delivery of growth at Bicester, Banbury and the former RAF Upper Heyford site. (para 1.4, para 3.30 and 3.31 and in particular para 5.10.

Comments

Dorchester Group support the approach that it necessary to monitor the housing supply for Oxford's needs separately from that for Cherwell. The disaggregation provides a mechanism to ensure a sustainable spatial distribution across the HMA. This therefore ensures that both the OAN is met across the HMA and that a sustainable distribution is achieved. In order to provide for this sustainable distribution, it is appropriate to disaggregate to an appropriate scale, and in the situation where there are 2 distinct needs to be addressed (Oxford City and Cherwell) it is entirely appropriate to disaggregate these requirements and the supply. Indeed, such an approach has recently been supported by a number of Inspectors as identified previously. However, such an approach is required to have sufficient flexibility to ensure that the OAN is addressed across the HMA when specific triggers are realised, such that each District (or sub-area) will be required to address its needs. This could be achieved through the identification of reserve sites. It is noted that Partial Review is a time limited plan and has been prepared to ensure the Oxford's unmet needs are met by 2031 as in the longer term the Oxfordshire Growth Board have agreed in principle to prepare a joint plan which may change how Oxford's needs are met in the longer term. According to the trajectory in Appendix 3 there is only a 5.1 years supply. However, Dorchester Group is concerned that the Partial Review is effective i.e. that the unmet need is delivered, there is already a shortfall as these needs are derived from 2011. As referred to previously the identified OAN for Oxfordshire relates to the period 2011 to 2031. By the time the Local Plan Part 1 Partial Review is adopted in 2018 there will be at least a 7-year shortfall, with no homes having been delivered to meet the annual requirement for 220 homes in Cherwell to meet the needs of Oxford City. This amounts to a shortfall of 1,540 homes. The Partial Review should therefore be required to respond as soon as possible rather than implementing a further 3 year delay in the need to deliver housing. It is considered that the housing implementation strategy should incorporate a 20% buffer in recognition of the existing shortfall of 1,540 homes which will have already accrued. The proposal for a start-date of 2021 will delay the necessary housing provision by 3 years (following adoption) with any justification. This will place a further constraint on the accessibility of the housing market for the residents of Oxford, who will either need to remain in their current potentially overcrowded and unsuitable accommodation for a further 3 years or move out of the area where they will have family and/or work connections. This would be entirely contrary to the objectives of national policy. As proposed the plan envisages the delivery of 440 per annum, this assumes that all sites are able to commence delivery as of 2021, however according to the housing trajectory at Appendix 3 Policy PR6a Land West of Oxford Road 530 dwellings is not anticipated to start delivering until 2023/24. Land at Policy PR7a Land south east of Kidlington 230 dwellings is not anticipated to start until 2026/27.

Changes Sought

Dorchester Group consider that the seventh paragraph of Policy PR12a should be deleted.

The approach that CDC take to meet their apportionment of Oxford's unmet need is for them to determine. We note this takes the form of 'ring-fencing' as a separate 5 year housing land supply will be maintained for meeting Oxford City's unmet need. We acknowledge that CDC have proposed to meet their apportionment through 7 strategic sites, however we understand that this could be dependent on the local assessment of their capacity. If it is found that the capacity of these 7 sites is deemed to be lower than initially thought, we assume that CDC are still capable of accommodating the remainder of their apportionment of Oxford's unmet need within their own district?

This policy is unsound due it being ineffective and unjustified. In our response to the previous consultation we noted our concern in confining the delivery of Oxford's unmet need to the 2021 to 2031 period and ring-fencing Oxford's unmet need from Cherwell's on housing requirement. Whilst we are supportive of the joint working that has taken place to ensure unmet needs within the HMA are delivered we remain concerned that Cherwell, and the other authorities in the HMA, are seeking to separate their own needs from that of Oxford's. The unmet need arising from Oxford should be considered as part of the Cherwell's housing requirement and should be monitored as such. It must be recognised that Oxford cannot meet its needs and that the demand for housing in Oxford will inevitably fall on the shoulders of its neighbours. Indeed, the Oxfordshire Strategic Housing Market Assessment (SHMA) identifies in appendix 1 that the housing needs of Oxford are already impacting on Cherwell's housing needs. Between 2006 and 2011 there was positive net migration from Oxford to Cherwell each year, with on average of 410 more people moving from Oxford to Cherwell than those moving the opposite direction. This positive flow of people shows that Cherwell is already to a certain extent meeting the needs for Oxford and that this is reflected in the OAN. To consider Oxford's unmet needs as separate to Cherwell's is to fail to understand that housing markets are not defined by administrative boundaries. In meeting Oxford's unmet needs it must be recognised that this is about considering future migratory patterns that are inevitable due to the fact that in some areas growth will, inevitably, be limited. Essentially Cherwell are not meeting Oxford's unmet need but their own need that will inevitable arise from the development constraints faced by Oxford City. As such Cherwell should plan to meet a single increased housing requirement for the Borough rather than for two wholly separate requirements. Given the scale of the challenge for both the Council and the house building industry to deliver these additional homes the only effective approach is to start planning for these homes as part of the Council's overall strategy for housing delivery. The sites allocated in the partial review will then for a key delivery mechanism for achieving the higher target. We are also concerned that Oxford City has a growing backlog of housing needs that need when delivery since 2011 is considered against the City's OAHN of 28,000 homes. At present we consider there to be a minimum backlog of 5,629 homes due to Oxford's inability to meet its own needs, as set out in the table below. Whilst we are not suggesting that this backlog should form part of Cherwell's five-year land supply it does give a clear indication of the need to deliver these homes as soon as possible and not wait until 2021 (Rep includes table of figures). There is also the danger with this approach that should the strategic allocations be delayed for any reason, such as insuperable infrastructure problems, then the housing needs of Oxford City could get neglected. We cannot comment on the deliverability of the proposed trajectory as this evidence is still to be provided. However, to ensure delivery on the seven allocated sites alongside the delivery of allocated sites to meet the original housing requirement for the Borough within 10 years will be challenging. By considering all housing needs as a single requirement the Council will be able to react more effectively to meeting needs as a whole. We do not consider that such an approach would undermine delivery to meet the needs identified in the Cherwell Local Plan. In fact it will provide the opportunity to secure a broader base of supply and ensure that infrastructure needs arising from all development is considered comprehensively. It follows from these arguments, that the HBF sees no need to disaggregate the needs of Oxford City provided for within Cherwell's administrative area from the needs (the OAN) of Cherwell – they are one and the same. It is necessary to identify an overall housing requirement to be delivered within the administrative area of Cherwell, and not ring-fence Oxford City's needs to the strategic allocations set out in the Partial Review.

Objection relating to Kidlington, Yarnton and Begbroke on the following grounds: Development could be located on sustainable sites identified elsewhere in the district rather than GB which Government says should only be used as a very last resort. A high proportion of the new homes should be affordable for young people and families from the local area. Infrastructure such as roads and schools should be put in place, as well as adequate parking facilities for the new residents. Traffic congestion and parking is already a major problem in Kidlington and the surrounding area, especially in the rush hour. Support for Cherwell's decision not to include land behind the Moors for development, as this is GB land used for recreation by local people, and would cause yet more traffic problems. I am appalled at the prospect of Kidlington becoming simply another suburb of Oxford.

Proposed Submission Plan - Policy PR12a - Delivering Sites and maintaining Housing Supply

PR-C-0705	08/10/2017	Peter	Trowles						N
5427	Comments								
Object to Policy PR3 to remove land from the Oxford Green Belt. The Green Belt around Kidlington preserves green spaces that are so greatly appreciated and regularly enjoyed by me and my family. It protects both the historic city of Oxford from overdevelopment and neighbouring villages from coalescence. Government guidance says that Green Belt is a permanent designation and that unmet housing need is not a reason for building in the Green Belt. The plan is therefore ineffective and not consistent with National Policy. Alternative locations for housing development in Cherwell district, outside the Green Belt are available along good public transport corridors to Oxford. Even if a case for exceptional need to build in the Green Belt could be made, the amount of land proposed to be removed from the Green Belt is not justified as it far exceeds that which is necessary to satisfy Oxford's stated unmet housing need because of the proposed low density of dwellings. One suspects that after an area of Green Belt land is designated for development, much higher densities will be proposed and this area will be used to meet Cherwell's future housing needs in addition to Oxford's unmet need. I therefore also object to Policy PR12a which allows for permission to be granted for housing numbers that exceed Oxford's unmet need.

1908	Comments								
Since there is currently a severe housing shortage for Oxford workers, the emphasis needs to be on first satisfying this backlog as quickly as possible, and only then thinking about a constant rate of new housing. 1. The ambition for the first 5 years 2021-26 should be increased from the stated 1700 to significantly more than half of the total 4400 planned for the 10-year period. 3. Requiring developers to maintain a 5-year supply goes against the need to satisfy the backlog as soon as possible. Thinks this requirement should be dropped.

PR-C-0766	10/10/2017	Haidrun	Breith	Berks, Bucks & Oxon Wildlife Trust					Y
511	Comments								
Policy PR12a - and Appendix 3: Housing Trajectory. Policy PR12a and the Housing trajectory in appendix 3 suggests that sites will come forward at different times in the plan period with sites PR6a, PR7b, PR8 and PR9 being the first ones to come forward at 2021. Site PR6b is proposed to be released at 2023, and sites PR7a and PR10 are not due to come forward until 2016. The government is currently consulting on a standard method of how to calculate housing need. It is our understanding that if this calculation is adopted, it might be possible that fewer houses are needed to meet Oxford's housing needs and as a result not all site allocations might be required. As mentioned above concerned about the proposed quantum of development in Oxfordshire and neighbouring counties and would welcome if fewer sites would be required for development.									
Changes Sought					Reasons for Participation				
From an ecological point of view sites PR7b, PR8, PR9 and PR10 appear to be most sensitive in ecological terms and we would therefore recommend for these sites only to come forward if really needed. Recommend that these sites are considered later in the plan period and the trajectory revised accordingly.					Potential biodiversity impacts as outlined in the representation.				
PR-C-0775	10/10/2017	Jon	Alsop	Savills on behalf of Christ Church, Exeter & Merton Colleges and Oxford University					Y
1970	Comments								
Objection. The consortium considers that the demand for housing in and around Oxford is such that the phasing of new development solely on the basis of abstract 5 year periods is unnecessary. A number of factors would suggest that the application of such phasing policies is inappropriate: • past rates of under-delivery that should be remedied as soon as possible;• the fact that there is built into the cross-boundary work and the district apportionment undertaken by the Oxfordshire Growth Board a shortfall of several thousand houses below the housing requirement for Oxford identified in the 2014 SHMA; and• there is a considerable risk of delay in the delivery of sites in other local authorities in Oxfordshire, for example due to the slow progress of new local plans to deliver the necessary allocated sites and also the risk that sites will not come forward quickly enough to achieve target rates of delivery. The latter factor is a particular risk in Oxford City where a substantial uplift in delivery is required above the current level of 400 dwellings per year if the midpoint target of the 2014 SHMA is to be achieved i.e. 28,000 dwellings.									
Changes Sought					Reasons for Participation				
On the basis of the analysis, the section of Policy PR12a that refers to the phasing of the allocated sites over successive 5 year periods should be deleted. Furthermore, paragraph 5 of the policy should be delete. The meaning of the paragraph is unclear nor is it explained how it will contribute to the objective of achieving the prompt delivery of the allocated sites. Instead the Council can rely on the range of measures contained in Policy PR13 in order to ensure an adequate supply of housing land is achieved and maintained throughout the plan period.					On behalf of the consortium, given the significance of their land interests, would wish to participate in the oral examination.

2001

Comments

The proposed approach that seeks a commencement of the five year supply for Oxford's needs at 2021 is not supported by the NPPF and is inconsistent with Government guidance. CDC's specific housing need and proportion of Oxford unmet need are both to be met within Cherwell administrative boundary and should be combined and planned comprehensively through a single approach over the Plan period. As such, the overall housing target for Cherwell should also be reviewed to ensure it is up to date and is "drawn up over an appropriate time scale, preferably a 15- year time horizon" (para 157 NPPF). Consequently, the 4,400 dwellings, should be included as part of the adopted CDC requirement at the earliest opportunity, the demand for housing being current and significant. The commitment to prepare a partial review of the Local Plan (April 2018), reinforces the necessity for CDC to progress with a strategy that delivers Plan + Oxford unmet need requirement from the point of the Local Pan Review (from 2018 onwards). This also reinforces the need for a range of sites that can help deliver supply in the short-term. There is no reference in Government Policy nor Guidance that the phased release of strategic sites is a mechanism through which a 5-year housing land supply can be maintained. It is critical that the supply provides a range that offers choice and competition in the market. Indeed, if a strategy were to be pursued that sought a mix of sites from various sustainable locations across the District, such as Banbury, choice and competition would be embedded in that strategy.

Changes Sought

In order to make the Plan sound the wording at para 1 "A separate five-year housing land supply will be maintained for meeting Oxford's needs" should be deleted. Also, the second paragraph should be amended to read "At least 1700 homes will be delivered for Oxford in the period up to 2026 & the remaining homes will be delivered by 2031. The policy should also include text that confirms that CDC proportion of Oxford's unmet needs will be considered as part of the calculation of five-year land supply from the time that the Partial Review plan in adopted.

Comments

Policy PR12a sets out that "a separate five-year housing land supply will be maintained for meeting Oxford's needs". Disaggregating five-year land supply calculations for Cherwell is not sound and the Partial Review is not positively prepared or consistent with NP in this regard. It is incumbent upon CDC to fully meet housing supply of Cherwell's needs and Oxford's unmet need in a single requirement figure to ensure sufficient competition and supply in the market place to deliver requirements. NP and guidance does not refer to disaggregating five-year housing calculations. Additionally, Oxford and Cherwell are part of the same HMA as set out in the Oxfordshire SHMA 2014 and share close economic, functional and spatial relationships. It is relevant that this matter has already been considered in the West Oxfordshire Local Plan Examination. The Inspector's preliminary findings (December 2015) found that Oxford's unmet need (if identified) would need to be taken into account in five-year land calculation (paragraph 7.6). Moreover, the issue was specifically addressed in later sessions by the Inspector (Matter 16) when he asked whether it is appropriate for the plan to have separate housing requirement figures for West Oxfordshire's own housing needs and for the unmet needs of Oxford City or whether should be a single figure. Whilst WODC maintained that it was important to identify the separate elements of need for delivery monitoring purposes, they agreed in their statement: "The Council's five-year supply position will be calculated on the basis of one composite annual requirement." (Matter 16 paragraph 9). It is also suggested that Oxford's needs should be met at the earliest possible opportunity and certainly from adoption of the Partial Review. The needs are not newly arising but date back to 2011. New market and affordable homes are required in the housing market area now. This does not prevent the identified sites from coming forward from 2021 onwards but ensures that overall housing market area needs are being met at the earliest opportunity. There are significant affordability issues in Cherwell and Oxford which need to be addressed without delay. Hallam does not object however to the phasing of the additional numbers up to 2026 and beyond 2026.

Changes Sought

Delete "A separate five-year housing land supply will be maintained for meeting Oxford's needs". Amend second paragraph to read "At least 1700 homes will be delivered for Oxford in the period upto 2026 and the remaining homes will be delivered by 2031. Oxfords needs will be taken into account in the calculation of five-year land supply from adoption of the Partial Review."

Reasons for Participation

Comments

Policy PR12a proposes that the five year supply of housing land to meet Oxford's needs will be maintained separately from the five year supply for Cherwell's own needs. The Policy also proposes a staged housing requirement against which the five year supply will be calculated: 1700 homes for the period 2021 to 2026 and 2700 homes for the period 2026 to 2031. * Gladman objects strongly to the identification of a specific housing land supply for Oxford's unmet needs with a separate five year supply calculation. The NPPF states that housing needs must be met in full across the housing market area and for the purposes of Cherwell, the housing market area is Oxfordshire. Therefore, any separation of the five year housing land supply calculation would be contrary to the NPPF and therefore unsound. * Gladman also objects to the proposed staged housing requirement which in effect reflects the points made earlier in this submission regarding the long lead in times for large strategic housing sites. The allocation of a wide range of sizes of site in a variety of sustainable settlements across the District would enable the delivery of the badly needed new houses more quickly. This would accord with the objectives of the NPPF and the Government White Paper 'Fixing Our Broken Housing Market'. * Gladman also has concerns that the Plan provides for the start date of provision of the homes in 2021. As referred to above, the need to address Oxford's unmet need is urgent; the SHMA period began in 2011 and already six years of the need being unmet has already elapsed. The Plan should therefore deliver Oxford's unmet need as soon as possible on a wide range of sites rather than on single large locations; delivery prior to 2021 can only be a benefit. The evidence draws on the advice of the NPPF and the NPPG & SHMA.

Comments

The scale of housing being planned for through the LPPR as Cherwell's contribution to meeting Oxford's unmet housing needs is supported. The proposed 4,400 homes figure reflects the apportionment of Oxford's unmet need between the councils agreed by the Growth Board in September 2016 and which is set out in the Growth Board Memorandum of Co-operation and we also support the proposal to ensure delivery of these homes by 2031. The proposed 2021 start date recognises the likely complexity of the issues needing to be addressed and allows a reasonable lead time for developments to come forward. However, OCC has no objection in principle to earlier housing delivery, provided the strategic infrastructure required to support the new housing exists or can be delivered matched to the accelerated housing.

Proposed Submission Plan - Policy PR12a - Delivering Sites and maintaining Housing Supply

PR-C-0833	10/10/2017	Judith	Onuh	Thakeham Homes Ltd		Y		
-----------	------------	--------	------	--------------------	--	---	--	--

Comments

Whilst acknowledging that this is a focused plan, it is noted that the Proposed Submission Plan is heavily reliant on large scale sites to meet Oxford's unmet need. The projected delivery for each of the site allocations ranges from 230 units (PR7a - Land South East of Kidlington) to 1,950 units (PR8 – Land East of the A44). Each site is supported by a specific planning policy which sets out the necessary infrastructure improvements. The Local Transport Plan (Appendix 4) includes a list of potential transport projects but does not set specific delivery times and does not provide an estimate of costs or identify the funding available for the projects. It therefore appears that there is a great deal of uncertainty regarding how these projects will be delivered. In order to address this the Proposed Submission Plan includes a commitment at Policy PR11 (Infrastructure Delivery) to work with partners and to prepare a Development Contributions Supplementary Planning Document (SPD). Policy PR13 (Monitoring and Securing Delivery) also includes a commitment to monitor supply and resolve potential obstacles (including infrastructure) to supply. Whilst these positive steps to achieving the necessary infrastructure are welcomed, it is considered that greater certainty is required at this stage. This is particularly pertinent as the Proposed Submission Plan is so heavily reliant on such large scale site allocations. Without greater certainty the necessary infrastructure improvements are unlikely to be delivered in a timely fashion. This, combined with the size of the proposed site allocations, means that it is highly likely that there will be significant delays before the sites start to deliver the necessary housing. This will cause a lag in the delivery of new housing until later in the plan period. Policy PR12a (Delivering Sites and Maintaining Housing Supply) and Policy 12b (Sites Not Allocated in the Partial Review) sets out a framework for addressing potential shortfall in supply. The supporting text for these two policies paragraph 6.165) indicates that a requirement of 1,700 homes has been identified for the period 2021-2026. The Proposed Submission Plan aims to phase the delivery of two sites (PR7a and PR10) so that they can be brought forward earlier in the plan period if an adequate supply is not maintained, and states: "Land South East of Kidlington (Policy PR7a – 230 homes) and Land South East of Woodstock (Policy PR10 – 410 homes) will only be permitted to commence development before 1 April 2026 if the calculation of the five year land supply over the period 2021 to 2026 falls below five years." Delivery of these sites is therefore restricted until 2026 unless supply falls below five years. However, it is noted that the proposed site allocations do not include a buffer above the 4,400 dwelling requirement. They are therefore reliant on 100% delivery and sites PR7a and PR10 are required in any event. Given the potential delays associated with the necessary infrastructure improvements it seems unnecessary to impose a phased approach by restricting the time in which the above two sites can be delivered. CDC continue at paragraph 5.166 to state that "the Council cannot control the rate at which houses are delivered". In order to address this Policy PR12b lists a set of criteria for bringing forward unallocated sites when necessary. The first criterion states that CDC need to take a formal decision that additional land is required to meet supply. As CDC are content that the Proposed Submission Plan allocates sufficient land for development such a decision is unlikely to be taken until later in the plan period. This policy will therefore not allow more small/medium scale sites to come forward in the short term. There is therefore likely to be a period where supply is insufficient for meeting need before the large scale sites start to deliver.

Changes Sought

In order to address this matter, it is recommended that the first criterion is amended to ensure that the trigger for consideration of unallocated sites is evidence based rather than following a decision of CDC. We therefore suggest amending the criterion as follows: "1. It can be demonstrated that there is a lack of a sufficient five year housing land supply" This approach will ensure that the trigger is based on up to date evidence rather than a more reactive decision made at a fixed point in time, thereby achieving a far greater level of flexibility. In addition, it is recommended that the Policy makes provision for reserve sites either as part of the Proposed Submission Plan. The provision of additional small/medium scale sites will increase flexibility and the speed at which the Proposed Submission Plan can meet its requirements. This combined with the suggested wording above will ensure that any delay caused as the result of the large scale allocations/infrastructure improvements can be addressed in a positive and proactive manner as required by paragraph 182 of the NPPF.

Overall, the Tripartite supports the intention to expedite the delivery of housing to meet Oxford's pressing needs. This is in line with the Government's Housing White Paper – Fixing our broken housing market (2017), which proposes to encourage local authorities to be more pro-active, with a clear and consistent assessment of new housing delivery with a new Housing Delivery Test as well as better information on build out rates required from developers on a site by site basis to improve transparency. However, five-year housing land supply is a rather crude tool for the phasing of delivery and provisions are already made within other policies in the Plan to monitor and maintain housing supply. It is therefore unnecessary. Hence, the fifth paragraph causes the Tripartite concern as it fails to have regard to the arrangements in the key strategic development site allocation policies, such as Policy PR8, which make provision for the application(s) to be supported by a Delivery Plan demonstrating how the implementation and phasing of the development shall be secured comprehensively and how individual development parcels, including the provision of supporting infrastructure, will be delivered. The Delivery Plan will also include a start date for development, demonstration of how the development would be completed by 2031 and a programme showing how a five-year supply of housing (for the site) will be maintained year on year. The Tripartite considers that such Plans should be realistic, accounting for and responding to lead-in times and sensible build rates, including a good mix of house types and sizes, and then being pragmatic about how quickly they will be delivered so that supply is maintained throughout the Plan period. It should be recognised that no one site is the same and that a reasonable and realistic approach to evidence and justification will be required.

Changes Sought

Add to fifth paragraph: This will be achieved via a Delivery Plan submitted at the application stage on the strategic development sites demonstrating how the implementation and phasing of the development shall be secured comprehensively and how individual development parcels, including the provision of supporting infrastructure, will be delivered. The Delivery Plan will also include a start date for development, demonstration of how the development would be completed by 2031 and a programme showing how a five-year supply of housing (for the site) will be maintained year on year taking into account infrastructure requirements, lead-in times and sensible build rates, including a good mix of house types and size.

Reasons for Participation

The land owned and controlled by the Tripartite comprises some 86% of the largest draft allocation within the Plan and as such, occupies a unique and vitally important role in meeting Oxford's Unmet Housing Needs. As such, the Tripartite consider it is essential that it is present [and/or represented] and participates at the Examination in order to assist the Inspector by responding to any queries that may arise and supporting the assessment of the soundness of the Plan.

Proposed Submission Plan - Policy PR12a - Delivering Sites and maintaining Housing Supply

PR-C-1399	10/10/2017	Ms Jennifer	Mitter	Lichfields on behalf of The Church Commissioners for England (CCE)	N		N	Y

Comments

The purpose of the Local Plan Review is to meet Oxford's unmet identified housing need and therefore ensuring the timely delivery of this additional level of housing need is paramount which is clear from the time limited nature of the review. In this regard, CCE has significant concerns regarding the Council's pursuit of growth at sites PR7, PR8, PR9 and PR10 which will lead to a substantial overconcentration of development (circa 3,220 dwellings) within a relatively small market area which will have significant implications on delivery. The strategy as proposed will see the requirement for an additional 4,400 dwellings entirely provided within the relatively confined south Cherwell / north Oxford area. Collectively, these sites are expected to start delivering units by 2021 at an average rate of 440 units per annum. It's also notable that Policy 12a requires each site to be supported by a 'whole site' development brief. Again, this will have implications on the timescales for housing delivery. The proposed rate of delivery is high, particularly when considered against the existing District wide commitment under the Local Plan to deliver circa 1,142 dwellings per annum. Between 2011 and 2016, a total of 3,477 dwellings were completed (685 dwellings per annum). Therefore the expectation to deliver circa 1,730 units per year between 2021 and 2031 is ambitious particularly considering the most completions ever recorded in the District within a single year was 1,425. The dispersal of the housing requirement to include other sustainable settlements, such as Islip, will greatly assist with housing delivery, as well as ease congestion in already troubled areas. As set out in our representations to Policy PR4a, CCE has a significant land holding in Islip entirely within its sole ownership. This site, as demonstrated through representations submitted in January 2017, can deliver development quickly at varying scales from circa 100 units on a single discreet parcel to a new settlement of circa 1,700 units. Soundness - The evidence base prepared to support Policy PR12a is not sufficiently robust to justify the strategy being progressed in the draft Local Plan, as it will provide an over concentration of housing within a relatively small market area with known congestion issues. The plan has failed to consider the reasonable alternatives, is not justified and is unsound. The draft Plan is not Effective and is unsound.

Changes Sought

The spatial strategy for growth as proposed is flawed with significant gaps in the evidence base. There is specific concern regarding CDC's focus on development along the A44 corridor and Kidlington. The requirement to deliver circa 1,730 dwellings per annum across the district (440/annum in the north Oxford area) between 2021-2031 warrants the Council giving further consideration to the need to disperse development to other settlements capable of delivering sustainable growth, such as Islip. Further distribution of the required levels of growth will assist in meeting the very ambitious housing delivery targets while ensuring that development comes forward at a sustainable rate within this area of Cherwell. Land at Islip should be released from the Green Belt and allocated for housing. More detailed consideration should be given to the release of Green Belt land around Islip which could potentially accommodate circa 1,700 dwellings. As demonstrated elsewhere in the representations by CCE, the release of this land would not harm the five purposes of including land within the Green Belt and would greatly assist in distributing the provision of new homes across the District, thereby reducing the impact on infrastructure in only one confined area. New development at this location would be sustainable and would support the existing local community. It has been demonstrated that there are no overriding physical constraints, in terms of highway impact, flooding and ecology, to the development of this land.

Reasons for Participation

Due to the complexity of the matters discussed in relation to PR12

Comments

While we object to any release of land in the Green Belt including the allocated sites, we have a further concern relating to the possible overall location of land for housing in the event that any or all of the allocated sites are confirmed for development in any adopted plan. PR6a, 6b, 7a, and 8, the land areas allocated specifically for residential development (i.e. not the total site areas) are approximately 50% higher than would be necessary to accommodate the stated number of houses at the net densities specified. For example the largest site (PR8) for 1950 houses at 45dpha net should require 43.3ha. Whereas the allocation is for 66ha, over 50%larger. The definition of net density is not specified in the plan though it usually includes access roads, parking, incidental open space and play areas. There are separate allocations for schools and a local centre, so it appears that the areas allocated specifically for residential development are significantly too large. Given the desirability of this land to developers, there is a clear risk that permission could be sought for significantly higher numbers of dwellings over and above the intended provision, resulting in even greater environmental harm and pressure on infrastructure. We are therefore concerned about the provision in PR12a (para 7) that should more than 4400 houses be built this will be taken into account in meeting Cherwell's own need, which would appear to be an incentive to the Council to approve higher numbers than set out in this plan."

Changes Sought

All allocations should be withdrawn because they are premature (need not yet established) and because alternatives to Green Belt development exist. However if some or all of the allocations are confirmed (which we completely oppose) then the plan should be amended to ensure that no more than the specified numbers of houses will be permitted (e.g. by reducing site areas or other stipulations).

Reasons for Participation

We (Kidlington Development Watch – KDW) consider this is necessary because of: our extensive involvement with the consultations at all stages of the Cherwell Local Plan to date; the considerable work we have undertaken to publicise the consultation ourselves; of the feedback we have received from Kidlington residents; and, the large numbers of them who have responded as a result of our efforts. KDW is a voluntary organisation run by Kidlington residents with experience and interest in planning issues. We believe that effective, informed public participation in planning consultations is vital to democratic policy making. We publicise consultations that directly affect Kidlington and offer advice on how people can best make their views known. In relation to this and the previous options consultation we printed and distributed leaflets, put up posters, ran a stall on many Saturday markets and at other events, participated in public and parish council meetings, provided information on our website and responded to requests for information from Kidlington residents. As a result, we have gained a very good understanding of the views of Kidlington residents, a large number of whom have made representations because of our activities. KDW's representations therefore reflect the views of much of the Kidlington community."

Proposed Submission Plan - Policy PR12a - Delivering Sites and maintaining Housing Supply

Comments

If the aim is to provide 1,180 houses in the area south of Kidlington, the least damaging locations would be at Stratfield Farm (site 49) and south of Gosford (sites 178, and HELAA 243 incidentally, a new site not identified at the Issues and Options stage). The two assessed sites have existing small allocations, but the theoretical capacity is far higher. The Initial Sustainability Appraisal (which excluded site 243) set these at 523 and 1,388 respectively. Allowing 3.2 hectares for a new primary school, probably best sited at the Gosford sites, and the 0.7 hectares identified for a cemetery extension in the Submission draft PR7a no. 3, the total net combined land available would be 34.26 + approximately 5 hectares of previously unidentified site HELAA 243. Adding in the existing allocation of 220 + 120, the total number of dwellings required to replace those not developed south of Oxford Parkway becomes 1,520. This represents an overall net density of 38.7 dph (1,520/39.26), which is lower than the 40 dph proposed in the submission draft in PR6a, less than the 45 dph proposed in Policy PR8 and less wasteful of Green Belt land than the 25 dph proposed in policy PR6b, or, to put the figures in greater perspective, withdrawing 60 hectares of land from Green Belt protection (Policy 6A, 6B) contributes 1,180 houses at a net density of just under 20dph. Detailed comments are provided in relation to the selection of alternative sites PR178 and PR49 and the Kidlington Masterplan.

Changes Sought

PR3, 6a, 6b - Delete references to PR6a and 6b in PR3. Rewrite all references to sites in Kidlington gap, deleting allocations, setting out playing field allocation in land east of A4165. Allow mixed use on land identified within Policy 3c playing fields, residential allocation of 140 written as a new policy. PR7 a and PR7b - Increase allocation to 1,520 between these sites. Retain a small buffer area to the west of Stratfield Farm. Remove reference to playing fields. PR12a - Rewrite to avoid incentive for future allocations beyond those allocated in the plan, or delete.

Reasons for Participation

Has spoken as a platform speaker at three public meetings in Kidlington and Gosford. Made a substantial representation at the Issues and Options stage. As a former parish councillor, has represented Kidlington Parish Council at the North Oxford Area Action Plan examination in public, and likewise was invited to the Examination in Public of the Local Plan. Has an MSc in Transport Planning, so part of representation covers that area. Also offers a distinctive perspective as a local resident, who agrees with the principle of a Green Belt review, but does not support the current planned site allocation. Has no interest in promoting a particular site, but only have some sympathy with those who would wish to preserve the Green Belt intact. Believe views represent many in Kidlington who recognise the need for local housing, but see these plans as strategically unacceptable. Representation contains primary research evidence which could be presented.

Not consistent with national policy. The allocations in Policies PR3, PR6A, PA6B, PR8, and PR12a by virtue of their location, scale, and likelihood to lead to future harm to the Green Belt, fail to demonstrate the 'very special circumstances' required to offset the protection against inappropriate development in the Green Belt, and the coalescence of settlements.

Comments

The Policy sets out the Council's proposed approach in respect of managing the supply of housing to meet the needs of Oxford City. A separate five year supply is proposed with the City's need ring-fenced. As agreed by the Oxfordshire Growth Board the requirement to start to meet the needs of Oxford City will not commence until 1st April 2021. Whilst we consider that the proposed approach to ring-fencing the Oxford City requirement to be appropriate we do have concerns regarding the soundness of artificially restricting the delivery of sites. The unmet needs of Oxford City is a long standing issue which has significantly restricted the ability for sufficient housing, both market and affordable, to be delivered. The work of the Growth Board and the commitment of the majority of the Oxfordshire authorities to meeting these needs is commended and is a significant positive step forward in addressing this issue. Whilst the Growth Board did assume a start date of 2021 for the commencement of development following adoption of the relevant Local Plan reviews etc. it did highlight that: "This assumption does not preclude earlier delivery, but does recognise the complexity of the issues being considered and consequently has sought to factor in reasonable lead times to enable options to come forward and to be fully considered through the Local Plan process." As such it is considered that Cherwell's proposed approach of seeking to prevent the delivery of homes prior to 2021 is unsound it that it is not justified, effective or consistent with national policy. The proposed approach is clearly contrary to the Government's ambition of boosting significantly the supply of housing and seeks to further delay the delivery of much needed new homes to meet the needs of Oxford City which has already been restricted for a number of years. As such, the Policy should be amended to allow for the early delivery of sites if they are able to do so. This amendment will ensure the Plan has sufficient flexibility to adapt should some of the proposed allocations not deliver as anticipated or should be unmet needs of Oxford City which Cherwell needs to meet increases – circumstances which are recognised by the Council themselves in Policies PR12a and PR12b. In addition to seeking to restrict the delivery of all of the sites to meet the needs of Oxford City until 2021, the Policy seeks to further restrict the delivery of the land south east of Kidlington (Policy PR7a – 230 homes) and land south east of Woodstock (Policy PR10 – 410 homes) until 2026. As noted above, the agreement to an assumed start date of 2021 was to reflect the lead in times for some of the proposed developments and does not preclude the earlier delivery of sites. Clearly some of the allocations proposed through the Partial Review Local Plan are significant in scale (up to 1,950 homes) and will have longer lead-in times to delivery. Where sites are not subject to significant lead-in times, their early delivery should not be restricted if they are able to do so. In particular, there are no requirements or restrictions which would prevent the early delivery of the client's portion of the land south east of Kidlington allocation. As such, the phasing restriction on the delivery of this site should be removed. Without this amendment it is considered that the Plan as currently drafted is unsound.

Changes Sought

The Policy should be amended to allow for the early delivery of sites if they are able to do so. This amendment will ensure the Plan has sufficient flexibility to adapt should some of the proposed allocations not deliver as anticipated or should be unmet needs of Oxford City which Cherwell needs to meet increases – circumstances which are recognised by the Council themselves in Policies PR12a and PR12b.

Comments

CDC's Partial Review Trajectory allows for a considerable amount of time for scheme and site preparation (2018/19 to 2021). Sites need to be brought forward sooner to meet Oxford's historic unmet need. The delivery rates for the first year, 2021/22 are low for all housing sites allocated as part of the Partial Review, particularly compared to the projected uplift in the second of year 2022/23. As set out in the Housing Trajectory, there is an overreliance on housing delivery at Land East of the A44, Begbroke (Policy PR8). Within the first five-year supply period (2021/22 to 2025/26) CDC expects the site to deliver a total of 825 homes. The trajectory forecasts high completion rates that increases from 50 homes per annum in the first year (2021/2022) up to 225 homes per annum for the final three years (2023/24 to 2026/27). This development programme is ambitious. CDC's Partial Review housing trajectory is not considered to be robust or realistic. If delivery is delayed on a particular site, the Council must be required to fully address the unmet need of Oxford City within the District as a whole; bearing in mind Oxfordshire is the housing market area. As already stated, there are no practical benefits from having a separate five-year housing supply, and the risk will be one of failure to address Oxford City's unmet need if that is limited to specific sites.

Changes Sought

Reasons for Participation

Our objections in part relate to the proposed growth strategy to address Oxford City's unmet need, which we consider to be unsustainable and inconsistent with national policy. This is contrary to the adopted Growth Strategy set out in the Cherwell Local Plan 2011-2031 (Part 1), which focuses new development at key settlements, as identified in Cherwell's settlement hierarchy. The Council has not discharged its duty to demonstrate exceptional circumstances to release the identified sites from the Green Belt, pursuant to paragraph 82 of the National Planning Policy Framework. Further, there is insufficient evidence to suggest that opportunities to increase capacity at existing allocated housing sites have been robustly tested. Finally, there should be a single housing requirement for the Cherwell Local Plan. There is no justification for a separate figure to be applied to meet Oxford City's unmet need, as is currently proposed.

Comments

A2D object to CDC's approach under Policy PR12a of having a 'standalone' five-year housing land supply requirement for Oxford's needs. There should be a single housing requirement for the plan. There is no justification for a separate figure to be applied. If delivery is delayed on a particular site, the Council must be required to fully address the unmet need of Oxford City within the District as a whole; bearing in mind Oxfordshire is the housing market area. There are no practical benefits from a separate requirement for unmet need and the risk will be one of failure to address unmet need if that is limited to specific sites for the purposes of 5-year supply of housing. With the Oxfordshire Growth Board's (OGB) acceptance of significant unmet need associated with the City, it is essential that it is addressed at the earliest opportunity – this will occur if included within the District's overall target rather than as a separate requirement.

Comments

Cherwell's approach to housing delivery, including with reference to the need to demonstrate a five-year housing land supply at all times in the plan period, seeks to establish (through policy) the year 2021 as a start date for the delivery (at the earliest) of homes needed. The justification is that this would have regard to the time needed to complete the Local Plan process and for developers to obtain planning permissions. The length of this lead-in period may be realistic, but national planning policy seeks to remove barriers to delivery and provides no support to an artificial policy constraint that will hold back sustainable development whilst the local plan process is concluded. Development that is sustainable should go ahead without delay. It is unreasonable and unjustifiable to put a date restriction on delivery. The need for homes is immediate and significant. The delivery of these homes should commence at the earliest opportunity. The proposed phased land release, which is said to assist with maintaining a 5 yearsupply and specifically seeks to delay the delivery of Land South East of Woodstock until 2026 (unless the calculation of the five year land supply over the period 2021-2026 falls below five years) is unsound, including for the following reasons: o The approach is not justified. It is not necessary to address land supply in this way – in accordance with National Planning Policy Guidance any overprovision in housing from the start of the plan period will continue to count towards the five year land supply. It is not discounted and Cherwell should not be fearful of overprovision. Hence securing earlier delivery will positively assist the Council in maintaining a rolling five-year housing land supply and should be encouraged. O The approach is not positive and could be ineffective. It provides an unjustified barrier to delivery. It would frustrate the ability to deliver suitable sites and introduce uncertainty as to when to submit planning applications (or not), not least given the uncertainties regarding lead in periods. O Whilst it is acknowledged that development is to be planned, ultimately Cherwell cannot and should not seek to control the rate of delivery. This would be ineffective and there is no substantive evidence to the contrary. O There is no reason to phase the release of this site with reference to infrastructure or employment provision. O The approach is inconsistent with national policy, specifically NPPF 47, which requires an illustrative trajectory but no mechanism to control, and in this case slow-down, the rate of delivery of much needed housing. Sites outside of the Green Belt, such as Land South East of Woodstock which is deliverable and developable now, would have the ability to be progressed through the planning application process in parallel with the Local Plan process, allowing them to come forward earlier than the timeline set out in the draft Plan. They should be prioritised. Such an approach would assist in the overall effectiveness of the plan and would be a reasonable and justified approach to achieving a boost in housing supply through sustainable development.

Changes Sought

The Council will manage the supply of housing land for the purpose of constructing 4,400 homes to meet Oxford's needs. A separate five-year housing land supply will be maintained for meeting Oxford's needs and delivered by 2031. For the period 2026-2031, the Council will maintain a land supply equivalent to the number of remaining years of that period taking into account any delivery surplus or shortfall and a 5% additional requirement. If there has been a record of persistent under delivery of housing in meeting Oxford's needs, the Council will increase the buffer to 20%. Should planning permission be granted for housing that will be delivered beyond 2031 and which results in the requisite 4,400 homes for Oxford being exceeded, this will be taken into account in meeting Cherwell's housing need in the next Local Plan review. Should the 4400 homes not be fully delivered by 2031, they will continue to be developed but will not contribute in meeting Cherwell's housing need in the next Local Plan review.

Reasons for Participation

To elaborate on the points raised should it be deemed necessary.

"Objection to Policy PR12a on the basis that it meets none of the soundness criteria stated at NPPF paragraph 182. There is no explanation as to why the sites at South East of Kidlington or South East of Woodstock have been identified as having delivery deferred to the final five years of the plan period. Whilst the explanatory text to the policy notes that larger strategic sites may have a longer lead in period to their delivery, the policy fails to recognise that in its drafting. These representations promote the development of land to the South East of Kidlington for 430 dwellings, but even at the current policy drafting level of 230 dwellings, delivery within 5 years, where there is substantial ground works and site infrastructure to be in place, would be challenging. Moreover, a large portion of the site at South East Kidlington (whether that be the proposed plan allocation or as per our client's vision document proposals) is allocated for the significant delivery of formal sports provision. As the policy notes, this provision is to address the needs of the wider community not just meeting the needs to the development itself. The clear implication of the timeframes included within Policy 12a, therefore, is that this current deficiency in sports pitch provision would not be addressed until the end of the plan period. The Local Plan Review fails to identify how any harm would arise if Oxford's unmet need were to be met earlier than 2026. Indeed, if this were to happen then the Council would have successfully met the NPPF requirements noted above. On this basis, therefore, and given that by the plans adoption there will at best be 13 years left of the plan period, the need for any phasing or restriction of sites to deliver the Oxford unmet need is considered unnecessary. The policy is unsound in that it is not positively prepared (as it delays meeting the unmet requirements from the neighbouring authority). It is not justified as it is not the most appropriate strategy for meeting Oxford unmet need. It is not effective as it delays commencement of development on large scale sites to a point in the plan period where they may not be capable of delivery before the plan end date and it is not consistent with national policy, specifically with NPPF paragraphs 47 and 179."

Comments

The calculation of a separate five year housing land supply for the Oxford unmet need is considered to be unrealistic & ineffective in managing the supply of housing. The difficulty of separately monitoring the five year housing land supply of the Oxford unmet need to the rest of Cherwell's housing requirement relates to the extent to which Cherwell District Council (CDC) can ensure the delivery of this unmet need in accordance with Paragraph 47 of the Framework. In circumstances where the supply falls to below a five year housing requirement in delivering the unmet need, the question arises as to what remedies are available to CDC to rectify this deficiency. As the unmet need would be expected to be delivered from a few specific allocated sites in an area heavily influenced by Green Belt it would therefore be very difficult to demonstrate & maintain a rolling five year supply if issues were experienced with any of the proposed allocations designated to meet Oxford's unmet need. We consider that the only appropriate way to deal with this matter is that whilst there is a specified unmet need & specified site allocations within the emerging Partial Review to meet that unmet need, in the event that the specified supply does not come forward, the remedy in meeting that unmet need must extend to the whole of the administrative area for Cherwell District. This would give the flexibility needed to ensure that the unmet need can be delivered. Furthermore, the Council have imposed an artificial constraint on housing supply as the first 5 year period for monitoring & delivery is set at 2021-2026. However, it is the case that Oxford's need exist now & there is therefore no reason to impose this artificial constraint on the market until 2021. The delay appears to have only been caused by the location & nature of the site's that the Council has chosen to allocate, which are of a type that will take some time to deliver housing. Evidence contained within the Council's Housing & Economic Land Availability Assessment (HELAA) identifies that there has been a significant under delivery of housing in the District since 2011. We consider that the Plan should seek to rectify this under delivery as soon as possible & that this requires the allocation of a wide range of sites throughout the District to meet both the requirement for Cherwell & the unmet need from Oxford. The Plan should not seek to implement phasing mechanisms to bringing sites forward for specific needs when sites are readily available & deliverable now to meet the identified needs. The inclusion of Policy PR12b 'Sites Not Allocated in the Partial Review' is therefore considered to be unnecessary. Representation includes 3 x Appendices: 1: Five year housing land supply report, August 2017, Turley, 2: Site location plan, 3: Illustrative masterplan.

Objection to Policy PR12 This Policy is a ploy to keep open plans for other Green Belt land that have not been unspecified in this plan. We support CDC rejection of sites around Kidlington that were initially identified for possible development (for example: PR14, PR17, PR27 and PR125). We agree they are not suitable for development and although strong representations will undoubtedly be made by developers/landowners all challenges to modify this decision should be strongly resisted. This, we see, is an underhand way of slipping in developments that have been previously rejected. We are most grateful for the opportunity to offer our objections to these proposals and hope that you will take them into consideration when you make your deliberations.

Proposed Submission Plan - Policy PR12a - Delivering Sites and maintaining Housing Supply

PR-C-1500	09/10/2017	Mrs Valerie	Russell	Bodicote Parish Council			N	N
------------------	------------	-------------	---------	-------------------------	--	--	---	---

4703

Comments

Bodicote Parish Council has obvious concerns with the para. 5.166, which states that "If a five year supply cannot be raised for reasons outside the Council's control, planning applications for unplanned development might be submitted. This para. Acknowledges that the Council cannot force developers to adhere to house building trajectories. Cherwell District Council's 'Annual Monitoring Report' has already shown us that house building targets have been down on estimated numbers. In reality if the Council has no control over housing delivery rates then they have no real control over the developers, who will of course state that they can maintain a five year housing supply to get the applications through, but then could negate through reserved matters. If developers do not deliver the requirement of 1700 homes within the first period 2021-2026 there is a real concern that many of the sites that were put forward for development and dismissed as areas of interest WILL (not might) be targeted as additional sites for Oxford's Unmet Housing Need.

Changes Sought

Policy PR12a states that "Permission will only granted for any of the allocated sites if it can be demonstrated at application stage that they will deliver a continuous five year housing land supply on a site specific basis ..." " In the interest of securing delivery, planning conditions will be used to place time restrictions on the unimplemented "life" of planning permissions." This Policy must be strictly enforced.

Incorrect consultation form used. Comments relate to proposed submission plan. Agree with phasing of land release, but this should start with strategic sites nearest Oxford and in Kidlington (PR6a, PR6c, PR7a and PR7b) so as to delay the impact on Yarnton so that the impact of any reduction in the numbers of dwellings required can be concentrated there.

Comments

Taylor Wimpey (TW) considers the Submission Plan is not sound as it is not "justified" or "consistent with national policy". This is because : 1. CDC acknowledge (Submission Plan Executive Summary para XV) that "under national policy Green Belt boundaries should only be altered in exceptional circumstances through the preparation or review of a Local Plan". The Submission Plan (para 5.17) sets out why CDC consider that exceptional circumstances exist for the release of these sites from the Green Belt & their allocation for residential development. TW contend that CDC have not thoroughly explored "all other reasonable options" &, where they have sought to do so, there are flaws in their evidence base (regarding their assessments of sustainability, transportation & alternative development locations). They have not demonstrated the "exceptional circumstances" required for the proposed release of the sites identified in Table 1 from the Green Belt; 2. CDC's approach is predicated on an assumption that "Oxford's Housing Needs" form a bespoke & identifiable source of housing need. This conflicts with the recognition in the Oxfordshire SHMA (2014) (para 9.2) that "the SHMA identifies an Oxford-focused Housing Market Area which extends across much of the County, reflecting the economic influence of the City. The county still remains the most appropriate geography for analysis of housing markets in terms of the 'best fit' of local authority boundaries to a functional housing market area." More recently the Inspectors Report into the Vale of White Horse Local Plan emphasised that (para 45) "it is not the role of, or possible for, the plan to prescribe where people live and work;" and; 3. CDC compound this assumption (Policy 12a) by seeking to pursue a "separate five year housing land supply . . . For meeting Oxford's needs." This, in conjunction with proposals not to support Sites Not Allocated in the Partial Review (policy PR12b) are not consistent with the NPPF's presumption in favour of sustainable development & risk substantially harming housing delivery in the District in the coming years. Scope of response (See Detailed 4 Section Report). This response amplifies TW's concerns regarding the soundness of the Submission Plan, & their view that their site at Bloxham (Site PR35) forms a "reasonable option" for residential development prior to the release of the proposed allocations from the Green Belt. Specifically • Section 2: Summarises the appropriateness of residential development on the TW site; (Section 2 encloses * Sustainability Analysis by Calibro, * Residential Potential of Site, * Assessment of site against constraints, * SHLAA Analysis) • Section 3: Summarises TW's concerns regarding the inadequacy of the evidence base, whilst emphasising their support for the level of residential development proposed. This underpins their contention that the Submission Plan does not establish "exceptional circumstances" for the proposed release of these sites from the Green Belt; • Section 4. Sets out TW's comments on emerging policies and the changes that they consider are necessary to make the plan sound.

Changes Sought

The Plan proposes that around 55 % of the housing proposed should be targeted within the Green Belt (GB). Para 3.26 "approximately 14 % of Cherwell lies within the Oxford GB". Thus CDC need to demonstrate "exceptional circumstances" as to why this housing cannot be located within non GB locations comprising 86 % of the District. Their fundamental concern with this draft policy is not appropriate when, as established above, the housing need originating in Cherwell and the unmet housing originating in Oxford CC cannot, in reality, be differentiated. Indeed the Foreword to the Submission Plan notes. "there are many interdependencies between Cherwell and Oxford". The Submission Plan suggests that the objective of maintaining a separate five year land supply of housing sites to specifically meet Oxford's unmet need within Cherwell is to 'ensure that the necessary housing supply will be maintained' (Executive Summary para xxi). TW consider that the opposite outcome will be achieved as any shortfall in supply originating within either area of demand will not engage the provisions of the NPPF (para 49) across Cherwell. In fact, in a situation where District wide housing supply is providing a five year land supply but the unmet housing need housing supply is not it is entirely unclear how the latter under supply would be remedied – beyond the provisions for a Partial Review of the Local Plan (Policy PR12b) – with which TW also have substantial concerns (see below). It is important that the Submission Plan does not constrain the "safety valve" such that under supply is capable of being accommodated through the provisions of the NPPF (paras 14 and 49). This is not reflected in the current policy approach and does not therefore reflect national planning policy.

Reasons for Participation

We consider it necessary to participate at the part of the Examination to amplify the concerns and points raised within the representations.

PR-C-1537	10/10/2017	Helen	Hartley	Nexus Planning on behalf of Hollins Strategic Land LLP	N	N	N	Y
------------------	------------	-------	---------	--	---	---	---	---

Comments

Delivering Sites and Maintaining Housing Supply. Hollins Strategic Land do not consider that the Council proposal to ring-fence the 4,400 dwellings of unmet need for Oxford separately from the needs for Cherwell for the purposes of five year housing land supply calculations is a sound approach. As set out above, the whole of Cherwell falls within the Oxfordshire HMA and the housing needs identified applies to the whole of the district. There is no distinction to be made between the part of the district closest to Oxford and the rest of the district and this approach is not supported by any national policy or guidance. It is inappropriate and unjustified for the Council to be seeking to create an artificial distinction between housing need for the part of the district closest to Oxford and the rest of the district.3. Furthermore, Policy PR12a is not considered consistent with national policy. Local planning authorities are required to maintain a 5 year supply explicitly in order to 'boost significantly the supply of housing' and 'provide a realistic prospect of achieving the planned supply' (paragraph 47 of the NPPF). The proposals to ring-fence the apportionment of Oxford's unmet need, and to delay the start of the 5 year monitoring period until 2021, will serve to prevent sustainable and deliverable sites elsewhere in the district from coming forward to contribute positively towards the district's housing requirement, thereby helping to address the acute need for housing within the HMA, in line with the aspirations of national policy.4. Moreover, the delay in the monitoring of progress until 2021 will give rise to a lack of certainty that the proposed numbers can be delivered and this will only exacerbate the need in future years of the Plan.5. The approach towards calculating five year supply set out in Policy PR12a is not 'justified', 'positively prepared' or 'consistent with national policy'. Accordingly, HSL argue this part of the Proposed Submission Plan is not sound in accordance with paragraph 182 of the NPPF.

Changes Sought

6. To be considered sound, the unmet need of 4,400 dwellings should be considered together with the housing requirement for the rest of the district in one calculation.

Reasons for Participation

For reasons set out in the comments submitted, HSL are of the view that the Local Plan (Part 1) Partial Review does not address matters which run to the heart of Soundness and request the opportunity to make oral representations to this effect.

Proposed Submission Plan - Policy PR12b - Sites Not Allocated in the Partial Review

PR-C-0237	15/09/2017	Karen	East	TMP Planning Ltd on behalf of Gosford and Water Eaton Parish Council	N	Y		
821	<p>Comments</p> <p>This policy is related to sites which are not allocated in the Partial review and sets out that such sites would only be permitted under certain circumstances. In respect of Gosford and Water Eaton Parish area such a policy does raise concerns. The plan as proposed allocates 3 significant sites for housing and removes 2 others from the Green Belt. These are Water Eaton Park and Ride and land between the A34 and PR6b which the Plan states in 5.39 is not suitable for residential development. The remaining open areas within the Parish are shown as Green Belt and in some cases also as protected public open spaces. On the face of it would seem unlikely that any application within the Parish (unless within the existing built up area) would be acceptable to the Council under this Policy. This is because remaining open land would be Green Belt (and in effect protected under Policy PR1 and Policy ESD14 of the Local Plan). However presumably the Council consider that such a proposal could come forward hence the need for the policy. In our view land identified as Green Belt following this review should remain Green Belt permanently and under no circumstances would further development on it be permitted. Note that there is an additional clause requiring consultation and support of the local community. It is unclear how local community support would be considered. It is difficult for us to believe that if the Council was faced with having to consider other sites to ensure that they meet the housing supply that local community objection would be sufficient to prevent development going ahead. In the interests of providing certainty it would seem more appropriate to have a robust Plan that is deliverable and ensures that remaining areas are fully protected rather than allowing exceptions such as provided for by this policy.</p> <p>Changes Sought</p> <p>This policy should not allow for any additional development or release of Green Belt land within the Parish.</p> <p>Reasons for Participation</p> <p>The Parish Council would wish to take part in order to explain the potential impact of the proposed development on local communities and why this should be better reflected in the draft vision.</p>							
PR-C-0305	25/09/2017	Martin	Small	Historic England	Y	Y	N	
911	<p>Comments</p> <p>Historic England welcomes the presumed intention behind requirements 5(h) and 5(i) of Policy PR12b for the application to be supported by a Heritage Impact Assessment which will "include measures to avoid or minimise conflict with the identified heritage assets within or adjacent to the site" and a desk-based archaeological investigation which may "then require predetermination evaluations and appropriate mitigation measures" as part of the positive strategy for conserving and enjoying, and clear strategy for enhancing, the historic environment as required by the National Planning Policy Framework. However, requirements 5(h) and 5(i), as drafted, only requires the Heritage Impact Assessment to include these measures and only notes that the archaeological investigation may require predetermination evaluations and appropriate mitigation measures respectively. It does not require these measures to be incorporated in or to influence the actual development scheme. The policy therefore provides inadequate protection for the Grade II listed Spring Hill, listed buildings adjacent to the site and potential archaeological remains on the site. As the Council will be aware, paragraph 126 of the National Planning Policy Framework requires local planning authorities to recognise that heritage assets are an "irreplaceable resource" and "conserve them in a manner appropriate to their significance". Paragraph 129 notes that the significance of a heritage asset can be affected by development affecting its setting. Historic England therefore considers that Policy PR9 as written does not conform with the Framework and thus is not sound.</p> <p>Changes Sought</p> <p>Requirement 5(h) of Policy PR12b should be reworded as follows: (h) The application shall be supported by a Heritage Impact Assessment which will identify measures to avoid or minimise conflict with the identified heritage assets within and adjacent to the site. These measures shall be incorporated or reflected, as appropriate, in any proposed development scheme." Requirement 5(i) should be reworded as follows: "(i) The application(s) shall be supported by a desk-based archaeological investigation which may then require predetermination evaluations and appropriate mitigation measures. The outcomes of the investigation and mitigation measures shall be incorporated or reflected, as appropriate, in any proposed development scheme".</p> <p>Reasons for Participation</p>							
PR-C-0526	06/10/2017	Sarah	Hamilton-Foyn	Pegasus Group On behalf of the Dorchester Group	Y	Y	N	Y
1288	<p>Comments</p> <p>Dorchester Group support the principle of Policy 12b i.e. that additional land may be needed however an objection is made to the wording as the "trigger" appears to be the Council taking a formal decision that additional land beyond that allocated is required to ensure the requisite housing supply. The trigger should be the housing land supply to meet Oxford's unmet need</p> <p>Changes Sought</p> <p>The Policy should be redrafted to amend Points 1 and 3 so that point 1 reads as follows and point 3 is deleted: Point 1. The Council is unable to demonstrate a five year land supply for the unmet needs of Oxford City. Point 3 should also be deleted as sites identified in a HELAA are not necessarily any more sustainable than sites which have not been assessed and included in the HELAA. Point 5 bullet points should be deleted as this is the Validation Check list for an application.</p> <p>Reasons for Participation</p> <p>Dorchester Group is concerned that the unmet needs assigned to Cherwell district are met in the most appropriate and effective locations and that the proposed locations delivery within the timescale.</p>							
PR-C-0559	09/10/2017	Keerpa	Patel	South Oxfordshire District Council				
1387	<p>Comments</p> <p>There are certain criteria for how planning applications will be treated on non-allocated sites to meet Oxford's unmet need. However, more clarity should be provided in respect of how will it be determined/justified as to whether or not a particular application should meet Oxford's unmet need or the district's requirement?</p> <p>Changes Sought</p> <p>PR12b - More clarity should be provided in respect of how will it be determined/justified as to whether or not a particular application should meet Oxford's unmet need or the district's requirement?</p> <p>Reasons for Participation</p>							
PR-C-0629	09/10/2017	Mrs Rosie	Lodwick		N		N	
1555	<p>Comments</p> <p>Written with particular reference to land east of the Moors (sites PR14 & PR27), and supports the omission of the sites from the Plan. Policy PR12b states that "Applications for planning permission for the development of sites ...that are not allocated in the Partial Review will not be supported unless..." I consider that this is not legally sound because it implies that development could still be allowed under certain circumstances. None of these include the "exceptional circumstances" necessary to remove GB designation. The site is unsuitable for development. It lies on the western edge of St. Mary's Conservation Area and would be detrimental to the setting of the church and historic houses nearby. The landscape is of particularly high value. The many footpaths are hugely popular used by many organisations and individuals from near and far. The GB should continue to safeguard this area. Development would generate traffic onto a narrow road that already has traffic calming measures. The land at the eastern end of PR14 is liable to flooding which does not show on Environment Agency maps, but there is photographic evidence. Development would be likely to result in an expansion of the current area of flooding.</p> <p>Changes Sought</p> <p>In order to make this Plan sound, it would need to add the requirement to PR12b for "exceptional circumstances" to exist for development in all the unallocated sites in the Green Belt.</p> <p>Reasons for Participation</p>							

Proposed Submission Plan - Policy PR12b - Sites Not Allocated in the Partial Review

PR-C-0784	10/10/2017	Nick	Freer	David Lock Associates on behalf of Gallagher Estates	Y	Y	N	N
2002	<p>Comments</p> <p>Policy PR12 enables alternative sites to come forward to meet the unmet need, if the sites currently proposed at Table 4 do not deliver at the projected rate to meet the housing requirement identified to be delivered over the Plan period. Whilst there is no objection to the principle of the policy & its intentions are understood, the NPPF makes clear the test to be taken in the absence of a 5 year housing land supply (paragraph 49) , & the primacy of this test above the local plan policy PR12b must be made explicit within the policy. The conditions referred to in policy PR12b that must apply for the Council to offer support to a site must only be relevant where the Council do have a 5 housing land supply. If the Council does not have a 5 year housing land supply then paragraph 49 of the NPPF applies, and not Policy PR12b. Detailed comments on criteria 2, 3 and 4 provided.</p> <p>Changes Sought</p> <p>In order to make the Plan sound the criteria for PR12b should be amended. Suggested change to criteria 2 and suggested deletions of criteria 3 and 4.</p> <p>Reasons for Participation</p>							
PR-C-0785	10/10/2017	Nick	Freer	David Lock Associates on behalf of Hallam Land Management			N	Y
2004	<p>Comments</p> <p>Policy PR12b is a contingency policy for bringing forward sites should it become apparent additional land is required (most likely due to slower than expected delivery of the allocated sites). It also sets out the tests such applications would need to meet. Hallam does not object to this policy in principle but it is necessary to make changes in order for it to be consistent with national policies. It should be noted this could only apply at a point where CDC still has at least five years' supply of housing land but it becomes apparent that this will no longer be the case unless other sites are brought forward. If there is already an absence of five-year supply then paragraph 49 of the NPPF would apply in any case. Policy PR12b also cross refers to Policy PR1 which, in turn, states that proposals should accord with Policies of the Partial Review. The Partial Review, however, mostly sets out site specific policies for delivering the 4,400 dwellings constituting Oxford's needs. It is suggested that criteria (2.) is amended to be specific about the tests to apply to such applications. The policy criteria should not cross refer specifically to the Housing & Economic Land Availability Assessment (HELAA). This is an evidence document, not a policy document, and could change over the life of the plan. It is not appropriate to include policy criteria in which applications are judged against the conclusions of a land assessment. It is important, however, that the Council can be satisfied that housing will be delivered on the additional sites brought forward. The wording should be revised to refer only to "the site can deliver housing in the plan period". Hallam agree with the importance of community consultation but the policy should place a greater emphasis on delivering sustainable development for local communities. There are also many ways in which effective engagement can occur and less emphasis should be placed on the methods of consultation. It should also be made clear the submission of a 'comprehensive development brief' is part of the application submitted and not an attempt to introduce an advanced informal approval process to select the sites preferred without going through any wider site selection process. This should also only be applied to sites of a specified size (at least 200 dwellings for example).</p> <p>Changes Sought</p> <p>Amend criterion (2.) of the Policy to read: "The proposed development should comply with the vision and objectives of the Partial Review and other material development plan policies; and achieve sustainable development". Amend criterion (3.) to read "The site can deliver housing in the plan period". Amend Criterion 4 to read "prior consultation has been undertaken with the local community and it is demonstrated that the proposed development will deliver economic, social or environmental benefit and is supported by the local community" Specify that a 'comprehensive development brief' is only necessary for schemes over 200 dwellings.</p> <p>Reasons for Participation</p> <p>To elaborate on these representations regarding Policies PR12a, PR12b and PR13 and the soundness of the plan as a whole.</p>							
PR-C-0791	10/10/2017	Keiron	Ward				N	Y
2037	<p>Comments</p> <p>Support the Council's rejection of all Green Belt sites proposed at the options stage (and that are not proposed to be allocated in the draft submission plan). However, the purpose of Policy 12b in relation to sites within the Green Belt that were considered and rejected at the options stage is not clear. It seems to suggest that the Green Belt may be subject to development 'as needed'. Such uncertainty is contrary to the aim and designation of the Green Belt. The concept of permanence is important to encourage appropriate land management.</p> <p>Changes Sought</p> <p>The ambiguity in 12b should be corrected so the policy is clear that no development would be permitted on Green Belt sites that are not allocated in the partial review.</p> <p>Reasons for Participation</p> <p>Would like to be represented by Kidlington Development Watch at the oral examination in public. For the reasons given in the Kidlington Development Watch representation.</p>							
PR-C-0813	08/10/2017	Jennifer	Betts					
2209	<p>Comments</p> <p>Objection to the removal of PR3c and PR3d from Green Belt designation - concern that if PR3c is removed then it could be developed under PR12b at a later date. Concern that if PR3d is removed it could open the door to other development on the parkway site.</p> <p>Changes Sought</p> <p>Reasons for Participation</p>							
PR-C-0813	08/10/2017	Jennifer	Betts					
2214	<p>Comments</p> <p>Objection to the inclusion of PR12b. Concern that this will be used as a mechanism for the release of land in the Housing Economic Land Availability Assessment that is land not currently included and discarded in this plan. I am particularly concerned that this will open up unsustainable development in the north of Kidlington and in particular on land at the rear of The Moors between The Moors and the River Cherwell.</p> <p>Changes Sought</p> <p>The inclusion of PR12b is unnecessary and should be deleted, as any further contingency sites are not needed to meet the housing targets set out in the plan.</p> <p>Reasons for Participation</p>							

Proposed Submission Plan - Policy PR12b - Sites Not Allocated in the Partial Review

2231	Comments								
<p>Objection to the inclusion of PR12b. Fail to see the point of this policy. Already challenged the quantum of proposed housing development. If the council have decided that 4400 homes is the figure at this stage then there should be no further opportunity to expand land allocation in the Green Belt or elsewhere in this area. Any further land allocation should only be a matter for the Local Plan beyond 2031. Concern that this will be used as a mechanism for the release of land in the Housing and Economic Land Availability Assessment that is land not currently included and discarded in this plan. Particularly concerned that this will open up unsustainable development in the north of Kidlington and in particular on land at the rear of The Moors between The Moors and the River Cherwell. There is no provision for 50% affordable housing in this policy as there is in every other allocation policy, which is an omission. The policy also states that consultation on any sites will take place with the local community prior to approval by the council. Propose that this be via the Parish Councils as elected representative of the local area otherwise it is not clear who will be consulted.</p>									
Changes Sought				Reasons for Participation					
The inclusion of PR12b is unnecessary and should be deleted, as any further contingency sites are not needed to meet the housing targets set out in the plan.

PR-C-0820	10/10/2017	Richard	House	Gladman Developments		Y	Y	N	Y
5079	Comments								
<p>Policy PR12b sets out a number of criteria that will be required to be met in respect of planning applications submitted for sites not allocated in the Partial Review Local Plan. These criteria may be summarised as follows: 1. Cherwell Council has formally decided that additional sites are required to meet the housing supply 2. Compliance with Policy PR1. 3. The site is identified in the HELAA. 4. That prior consultation has been undertaken with the local community which has signified its support. 5. The application is supported by comprehensive information * Gladman objects to a number of these criteria. Firstly the policy should allow for the submission and approval of planning applications in the absence of a demonstrable five year supply of housing land. A formal decision of the Council is neither necessary nor appropriate. Secondly the requirement for the site to be already identified in the HELAA is unreasonable and unjustified. The important point is that the site should be available deliverable and in a sustainable location. Finally whilst Gladman fully supports the requirement for pre application consultation with the local community, it is unreasonable for the policy to require "the demonstrable support of the local community". This is not something that is measurable, is not required by NPPF and is therefore unsound. The evidence draws on the advice of the NPPF and the NPPG.</p>

<p>Support the Council's rejection of all Green Belt sites proposed at the options stage (and that are not proposed to be allocated in the draft submission plan). However, the purpose of Policy 12b in relation to sites within the Green Belt that were considered and rejected at the options stage is not clear. It seems to suggest that the Green Belt may be subject to development 'as needed'. Such uncertainty is contrary to the aim and designation of the Green Belt. The concept of permanence is important to encourage appropriate land management.</p>									
Changes Sought				Reasons for Participation					
The ambiguity in 12b should be corrected so the policy is clear that no development would be permitted on Green Belt sites that are not allocated in the partial review.				Wish to be represented by Kidlington Development Watch at the oral examination in public.					

Proposed Submission Plan - Policy PR12b - Sites Not Allocated in the Partial Review

Overall, the Tripartite supports the Policy and its intentions to expedite delivery of housing on suitable, sustainable and deliverable sites to meet Oxford's pressing needs and in accordance with the spatial strategy set out in the Plan. However, this is subject to the inclusion of amendments to the Policy.

Changes Sought

Proposed changes suggested. Add to Policy PR12bA reference to timing in the Policy to reflect the third paragraph in Policy PR12a, which indicates that land allocated by Policies PR7a and PR10 will only be permitted to commence development before 1 April 2026 if the calculation of the five-year land supply over the period 2021-2026 falls below five years. In respect of the second paragraph, add that any additional developments will be required to comply with Policy PR1 and all other relevant policies in the Plan and Development Plan for Cherwell. Add - In the Green Belt, this will require the demonstration of 'very special circumstances' to accord with Paragraph 88 of the NPPF to be consistent with national policy and satisfy the 'exceptional circumstances' set out in Paragraph 5.17 to be consistent with the Council's spatial strategy set out in the Plan. In relation to the third paragraph, the sites should be 'developable' not 'potentially developable' if they are to meet Oxford's housing needs. Add - The proposed developments should also not conflict with or undermine the delivery of the strategic development sites allocated in the Plan. Add – The 'Key Delivery Requirements', 'Planning Application Requirements', 'Development Brief' and 'Place shaping principles' must be established and agreed at the outset (before the submission of a planning application) with the Council in consultation with the County Council and City Council to be consistent (where relevant and necessary) with the overarching requirements and principles for the strategic development sites.

Reasons for Participation

The land owned and controlled by the Tripartite comprises some 86% of the largest draft allocation within the Plan and as such, occupies a unique and vitally important role in meeting Oxford's Unmet Housing Needs. As such, the Tripartite consider it is essential that it is present [and/or represented] and participates at the Examination in order to assist the Inspector by responding to any queries that may arise and supporting the assessment of the soundness of the Plan.

Comments

The Council notes that the general thrust of PR12b is to provide a vehicle for additional sites to be released in the future. The retention of GB policy on unallocated land is thus very important. KPC is extremely concerned that the Policy makes provision for the release of unspecified sites in the future on the basis that they are sites listed in a HELAA. This for example would include Frieze Farm, and land to the north of the village. These sites have been discarded for valid reasons in the Plan, which KPC fully supports. As the purpose of the plan is to address only the identified unmet needs of Oxford City, once these have been met and confirmed as genuinely deliverable, as will be tested at the Examination, there is no need for a contingency Policy in this Plan. If adopted however, this Policy resists the release of additional sites unless they satisfy a long list of requirements, in which circumstances they can be approved. Included is the clause: 4. that prior consultation has been undertaken with the local community in a form to be agreed with the Council and the proposed development has the demonstrable support of the local community. The Parish Council is concerned about the uncertainty inherent in this Policy regarding local support – who will decide what is 'the demonstrable support of the local community'? As KPC members are the elected representatives of the local community, it would be much clearer if it was amended to include reference to the support of the affected Parish Council(s). Policy PR12b fails to require 50% affordable housing on any unallocated sites. This is inconsistent with the Plan objectives and the approach on allocated sites. This requirement should be added within the first part of the Policy."

Changes Sought

"Delete Policy PR12b, as contingency sites are not required to meet Plan objectives • If adopted, support clause 4, amended to include a requirement for the demonstrable support of the relevant Parish Council. * If adopted, include as an essential requirement 50% affordable housing on any new unallocated sites "

Reasons for Participation

KPC is an elected body, representing the views of a large number of people in the part of the District which will be most affected by the proposed alteration to the Development Plan. In addition to having a statutory role in the Planning process, the Parish Council has an in depth understanding of the local area where new development is proposed, and is well placed to contribute to the Local Plan process. It is essential for the KPC to be actively involved in the Examination, in order to be able to represent local views, fully respond to submissions made by others, and to address any modifications discussed in advance of the Examiners report.

Comments

Firstly, we repeat our support for the Council's rejection of all Green Belt sites proposed at the options stage (and that are not proposed to be allocated in the draft submission plan). Are unclear about the purpose of Policy 12b in relation to sites within the Green Belt, which constitute most of the sites that were considered and rejected at the options stage. Green Belt site should never be supported for development precisely because it is in the Green Belt and regardless of the qualifications given in clauses 1 to 5 of the proposed policy. Permitting such development would be contrary to planning guidance which states that unmet housing need does not constitute very special circumstances for building in the Green Belt. Assumes that it is not suggested that such sites would first be removed from the Green Belt as this would contravene guidance that Green Belt boundaries should only and exceptionally be reviewed as part of Local Plan preparation and that boundaries are intended to endure beyond the lifetime of a plan.

Changes Sought

The potential ambiguity in this policy should be removed. While we do not accept that any of the proposed allocations are justified, this policy should make clear that no development would be permitted on Green Belt sites that are not allocated in the partial review

Reasons for Participation

"We (Kidlington Development Watch – KDW) consider this is necessary because of our extensive involvement with the consultations at all stages of the Cherwell Local Plan to date; the considerable work we have undertaken to publicise the consultation ourselves; of the feedback we have received from Kidlington residents; and, the large numbers of them who have responded as a result of our efforts. KDW is a voluntary organisation run by Kidlington residents with experience and interest in planning issues. We believe that effective, informed public participation in planning consultations is vital to democratic policy making. We publicise consultations that directly affect Kidlington and offer advice on how people can best make their views known. In relation to this and the previous options consultation we printed and distributed leaflets, put up posters, ran a stall on many Saturday markets and at other events, participated in public and parish council meetings, provided information on our website and responded to requests for information from Kidlington residents. As a result, we have gained a very good understanding of the views of Kidlington residents, a large number of whom have made representations because of our activities. KDW's representations therefore reflect the views of much of the Kidlington community."

Proposed Submission Plan - Policy PR12b - Sites Not Allocated in the Partial Review

Comments

As set out in Paragraph 5.16627 of the Partial Review, Policy PR12b requires a formal Council decision that additional land beyond that allocated in the Partial Review is needed to ensure the requisite housing supply and that the proposed developments comply with policy PR1 ('Achieving Sustainable Development for Oxford's needs'). Whilst A2D support the need for an insurance type policy to allocate additional sites, we query how Policy PR12b will be enforced if additional sites come forward? The Council will be at risk of departure applications and piecemeal development. It is not clear from the listed criteria under Policy PR12b how CDC will decide which sites meet Oxford City's unmet need and CDC's unmet need. We can only assume from the policy wording that CDC will apply a locational based rationale when determining whether a site meets the policy criteria, which is an incorrect approach.

Sites should not be identified on the basis of their proximity to Oxford City alone, but their consistency with the adopted spatial strategy.

Changes Sought

Reasons for Participation

Our objections in part relate to the proposed growth strategy to address Oxford City's unmet need, which we consider to be unsustainable and inconsistent with national policy. This is contrary to the adopted Growth Strategy set out in the Cherwell Local Plan 2011-2031 (Part 1), which focuses new development at key settlements, as identified in Cherwell's settlement hierarchy. The Council has not discharged its duty to demonstrate exceptional circumstances to release the identified sites from the Green Belt, pursuant to paragraph 82 of the National Planning Policy Framework. Further, there is insufficient evidence to suggest that opportunities to increase capacity at existing allocated housing sites have been robustly tested. Finally, there should be a single housing requirement for the Cherwell Local Plan. There is no justification for a separate figure to be applied to meet Oxford City's unmet need, as is currently proposed.

OBJECT to Policy PR12b as it should be more specific about safeguarded sites (which could list The Moors, if it is not allocated directly as an omission) as this modification will aid certainty and deliverability in the context of maintaining a five year housing land supply. In a similar vein, this same policy could provide for further housing sites based on localized Green Belt reviews, akin to the approach taken for Oxford Technology Park in LPP1.

Changes Sought

On the assumption that the draft Plan would otherwise be held to be unsound, The Moors (PR14) should be included as an omission site for c300 houses, linked to a regeneration package for the village centre & a new 10 hectare 'country park'. In the alternative, it could be specifically listed as a 'safeguarded site' in Policy PR12b, or this policy could be amended to provide for localized Green Belt reviews for housing where planned for sites are not being delivered by 2021.

Reasons for Participation

We confirm that we wish to attend the examination in public.

"Objection to Policy PR12a on the basis that it meets none of the soundness criteria stated at NPPF paragraph 182. There is no explanation as to why the sites at South East of Kidlington or South East of Woodstock have been identified as having delivery deferred to the final five years of the plan period. Whilst the explanatory text to the policy notes that larger strategic sites may have a longer lead in period to their delivery, the policy fails to recognise that in its drafting. These representations promote the development of land to the South East of Kidlington for 430 dwellings, but even at the current policy drafting level of 230 dwellings, delivery within 5 years, where there is substantial ground works and site infrastructure to be in place, would be challenging. Moreover, a large portion of the site at South East Kidlington (whether that be the proposed plan allocation or as per our client's vision document proposals) is allocated for the significant delivery of formal sports provision. As the policy notes, this provision is to address the needs of the wider community not just meeting the needs to the development itself. The clear implication of the timeframes included within Policy 12a, therefore, is that this current deficiency in sports pitch provision would not be addressed until the end of the plan period. The Local Plan Review fails to identify how any harm would arise if Oxford's unmet need were to be met earlier than 2026. Indeed, if this were to happen then the Council would have successfully met the NPPF requirements noted above. On this basis, therefore, and given that by the plans adoption there will at best be 13 years left of the plan period, the need for any phasing or restriction of sites to deliver the Oxford unmet need is considered unnecessary. The policy is unsound in that it is not positively prepared (as it delays meeting the unmet requirements from the neighbouring authority). It is not justified as it is not the most appropriate strategy for meeting Oxford unmet need. It is not effective as it delays commencement of development on large scale sites to a point in the plan period where they may not be capable of delivery before the plan end date and it is not consistent with national policy, specifically with NPPF paragraphs 47 and 179."

Comments

The calculation of a separate five year housing land supply for the Oxford unmet need is considered to be unrealistic & ineffective in managing the supply of housing. The difficulty of separately monitoring the five year housing land supply of the Oxford unmet need to the rest of Cherwell's housing requirement relates to the extent to which Cherwell District Council (CDC) can ensure the delivery of this unmet need in accordance with Paragraph 47 of the Framework. In circumstances where the supply falls to below a five year housing requirement in delivering the unmet need, the question arises as to what remedies are available to CDC to rectify this deficiency. As the unmet need would be expected to be delivered from a few specific allocated sites in an area heavily influenced by Green Belt it would therefore be very difficult to demonstrate & maintain a rolling five year supply if issues were experienced with any of the proposed allocations designated to meet Oxford's unmet need. We consider that the only appropriate way to deal with this matter is that whilst there is a specified unmet need & specified site allocations within the emerging Partial Review to meet that unmet need, in the event that the specified supply does not come forward, the remedy in meeting that unmet need must extend to the whole of the administrative area for Cherwell District. This would give the flexibility needed to ensure that the unmet need can be delivered. Furthermore, the Council have imposed an artificial constraint on housing supply as the first 5 year period for monitoring & delivery is set at 2021-2026. However, it is the case that Oxford's need exist now & there is therefore no reason to impose this artificial constraint on the market until 2021. The delay appears to have only been caused by the location & nature of the site's that the Council has chosen to allocate, which are of a type that will take some time to deliver housing. Evidence contained within the Council's Housing & Economic Land Availability Assessment (HELAA) identifies that there has been a significant under delivery of housing in the District since 2011. We consider that the Plan should seek to rectify this under delivery as soon as possible & that this requires the allocation of a wide range of sites throughout the District to meet both the requirement for Cherwell & the unmet need from Oxford. The Plan should not seek to implement phasing mechanisms to bringing sites forward for specific needs when sites are readily available & deliverable now to meet the identified needs. The inclusion of Policy PR12b 'Sites Not Allocated in the Partial Review' is therefore considered to be unnecessary. Representation includes 3 x Appendices: 1: Five year housing land supply report, August 2017, Turley, 2: Site location plan, 3: Illustrative masterplan.

PR-C-1508	09/10/2017	Alan	Graham						N N	
4748	Comments Policy PR 12b - Non Allocated SitesA number of other sites are being proposed for development in and around Kidlington which are not allocated. These are identified in HEELA, none of these sites in the Green Belt should be consideredfor development.									
	Changes Sought				Reasons for Participation					
PR-C-1521	09/10/2017	Alaric	Rose						N N	
5442	Comments The general purpose of PR12b is to provide a vehicle for additional sites to be released in the future. The retention of Green Belt policy on any unallocated land is thus very important. I am extremely concerned that the Policy makes provision for the release of unspecified sites in the future on the basis that they are sites listed in a HELAA. This for example would include Frieze Farm. It would also include land to the north of the village, and between the village and the River Cherwell (sites PR14 and PR27) These sites have been discarded for valid reasons in the Plan, which I fully support for the following reasons: - These sites sit in an area of the Green Belt which must be preserved to prevent urban sprawl. The impact of Bloomfield’s proposed development on the Green belt is not modest as claimed by the developers. Green belt status should be protected and preserved as stated in the Conservative Government’s manifesto. - Loss of landscape and rural views towards the oldest part of the village. Development (including residential and business units) would affect the setting of St Marys Church - Grade 1 listed - and other listed buildings in the Church Street Conservation Area. - Development will exacerbate the flood risk to housing and adjoining land/conservation area. The fields behind The Moors and west of the burial ground flood regularly. - Inadequate local infrastructure to support development of this scale. Detrimental impact on existing roads and services especially surface and foul drainage. The access to the proposed Moors development site is opposite Benmead Road close to two Kidlington Conservation areas. Development will generate a lot of extra traffic near a school and nursery on a relatively narrow, busy road already subject to traffic calming. - Damage to surrounding countryside and loss of a rich habitat for many rare wildlife species including Short Eared Owls, Great Crested Newts and Skylarks. - The fields are an important and very well used amenity for village residents and regular visitors providing walks and views of the village towards St Mary’s Church. The land should be treated as a permanent local green space. As the purpose of the plan is to address only the identified unmet needs of Oxford City, once these have been met and confirmed as genuinely deliverable, as will be tested at the Inspector’s Examination, there is no need for a contingency Policy in this Plan. However, if adopted, this Policy resists the release of additional sites unless they satisfy a long list of requirements, in which circumstances they can be approved. Included is the clause: 4. that prior consultation has been undertaken with the local community in a form to be agreed with the Council and the proposed development has the demonstrable support of the local community I am concerned about the uncertainty in this Policy regarding local support – who will decide what is ‘demonstrable support’? As Kidlington Parish Council members are the elected representatives of the local community, it would be much clearer if it was amended to include reference to the support of the Parish Council. Policy PR12b fails to require 50% affordable housing on any unallocated sites. This is inconsistent with the Plan objectives and the approach on allocated sites. This requirement should be added within the first part of the Policy.									
	Changes Sought				Reasons for Participation					
	Delete Policy PR12b, as contingency sites are not required to meet Plan objectives - If adopted, support clause 4, amended to include a requirement for the demonstrable support of the relevant Parish Council. - If adopted, include as an essential requirement 50% affordable housing on any new sites.

PR-C-1535 5415	10/10/2017	Layla	Vidal-Martin	Lichfields on behalf of Taylor Wimpey (Oxfordshire)	Y	Y	N	Y
<p>Comments</p> <p>Taylor Wimpey (TW) considers the Submission Plan is not sound as it is not “justified” or “consistent with national policy”. This is because : 1. CDC acknowledge (Submission Plan Executive Summary para XV) that “under national policy Green Belt boundaries should only be altered in exceptional circumstances through the preparation or review of a Local Plan”. The Submission Plan (para 5.17) sets out why CDC consider that exceptional circumstances exist for the release of these sites from the Green Belt & their allocation for residential development. TW contend that CDC have not thoroughly explored “all other reasonable options” &, where they have sought to do so, there are flaws in their evidence base (regarding their assessments of sustainability, transportation & alternative development locations). They have not demonstrated the “exceptional circumstances” required for the proposed release of the sites identified in Table 1 from the Green Belt; 2. CDC’s approach is predicated on an assumption that “Oxford’s Housing Needs” form a bespoke & identifiable source of housing need. This conflicts with the recognition in the Oxfordshire SHMA (2014) (para 9.2) that “the SHMA identifies an Oxford-focused Housing Market Area which extends across much of the County, reflecting the economic influence of the City. The county still remains the most appropriate geography for analysis of housing markets in terms of the ‘best fit’ of local authority boundaries to a functional housing market area.” More recently the Inspectors Report into the Vale of White Horse Local Plan emphasised that (para 45) “it is not the role of, or possible for, the plan to prescribe where people live and work;” and; 3. CDC compound this assumption (Policy 12a) by seeking to pursue a “separate five year housing land supply . . . For meeting Oxford’s needs.” This, in conjunction with proposals not to support Sites Not Allocated in the Partial Review (policy PR12b) are not consistent with the NPPF’s presumption in favour of sustainable development & risk substantially harming housing delivery in the District in the coming years. Scope of response (See Detailed 4 Section Report). This response amplifies TW’s concerns regarding the soundness of the Submission Plan, & their view that their site at Bloxham (Site PR35) forms a “reasonable option” for residential development prior to the release of the proposed allocations from the Green Belt. Specifically • Section 2: Summarises the appropriateness of residential development on the TW site; (Section 2 encloses * Sustainability Analysis by Calibro, * Residential Potential of Site, * Assessment of site against constraints, * SHLAA Analysis) • Section 3: Summarises TW’s concerns regarding the inadequacy of the evidence base, whilst emphasising their support for the level of residential development proposed. This underpins their contention that the Submission Plan does not establish “exceptional circumstances” for the proposed release of these sites from the Green Belt; • Section 4. Sets out TW’s comments on emerging policies and the changes that they consider are necessary to make the plan sound.</p> <p>Changes Sought</p> <p>The Plan proposes that around 55 % of the housing proposed should be targeted within the Green Belt (GB). Para 3.26 “approximately 14 % of Cherwell lies within the Oxford GB”. Thus CDC need to demonstrate “exceptional circumstances” as to why this housing cannot be located within non GB locations comprising 86 % of the District. The provisions of PR12b states that residential development proposals, across the District, where they are not allocated in the Partial Review, will not be supported except where a number of criteria are met. These include :</p> <ul style="list-style-type: none"> • CDC “has taken a formal decision that additional land... is required to ensure the requisite housing supply.” This requires a decision by CDC – it is not the same as failing to demonstrate a 5 year land supply; • The proposed development accords with Policy PR1 – which in turn requires it to “accord with the Vision, Objectives and Policies of this Partial Review.” This serves to limit development to the geographical area proposed by the Submission Plan following a strategy which we have highlighted is not supported by the evidence base10; • Identified in the HELAA as a potentially developable site – with no provisions for locations where part of a comprehensive site has been allocated and / or there is scope subsequently for a wider development bringing appropriate benefits; • Requiring prior consultation with the Local Community & having the “demonstrable support of the local community” an approach which has no basis in planning policy & would be extremely difficult to achieve; & • Requiring a series of reports – the requirement for which is unclear at this stage – & which is more appropriately addressed through the development management process. <p>Reasons for Participation</p>

<p>Comments</p> <p>The criteria set out in Policy PR12b for non allocated site in the Partial Review are fundamentally vague, setting out no definitions, quantifiable triggers or specific timescales for the circumstances in which the Council may consider this type of application. Criteria 1, for example, is when ‘Cherwell District Council has taken a formal decision that additional land beyond that allocated in the Partial Review is required to ensure the requisite housing supply’. Criteria 4 is ‘that prior consultation has been undertaken with the local community in a form to be agreed with the Council and the proposed development has the demonstrable support of the local community.’ Both of these criteria are poorly defined such that the policy provides insufficient clarity to be considered ‘effective’ and therefore sound with regard to the tests in paragraph 182 of the NPPF.</p> <p>Changes Sought</p> <p>3. HSL consider Policy PR12b requires comprehensive revision to include more specific, measurable criteria to enable the policy to be considered effective, justified and therefore sound.</p> <p>Reasons for Participation</p> <p>For reasons set out in the comments submitted, HSL are of the view that the Local Plan (Part 1) Partial Review does not address matters which run to the heart of Soundness and request the opportunity to make oral representations to this effect.</p>								

Proposed Submission Plan - Policy PR13 - Monitoring

PR-C-0265 09/10/2017 Ellis Davies N N N Y

5554

Comments

Unsure that CDC is able to monitor and carefully scrutinise the project if it was implemented. There are examples in our parish that show it did not want to or was unable to uphold the planning policies. We can only assume that planning were unable to do so due to costly litigation. The developers seem to have the whip hand.

Changes Sought

Reasons for Participation

I would like the Begbroke & Yarnton Green Belt Campaign to represent me at the Examination should it take place.

PR-C-0526 06/10/2017 Sarah Hamilton-Foyn Pegasus Group On behalf of the Dorchester Group y y N Y

1289

Comments

An objection is made to Policy PR13, the final paragraph which states that " If monitoring indicates that the vision and objectives cannot be met, the Council will consider whether it wishes to ask the Secretary of State for Communities and Local Government to revoke the Partial Review under Section 25 of the Planning and Compulsory Purchase Act 2004 in the interest of releasing alternative sites that will achieve delivery by 2031." This paragraph should be deleted and replaced as another way of supporting delivery is to identify reserve sites, such that if any of the allocated sites are delayed then sustainable alternatives can be brought forward quickly. Area of Search F i.e. land at Upper Heyford should be allocated as a reserve site as it provides a sustainable option to meet the unmet needs of Oxford City as it is well-related to Oxford by way of a rail connection. Area of Search F also provides the most sustainable, deliverable option to meet the needs of Cherwell in the longer-term.

Changes Sought

Reasons for Participation

Land at Upper Heyford should be allocated as a reserve site.

Dorchester Group is concerned that the unmet needs assigned to Cherwell district are met in the most appropriate and effective locations and that the proposed locations delivery within the timescale.

PR-C-0785 10/10/2017 Nick Freer David Lock Associates on behalf of Hallam Land Management N Y

2005

Comments

It is unclear how Policy PR13 and PR12b relate to one another with regards to what action the Council would take if the allocated housing sites are not likely to deliver sufficient new homes to meet Oxford's needs. The last sentence states that if monitoring indicates that the vision and objectives will not be met then the Council will consider asking the Secretary of State to revoke the Partial Review. This appears inconsistent with the approach set out in PR12b whereby the Council can agree more sites are necessary and sets out the tests by which those applications will be judged.

Changes Sought

Reasons for Participation

Delete the last paragraph of PR13 and instead cross refer to the provisions of PR12b.

To elaborate on these representations regarding Policies PR12a, PR12b and PR13 and the soundness of the plan as a whole.

PR-C-0790 10/10/2017 Chris Shaw Bloor Homes Western N Y N Y

5378

Comments

Broadly support the Council's approach to working in partnership with site promoters, developers, landowners and public sector partners. Also support the commitment to annual monitoring of progress towards the Local Plan Partial Review's objectives and the suggestion of future revocation of the Partial Review if monitoring indicates that the vision and objectives will not be met, in the interest of releasing alternative sites that will achieve delivery by 2031. However, it is for this reason that there should be greater certainty within the Partial Review regarding the true figure of Oxford's unmet needs, the robustness concerning CDC's proposed strategy and the future approach to identifying alternative sites to help ensure a healthy housing land supply.

Changes Sought

Reasons for Participation

It is considered necessary to ensure that the Local Plan Partial Review is legally and procedurally compliant, positively prepared, justified, effective and compliant with national policy.

PR-C-1408 10/10/2017 Andy Pearce Barton Willmore on behalf of A 2 Dominion Housing Group Ltd N N N Y

5493

Comments

We note that the Council seeks to monitor this plan to check the effectiveness of the policies. Results will be published in the Annual Monitoring Report. As already set out, CDC should review its existing housing target to reflect the additional need and have a single five-year housing land supply to allow for the unmet need. The unmet need should be CDC's responsibility to deliver.

Changes Sought

Reasons for Participation

Our objections in part relate to the proposed growth strategy to address Oxford City's unmet need, which we consider to be unsustainable and inconsistent with national policy. This is contrary to the adopted Growth Strategy set out in the Cherwell Local Plan 2011-2031 (Part 1), which focuses new development at key settlements, as identified in Cherwell's settlement hierarchy. The Council has not discharged its duty to demonstrate exceptional circumstances to release the identified sites from the Green Belt, pursuant to paragraph 82 of the National Planning Policy Framework. Further, there is insufficient evidence to suggest that opportunities to increase capacity at existing allocated housing sites have been robustly tested. Finally, there should be a single housing requirement for the Cherwell Local Plan. There is no justification for a separate figure to be applied to meet Oxford City's unmet need, as is currently proposed.

PR-C-1436 10/10/2017 Patsy Dell Oxford City Council

4579

Comments

The Partial Review sets out positive measures to ensure delivery of the supply of homes for Oxford, which is welcomed. It is very helpful that the plan includes a very clear trajectory for the sites contributing to Oxford's unmet need, to enable monitoring against the Growth Board apportionment, & for understanding the likely phasing of delivery.

Proposed Submission Plan - Appendix 1

PR-C-0308	11/09/2017	Sandra & Richard	Tyrrell		N	N	N	No
919	<p>Comments</p> <p>Do not consider the Plan to be sound for the following reasons:- The numbers requiring housing 4,400 need to be qualified and the responsibility for meeting Oxfords housing shortage should be revisited. Using land currently in the Green Belt will have a long lasting effect on the sustainability of essential wildlife and the mental health and wellbeing of the many people who use the space for relaxation and sport. Kidlington, Yarnton and Begbroke need to retain their identities and not become an extension of Oxford. Already there is Oxford Airport, Oxford Motor Park, Oxford Parkway and a proposed Science Park which will no doubt be pre-fixed Oxford. At one time the people of these villages knew and cared for their community, but with the expansion and the inclusion of Oxford's overflow already it is becoming more and more difficult for residents to police the community and retain a safe environment. If any of the developments proposed are adopted there is no real consideration to the infrastructure required. Already there is a serious problem with traffic flow not only at peak times, but when there is an accident on the A34 (for instance) and traffic is diverted through our villages, when Blenheim hold their big events and when Oxford introduce any road closure in the Banbury and Woodstock Roads it all has a major impact. To quote from the Cherwell Local Plan booklet "to provide homes where people can most readily connect to Oxford and sustainably access the city's employment areas, its universities etc." IT IS NOT POSSIBLE TO DO THIS CONNECTION!!!! Even more so if a consideration is given to closing Sandy Lane to traffic and making it a green route. We do not know where water and power will come to service any of these developments. Where the health service can adjust to extra bodies to care for, where policing, the fire and ambulance service can be increased to ensure security and care for all the people the proposed developments will bring with them.</p>							
	Changes Sought				Reasons for Participation			
	<p>We suggest that the numbers of dwelling required should be readdressed. That Oxford looks to land and derelict properties within its boundary before extending any further. The University is still finding land to extend within the City, perhaps they could be encouraged to include properties for Social or other housing within its student housing after all the students are not "at University" all year round and a lot of accommodation stands empty out of term. Priority must be given to the roads and repair of the same before any developments can be considered in any part of Oxfordshire. That no development should be allowed without a cap on the price of properties. That the term "affordable housing" should actually be "Social Housing". No Developer worth his salt would build properties that did not turn a good profit.</p>							

PR-C-0436	05/10/2017	Steve	Pickles	West Waddy ADP on behalf of JA Pye (Oxford) Ltd	Y	Y	N	Y
1095	<p>Comments</p> <p>The proposals conflict with the National Planning Policy Framework, one of the core planning principles of which is 'protecting Green Belts,' (para 17) and the advice in paragraphs 79 and 80, which state that 'The Government attaches great importance to Green Belts. The fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open; the essential characteristics of Green Belts are their openness and their permanence.' This is particularly the case with the proposals on site PR38 which would lead to virtual coalescence between Oxford and Kidlington, leading to substantial erosion of Kidlington's identity as a separate settlement and the creation of a large area of urban sprawl on the northern edge of Oxford. This impact could be reduced by allocating areas around Kidlington which have a moderate or low harm to the Green Belt, such as my client's land at Webb's Way (site PR32) thereby reducing the number of dwellings that have to be allocated in areas where development would have a high impact on the Green Belt. Even if some development is still required on the PR38 land in order to accommodate Cherwell's allocation of 4,400 dwellings towards Oxford's unmet need, the detailed site Assessment on page 123 of Appendix 1 to the Cherwell Green Belt Assessment indicates that there would be substantially less harm to the Green Belt if only the areas closest to the Oxford City Council boundary were released, as indicated on the plan entitled 'Harm to Green Belt resulting from partial release of site'. The current strategy, which would lead to urban development over most of the 'Kidlington Gap', thereby leading to urban sprawl and significantly eroding the distinct identity of Kidlington as a separate settlement, is contrary to the purposes for which the Oxford Green Belt was designated and due to the scale of development proposed would cause significant harm to it. Given that there are other sites where development could be promoted, which would have less harm on the purposes of the Green Belt, it is not the most appropriate strategy.</p>							
	Changes Sought				Reasons for Participation			
	Amend the strategy to remove, or at least minimise, the amount of land to be removed from the Green Belt in the 'Kidlington Gap' by instead removing other areas, such as the J A Pye (Oxford)Ltd land at Webb's Way, Kidlington (PR32), which the Cherwell Green Belt Study (April 2017) has identified would cause less harm to the Green Belt.				J A Pye (Oxford) Ltd owns land at Webb's Way, Kidlington and wishes to ensure that the argumentis strongly made for the removal of this site from the Green Belt and its allocation for housingdevelopment, which would help to address Oxford's unmet need.			

PR-C-0436	05/10/2017	Steve	Pickles	West Waddy ADP on behalf of JA Pye (Oxford) Ltd	Y	Y	N	Y
1096	<p>Comments</p> <p>The Partial Review of the Cherwell Local Plan 2011 - 2031 (Part 1) proposes to remove a number of parcels of land from the Green Belt whose contribution to the five purposes of including land in the Green Belt was assessed in the Cherwell Green Belt Study (April 2017). This assessment has looked at land owned by J A Pye (Oxford) Ltd at Webb's Way Kidlington (Site Ref: PR32) and come to the conclusion that it only makes a 'low moderate' contribution to Green Belt purposes. It concluded that it did not make a significant contribution to any of the five purposes of including land in the Oxford Green Belt. With regard to purposes 1 and 2 (checking sprawl of Oxford & preventing merger of settlements) it concludes that the parcel plays no role with regard to these purposes. With regard to Purpose 3 of Safeguarding the Countryside it acknowledges that 'the southernmost field [which is the part of the site where J A Pye (Oxford) Ltd are proposing development] is contained by inset development on three sides and so has a stronger relationship with the settlement edge than the surrounding countryside.' On Purpose 4 it is acknowledged that 'The Parcel has insufficient relationship with Oxford to be considered to contribute significantly to its historic setting or special character.' While it is stated that there could be some detracting influence in terms of the wider rural setting of the city through the sites relationship with the Cherwell Valley, the only part of the site proposed for development, as indicated on drawing ASP1 B in the accompanying Landscape & Visual Appraisal, is the inner field which is well screened from the Cherwell valley by a tall, dense hedgerow.</p>

Comments

Do not consider that the Proposed Submission Plan ('The Plan') has been positively prepared as it fails to remove from GB status a small area of land situated at Gosford Farm, Gosford, (Site plan provided) which has no justification in remaining within the GB. The Plan is therefore unsound in that it fails to address the removal of the Subject Site which forms part of Gosford Farm, Gosford despite the policies expressed in para.5.37 of Policy PR3. 2. Whilst we believe that The Plan is based on the most appropriate strategy when considered against the reasonable alternatives, we maintain that it can only be justified if it removes areas of the GB for unmet residential housing needs. Such areas are referred to in para. 5.37.2 of Policy PR3. The Subject Site at Gosford Farm has no reason to remain within the GB and could be used to meet the identified housing need. 3. We do not consider that The Plan is effective as it currently stands. Every area of the GB needs to be carefully considered for removal and the Subject Site that we are proposing to be removed has no justification in remaining as GB for those reasons set out in Section 5 below. 4. We do not consider that The Plan is consistent with the National Policy as it fails to address the purpose of the GB given that the small area of the GB (the Subject Site) that we are proposing should be removed has no justification for inclusion within the GB. 5. Paras. 5.37.4 and 5.39 of The Plan clearly state that the revised GB boundaries should be capable of enduring beyond the Plan period. We do not consider there is any planning justification in retaining the Subject Site within the GB and that its proposed continued inclusion could be overturned at a later date as being totally wrong and unjustified.

Changes Sought

1. It is necessary to amend the Local Plan to make it sound. 2. Our view is that to make the Local Plan sound, Policy PR3 needs to be amended as follows: ...'Policy PR7a Removal of 11.35 hectares of land as shown on inset Policy Map PR7a'..... 3. Policies Map PR7a will need to be amended on its northern extremity to show Gosford Farm, to include Gosford Farmhouse and the remainder of the land shown edged red on the attached plan. 4. This will comprise a minor amendment to "Policy PR3: The Oxford GB" and can be justified on the grounds that to retain the Subject Site within the GB would not meet the four basic purposes of GBs all as set out under Government Guidance (lists Green Belt principles). 5. The Subject Site is contained on three sides by existing development and on the fourth side by a long established and mature field boundary hedge which will be retained and enhanced.

Reasons for Participation

Wishes to participate at the oral Examination and consider this to be necessary so that the Inspector will be fully able to understand the justification for our proposed amendment to Policy PR7a and Policy PR7a - Proposals Map contained within the Proposed Submission Plan. 2. Acknowledges the Subject Site, comprising some 0.55 so hectares or thereabouts, hectares or thereabouts, is of minimal relevance to the Submission Plan and the Partial Review of the Cherwell Local Plan 2011 - 2031(Part One). For the reasons stated above, it is important that all areas of the GB are examined at this moment in time and we believe it is only right that the Subject Site should be excluded from falling within the boundaries of the future Oxford GB.

Objects to proposed plan & sustainability appraisal. It is inconsistent with the NPPF because it fails to provide sustainable development, ensuring a better life for current/future generations. It fails to: Promote realistic sustainable transport; Protect GB; Meet the challenge of climate change & resultant flooding; Conserve and enhance the natural and historic environments. The consultation process has been unreasonable. I object to the complexity of it, with the demand that representations are made on a specific form, and being timed over school holidays. CDC failed to give the public an opportunity to digest the proposals & make their views known. Considers the proposed submission plan, associated policy maps and sustainability appraisal to be unsound, not positively prepared, not justified and not effective for the reasons detailed in specific objections and comments.

Policy Maps - Development context: Mapping often only shows the individual site but not the wider development context such as other proposed site allocations in Cherwell DC or neighbouring authorities such as Oxford City Council or West Oxon District Council, which makes it difficult to get the full picture. - Policy PR3 land: note that areas of this category are proposed to be taken out of the Greenbelt but it is unclear what use is proposed on these areas (as it is done for the other categories in the key). - Ancient Woodland: what is the information source for this? This category seems to show areas of woodland or scrub but according to our records none of the woodland belts/blocks are designated as Ancient Woodland (with the exception of Begbroke Wood). The key needs revising to reflect this, e.g. by identifying these areas as Woodland rather than Ancient Woodland - BAP habitat: this category appears in the key to a number of the policy maps. Whilst it might be the intention to create BAP habitat this can be difficult to achieve it in some locations such as arable farmland. Feel that a more cautious wording would be more appropriate to manage expectations. Potential alternative wording could for example be Proposed BAP Habitat (if feasible), Proposed area for nature conservation' or similar.

Changes Sought

Reasons for Participation

Recommend that the development context is included on the policy maps. Recommend that detail on future land use is provided. Key to be considered for woodland / ancient woodland.

Potential biodiversity impacts as outlined in the representation.

A key requirements to make proposals PR8 and PR9 sustainable is to alleviate the congestion along the A44 to Loop Farm roundabout. This section of road already suffers significant at peak times and the addition of a large number of cars will overburden this route. The Transport Assessment - July 2017 asserts that a feasibility study has not been conducted, yet this route includes a canal bridge and a railway bridge, as well as a number of properties that restrict its potential widening. Worryingly, no cost is specified for these critical projects, but the Transport Assessment refers to a "very high cost". Furthermore, work to improve this route would presumably require traffic to be diverted to other routes, which would cause major disruption to the entire system for a significant period of time. - Appendix 4 Infrastructure Schedule, Project 6c (part of Policy PR4a (a) (i)) is to "Extend Northbound bus lane on Woodstock Road to Bainton Road (currently stops at Moreton Road)". This is a laughably minimal extension to the bus lane, and in one direction only. It cannot possibly mitigate the effects of the increased traffic into and out of Oxford caused by the Plan. It should be noted that a recent reduction in the frequency of the S3 bus service to make it more reliable show the problems that buses are already suffering as a result of congestion and insufficient provision of bus lanes. If there was space along Woodstock and Banbury roads (inside of the ring road) to significantly improve/extend the bus lanes, then this would surely have already been done. Bus lanes the full length of both of these routes should be a minimum requirement for the feasibility and sustainability of these plans, but this is an impossibility due to the spatial constraints on these routes. - Paragraph 5.47 states that traffic modelling suggests an increase in car journeys of 1.3-1.4% as a result of the planned development. This must assume that the journeys that need to be undertaken by the occupants of the new homes are equivalent to those that are already being undertaken. However, the planned housing is to meet the needs of Oxford and its employers, hence it can be assumed that a far higher proportion of journeys from the new development will be into Oxford, along routes that are acknowledged to already suffer from "high levels of traffic congestion and delay" (paragraph 5.45, P79). - No reference is made to the potential range of error in the modelled calculation of the 1.3- 1.4% increase figure. I note that the Transport Assessment - July 2017, paragraph 7.9, refers to a "predicted 35.9% increase in car vehicle trips in the AM peak (Do Minimum Reference Case to Base Year comparison)". No well-evidenced reason is given for the discrepancy between these values. Also note that the proposed density of housing between Begbroke and Yarnton (1950 + 530 homes) suggests 2,000+ more cars (87% of households own a car, as per Transport Assessment, para 2.23) where if only 50% commute (currently 69% commute by car, as per Transport Assessment, para 2.32) that's potentially 1,000 more cars on the A44 at peak times. - Even if the figure of 1.3-1.4% is robustly evidenced, paragraph 5.47 states that the modelled increase in car journeys of is "a relatively small percentage change". This illustrates significant naivety in understanding of the effects of small changes in a system that is near to, or at, capacity. Figures like this should be considered in relation to the amount of remaining capacity in the system. A 1.4% change in a system with 50% remaining capacity can be absorbed comfortably, but a 1.4% change in a system with 1.5% remaining capacity will clearly bring that system dangerously close to failure. Paragraphs 5.45 and 5.47 both refer to the significant existing delay and congestion, suggesting a system that already has minimal remaining capacity and is close to failure. Anyone with even limited experience of commuting into and out of Oxford all the Woodstock and Banbury Roads at peak times would corroborate this.

Changes Sought

Reasons for Participation

For the reasons I have given above AND the Representations made by the Begbroke & Yarnton Green Belt Campaign which I additionally support and adopt as part of my own Representation in this document, the Plan cannot be changed to make it legally compliant or sound

Would like the Begbroke & Yarnton Green Belt Campaign to represent me at the Examination should it take place.

Proposed Submission Plan - Appendix 4

and should therefore NOT be submitted for Inspection.

PR-C-0271 4413	09/10/2017	Lynne	Whitley		N
<p>Comments</p> <p>Infrastructure Schedule Bus Lane improvement along the A44 Begbroke to Loop Farm. This proposal is physically and financially impossible owing to the restrictive widths of railway and canal bridge crossings. Further restricted by Policy 11a being 'cycle and pedestrian improvements along A44 between Bladon roundabout and Peartree roundabout'. The 'Rapid Transit' route is a pipe dream and cannot be used to justify large scale housing development adjacent to the A44. This would also mean that residents of Yarnton would find it very difficult to cross the A44 to get to bus stops. Policy PR8 Page 6 No. 6 "The provision of a local centre on one hectare of land including local convenience retailing, ancillary business development, café or restaurant, community building and health facilities". One hectare sounds extremely minimal to occupy all these facilities. Most of the infrastructure proposals are not justified, nor effective. Development Brief 18f (p123) Closure of Sandy Lane - This road has long been recognised by Oxfordshire County Council as a key alternative route should there be problems on the A44 or A4260. It's importance is recognised even to the extent of providing salting during cold weather. It is not justified to close this vital link between Yarnton and Kidlington without providing a suitable alternative route. The suggestion to redevelop Exeter Hall intimating that Yarnton people would be expected to travel there for doctors is even more bizarre as they would have approximately 3 or 4 miles each way more than they currently have to get to the surgery.</p>

<p>Comments</p> <p>As a project manager, this schedule concerns me deeply. Costs and sources of funding have largely been indicated as "TBC". Delivery dates are cast into 3 wide terms of 3 years, 4 years, and 5 years. No risks or mitigations have been identified. This is not a plan; it is a wish list at best. Also I would question the evidence on which the plan is based. For example, in paragraph 5.47 of the proposal it states "Traffic modelling suggests that under the highway circumstances that existed in 2013, the 4,400 new homes we are planning for would increase car journeys by 1.3-1.4%." Kidlington, Begbroke, and Yarnton currently have around 8,000 houses. Common sense suggests that an increase of 4,400 houses would result in an increase in car journeys in the area of over 50%. An increase of 1.3-1.4% is not even credible.</p>

PR-C-0682 1681	08/10/2017	Tara J	Prayag		N
<p>Comments</p> <p>The Submission Plan (5.45) north Oxford suffers from "high levels of congestion and delay" and that there are Air Quality Management Areas across the whole city as a whole and on a small section of the Bicester Road due to high levels of pollution. Traffic Levels Oxford Road is regularly at a standstill from 7.00am on a working day. It can take minimum 45 – 60 minutes to get into Oxford City. Roundabout changes at Cutteslowe and Wolvercote have not made things better. Additional traffic will make the situation worse. The Bicester Road is similarly busy at peak times, often coping with traffic avoiding the congested A34. Bicester Road is used as a rat run when the A34 is blocked which happens frequently leading to congestion. The Submission Plan itself in 5.47 says: "Traffic modelling suggests that under the highway circumstances that exist in 2013, the 4400 new homes we are planning for would increase car journeys by 1.3-1.4% - a relatively small percentage change but one that must be seen in the context of a wider picture of existing traffic congestion and delay experienced on the network." You have not explained where you got that figure. Are you anticipating one car per house (and ignoring the fact that most people rent out rooms) – the flat above us has three bedrooms and has two cars. An additional 4400 houses in Cherwell (1410 of which are in the Parish) together with further growth at Banbury, Bicester and Upper Heyford will put further pressure on the transport network through our Community and exacerbate the problem. The new Westgate Shopping Centre is anticipated to be a major attraction drawing visitors in and traffic problems within Oxford related to this are already being reported locally. Bus Services PR2 (a) ii and (d) refer to improved bus services along the A4260/A4165. At present there are examples of bus services being reduced through Gosford rather than increased. The S5 (Stagecoach) bus service no longer runs direct from Gosford, have more diverted routes and are busier and more delayed than previously. Delays are due to increased traffic congestion. No where do you mention the cuts that affected the bus routes across the whole county. Also understand that charges at the Park and Ride are increasing which will not help alleviate the problems. Where will additional space be found for a bus lane on Oxford or Bicester Road? One was there previously and was deemed unsuccessful and did not last more than a couple of months. Residents already experience problems from vibration in their houses from buses/lorries so if the bus lane is brought closer to their properties this will make the problem worse. How will an additional bus lane through Kidlington or Gosford be achieved. Given the above concerns do not believe that Policy PR4 will achieve sustainable development, nor will it be effective in delivering the necessary improvements over the Plan period. Remain unconvinced that the policy complies with the National Planning Policy Framework paragraphs 29 and 30 in terms of delivering sustainable transport and reducing congestion. Air Pollution There are designated Air Quality Management Areas (AQMA) covering the whole of Oxford and on Bicester Road within the Parish. This illustrates that there are recognised air pollution problems within and very close to the Parish. The most recent 2016 Air Quality Status Report for Cherwell confirms (Table 3.1) that nitrogen dioxide concentrations still exceed the national air quality objective for Bicester Road AQMA. Given that the whole of the administrative area of Oxford City has been declared an AQMA it is difficult to believe that areas just immediately to the north of the City Boundary (and within the Parish) will not risk suffering equally from air pollution resulting from increased traffic levels. Within the Oxford AQMA the Wolvercote and Cutteslowe roundabouts are identified as hotspots for pollution both of which are close to Gosford and Water Eaton Parish. We do not consider that Cherwell has fully considered the air pollution impacts of the additional traffic on the Parish. Funding Appendix 4 provides a list of transport infrastructure improvements to support the growth proposed. However, it is noted that whilst many of these are considered of "Critical" costs/funding are to be confirmed. It remains distinctly unclear as to whether these improvements will indeed secure the necessary funding. In addition, many of these schemes, it appears require developer funding for implementation which are clearly yet to be secured. There needs to be a much clearer link between the transport improvements and new developments. Development should not go ahead until critical infrastructure is in place. Proposed Submission Plan - Appendix 4

PR-C-0688	03/10/2017	Susan	Knox				
5659	Comments Pressure on GP and School Services - The surgery is very busy. For regular check-up visits it is necessary to book at least 2/3 weeks in advance. Such an increase in population will make things impossible. Likewise the school is also full having just added more capacity. While new schools will provide places, the road traffic will increase, all adding to the difficulties here.

PR-C-0768	10/10/2017	Julie-Anne	Howe	Oxfordshire Clinical Commissioning Group			N
516	Comments Detailed comments provided on health proposals - Kidlington and Surrounds Neighbourhood Estates Issues:(includes Islip and Woodstock).						
	Changes Sought			Reasons for Participation			
	Oxfordshire Clinical Commissioning Group, as part of their Sustainability and Transformation Plans are working on Locality Place Based Plans. These are currently in draft format, and will be subject to public consultation. The detail around estates provision is underway, and the principle being worked to within the OCCG strategy is that there will be one health Neighbourhood in the Bicester area, made up of two health campus's, and one Neighbourhood in Kidlington, which encompasses joint working with Islip and Woodstock. The intention for the main health hub campus in Kidlington is to have the two existing local practices working together as a single unit to ensure sustainability for the future. The placement of this health hub is undergoing discussion, and is very much reliant on developer contributions for it to go ahead. With the housing proposed in the Kidlington, Yarnton, Woodstock area, all local practices will be significantly impacted upon, with Islip least affected. 1. Three health hub site options have been identified on the proposed plans - the provision of a new health hub is complex and will require further discussion on what is the most suitable location to develop. 2. Public transport links are key to patient ease of access to health services, along with sufficient parking. 3. Fast broadband and IT in place for both the premises and patients generally will support access to new models of health care in the future. 4. Care Home provision produces significant pressure on health facilities and planning requests should be discussed early with the local practices. 5. Funding for infrastructure to support pressures on practices as a direct result of housing growth is essential to ensure a safe sustainable service. Our expectation that a contribution will be forthcoming as a direct consequence of that development. Separate document provided for further details around: A Kidlington Health Hub model, health needs associated with housing growth (page 14), Original response to the part 1 consultation in January 2011. OCCG is keen to continue to work with CDC around the implications of housing growth on health. OCCG do object to this development until we are satisfied that sufficient provision is being made for healthcare infrastructure, for the healthcare needs for the proposed development.

Comments

The Tripartite considers that the list of infrastructure requirements represents the position as at the time of preparation of the Plan in terms of information provided by Council service areas, the County Council, infrastructure providers, statutory undertakers and others. However, there are gaps and other issues (see below), which indicate that the Schedule is not complete, fully justified, effective or consistent with national policy. Therefore, the Tripartite considers that it should be seen as a 'work in progress' because, at this stage, it cannot be relied upon to represent a definitive statement of requirements, estimated costs, delivery methods and funding sources. Infrastructure requirements that relate to more than one "allocated strategic development site" are identified within the Schedule and will need to be considered within the scope of advice in the NPPF (Paragraph 203-205) and apportioned on a pro-rata basis to each site. This will also need to have regard to the impact of the proposed development of each site and the appropriate phasing of infrastructure delivery to ensure that the infrastructure requirements are necessary to make the development acceptable, directly related to the development and fairly and reasonably related in scale and kind to the development. This is likely to be secured and managed through s106 obligations although the Council has not yet decided whether to proceed with CIL. Hence, the Tripartite reserves its position on CIL and any draft Charging Schedule for the strategic development sites. Education Item number 19 in the Schedule identifies the provision of a 3FE primary school at land east of the A44. This is repeated at Point 4 of Policy PR8. However, Point 5 of Policy PR8 makes reference to an additional 2FE primary school within the allocation 'if required in consultation with the Education Authority and unless otherwise agreed with Cherwell District Council'. However, this possible requirement does not appear to be included within the Schedule, which is confusing and inconsistent. It also suggests a disconnect between the evidence base and the Plan, which needs to be addressed in order to be effective, justified and consistent with national policy. Item number 22 of the Infrastructure Schedule includes a 900-place secondary school at land east of the A44 but states in the ninth column (LP1 PR site policy) that it relates to 'all sites'. However, Point 3 of Policy PR8 refers to the need to provide a secondary school on 8.2 hectares of land, without any reference to this development being required by all proposed residential development sites within the Plan (which will generate secondary school children), which is unclear, not effective and inconsistent. The Tripartite considers that the education evidence base dated September 2016 does not support the detailed and prescriptive approach set out in the Infrastructure Schedule. It is the Tripartite's view that the proposed education requirements for the strategic development sites need to be considered alongside the emerging spatial development strategy in other areas, proposals for new schools, capacity available in existing schools and the potential to expand existing schools. All this work has yet to be undertaken, and is required to inform a final decision about what it is appropriate to provide in the Schedule. It is the view of the Tripartite that the current education provisions are not adequately justified by the supporting evidence base, which is not up-to-date, and that the details referred to in the Infrastructure Schedule are premature, not substantiated, presently inequitable and too prescriptive. Revised wording is proposed that provides the necessary flexibility at this stage, pending the further assessment that is required by the County Council, as education authority. Item number 33 of Policy PR8 makes reference to the provision of GP health facilities and the need for private developers to make a contribution towards these facilities. This obligation also forms part of other policies relating to sites proposed to be allocated at PR6a, PR6b, PR7a and PR9. However, the approach to delivery is unclear in the Schedule and whilst one option is through Local Centre space allocated as part of Policies PR6a and PR8, the evidence of need is unclear (from the Schedule and the OCCG). The relevant LP1 PR site policies column refers to PR6a, PR6b, PR7a, PR7b, PR8 and PR9, which suggests that the need is generated by all of these developments, yet the requirement is indicated to be borne by two sites. This is not fairly and reasonably related in scale and kind to the development and therefore not consistent with Paragraph 204 of the National Planning Policy Framework (NPPF). As a consequence, the Tripartite questions this requirement and its reference in Policy PR8 as it lacks clear justification and effective recognition that any GP health care need would be generated by many other development sites in the locality and costs/land costs should therefore be apportioned on a pro-rata, equitable basis to satisfy the NPPF. Another alternative is for the redevelopment of the existing GP surgery site if this is appropriate and justified by the evidence base. Item number 41d suggests that 79 hectares of land east of the A44 should be retained for compensatory open space, countryside access and improvements. Item number 44h suggests 21 hectares of land is needed for public open space as informal canal side parkland as part of the Policy PR8 allocation at Begbroke. Item number 47b makes reference to 12.6 hectares for a nature conservation area as part of the allocation at PR8. However, these areas are different from those listed under Policy PR8. As drafted, Policy PR8 sets measurements of 29.3 hectares of Local Nature Reserve, 12.2 hectares for a nature conservation area and 23.4 hectares of publicly open green space. This is an anomaly albeit that the Tripartite considers that the areas and measurements should only be seen as "indicative" at this stage. Given the need to avoid coalescence, protect the environment, enhance biodiversity, achieve sustainable development and offset the removal of land from the Green Belt (as supported in the Government's Housing White Paper – 'Fixing our broken housing market' Cherwell Local Plan 2011-2031 (Part 1) - Partial Review – Oxford's Unmet Housing Need – Proposed Submission Representation Form (February 2017) the Tripartite do not object to the general proportion of the site to be allocated via Policy PR8 being proposed for green infrastructure. However, the Tripartite consider that the Infrastructure Schedule should align more closely with the numbers/areas included within Policy PR8 and the addition of the word "approximately" before those areas to allow the precise configuration and extent to be established through a master planning approach to the development of the site (secured via a Development Brief and outline planning application).

Changes Sought

Amend Item numbers 19 and 22 and replace with: "Education requirements need further assessment and consideration alongside the emerging spatial development strategy, the strategy in other areas, proposals for new schools, capacity available in existing schools and the potential to expand existing schools. All this work has yet to be undertaken by the Education Authority and is required to inform a final decision about what it is appropriate to provide on the proposed strategic development allocations and within related policies. This will include a mechanism that recognises the alternative potential use of the land, the demand arising from the area and the need to ensure that the requirements are related in scale and kind to the proposed development." Delete Item number 33 as the requirement and its reference in Policy PR8 lacks clear justification. In addition, it fails to recognise that any GP health care need would be generated by many other development sites and costs/land costs should therefore be apportioned on a pro-rata, equitable basis to satisfy the NPPF if the requirement can be justified. Alternatively, this could be amended to include the potential to redevelop the existing GP surgery site funded through pro-rata contributions from each strategic development site. More closely align the measurements and areas included within Item numbers 41d, 44h and 47b with those included in Policy PR8 and state that these are "indicative" only at this stage. Delete Item 44d. If this land was included to facilitate the provision of the proposed pedestrian, cycle and wheelchair bridge over the Oxford Canal to enable the site and public bridleways to be connected to the proposed allocation at Stratfield Farm (Policy PR7b), this could be addressed through an amendment to refer to the need to include just the land required for the bridge and public bridleways to achieve this objective. A similar requirement will be needed in respect of Policy PR7b. Delete Item number 46 as investigation and remediation of the landfill site is likely to be costly and unnecessary to the Policy PR8 allocation and its wider development and could be retained as existing – green infrastructure. Provide a reference that the indicative levels for contributions for education, health, etc. can be discussed with the Council and County Council and any s106 agreement can manage pro-rata contributions so they fairly and reasonably relate to the scale and impact of the development.

Reasons for Participation

The land owned and controlled by the Tripartite comprises some 86% of the largest draft allocation within the Plan and as such, occupies a unique and vitally important role in meeting Oxford's Unmet Housing Needs. As such, the Tripartite consider it is essential that it is present [and/or represented] and participates at the Examination in order to assist the Inspector by responding to any queries that may arise and supporting the assessment of the soundness of the Plan.

This is physically impossible owing to the restrictive widths of the railway & canal bridge crossings plus the underpasses at Peartree Interchange. It is further restricted by Project 11a being "cycle & pedestrian improvements along A44 between Bladon Roundabout & Peartree Roundabout", the so called "Rapid Transit" route along the A44 which is only possible if Govt. grants are forthcoming. This bus lane improvement cannot be used to justify large scale housing development adjacent to the A44 at Yarnton and Begbroke .

Proposed Submission Plan - General Comments

PR-C-0001	19/07/2017	Karl and Karen	Bushell	
1	Comments Have been Yarnton residents for over 30 years and have seen the village grow in population. Are not opposed to sensible expansion but plans to build 4400 on GB land are unbelievable. If you proceed with any development on GB land you will go against the definition of GB in the NPPF. At the moment the local roads and doctors surgeries are unable to cope, and local wild life is being pushed away. Strongly object to the current plans.			
	Changes Sought	Reasons for Participation		

PR-C-0001	19/09/2017	Karl and Karen	Bushell	
4792	Comments Strong objections to the proposed mass development of our area that makes no practical sense and will destroy our green belt. Feel that you need to seriously review because it breaks all the current guidelines for green belt protection. It is a struggle to get out of the village at the moment without additional traffic. Unless you can reinstate the station at Yarnton and a tram route to Kidlington, Oxford and Witney everything will come to a stand still. 4 week wait for doctors' appointment and need to go to Kidlington. Local surgeries cannot cope at the moment. Where is all the wonderful local wildlife to go? Many deer, badgers, foxes, other small animals and reptiles plus an array of birds rely on the area around Yarnton for their existence. What arrangements have you made for their lives?

PR-C-0002	05/10/2017	Mrs Denise	McKillop	
1179	Comments Disgust and annoyance to the future proposal for vast amounts of additional housing in the Yarnton and Begbroke villages, to the point where both villages will be permanently linked together. An action against Greenbelt Policy. The proposed land to be built on is in the Green Belt Area which is a further important point. This should not be allowed to happen as this land will be lost for ever to future generation. Oxford as a city has lots of brown site areas that could be built on. The houses built will not be for local people, due to prices predicted they are more than likely to be built for commuters travelling to and from London on a daily basis. Being a member of the Woodstock and Begbroke Health Walking Groups we walk the various fields in the area, on a weekly basis, that in the very near future will be built on. The houses built will not be for local people, due to prices predicted they are more than likely to be built for commuters travelling to and from London on a daily basis. There is clearly a lack of understanding of the difficulties that already exist in this area regarding traffic conditions throughout the day. Building additional homes that are no longer required will add to these difficulties.			
	Changes Sought	Reasons for Participation		

PR-C-0002	21/07/2017	Mrs Denise	McKillop	
2	Comments 1). The proposed planning goes against CDC own policy on not building on GB land except under exceptional circumstances. There are no exceptional circumstances as there are plenty of brown area sites in Oxford to be used for housing. 2). Yarnton will quadruple and the necessary services to absorb this massive growth will be years behind. 3). The atmospheres of Yarnton and Begbroke will change drastically for ever. They will no longer be villages but extended suburbs of Oxford. CDC stated that these villages should be kept separate so by taking this action CDC is going against its own policy. 4). Yarnton and Begbroke already have extreme traffic problems, not only during commuter times but also during frequent weekend events at Blenheim Palace. 4400 new homes will invariable mean 8800 new cars making the A44 unbearable. 5). Blenheim Palace has been granted additional housing as well, which means again an increase in traffic and pollution. 6). This proposed development will not assist the housing shortage in Oxfordshire as there will be little first time housing being built. The development will be for people in Oxfordshire who commute to London. It seems a money making project. CDC will benefit from increased council tax revenues. 7). Active member in the village who loves living in a small community where the majority of people know each other. Enjoy being able to walk to the countryside. GB should be allowed to remain for future generations. Once built on the GB it is lost for ever. 8). Yarnton has historical footpaths relating back to the Civil War. These are very well used by local people. Regular walking helps with mental and physical health. 9). Housing demand has changed drastically since Brexit, this planned development was devised before Brexit and therefore out of touch with recent changes in this country.			
	Changes Sought	Reasons for Participation		

PR-C-0004	26/07/2017	Mrs Bridget	Watson	
4	Comments 1. This is GB land and as intended in the original legislation, should not be build on and was intended to retain distinct boundaries between individual settlements. If development went ahead on the proposed scale there would be no distinction between Yarnton, Begbroke and Kidlington. It would also set a precedent and perpetuate the urban sprawl elsewhere. 2). Already congested traffic problem between Begbroke / Yarnton to and from Oxford. The impact on this already congested stretch of road would be intolerable. 3). Oxford City Council has not made sufficient effort to provide unmet housing needs on existing brownfields sites within the City. eg Oxford Golf area. Has enough effort been made to identify alternative sites surrounding Oxford? 4). In view of Brexit are the numbers of new houses necessary? The scale of housing should be revisited. 200 extra homes have already been build in Yarnton since 2011. 5). " Affordable homes" within this development will not be affordable for most people, particularly young people. 6). Proposal will have a detrimental effect on local infrastructure. It is already difficult to get doctor's appointments. Development will exacerbate this problem. 7). The loss of the local chicken and deer farm and other farm land between Yarnton, Begbroke and Kidlington will completely destroy the nature of this area. 8). The proposal would have an adverse effect on the diversity of local wildlife.

Proposed Submission Plan - General Comments

PR-C-0005	17/07/2017	Dr Ian	East	
5	Comments			
<p>Strongest objection to large-scale building on GB without regard for meeting actual need, effective transport, availability of amenities, true community and catastrophic effects on existing settlements. GB was constituted to avoid sprawl beyond and between existing towns. There are no exceptional circumstances which might overwhelm that purpose, merely the desire to make huge and unwarranted profit. The surrounding roads are already hopelessly congested and cannot cope with additional demand. To override the GB protection will effectively destroy it. The precedent will be set. It will undermine all alternative protection for the countryside and rural landscape. It will completely fail to provide truly affordable housing so desperately needed. Developers will have no interest in low-cost housing where land has become plentiful, work remote and adequate transport and amenities absent. They will build unaffordable housing for wealthy London commuters lured into the area. It invites corruption of our planning system and destroys confidence in it. Two Alternatives suggested. First add 10% (on average) to each existing settlement, improving the viability of local amenities. Second, raise the density of housing within larger towns and cities, where transport and amenities already exist. Neither option has been considered presumably because they would make less profit.</p>

PR-C-0006	17/07/2017	Stefan	Lutener	
6	Comments			
<p>Resident of Yarnton, exceptionally grateful to have been brought up in the this wonderful part of Oxfordshire. Devastated that no prior consultation has taken place with local residents. People understand the need for more homes but not in the huge numbers and densities planned. The plans would destroy the historical identity of all three communities and cause irreplaceable damage to the wildlife environment and beauty of the GB surrounding these villages. Infrastructure is at breaking point with the A44 and A34 unable to cope with the amount of traffic. These proposals will make the situation considerably worse. New housing projects should be shared with all the Oxfordshire villages in the surrounding areas, not just the few closer to Oxford. For example, Islip and Long Hanborough have excellent train links to Oxford. You risk spoiling the GB for future generations. This area is the gateway to the Cotswolds. It is imperative that these villages keep their identities and grow in a linear approach and not mass building. The newly constructed Cresswell Close Development in Yarnton appears to have drainage problems. This is a fundamental lack of infrastructure planning which concern and fear that this lack of foresight could be replicated again. The Oxford GB is precious to local residents and should not be destroyed and lost forever on a whim.</p>

<p>Urges Council not to go ahead with this mad planning.1). Yarnton resident near A44. It takes a long time to get into Oxford due to A44 traffic and 50 mile an hour speed limit. The proposed houses will treble the problems. If events at Blenheim it can take over an hour to get to Woodstock. 2). Doctor's appointments take up to 2/3 weeks now. are you going to supply more doctors and surgery's. Our small school is bursting at the seams. 3). It is GB and the law is that you cannot build on GB land. Why are you allowed to break the law? 4). Our children have to move away from the villages because they cannot afford even your affordable housing. We need to think about our own people to keep them housed before we think about Oxford. Oxford need to look closer to home before encroaching on GB which will be lost forever if allowed to be taken away.</p>

Proposed Submission Plan - General Comments

<p>PR-C-0011 11</p>	<p>19/07/2017</p>	<p>Mrs</p>	<p>Patten</p>	<p>Comments Object to the proposed development for new housing in Begbroke and the surrounding areas. 1. It will destroy the form and character of each village. 2. Put pressure on the infrastructure. Local roads are regular jammed, schools oversubscribed and health services at their limit. No benefit for the residents. 3. The closing of Sandy Lane will create long delays at the lights of A44 turning into Langford Lane. Traffic cannot fit on the slip road, causing accident risks on the fast lane of the A44. 4. Irretrievable damage to large areas of countryside and serious loss of wildlife habitat. Ancient footpaths such as Frogwelldown Lane, the bridleways and Shakespeare Way give access to open country for walkers, riders and cyclists. The loss will be devastating. 5. GB encroachment flies in the face of CDC's own policy and it's agreed plan in 2015 together with the expressed wishes of most local residents. Public survey commissioned by CPRE Oxfordshire, 76% of Oxfordshire residents were in favour of protecting the GB, with the majority seeing housing development as the greatest threat. Do not want Begbroke to be surrounded by houses.</p> <p>Changes Sought Reasons for Participation</p>
<p>PR-C-0012 12</p>	<p>19/07/2017</p>	<p>Shahida</p>	<p>Zubair</p>	<p>Comments Deeply shocked and appalled that the Council is proceeding with plans to develop 4400 houses on the GB between Begbroke and Yarnton. Rep quotes the purposes of the GB as outlined in the NPPF. Rep also includes quote from CDC's Green Belt Report (April 2017). The proposed development will radically change the character of Begbroke and Yarnton. It will create a new town by stealth. The very essence of our countryside will be lost for future generations. The GB hosts a diversity of Ecology. This high density development will destroy their natural habitat forever. These habitats and wildlife give us wellness and wellbeing. The farmland in the GB is an area to walk and breathe fresh air. The GB is absolutely crucial to preserve and protect as it is a carbon sink for the pollution from Oxford. This development will contribute to more pollution from traffic and therefore we will suffer from asthma and other respiratory problems. Sandy Lane is a very important route for the residents of Yarnton and Begbroke for access to daily facilities and amenities in Kidlington. Closing it would force us to use the heavy congested traffic on the A44 to Frieze Way. This proposed development will definitely exacerbate this congested situation. Thousands of international tourists come to visit Blenheim Palace and the very rural approach to this national jewel will be marred and defaced forever by merging the villages. It will leave an negative impression on visitors.</p> <p>Changes Sought Reasons for Participation</p>
<p>PR-C-0013 13</p>	<p>19/07/2017</p>	<p>Alexis</p>	<p>Livadeas</p>	<p>Comments Concerns expressed about the proposed housing development around Kidlington. These are due to (1) loss of GB and (2) the increased traffic flow. If the land next to Garden City at the south side of Kidlington is built on, this will leave nowhere for local people to walk and enjoy a little piece of countryside without having to get into their cars. The proposed site is right next to a nature reserve. This will be adversely affected by the housing development. Enjoyment of nature is known to promote good health and well-being and to have to drive to do this is, when we have this on our doorstep is perverse. Concerns of already horrendous traffic problems around the southern side of Kidlington at rush hour will be made worse by hundreds of additional vehicles. At some times of day, it is impossible to leave the Kidlington housing estates because of backlog of traffic. Stationary and slow moving vehicles already produce significant amount of pollution at these times.</p> <p>Changes Sought Reasons for Participation</p>
<p>PR-C-0014 14</p>	<p>20/07/2017</p>	<p>Derek</p>	<p>Taylor</p>	<p>Comments Disgusted and horrified at the proposed destruction of the GB and the associated environment. Brought family down from the Lancashire Cotton Mill Town to live in a more rural and unpolluted environment. This housing will be accompanied by traffic pollution, natural pollution and remove forever the rural atmosphere. Fumes from the University Science fume cupboards can just about be absorbed in the existing surrounding land. High density housing will adversely affect on the environment. Reconsider the proposed demolition of our GB.</p> <p>Changes Sought Reasons for Participation</p>
<p>PR-C-0015 15</p>	<p>20/07/2017</p>	<p>David F J</p>	<p>Pollard</p>	<p>Comments As a Begbroke resident for 30 years wish to object to the proposed housing development on GB around Kidlington, Yarnton and Begbroke. The massive development of 2480 houses would destroy this rural community forever. Apart from pollution much of our wildlife would be lost. Examples of the wildlife are set out in the rep. In 2011 when the Science Park extended it's "link road" to the A44, across GB land, they promised to ensure protection of the bat and badgers population. How can they be protected and left in their natural environment when they lose this environment? The villages of Yarnton and Begbroke will become "estates" of the larger village of Kidlington and no longer unique by their separation. Does the planning committee know the area as it is some distance from Banbury? Proposals are driven by City of Oxford, or perhaps Oxford University, who already have an foothold in Begbroke Science Park. The A44 is the arterial road that runs through Yarnton and Begbroke, being only 6 miles from the City outskirts. With the proposal of Sandy Lane being closed off to the traffic, the additional traffic would be immense and the road quickly gridlocked especially at peak hours. This would have a dramatic impact on Oxford and Blenheim Palace. The Palace has many events during the year when the A44 is particularly busy and sometimes traffic is stationery back up to Langford Lane traffic lights. Palace traffic and northbound traffic as well as Woodstock traffic would be severely impacted by the traffic. The road would not cope with this and this effects everyone living there. The Science Park traffic lights on the A44, are timed to give preference to the Science Park. The rep describes in some detail the current and potential problems caused by this junction. New housing development will add to the already A44 morning-traffic gridlock. This has not been thought out, or issues ignored. Flooding. The Rowel Brook runs under the A44 west to east through the village. The houses in Fernhill Road back onto it. On Many occasions this has flooded the banks and washed up to the backdoor of these houses. The Rowel Brook runs along the entire top of the proposed housing plan. Has anyone considered the impact of this threat for the new houses? The bottom of Springhill Road, historically floods. This has never been resolved and new houses will not help but add to it. Infrastructure - The current schools struggle to cope with the present population. A very large school complex, plus shops and facilities and doctor's surgeries and better and more timely bus routes are needed. Do not think the proposed housing is an 'exceptional circumstance' especially when it is to meet the needs of Oxford and not the GB villages. CDC should be serving our needs and our wishes and not taking instruction from Oxford, which has its own council.</p> <p>Changes Sought Reasons for Participation</p>
<p>PR-C-0016 16</p>	<p>21/07/2017</p>	<p>Stuart</p>	<p>Earp</p>	<p>Comments Horrified at the proposals for 4400 houses around Yarnton and Begbroke. Strongly object for the following reasons: 1. Would become an urban sprawl. 2. A44 would be gridlocked and clog up the A34. Lorries would be stuck for hours, losing economy money. 3. Local doctor's surgeries and amenities in general could not cope. 4.The GB is precious and keeps people sane - do not destroy it.</p> <p>Changes Sought Reasons for Participation</p>

Proposed Submission Plan - General Comments

PR-C-0017	22/07/2017	Mrs Catherine	Morley	
17	Comments			
Expresses huge concern for the proposal to build 4400 houses on GB between Yarnton, Begbroke, Kidlington and Oxford. Government made a promise that new houses would not be built on GB. Volume of A44 traffic at present is at capacity during rush hours. It takes 5-10 mins to pull out at Rutten Lane roundabout due to traffic. With proposed Sandy Lane closure this will just compound the problem. How will you solve this problem if an extra 8-10.000 people will be using this road? Other concerns include air pollution, destruction of countryside, council funding of road repairs and local amenities (doctors surgery, schools etc.). This proposal is unsustainable and has been made as a reaction to the demands for extra housing. It is a 'tick box exercise' without careful consideration for the consequences.

A great deal of effort has been expended on presenting the proposals in the most glowing and favourable way. Phrases such as 'protecting and enhancing', 'seeking to conserve, 'respecting the identity of' and 'mitigation' pepper the text. Jargon terms such as 'wildlife movement corridors', 'place shaping' and 'green infrastructure' seek to reassure the sceptic. Cherwell DC is already committed to building around 22,800 houses in its district. If this proposal to build a further 4,400 houses goes ahead then no amount of 'mitigation' is going to lessen the huge impact it will have on the environment and existing local communities. The submission also goes to some lengths in explaining the legal obligation Cherwell DC has in obliging Oxford City Council in meeting their 'unmet' housing need. A housing need based on the contentious SHMA report. Against a background of Brexit uncertainty, weak public finances and oft changing political imperatives, any claim to know what future 'need' is, should surely be treated with caution. As recently as March 2012 in the Governments own National Planning Policy Framework (NPPF) it stated, "The Government attaches great importance to Green Belts. The fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open; the essential characteristics of Green Belts are their openness and their permanence." Green Belts were set up with 5 guiding principles. It is hard to see how the Proposed Submission meets any of these criteria. If by the stroke of a pen we can invalidate the protection offered by the Green Belt, then it may as well be abandoned altogether. Citing 'exceptional need' can be an excuse wheeled out every time a developer or land owner seeks an opportunity to profit. There is a need for affordable housing and the creation of jobs, but there is also a duty on those of us who care to speak up for the British countryside. If we are condemning future generations to a bleak urban landscape, where their experience of the natural environment is confined to token 'corridors of green space', then we shall have failed.

Dividing land use planning between 5 districts creates difficulties when planning the bioregion comprising most of Oxfordshire. However, Cherwell has functional links to the surrounding Districts through, wildlife corridors, water catchment & drains/streams/rivers as well as transport links & the housing intended to meet Oxford's needs. Soil quality has been neglected by those engaged in urban development.				
	Changes Sought			Reasons for Participation
	Either through the Duty to Cooperate (or a Statement of Common Ground) or a Joint Spatial Plan there should be concerted attempts to coordinate the use of the countryside in terms including: - strategic tree planning, soil protection, wetland creation, water retention, run-off prevention, food production. All open space not given to recreation should be planted so as to provide carbon sequestration, food, enhanced drainage/water retention, improved air quality and increased well-being/mental health, following the practice developed under Forest Gardens. Such plantings provide a step towards urban food production & can be a key part of climate change adaptation (as well as mitigation through carbon sequestration). Cherwell should adopt a Soil Strategy, using green spaces to build & improve soil. Local food systems should be promoted through the use of legal agreements to secure affordable land & housing to create smallholdings to mitigate the impact of taking valuable land on the edge of settlements for high density housing. (refers to website).

20	Comments			
No concern has been made re. the main issue, which needs to be confronted up to 2031 & beyond, the need to reduce carbon emissions by at least 6% p.a. (or even double that rate). The potential of the land use planning system to reduce carbon emissions by 50% (ref made to web link) will be missed unless addressed coherently &, holistically to achieve sustainable development as per the NPPF. The Plan 'must' mitigate against climate change (s19 of the Planning & Compulsory Purchase Act 2004) & contribute to the achievement of sustainable development (s92 of the PCPA 2004). This would only make sense if 'mitigation' meant to prevent & substantially reduce, & not just minimize or allow to happen, but at a slower rate. Sustainable development must not disadvantage future generations. The scale of the unmet need has not been objectively assessed. It relies on the 2014 SHMA that hasn't been scrutinized/critiqued. An extraordinary omission given the serious consequences (i.e. extensive GB development), & the obvious flaws in the analysis (i.e. equating demand with need as in the assessed 'need'; for more smaller houses in the affordable sector that has a greater need larger dwellings).				
	Changes Sought			Reasons for Participation
	The overarching vision for the local plan should include the following objectives: a zero carbon district/city by 2050 and aiming to be carbon negative; a water neutral region; not producing any waste water that is not already treated or released at a rate faster than the volume of river and rain water entering the local area/catchment; planning to reduce waste to zero; eliminating waste to landfill; and a net reduction in road traffic growth.			

Proposed Submission Plan - General Comments

PR-C-0019	24/07/2017	Daniel	Scharf					
21	Comments							
Unclear why the Plan refers to overcrowding in the City at under 5% but not the level of under-occupation which is over 60%. The Plan is right to depart from the housing mix recommended in the 2014 SHMA (increasing the number of smaller dwellings) but doesn't question the SHMA in other ways. The Plan should include both Unlocking England's Hidden Homes (refers to website) & the 2016 HAPPI 3 report on housing for the elderly (refers to website) to its evidence base & take account of in the main findings. The problems & opportunities of housing the older generation have been underestimated. It should not be looking at housing for the elderly, but ensuring that most/all new developments are suitable for them. Given the state of the existing housing stock, the needs of the ageing population are unlikely to be met even if every new dwelling within the country or local plan area were made suitable for an elderly household. Refers to APPG 2016 (approx. 8 million, 1/3 of all households, could be looking to downsize). Re. self-building & community self- build/finish you are unaware of the potential of 'custom splitting' in both Oxford & Cherwell district to meet the needs of both ageing & younger households (refers to website). It is Government policy that self/custom building should be encouraged in order to make a substantial contribution to housing supply. The Council will find it difficult to meet their legal duty to provide serviced plots for individuals & associations of individuals on the statutory registers unless directed exclusively to Graven Hill (not on the plan to meet the City's needs). Encouraging households with 'space to spare that they would be happy to share' to register this interest could reduce under occupancy & allowing downsizing in place to address the crisis in social care. By making a deep energy refit a condition of the sub-division of an existing dwelling into 2 or more units, there could be a substantial decrease in the 80% of dwellings which are currently EPC D or below. The sustainability of custom splitting makes the proposal to spread Oxford out into the Green Belt look comparatively if not extremely unsustainable. Incidentally, the Plan should be providing for "consequential improvements" in the case of any extensions to buildings which do not currently meet a zero carbon standard. The merits of Lifetime Homes should be reconsidered in favour of a combination of Lifetime Neighbourhoods and custom splitting. The former can incentivize under-occupation while the latter would increase environmental & social sustainability. If, nationally, custom splitting could help raise the level of self/custom building to 20% of 200,000 p.a. (currently 7% of about 100,000) as in many other world cities as well as being an objective of central government, then the scale of new building in both the City & the adjoining districts could be reduced. Building in the GB should only be proposed/allowed when all reasonable alternatives have been explored.

Objection to building in excess of 4000 houses around Yarnton and Begbroke. The proposals will adversely affect local residents including traffic, drainage and the destruction of the GB. There would be an increase in traffic between Oxford and Woodstock and local residents would be seriously affected by the increased congestion, which is already a problem on a daily base. Local residents should not have to suffer loss of access to the city - more vital now than ever following the loss of services which were hitherto accessible in the villages. Elderly residents will be particularly adversely affected. Urge planners to find alternative sites in the City. E.g. Southfields golf course; move Park & Rides outside the city and use that land for building. Protect the GB.

Objection to building houses on GB around Begbroke and Yarnton. It would have a devastating effect on both villages. 1. Increase in traffic volume would make it impossible to move during the rush hour. The number of new houses would bring at least 4000 more vehicles onto already congested roads. 2. Medical services in Yarnton are already stretched to capacity. 3. Primary school would not be able to cope with increased numbers. Secondary school pupils travelling to Woodstock would need to be picked up by 7.30am to ensure they arrive in time to start lessons. 4. When the last development for 160 houses was put in for planning Thames Water objected due to increased supply of water and effluent. Still problematic now. How are they going to cope with 4000 houses? 5. Closing Sandy Lane would cause greater congestion to the A44 and A4260 roads. 6. Increase of pollution due to extra vehicles and utility needs, when we're being asked to cut pollution. 7. There is an planning application to build more houses in Woodstock which will also add to the congestion of the A44. Finally, is it not time that the City Council stopped building on commercial sites and concentrated on their own housing needs, before going for the easy option to build on local GB. There are several commercial sites that do not have full occupancy. Build on brownfield sites rather than the cheaper GB option.

Objection to current plan. In seeking to respond to Oxford's needs it pays little or no heed to the needs of Kidlington and ignores practical considerations. 1. Water-table in the south of Beagles Close, is high and building will raise it further. Even if no serious flooding it will be very difficult to get house insurance. Water Eaton Lane acts as barrier to flooding from the Cherwell. Alterations to cope with increased traffic including removal of trees, will undermine this function. 2. It is undesirable to build houses directly underneath power-lines and the costs of re-routing this or cabling underground need to be considered. 3. in the areas bordering the A34 allowance should be made for the expansion of the dual carriageway into a 3-lane motorway. 4. One must ask - who will profit? Answer - probably not the homeless of Oxford, but London workers profiting from the new Parkway Station.

31	Comments							
Objection to the development 1. There will be an strain on the already over crowded infrastructure, which is not well enough maintained. 2. It appears deliberately to move the stress away from Cherwell towards Bladon and Woodstock which is a controversial political move. 3. There are other, long time un-used areas, that should be used before pressing into GB. 4. Any more development in an area close to a World Heritage site is unacceptable. However some might say this is beneficial since the World Heritage status might be removed. Is this the objective? 5. Double standards emanating from Blenheim Estate regarding development and the interested parties. How can it be demonstrated that this is not correct? (Statement of intent alone are not sufficient) 6. Consideration needs to be given to the residents and to traffic flow and wear and tear, which is magnified with events at Blenheim Estate. 7. Can we be sure there is no nepotism, in the decision within the parties concerned?

Proposed housing development in Gosford and Water Eaton infringes upon the GB. It is vitally important that this 'green' space is protected to prevent urban sprawl. Do not want to live in the middle of a new estate. 1. Traffic though the village on the A4260 is already gridlocked road during peak periods so imagine increased traffic from another 4000 houses. 2. Infrastructure would not cope. We would need more Government funding. 3. Pollution levels at the junction of the Miller and Carter Restaurant, Gosford and Water Eaton and Kidlington is already the highest in the area and the health of our families will be put at risk. 4. Our health centres are bursting at the seams now and there will not be enough doctors etc. to cope. Schools will be needed to meet the needs of these extra families. 5. Oxford Parkway Station already overcrowded at peak times. Increased numbers which will result in more cars on already crowded roads. 6. Our historic village should be preserved in it's entirety and it should not be an overspill from Oxford and London and should not be merged with Yarnton and Begbroke. The GB is our legacy. Do not build on the GB.

<p>Objection to proposed 4000 new houses on GB around Yarnton, Begbroke and Kidlington. 1. Loss of GB for future generations. Brownfield sites should be developed first. The nature of our historic villages will be changed forever. Without the GB separating us, we will become a suburb of Oxford. 2. Serious concerns around the impact on traffic for the local area. The A44, is already gridlocked at peak times and cannot imagine the impact of a further 4000 households. Proposed restricted access via Sandy Lane. This is an key route for Yarnton residents to facilities in Kidlington. 3. Concerned about the impact on the existing infrastructure - what will the provision be? The impact on schools - education, doctor's appointments (already difficult), wear and tear of the roads (already poor condition) with 4000 more households? Overall it is the size of the development that is of most concerns. The density is too much for the local area and not in keeping with the existing villages. But mostly the beautiful and important GB will be lost forever.</p>

<p>According to the Cherwell District Council Local Plan, "the essential characteristic of a Green Belt is its permanence" and "detailed Green Belt boundaries defined in adopted local plans should be altered only exceptionally". Nothing in the Plan or associated documents provides a convincing case that the current need can be considered as exceptional. It is an acute, temporary need that results from poor previous planning and failure to distribute employment and wealth throughout the country. Wider, long-term planning failures should not be mitigated by destruction of the Green Belt for short term and short-sighted gain. The housing requirement figures are at best debatable, insufficient consideration has been given to alternatives to meet Oxford's housing needs within Oxford itself, and Cherwell District Council's childish initial attempts to push this plan through with the minimum statutory consultation are a clear indication that what is being proposed here is not right.</p>

<p>A key foundation of the Plan is that its intention is to meet Oxford's unmet housing need. However, little consideration seems to have been given to the significant risk that a proportion of this housing is likely to be occupied by people working in London. Since the opening of Oxford Parkway station, there has already been a notable influx of individuals who choose to live in the settlements north of Oxford and commute into London. This is evidenced by the major inflationary impact that the creation of the station has had on house prices. While this has seriously affected the affordability of housing for people who work in Oxford and the local area, it is still very affordable by London standards. Fear that we will be destroying our Green Belt for the sake of London's unmet affordable housing need. Therefore, the Plan is neither justified nor effective and thus is UNSOUND. No consideration seems to have been made to the effect, particularly of Policy PR9, on through routes within Yarnton. Rutten Lane is already used extensively as a cut-through from Cassington Road to the A44. The volume and speed of vehicles along this road puts the children using the preschool, school and park, the elderly living in the residential home and everyone going to the social club and doctor's surgery at risk. This will only get busier with the expansion of the village, thus putting these most vulnerable groups in our society in even greater danger.</p>

<p>Opposes the additional 4,400 Housing Development Areas - Yarnton, Begbroke & Kidlington. When do you say "enough is enough". Our green & pleasant land is diminishing through the building of houses. It will never be returned to us. Britain is / was re-known for its pubs and villages, with its beautiful countryside. Most of the pubs are now gone, built on with flats, houses and supermarkets. How much more land should be sacrificed? Villages are being expanded to more than their capacity, until they can no longer be called villages. But how far do you go before it's stopped? Green belt land is there for a good reason, and is unbelievably being challenged as if there will be no consequences. We feel it's unfair that Oxford University should have more say than the residents of these villages. All too often we hear that houses have been built on the Thames Flood Plain, and then a solution has to be found when problems arise. It will be the same for some of these areas. It is impossible not to see or be affected by the growing gridlock of traffic at peak times or when there are shows / events on at Blenheim Palace etc. now, yet alone if there were even more traffic! Is there to be yet more congestion? The transport infrastructure can never be made to cope with expansion to hold more. Local facilities will suffer. Doctors, schools, police, fire, ambulances and shops will be unable to cope. Waiting time for the doctors at present are two to three weeks, unless an emergency appointment is made. Any social housing being incorporated in these plans will bring additional crime and antisocial behaviour. Our insurance premiums will go up and our house prices will surely go down. We understand how fortunate we are to live in Yarnton ourselves, but like most people here we did pay a 'HEFTY' premium to do so. This was far from easy for us as we could barely afford it. We moved from the Headington area due to the ever growing dense housing and population. We believe the different councils should communicate and convene more with each other. The Oxford City Council has just built just 12 luxury flats on the old Northway School site. Surely with such shortage of standard houses, this site would have been ideal for 100+ houses. Could this be happening all too often? Why should the 'protected' green belt boundaries be reduced when this must be happening everywhere? Then a decision of 'exceptional circumstances' would not apply to this situation.</p>

Proposed Submission Plan - General Comments

PR-C-0031 31/07/2017 Michael Warren South Northamptonshire Council

36 Comments

This Council raises no objections to the proposed submission documents, which appear to have been well-considered, based on the evidence gathered. The CDC vision responds to the specific needs and growth of Oxford, the relationship between housing and employment, and the importance of building sustainable communities that are well related to Oxford while respecting the Cherwell context. The Plan provides for new development that meets Oxford's agreed, identified housing needs, supports the city's world-class economy, universities and its local employment base, and ensures that people have convenient, affordable and sustainable travel opportunities to the city's places of work, study and recreation, and to its services and facilities. In conclusion, SNC can fully support the Submission plan for meeting some of Oxford's unmet housing needs within Cherwell District.
