

Representation Number	Respondent	Question or Option Number	Comments
LPR-B-001	Eric Baldwin	General	Is there any point as you have not listened to the residents in Begbroke and the surrounding area and are clearly in the pockets of Oxford University colleges who wish to sell land.
LPR-B-002	Michael Davy	Question - Policies for Climate Change, Sustainable Construction & Renewable Energy	Requirement should be introduced for all new developments, residential and commercial to incorporate PV panels on the roofs.
LPR-B-002	Michael Davy	Bloxham	Comments relate to Bloxham. Air quality has deteriorated due to increased traffic movements following large scale development, including a noticeable increase in traffic through the village. To mitigate climate impact we need to radically re-think the way in which we live. Banbury town centre is in dire need of regeneration. Decisions to grant the Gateway retail park has negatively impacted the town centre. It would be beneficial for local communities to benefit directly from the allocation of Section 106 funds rather than them being re-directed to other areas.
LPR-B-002	Michael Davy	Option 30	future developments should be concentrated in urban areas and not in rural areas which do not have the infrastructure to support an increase in population. Development on previously occupied sites, such as Upper Heyford, should also be supported but with the proviso that the infrastructure must be developed to meet the increased need.
LPR-B-003	David Rogers	Option 1	The plan should support OCCG to develop a plan suitable to ensure delivery of new primary care infrastructure. Recent developments in the council area have not included primary care contributions. A safe and suitable cycle route from Oxford to Banbury should be considered. Queries plans for managing surface water flooding and to mitigate climate change to manage cumulative surface water.
LPR-B-004	Bioscan	LPR-A-017	comments relate to land adjoining Charbridge Lane, SE Bicester, primarily the southern parcel of land. The site is unsuitable for built development due to its high nature conservation importance as part of the Gavray Meadows Local Wildlife Site (LWS) and its inclusion within the River Ray Conservation Target Area (CTA). The site lends itself very well to the delivery of biodiversity enhancements required as a consequence of development elsewhere. This might be other development land owned by the promoter, or as a repository for the delivery of biodiversity enhancements in order for other developments in the District to be able to deliver 'net gain'. This provides a much more appropriate means to secure the appropriate management and future security of this part of the Local Wildlife Site than sacrificing around half of it to residential development. Securing the future of this part of the Local Wildlife would enable it to continue to form an essential part of the corridor of protected green infrastructure of high wildlife and potential amenity value that runs along the southern side of the railway, extending eastwards from Bicester to connect with the constellation of high value nature conservation sites and BBOWT reserves in the Upper Ray catchment. On a more strategic level, the incongruity of any housing scheme here in the context of the direction of travel of surrounding green infrastructure and masterplanning, and the weighty policy constraints against any such idea, militate against any development and, crucially there is in any event no need for any such enabling development.
LPR-B-005	King's Sutton Parish Council	Option 30	Concerns regarding level of additional traffic generated. Coalescence of Banbury and the surrounding villages should be avoided to allow villages to retain individual identities. Ensure necessary infrastructure is in place to cope with new housing.
LPR-B-006	Lawrence Putt	LPR-A-049	proposed development site at LPR-A-049 is full of natural wildlife including wild birds, rabbits, squirrels, bats and muntjacs. Risk of flooding from existing fields which currently flood. Increased use of the Woodlands estate for car parking to access the local school as a result of more housing. Negative impact upon existing walking routes and views. Additional pollution.
LPR-B-006	Lawrence Putt	Option 30	New housing developments should be considered as "standalone" sites, not on the doorsteps of existing housing and should not compromise existing natural environment, views and walks.
LPR-B-007	Lenka Sherry-Sole	Bloxham	Comments relate to Bloxham. Consideration needs to be given to additional shops and schools if the village is to expand; existing schooling capacity issues. The high street is dangerous and walking to the local school is dangerous. Would prefer no further housing in the village as the village vibe diminishes with each new estate built.
LPR-B-008	Alistair Johnson	Bloxham	Comments relate to Bloxham. the resources inc schools and doctors are already at full capacity. Any future development of the village needs to take into account these facilities. Further the road network through the village is already congested. Does Bloxham need a bypass or improvements to the A361? Also Milton road has become a rat run and needs improvements to reduce cars speeding as they enter and leave the village.
LPR-B-009	Sibford Ferris Parish Council	LPR-A-045	Considered by the community to be unnecessary, disproportionate, undesirable and unsustainable. They would undermine the housing strategy in the Cherwell Local Plan Part 1, which seeks to distribute new housing to the most sustainable locations with regards to public services and facilities, transport and employment. It also undermines the Oxford 2050 policies which focus on the 5 themes of addressing climate change, improving environmental quality, creating strong and healthy communities, planning for sustainable travel and connectivity and creating jobs while providing homes. All of the sites being put forward are on excellent agricultural land located with far reaching views close to the AONB. This land should be protected and preserved for agricultural purposes. The historic character of the area and its historic sensitivity should be protected. Any further development would have further negative visual impact on the rural character and appearance of the locality and cause unacceptable harm to the character and appearance of the area, open rural countryside and rural edge of village setting, failing to reinforce local distinctiveness. Existing infrastructure is at its limit with limited potential for expansion. Extension beyond the built limits of the village on a greenfield site. The sewage, water and power are aged and have had issues coping with current volumes in recent years. The ability of the foul and waste water system to handle an increase in volume could impact the service provided to all residents

LPR-B-009	Sibford Ferris Parish Council	LPR-A-068	Considered by the community to be unnecessary, disproportionate, undesirable and unsustainable. They would undermine the housing strategy in the Cherwell Local Plan Part 1, which seeks to distribute new housing to the most sustainable locations with regards to public services and facilities, transport and employment. It also undermines the Oxford 2050 policies which focus on the 5 themes of addressing climate change, improving environmental quality, creating strong and healthy communities, planning for sustainable travel and connectivity and creating jobs while providing homes. All of the sites being put forward are on excellent agricultural land located with far reaching views close to the AONB. This land should be protected and preserved for agricultural purposes. The historic character of the area and its historic sensitivity should be protected. Any further development would have further negative visual impact on the rural character and appearance of the locality and cause unacceptable harm to the character and appearance of the area, open rural countryside and rural edge of village setting, failing to reinforce local distinctiveness. Existing infrastructure is at its limit with limited potential for expansion. Extension beyond the built limits of the village on a greenfield site. The sewage, water and power are aged and have had issues coping with current volumes in recent years. The ability of the foul and waste water system to handle an increase in volume could impact the service provided to all residents. Site is totally disproportionate in relation to the size of our village and for all the points mentioned above should not be included in the next local plan as a potential site.
LPR-B-009	Sibford Ferris Parish Council	LPR-A-139	Propose that this site is removed and allocated as green space for the community. Considered by the community to be unnecessary, disproportionate, undesirable and unsustainable. They would undermine the housing strategy in the Cherwell Local Plan Part 1, which seeks to distribute new housing to the most sustainable locations with regards to public services and facilities, transport and employment. It also undermines the Oxford 2050 policies which focus on the 5 themes of addressing climate change, improving environmental quality, creating strong and healthy communities, planning for sustainable travel and connectivity and creating jobs while providing homes. All of the sites being put forward are on excellent agricultural land located with far reaching views close to the AONB. This land should be protected and preserved for agricultural purposes. The historic character of the area and its historic sensitivity should be protected. Any further development would have further negative visual impact on the rural character and appearance of the locality and cause unacceptable harm to the character and appearance of the area, open rural countryside and rural edge of village setting, failing to reinforce local distinctiveness.
LPR-B-009	Sibford Ferris Parish Council	Sibford Ferris	Bus services were further reduced in Oct 2021, with the service having more than halved in recent years. Existing service is not convenient and routes are limited. The road conditions are bad and roads are so narrow that pavements cannot be provided. There is limited street lighting. Due to a lack of local facilities and services, the private car is often the only option. Due to steep hills and roads full of potholes cycling is only for the courageous few. Roads are dangerous due to parked cars and lack of pavements. Support development that is in urban areas on brown field sites. Adding more good agricultural land will not encourage developers to complete urban developments.
LPR-B-009	Sibford Ferris Parish Council	Sibford Gower and Sibford Ferris	Sibford Ferris and Sibford Gower wish to seek reclassification to two separate villages regarding planning status. We have separate Parish councils and the community is separated by 1 mile and a steep valley, narrow and in parts without pavements. The classification as a category A village is not appropriate and the facilities and job opportunities are severely limited. A recent planning inspector for the Hook Norton Appeal case stated "Given the spread of services across each settlement it is unlikely that the development of any site around the Sibfords would readily enable access by sustainable transport modes. This is an argument against the inclusion of the Sibfords as a Category A village but is not a matter before me in this Appeal." The current Category A village is not a true reflection of our community and its facilities. Expect this to be revised through the new local plan.
LPR-B-009	Sibford Ferris Parish Council	Question - Transport Policies	We strongly urge that a new clear policy on how the impact of excessive traffic is assessed in rural areas where development is being proposed. This policy needs to be revised and legally defined to protect small villages on unsuitable minor roads to be protected from speculative developments that have little regard inappropriate and excessive traffic and the impact that has on the community physically, mentally and emotionally.
LPR-B-009	Sibford Ferris Parish Council	Option 32	no.2 Giving additional weight to the accessibility of the settlement to our urban centres by public transport, walking and cycling. Travel is not sustainable and job opportunities severely limited, if any at all. Air quality and noise pollution due to the large number of privately owned cars is already impacting the village and will be made worse by the construction and work vehicles for the major development being constructed from 2022 by Gade homes on the Hook Norton road site.
LPR-B-009	Sibford Ferris Parish Council	Option 30	no.1 Limit development in the rural areas to that required to meet local needs. The population is only 470 in Sibford Ferris. We would like to question how active applications on the housing register with preferences to living in Sibford Ferris are used to determine local needs? Local needs in Sibford Ferris have already been exceeded with Gade homes building 25 new homes with 9 affordable, shared ownership, housing association properties. We would like to question why Homes with permission at 31 March 2021 in rural areas are N/A on the above chart (Table 1 from page 18 of the local plan review document)?
LPR-B-010	Andrew Lawson	Chesterton	Comments refer to Little Chesterton. Looking carefully at the shaded areas surrounding us every field appears to be chosen for future development no indication as to whether residential or commercial. Effectively our hamlet has been thrown under a bus. I am indignant and I would object, however having witnessed the debacle of the Great Wolf development and shortly the Bicester Sports Association expansion nothing surprises me, but I see little point in objecting as local democracy has all but vanished in the face of government policies.
LPR-B-011	James O'Neill-Brande	LPR-A-068	Comments relate to Sibfords. Goes against climate aspirations, government policy re no building on green fields and against the ability for current infrastructure to cope with further development. Site is within an AONB. Negative impact upon Grade II Listed building (Little London) which sits to the front of the site. Sibfords is not suitable for further development with lack of infrastructure and sustainable development, and will be exceptionally harmful to the environment and climate. No further planning applications for housing in Sibford Gower or Sibford Ferris.

LPR-B-012	Gerard Flynn	Bloxham	Comments relate to Bloxham. Previous expansions have resulted in some cost to the inhabitants, more traffic, extra pressure on local services, loss of Green Belt and erosion of village identity. Bloxham has contributed enough new-build housing, over the past decade. Any further development would lead to further destruction of the precious Green Belt and overload local services and infrastructure. The proposed building on these green spaces, adjacent to the village, will remove important wildlife habitats and damage the rural environment irrevocably. This type of development is certainly not sustainable, as defined by the CDC in the Bloxham Neighbourhood Plan, Nov 2015.
LPR-B-013	Nick Allen	Hanwell	Comments relate to Hanwell. Further development at Banbury will bring development closer to Hanwell. Will remove wildlife. Conflicts with Cherwell's core strategy as merging villages in to Banbury will not maintain its rural character. Proposals will destroy the local identity of Hanwell. Additional strain on existing infrastructure, further worsening the already terrible congestion around the town and to the M40. Any development that merges a village into a town cannot possibly enhance the setting of the village. The draft plan directly and completely destroys the open and agricultural setting and identity of Hanwell village.
LPR-B-014	Bloxham Parish Council	Bloxham	Will resist developments within the Parish Boundary or nearby which: narrows the gap between Bloxham and other communities; impacts negatively on Bloxham's current spatial 'feel' as set out in the Neighbourhood Development Plan; expands the accepted built-up boundary of Bloxham; will have a detrimental impact on infrastructure especially schools, shopping facilities and transport routes; is larger than developments since 2015 (95 houses); on a greenfield site; and, seeks development in key 'Valued Landscapes. We strongly recommend specific discussions on the issue of coalescence with the relevant local councils to develop a co-ordinated approach to these 'Valued Landscapes.
LPR-B-014	Bloxham Parish Council	Option 1	Welcomes the general direction of the key themes in the local plan and the approach being taken to secure sustainability.
LPR-B-014	Bloxham Parish Council	Option 1	Generally good. This could be strengthened by something about interrelationships. What is Cherwell's distinctive contribution to Oxfordshire and the region, including the Oxford-Cambridge Arc? What can be said about the interrelationship of settlements and their diverse and distinctive contributions to the District? This would recognise the need to ensure an approach to future development which reflects this issue.
LPR-B-014	Bloxham Parish Council	Option 2	Broadly welcome as a balanced suite of objectives.
LPR-B-014	Bloxham Parish Council	Option 3	We would suggest No. 5. The first four options should form the hierarchy for employment land development as they seem to be in the right order. So sites should be sought at main urban centres, then significant transport interchanges, then other previously developed land, finally at the larger villages.
LPR-B-014	Bloxham Parish Council	Option 4	Our preference would be for a different way of looking at this issue: development outside existing settlement boundaries should be resisted; mixed use sites should be adopted where possible, however this should specifically exclude leisure and retail; and, there should be a clear push towards their renewal and out of town retail and leisure should be resisted.
LPR-B-014	Bloxham Parish Council	Question - Supporting Employment	Attention should be given to developing diverse and sustainable employment opportunities in order to secure a wide spectrum from 'entry' level employment through to very high quality jobs, with the aim of providing a clear career future for the workforce.
LPR-B-014	Bloxham Parish Council	Option 5	Rather than trying to write a policy which seeks to anticipate what development should be encouraged across the district, is there not scope to consider each town (and village) centre on its merits and have a flexible plan for each, then explore specific local gaps?
LPR-B-014	Bloxham Parish Council	Question - Supporting our Town Centres	Village retail development or expansion needs to be carefully balanced against parking etc. as in most villages, especially the larger ones, this is a problem.
LPR-B-014	Bloxham Parish Council	Option 6	Our preference would be for No. 1, it would at least raise the starting point of negotiations with developers. While recognising the need for affordable housing, Bloxham has grown by around 20% since 2015, whilst Cherwell District as a whole has seen an increase of around 10% in households in the same period. It considers that, for any future potential development to be acceptable, opportunities to strengthen Bloxham must clearly outweigh risks to its character, sustainability and viability as a community and place.
LPR-B-014	Bloxham Parish Council	Option 7	It would seem to be better to seek different levels in different locations, perhaps driven by local plans and existing levels in particular places.
LPR-B-014	Bloxham Parish Council	Option 8	We prefer No. 1 as otherwise private rental housing would fall out of this requirement.
LPR-B-014	Bloxham Parish Council	Question - Separation Distances	Possibly, but this needs careful consideration in relation to housing density pressures, as mentioned by CPRE.
LPR-B-014	Bloxham Parish Council	Option 9	Unsure what the advantage is in a separate policy over and above the new buildings regulations standards. This needs to be explained. It would seem sensible to have some clear policies as suggested on conversion of rural buildings, modular housing, retail to housing conversions, housing in multiple occupation etc.
LPR-B-014	Bloxham Parish Council	Question - Housing Policies	It would seem sensible to have some clear policies as suggested on conversion of rural buildings, modular housing, retail to housing conversions, housing in multiple occupation etc.
LPR-B-014	Bloxham Parish Council	Option 10	Why is a choice required? Whatever standards are set they should be defensible at any planning appeal, straightforward for developers to understand and anticipate, and if locally defined, straightforward to develop and administer. So it would seem sensible to opt for No. 1 and/or 2 but retain the right to flexibility for any special local issues.
LPR-B-014	Bloxham Parish Council	Question - Retrofitting of Historic Buildings	This section seems to conflate 'legacy' properties with buildings that have historic/heritage importance. It would seem sensible to develop a set of categories and then have policies for each, including bespoke policies for specific buildings. Heating type and provision is likely to be a huge problem for all existing buildings both in terms of requirements and financing. Special provision will need to be made for Listed Buildings, electric vehicle charging provision likewise.
LPR-B-014	Bloxham Parish Council	Option 11	Surely this should be both/and rather than either or? Identify potential sites and then the suitability of the type of renewable energy proposed, and assess any proposals for non-identified sites on the same basis.

LPR-B-014	Bloxham Parish Council	Question - Policies for Climate Change, Sustainable Construction & Renewable Energy	We need to ensure that there is a requirement to provide electric car charging infrastructure generally and in particular to take the opportunity to provide it in all new builds, not just the parking areas mentioned in NPPF.
LPR-B-014	Bloxham Parish Council	Question - Green Belt	We would like to see Green Belt status for key rural areas surrounding Banbury and Bicester, but understand the difficulties in doing this. Instead, we propose securing 'Valued Landscape' status for these and have proposed four for Bloxham.
LPR-B-014	Bloxham Parish Council	Option 12	This seems to be a false "either/or" choice. It would be better if it were seen to be a hierarchy of solutions, with offset payments only used as a last resort.
LPR-B-014	Bloxham Parish Council	Option 13	No. 2 would seem to be the most sensible if the plan's objectives are to be secured.
LPR-B-014	Bloxham Parish Council	Option 14	No. 1 seems to seek to impose planners' and developers' preconceptions on play, with attendant high maintenance requirements. It would seem better to ensure an emergent approach such as No. 3. A more flexible approach would seem a good idea, rather than the blanket approach of planting a standard play area in each new development without assessing other factors in the area.
LPR-B-014	Bloxham Parish Council	Option 15	Suggest both No. 2 and 3 provided that it is possible to avoid long 'commutes' to hubs. It may require a mixed approach depending on viability and maintenance questions.
LPR-B-014	Bloxham Parish Council	Question - Local Green Spaces	In addition to those already mentioned in our Neighbourhood Plan, we would also highlight the Weavers fields area between Wellington Park and The Mill Trading Estate.
LPR-B-014	Bloxham Parish Council	Question - Achieving Good Design & 'Beauty'	It is good to see that CDC produced an SPD to give further detail on what constitutes 'good design' – it is a laudable aim but it is hard to see how it can be achieved without detailed criteria. Beauty is of course a subjective requirement but even so is, we would suggest, incompatible with, for example, the homes and developments built in Bloxham by Bloors and Millers or by Bloor homes in Chipping Norton. They nod to local characteristics, but are they beautiful? From the evidence we have seen Developers' principal interest is in mass housing provision, not aesthetics. How is beauty to be assessed and enforced?
LPR-B-014	Bloxham Parish Council	Question - 20-Minute Neighbourhoods	Agree that 20 minute neighbourhood is desirable, and that a key feature of Bloxham is that it is one and should remain so.
LPR-B-014	Bloxham Parish Council	Question - Transport & Connectivity	General approach is agreed, with the added point that congestion is a contributing factor to emissions problems. Not sure that the principle of reducing the need to travel should be any different for rural areas, however perhaps time taken rather than distance travel would be a better measure of impact. Measures might include further public transport improvements, especially those off A361, improved footpaths on the main roads, car clubs/sharing and voluntary driver schemes.
LPR-B-014	Bloxham Parish Council	Option 16	These are not mutually exclusive and seem to be sensible elements of a future strategy, with the additional point that some developments may tip a local area into requiring a step change in provision, for example relating to bandwidth thresholds or the viability of different forms of digital infrastructure, and any conditions should reflect this.
LPR-B-014	Bloxham Parish Council	Question - Transport Policies	It will be interesting to see the LTP4 next year as it seems that CDC will use that to inform some policies.
LPR-B-014	Bloxham Parish Council	Option 17	It would seem sensible to review and update the methodology in line with the vision and objectives of the local plan, so choose No. 1 over 2. No. 3 and 4 are not alternatives to 1 & 2. They are not mutually exclusive and it would seem sensible to consider both.
LPR-B-014	Bloxham Parish Council	Question - Delivering infrastructure	There seems to be an omission of anything relating to primary care, hospital and other health provision. This seems to be an important gap and should be addressed. Emerging proposals relating to the Horton Hospital, and the requirements of further developments will need to be monitored carefully.
LPR-B-014	Bloxham Parish Council	Option 18	Further urban extensions into open countryside should be avoided and the current hierarchy and integrity of settlements maintained. This relationship is as much part of the history of the place as individual heritage assets. Depending on the approach to 19 this might require a limit to development. The travel hierarchy, focusing on an existing or new development, rather than Banbury is not desirable. It would be better to work to secure improved environmental, economic and social viability and sustainability of Banbury itself, within a clearly defined boundary.
LPR-B-014	Bloxham Parish Council	Option 19	Development around Banbury has clearly been defined at least partly by the line of the M40 and the boundary with Northamptonshire, which is understandable, however this has arguably forced development further to the West, North and South of the centre. Accordingly sites to the East of the motorway should be actively considered. This might require amendment to the County and District boundary in order to address longer term planning and management issues.
LPR-B-014	Bloxham Parish Council	Question - Important views of Banbury	yes. Views of St Mary's Church should be protected along with the market place and Parson's street area, Horse Fair, South Bar Street.
LPR-B-014	Bloxham Parish Council	Option 20	Our preference would be No. 1.
LPR-B-014	Bloxham Parish Council	Option 21	This should be considered in the light of the Canalside's future role in relation to the rest of the town centre. Any development should help support the viability of the existing shopping areas, this could involve a combination of all three, depending on the mix of development in this site and elsewhere. It should not be considered as a separate entity.
LPR-B-014	Bloxham Parish Council	Option 30	This should be a bottom-up exercise depending on local circumstances. This should probably be based on an assumption that development should be limited to local housing need, unless otherwise stated. For example a settlement might have direct housing need, but may welcome further housing provision to secure the future of, or introduce, much needed local services or infrastructure. So careful communication and negotiation with local communities, and cross-border cooperation, will be required before a District-wide picture could be produced.
LPR-B-014	Bloxham Parish Council	Option 31	It would seem sensible to use a combination of both. Our approach to the proposed options sites sets criteria based on our neighbourhood plan and assesses each site on that basis.

LPR-B-014	Bloxham Parish Council	Option 32	A settlement hierarchy could be useful, but depends on the categories used. A factor could be the relationship between each settlement and others, with the total 'weight' on facilities considered. So for us that might include Milcombe, South Newington, Wigginton, Milton etc. The methodology would be key. We think this is worth discussion during the development of any policy. Is what is needed a classification system rather than a hierarchy? For example, two villages might have similar facilities but one may be very stretched while the other may have capacity. Yet in a hierarchy they might be assigned the same level, based on population and the facilities available.
LPR-B-014	Bloxham Parish Council	Question - Settlement Boundaries	Settlement boundaries they should be defined, if they reflect the Neighbourhood Plan and improve on it with further specific consultation.
LPR-B-014	Bloxham Parish Council	Option 33	Probably best to consider a combination of the two, to allow for good opportunities that tie in with the plan's vision and objectives, but we would want to discuss how that would work in practice.
LPR-B-014	Bloxham Parish Council	Option 34	Not sure these are mutually exclusive. It would be sensible to look at how both can be achieved in line with the points about Green Belt above. We would identify the following as 'Valued landscapes' in and around Bloxham: Sor Brook Valley; Slade Nature Reserve; Hobb Hill and its setting; and, land around Coates Spinney (North of Milton Road and close to St Mary's Church).
LPR-B-014	Bloxham Parish Council	Question - Neighbourhood Planning	Help with facilitation to revise our Neighbourhood Plan would be much appreciated.
LPR-B-014	Bloxham Parish Council	Parish Profile - Bloxham	For all of the maps it would have been better to circulate these with aspects of the key policies maps from the existing local plan showing all currently approved sites, and not just those that have been built-out, in order to be able to assess the cumulative impact of new developments. Employment: There are no comments on employment in the profile which seems strange, for example Bloxham School is a significant local employer and there is a wide range of businesses in the village, ranging from those at Bloxham Mill to a large number of small/working from home-based businesses. It would have been helpful for the demographic information to show the current number of households in Bloxham. This would place the 232 completed dwellings since 2015 in context (17% of the 1350 noted in the Oxfordshire district data site, or a 21% increase on household numbers from 2015). Noted and welcomed comment relating to Ell's lane/Bloxham Grove and the Sor Brook Valley. This concern should also be extended specifically to other key green corridors/'Valued Landscapes' including Hobbs Hill and the Coates Spinney Valley to the East of St Mary's Church/North of Milton Road. page 4/5 of profile Odd not to mention Bloxham School on this list, or anywhere in the profile as a major property owner and Bloxham's largest employer. Ell's Lane Nursery should also be included as a facility/employer. It is also worth noting that unlike many other villages, Bloxham has no allotments and thus lacks an important, if small scale, contributor to good health and low food miles, any new development should be required to help facilitate this provision.page 6 of profile - Wording of first bullet point of constraints needs checking, including river naming. Is it Sor Brook on both tributaries? Noted need to avoid development at or near the Slade Nature Reserve. Also to note range of bat species year-round in the area as well as swifts Wording of opportunities section needs checking. We continue to endorse the comment re: development management companies and green spaceWe have developed some thoughts on principles to adopt for this and about how to test each of the sites as set out in the plan, including those relevant ones in other parishes. All of them present challenges. If all were accepted they would represent around a doubling of Bloxham's population, but any response would need to be based on a careful assessments on each site on its merits and risks. We therefore need to think about underlying principles and criteria for a good assessment. responses provided have been based on the Bloxham Neighbourhood Plan. Criteria for comments/assessment include community identity & proportionality. Commentary provided in relation to the potential housing allocations including Bloxhams percentage share and a pro rata housing requirements estimates table. The figures show that even if Bloxham is required to take a pro-rata allocation, only 5% of the current proposed sites' total area would be needed at the lowest estimate. Even at the highest estimate just 19% of the proposed sites' total area would be required. The proposals for up to 2300 further houses on sites between Bloxham and other centres would put significant strain on the village and the surrounding area for the reasons described in our assessment.
LPR-B-014	Bloxham Parish Council	LPR-A-049	acceptability criteria table submitted - concludes - strongly object
LPR-B-014	Bloxham Parish Council	LPR-A-052	acceptability criteria table submitted - concludes - strongly object
LPR-B-014	Bloxham Parish Council	LPR-A-067	acceptability criteria table submitted - concludes - potentially acceptable.
LPR-B-014	Bloxham Parish Council	LPR-A-070	acceptability criteria table submitted - concludes - object, significant issues at Ell's Lane junction
LPR-B-014	Bloxham Parish Council	LPR-A-075	acceptability criteria table submitted - concludes - strongly object
LPR-B-014	Bloxham Parish Council	LPR-A-094	acceptability criteria table submitted - concludes - strongly object
LPR-B-014	Bloxham Parish Council	LPR-A-100	acceptability criteria table submitted - concludes - strongly object
LPR-B-014	Bloxham Parish Council	LPR-A-115	acceptability criteria table submitted - concludes - Attractive on surface but object as counter to NP infill policy BL2 (usual upper limit of 5)
LPR-B-014	Bloxham Parish Council	LPR-A-151	acceptability criteria table submitted - concludes - strongly object
LPR-B-014	Bloxham Parish Council	LPR-A-116	acceptability criteria table submitted - concludes - Strongly object: The map for Banbury shows only the existing developments, not those that are in the process of being built. These two proposals would further undermine the dwindling space between Banbury and Bloxham significantly continuing the trend towards coalescence, increase congestion and have an impact on the viability of the Sor Valley as a 'Valued Landscape' and green corridor between settlements.
LPR-B-014	Bloxham Parish Council	LPR-A-185	acceptability criteria table submitted - concludes - Strongly object: The map for Banbury shows only the existing developments, not those that are in the process of being built. These two proposals would further undermine the dwindling space between Banbury and Bloxham significantly continuing the trend towards coalescence, increase congestion and have an impact on the viability of the Sor Valley as a 'Valued Landscape' and green corridor between settlements.
LPR-B-014	Bloxham Parish Council	LPR-A-156	acceptability criteria table submitted - concludes - Object: These three proposals, together with the significant proposals to the East of Adderbury would continue the trend towards coalescence, increase congestion and have an impact on the viability of the Sor Valley as a 'Valued Landscape' and green corridor between settlements.

LPR-B-014	Bloxham Parish Council	LPR-A-258	acceptability criteria table submitted - concludes - Object: These three proposals, together with the significant proposals to the East of Adderbury would continue the trend towards coalescence, increase congestion and have an impact on the viability of the Sor Valley as a 'Valued Landscape' and green corridor between settlements.
LPR-B-014	Bloxham Parish Council	LPR-A-091	acceptability criteria table submitted - concludes - Object: These three proposals, together with the significant proposals to the East of Adderbury would continue the trend towards coalescence, increase congestion and have an impact on the viability of the Sor Valley as a 'Valued Landscape' and green corridor between settlements.
LPR-B-014	Bloxham Parish Council	LPR-A-137	acceptability criteria table submitted - concludes - Strongly object: These three proposals are a step change and start a new trend towards coalescence between Bloxham and Milcombe. Taken together, and given Milcombe's comparatively smaller range of facilities, they could lead to over 500 new households seeing Bloxham as a natural 'centre' and the most direct route to Banbury and the main roads north and south, worsening an already challenging situation.
LPR-B-014	Bloxham Parish Council	LPR-A-158	acceptability criteria table submitted - concludes - Strongly object: These three proposals are a step change and start a new trend towards coalescence between Bloxham and Milcombe. Taken together, and given Milcombe's comparatively smaller range of facilities, they could lead to over 500 new households seeing Bloxham as a natural 'centre' and the most direct route to Banbury and the main roads north and south, worsening an already challenging situation.
LPR-B-014	Bloxham Parish Council	LPR-A-231	acceptability criteria table submitted - concludes - Strongly object: These three proposals are a step change and start a new trend towards coalescence between Bloxham and Milcombe. Taken together, and given Milcombe's comparatively smaller range of facilities, they could lead to over 500 new households seeing Bloxham as a natural 'centre' and the most direct route to Banbury and the main roads north and south, worsening an already challenging situation.
LPR-B-015	Briony Franklin	LPR-A-045	larger volume of vehicles competing for space on the very narrow country roads. Bus services are sparse, making private transport the only option for villagers travelling to work. Main Street Sibford Ferris is so narrow as to be single track in places. Pedestrians are already at risk because the width of the road doesn't allow for pavements. Children have to be driven to Sibford Gower primary school because walking to school has become an increasingly dangerous option. Small villages like both the Sibfords need protecting from developments that endanger the lives of their inhabitants & the rural environment, while concreting over good agricultural land. increased level of pollution from traffic, plus an infrastructure (water, electricity, sewage) that will be overwhelmed by a considerable increase in the population. Development should be rejected.
LPR-B-015	Briony Franklin	LPR-A-068	larger volume of vehicles competing for space on the very narrow country roads. Bus services are sparse, making private transport the only option for villagers travelling to work. Main Street Sibford Ferris is so narrow as to be single track in places. Pedestrians are already at risk because the width of the road doesn't allow for pavements. Children have to be driven to Sibford Gower primary school because walking to school has become an increasingly dangerous option. Small villages like both the Sibfords need protecting from developments that endanger the lives of their inhabitants & the rural environment, while concreting over good agricultural land. increased level of pollution from traffic, plus an infrastructure (water, electricity, sewage) that will be overwhelmed by a considerable increase in the population. Development should be rejected.
LPR-B-015	Briony Franklin	LPR-A-139	larger volume of vehicles competing for space on the very narrow country roads. Bus services are sparse, making private transport the only option for villagers travelling to work. Main Street Sibford Ferris is so narrow as to be single track in places. Pedestrians are already at risk because the width of the road doesn't allow for pavements. Children have to be driven to Sibford Gower primary school because walking to school has become an increasingly dangerous option. Small villages like both the Sibfords need protecting from developments that endanger the lives of their inhabitants & the rural environment, while concreting over good agricultural land. increased level of pollution from traffic, plus an infrastructure (water, electricity, sewage) that will be overwhelmed by a considerable increase in the population. Development should be rejected.
LPR-B-016	Chris Franklin	LPR-A-045	Strongly object - entirely unjustified by any local need. Village is already congested, narrow roads inadequate for more traffic, bus service is virtually non-existent, private cars only means of travel. This site is a speculative and totally unnecessary extension to the already agreed (and much disliked) 25 home development on the Hook Norton Road. As above there is no need for additional housing in the village. Will generate more unnecessary traffic congestion in a location where additional housing is not required. The access onto the Hook Norton road, near the entrance to the Friends School, will be very dangerous with the likely massive increase in vehicle traffic. located on good agricultural land.
LPR-B-016	Chris Franklin	LPR-A-068	Strongly object - entirely unjustified by any local need. Village is already congested, narrow roads inadequate for more traffic, bus service is virtually non-existent, private cars only means of travel. This site lies outside the existing limits of the village. It is on good agricultural land. There is absolutely no need for additional housing in Sibford Ferris. The entrance to the village from Banbury is down a hill towards the village; any access would be dangerous.
LPR-B-016	Chris Franklin	LPR-A-139	Strongly object - entirely unjustified by any local need. Village is already congested, narrow roads inadequate for more traffic, bus service is virtually non-existent, private cars only means of travel. There is no identified need in the village for additional houses in this location. Access can only be via the new development onto the Hook Norton Road. Woodway Road is far too narrow to allow any additional vehicle access. It would mean more traffic / congestion on the Hook Norton Road. The land is good agricultural land. Any additional development will overload the facilities and infrastructure of the village.

LPR-B-017	Robin Grimston	Sibford Ferris	CDC is inviting supply of sites ahead of clarifying the demand for housing. The current published housing requirement is 22,840 homes for the period 2011 – 2031, amended only by the additional requirement to accommodate some Oxford City overspill housing. The latter is all to be accommodated in the parts of Cherwell District that are as close to Oxford City as possible. The Annual Monitoring Review of 2020 (AMR) records that 1,887 will have been completed in the rural villages by March 2021 with the final 347 (of which the 25 in Sibford Ferris are part) being completed by March 2024. The conclusion to be drawn is that there is no requirement for additional housing in the rural villages of Cherwell District, beyond Windfalls, before 2031. The adopted LP says that “..this local plan has a strong urban focus which seeks to direct housing towards Bicester and Banbury.” To meet this objective CDC needs to focus on Banbury and Bicester which does not square with calling for more sites in the rural villages. The sites being offered in Sibford Ferris have been offered before. The Cherwell District Council Housing and Economic Land Availability Assessment February 2018 (HELAA) made the following comments on the Sibford Ferris sites. HELAA classified the Land at Folly Farm as unsuitable for development. The existing development along the land to the West of the Hook Norton of 25 houses will have exceeded the HELAA recommendation and this development will have rendered unnecessary the Woodway Road site. Following the recommendations of HELAA no further development should be considered for Sibford Ferris. the proposed Sibfords sites are least suitable locations in the whole of the district in terms of landscape value, agricultural value, lack of infrastructure, distance from main roads and places of employment.
LPR-B-018	Richard Bailey	LPR-A-231	Site regularly floods, development would result in flooding at neighbouring properties. Field contains rising springs and two footpaths. Greater Crested Newt occupy the field and stream. Vehicular access is not suitable for the development. Council should consider planting trees on the Fern Hill Field to protect the existing footpaths and offset CO2 created by the current Oak Farm development. photo of GCN provided with rep.
LPR-B-019	Deddington Parish Council	Deddington	Deddington Parish Council would like to establish very clearly that Deddington should not be classified as a Growth zone. The historic nature of the medieval village, the Scheduled Ancient Monument, the extensive Conservation Area and the high number of listed buildings, the surrounding landscape, all combine to make the parish better suited as a “Protected Area”
LPR-B-019	Deddington Parish Council	Option 2	Key objectives 10-19 are very laudable but there is very little specific detail on how these will be achieved. Questions raised: 1) Can consideration be made to providing a safe and suitable cycle route from Deddington to Banbury? (and to Oxford)? 2) What are the plans for managing surface water flooding? This issue will affect us all. The existing infrastructure was designed to standards that are no longer relevant. 3) What are your plans to manage the cumulative surface water that is collected by SuDS features (protecting the local estate) and then discharged into our waterways which flood areas downstream? Can consideration be given to accumulating developer contributions towards strategic flood defences? 4) What are your plans to protect existing homes from surface water flooding when the antiquated surface water drains are insufficient?
LPR-B-019	Deddington Parish Council	Option 2	Key objective 28 - In this connection we consider S106 contributions are very important, and those concerning developer contributions towards Primary Care are of particular concern. There have been a number of recent developments in the Cherwell District Council area where Section 106 agreements have included no request from OCCG for a primary care contribution (e.g Salt Way, Longford Park, Hanwell Fields, Wolvercote). Is there any way that OCC and CDC could support OCCG to develop a plan suitable to deliver new primary care infrastructure as a part of the 2050 and ARC plans?
LPR-B-019	Deddington Parish Council	Option 3	Favour no.2 with the aim of trying to wean people away from travelling by car.
LPR-B-019	Deddington Parish Council	Option 6	House prices are so disproportionately high in Cherwell’s villages that developers should still be able to make sustainable profits with a higher percentage of affordable homes. More homes that young people can afford should help keep villages alive and vibrant. In Deddington and probably other villages there is an unusually high proportion of over 65-year-olds.
LPR-B-019	Deddington Parish Council	Option 7	Favour no.2. Is there a misprint here? Should it be “30% affordable homes to buy” – ie, First Home and shared ownership? In Deddington, as we have ascertained from housing needs assessments, there is a possibly greater need for affordable homes to purchase than to rent. People are unable to get on to the CDC housing register but cannot afford the market rate for houses and flats in their home village. We would suggest 50% of affordable homes to purchase – in line with government policy – and we would prefer (insist on) some kind of mechanism that prevents them being sold thereafter at a market rate.
LPR-B-019	Deddington Parish Council	Option 8	Favour No.1. All new dwellings should at least meet national space standards. People paying top dollar for first homes should not be obliged to settle for homes with poky little rooms and no storage space.
LPR-B-019	Deddington Parish Council	Question - Housing Policies	Yes, modern, alternative, stylish methods of construction should be encouraged, especially if they produce better insulated and more affordable homes.
LPR-B-019	Deddington Parish Council	Option 14	No.2 and No.3
LPR-B-019	Deddington Parish Council	Option 15	Favour No.3. Some kind of sports provision should be available nearby where people live. Certainly Certainly not the 2nd option, whereby people would have to travel from the villages to the towns to play a game of football
LPR-B-019	Deddington Parish Council	Option 16	Favour No.1 With more people working from home and the possibility of small workshops in rural areas, digital infrastructure and future proofing is essential. It should also have the crucial side benefit of reducing travel, congestion, pollution.
LPR-B-019	Deddington Parish Council	Option 18	Neither No.1 or No.3) seem very appealing, but preferable to No.2
LPR-B-019	Deddington Parish Council	Question - Neighbourhood Planning	Provide the information they need to create a viable plan – eg a target figure of the number of dwellings they should be aiming for, and what infrastructure will be needed.
LPR-B-019	Deddington Parish Council	Option 30	Favour No.1. Adding substantially more development in the rural areas would change the character of the whole district for the worse. Villages that CDC has hitherto striven to preserve would be over-extended, spoiling their beauty and rural identity. Most of the existing working population of, say, Deddington, currently commute to work by car. Focusing development in rural areas would add greatly to congestion and pollution – the very things CDC hopes to reduce in prioritising combatting climate change.

LPR-B-019	Deddington Parish Council	Option 31	Favour No.2. Many rural communities have completed or are currently working on neighbourhood plans which include sustainability studies on specific sites and housing needs assessments, indicating the type and numbers of housing needed. Neighbourhood planning teams have much closer understanding of their communities' preferences and other local issues than the district council. It would be a slap in the face to neighbourhood planners and parish councils to impose district council choices on the villages. It would also be contrary to government strategy of encouraging local people to take local decisions.
LPR-B-019	Deddington Parish Council	Option 32	Favour No.2. In the interests of minimising pollution created by commuting and in the interests of work/life balance for the working population, accessibility of settlements to urban centres should be paramount.
LPR-B-020	Jules Cook	LPR-A-178	Development will have an enormous impact on wildlife. Building all of the LPR- A-178, LPR- A-156, LPR-A- 081, LPR-A-002 and LPR-A- 156 will effectively turn Twyford into one massive, horrible estate. It will impact negatively on everything that currently gives the area charm and makes it a desirable place to live. The amenities in the area cannot sustain this sort of growth. Objects in the strongest possible terms to LPR-A-178.
LPR-B-020	Jules Cook	LPR-A-156	Development will have an enormous impact on wildlife. Building all of the LPR- A-178, LPR- A-156, LPR-A- 081, LPR-A-002 and LPR-A- 156 will effectively turn Twyford into one massive, horrible estate. It will impact negatively on everything that currently gives the area charm and makes it a desirable place to live. The amenities in the area cannot sustain this sort of growth.
LPR-B-020	Jules Cook	LPR-A-081	Development will have an enormous impact on wildlife. Building all of the LPR- A-178, LPR- A-156, LPR-A- 081, LPR-A-002 and LPR-A- 156 will effectively turn Twyford into one massive, horrible estate. It will impact negatively on everything that currently gives the area charm and makes it a desirable place to live. The amenities in the area cannot sustain this sort of growth.
LPR-B-020	Jules Cook	LPR-A-002	Development will have an enormous impact on wildlife. Building all of the LPR- A-178, LPR- A-156, LPR-A- 081, LPR-A-002 and LPR-A- 156 will effectively turn Twyford into one massive, horrible estate. It will impact negatively on everything that currently gives the area charm and makes it a desirable place to live. The amenities in the area cannot sustain this sort of growth.
LPR-B-021	Sue Willis	Adderbury	Comments relate to Adderbury. Key concern relates to traffic resulting from the doubling the size of the village. Exiting respondents driveway is already difficult, increase in traffic from Adderbury sites and Bodicote's 850 homes will add to the difficult situation. Village is in danger of becoming part of Banbury and losing identity. No plans to bypass Banbury so traffic will be unbearable. Environmental impact will be huge; need to protect beautiful natural areas. Infrastructure not in place to accommodate doubling the size of the village.
LPR-B-022	Catriona Reid	LPR-A-152	Extremely concerned about development of this site. Development would leave just metres between the edge of the conservation area down Gullicote Lane and track, which would not allow for any significant natural border as exists with the trees which hide the Banbury 5/Hanwell Chase development. Higher footfall in Hanwell resulting from recent developments, flytipping an issue, and traffic through the village is at an all time high. Further development between Hanwell and Banbury would permanently and irrevocably destroy the character of the village and damage the mental health of its current residents who chose to live there for the character and community feel of a rural settlement. development of the site would not cherish, protect or enhance the distinctive natural and built environment. Development would not be consistent with Key objectives 5, 9 and 15. Development would result in coalescence.
LPR-B-022	Catriona Reid	LPR-A-214	Extremely concerned about development of this site. Higher footfall in Hanwell resulting from recent developments, flytipping an issue, and traffic through the village is at an all time high. Further development between Hanwell and Banbury would permanently and irrevocably destroy the character of the village and damage the mental health of its current residents who chose to live there for the character and community feel of a rural settlement. development of the site would not cherish, protect or enhance the distinctive natural and built environment. Development would not be consistent with Key objectives 5, 9 and 15. Development would result in coalescence.
LPR-B-022	Catriona Reid	Option 18	suggest development is most appropriate to the East or South of Banbury where there is lesser prospect of incursion on neighbouring villages
LPR-B-022	Catriona Reid	Option 19	strongly support Option 2 to limit development at Banbury and protect its landscape setting and maintain separation between the town and surrounding villages. No objection to the development of sites LPR-A-154, LPR-A-047 and LPR-A-205, which would allow some expansion to the north of Banbury without encroaching upon any local villages.
LPR-B-022	Catriona Reid	Hanwell	Comments relate to Hanwell. Before considering further expansion and development perhaps focus should be shifted to meeting existing healthcare service needs. Reference to the Hanwell Conservation Area document which identifies points which support the protection of open space and rural character.
LPR-B-023	Karen Turner	Adderbury	Comments relate to Adderbury. Infrastructure including schools cannot cope with the new residents and traffic proposed. More to offer families in Aynho, Kings Sutton, Charlton, Croughton, Deddington. Village could sustain a few more small pockets of new housing further out of the village but not the 1000s proposed. Development will result in no local fields to walk, wildlife and air quality will suffer and the area in general will suffer. Beautiful villages are being lost amongst the greedy developers who give little thought to the aesthetics of the area.
LPR-B-024	Hugo and Caroline Seely	LPR-A-107	Strongly object. Sites extend outside the built area of the village on agricultural land enclosed by mature trees and native hedgerows home to protected species. The land frames the wider Cotswolds AONB and can be seen from as far away as Broadway Tower. The land is sited on an area referred to as 'the Ironstone Downlands' and characteristic of the ironstone landscape west of Banbury, adjacent to the local hills of Long Hill, Yarn Hill, Epwell Hill, Gallow Hill and Brailes Hill. The site could generate over 350 new homes, with a population in excess of 700, which represents a population increase of 130% (current population estimated at 533 (ONS, 2019). Substantial increase in traffic and access to services and facilities which are unlikely to be able to absorb the increase in population. Existing roads are not suitable for existing traffic. Road passing the site is inappropriate for pedestrian use with no pavements. Water and sewerage provision for the current local community is already limited. Sibford Glover is a dark skies village - the elevated position will contribute to an unacceptable increase in light which will be visible for significant distances. Development of the site would be at odds with existing and proposed planning policy.

LPR-B-024	Hugo and Caroline Seely	Option 34	Rather than seek to source and offer new land for potential development, we believe that greater thought is needed to establishing new boundaries that protect the existing landscape. These proposed sites, part of the Ironstone Downlands, are of similar character to the adjacent Cotswolds AONB, but do not have the same protective status. The ridge to the north of the village of Sibford Gower contributes to the wider character of the north Cotswolds, providing expansive views west and an imposing and strong green skyline when viewed from Broadway Tower. Between them, these north-south ridge lines contribute to the wider landscape, framing the northern Cotswolds AONB.
LPR-B-025	Brown & Co.	LPR-A-165	Support the development. The two sites at Land at Mill Lane, Charlton-on-Otmoor are ideally placed to provide housing to support the existing services and facilities in the village and ensure the village thrives. Sites can assist with the provision of a wider mix of dwelling types. In line with para 69 of NPPF, the sites can make an important contribution to meeting the housing requirement of an area, are built-out relatively quickly and assist with maintaining a 5 year housing land supply. The sites are accessed down Mill Lane with a footpath on both sides of Mill Lane. The development would provide much needed housing for the village of Charlton-on-Otmoor. There will be economic benefits through the construction jobs created and from owner/occupiers using the services and facilities within the village and the wider area. There will be social benefits through the provision of market and affordable housing providing a mix of housing along with environmental benefits through strengthening the hedgerow and trees on the boundary of the site and providing a biodiversity net gain. Residential development at both sites at Land at Mill Lane, Charlton-on-Otmoor will provide much needed housing in Charlton-on-Otmoor to support the existing services and facilities in this rural community and also provide much needed housing across Cherwell.
LPR-B-025	Brown & Co.	Question - Green Belt	When defining Green Belt boundaries plans should not include land which it is unnecessary to keep permanently open such as these sites and they should be released from the Green Belt.
LPR-B-025	Brown & Co.	Option 31	It is considered that a combination approach is used with a parish level figure for each area to ensure housing is delivered but also work with communities to allocate specific sites to meet the housing need and the two sites at Land at Mill Lane, Charlton-on-Otmoor are ideally placed to assist with the local housing need and to maintain and enhance the rural community.
LPR-B-025	Brown & Co.	Option 32	if the Council develops a Rural Settlement Hierarchy it is important significant weight is given to existing services and facilities such as a Primary School, local Church and Public House. The Charlton-on-Otmoor Parish Profile shows in 2021 the services and facilities include a post office in the Community Hall 1 morning a week, a Primary School, two Churches, a recreation ground with children's play area and The Crown Public House and new housing development will enable this rural community to continue to be supported. It is not considered creating a settlement boundary is the right approach beyond which development would not normally be permitted as it can lead to pressure for development within the boundary on areas of open space which would not be appropriate.
LPR-B-026	Andrew Crawley	Option 30	Believes that the policy to build in large volumes on rural land, much of which is currently agricultural land is extremely short sighted. Every arable or pasture field that is changed to housing increases the strain on the food producing land that remains thus necessitating more and more intensive farming. This will inevitably reduce species diversity both in the plant and animal kingdom and will also increase pressure on our waterways and atmosphere. It is my belief that, given the scale on which the government wishes to build, this will become an unsustainable strain which will cause an ecological disaster in the UK.
LPR-B-026	Andrew Crawley	LPR-A-065	Comments relate to Hempton. Village has no pub, school, shops, playgourd or leisure facilities. Development would be extremely unwise. No bus service that serves the village therefor reliance will be on private car to access the nearest village (Deddington) for schools, facilities and to use the single shop that is there. Development of the fields would almost double the current population. Exsiting B4031 would need to be upgraded to cope with extra traffic. Water supply is via small pump located in Deddington. This pump breaks down a few times a year leaving us without running water for hours (or more) on occasions. The water pressure it does provide is pretty low at the best of times, so the mains water supply to Hempton would have to be substantially improved and updated to accommodate any new housing.
LPR-B-027	Epwell Parish Council	Option 30	The Village of Epwell has no public transport, narrow and poorly maintained roads and limited capacity for mass development with limited services and facilities The needs for limited and targeted local development has been identified in the Community Plan led by the residents and the parish council.
LPR-B-027	Epwell Parish Council	Option 31	The Epwell Community Plan encourages those wishing to develop to liaise with the Parish Council prior to making any planning application. The residents have expressed preferences in the type, number and style of future housing. No specific area has been identified as potential development land in the Community Plan. Close cooperation with CDC to understand the level of contribution to housing stock expected from rural communities is paramount before appropriate development land can be identified by both the Parish Council and CDC.
LPR-B-027	Epwell Parish Council	Option 32	With the stated aim of central government and OCC in encouraging 20 minute neighbourhoods, villages with no public transport, located some distance from employment centres and with no services and facilities are unlikely to contribute to this aim. The existing village classification system based on the level of services and facilities has proved successful in limiting development in rural areas where large scale development would be inappropriate.
LPR-B-027	Epwell Parish Council	Option 33	Epwell Parish Council has in recent times supported rural businesses within the Parish boundary. The need for diversification is widely recognised. Whatever policy is adopted to support the local economy close consultation with Parish Councils and residents is necessary to ensure continued support.
LPR-B-027	Epwell Parish Council	Option 34	The vast Majority of residents support active management of wildlife habitats. Woodland, hedgerows streams ,ponds and verges The concept of "VALUED LANDSCAPES" is very subjective. Most people living in rural areas regard their local area as "VALUED" Those areas not afforded VALUE status would be less protected from inappropriate development.
LPR-B-027	Epwell Parish Council	Question - Neighbourhood Planning	Provide impartial free advice and expertise to communities wishing to draw up a Neighbourhood plan.The financial burden on a small village is prohibitive to many producing a detailed and legally recognised plan. Give more influence to a Community Plan that by necessity is less detailed, less expensive to produce but still reflects the wishes and aspirations of a community.

LPR-B-028	Deddington Neighbourhood Plan Steering Group	Option 2	Key objectives 10-19 are very laudable but there is very little specific detail on how these will be achieved. Questions raised: 1) Can consideration be made to providing a safe and suitable cycle route from Deddington to Banbury? (and to Oxford)? 2) What are the plans for managing surface water flooding? This issue will affect us all. The existing infrastructure was designed to standards that are no longer relevant. 3) What are your plans to manage the cumulative surface water that is collected by SuDS features (protecting the local estate) and then discharged into our waterways which flood areas downstream? Can consideration be given to accumulating developer contributions towards strategic flood defences? 4) What are your plans to protect existing homes from surface water flooding when the antiquated surface water drains are insufficient?
LPR-B-028	Deddington Neighbourhood Plan Steering Group	Option 2	Key objective 28 - In this connection we consider S106 contributions are very important, and those concerning developer contributions towards Primary Care are of particular concern. There have been a number of recent developments in the Cherwell District Council area where Section 106 agreements have included no request from OCCG for a primary care contribution (e.g Salt Way, Longford Park, Hanwell Fields, Wolvercote). Is there any way that OCC and CDC could support OCCG to develop a plan suitable to deliver new primary care infrastructure as a part of the 2050 and ARC plans?
LPR-B-028	Deddington Neighbourhood Plan Steering Group	Option 3	Favour No. 1 and No.2. No.1 as transport routes are focused on main urban centres. Support No.2 with the aim of trying to wean people away from travelling by car.
LPR-B-028	Deddington Neighbourhood Plan Steering Group	Option 6	Favour No.1. Raise the percentage requirement to 40% at least in the rural areas. House prices are so disproportionately high in Cherwell's villages that developers should still be able to make sustainable profits with a higher percentage of affordable homes. More homes that young people can afford should help keep villages alive and vibrant. In Deddington and probably other villages there is a unusually high proportion of over 65-year olds.
LPR-B-028	Deddington Neighbourhood Plan Steering Group	Option 7	Favour No.2 Is there a misprint here? Should it be "30% affordable homes to buy" – ie, First Home and shared ownership? In Deddington, as we have ascertained from housing needs assessments, there is a possibly greater need for affordable homes to purchase than to rent. People are unable to get on to the CDC housing register but cannot afford the market rate for houses and flats in their home village. We would suggest 50% of affordable homes to purchase – in line with government policy – and we would prefer (insist on) some kind of mechanism that prevents them being sold thereafter at a market rate.
LPR-B-028	Deddington Neighbourhood Plan Steering Group	Option 8	Favour No.1 All new dwellings should at least meet national space standards. People paying top dollar for first homes should not be obliged to settle for homes with poky little rooms and no storage space.
LPR-B-028	Deddington Neighbourhood Plan Steering Group	Option 14	Favour No.2. for all age approach and No.3.
LPR-B-028	Deddington Neighbourhood Plan Steering Group	Option 15	Favour No.3. Some kind of sports provision should be available nearby where people live. Certainly Certainly not the 2nd option, whereby people would have to travel from the villages to the towns to play a game of football
LPR-B-028	Deddington Neighbourhood Plan Steering Group	Question - Local Green Spaces	The steering group intends to put forward Local Green Spaces under the Deddington Neighbourhood Plan.
LPR-B-028	Deddington Neighbourhood Plan Steering Group	Option 16	Favour No.1 With more people working from home and the possibility of small workshops in rural areas, digital infrastructure and future proofing is essential. It should also have the crucial side benefit of reducing travel, congestion, pollution.
LPR-B-028	Deddington Neighbourhood Plan Steering Group	Option 18	Neither No.1 or No.3) seem very appealing, but probably best options
LPR-B-028	Deddington Neighbourhood Plan Steering Group	Option 30	Favour No.1. Adding substantially more development in the rural areas would change the character of the whole district for the worse. Villages that CDC has hitherto striven to preserve would be over-extended, spoiling their beauty and rural identity. Most of the existing working population of, say, Deddington, currently commute to work by car. Focusing development in rural areas would add greatly to congestion and pollution – the very things CDC hopes to reduce in prioritising combatting climate change.
LPR-B-028	Deddington Neighbourhood Plan Steering Group	Option 31	Favour No.2 Many rural communities have completed or are currently working on neighbourhood plans which include sustainability studies on specific sites and housing needs assessments, indicating the type and numbers of housing needed. Neighbourhood planning teams have much closer understanding of their communities' preferences and other local issues than the district council. It would be a slap in the face to neighbourhood planners and parish councils to impose district council choices on the villages. It would also be contrary to government strategy of encouraging local people to take local decisions.
LPR-B-028	Deddington Neighbourhood Plan Steering Group	Question - Settlement Boundaries	Yes. This would help to ensure that development takes place in the most suitable locations in terms of accessibility and infrastructure, as well as protecting local character and the landscape. Defined settlement boundaries provide greater certainty as to where certain types of development are likely to be acceptable in planning terms. This is also supportive of a planned approach to development. Many other LPAs have a policy of defining settlement boundaries, and this approach has also been followed in the Adderbury and Mid-Cherwell Neighbourhood Plans.

LPR-B-028	Deddington Neighbourhood Plan Steering Group	Option 32	Favour No.2 In the interests of minimising pollution created by commuting and in the interests of work/life balance for the working population, accessibility of settlements to urban centres should be paramount. Weighting formulae can be arbitrary. A CRAITLUS type survey is needed of distances travelled from individual settlements to work destinations, average network distances, and proportion of workers travelling to each identified destination etc. It should not be a tick box exercise. The degree of usage of bus services should be analysed. Bus services in rural areas are frequently little used for a variety of reasons, so they don't contribute to reducing commuting. <a href="https://www.cherwell.gov.uk/info/84/evidence-for-adopted-local-plan-part-1/328/infrastructure-evidence/5">https://www.cherwell.gov.uk/info/84/evidence-for-adopted-local-plan-part-1/328/infrastructure-evidence/5</a> [Cf. Parish profile comments: For Deddington residents who work, Deddington is essentially a commuter village. According to the 2011 census, more than 90% of residents travel to work by car. There is a bus service Oxford/Banbury via Deddington but only 3.5% of population used public transport to commute to work. As the parish grows, this has serious implications for pollution control.]
LPR-B-028	Deddington Neighbourhood Plan Steering Group	Question - Housing Policies	Yes, modern, alternative, stylish methods of construction should be encouraged, especially if they produce better insulated and more affordable homes.
LPR-B-028	Deddington Neighbourhood Plan Steering Group	Question - Neighbourhood Planning	Provide the information they need in a timely manner to create a viable plan – eg a target figure of the number of dwellings they should be aiming for, and what infrastructure will be needed.
LPR-B-028	Deddington Neighbourhood Plan Steering Group	Option 33	Favour No.1. Criteria-based policies are more focused, although risk not being respected.
LPR-B-028	Deddington Neighbourhood Plan Steering Group	Option 34	It is vital existing policies should not be diluted. Defining valued landscapes per No.2 would be useful additional protection.
LPR-B-028	Deddington Neighbourhood Plan Steering Group	Sustainability Appraisal	representation provides an extract of table 3.5 from the sustainability appraisal and notes that the table is difficult to understand and interpret. Comments provided in relation to table 3.5 - 1. Air and wider env'l quality – This must be made worse by higher growth. The negative should be shown against Option 2. 2. Biodiversity – Higher growth means greater loss of habitat. Significant negative should apply to option 2. 3. Climate change mitigation – agree their finding. 4. Climate change adaptation - ? 5. Communities – Higher growth puts greater stress on services and infrastructure, which are not increased in proportion. Therefore a negative against higher growth. 6. Crime – more people means more crime, so moderate negative against Option 2. 7. Digital infrastructure - = 8. Education and skills - = 9. Employment and Economic Growth – Higher growth means more car dependence and commuting, as employment prospects are not increased – significant negative against Option 2. 10. Flood risk - = 11. Health – Health services are not increased to match higher growth, so services will be more stressed. Negative against Option 2. 12. Historic environment. – Higher growth has an adverse effect on the historic environment. Significant negative against Option 2. 13. Homes – the only positive for Option 2 14. Land and soils – development means loss of agricultural land. Significant negative against Option 2. 15. Landscape – Development must cut off views of the landscape. It can't improve it. Significant negative against Option 2. 16. Poverty etc - = 17. Transport – Significant negative against Option 2. 18. Waste – The local rivers are already polluted by sewage discharge. Higher growth will increase this. Significant negative against Option 2. 19. Water - Higher growth means greater demand for scarce resource. Moderate negative against Option 2.
LPR-B-029	Chris Wardley	Adderbury	Comments relate to Adderbury. The whole of the CDC exercise in terms of Adderbury is, in my view, totally out of proportion to almost every possible measure I can think of - from the size of Adderbury now, the development which I have seen take place in the village in the last 23 years, the already totally inadequate highway network in and around the village, the facilities of the village, Adderbury's relationship to the town of Banbury whereby if even a small number of these sites were to be developed either as part of the new plan or as and when the five year land supply falls below the threshold (as it inevitably will fairly regularly as it has done) the village would simply become part of Banbury.
LPR-B-030	John Holloway	LPR-A-175	Firmly against any proposal that would jeopardise this village, its community and heritage. Expanding the village will lose its rural identity. Development would have a detrimental effect on the village and surrounding area. The village does not have amenities, services or utilities to support expansion. Key issues include: Traffic concerns relating to A361, already a hotspot for accidents; No Doctors Surgery in the village; Limited Bus Services to Banbury, and nothing on a Sunday; No Schools; Low water pressure; Intermittent power disruption; Sewage already is a problem within the village; No Village Shop; No mains gas supply; Countryside erosion; Wildlife disruption; Closure of public footpaths.
LPR-B-031	Sam Patterson	Deddington	Comments relate to Deddington and surrounding villages (Clifton and Hempton). Developing on land surrounding Deddington imposes a serious risk on the local character, landscape and infrastructure. Any development in Deddington would cause further traffic in what is already an extremely busy traffic town. Concerns that Deddington does not meet the minimum air quality and noise pollution targets. The local school is at the heart of the cross roads in the village; the danger traffic already imposes on parents and children walking to and from school. An increase of heavy traffic as a result of further development would inevitably lead to a life threatening accident, of that I have no doubt. We have a neighbourhood team looking into local housing needs and they should be consulted with prior to any decision. Deddington has poor transport sustainability credentials and therefore does not have the infrastructure to support further development in the area without investment in these transport links. Deddington and the surrounding villages is to be deemed unsustainable and therefore should not be considered for development.
LPR-B-032	Paul and Jan Amond	Shutford	Comments relate to Shutford. Roads could not support construction traffic or traffic generated by developments. Local country lanes would be overloaded with large increase in delivery vans of transit size or bigger. Traffic coming from Banbury would cause a pinch point on the High street. No opportunity to widen the road from the junction of West St. down to the George and Dragon. The site at 5 ways junction, of the two sites earmarked, would appear to be the one site that would create the least disturbance to the village in terms of construction

LPR-B-033	Andy Watt	LPR-A-155	Strongly objects to development of this land. Site is unsuitable for housing development. Little or no access to public transport/amenities, and the adjoining marina and canal have suffered from flooding. Loss of jobs and income if the marina residents move away due to the presence of the new housing. Environmental impact of the development is concerning in terms of flooding. brownfield development would be more preferable. impact on existing residents of Kyetts Corner. More suitable sites elsewhere.
LPR-B-034	Andrew Robinson	LPR-A-171	Development would almost double the population of the village; an unsustainable increase. Shutford does not have the infrastructure to meet a significant rise in population. The village has no bus service or shop and services. The existing road access and infrastructure is insufficient to meet the demands of modern day construction traffic and the potential congestion arising from significantly increasing the local population. There are very narrow roads, steep hills and multiple bends leading to the village (and within it) which would not support the increased car and HGV traffic arising from the proposal to build on the land. There is no street lighting for the majority of the village no on the roads used to access the village. There have been recurring mains water supply leaks observed in the village and further issues with drainage. The mains water supply and the waste water/sewerage infrastructure could need expensive upgrade to meet the demands of a significantly increased population. The loss of green belt land associated with the proposal would significantly reduce water infiltration. Reduced water infiltration and increased surface run off from newly developed land could increase flood risk within the village. There is no village school, or any school within safe walking distance. The nearest village primary school has a low pupil capacity (103), which would not meet a significant increase in population growth. There are also no pavements or cycle routes leading in to or out of village making villagers highly reliant on car usage to access any services. There are high levels of Radon gas within the area, increasing the long term health risk to residents from lung cancer. Radon gas issues would need to be addressed to safeguard new residents. Shutford is adversely affected by power cuts, with the electrical supply most unstable during inclement weather. More housing could place too much demand upon the existing supply. Although broadband is available within the village, the speed is relatively low in comparison to that within urban areas. A significant increase in local usage would bring down speeds further. there is no piped gas supply to the village, placing a reliance on expensive bottled gas, oil or wood. There is a very high content of iron stone under the ground in Shutford, with a previous mining permission to remove it from an area immediately adjacent to LPR-A-171. Applications to renew this permission to extract iron stone were recently refused on several grounds, one being the unsuitability of HGV access to the village via the existing road infrastructure. The proposed housing development would also incur similar HGV access issues. High iron stone content could create problems with the construction of the development. In winter conditions, the roads in and around Shutford are not gritted and leave residents stranded due to the steep hills and bends. Loss of rural view, unsustainable housing site.
LPR-B-034	Andrew Robinson	LPR-A-004	Development would almost double the population of the village; an unsustainable increase. Shutford does not have the infrastructure to meet a significant rise in population. The village has no bus service or shop and services. The existing road access and infrastructure is insufficient to meet the demands of modern day construction traffic and the potential congestion arising from significantly increasing the local population. There are very narrow roads, steep hills and multiple bends leading to the village (and within it) which would not support the increased car and HGV traffic arising from the proposal to build on the land. There are also no pavements or cycle routes leading in to or out of village making villagers highly reliant on car usage to access any services. There are high levels of Radon gas within the area, increasing the long term health risk to residents from lung cancer. Radon gas issues would need to be addressed to safeguard new residents. Shutford is adversely affected by power cuts, with the electrical supply most unstable during inclement weather. More housing could place too much demand upon the existing supply. Although broadband is available within the village, the speed is relatively low in comparison to that within urban areas. A significant increase in local usage would bring down speeds further. there is no piped gas supply to the village, placing a reliance on expensive bottled gas, oil or wood. There is a very high content of iron stone under the ground in Shutford, with a previous mining permission to remove it from an area immediately adjacent to LPR-A-171. Applications to renew this permission to extract iron stone were recently refused on several grounds, one being the unsuitability of HGV access to the village via the existing road infrastructure. The proposed housing development would also incur similar HGV access issues. High iron stone content could create problems with the construction of the development. In winter conditions, the roads in and around Shutford are not gritted and leave residents stranded due to the steep hills and bends. Loss of rural view, unsustainable housing site.
LPR-B-035	Steven Lock	Shutford	Comments relate to Shutford. Roads are narrow and in poor state of repair; any increase in use of widening would destroy habitat, hedgerows, ponds, etc. Access from the proposed sites to the village amenities would be via a road with no suitable lighting or footpath. The geology of whole village is situated on ironstone thus making improvements to facilities both complex and costly. current infrastructure cannot support the present population adequately so any additional dwellings would require major improvements (e.g sewers). The village has no shop and few facilities; reliance will be on car; increase in vehicle movements would not support the carbon footprint reduction of the village. all development should prove environmental sustainability before progressing into the Cherwell Plan and thus supporting the zero carbon national objectives. The location of the village is not conducive to development except for infill where appropriate.

LPR-B-036	James Macaro	Deddington	Comments relate to Deddington. I would like to express my concerns about the proposed further housing developments for Deddington. I understand the need for houses but not on such a large scale. Deddington has already had a very big development at Deddington Grange and a smaller one at Windmill close. There are already further developments under way on the Clifton Road side. I don't believe Deddington has the capacity or infrastructure for any further large developments. I believe smaller scale developments around 5-10 acres would be more manageable.
LPR-B-037	Claire Dalbeck	LPR-A-175	The village does not have the services to support double the number of people in the village. The scale of build is totally disproportionate to the size/proportion of the village. Everyone who lives here has deliberately bought into a quiet, rural, picturesque village. development of the site would compromise everyone's way of life here and clash with the historic character of the place. The village has already been hit by the monstrosity warehouses just off the motorway junction, and then double the size of it would be most unfair to all residents and the environment.
LPR-B-038	Ray Herd	LPR-A-175	Number of units proposed is out of keeping with the small and quiet village and would change its character. The village is conservation controlled with great historical and architectural interest. No schools or shops in the village, and insufficient services to maintain the proposed level of housing. The village is totally unsuitable for a development of this size. Vehicular access via the A361 is hazardous and difficult as it is currently. To increase this for the length of time necessary to build so many houses would necessitate severe disruption to villagers and all other road uses on this very busy road. Pollution of all types would reach an intolerable level. The concept of a bypass on the only feasible route around the village would be blocked by this development. Local GP services already under pressure and would be further stretched by new residents.
LPR-B-039	Swalcliffe Parish Council	Swalcliffe	Comments relate to Swalcliffe. The rural parish consists of around 100 households which has seen limited development with only 1 house built since 2015. the parish has some basic facilities including a community hall, pub, and woodland playpark. The conservation area was expanded in 2016 to include the majority of the current built up area. support the suggested vision for Cherwell which we believe establishes a framework for a vibrant and sustainable future.
LPR-B-039	Swalcliffe Parish Council	Option 1	focus on opportunities at larger settlements and planned growth locations
LPR-B-039	Swalcliffe Parish Council	Option 2	focus on Oxford-led growth. The character of Swalcliffe as an attractive and active rural village will best be maintained by offering limited affordable housing development for those working within a reasonable commuting distance, or those who work from home or in local businesses. Local services and infrastructure do not support expansion. There is one small shop in Sibford Ferris, otherwise the nearest shops are Bloxham or Banbury. There is one two lane road through the village (B4035); all others are narrow single rural lanes which are not suitable for significantly increased traffic.
LPR-B-039	Swalcliffe Parish Council	Option 30	Preferred option 1, limit development in the rural areas to that required to meet local needs.
LPR-B-039	Swalcliffe Parish Council	Option 31	Preferred option 1, work with communities to allocate specific sites to meet identified housing needs.
LPR-B-039	Swalcliffe Parish Council	Option 32	Preferred option 2, give additional weight to the accessibility of the settlement to our urban centres by public transport, walking and cycling. Comment. Swalcliffe is too far from Banbury for most to cycle or walk but an improved bus service may encourage residents to use this in place of a car to travel to Banbury and beyond.
LPR-B-039	Swalcliffe Parish Council	Option 33	Preferred option 3, combination of criteria-based policies and allocating sites to support the rural economy. Comment. As noted above, Swalcliffe already has a small but diverse rural economy and we encourage creative plans to develop this within the limitations of the parish infrastructure.
LPR-B-039	Swalcliffe Parish Council	Option 34	Preferred option 1, retain the current approach of seeking to conserve and enhance the countryside and landscape character of the whole district.
LPR-B-039	Swalcliffe Parish Council	LPR-A-068	Strongly oppose the inclusion of LPR-A-068 in future iterations of this plan. This runs counter to the current strategy, which we believe remains extant, to limit growth in our rural areas and directing it towards larger and more sustainable villages (Para 4.3.1). It does not support the suggested vision for Cherwell, Point 10, "Our distinctive natural and built environment and our rich historic heritage is cherished, protected and enhanced. Cherwell maintains its rural character where its landscapes, its vast range of natural and built heritage and its market towns define its distinctiveness." Acceptance of such a development in the 2040 plan would go against the preferred rural options that we have proposed above. This development would destroy existing prime agricultural land. The addition of up to 85 houses on the boundaries of Sibford Ferris and Swalcliffe would completely unbalance both villages. The existing infrastructure, particularly the narrow country roads, would not support such an expansion and it would destroy their rural character.
LPR-B-040	Simon Lutter	Adderbury	Comments relate to Adderbury. Objects on environmental, road safety, pollution and loss of amenity grounds. It is unsustainable to build on fields that feed us. Proposals should be on brownfield sites not greenfield. Current sewerage and drainage will struggle with new development proposed. Queries how sewerage will be dealt with and whether Thames Water are being consulted. Queries the consideration given to waste collection services, policing, health, hospital and medical services - will these be able to cope with the expansion plans? existing roads under strain currently, further development will make this worse and will consequently impact pollution levels. Additional traffic near Sir Christopher Rawlins School will impact pupils health. Additional traffic generated will affect highway safety. additional fumes from traffic is detrimental to health. Adderbury is a village and further increase in housing will lose that distinction and become part of Banbury. Additional housing on these fields will impact on the visual amenity to the detriment of the village. The proposed plan will impact on wildlife living on this land.
LPR-B-041	Richard Altham	Wardington	Comments relate to Wardington. Scale of development proposed is out of proportion to the existing village. Building large numbers of housing next to a Conservation Area would be an undesirable change in respect of the Wardington CA definition. Building more houses where the character of the surroundings wouldn't be affected and where large numbers of intensive housing have recently already been built and are continuing to be built would be better. Access to the site through the village is already a problem with no room to widen the road. The site should not be considered for development.

LPR-B-042	Cllr Hannah Banfield	LPR-A-185	Development should be directed to previously developed land and not greenfield sites. the current infrastructure capacity is insufficient at the M40 roundabout and the development of these areas would have an unacceptable impact on local roads. Existing issues at J11 of the M40, proposals would result in more traffic to the area that would further encourage traffic to local roads when there are incidents on the M40 J11 or A422. it would be prudent to resolve issues with the bottleneck of traffic at the M40 J11 roundabout. The proposal does not represent sustainable development as it fails to meet environmental objectives which include improving biodiversity and enhancing the natural environment. The area is a natural habitat for much wildlife. The area with its proximity to the M40 and the A422 gives the wildlife an unusual protection from human interference or disturbance. the allocation of this site would fail to respect the character of the countryside and the history of Banbury that is still preserved after the building of the M40 and A422.Public footpaths run through Nethercote, and is within walking distace of nearby residential estates. Potential flooding issues as result of removal of permeable surfaces. Land north ofthe M40 J11 is prone to flooding. Large scale commercial development does not consider residents in this quiet area and would bring unreasonable distrubances. Potential that there may be oil pipes running on the line (former Shell pipes). Queries what conservation protection can be given to the area?
LPR-B-042	Cllr Hannah Banfield	LPR-A-168	Development should be directed to previously developed land and not greenfield sites. the current infrastructure capacity is insufficient at the M40 roundabout and the development of these areas would have an unacceptable impact on local roads. Existing issues at J11 of the M40, proposals would result in more traffic to the area that would further encourage traffic to local roads when there are incidents on the M40 J11 or A422. it would be prudent to resolve issues with the bottleneck of traffic at the M40 J11 roundabout. The proposal does not represent sustainable development as it fails to meet environmental objectives which include improving biodiversity and enhancing the natural environment. Potential that there may be oil pipes running on the line (former Shell pipes). Queries what conservation protection can be given to the area?
LPR-B-043	Ivor Davies	Question - Kidlington Infill Housing	Supports the position that no further residential development is planned for Kidlington and the green belt beyond that identified in the Partial Review. The plan should commit to block further development until there is a very clear need for it. The text "Whether or not further growth (and Green Belt release for housing) is required at Kidlington is a matter for the Oxfordshire Plan." needs to be much clearer in intent to block further housing development.
LPR-B-043	Ivor Davies	LPR-A-024	should be allocated as green space as the site is used by many residents for leisure purposes.
LPR-B-043	Ivor Davies	LPR-A-224	should be allocated as green space as the site is used by many residents for leisure purposes.
LPR-B-043	Ivor Davies	LPR-A-156	should be allocated as green space as the site is used by many residents for leisure purposes.
LPR-B-043	Ivor Davies	Question - Travelling Communities	Would like to see a clearer statement wrt Travelling Communities in Kidlington – I note there are a number of development proposal in Kidlington, which I think are not appropriately sited, but its not clear how these are addressed by the plan.
LPR-B-044	Anne Swain	Cropredy	Comments relate to Cropredy. Traffic and parking are an existing issue. More housing would have a detrimental impact on the nearest town of Banbury; access in to the town is a major problem at present. Doctors and schools in Cropredy have no spare capacity. Empty and derelict shops should be used in town centres to improve the area. Development for large scale housing would result in greenhouse gasses. Land would be better used as a reseviior, create leisure facilities to generate business or plant woodland which would reduce impacts of global warming and may result in financial rewards for tree planting. No consideration given to existing residents. Cropredy is in the process of being spolit by overdevelopment similar to Banbury.

LPR-B-045	Peter Tinker	LPR-A-175	Comments relate to villages of Wardington, Williamsote, Cropredy, Great Bourton and Claydon. If the housing developments are to proceed, they should give consideration to improving facilities in these villages. Improvements include: 1. A health centre or cottage hospital, as an extension of the existing surgery at Cropredy for consultations with visiting specialists, thus avoiding the necessity for patients to travel to Horton or John Radcliffe Hospitals. 2. A variety of convenience shops and a post office within walking or cycling distance of the local villages. 3. An adventure recreation ground for children to tempt them away from bedrooms and keyboards. 4. Sports fields, tennis courts, clubs with coaching facilities. 5. If a new school is required, the design should include sufficient parking space for staff,visitors and school buses to avoid congesting the roads. 6. Space for office buildings and small workshops for potential start- up businesses. The design of the houses should be as varied as possible and of the same standard and density as those in the existing villages. The new development should have its own name so that the existing villages retain their identities
LPR-B-045	Peter Tinker	LPR-A-155	Comments relate to villages of Wardington, Williamsote, Cropredy, Great Bourton and Claydon. If the housing developments are to proceed, they should give consideration to improving facilities in these villages. Improvements include: 1. A health centre or cottage hospital, as an extension of the existing surgery at Cropredy for consultations with visiting specialists, thus avoiding the necessity for patients to travel to Horton or John Radcliffe Hospitals. 2. A variety of convenience shops and a post office within walking or cycling distance of the local villages. 3. An adventure recreation ground for children to tempt them away from bedrooms and keyboards. 4. Sports fields, tennis courts, clubs with coaching facilities. 5. If a new school is required, the design should include sufficient parking space for staff,visitors and school buses to avoid congesting the roads. 6. Space for office buildings and small workshops for potential start- up businesses. The design of the houses should be as varied as possible and of the same standard and density as those in the existing villages. The new development should have its own name so that the existing villages retain their identities
LPR-B-045	Peter Tinker	LPR-A-202	Comments relate to villages of Wardington, Williamsote, Cropredy, Great Bourton and Claydon. If the housing developments are to proceed, they should give consideration to improving facilities in these villages. Improvements include: 1. A health centre or cottage hospital, as an extension of the existing surgery at Cropredy for consultations with visiting specialists, thus avoiding the necessity for patients to travel to Horton or John Radcliffe Hospitals. 2. A variety of convenience shops and a post office within walking or cycling distance of the local villages. 3. An adventure recreation ground for children to tempt them away from bedrooms and keyboards. 4. Sports fields, tennis courts, clubs with coaching facilities. 5. The new development should have its own name so that the existing villages retain their identities

LPR-B-045	Peter Tinker	LPR-A-114	Comments relate to villages of Wardington, Williamsote, Cropredy, Great Bourton and Claydon. If the housing developments are to proceed, they should give consideration to improving facilities in these villages. Improvements include: 1. A health centre or cottage hospital, as an extension of the existing surgery at Cropredy for consultations with visiting specialists, thus avoiding the necessity for patients to travel to Horton or John Radcliffe Hospitals. 2. A variety of convenience shops and a post office within walking or cycling distance of the local villages. 3. An adventure recreation ground for children to tempt them away from bedrooms and keyboards. 4. Sports fields, tennis courts, clubs with coaching facilities. 5. If a new school is required, the design should include sufficient parking space for staff,visitors and school buses to avoid congesting the roads. 6. Space for office buildings and small workshops for potential start- up businesses. The design of the houses should be as varied as possible and of the same standard and density as those in the existing villages. The new development should have its own name so that the existing villages retain their identities
LPR-B-045	Peter Tinker	LPR-A-133	Comments relate to villages of Wardington, Williamsote, Cropredy, Great Bourton and Claydon. If the housing developments are to proceed, they should give consideration to improving facilities in these villages. Improvements include: 1. A health centre or cottage hospital, as an extension of the existing surgery at Cropredy for consultations with visiting specialists, thus avoiding the necessity for patients to travel to Horton or John Radcliffe Hospitals. 2. A variety of convenience shops and a post office within walking or cycling distance of the local villages. 3. An adventure recreation ground for children to tempt them away from bedrooms and keyboards. 4. Sports fields, tennis courts, clubs with coaching facilities. 5. If a new school is required, the design should include sufficient parking space for staff,visitors and school buses to avoid congesting the roads. 6. Space for office buildings and small workshops for potential start- up businesses. The design of the houses should be as varied as possible and of the same standard and density as those in the existing villages. The new development should have its own name so that the existing villages retain their identities
LPR-B-046	Matt Foley	LPR-A-091	Obejct - roads in the area would not facilitate a new development and the work would be detrimental to the existing residents.
LPR-B-047	Phil Mansell	Adderbury	Comments relate to Adderbury. Exclusive emphasis on housing, at the expense of consideration of all the other environmental and economic factors that play a role in Cherwell's broader planning framework is disappointing. New residents would be unable to enjoy the benefits of traditional village life where transport, education and health infrastructure would be so intense it would limit thier quality of life. Housing would result in an extreme pressure on the natural environment limiting the degree to which incomers can benefit from the country surroundings. proposals would result in little potential for economic or social development.
LPR-B-048	Corrine Mitchell	Question - Bicester's Local Green Spaces	strongly support the designation of the Langford Community Orchard (LPR-A-204) and Gavray Meadows Local Wildlife Site (LPR-A- 125).
LPR-B-048	Corrine Mitchell	LPR-A-204	strongly support the LGS designations. Site is easily accessible and one of few wild space left in Bicester. Impreative that we preserve and look after these wonderful spaces.
LPR-B-048	Corrine Mitchell	LPR-A-125	strongly supporting of the LGS designation. Gavray Meadows will be even more important when the fields beyond the A4421 are developed for housing. The site is a remnant of the countryside that used to surround Bicester, full of wildlife and home to many rare species of butterflies and newts. The site has varied small ancient meadows bounded by hedgerows dating back to medieval times. It has magnificent mature trees, two ponds and lots of wild flowers inspring and summer. We should not lose it.
LPR-B-049	Gillian Hughes	LPR-A-185	Developing these areas would have a significant negative impact on our countryside. It will: increase noise from alarms and machinery; increase traffic and place more pressure on the M40 J11 roundabout which has already been highlighted as an issue in the Pla; remove key areas of natural habitat which are a haven for wildlife and birds and increase flooding risks by removing permeable surfaces.
LPR-B-049	Gillian Hughes	LPR-A-034	Developing these areas would have a significant negative impact on our countryside. It will: increase noise from alarms and machinery; increase traffic and place more pressure on the M40 J11 roundabout which has already been highlighted as an issue in the Pla; remove key areas of natural habitat which are a haven for wildlife and birds and increase flooding risks by removing permeable surfaces.
LPR-B-049	Gillian Hughes	LPR-A-168	Developing these areas would have a significant negative impact on our countryside. It will: increase noise from alarms and machinery; increase traffic and place more pressure on the M40 J11 roundabout which has already been highlighted as an issue in the Pla; remove key areas of natural habitat which are a haven for wildlife and birds and increase flooding risks by removing permeable surfaces.
LPR-B-050	Mr and Mrs D'Costa	LPR-A-091	Comments relate to Bodicote. Objects to unsustainable development in Bidcote. This development offers no benefit to the local residents .The increase in volume of road traffic and pollution through the existing estate will be detrimental to the health of the local population and environment. Access would have to be through the existing estate as no main roads near. The local roads could not cope with building traffic or the increase of traffic if new houses were built there.

LPR-B-051	Mark Chivers	LPR-A-175	Comments relate to Wardington. The potential number of properties proposed would have a disproportionat and native impact on the village as a conservation area. Without exact numbers and blueprints of the development it is difficult to show the impact on the character of the village. Development of any size would mean that any construction traffic would have to use the existing narrow village roads, which would be disturbance for the existing residents. Alternatively construction traffic would have to create new access from the A361 which is problematic because of the layout of the roads. increased daily traffic with people commuting to work, schools, and shops as none of these facilities are in the village. The village has poor drainage; with no indication of improvements to the local draiange system which could result in local flooding. No indication of whether electricity, water and waste water systems will be improved to accomodate the developments. Larger development is out of scale and out of character with the village. The village may be in need of starter homes or smaller retirement properties or homes for local farm labourersbut there are no specific plans for these to comment upon. Other sites are more suitable, e.g. Upper Heyford, large areas of the operational side of the former base. National policy supports brownfield rather than greenfield sites. Extensive archaeology likely to be required. Habitat surveys would be required for access to be taken off A361; timescales for these may delay development commencement. Landowner should divide up site to smaller parcels if only 25 units proposed.If brownfield sites are used up in the future and the village has more facilities and infrastructure then larger development could be considered. at this time the site is inappropriate for development.
LPR-B-052	Tammy Marrett	Deddington	Comments relate to Deddington. Express concern over the councils support for the Housing and Growth Deal and being pro development. Existing development is essentially linking the villages of Adderbury and Bodicote. Has the local housing need been established and can evidence be provided to show how this is determined? how has the need been established for the 13 potential development sites around the parish of Deddington. concern raised over the number of new houses being built locally that need retrofitting as soon as they are built. Exemplar project at Elmsbrook; why is there no requirement for new development to meet these standards?
LPR-B-053	Acorus Rural Property Services Ltd for WS Deeley and Son	Call for Sites Promotion - Land connecting Chapmans Lane and St Thomas Street, Deddington	Land connecting Chapmans Lane and St Thomas Street, Deddington is promoted for housing.
LPR-B-053	Acorus Rural Property Services Ltd for WS Deeley and Son	Call for Sites Promotion - Land north east of Chapmans Lane, Deddington	Land north east of Chapmans Lane, Deddington is promoted for housing.
LPR-B-053	Acorus Rural Property Services Ltd for WS Deeley and Son	Call for Sites Promotion - Land east of Hall Personal Training, Clifton Road, Deddington	Land east of Hall Personal Training, Clifton Road, Deddington is promoted for housing.
LPR-B-054	Judy Abbott	LPR-A-107	Strongly objects. Increase in traffic is not supported by suitable roads, many already in a poor state and traffic is already heavy. Amenities in the village are inadquate to cope with increase in people. Government proposes development on brownfield land rather than greenfield, this is good agicultural land. Infrastructure not capable of coping with significant increase in demand. Development of this size would significantly change the character of the village which has previous supported small developments in the past but could not absorb a development of this scale.
LPR-B-055	Derek Adams	LPR-A-214	Development proposals would devalue and tarnish Hanwell's historical, environmental and cultural significance. Merging villages in to Banbury will not maintain its rural and historic character. The proposal effectively destroys the local identity of Hanwell. Additional housing to the north of Banbury puts additional strain on existing infrastructure. Any development that merges a village into a town cannot possibly be enhancing the setting of the village. The draft plan directly and completely destroys the open and agricultural setting and identity of Hanwell village. Hanwell will become just another suburb of Banbury. Hanwell village is not only a protected area but it has immense historical value. Hanwell Castle is steeped in historical significance and by encroaching on Hanwell's land space is to completely disrespect its place in history. The rare public observatory in the grounds of the Castle won't be able to function because of increased light pollution. Building on prime countryside land will produce more flooding and less drainage. By building on farm land the council is contributing to the destruction of the UK farming industry. If this development goes ahead it will radically disturb all crucial wildlife. Views will be utterly ruined and therefore spoil the area and affect tourism in the region. houses will be considerably devalued, but their views and direct access will be completely obliterated.
LPR-B-055	Derek Adams	LPR-A-152	Development proposals would devalue and tarnish Hanwell's historical, environmental and cultural significance. Merging villages in to Banbury will not maintain its rural and historic character. The proposal effectively destroys the local identity of Hanwell. Additional housing to the north of Banbury puts additional strain on existing infrastructure. Any development that merges a village into a town cannot possibly be enhancing the setting of the village. The draft plan directly and completely destroys the open and agricultural setting and identity of Hanwell village. Hanwell will become just another suburb of Banbury. Hanwell village is not only a protected area but it has immense historical value. Hanwell Castle is steeped in historical significance and by encroaching on Hanwell's land space is to completely disrespect its place in history. The rare public observatory in the grounds of the Castle won't be able to function because of increased light pollution. Building on prime countryside land will produce more flooding and less drainage. By building on farm land the council is contributing to the destruction of the UK farming industry. If this development goes ahead it will radically disturb all crucial wildlife. Views will be utterly ruined and therefore spoil the area and affect tourism in the region. houses will be considerably devalued, but their views and direct access will be completely obliterated.
LPR-B-055	Derek Adams	Option 18	Banbury is simply not big enough and the infrastructure is not in place to accommodate thousands more homes. There will be much more traffic and therefore more fumes. Horton Hospital and all surrounding GP surgeries will simply not be able to cope. There are simply not enough schools to accommodate more pupils. Supermarkets will become far too overcrowded. If more housing is developed, I fear the entire area will suffer and Banbury and its surrounding areas will become London 2.0 where all the lovely satellite villages were swallowed up by out-of-character homes.

LPR-B-056	Tudor Hall School	LPR-A-185	Strongly objects to further development south of Banbury butting on to Wykham Lane. If these developments are permitted it will further erode the rural green corridor between Banbury, Bodicote and Bloxham, which has been significantly reduced with the urban expansion south of the Saltway. This development would replace existing agricultural land, used for cereals and livestock with the associated loss of habitat. It may adversely affect the business of Tudor Hall School. Development on a greenfield site will run counter to key objectives 5, 14, 15 and 23. The site should be removed from future iterations of the local plan.
LPR-B-056	Tudor Hall School	LPR-A-116	Strongly objects to further development south of Banbury butting on to Wykham Lane. If these developments are permitted it will further erode the rural green corridor between Banbury, Bodicote and Bloxham, which has been significantly reduced with the urban expansion south of the Saltway. This development would replace existing agricultural land, used for cereals and livestock with the associated loss of habitat. It may adversely affect the business of Tudor Hall School. Development on a greenfield site will run counter to key objectives 5, 14, 15 and 23. The site should be removed from future iterations of the local plan.
LPR-B-057	Ed Batchelor	LPR-A-175	Object to the application for change of use. Once granted there will inevitably be planning applications for housing. The number of houses permitted on average per hectare (as per council guidance) is far greater than that sighted in the original application; potential for 450 houses on sites combined. Potential scale of development is neither required or appreciated in the small community; increasing the village by 2/3 is not plausible. The current A361 and surrounding infrastructure would not support a development of this scale. If the site was fully utilised to its permitted scale of 23 houses per hectare, the highway access would not support the increase in capacity for cars turning off the main road - inevitably leading to a bypass being required which would further impact the surrounding areas as far down as Williamscot. Increased traffic flow and need for further infrastructure would weigh heavily on council budgets if combined with the houses being developed in Wardington. If a small area for change of use is given this will pave the way for further expansion once the houses start to be built.
LPR-B-058	Jan Funnell	LPR-A-175	Change of use must not be allowed. The village needs farming land. Do not need more houses and more cars on the A361. Doctors cannot cope just now. Sewerage system cant cope just now. No school, shop, mains gas. Would result in closure of footpaths which are used for dog walking. Do not give permission of change of use to building, residents like the farming village and the countryside.
LPR-B-059	Patricia Bryant	LPR-A-175	Could be as many as 300-450 houses which will completely alter the character of the conservation village. Will also lose the opportunity for a bypass in the future. Services in the village could not accommodate so many houses. Lack of infrastructure - no school or doctors. Change of use from agricultural land also the number of houses planned could be increased later without consultation.
LPR-B-060	Mr G Allen	LPR-A-168	Respondent owns the land subject to the call for sites submission, however has not been consulted by the submitter L&Q Estates. Mr Allen does not know L&Q Estates and clarifies land is not for sale. Concerned about being named in the submission without his consent. Requests name is removed from the documentation.
LPR-B-061	Sibford Gower Parish Council	Option 1	Visions can be identified as a thoughtful and measured consideration of the future viewed through a variety of different scenarios. The success of this Cherwell Local Plan Review will be measured in delivering the right housing to the right people in the right places at the right time. Decisions must be delivered through a secure and robust evidential base, rather than the speculation of developers.
LPR-B-061	Sibford Gower Parish Council	Option 2	Seeking to rationalise the complex nature of the Cherwell Local Plan Review into themes and objectives is a major challenge in itself, with the added requirement to present them in a manner which is broadly accessible to the non-specialist. The inter-connectivity of multiple objectives makes any decision regarding relative importance dangerous given that any range and value of priorities identified for a particular set of circumstances is unlikely to have universal application.
LPR-B-061	Sibford Gower Parish Council	Option 3	Option 5 would appear to be the pragmatic choice, as it embraces the other options while continuing to offer a range of flexibility. There are clear advantages in continuing to utilise the existing urban centres of Banbury, Bicester and Kidlington with their already established transport connectivity, likely to be further enhanced through the development of Oxford-Cambridge Arc. The use of previously developed land will clearly reduce the negative impact of further employment development on the rural landscape, but may offer insufficient land area. It should also be recognised that the rural economy is also a significant element of the rural landscape in itself, and is likely to experience further innovative development. In seeking additional development land in the larger villages, there is an inevitable possibility that the essential character and heritage of the village may be entirely consumed by the development and associated infrastructure.
LPR-B-061	Sibford Gower Parish Council	Option 6	More inclined by 2nd option, but ensure that these percentages are met in full with actual housing units. With the identified on-going pressure for affordable housing, it is essential that the provision is made where the local need is identified rather than as an afterthought in the provision of development sites.
LPR-B-061	Sibford Gower Parish Council	Option 7	Essential to identify the need and then prioritising that need rather than the mere application of an arbitrary formula.
LPR-B-061	Sibford Gower Parish Council	Option 8	Option 1 as a minimum requirement. Option 2 could be identified as discriminatory.
LPR-B-061	Sibford Gower Parish Council	Question - Housing Policies	Provision for developing alternative methods of construction merit on-going review to investigate all aspects of the construction process eg efficient use of materials, innovative building techniques, thermal efficiency, thereby contributing to a positive awareness of climate change and the creation of new heritage environments for the future.
LPR-B-061	Sibford Gower Parish Council	Option 10	Option 3 could be identified as aspirational if the objective is to identify and achieve the highest quality for our residents. However, such aspiration may be significantly moderated by the implementation of relevant national guidelines.
LPR-B-061	Sibford Gower Parish Council	Question - Retrofitting of Historic Buildings	Listed buildings were built within the limits of construction methods, materials and lifestyle which were appropriate to the locality at that time. Such an approach is unlikely to meet modern energy efficiency requirements. In general, owners of listed buildings value their character and heritage, and are willing to accept some limitations to energy efficiency in order to preserve that identified character and heritage. The bespoke approach identified (para 5.5) would seem both advisable and reasonable, with a healthy dose of common sense being utilised by all parties.

LPR-B-061	Sibford Gower Parish Council	Option 11	The paragraphs in 5.5 on 'What you told us' properly reflect a range of views. Although that can often only serve to perpetuate arguments 'for' and 'against' which can verge on self-indulgence at a time of crisis, CDC are clearly listening. The paragraphs in 5.5, in our view, are already well-developed and ambitious. Many of the measures proposed in this section concern local responses to the very real and very pressing climate crisis, although it would be hard to guess the urgency from the section's title 'Mitigating and adapting to Climate Change'. Responding to the crisis: The measures proposed do not always convey the scale of the crisis that confronts us. They are all necessary, and are much needed. In the rush to develop 'green growth', which is where the predominant emphasis is placed in this section, we wish to highlight the fact that reference to an equally significant diversity crisis impinging on all of us is presently almost entirely missing in the present document, except for Option 13.
LPR-B-061	Sibford Gower Parish Council	Question - Policies for Climate Change, Sustainable Construction & Renewable Energy	draws reference to Dasgupta Review and Environmental Audit Committee report. A consumption-oriented way of life which is as predominant in Oxfordshire's towns and villages as anywhere else – and is presently not addressed in this section of Cherwell's Review at all, except as a policy issue in Option 13. From this perspective, truly sustainable economic development would mean recognising that our long-term prosperity relies on re-balancing our presently profligate demand on Nature's 'goods' and 'services' with its capacity to supply them. It also means that Cherwell, would need to account fully for the impact of our interactions with nature – one of the principle calls of the Government's Dasgupta Review. But any natural capital assessment as proposed in Option 13 needs to go beyond demonstrating impact to prevent its happening. we feel it should be a policy priority in this section of the Options Paper to clearly differentiate this more general use of the term from the much stricter requirements of ecologically supported development. The regenerative capacity that those requirements would safeguard should be upheld as strongly as any of the other pre-occupations that presently feature in this listing of Cherwell's Key Choices – and could properly be seen as the pre-condition for any one of them. The review would gain significantly from the provision of supporting links where appropriate to explanatory video footage of the issues involved and the scale of the crisis that is confronting us as a civilisation. The review is supported with photographs and diagrams, but is presently overwhelmingly word based, As a contribution to that recommendation, and in support of the proposition presented in these last few comments, we commend the following short video clip commissioned by HM Treasury as part of the Dasgupta Review: <a href="https://www.cam.ac.uk/stories/dasguptareview">https://www.cam.ac.uk/stories/dasguptareview</a>
LPR-B-061	Sibford Gower Parish Council	Option 12	Having concluded that an acceptable solution cannot be achieved on site, the base line for further action will be determined by reference to the criteria identified through the initial site assessment. Objective comparisons can then be made against the base line criteria to determine where the required biodiversity net gain / compensatory measures can be achieved. We certainly support Proposal 3) that the Council should secure contributions to local environment bodies undertaking biodiversity enhancement projects within the district.
LPR-B-061	Sibford Gower Parish Council	Option 13	We are supportive of Option 2). Major developments, by their very nature, are likely to have a significant impact on the natural environment. It is encouraging to note that much work has already been undertaken in mapping Oxfordshire's natural capital (para 5.7.10). The use of this evidence at a more detailed local level to both demonstrate the potential impact of major development proposals and possible environmental net gain (para 5.7.11) will generate a greater understanding and awareness for all parties, and provide the basis for bold initiatives to interrupt the presumption in favour of economic growth and ensure that any development is ecologically sustainable.
LPR-B-061	Sibford Gower Parish Council	Question - Biodiversity & The Natural Environment	The example identified (para 5.7.12) offer an additional range of important areas which require detailed understanding within a structured overview of biodiversity and the natural environment. Clearly, it will be appropriate to embrace such further detail as may be required by national legislation within the Environmental Bill.
LPR-B-061	Sibford Gower Parish Council	Option 14	In small village locations, an important first step should be an assessment of the existing provision for all age groups, linked with a consultation exercise to identify the residents' priorities. This will offer a baseline data set for the proposed development site which will be further informed through due consideration of the anticipated residential profile. A simple application to identify minimum provision through LAP/LEAP/NEAP approach appears to promote administrative convenience at the expense of rational and constructive dialogue.
LPR-B-061	Sibford Gower Parish Council	Question - Protecting the Historic Environment	As indicated (para 5.10.4), local heritage assets do make an important contribution to the nature and character of their environment, both for now and for future generations. The creation and delivery of policies to formally protect such assets (para 5.10.6) is strongly supported.
LPR-B-061	Sibford Gower Parish Council	Question - Achieving Good Design & 'Beauty'	Merely to determine the design of places as "beautiful" implies a very subjective judgement and lacks precision. All potential development sites, both big and small, will be located within areas which already exhibit local character through previous design, use of materials, existing land use, historical context. The basic concept of design codes and guides offers an option for considered review, but also could be seen as overly restrictive. An attempt to impose a national design guide and model design code would seem to ignore the diverse nature and character which is to be found throughout the country, or could be so vague within its terms and conditions as to be liable to ambiguous interpretation. While the option to devise and implement design and advice codes for individual small development sites may be unrealistic, it may be that an overall district-wide implementation could be viewed as simplistic in failing to acknowledge significant local variation. Perhaps priority should be targeted at the local level, thereby offering an overview which is able to reflect a closer understanding and awareness of relevant matters. A combination of the identified local levels will provide a sensitive and relevant document which fully embraces and informs Cherwell's on-going development options.
LPR-B-061	Sibford Gower Parish Council	Question -Transport & Connectivity	Many rural communities are found in areas where narrow roads and tight bends, often without a pedestrian footpath, are dominant features. Access to major highway provision and public transport is severely restricted, meaning that personal transport is an essential element of access to urban areas – work, shopping, recreation. The need for comprehensive electric and hydrogen charging facilities, both public and private, IS VITAL.
LPR-B-061	Sibford Gower Parish Council	Option 16	It must be acknowledged that society is currently experiencing a digital revolution. It may be difficult to project long-term into the digital future, it would seem negligent not to require all new development to be future proofed, within the context of the best available information available at that time.
LPR-B-061	Sibford Gower Parish Council	Question - Transport Policies	In rural areas, where roads are frequently narrow with many difficult bends, personal transport is likely to remain dominant. With the increasing requirement to reduce pollution and enhance air quality, a comprehensive charging infrastructure (electric and hydrogen) is essential.

LPR-B-061	Sibford Gower Parish Council	Option 17	When considering any revised methodology for the Infrastructure Delivery Plan (IDP) it will be important to identify a known base level as a starting point ie to have a comprehensive record of the current situation which will form a factual basis for further consideration, avoiding the potential for seeking solutions through administrative convenience. The reference to grouping infrastructure by its catchment area (para 5.13.7) could offer an interesting perspective on connectivity, although the lack of scale identified for such catchment areas, as potentially applied to rural areas ,is a significant omission.
LPR-B-061	Sibford Gower Parish Council	Option 18	Banbury's location has a limiting factor on future development due to the close proximity of the Northamptonshire and Warwickshire county boundaries. Rather than be restricted by existing county boundaries, an active dialogue with both Warwickshire and Northamptonshire could lead to innovative options for mutually beneficial housing and employment growth, e.g. DIRFT project near Rugby. consideration could be given to creating a new M40 access. This would help to alleviate the current Junction 11 congested access to and from Banbury, and offer further development opportunities for housing and local industry with enhanced connectivity nationally. Active consideration could be given to the possibility of relocating the railway station, helping to alleviate another traffic hot spot and generating a significant brown field area for appropriate redevelopment.
LPR-B-061	Sibford Gower Parish Council	LPR-A-107	proposals are totally inappropriate and should not be included in the revised local plan. Sites are not contiguous with the heart of the village and its conservation area. The land, which forms an elevated ridge, and, as such, forms one of the hills in the area referred to as Ironstone Downlands. Whilst lying just outside the Cotswolds AONB, these two areas of high ground help to cradle the gently undulating landscape of the AONB and its environs with only occasional buildings interrupting the scene. Totally inappropriate scale - potential to generate 350 dwellings which would increase the village by 131%. Any development of this nature would be significantly out of scale with the current settlement and contravene CDC's current planning strategy 'limiting growth in rural areas and directing it towards larger and more sustainable villages'. Development of any scale in this location is totally inconsistent with the planning/development strategies currently being promoted by Oxfordshire County Council and Cherwell District Council. The location of the proposed development sites means that car journeys will always be necessary to access employment, retail and other primary services. Locations are unsustainable and will increase the need to travel. Clear inconsistency with existing and proposed planning and development policy including: Guide new development onto the most sustainable locations; Use land effectively by planning positively for brownfield land and supporting urban regeneration; Limit growth in rural areas; Strictly control development in open countryside; Protect and enhance Oxfordshires highly valued countryside and landscape; and reduce the need to travel. Site Specific concerns include: access and movement - Pound Lane has capacity issues, restricted width and only 60m of footpath at the bus stop. Road is in poor nature, limited public transport, railway station is 8 miles away. Walking between villages is difficult due to topography. Forms part of the Oxfordhire Cycleway and is a route of regional significance due to rural character and low traffic volumes. Limited access to primary infrastructure - water pressure and quantity is an existing issue. Main length of Pound Lane has no main foul sewer making access to drainage difficult. Sewerage Treatment Plant has limited capacity and is unlikely to be able to accommodate any significant increase in foul sewage, its location makes any increase in size very difficult. Increase in surface water runoff is a major issue. Any substantial built development in the upstream catchment areas will only exacerbate an already difficult situation. Street lighting - It is highly likely that any new development would destroy the 'dark skies' nature of the village. Micro Climate - Lower winter temperatures and higher amounts of snow make access to and from the village more difficult. development located in an exposed location would require substantial additional measures to enhance their energy efficiency. Lack of understanding of agricultural activity - In locations with similar profiles to Sibford Gower, evidence exists that when new communities are established, frustration with existing agricultural activity can arise and, in due course, lead to conflict. Loss and degradation of the immediate and wider landscape - the proposed development sites would result in a direct loss of high quality agricultural land, damage to the network of hedgerows and trees which enclose it and loss of water to the immediate water table. The location of new buildings in such a prominent location would have a detrimental effect on the visual qualities of the wider landscape. Needs - It is vital for the village to have the ability to develop and re-shape itself to meet current requirements based on local needs rather than speculative development
LPR-B-061	Sibford Gower Parish Council	Option 30	Both options offer a rather simplistic approach to a complex problem. All solutions will have a lasting impact on the rural landscape, infrastructure, viability and heritage. Option 1 could generate a "moth balling" character to a village community, while Option 2 could overwhelm and destroy existing character and heritage. On balance, we support option 1. Both will require an unambiguous identification of needs, local and wider district, which are rigorously reviewed within a clearly defined monitoring programme. Previous experience suggests that national perspectives are likely to exert a dominating influence.
LPR-B-061	Sibford Gower Parish Council	Option 31	Developing a collaborative approach with local communities is more likely to achieve positive outcomes by enabling all parties to express their wishes and concerns within a constructive and reasoned dialogue. A specific allocation of parish level figures would appear to identify an unequal partnership within the component partners.

LPR-B-061	Sibford Gower Parish Council	Option 32	Of particular importance would be: Access to good quality education facilities, both primary, secondary and nursery; Access to primary medical care; Access to high speed and reliable internet connectivity; Local convenience shopping facilities, including a post office; Local recreational, community and entertainment facilities; Connectivity to major urban retail facilities; Connectivity to major employment locations; Safe and readily accessible highways infrastructure, with safe pedestrian provision; Provision of frequent, regular and affordable public transport; Availability of housing stock to sustain the provision of essential workers within the broader community. The development of a rural settlement hierarchy will require the need to identify a range of measures to determine the relative features of individual villages. Such criteria should be clearly defined, unambiguous and open to public scrutiny. It is essential that the target outcomes are publicly identified and understood before such criteria are brought together for comparison. When comparison data is drawn from the available information, it must be considered against the previously identified target outcomes, rather than such target outcomes being subsequently "adjusted" to coincide with planning convenience. It is essential to have precisely defined settlement boundaries for individual villages to provide greater certainty as to the extent of the built-up area, thereby addressing the current village boundary ambiguity. Should future pressures indicate a possible village boundary revision, this can be addressed through the identified democratic planning process. The Sibford Gower Parish Profile offers a concise and informative picture of our village, identifying a range of characteristics, detail and concerns which are particularly relevant to any future development consideration.
LPR-B-061	Sibford Gower Parish Council	Option 33	Option 3 offers the most appropriate means of supporting the current and future development of the rural economy. Criteria based policies can offer clear direction and guidance as a baseline, while size and scale may indicate a more bespoke approach. While the nature and priorities of the existing rural economy can be readily identified, these may be at variance with the nature and priorities for an innovative 21st century rural economy. Inevitably, this could lead to conflict where a climate of rational discussion and dialogue will be an essential component in determining future planned development. The stated preference to favour the development of previously developed land and the conversion of existing buildings to limit the impact of new development on the countryside (para 6.6.13) is strongly supported.
LPR-B-061	Sibford Gower Parish Council	Option 34	While the two options identified are not mutually exclusive, the current approach would appear to generate a broader perspective which is beneficial to the wider community. Designated conservation areas already offer an added focus and protection to specifically designated locations within the broader perspective. The suggestion of devising a non-statutory designation protection for "valued landscapes" offers a level of protection similar to non-designated assets within conservation areas and is to be welcomed. The current draft plans of the County and District Councils both make reference to the overall quality of Oxfordshire's landscape and to specific landscape and countryside features. Whilst some of these areas are afforded protection through measures such as ANOBs, others have almost identical characteristics, but do not have this recognition and the protection it brings. There is a strong case that the Cotswolds AONB be extended eastwards to include the high ground immediately to the north of Sibford Gower. The two inappropriate development sites proposed on land to the north of Sibford Gower are located on this important piece of landscape. Protecting this landscape through an extension of the Cotswolds AONB, or by defining it as a Special Landscape Area, would prevent this being considered.
LPR-B-061	Sibford Gower Parish Council	Question - Neighbourhood Planning	There is some scepticism regarding the value of Neighbourhood Plans. Their construction formula is perceived as extremely time consuming and expensive, while their time limited implementational effectiveness is constrained, given that they are required to fit in to an established Local Plan which, in its turn, will have to meet national policy requirements. While the suggestion (para 6.7.3) referring to allocating sites and developing local design codes offers an interesting option, it also identifies significant resource implications for both the local community and the local planning authority.
LPR-B-061	Sibford Gower Parish Council	Question - Development Management Policies	The national pressure for generating renewable energy and reducing energy consumption will be important areas for the successful planning and implementation of future growth in the 21st century. There is much talk, both locally and nationally, about affordable housing, although little common understanding of the term and the implementation policies. A precise understanding of the term "affordable housing" and clear implementation guidance would help to clarify this contentious area within the local planning authority. With the likelihood of more people choosing to live in rural areas, consideration should be given to policies dealing with light and sound pollution; protection of the rural landscape; support for the farming community. With recent challenging weather conditions likely to become a significant element in our future weather patterns, flood and water management cannot be ignored.
LPR-B-062	John Dovere and Lesley Coleman	LPR-A-001	Strongly object to sites which will disproportionately increase the local population of the villages. Inadequate infrastructure to service the existing population, let alone the additional population. Insufficient places at Deddington School. The local roads are inadequate for the present volume of traffic. The local roads are badly potholed and poorly maintained. The developments would bring considerable further traffic, pollution and CO2 emissions which would damage air quality and the environment further. Additional population would need to commute to Banbury, Oxfrord, London, etc for work. fail to understand why the Council is minded to cut down trees and concrete over fields, ignoring the effect on the local environment. There are many dilapidated and unoccupied buildings in Banbury and Bicester that could be renovated for homes. Hempton has few or no facilities; no shop or pub. Increase in traffic along the Hempton Road. Further development would put more pressure on The Horton which cannot serve current needs. The suggested developments would result in needless destruction of local wildlife habitats. Noise pollution will have an appalling effect on wildlife. Will result in light pollution. Increase in population will result in more rubbish and plastic waste. History tells us that development simply increases local population and demand for further development. The Council is exacerbating this self-fulfilling problem by allowing the construction of these housing developments.

LPR-B-062	John Dovere and Lesley Coleman	LPR-A-150	Strongly object to sites which will disproportionately increase the local population of the villages. Inadequate infrastructure to service the existing population, let alone the additional population. Insufficient places at Deddington School. The local roads are inadequate for the present volume of traffic. The local roads are badly potholed and poorly maintained. The developments would bring considerable further traffic, pollution and CO2 emissions which would damage air quality and the environment further. Additional population would need to commute to Banbury, Oxfrord, London, etc for work. fail to understand why the Council is minded to cut down trees and concrete over fields, ignoring the effect on the local environment. There are many dilapidated and unoccupied buildings in Banbury and Bicester that could be renovated for homes. Hempton has few or no facilities; no shop or pub. Increase in traffic along the Hempton Road. Further development would put more pressure on The Horton which cannot serve current needs. The suggested developments would result in needless destruction of local wildlife habitats. Noise pollution will have an appalling effect on wildlife. Will result in light pollution. Increase in population will result in more rubbish and plastic waste. History tells us that development simply increases local population and demand for further development. The Council is exacerbating this self-fulfilling problem by allowing the construction of these housing developments.
LPR-B-063	Clive Hunt	LPR-A-175	Objection relates to both parcels of land being promoted. Both parcels of land are greenfield sites outside the current village curtilage. In both cases the land is actively in full time agricultural use. Assuming even a conservative housing density of 30 houses/hectare this would result in excess of 450 houses. The current number of dwellings in the parish is 400. The proposed additional houses would swamp the village and entirely change its character from an unspoilt conservation rural village to a settlement dominated by modern houses The two sites straddle an already notably dangerous road (A361) – by potentially doubling village traffic and pedestrian flows, safety risks would be raised considerably. The only village facilities are a church, pub, village hall and garden centre. There is no shop, school or surgery and thus the proposed development is not sustainable given the lack of services. The village foul drainage plant already has to pumped out twice a week.
LPR-B-064	Peter Abbott	Sibford Gower	Submits the following observations - The possible development of 12.5 hectares at this site is disproportionate to the existing village and would significantly alter its character, particularly in view of its proximity to the Cotswolds AONB. Infrastructure is inadequate for a significant development. Local facilities such as school and local surgery would be unable to cope. There is already inadequate public transport. Most houses would probably end up with 2 or more cars leading to increased traffic on already poor condition roads. Lack of local employment would lead to increased commuter traffic. Government policy is looking to increase use of brownfield sites thereby avoiding loss of useful agricultural land.
LPR-B-065	Jonathan Akin and Natasha Kennedy Akin	LPR-A-175	Objects to change of use of land. Population of just over 766 people in our settlement village struggles enough with the day-to-day sewage problems and low water pressure and intermittent power disruptions. Doubling the population would have a detrimental effect on our settlement and way of life. Concerns include - At present there is no village shop, even with the building of potentially 450 houses there would be no guarantee a shop or amenities would even be built. There is currently no school for the children of this village and no guarantee one would be built. Being so close to the A361 and its notorious accident blackspots, more traffic in and out of the village will only make the road more dangerous with the potential increase to loss of lives. Sewage is already a huge problem to this village and the increased numbers would have a crippling effect on the already struggling sewage. There is no doctor's surgery in the village, the closest surgery is Cropredy, they are not taking on new patients as they simply cannot accommodate them. We already must go to Byfield as there wasn't space for us at Cropredy. The closure of public footpaths and the disruption to local wildlife would change this beautiful village and its landscape for good.
LPR-B-066	Paul and Anne Webb	LPR-A-156	Object in the strongest manner. The site is located in the Green Belt. The proposed development is within the Kidlington Church Street conservation area, as detailed in your document dated March 1996, which states 'a conservation area is an area of special architectural or historic interest, the character or appearance of which it is desirable to preserve or enhance (section 3 refers.) It would also affect the setting of the two grade 2 listed buildings nearby. Under a previous planning application (13/00990/F) a main Badger was destroyed and an artificial one was created (under a licence from Natural England). Since then, the Badgers have created another sett within the area of this planning application and are not using the artificial one. Therefore, is this is approved this will mean yet another main sett being destroyed, and the Badgers moved once again. Under the terms of the Protection of Badgers Act 1992 Badger Setts are afforded legal protection, and as such the act forbids any interference with the badger sett for, amongst other things, the purpose of new construction works. The land in question is home to several families of Skylarks which are protected in the UK under the Wildlife & countryside Act 1981. Classified in the UK as a Red List species under the Birds of Conservation Concern review and as a Priority Species in the UK Biodiversity Action Plan. Not to mention its population is in decline putting it on the endangered list of birds. Where/what are the exceptional circumstances that are needed to be demonstrated by the developer to get this land taken out of the Green Belt?
LPR-B-067	Anne Marie Cromarty	LPR-A-204	Strongly supports the designations of the community orchard. Value these sites as valuable green spaces near the centre of the town. Has volunteered at the site. Please give Langford Community Orchard the Local Green Space designation so that nature can continue to flourish, people can strengthen their involvement in, and sense of community in this special place.

LPR-B-067	Anne Marie Cromarty	LPR-A-125	Strongly supports the designations of the local wildlife site. Gavray Wildlife Meadows is a precious remnant of the countryside that used to surround Bicester. The site has varied small ancient meadows bounded by hedgerows dating back to medieval times. It has magnificent mature trees, two ponds and lots of wild flowers in spring and summer. Gavray Meadows is a Local Wildlife Site due to its biodiversity and rare species of butterflies and newts. The site is also part of the Upper River Ray Conservation Target Area (CTA) which is protected as an area where action to improve biodiversity should be focused. Please give Langford Community Orchard the Local Green Space designation so that nature can continue to flourish, people can strengthen their involvement in, and sense of community in this special place.
LPR-B-068	R Meadows	LPR-A-178	This proposal is completely disproportionate and should not be approved. Any development as proposed would lead to the destruction of Adderbury as a viable village and to the way of life for the majority of its residents. Site specific comments include - The scale of this development is completely unsustainable and wholly disproportionate given the size of Adderbury village. The development would completely destroy the identity and viability of Adderbury as a village, subjecting Adderbury to increasing "coalescence". Adderbury school, retail and infrastructure generally is already at capacity and the proposal does not address that issue sufficiently which will result in more not less traffic movements and pollution from the 800 or so houses inhabitants. The proposal completely overestimates the scale and capacity of Adderbury's existing facilities and infrastructure to cope with a development on this scale. The traffic system is now over capacity especially at school drop off times and the introduction of the new roads proposed including the road accessing the B4100, and motorway junction will add significantly to the traffic volumes and exponential increase in pollution. The local road system simply would not cope. Further pollution will be generated through increased pressure on already over stretched waste and sewerage infrastructure. Adderbury Lakes is already suffering from increased pollution with raw sewerage discharges into the lake and adjacent Long Wall public footpath. The village is already deemed to be at capacity with recent housing developments and this development sits outside the local plan. The gap between Adderbury and Banbury and surrounding areas will be narrowed to an unacceptable level. This development impacts negatively on Adderbury's current "spatial feel". The development is on a "greenfield" site and no account has been taken of the impact on the environment as a whole or the considerable impact on local wildlife. The effect on existing residents "mental health" by the removal of open green spaces (the provision of which has been recently acknowledged as vital to mental well being) will be significant resulting in further pressure on already at capacity health facilities. This effect will be magnified by the considerable disturbance over a significant period through the building activity. The development seeks development in key "valued landscapes" which should be protected.
LPR-B-069	Paul Hornby	LPR-A-175	Registers concerns and objections to the proposed housing development on the following grounds - It is not suitable because of a lack of services, we already experience power outs, low water pressure, sewage problems current system struggles to cope, existing road network is inadequate for the current traffic load. Lack of Amenities we currently have no school, shop, an already oversubscribed doctor's surgery at Cropredy. The bus service is limited. Out of Scale with the current size of the village where we have only circa 350 residents. Would change the character of the historic village, most of which is in a conservation area. Would set precedent for further development / expansion without consultation.
LPR-B-070	Kidlington Parish Council	Option 3	Given the expected change in employment practices post-pandemic, 5) is our preferred option, with the proviso that employment land on brownfield sites should only be in sustainable locations.
LPR-B-070	Kidlington Parish Council	Option 5	Prefer 1), as there seems to be little scope for the conversion of existing retail, etc. outlets, and we would not wish to see a reduction in these sectors. With the 4400 dwellings proposed to address Oxford's Unmet Housing Needs the current retail area in Kidlington is relatively small and, whilst many retail areas are currently in decline, the emphasis should be on expanding the retail offer. This is consistent with the adopted Kidlington Masterplan.
LPR-B-070	Kidlington Parish Council	Question - Green Belt	Kidlington will already suffer from drastic reduction of the Green Belt gap between it and Oxford and the substantial loss of Green Belt on its Western and southern edge. Further reduction of the Green Belt surrounding the Village must be avoided at all costs in order to maintain its character and avoid suburban sprawl. The Green Belt between Kidlington and Oxford will effectively be destroyed by the proposals to address Oxford's Unmet Housing Needs. There should be no further exceptional circumstances for the further release of Green Belt land in the areas adjoining Kidlington. Therefore, the options submitted in Appendix 2 within the Green Belt for possible development are unacceptable to KPC.
LPR-B-070	Kidlington Parish Council	Question - Delivering infrastructure	There is already a substantial infrastructure deficit in Kidlington and the Plan should seek the means to address by other measures than S106 contributions.
LPR-B-070	Kidlington Parish Council	Question - Kidlington Infill Housing	Additionally no further release of Green Belt should be considered, residential development should be primarily infill.
LPR-B-070	Kidlington Parish Council	Option 6	The priority should be for social housing and this should be emphasised within the 50% requirement for Affordable Housing.
LPR-B-070	Kidlington Parish Council	Option 7	The priority should be for social housing and this should be emphasised within the 50% requirement for Affordable Housing.
LPR-B-070	Kidlington Parish Council	Question - Kidlington Infill Housing	Yes. Maintenance of the character of neighbourhoods and limiting need for parking are key criteria whilst also respecting the need for additional visitor parking. As a part of this Kidlington Parish Council is concerned about the alteration of semi-detached and terraced houses (even with extensions) to apartments as they change the character of a residential area and create additional pressure on on-street parking.
LPR-B-070	Kidlington Parish Council	Option 26	It is paramount to respect the integrity of the Green Belt with no further reviews.
LPR-B-070	Kidlington Parish Council	Option 27	Strongly agree with all 3. Stronger design framework needed for the Village Centre including the Oxford Road between Yarnton Road and Benmead Road on west side, as set out in the Kidlington Masterplan, which should be more of an extension of the High Street and less an arterial road. With the additional of the 4400 houses within the Partial review it will be important to strengthen and enhance the retail offer in the village centre. We support a 20 mph limit for this section, together with traffic-calming measures including a platform.

LPR-B-070	Kidlington Parish Council	Question - Reducing Car Dependency in Kidlington & the Surrounding Villages	All these factors are important. Enhanced bus/tram/cycle corridors along the A4260 will be critical to reducing the use of the car particular through Kidlington. We understand that the County Council transport strategy provides for a park and ride north of Kidlington to reduce the car through Kidlington for commuters from outlying villagers
LPR-B-070	Kidlington Parish Council	Option 28	Strongly support 1, as a key way of preserving and enhancing the character of Kidlington as a Village surrounded by Green Belt. Additionally, the Kidlington Recreational Trust needs to be consulted on these issues.
LPR-B-070	Kidlington Parish Council	Question - Kidlington Sports, Recreation and Community Needs	Cherwell DC should consult the Kidlington Recreational Trust
LPR-B-071	Cllr Andrew Beere	Nethercote	inherent contradictions in general planning policy and they come through here with regard to the text in the Local Review Paper 2021 ,and how they relate to the developments on our side of the town. Even a cursory glance at the Banbury Town Map P105 shows this Nethercote has to stay and remain part of a Green Buffer between the motorway and the Town /District and County Boundary Infact the building od the motorway provided a defacto "built" boundary for urban growth and industrialization on the East of Banbury; Yes at BAN15 some proposals are moving ahead in line with the earlier 2015 approved plan but as you will recall a BLUE Industrial zone east of the Daventry Road ,opposite BAN 15 was rejected by the Inspector in the final 2031 report. Historic commercial and housing growth between the town centre and the county boundary has almost filled all the green and brownfield sites. Extension of housing and commercial uses on the other side of the motorway will make traffic pollution worse. The proposed development along the Daventry Road is not coherntly explained and is a threat to declared Council objectives spelled out in the September 2021 Review or form part of a balanced planning design for our town. In terms of Nethercote and the wider Green Buffer East of the MWAY the environment ecological and biodiversity and yes the social infrastructure have to come first.The proposals contradict key objectives 9, 25 and 26 and page 23 para 4.7 numbers 5 and 10. Reject P69 sites east of the town and seek to limit development to protect its landscape setting.
LPR-B-071	Cllr Andrew Beere	LPR-A-185	inherent contradictions in general planning policy and they come through here with regard to the text in the Local Review Paper 2021 ,and how they relate to the developments on our side of the town. Even a cursory glance at the Banbury Town Map P105 shows this Nethercote has to stay and remain part of a Green Buffer between the motorway and the Town /District and County Boundary Infact the building od the motorway provided a defacto "built" boundary for urban growth and industrialization on the East of Banbury; Yes at BAN15 some proposals are moving ahead in line with the earlier 2015 approved plan but as you will recall a BLUE Industrial zone east of the Daventry Road ,opposite BAN 15 was rejected by the Inspector in the final 2031 report. Reject P69 sites east of the town and seek to limit development to protect its landscape setting.

LPR-B-072	Phillipa Hunt	LPR-A-175	Strongly objects to both parcels of land. Objection reasons include - Both parcels of land are on greenfield sites outside the current village curtilage. All the land is in full time agricultural use. The current number of houses is about 400, if the Councils preferred density of housing is 30 houses per hectare, this would produce more than 450 houses therefore more than doubling the village, and changing its character. The village is an ancient rural settlement with very few facilities. There is no shop, School or Surgery and a very limited bus service. The roads through the village are narrow and not suitable for the extra traffic that would result from so many new houses. The proposed land is divided by the already very dangerous A 361 at a narrow point coming into the village and approaching a sharp chicane bend, traffic using the A361 from either parcels of land would add to the congestion on this very difficult piece of road. The village has severe problems with flooding. The proposed development is neither suitable or practical for the areas stated.
LPR-B-073	Nicholas Reynolds	LPR-A-175	A development of this size would be completely out of proportion to the existing size of the village. this proposal is out of scale for the village and surrounding area. The character of this small village would be destroyed and would reduce the unique small village life. The focus should be on repurposing existing buildings and brownfield sites to retain the embedded CO2 already in the buildings within the county. The CDC should be encouraging the use of empty houses before building more. Help for improving the existing housing stock should be prioritised before building new. suggest the CDC encourages and helps local farmers to increase food growing, instead of concreting over precious farmland. pollution and environmental impact of such a development would cause. With our urgent need to reduce energy usage. The carbon foot print of building new housing would outweigh the benefits. Even if all the houses were fully Net Zero, it would still take many tons of CO2 to build the estate. The granting of such development would set a precedent for further development requests from land owners around Wardington. The development would put an enormous strain on local Doctors, Schools, increased traffic congestion and travel pollution. It's currently essential to have a car to live in the village. In the past large housing development companies have gone back on promises of including public amenities such as shops, schools etc, in favour of more houses and profit.
LPR-B-074	Oswyn Murray	Sibford Gower	Supports the retention of policies relating to the protection of the environment, A housing policy that concentrated on the provision of housing in the main conurbations of Banbury, Bicester and Kidlington, with good transport links and where housing and workplace provision could be combined. The protection of the smaller village communities from predatory or speculative housing development, other than local amenity housing and the provision of housing restricted to local residents. The conclusions of a survey which fed in to the Sibfords Community Plan 2012, 95% of respondents did not wish to see more than 20 new houses in the villages, and most preferred small or medium groupings. There was a preference for 1-2 bedroom houses for first time buyers and sheltered housing, in traditional local vernacular. When asked to suggest possible locations for new housing there was a strong preference for the roads leading out of the villages (Hook Norton Road, Pound Lane, Hawkes Lane) and opposition for land to the west and south of the villages. The target of 20 new houses has already been exceeded in the villages, and further development should be actively discouraged. Considered that these views still represent the three villages of Sibford Gower, Sibford Ferris and Burdrop. The main way in which the current Cherwell Plan could be strengthened is also the main priority of Cherwell District Council and the UK government, the improvement of our carbon footprint towards net-zero carbon emissions by 2040. In the context of the north Cherwell area this requires primarily limiting car journeys and the improvement of the housing stock with alternative energy sources and better insulation. The Sibfords have a minimal bus service unsupported by Oxfordshire CC; there is no possibility of creating viable cycle routes because of hills. The nearest shopping, secondary schooling and work facilities are 7.5 miles away. Each new household will require at least 6 car journeys a day, which implies a minimum of approximately 16,500 miles a year per household. This is clearly incompatible with the zero carbon aims of Cherwell and the central government. all planning submissions to submit a carbon neutral plan for all new developments, which should include vehicle movements. In remote rural areas there should be no new development without such a zero carbon guarantee. One anomaly should be addressed; Cherwell adopted a categorisation of villages in which the Sibfords were declared to be a single unit in Category A. Despite many protests, Cherwell has continued to use this criterion for planning while at the same time for all other purposes treating the two Parishes as separate. This anomaly should be corrected since it impacts on a wide variety of issues.
LPR-B-075	Rex Anson	LPR-A-175	Strongly objects - A large part of Wardington is a Conservation Area, the proposed development would change the appearance of the whole village as it is far too large to keep the present character of the area. Wardington has for many years now, not had a school? Is the proposal to build a new school to accommodate the influx of children, as Cropredy would certainly not be able to deal with that number. There is also no shop in the village! The lack of services is also obvious. The sewer is already stretched, and the water supply is at times at very low pressure, and we also suffer a significant number of electricity cuts. A large number of residents from the proposed scheme would undoubtedly access Banbury via Cropredy and Great Bourton, bearing in mind the large industrial development on the A361 just before the M.40 Interchange. This alternative route is on minor country roads and would severely damage both villages. The A361 is already an extremely busy road, where, unfortunately there are many accidents and the extra volume of traffic would only add to the problem. There are many other areas in Oxfordshire where such a large development would not have the impact on a quiet and delightful village.
LPR-B-076	Wendy Anson	LPR-A-175	Strongly objects - A large part of Wardington is a Conservation Area and therefore should be protected. This extremely large development would completely change the character of the whole village. The A361 is already an extremely dangerous road and the volume of traffic from the development would most certainly add to the danger. With the additional traffic generated by the unsightly commercial development just before the M.40 interchange, I feel residents would almost certainly choose to access Banbury via Cropredy and Great Bourton. These two villages would undoubtedly suffer badly from this increase in traffic. The Utilities in Wardington are insufficient, i.e., sewage already stretched, water supply not consistent and electricity cuts are quite frequent!. There is no school, as this was closed many years ago, and also no shop. There must in Oxfordshire, be several far more suitable locations for such a large development, without destroying a beautiful unspoilt area.

LPR-B-077	Maddi Simpson for Charterhouse Strategic Land	Option 1	Charterhouse agrees with the suggested Vision.
LPR-B-077	Maddi Simpson for Charterhouse Strategic Land	Option 2	Charterhouse welcomes the key draft objectives for maintaining and developing a sustainable local economy. KO1 and KO2 especially state that the Council will need to allocate sufficient land to meet housing and employment need and raise the value of the local economy and support the growth of all sectors to create an inclusive economy. Currently the District employment land supply is geared towards national and regional distribution (which comes as no surprise given its strategic location on the highway network), although prohibits/limits opportunities for start-ups seeking flexible workspace. The Economic Needs Assessment (September 2021) prepared by Lambert Smith Hampton identifies the future economic and employment needs across Cherwell between 2021- 2040. The assessment states that recent developments in Cherwell have predominantly been of an industrial nature, with a focus on the larger unit, logistics and distribution schemes. Therefore, Charterhouse considers that the Council will need to allocate employment sites that meet the needs of smaller businesses, ensuring the growth of all sectors is supported.
LPR-B-077	Maddi Simpson for Charterhouse Strategic Land	Option 3	Charterhouse recognises the significance of Banbury's role in Cherwell's spatial strategy but is concerned that Banbury has/is fast approaching the limits of its environmental capacity. Banbury has expanded significantly in the past decades and now is at a point where it cannot reasonably continue expanding east because of the M40; north because of flood risk and coalescence with Hanwell; west because of significant landscape harm and coalescence with Drayton; and south because of the complete encompassment of Bodicote and Adderbury. Accordingly, Charterhouse consider that the future growth of the District would be better served by the expansion of Bicester and the larger villages. The Council should therefore focus on this approach in the Proposed Submission Plan.
LPR-B-077	Maddi Simpson for Charterhouse Strategic Land	Option 4	Future employment land supply needs to provide opportunities for smaller start-up businesses seeking flexible workspace. The Council should therefore provide a mixture of uses in order to meet the needs of all businesses.
LPR-B-077	Maddi Simpson for Charterhouse Strategic Land	Option 18	Charterhouse recognises the significance of Banbury's role in Cherwell's spatial strategy but is concerned that Banbury has/is fast approach the limits of its environmental capacity. Banbury has expanded significant in the past decades and now is at a point where it cannot reasonably continue expanding east because of the M40; north because of flood risk and coalescence with Hanwell; west because of significant landscape harm and coalescence with Drayton; and south because of the complete encompassment of Bodicote and Adderbury. Accordingly, Charterhouse consider that the future growth of the District would be better served by the expansion of Bicester and the larger villages.
LPR-B-077	Maddi Simpson for Charterhouse Strategic Land	Option 19	Charterhouse recognises the significance of Banbury's role in Cherwell's spatial strategy but is concerned that Banbury has/is fast approach the limits of its environmental capacity. Banbury has expanded significant in the past decades and now is at a point where it cannot reasonably continue expanding east because of the M40; north because of flood risk and coalescence with Hanwell; west because of significant landscape harm and coalescence with Drayton; and south because of the complete encompassment of Bodicote and Adderbury. Accordingly, Charterhouse consider that the future growth of the District would be better served by the expansion of Bicester and the larger villages.
LPR-B-077	Maddi Simpson for Charterhouse Strategic Land	Option 22	Comments relate to land adjoining Bicester 12. Previously engaged in examination of the Local Plan Part 1. Believes examiner saw merit in the land forming part of Bicester 12 but felt it was best left to Part 2 of the Local Plan. Requests land interests be considered through this review. Land interests extend to 13 acres and occupies one third of the Gavray Meadows Local Wildlife Site (LWS) and within River Ray Conservation Target Area (CTA). Policy ESD11 relates to CTAs and the respondent believes that the policy wording does not preclude sites within it from coming forward for development – the underlying objective of the CTA being to “restore biodiversity at a landscape-scale through the maintenance, restoration and creation of BAP priority habitats”. Ecological surveys undertaken in 2015 and 2015 indicated that in order to maintain biodiversity interest within this privately-owned site and to maintain ecological continuity across the A4421 to the rest of the LWS, restoration measures are needed as soon as practically possible, and certainly before the conservation interest is lost...” the landholding is evidently undergoing ecological succession to woodland which, left unmanaged, means the site continues to decline, eventually to a point where it would be impossible to restore it. Accordingly, the planning strategy Charterhouse intends to follow is that the partial release of the site for development to enable the remainder to be gifted to a local conservation organisation or similar, along with sufficient funding to facilitate key elements of restoration to take place and for an appropriate conservation management regime to be initiated is credible. Charterhouse wishes the land to be considered for commercial development on 5 acres. Such development would seek to deliver ‘nursery’ accommodation for start-ups and other local business.
LPR-B-077	Maddi Simpson for Charterhouse Strategic Land	Option 23	To make best use of greenfield land the Council need to consider sites adjacent to existing allocations, such as the land adjoining Bicester 12 which will deliver c. 40 hectares of employment land and 1,500 homes. Charterhouse wishes the land off of the A4421 to be considered for commercial development on 5 acres of the site. Such development would seek to deliver ‘nursery’ accommodation for start-ups and other local business to support smaller business needs. We firmly believe that it should be possible to develop part of the site, provided a viable parcel is retained and can be restored/managed in the long term for biodiversity benefit. We would welcome further discussions with the Council to determine how the site can be brought forward sustainably as part of the LP Part 1 Review.
LPR-B-078	David Jennings	LPR-A-004	Site should not be included as North Newington as the development is in direct conflict with the terms of a category C village. North Newington does not have the road infrastructure to support the additional traffic (nor can it be expanded to do so - there are a number of narrow elements and bridge). Development in the village with a large number of conservation sites would be detrimental to the fabric and history of the village and the additional carbon footprint would impact the environment significantly. Particularly as there is extremely limited public transport links (1 return bus a day) and there are no cycle routes or indeed continuous pathways to Banbury. Amenities within the village are non-existent and the school is at capacity. The narrative in the Cherwell Local Plan in relation to North Newington is inaccurate and/or outdated.

LPR-B-078	David Jennings	LPR-A-135	Site should not be included as North Newington as the development is in direct conflict with the terms of a category C village. North Newington does not have the road infrastructure to support the additional traffic (nor can it be expanded to do so - there are a number of narrow elements and bridge). Development in the village with a large number of conservation sites would be detrimental to the fabric and history of the village and the additional carbon footprint would impact the environment significantly. Particularly as there is extremely limited public transport links (1 return bus a day) and there are no cycle routes or indeed continuous pathways to Banbury. Amenities within the village are non-existent and the school is at capacity. The narrative in the Cherwell Local Plan in relation to North Newington is inaccurate and/or outdated.
LPR-B-079	Anne Carro	Shutford	the village is not able to accommodate any future developments due to the following reasons - The roads around the village are not particularly good and the extra volume of more traffic will not help the current situation; The potential area does not have good access for vehicles, particularly heavy vehicles conveying building materials for construction; Sewage works are not adequate for more properties in the village; There are no shops, doctors or a school in the village.
LPR-B-080	J Carpenter	LPR-A-068	The site is totally disproportionate in relation to the size of the village and unnecessary, undesirable and unsustainable. It would undermine the housing strategy in the Cherwell Local Plan Part 1, which wants to distribute new housing to the most sustainable locations with regards to public services and facilities, transport and employment. It also undermines the Oxford 2050 policies which focus on the 5 themes of addressing climate change, improving environmental quality, creating strong and healthy communities, planning for sustainable travel and connectivity and creating jobs while providing homes. As a result of poor public transport and no local jobs, each household could potentially have 2 cars or more having to use the local roads which would result in increased car traffic through a village that can't cope with existing levels of traffic.
LPR-B-080	J Carpenter	Sibford Ferris	I strongly object to all proposed sites within Sibford Ferris Parish being put forward in the Local Plan Review document and any other sites that may be added during the planning review process. The existing bus service doesn't have convenient times to allow people to travel into Banbury for work, the connections to Stratford up Avon are difficult and there are no direct bus services to Chipping Norton or Oxford. The road conditions in the village and surrounding areas are bad, roads are narrow with no pavements or safe places for pedestrians to walk and despite the main roads into Banbury 7.5 miles away have a B classification they are still 60 & 50mph limits - so cycling is also dangerous. There is limited street lighting within the village. A lack of off road parking for existing households in the village results in cars parking throughout the village, on bends making it virtually a one way street and with no pavements dangerous for pedestrians.
LPR-B-080	J Carpenter	LPR-A-045	Proposals seek to extend already approved development of 25 homes into the other half of the field. This would easily double the size of the existing development. The village infrastructure is already at its limit and unsure as to how it will cope with this approved major development. As a result of poor public transport and no local jobs, each household could potentially have 2 cars or more having to use the local roads which would result in increased car traffic through a village that can't cope with existing levels of traffic.
LPR-B-080	J Carpenter	Option 32	Travel is not sustainable and job opportunities severely limited. Air quality and noise pollution due to the large number of privately owned cars is already impacting the village and will be made worse by the construction of further new homes. Development on high quality agricultural land versus Urban development. The site is on excellent agricultural land with a footpath running through it, and a historic (coffin) path running south west to north east from the Old Grange to Folly Barn beyond the designated "public right of way footpath". linking the two village conservation areas of Sibford and Swalcliffe. The path that runs from Grange Lane to Folly Barn has amazing views that spans across several counties including towards the Cotswold AONB. This would be lost should housing be placed on the fields to the west and south. This view, that many local villagers enjoy on a daily basis, should be protected and preserved for the enjoyment, physical and mental health of the those who use it, and so should the land for agricultural purposes. Any additional new homes here would result in unwanted light and noise pollution in an existing rural environment. The main water and sewer system would struggle to cope with additional homes on this scale. There are no mains supplies to the east on Grange Lane - existing properties to the south and east all being on private fed spring and bore hole water and septic tank sewerage waste. The historic character of the area and its historic sensitivity should be protected. Any further development outside the existing village housing curtilage would have a negative visual impact on the rural character and appearance of the locality and cause unacceptable harm to the character and appearance of the area, open rural countryside and rural edge of village setting, failing to reinforce local distinctiveness. Sibford Ferris is a small village community with limited facilities and infrastructure and has already had approved more new houses than are realistically sustainable within the parish and I believe it will not be able to cope with any more.
LPR-B-081	Mike Pollard	LPR-A-175	Objects to site development. development strategy in the current development plan is fit for purpose and as such should form the basis of the distribution strategy in the rolling forward of the Local Plan. Wardington should not be a candidate to accommodate district level development needs. The village has minimal services and is a conservation area. The scale of the proposed housing allocation is out of alignment with current planning policy for the village and parish. It would have a major impact on the setting of the village, as well as adding extra traffic to quiet roads where people are still able to walk in relative safety. The southern section of proposed housing allocation area is currently a valuable area of greenspace close to the village, much used by many local people as there are rights of way through the fields. A more appropriate purpose for this area would be creation of more accessible natural greenspace for local people and wildlife, this could include tree planting. The proposed housing land is also part of a wider area of land west of the village that is important for wildlife and has been mapped by Natural England as 'Network Enhancement Zone 1', a clear measure of the sensitivity of the area to development. Due to the significant existing value for nature and high potential for nature recovery that applies to this area, the plan should focus attention on nature recovery in this location and ensure this can be delivered without being compromised by major housing developments which will lead to increasing habitat fragmentation and elevated levels of disturbance. Respondent has observed nine red listed birds to be breeding in and around the proposed allocation area over the past 20 years. In the current nature and climate emergency we must avoid to allocating land for development that will lead to major impacts on nature in our area and severely limit the potential for nature recovery.

LPR-B-082	Peter Cockrell	LPR-A-175	Objects to development on following grounds - The area of development land and potential number of houses is vastly out of proportion to the size and character of this conservation area village. Priority should be given to the development of brownfield sites rather than productive Agricultural land. The services and infrastructure of this small village are vastly inadequate for such a development. If this parcel of land is granted change of use for housing development and access from the A361 is opened up then adjoining land such as the village allotment plot could become subject to speculative development.
LPR-B-083	L Matthews	LPR-A-175	Raises strong objection on following grounds - future of village with few amenities; no shop, no school and very limited bus services; concerned how increased housing numbers would cope with this. Impacts on traffic using the 361 which is already an accident black spot.
LPR-B-084	Carl Middleditch	LPR-A-185	Obejct - last area east of the M40 and is an attractive asset to the town, development would create severe loss of open countryside. Proposals for a connecting road from A422 to Overthorpe Road would further disrupt the people of Nethercote. Difficult to see who would benefit from this road and whether there is sufficient traffic to warrant it. Any forseen problems with the M40 intersection J11 could be overcome by construction of a slip road and additional approach roads.
LPR-B-085	Sir Frank Davies	Option 30	Against housing development in rural areas set above local need. few jobs in those areas and additional housing leads to greater travel to work thereby polluting the environment in contravention of the objectives of COP26. Developers favour expensive houses because they make more profit. This is an inefficient use of land and there is a glut of grossly underused 4 and 5 bedroom houses in most villages. because more expensive houses can only be afforded by high income purchasers and there are few such jobs in the rural areas this means long, polluting, journeys which usually mean by private car. this green and pleasant land is being destroyed for ever by mini towns with no facilities again encouraging travel to the towns. Both these points mean more long distance road upkeep. Fifthly, other high growth is met by housing estates which are essentially urban and spoil villages.
LPR-B-086	Angela Turner	LPR-A-204	Support for the designation as local green spaces. Volunteering at the orchard. Used by the local community for walking their dogs, a quiet walk, playing with children and collecting fruit. The orchard is a special site as it still has the ridge and furrow formations and we have listed the original trees and shrubs, which make it a natural haven for wildlife and plan on making labels for other people to see. keep these two spaces as Local Green Spaces, along with any others, for people of the future, who move to this town to still have the pleasure of enjoying the tranquillity of green spaces within built up areas.
LPR-B-086	Angela Turner	LPR-A-125	Support for the designation as local green spaces. This wildlife site at Gavray Meadows dates back 400 years to medieval times with ancient small meadows bounded by hedgerows, ridge and furrow formations, green lanes, mature trees, wild flowers and dew ponds. It has rare species of butterflies, including all five species of the Hairstreak butterflies and newts and that it is part of the Upper Ray Conservation Target Area (CTA) which is protected as an area of where biodiversity action should be focused. These details make it beneficial for educational purposes, apart from enjoyable walks. keep these two spaces as Local Green Spaces, along with any others, for people of the future, who move to this town to still have the pleasure of enjoying the tranquillity of green spaces within built-up areas.
LPR-B-087	V Hampson and A Nockalls	Hanwell	Concerned about encroachment on the village from Banbury to the South. The effect on this 800 year old village will be catastrophic the road through the village is narrow and only capable of one vehicle width in many parts. The road has been without repair for many years and is already eroded and in poor condition. Traffic is a perpetual problem due to the road being unsuitable for the volume of vehicles which use the village as a cut through and have a total disregard for the speed limit. That aside the village is a conservative area and many of the trees are protected. More trees should be planted not cut down especially in this time of climate change and the issues currently under discussion by our government. double standards are applied by the council with regard to refurbishment of homes in Hanwell who have to comply fastidiously with the conservation rules yet it appears building developments can go ahead unchallenged. The boundary between Banbury and Hanwell must be maintained in order to keep the villages identity and preserve what is essentially an old English village.
LPR-B-088	James Reid	LPR-A-152	Extremely concerned about development of this site. Development would leave just metres between the edge of the conservation area down Gullicote Lane and track, which would not allow for any significant natural border as exists with the trees which hide the Banbury 5/Hanwell Chase development. Higher footfall in Hanwell resulting from recent developments, flytipping an issue, and traffic through the village is at an all time high. Further development between Hanwell and Banbury would permanently and irrevocably destroy the character of the village and damage the mental health of its current residents who chose to live there for the character and community feel of a rural settlement. development of the site would not cherish, protect or enhance the distinctive natural and built environment. Development would not be consistent with Key objectives 5, 9 and 15. Development would result in coalescence.
LPR-B-088	James Reid	LPR-A-214	Extremely concerned about development of this site. Higher footfall in Hanwell resulting from recent developments, flytipping an issue, and traffic through the village is at an all time high. Further development between Hanwell and Banbury would permanently and irrevocably destroy the character of the village and damage the mental health of its current residents who chose to live there for the character and community feel of a rural settlement. development of the site would not cherish, protect or enhance the distinctive natural and built environment. Development would not be consistent with Key objectives 5, 9 and 15. Development would result in coalescence.
LPR-B-088	James Reid	Option 18	suggest development is most appropriate to the East or South of Banbury where there is lesser prospect of incursion on neighbouring villages
LPR-B-088	James Reid	Option 19	strongly support Option 2 to limit development at Banbury and protect its landscape setting and maintain separation between the town and surrounding villages. No objection to the development of sites LPR-A-154, LPR-A-047 and LPR-A-205, which would allow some expansion to the north of Banbury without encroaching upon any local villages.
LPR-B-088	James Reid	Hanwell	Comments relate to Hanwell. Before considering further expansion and development perhaps focus should be shifted to meeting existing healthcare service needs. Reference to the Hanwell Conservation Area document which identifies points which support the protection of open space and rural character.
LPR-B-089	Jamie Jones	Question - Settlement Boundaries	stop turning our small little country into a mass of concrete adjoining other towns city's.. this must stop for our future generations. People can't even get permission to live in a caravan that can be moved... corruption is setting in like Spain just kept quite , on the gravy train.

LPR-B-090	Drs John and Hilary Maddicott	Kidlington	Almost all the sites listed in your documents are within the Green Belt. There should be no further Green Belt development. Enough Green Belt land has already been sacrificed in the Oxford-Kidlington gap and in the Begbroke-Yarnton-Kidlington triangle. Further Green Belt development will not only contravene a planning principle but will vastly increase the volume of traffic on local roads and place a heavy strain on local facilities, such as doctors' surgeries, which are already under extreme pressure. The Council should act now to query some of the assumptions in the Oxfordshire 2050 Plan; Any figures for future growth in the OGNA should be vigorously challenged.
LPR-B-090	Drs John and Hilary Maddicott	LPR-A-156	land is entirely unsuitable for development for the following reasons - on Green belt and most of the land is in the Conservation Area which should be protected. The area forms part of the beautiful assemblage of fields, pasture and meadow land which stretches down to the river Cherwell. Bordered by historic Church Street, it has a number of listed buildings along its periphery. Any development in this area would intrude in an ugly and unacceptable way on this historic and visually appealing landscape and would negate the purpose for which the Conservation Area was established. Site is a wild life haven; development would seriously damage the natural history aspects of the area. Whole site forms part of the flood plain; climate change will increase frequency of damaging rainfall; site unsuitable for housing. Access is via a relatively narrow residential road which gives on to Mill Street, which already carries a large volume of car and (frequent) bus traffic. Development would greatly increase the traffic flow in this whole area.
LPR-B-090	Drs John and Hilary Maddicott	LPR-A-024	This is good agricultural land, at present mainly used for the cultivation of wheat, barley and oats. At a time when the country is supposed to be producing more of its own food agricultural land should not be easily given up for housing. These fields are widely used for leisure activities – by dog walkers, ramblers and to some extent by cyclists. Almost every hedge has a parallel footpath running beside it, some rights of way, others merely permissive.. In the event of development these would largely be lost, depriving Kidlingtonians of a valuable leisure and health resource. Access to the site could be obtained only via the Moors, already a busy residential road carrying much traffic to and from the main road to Banbury. Building over this very large area would greatly increase traffic, with detrimental effects on the environment and on the circumstances of Moors' residents.
LPR-B-090	Drs John and Hilary Maddicott	LPR-A-224	This is good agricultural land, at present mainly used for the cultivation of wheat, barley and oats. At a time when the country is supposed to be producing more of its own food agricultural land should not be easily given up for housing. These fields are widely used for leisure activities – by dog walkers, ramblers and to some extent by cyclists. Almost every hedge has a parallel footpath running beside it, some rights of way, others merely permissive.. In the event of development these would largely be lost, depriving Kidlingtonians of a valuable leisure and health resource. Access to the site could be obtained only via the Moors, already a busy residential road carrying much traffic to and from the main road to Banbury. Building over this very large area would greatly increase traffic, with detrimental effects on the environment and on the circumstances of Moors' residents.
LPR-B-091	Malcolm Bannister	Sibford Gower	Strongly objects to development around the village. This would almost double the size of the village. Categorisation as a category A village is not a true reflection of our communities and their facilities. Sibford Ferris and Sibford Gower wish to seek reclassification as two separate villages. Pound Lane is a narrow country road, at some points causing cars to pass each other with difficulty and it is without pavements for most of its length. would undermine the housing strategy in the Cherwell Local Plan Part 1, which seeks to distribute new housing to the most suitable locations with regards to public services and facilities, transport and employment. Also undermines the Oxford 2050 policies which address climate change, improving environmental quality, creating strong and healthy communities, planning for sustainable travel and creating jobs while providing homes. New housing should be located in sustainable areas; proposals for Sibford Gower should be removed from the local plan.
LPR-B-092	Debbie Pitt	Shutford	Proposed development would increase the village by almost 50%. Would result in extra pressure on the narrow roads and infrastructure including drainage and sewerage which isn't capable of coping with the present situation. No bus service, no primary schools, no shop, no GP surgeries and a small play area which would require people to drive out of the village to access facilities. Driving would not help our zero emission targets. Housing should be built taking in consideration of infrastructure and the environment.
LPR-B-093	C A Warner	LPR-A-107	The site in question is within an area referred to as part of "Ironstone Downland" and next to an area of outstanding natural beauty. The potential development on this location would double the size of Sibford Gower and is quite unacceptable and would damage valuable countryside. Access to the site is totally inadequate. Increased traffic generated by such a development would have a detrimental effect on the villages of Tadmerton, Swalcliffe and Broughton with commuter traffic heading for Banbury and the M40 so increasing CO2 emissions. Existing infrastructure is totally inadequate. New developments generate levels of lighting (street lighting) which would destroy the 'dark sky' environment currently enjoyed. Development in rural areas should be limited to local needs and be directed to larger sustainable villages and towns. Site is inappropriate and should be dismissed.
LPR-B-094	Mervyn and Valerie Benford	Shutford	Comments provided in relation to developments providing improvements to relevant facilities, access and viable mobile phone services. Council response is sensitive and mindful of the potential, real problems of resources and road access. would what is proposed be an opportunity to have those present problems addressed — and in particular the provision of effective mobile phone access? Queries the numbers of units/plans envisaged for Shutford. increasing predictions of more and heavier rainfall the water table lower in the village becomes a serious concern for potential housing. Might such a mixed development be helpful for possible local downsizing? Will changes in the future for work and at work change family needs as children reach adulthood? What type of housing is proposed? The Dairyground housing estate is viewed as an asset - Houses mean people and potential support for local enterprise and partnership/social/cultural life- but within sensible limits. No new developments should happen without full and responsible consideration of the resources and road access problems. Eco-friendly housing not dependent on fossil fuel might be an asset. endorse the comment in the Parish Council's response about brown field sites if development does ultimately go ahead.

LPR-B-095	Nick Fennell	Adderbury	Up to 8 new developments around Adderbury would go against the 2018 Neighbourhood Plan. Immediately before the CDC plan was finalised, and hence before our Neighbourhood Plan, Adderbury experienced a 20% housing increase with the developments on Milton Rd and Aynho Rd. The village voted for the protection afforded by our current residential settlement boundary and local gaps between Adderbury and Bodicote and Milton. agreed Neighbourhood Plan would be obliterated if even a proportion of the possible developments was approved. The current infrastructure would be inadequate to support the increased traffic and demand for school places – but no increase in employment opportunity. It is not what our (already large) village needs, and would severely damage what defines a village - its community, individual identity, charm and history
LPR-B-096	Colin and Diane Hanney	LPR-A-175	Strongly object to development site. Not suitable due to lack of services. The village is category 'B' and has no school or doctors surgery or retail to sustain a development of this potential size. Only one pub in village. Out of proportion to the existing village. The area could not take development of, what potentially could be between 300 and 400 houses as this would change the aspect and character of the village entirely. A development of this size would not enhance the needs of the local community. The village is a conservation area. The land identified is highly populated by wildlife. Parcels of the land is currently used for crop growing and sheep grazing. The A361 is already heavily congested which has unfortunately resulted in deaths and with the expected increased traffic from HS2 and the commercial developments at Junction 11, an additional development of this size will only increase the potential for more accidents on this road.
LPR-B-097	Alasdair Gibbs	Shutford	Sites proposed are entirely inappropriate. Shutford has very restricted infrastructure in terms of road access, water, drainage or sewage; much of which was installed in the early 1950s. Sewerage system struggles to cope. The road network simply could not cope with the increased traffic that further homes would bring; roads are narrow with no room to expand. Vibration from large wagons has resulted in major collapse of respondents water well. Little street lighting. Even if the access and infrastructure were to be improved, which would be a major task requiring substantial investment, the village has no shop, school or leisure facilities other than the village hall, pub and children's play area. All residents travel by car; no bus or rail links. Roads unsuitable for large wagons. development should respect the green belt and environmental nature of Shutford, and consider brown field sites before encroaching outside the present village boundary.
LPR-B-098	Oxfordshire County Council	Question - Policies for Climate Change, Sustainable Construction & Renewable Energy	There should be reference to the Circular Economy, as well as greater promotion of Active/Sustainable Travel as a means to achieving climate action. There are strong links between resource efficiency, the circular economy and climate change and this is not specifically acknowledged. Climate change policies and objectives should be worded to reflect this, so they shape developments that include community spaces to support resource efficiency and the circular economy, energy efficiency, public recycling/composting infrastructure and active travel. Policies on sustainable construction should require buildings to be designed for energy efficiency and zero carbon to mitigate climate change. We welcome the intention to include detailed policies concerning Air quality in the and note the congestion impacts on air quality at Banbury and Bicester. The transport user hierarchy set out in LTCP prioritises walking and cycling, in conjunction with sustainable public transport for longer journeys, to deliver a zero-carbon Oxfordshire transport system that enables the county to thrive whilst protecting the environment and making Oxfordshire a better place to live for all residents.
LPR-B-098	Oxfordshire County Council	Question - Transport & Connectivity	We suggest that there should be reference made to the emerging Local Transport Connectivity Plan (LTCP). An issue for OCC which the Local Plan 2040 will need to address is the identification, provision, funding and overall deliverability of the infrastructure and County Council services needed to support sustainable development. However, transport matters within this paper are well addressed from a strategy perspective, and additional detailed points are provided where they could be further strengthened, in particular reference is requested to the Bicester south-east link road.

LPR-B-098	Oxfordshire County Council	Option 1	<p>We support Cherwell's emphasis on climate action in the vision and acknowledgement of opportunities for post COVID-19 recovery. We would welcome further reference to innovation and connectivity. Reference should be made to the emerging Local Transport Connectivity Plan (LTCP). A number of supporting strategies including the Rail Strategy as well as the Freight and Logistics Strategy, will address the challenges associated with the movement of goods and passengers in Oxfordshire. . We support Meeting the Challenge of Climate Change at the heart of the vision, with Healthy Place Shaping and Maintaining and Developing and Sustainable Economy as the other key elements. All new homes should have or be made ready for EV-charging and the fastest available broadband. Theme 2 – this section could expand on the modal shift we need to create to achieve a reduction in carbon emissions. Growth should be concentrated in areas which have established transport connections and investment in infrastructure should be focused on active and sustainable travel. Pg22 (Development Management Policies) - Connectivity should be more specific, active and sustainable travel will be prioritised. Pg. 23 – not one point in this section is on transport.. Whilst technology and innovation are mentioned in terms of taking advantage of them, which is great, there is a gap around ensuring that communities/developments are equipped to face the changes that current innovation becoming mainstream will bring (e.g., electric vehicles, automated vehicles, 5G/6G etc). This could be considered an aspect of sustainability. It is welcomed that the first pledge within the suggested vision is to achieve climate action targets. Point five needs to explicitly reference the importance of creating health enabling environments where it is easy to be active, access healthy food, and to connect with neighbours. The design and delivery of new developments and their connectivity to existing communities need to reflect healthy place shaping principles. . The section should include the rich and nationally significant archaeological resource of the District which contributes greatly to its sense of place. . This archaeological resource forms an important part of the character of Cherwell which needs to be protected and enhanced as set out in the environmental objective of sustainable development. The county would further welcome policies within the emerging CDC Local Plan 2040 that: strengthens or supports policies for net zero carbon homes, specifically construction and design standards that reduce energy demand in line with the energy hierarchy. The Pathways to a Zero Carbon Oxfordshire (PAZCO) report builds on the previous Low Carbon Economy Report (2014), with updated evidence of pathway options for Oxfordshire to achieve net zero carbon and should be referred to. Recognition should be given to the Minerals and Waste Local Plan as part of the Development Plan for Oxfordshire . We would expect to see commitment to continuing to work with the County on these issues, particularly on waste.</p>
LPR-B-098	Oxfordshire County Council	Option 2	<p>We welcome the key objective set out in delivering developments that minimise and are resilient to the impacts of climate change, including extreme weather events. We welcome the inclusion of key objective 20 in meeting the housing needs of all sectors of Cherwell's communities. We suggest that further iterations of the Local Plan should explore policies to encourage the development of good quality lifetime homes and create dementia friendly environments to support active, independent, and healthy lifestyles to improve their quality of life and community integration. Consideration should be given to objective(s) around ensuring that innovation/technology are used to further each of the themes. We offer no judgement as to which objectives are the most important, but welcome reference to prioritisation of active travel, reduction of dependency on public transport and high standards of connectivity (KO16) and meeting the housing needs for all residents (KO20), we would welcome reference to the need for Extra Care Housing. KO1: There should be an emphasis on developing brownfield sites in preference to allowing "urban sprawl"? (partly addressed in KO7 and KO23) as this is best from a sustainable transport perspective. There should be reference to these being locations that are suitably well-connected in terms of sustainable travel. This is very important as the lack of truly affordable homes means that people who work in the health and care sector have to commute significant distances as they cannot afford to live locally. KO3 is vital to achieving the wider climate emergency targets and improving people's mental and physical wellbeing, as reduced commuting distances will allow for a better uptake of active travel. KO 9 – could note something around futureproofing for current innovation becoming mainstream in order to ensure attractiveness for businesses – evidence that you're more likely to attract high tech/high performing business to an area that is equipped well for the future. KO 10 – given the need to off-set existing development which can't be brought up to zero carbon standards with retrofit, ideally, new development should be better than net zero and could make mention to EV charging. KO11 – could mention smart energy systems. KO12 is important because the demand for new housing cannot be met without a key focus on the impacts of climate change and the individual risks to each property. Typo at KO14: Secure new green....KO16 – prioritising active travel ignores the complexity of rural travel which does not seem to be given so much thought. Need to ensure that active travel is not promoted above all else as it is not an option for many. However, it is important to reduce transport emissions. KO24: There should also be an aspiration to reduce the need to travel at all. KO30: Facilities such as pubs create reduce the need to travel further afield for leisure purposes and encourage closer community cohesion. KO20-31 are all very high priority if we are to deliver our aspiration of healthy place shaping. These objectives address the wider social determinants of health that the Local Plan can influence and reduce health inequalities.</p>

LPR-B-098	Oxfordshire County Council	Option 3	Sustainable travel options should be a key consideration in the location of employment land, providing access to residential development and other uses. OCC transport planning colleagues will work with Cherwell to assess the impact of employment land options. Transport connections should guide the location of employment land. Locations where people can sustainably travel to need to be identified and then an assessment of whether the site is suitable for employment should take place, so Option 3 is not appropriate. Option 5 would offer the best solution for the people of Cherwell. A significant proportion of residents do not live within the urban centres of Banbury, Bicester, or Kidlington and if we are to encourage commuting via active travel then it is important that people can live within short distances from their place of work. In addition, the public transport network should allow those living further away from the larger employment hubs to be able to get to work without relying on the use of a car.
LPR-B-098	Oxfordshire County Council	Option 4	Favour Option 2 to enable mixed use sites.
LPR-B-098	Oxfordshire County Council	Question - Supporting Employment	Favour Option 2 to enable mixed use sites. Consideration should be given to potential B8 requirements within residential areas, for freight consolidation. The Council may also want to think about policies around requirements for futureproofing for innovation/tech set to become mainstream in areas where there is an objective to promote science, tech, and innovation businesses in particular. With the recognised decline in town centre shops and services, it is crucial to ensure that the locations of new retail and leisure are considered in respect of the local communities and their ability to travel on foot, by bike or via public transport. The concept of 20- minute neighbourhoods relies on the ability to access services without driving. To sustain and manage economic growth as identified in the plan we must leverage every opportunity; maximise every 'lever' we have within the 'system' to encourage skills, training, and employment opportunities. We must ensure we fully embrace Community Employment Plan (CEPs) aligned to major developments thus creating a county wide approach to increased employment and training opportunities. A county wide approach creates opportunities for residents from all districts. Following successful pilot CEPs instigated by the Skills Board and the OxLEP Skills Team, further work to implement CEPs into planning policy has been in progress. This approach has been endorsed at Growth Board, Local Enterprise Partnership Board and by the Skills Board. CEPs are fundamental to the successful delivery of strategic objective's identified in Oxfordshire's Local Skills Plan and Report and Economic Recovery Plan and the emerging Oxfordshire Inclusive Economy Partnership. CEPs could be greatly beneficial in providing opportunities for people of all ages to gain necessary skills, apprenticeships, and work, to address the identified skills shortage and lack of training opportunities locally and providing enhanced social mobility and economic growth as a result. If skills, training, and employment levels are not significantly improved in deprived areas, this will consequently inhibit local economic growth and prosperity. The preparation and implementation of Community Employment Plans could significantly benefit businesses, the economy and provide opportunities for local people to improve their skills and training in support of the strategic plans. Community Employment Plans can be part of our approach locally – delivered in partnership with willing investors. CEPs provide the framework to help developers deliver on these ambitions. CEPs are employer-led initiatives which can form part of planning obligations for significant developments. The measures contained within CEPs seek to maximise the wider community benefits of development through ensuring that local people can better access job opportunities arising from development. The outcomes in CEPs should apply at the construction phase and at end-use phase of employment generating development. The Cherwell Plan should seeks to encourage the implementation of CEPs which are focused on strategic sites. There are a significant number of strategic sites at various points in the planning process locally and an additional pipeline over the mid-term. Each represents a huge opportunity to support wider skills and training opportunities and may be particularly helpful in boosting social mobility. Oxfordshire has the collective knowledge and experience to support developers in the delivery of CEPs. The Plan must provide the strategic hooks for us to legitimately engage and support developers as they invest in Oxfordshire and Cherwell and in turn leverage that investment to the benefit of all our communities.
LPR-B-098	Oxfordshire County Council	Option 5	Flexibility of use will be an important element of the COVID-19 recovery and provide adaptability in a changing town centre landscape mainting vibrancy and reducing transport impacts. There is an opportunity to rethink the role and look of town centres. If some retail has moved to the edge of town, then spaces in the centre could be converted to parks/bike repair places/gyms/other community facilities, whilst ensuring strong active travel connections to retail areas. Disused department stores could be converted into health centres which would be accessible to more people and in turn reduce the burden on GP services. Option 2 seems a better although as towns act as service centres, the idea of a 20-minute neighbourhood should still be retained as having amenities more spread out would be less conducive to active travel.
LPR-B-098	Oxfordshire County Council	Question - Town Centre Uses (Banbury, Bicester & Kidlington)	20-minute neighbourhoods are not purely for encouraging the shift to active travel. It is to allow those from deprived communities to have equal access to shops and services which might otherwise be inaccessible due to travel distance and lack of quality infrastructure. If town centres are allowed to become entirely residential then this would result in a loss of community facilities and result in widening health inequalities. iHUB within OCC prefers Option 1 allowing flexibility but protecting key shopping areas. Although the Banbury section of this plan contains a number of paragraphs on Banbury's built heritage there is nothing to highlight the archaeological resource within the town. Banbury has a wealth of archaeological heritage assets which are often overlooked. Archaeological excavations ahead of development in and around Banbury have revealed a significant prehistoric landscape, a Bronze Age funerary landscape and later prehistoric settlement. In line with the NPPF the local plan should aim to set out a robust strategy for the protection and enhancement of this archaeological resource. In addition to Alchester Roman Town and the Priory Bicester contains a wealth of archaeological sites which should be highlighted. The own contains a scheduled medieval village at Wretchwick and considerable evidence of wide scale Iron Age and Roman field systems survive below ground around its edges. This includes a large area south east of the current town where evidence of Roman wine production has been reported. A number of Bronze Age barrows have been recorded within the town. Bicester dates back to the Saxon period. Saxon halls and sunken featured buildings have also been recorded within the town. In addition to the Cold War heritage, the site of the airfield at Upper Heyford has considerable archaeological interest located alongside Aves Ditch. A number of later prehistoric Banjo enclosures have been recorded along the lineof this boundary feature. Whilst the development of the area south of Camp Road would have removed much of this potential the majority of the Flying Field could still contain significant archaeological sites.

LPR-B-098	Oxfordshire County Council	Question - Supporting our Town Centres	A policy on out-of-town retail centres is important so that such centres do not reduce retail activities in town centres. The policy should require retail centres be accessible by sustainable and active travel.
LPR-B-098	Oxfordshire County Council	Option 6	There remains a lack of new supply of social rented housing the district, the percentage of affordable housing on new developments needs to be increased. Housing remains unaffordable even for those who don't fall into the deprived bracket. This is partly due to the high house prices in South East England. More should be done to enable first time buyers and young families to get onto the property ladder. In addition to the 30% and 35% requirements for affordable housing in the current Local Plan to address Cherwell's need for affordable housing, the percentage of required affordable housing is 50% for the Partial Review allocations. The 50% requirement was included given that these allocations were made to address Oxford's unmet housing needs and there is a requirement for sites to deliver 50% of the houses as affordable housing in Oxford City. Consideration should be given to the required percentage levels of affordable housing having regard to viability and strategic considerations identified through the Oxfordshire Plan 2050.
LPR-B-098	Oxfordshire County Council	Option 7	Prefer Option 1 where priority is given to social rented housing. Given the high cost of average house prices in Oxfordshire and the lack of supply of truly affordable homes, increasing social rented housing is important and its % should be increased above 30%
LPR-B-098	Oxfordshire County Council	Option 8	Prefer Option 1 to require all new dwellings to meet minimum requirements. The Covid pandemic has highlighted the impact of overcrowding on both physical and mental health. The Local Plan should include a requirement that all new dwellings meet nationally described minimum space standards.
LPR-B-098	Oxfordshire County Council	Option 9	Prefer Option 1 to introduce accessibility standards. A new specific policy for accessibility standards for a proportion of new homes would be welcome as this would reduce the health inequalities experienced by the ageing population of Cherwell and enable those living with long term conditions to live independently, thereby reducing the pressure of health services.
LPR-B-098	Oxfordshire County Council	Question - Travelling Communities	Specific locations are often identified by members of the Gypsy and Traveller community, who even with the expert advice of knowledgeable agents, often fail at the application stage, or achieve approval for a very reduced number of pitches. There is no perfect location for sites, but sites are normally on marginal land that developers see no potential for large or small developments. Guidelines and planners are concerned if locations are isolated and not near schools, retail, or public transport. Yet this is never an issue for the Gypsy and Traveller community when they build sites, they are pleased to have a location to call home. They don't like sites in overdeveloped areas where they don't have privacy. Cherwell DC have lost 2 sites in the past few years. Planning consent has been achieved in several locations, Chesterton and Caulcott, there being an appeal on the proposed site at Piddington. There needs to be positive intervention by planning enforcement within the Council, as has recently been proved with Cherwell's action in the High Court in respect of the site at Manor Park, Nr Islip, where many plots that should according to the planning consent be for members of the Gypsy and Traveller community, were being rented out to persons from the settled community. This is widespread throughout the County and UK. Cherwell was one of the first to take positive action. We all know that many sites are located at locations where the settled community would not even consider living. But with the requirement for more suburban and commercial development, this are becoming harder to find. Many sites have little or no impact on the adjoining communities.
LPR-B-098	Oxfordshire County Council	Question - Housing Policies	Housing policies should support Modern Methods of Construction, including design for disassembly, off-site construction, and modular homes. This will need to consider that many of these MMCs are not fully tested – AIMCH project would be useful to review for consideration of how these MMCs can be made most commercially viable. It would also be good to be supporting digital approaches such as digital twinning and Building Information Modelling, to support reduced environmental impact and reducing snags. There's potential for significant change in this field over the life of the new plan, so any policy might be better to be relatively flexible in wording and point elsewhere to follow best practice. There should be a policy restricting conversion of homes into houses in multiple occupation as these tend to result in overcrowding, if such conversions are permitted the policy should require that they meet minimum space standards. A policy to support the provision of housing to meet specific needs would be consistent with the requirements in paragraphs 60-62 of the NPPF. We observe an opportunity to include policies to support circular economy principles and on embodied carbon, to manage the emissions in producing building materials, their transport and installation on site, as well as their disposal end of life.
LPR-B-098	Oxfordshire County Council	Option 10	Cherwell Local Plan should take this review as an opportunity to explore including sustainable design and construction standards above those required by Government. We prefer Option 1' if OP2050 already exceeds government requirements; Option 3 if it does not. This Policy should ensure that provision for sustainable management of waste during construction and occupation is considered by developments as part of their Planning Applications. They should consider the reuse of materials on site and the use of recycled and secondary aggregates during construction. They should consider the storing and segregation of waste and ensure access by waste collection during occupation. We would be happy to explore this further with you. We need to be as ambitious as possible in tackling the climate emergency to prevent catastrophic impacts. It would be best to set targets for both residential and non-residential development above those required nationally in order for Cherwell to become a front runner and set an example. We only have around seven years left of our carbon budget in Cherwell and so drastic action is needed now. The County supports the preferred option to bring forward higher design requirements but the policy wording should be strengthened to require major developments to be net zero. Should the Oxfordshire Plan 2050 not include a policy requiring major developments to be net zero, the CDC Local Plan 2040 should set their own higher standard. We welcome the publication of the LETI Climate Emergency Design Guide which clearly defines net zero carbon in buildings (both embodied and operational carbon) and sets a clear roadmap to achieve this. The County Council does not have a statutory role in setting design standards for new developments but is a cosignatory with CDC on the Oxfordshire Energy Strategy which outlines a shared commitment 'to reduce countywide emissions by 50% compared with 2008 levels by 2030 and set a pathway to achieve zero carbon growth by 2050'. This target reflects the Climate Change Act 2008 and the County Council's Climate Action Framework, which sets out our commitment to be a zero carbon organisation by 2030 and playour part in enabling a zero carbon Oxfordshire by 2050.

LPR-B-098	Oxfordshire County Council	Question - Retrofitting of Historic Buildings	Agree with suggested approach in relation to retrofitting. Suggest encouraging latest PAS is applied to retrofit (currently PAS 2030/2019 and 2035 for retrofit). For retrofit need to think about how we can support the supply chain to develop. This may be outside scope of Local Plan though. Retrofitting buildings to meet targets on carbon emissions should be more important than preserving historic buildings. There will clearly be some exceptions, but retrofitting should not simply be denied because a building holds some historic significance. Local Plan policies should identify opportunities for reducing carbon dioxide emissions from the existing building stock by identifying potential synergies between new developments and existing buildings through the retrofitting of energy efficiency measures, decentralised energy and renewable energy opportunities. The County is supportive of retrofit and would like to work with Cherwell, especially where funding is routed through larger scale bodies such as county councils. We also note an established need as outlined in the Oxfordshire Infrastructure Strategy (OxIS) Stage 1 report, which includes a schemes gap analysis and recommends additional future schemes to address environment needs to 2040
LPR-B-098	Oxfordshire County Council	Option 11	Prefer Option 1, but there needs to be an impetus for local onsite energy generation for developments. The County is supportive of allocations of sites for renewable energy generation and renewable energy data is available through Project Local Energy Oxfordshire (LEO). Proposals will need to be considered alongside network capacity and demand. Energy projects typically require significant investment and planning, and local plans are the ideal means to securing a strategic and managed approach that provides certainty for both developers and the community, developed through a rigorous process, and tested in terms of viability. In terms of carbon emissions outside of the control of the local authority, local plans provide the mechanism to ensure that developers improve standards, connect to key infrastructure, such as heat networks, and where this is not possible, make financial contributions to energy projects within the local area.
LPR-B-098	Oxfordshire County Council	Question - Policies for Climate Change, Sustainable Construction & Renewable Energy	To help in climate change mitigation and adaptation, we would expect to see the Circular Economy within the Plan. The Issues Paper also does not discuss resource efficiency. Resource efficiency and sustainable management of waste will continue to have a significant link with Climate Change. A number of the proposed objectives contain the word 'sustainable' within them, in particular in the development of sites, as well as supporting the efficient use of local resources yet waste is not specifically mentioned within any objective. In Objective KO28, waste is not included as an area/need that should be met by the District. The paper includes no reference to reducing waste, recycling, waste minimisation, resource efficiency or managing waste in new developments. Is it the District's intention that the objectives are all inclusive of waste issues and resource efficiency, even if not specifically mentioning them in the Review Paper currently? It is felt that the future Local Plan could expand these further. Consideration of other technologies likely to impact on climate change e.g., autonomous vehicles. Setting out sharing space within development to promote their use through shared schemes rather than private ownership. Also need to think about impacts of the change's climate change will require i.e., reduce car usage and ownership. Promotion of re-deployable parking, for example. Last mile delivery might also be worth thinking about re drone and cargo bike delivery for example – ensuring charging, docking facilities available etc. There should be targets on how many electric vehicle charging points there will be installed and consideration taken on the location/distribution of these. Energy policy on new developments set metrics not only for carbon, but for total energy use, so that new-builds do not put added strain on an electricity grid which is coming under pressure from the electrification of vehicles and heating – in line with local and national zero-carbon goals.
LPR-B-098	Oxfordshire County Council	Question - Green Belt	Countywide strategic matters relating to the Green Belt might be addressed by the Oxfordshire Plan 2050. We acknowledge this is a sensitive issue and will need co-ordination with other authorities. Consider the need for a transport hub off of the A44 at the Bladon roundabout to assist sustainable transport into Oxford, Woodstock and Blenheim as well as linking to other local areas.
LPR-B-098	Oxfordshire County Council	Option 12	A combination of Options 2 and 3 seems the most appropriate here as developer contributions are a simple and effective way to ensure that the impacts of a development are mitigated in the right way. By channelling some of this funding to local environmental bodies, it will increase their capacity to undertake projects aimed at biodiversity protection/enhancement and increasing access to nature. At the same time this community activity needs to support enhancement and protection of priority areas in the nature recovery network.
LPR-B-098	Oxfordshire County Council	Option 13	Prefer Option 2 as simply assessing impact of development on natural capital is insufficient, developers need to be required to show how they are mitigating potentially negative impacts to achieve environmental net gain. Major development proposals to be supported by a natural capital assessment to demonstrate the impact of the proposals and demonstrate environmental net gain.
LPR-B-098	Oxfordshire County Council	Question - Biodiversity & The Natural Environment	We support the references to Natural Environment and Biodiversity and the aspiration to secure the delivery of biodiversity net gain and mitigate the impact of climate change on biodiversity. The development of a robust and diverse green infrastructure network will deliver multiple environmental benefits and meet the needs of existing and future communities, as well as help in the delivery of mitigation and adaptation to climate change. There is an opportunity through the emerging Oxfordshire Nature Recovery Strategy to identify schemes in the Nature Recovery Zone to enhance habitat restoration and to integrate this with wider infrastructure types such as flood alleviation and transport. It would be good to consider integrating natural environment into buildings and infrastructure – green walls, roofs etc. Consideration of moss walls may be beneficial for air quality improvement and climate change mitigation. The Plan should include policies on green and blue infrastructure including access to nature as well as air quality.
LPR-B-098	Oxfordshire County Council	Option 14	Option 3 creates a more inclusive place for children overall rather than children effectively only be accepted in certain places. This has the potential to foster a greater sense of community and conveys a message of reclaiming the streets for people and moving away from a purely movement-based approach. Good to have traditional provision as well. Provision of highly accessible, informal as well as formal play spaces are linked with good mental and physical wellbeing in children. With childhood obesity and levels of inactivity on the rise, it has never been more important to focus on the provision of a variation of different types of play areas.

LPR-B-098	Oxfordshire County Council	Option 15	Prefer Option 2. Centralised hubs or enhancing existing facilities ensures that there are high quality facilities that meet community need, so less need to travel elsewhere. There could then be a focus on ensuring sustainable travel connections to these places. It is a priority to use developer financial contributions to enhance the provision of existing facilities, with contributions supporting connectivity by sustainable and active travel from new developments to existing facilities. However, where there is no scope for expansion at existing facilities, developers should be obliged to ensure that sports hubs are provided at the development.
LPR-B-098	Oxfordshire County Council	Question - Protecting the Historic Environment	Anything that would promote the use of outdoor spaces for walking, exploring, recreation and learning is ultimately good for people's wellbeing. Where new development is able to reveal the significance of heritage assets, this should be harnessed to its maximum potential. This section should certainly reference the wealth of archaeological information within the District which contributes greatly to its sense of place. The District contains a number of Iron Age Hillforts, castles, and the scheduled Roman Town of Alchester along with earthworks of shrunken medieval villages and preserved former field systems. The District contain numerous undesignated archaeological sites which are considered to be of the same significance and would need to be considered in line with policies for designated sites set out in the NPPF. This archaeological resource forms an important part of the character of Cherwell which needs to be protected and enhanced as set out in the environmental objective of sustainable development.
LPR-B-098	Oxfordshire County Council	Question - Achieving Good Design & 'Beauty'	Good design needs to cater for future change. Suggest pointing people towards Innovation Framework to help address these kinds of considerations. Taking inspiration from the design of Elmsbrook Eco-Town, Bicester, new developments should maximise space for walking, cycling, resting, and enjoying the local landscape. 'Beauty' is a fairly subjective concept so would be difficult to quantify in a specific policy. We would recommend a policy that all new developments are required to meet Building for a Healthy Life standards. A policy could be included that focuses on creating safe environments which promote good physical and mental health, with places and routes that are safe and perceived to be safe by creating passive surveillance and active frontages, as well as including measures to improve safety for all road users, particularly for those that walk and cycle.
LPR-B-098	Oxfordshire County Council	Question - 20-Minute Neighbourhoods	We support the concept of the 20-minute neighbourhood and believe this is key to getting more people out of their cars and sustainably using their local communities for services. The principle is good but even with everything people supposedly need within 20-minutes, people will still want to travel further, so strong public transport connections need to be considered. One possibility is creating a network of 20-minute neighbourhoods that are well connected by public transport. In rural areas there could be consideration of the time taken to reach employment or shops being used to grade accessibility, and thus guide where development could/should be encouraged without encouraging commensurate long-distance commuting. A place for all ages is important, given proportionally high levels of older people living in rural locations. There is the potential to treat clusters of villages as '20-minute cycle' neighbourhoods which between them may have the range of assets associated with this concept. Also, villages in the hinterland of our urban centres can be connected to the market towns through cycle routes that encourage active travel between them.
LPR-B-098	Oxfordshire County Council	Question - Transport & Connectivity	We support the proposed transport and connectivity approach which prioritise reduction in the need for travel and then active and sustainable modes. The transport user hierarchy set out in LTCP highlights a new and right approach is required that prioritises walking and cycling, in conjunction with sustainable public transport for longer journeys. Application of the transport user hierarchy will deliver a more balanced and effective transport network that provides for a greater range of travel modes and accessibility needs. However, you probably need to have decarbonisation via technology running alongside the hierarchy, rather than within it. There are also new forms of transport which don't fit neatly within categories – e.g., micro mobility modes, which play a role in decarbonisation, but need to be carefully managed to ensure they're not detracting from un-powered active travel modes. This will enable all residents to have more choice and easier interchange between sustainable modes, making every-day journeys more convenient. In order to support this hierarchy and prioritise walking and cycling OCC will create plans for improved infrastructure across the county. Comprehensive cycle and walking networks are fundamental to successfully increasing their usage. The development of the Strategic Active Travel Network will expand the opportunities to walk and cycle between towns, villages, and key corridors in Oxfordshire. This improved connectivity will contribute to encouraging walking and cycling and delivery of our vision. There are also existing off-road networks that could be developed to support the uptake of walking and cycling. There are hundreds of kilometres of Public Rights of Way throughout Oxfordshire that have the potential for transformation into high quality multi-user routes. Encouraging an increased number of public transport trips will also be an essential part of delivering our LTCP vision. Increased public transport use will help to reduce the number of private vehicle trips and deliver air quality improvements. Public transport is key for rural areas and strong connections to service centres are required. There is considerable emphasis on active travel throughout the transport section which is welcomed, and there will need to be ongoing work between CDC and OCC on the challenges of providing effective public transport for the rural areas. Developments need to help deliver the LCWIPs in order to provide active travel connectivity. There is a need to not just consider the infrastructure but the whole journey of travelling, to include changing facilities at workplaces, bike repair stations and provisions for winter. These factors should be built into policy so that a comprehensive approach to active travel is taken. It may be difficult to prioritise public transport/cycling in the rural villages but the larger destinations (Bicester, Kidlington, Banbury) need to reduce car parking and prioritise bus lanes/cycle lanes. There will be a need to consider low carbon technology to a greater degree for rural areas and protecting the bus service is essential.

LPR-B-098	Oxfordshire County Council	Option 16	Support Option 1. We welcome reference to Broadband and Digital Infrastructure, which has been integral to the response to COVID-19 and is fundamental to enhancing connectivity and providing resilience. The Plan should ensure that any new homes or commercial premises planned to be built have “full fibre to the premises” digital connectivity to enable more people to work from home, reducing the amount of traffic on the roads. This will help ensure that connected homes and offices optimise environmental controls reducing power consumption and pollution. The Plan as a whole needs to embrace and enable new technologies for transport and connectivity. “Future-proofing” is essential. Digital infrastructure is key to reducing the need to travel. Good digital connectivity needs to be expedited though and not just something for the future and the infrastructure needs to be in place to respond to this. A sense of urgency should be added to providing good digital infrastructure. Ensuring sensible space is allocated for street cabinets (for 5G/6G), to avoid future obstruction to wheelchair users etc. Full Fibre should be standard for new development.
LPR-B-098	Oxfordshire County Council	Question - Transport Policies	Approved LCWIPs could be included within the IDP as appropriate. LTN 1/20 should be used for attractive and safe cycle provision. The new Oxfordshire Street Design Guide could be mentioned. Oxfordshire Electric Vehicle Infrastructure Strategy will be producing a guidance note for developers specifically. Should reference Innovation Framework and Oxfordshire Digital Infrastructure Strategy. It may be helpful to integrate a high-level policy which pertains to changes within transport options available/ trends of societal change, significant change might be expected, and exact trajectory over this length of time is uncertain. This could call on the need for changes within options available/level of need for provision being considered in planning development/infrastructure, and that this should be done with the key themes in mind. Then point to Innovation Framework provides up-to-date guidance/evidence. As part of the standards for cycle parking and electric charging in new developments, there should be specific obligations for cycle parking to be accessible and convenient from the roadside, thereby encouraging people to cycle to and from their homes. Plug-in points should be close to people’s homes and convenient for everyday use. The Plan needs a policy on the creation of delivery hubs to reduce the multiple trips into villages that are generated by online shopping. Identifying delivery points at which all delivery companies could leave packages would enable active travel within villages and improve air quality. Providing enhanced cycling and walking infrastructure is key to improving connections across the network. In addition, people need support to change behaviour and make modal shift. We would support a policy of community activation being included in the Local Plan that identifies the range of complementary measures that need to be provided in order to address the barriers that people experience to cycling and walking more. The Plan also needs a policy to endorse the continued review and investment in LCWIPs and ensure that connectivity between settlements is considered to develop a comprehensive network of walking and cycling infrastructure is needed across all areas to enable this shift to happen on a bigger scale.
LPR-B-098	Oxfordshire County Council	Option 17	We agree that updating the methodology would be appropriate. The methodology should be updated to consider the social and environmental benefits of schemes and their contributions to climate action, healthy place shaping and a sustainable economy. Infrastructure influences so much that it cannot be considered just as a physical facet. A catchment approach would be good for rural areas where needs cannot be met in individual neighbourhoods alone. It is important to look at areas by catchment and their accessibility.
LPR-B-098	Oxfordshire County Council	Question - Delivering Infrastructure	A policy should be included to future proof infrastructure. The Oxfordshire Infrastructure Strategy (OxIS) Stage 1 report included a schemes gap analysis and recommended additional future schemes to address environment needs to 2040: Home Efficiency Retrofitting Scheme; Zero Carbon Heat Network Scheme; Electric Vehicle Charging Sessions; Zero Emissions Zones; Zero Carbon Public Transport Scheme; Habitat & Biodiversity Restoration Scheme; Strategic Flood Alleviation Scheme; and, Renewable Energy Scheme.
LPR-B-098	Oxfordshire County Council	Option 18	OCC will work in partnership with Cherwell to assess the transport impacts of the growth options. Further urban extensions will simply increase the need to travel, and thus congestion, unless they come with very strong sustainable transport connections. The current concentration of employment to the east and housing to the west of Banbury has increased the need to travel which needs to be resolved with active travel, public transport and as a last resort highway improvements. Before considering any further extensions into the open countryside, consideration must be given to new peripheral or orbital routes that will relieve the traffic in the town centre, allowing for the allocation of space to sustainable traffic modes and making it a more pleasant town to walk or cycle in. Such routes must not bisect residential areas, where there will always be a conflict between place and movement. Traffic free cycle routes must be created between the town centre and the extensions, as well as orbital routes. Consideration should also be given to the natural environment, and enjoyment of public rights of way, which may be lost if the separation is lost between villages. There is excellent walking country around Banbury, which is an attractive feature key to encouraging tourism. Green ‘fingers’ and corridors must be provided rather than simply encircling the town with new development. Focussing development on a settlement well connected with Banbury would make public transport critical, to avoid increasing traffic. The settlement would need to be of a sufficient size to generate enough demand to make public transport services between the site and Banbury commercially viable. Across the existing and planned school estate in Banbury, there are options to accommodate further growth. Where existing/planned schools are intended to serve growth, travel routes to those schools are key, especially to ensure safe and sustainable travel patterns. If the scale of growth exceeds the potential of the existing/planned school estate, then housing developments should be of a scale, individually or in close proximity, to make a new primary school viable. The scale of housing development at an existing settlement outside of Banbury would need to be carefully planned. In some cases, there will be an existing primary school which may benefit from local population growth to a certain degree, but there will be a limit to the scale of growth it can support; beyond that limit a new school may be required, but it would be important that this does not destabilise the existing school. Any new settlement would need to be of a scale to make viable a new primary school.

LPR-B-098	Oxfordshire County Council	Option 19	Development to the east of Banbury would be challenging due to the severance caused by the M40, and would require additional crossings of the motorway, including for motor traffic, and improvement of existing road corridors as well as the development of good quality traffic free cycle routes. However, housing here would be closer to the main employment areas. To other sides of town, the hilly topography could make cycling unattractive, although the increasing uptake of e-bikes could counteract this. Any sites need to demonstrate strong sustainable connections and consider how they could help to relieve the significant issues on Hennef Way. Existing and planned secondary schools are concentrated to the south and west of Banbury. Unless extensions to the north or east were of sufficient scale to provide a new secondary school site, housing in those locations (especially east of the M40) might generate less sustainable travel patterns to secondary school. Banbury has a wealth of archaeological heritage assets which are often overlooked. Archaeological excavations ahead of development in and around Banbury have also revealed a significant prehistoric landscape, a Bronze Age funerary landscape as well as later prehistoric settlement. In line with the NPPF the local plan should aim to set out a robust strategy for the protection and enhancement of this archaeological resource.
LPR-B-098	Oxfordshire County Council	Option 20	Conversion of shops and restaurants to homes can present problems in terms of parking. Consideration of parking policy and zones is required. It can be difficult to fit in convenient and sufficient cycle parking into this type of premises. A reduction in the need for retail and office space is inevitable, and there is a need to re-think the town centre, so that parts of it can be redeveloped as residential, if necessary, allowing buildings to be demolished rather than converted. It is important to take steps to remove certain development rights within the town centre to prevent the conversion of shops and restaurants to homes without the need for planning permission. Creating a balanced mix of uses in our town centres of retail, leisure, community, and arts as well as housing is required to create thriving town centres. This applies to Kidlington and Bicester as well.
LPR-B-098	Oxfordshire County Council	Option 21	Prefer Option 2. A mix of development will encourage the vibrancy of the area and is preferable in terms of co-locating jobs with potential employees. However, consideration must be given to HGV access.
LPR-B-098	Oxfordshire County Council	Question - Banbury's Open Spaces	By linking open spaces with good quality walking and cycling routes, to make them more accessible and attractive. The Options paper identifies the importance of connecting Banbury's green spaces. It needs to identify the importance of ensuring effective stewardship of green spaces. Without good maintenance people stop using green spaces due to safety fears. Long-term stewardship models of community buildings, green spaces and other areas of public realm need to be identified and supported through a policy in the new Local Plan which requires developers to contribute to sustainable stewardship of public spaces.
LPR-B-098	Oxfordshire County Council	Question - Addressing Inequality in Banbury	Improving walking and cycling infrastructure and providing for good quality cycle parking and provision for e-bikes, and cargo bikes, would enable families to manage without a car, and reduce the need for them to pay for public transport. The following policies could be included. A Health Impact Assessment Policy which requires major developments to explicitly undertake a health impact assessment of their proposals to ensure that masterplans address identified local health and wellbeing needs of an area in the formulation of proposals for a site. A policy that promotes wayfinding and walkability of local neighbourhoods. This can ensure that routes through developments and which connect new housing with existing communities cater for all age groups including the elderly and those with a disability, through for example the provision of benches, shading and clear signage. A policy that promotes early provision of community infrastructure to address issues of social isolation and loneliness as such local assets can support social interaction and help to support the growth of friendly communities. A policy that supports community development which will contain actions to encourage community cohesion, both within the development itself and between the new development and existing communities, through supporting social capital and building on opportunities afforded by existing and proposed, soft and hard, community assets. A policy that supports the creation of healthy food environments making it easier for people to make healthier food choices by providing allotments (based on local need) and other opportunities for food growing such as community gardens, community orchards, roof gardens, edible landscaping involving fruit and nut trees. A policy that reduces the density of fast-food outlets, particularly in local areas of high deprivation. A policy that sets out place based cultural-wellbeing strategies which set out proposals to support the cultural enrichment of the place. Such strategies should include a mixture of projects where cultural elements are integrated into the form and function of new developments to achieve a high quality, distinctive design, as well as financial contributions to cultural projects where the focus is on community engagement.
LPR-B-098	Oxfordshire County Council	Question - Reducing Car Dependency in Banbury	Improvements to the public transport network and to cycling infrastructure are vital to reduce car dependency. Significant investment in cycle infrastructure linking outlying areas and adjacent settlements will be vital in achieving this aim. Regarding paragraph 6.2.36, this should be more positive and say 'promote' active travel. Regarding paragraph 6.2.35, reducing stationary traffic as a means of reducing emissions will become less relevant as a reason for providing more road capacity, as most new vehicles now switch off instead of idling, and electric vehicles will become the norm. 'Targeted' road capacity improvements could include measures to take trips out of the centre of town, as this would improve conditions for pedestrians and cyclists and allow more road space to be allocated to them. Strategic transport connection issues are at a critical stage and need addressing. Provision of electric bike hubs where residents can loan/rent ebikes for travel to and from work/leisure/retail facilities is needed to address the fact that Banbury sits in a bowl of hills which make modal shift difficult. A programme of maintenance and improved lighting and signage of walking routes, together with increased bench provision and replacement of metal barriers with wooden bollards to promote footpath access by double buggies or mobility scooters. These comments apply to Bicester and Kidlington as well.

LPR-B-098	Oxfordshire County Council	Option 22	It is hard to see where further major urban extensions could take place in any direction without Bicester merging with one of its surrounding villages. In the interest of reducing the need to travel, reducing travel distances, and promoting active travel, urban extensions would be preferable to focusing development at surrounding settlements. Suitable and direct pedestrian, cycle and public transport routes must be made available to any such urban extension. Focusing development at existing or new settlements, no matter how well connected they are to Bicester, does not reduce demand for travel. It is less likely that future residents of such developments would travel by active modes due to distances involved. High quality public transport options would be key; however, car use would likely remain the most convenient and attractive travel mode from such developments. Across the existing and planned school estate in Bicester, there are options to accommodate further growth. Where existing/planned schools are intended to serve growth, travel routes to those schools are key, especially to ensure safe and sustainable travel patterns. If the scale of growth exceeds the potential of the existing/planned school estate, then housing developments should be of a scale, individually or in close proximity, to make a new primary school viable. The scale of housing development at an existing settlement outside of Bicester would need to be carefully planned. In some cases, there will be an existing primary school which may benefit from local population growth to a certain degree, but there will be a limit to the scale of growth it can support; beyond that limit a new school may be required, but it would be important that this does not destabilise the existing school. Any new settlement would need to be of a scale to make viable a new primary school. In addition to Alchester Roman Town and the Priory Bicester contains a wealth of archaeological sites which should be highlighted. The town contains a scheduled medieval village at Wretchwick and considerable evidence of wide scale Iron Age and Roman field systems survive below ground around its edges. This includes a large area south east of the current town where evidence of Roman wine production has been reported. A number of Bronze Age barrows have been recorded within the town. The current Town almost certainly dates back to the Saxon period.
LPR-B-098	Oxfordshire County Council	Option 23	Growth should be centred around key transport corridors which serve the greatest potential for exploiting existing, and delivering new, viable public transport services as well as direct walking and cycling routes. Development towards the centre of Bicester where housing development is already prominent would be beneficial, such as the OCC-owned site at Hudson Street (LPR-A-031) which is situated near The Bicester School and Bicester Leisure Centre and is within walking distance of Town Centre. Additionally, the OCC-owned site on Queens Avenue (LPR-A-031) would also be appropriate.
LPR-B-098	Oxfordshire County Council	Option 24	Option 1. Town centres are usually the most accessible locations within the respective towns and Bicester town centre is typical of this. Town centres are the origins and destinations of bus services, where rail stations are located, are generally more walkable with pedestrianised streets and are usually well connected with cycle routes. Maximising use of town centre locations offers a great potential for increased sustainable travel within the town.
LPR-B-098	Oxfordshire County Council	Option 25	Identify a specific site(s) to enable the development of cultural facilities for Bicester
LPR-B-098	Oxfordshire County Council	Question - Bicester's Open Spaces	The blue lines scheme which promotes active travel and people's engagement with getting active has been a big success – their use should be maintained and extended to support walking connectivity between existing and new housing developments. Existing small areas of green space need to be identified for improvement/rewilding spaces such as Dangerfields park to enable easy local access to the natural environment.
LPR-B-098	Oxfordshire County Council	Question - Local Green Spaces in Bicester	When the next version of the Local Plan is published, we would be happy to provide further input and comment on proposals for local green spaces in Bicester.
LPR-B-098	Oxfordshire County Council	Question - Reducing Car Dependency in Bicester	Reduce the need to travel through the promotion of home working, high quality internet etc. Ensure that development is suitably located to maximise and exploit opportunities for sustainable travel. Reduce travel distances so that walking and cycling are more attractive choices. Ensure the provision of high quality, continuous, direct and, where possible, traffic free and segregated pedestrian and cycle routes throughout Bicester and to nearby surrounding settlements. Much of this is currently lacking in Bicester. Remove barriers to active travel along key corridors and between residential and employment areas. Implement the Bicester LCWIP. Ensure that there is a reliable, frequent, joined up and logical public transport network for the town and surrounding settlements as well as inter-urban services. Ensure that rural areas that rely on Bicester for employment and services are well connected by public transport, to further reduce the need to travel by car. Provision of electric bike hubs where residents can loan/rent ebikes for travel to and from work/leisure/retail facilities is needed to address the fact that Banbury sits in a bowl of hills which make modal shift difficult. A programme of maintenance and improved lighting and signage of walking routes, together with increased bench provision and replacement of metal barriers with wooden bollards to promote footpath access by double buggies or mobility scooters.
LPR-B-098	Oxfordshire County Council	Question - Kidlington Infill Housing	Development of sites for residential uses should be controlled in a manner that is appropriate. No type should be wholly restricted. The introduction of a policy to control the subdivision of larger existing dwellings could be introduced. Need to ensure that any development will not have an adverse impact on the transport network. Need to ensure apartments have sufficient cycle storage/ EV charging. Policy should wrap around redevelopment of properties to flats/apartments to be more acceptable within a short distance to a high frequency public service route
LPR-B-098	Oxfordshire County Council	Option 27	Consider tools such as Article 4 Directions to prevent the conversion of retail and leisure uses to residential

LPR-B-098	Oxfordshire County Council	Question - Reducing Car Dependency in Kidlington & the Surrounding Villages	Reference should be made to the LCWIP to determine key routes for sustainable travel. Public transport connections to Oxford and to transport hubs e.g., park and rides and Oxford Parkway to facilitate multi-modal journeys are also important for commuting, leisure, and private appointments. Ensure that rural areas rely on Kidlington for services are well connected by public transport, to further reduce the need to travel by car. We should encourage and support developments that are located within 400m of the key arterial routes such as the A4260 and Bicester Road that are well served by frequent public transport should. And these should be governed by comparatively stricter parking standards. Policies that limit parking provision at both origin and destination are seen to influence how people travel Kidlington lacks well joined up east to west connectivity. We also need to prioritise and explore how Kidlington benefits from the shorter east – west routes for walking and cycling. Provision of electric bike hubs where residents can loan/rent ebikes for travel to and from work/leisure/retail facilities is needed to address the fact that Banbury sits in a bowl of hills which make modal shift difficult. A programme of maintenance and improved lighting and signage of walking routes, together with increased bench provision and replacement of metal barriers with wooden bollards to promote footpath access by double buggies or mobility scooters.
LPR-B-098	Oxfordshire County Council	Option 28	Option 1. This is very important given the high levels of childhood obesity in Kidlington. Creating a network of connected places by active travel will help to reduce the need to use a car to access these. Linking green spaces will create a greater sense of community, cohesion and reinforce the rural character of Kidlington which some residents felt was being eroded. New opportunities for nature conservation and publicly accessible open space could be provided within new developments, rather than simply protecting existing green spaces. OCC Estates recognise that future development needs to be carefully planned. Where sites are located within or on the edge of Kidlington, then policies that support appropriate development that is consistent with the NPPF will be supported. The introduction and maintenance of areas of strategic green space needs to be carefully considered to ensure that otherwise appropriate development is not prevented as a result of the designation.
LPR-B-098	Oxfordshire County Council	Option 29	Heyford Park has always been a challenge from a sustainable transport point of view, but the larger the settlement the more opportunity there is for trips to stay local if there is a good mix of employment and other facilities. Growth would need to include both housing and employment. A high level of commitment to sustainable living, including transport, would need to be at the heart of any further growth. If there is to be further growth the village needs to be designed to clearly put active modes and bus as the first choice for local movements applying the 20-minute neighbourhood concept. External connectivity is particularly challenging and significantly reducing the dependency on car use for longer distance trips would help to reduce the impact on the neighbouring villages. There is a station, but it needs to be understood what role this station has in the future rail strategy and there need to be high quality cycling and bus connections. There are higher quality services from the Bicester stations, particularly Bicester Village Station, and the provision of a strategic cycle route and bus services to this station would assist. Bus connections need to be supported with bus priority provision where possible to make mass transit a clear first choice for trips to larger towns. High quality cycle access to Bicester park & ride may provide further opportunities for connectivity. Further allocations should only be made if the above can be clearly demonstrated; without this in place further growth should be limited because of the impact on surrounding villages and environment from an increase in car trips. The suitability of this area compared with others need to be carefully assessed. The constraints of the junction at Middleton Stoney means that significant road infrastructure would be required to bypass the village in order to mitigate additional development. Further capacity improvements at M40 J10 would also be required, beyond those already planned. In addition to the Cold War heritage the site of the airfield at Upper Heyford has considerable archaeological interest located alongside Aves Ditch, formally thought to be a routeway and now considered to be a tribal boundary. A number of later prehistoric Banjo enclosures have been recorded along the line of this boundary feature. Whilst the development of the area south of Camp Road would have removed much of this potential the majority of the Flying Field could still contain significant archaeological sites.
LPR-B-098	Oxfordshire County Council	Option 30	The scale of housing development at an existing settlement would need to be carefully planned. In some cases, there will be an existing primary school which may benefit from local population growth to a certain degree, but there will be a limit to the scale of growth it can support; beyond that limit a new school may be required, but it would be important that this does not destabilise the existing school. Villages without housing growth often experience aging populations, which can make village primary schools unviable. At the time of developing the last Local Plan this impact was masked by an overall rise in birth rate, but birth rates are now falling, which will put pressure on small schools in the absence of housing development suitable for young families. OCC Estates recognise that future development at rural settlements needs to be carefully planned. We do not necessarily believe that limiting development to that which is required to meet local need is the best solution. Directing a mix of development to the rural villages over the plan period, in line with paragraphs 69, 79 and 80 of the NPPF, is supported and thus option 2 is the preferred.
LPR-B-098	Oxfordshire County Council	Option 31	Option 3 will allow local communities to be more involved in the shaping of their area, including through the Neighbourhood Planning process, but these are not the only sources of rural housing and it will be necessary to provide policies that deal with the non-allocation approach to windfall development in the rural areas. Windfalls comprise an important source of housing in the rural areas and therefore policies which set out the development strategy for rural settlements and the countryside will be necessary to be consistent with the NPPF. A further option should be explored which includes option 3 but which allows for a development strategy to be provided which addresses the provision of non-allocated windfall sites.

LPR-B-098	Oxfordshire County Council	Option 32	In respect of question 1, a reliable level of public transport needs to be given additional weight. In respect of question 2, we agree that it is essential to give additional weight to the accessibility of the settlement to urban centres by public transport, walking and cycling. Should be a combination of the above, plus digital connectivity (both mobile and physical, could also consider satellite). Satellite connectivity likely to significantly improve in coming few years (roll-out of low earth orbit satellites is set to be significant over the next 5 years and will enable super-fast broadband equivalent speeds). This may make lack of broadband digital connectivity less of a barrier to development in future. OCC Estates believe both options have merit as both the availability of facilities and services, as well as accessibility of the settlement, have an impact on the overall sustainability of new development. Not all development in rural areas will be accessible to the nearest urban centre and a development strategy that allows limited development within the built parts of rural settlements is recommended. Defining settlement boundaries is a possibility, however the more frequently employed 'built up area of the settlement' approach, which avoids the need for hard boundaries, has been shown to be successful elsewhere.
LPR-B-098	Oxfordshire County Council	Question - Neighbourhood Planning	We are supportive of local communities preparing neighbourhood plans and will offer advice during the preparation. Reference should be made to the OCC Neighbourhood Planning Guide which provides guidance on the role of the county council in neighbourhood planning and support available. Whilst Climate Emergency Declarations are typically made by city, county, or district councils, at the scale of a Neighbourhood Plan, town councils can and have taken this step. Neighbourhood Plans are a means of promoting renewable and low carbon energy projects in the local area, in accordance with the strategic policies of the local plan. Some Neighbourhood Plans include specific policies and allocations for renewable energy. Faringdon Neighbourhood Plan (2016) Policy 4.13C identifies the potential for hydro-electric power on the River Thames.
LPR-B-098	Oxfordshire County Council	Question - Development Management Policies	We welcome policies on HMOs. It would be helpful if these policies could set a car and cycle parking standard for these type of dwellings to help us deal with minor planning applications of this type. Car and cycle parking policies would be welcomed. Especially in the context of growth in urban areas of Banbury, Bicester, and Kidlington. The county council has had Civil Enforcement Parking powers from 1st November 2021. This means that Controlled Parking Zones can be implemented and enforced by the county council. This allows us to encourage developments to provide car free or low car housing, as the CPZ provides comfort that indiscriminate parking would be controlled. Therefore, it would be useful to bring in policies for urban areas which require developments to provide higher levels of cycle parking and lower levels of car parking, thus supporting Theme 2 of the Local Plan which is seeking to reduce carbon emissions and act on the Climate Emergency. Innovation and technological change would be useful to cover with reference to the Innovation Framework. A policy on the support for provision of core infrastructure and expansion of existing infrastructure is recommended. A policy for assisted living for older persons, or development for elderly/supported accommodation or extra care units would be consistent with the objectives in paragraphs 60-62 of the NPPF. To ensure that policies supporting renewable and low carbon energy and requiring reduced carbon emissions from new buildings, confident and effective development management is required. In decision making, according to the recent RTP1 and TCPA Planning for Climate Change (2019) publication LPAs should: attach great weight to climate change adaptation and mitigation; and not refuse applications that incorporate energy efficiency measures and design responses on the grounds of incompatibility with the existing townscape.
LPR-B-099	Avison Young for the National Grid	General	One National Grid asset located within the area. Electricity Transmission - 4YH ROUTE TWR (001 - 107): 400Kv Overhead Transmission Line route: COWLEY - EAST CLAYDON (plan provided with approximate route). National Grid is happy to provide advice and guidance to the Council concerning their networks. If we can be of any assistance to you in providing informal comments in confidence during policy development. To help ensure the continued safe operation of existing sites and equipment and to facilitate future infrastructure investment, National Grid wishes to be involved in the preparation, alteration and review of plans and strategies which may affect their assets. Please remember to consult National Grid on any Development Plan Document (DPD) or site-specific proposals that could affect National Grid's assets. Request that contact details provided are included on the council consultation database. General guidance provided re electricity and gas assets with links to guideline documents.
LPR-B-100	Tony Churchill	Kidlington	Objects to extent and assumptions made in the local plan. The housing need appears to be grossly exaggerated. The Office for National Statistics (ONS) household projections for Oxfordshire for 2050 are 53,000. The fields behind Webbs Way have skylark nest sites and so must be protected. During last winter there was widespread flooding of the fields from the Cherwell towards Kidlington. Has this issue been considered? The location of a Travellers site on the Moors is totally unsuitable being adjacent to two retirement homes. I feel our representatives have given up protecting the Green Belt and now is predated by a feeding frenzy of developers. The walk routes that were so beneficial during lockdown will be built over.
LPR-B-101	Bobbie Brown	Option 18	Development should NOT happen to the North of the town. The Bourtons Parish Council recently carried out a survey to assess housing needs within the villages. They established that there are no housing needs; previous developments have met needs. The Parish is a rural community and should remain that way. Existing/ongoing developments north of Banbury are already putting substantial strain on an area that lacks infrastructure to support them.
LPR-B-101	Bobbie Brown	Option 19	Development should be limited "at Banbury to protect its landscape setting and maintain separation between the town and surrounding villages". There are already developments to the South, connecting Bodicote and Banbury. This could continue further, towards Addebury, where there is infrastructure to support further housing. Protecting rural areas is needed to maintain the environment, eco system and character of the country as a whole. The wildlife habitats around our villages MUST be protected for future generations. No logic to build more houses within or around the Bourtons limited amenities. No infrastructure to support more people, no shops, no public transport, very few, if any jobs. Single lane roads around and between the two Bourtons are not fit for purpose. They are already in a state of disrepair; further volumes of traffic will exacerbate the problem.

LPR-B-101	Bobbie Brown	Little Bourton	there are various springs throughout the village. The fields to the north of Chapel Lane, often have standing water. The rain water gullies often overflow Water flows down Chapel Lane, resembling a river. At one point, when Thames Water were repairing the drains in the lane, I was told that the drainage system below the road is collapsing in places.
LPR-B-102	Cathryn George	Sibford Gower	The development of the 30 acre site at Pound Lane would double the number of houses in the village which has a small population currently just over 500 people and it is totally inappropriate for such a small rural village of outstanding beauty. Sibford Gower being classified as a Class A village is ridiculous. Development of this size would obviously damage the lovely countryside and it is not a sustainable location for many reasons including the increase in commuter traffic that would be caused. Site is located at the highest point in the village next to an AONB. Existing roads, cycleways and footpaths, water supply, sewerage and surface water drainage are totally inadequate to cope. Village is a dark sky village. Village has poor transport links, drainage infrastructure and little employment which would encourage more people to commute which negates low carbon living. Brownfield sites in and near towns could be developed in a much more sustainable way. The beautiful landscapes and history of the village should be valued and conserved.
LPR-B-103	Mary Nash	Sibford Gower	This development will be disastrous environmentally, releasing massive amounts of carbon, and causing irreversible damage to ancient hedgerows, mature trees and to the water table, the very things that the council is committed to protecting. it makes no sense to build on a greenfield site in a village like Sibford Gower with poor transport, drainage infrastructure and little employment, so encouraging more and more people to commute from the village; this contravenes KO 16 to reduce car dependency. The proposed development would double the number of houses in the village whose infrastructures are already significantly underdeveloped. developments should be directed towards brownfield sites in and around towns, where amenities already exist, and the result would be significantly less destruction of our precious natural environment, and a vast reduction in carbon emissions.
LPR-B-104	Jason Beeney	LPR-A-034	Strongly objects. Junction 11 of M40 often congested; further development would increase traffic and create more congestion on the roundabout. The A361 will not be fit for purpose if the development is permitted. The development is unnecessary; Building further warehouses on the outskirts of Banbury are totally out of character of the town. Significant increase in traffic will result in an increase in air pollution in one of the most polluted areas in Oxfordshire. Given recent coroner rulings, the increase in air pollution shouldn't be taken lightly. Air pollution also has a negative impact on climate change and makes it harder to decrease global temperatures. the need for the conservation of nature should not be dismissed. Council should be looking at developing brown field sites rather than greenfield sites. The development of brown field sites would be far better for the environment.
LPR-B-104	Jason Beeney	LPR-A-168	Strongly objects. Junction 11 of M40 often congested; further development would increase traffic and create more congestion on the roundabout. The A361 will not be fit for purpose if the development is permitted. The development is unnecessary; Building further warehouses on the outskirts of Banbury are totally out of character of the town. Significant increase in traffic will result in an increase in air pollution in one of the most polluted areas in Oxfordshire. Given recent coroner rulings, the increase in air pollution shouldn't be taken lightly. Air pollution also has a negative impact on climate change and makes it harder to decrease global temperatures. the need for the conservation of nature should not be dismissed. Council should be looking at developing brown field sites rather than greenfield sites. The development of brown field sites would be far better for the environment.
LPR-B-104	Jason Beeney	LPR-A-175	Strongly object. Wardington has minimal services; one pub and one church. The village could increase in size by between 300 and 450 houses; this would effectively increase the village by nearly 50%. This is not sustainable given the lack of services the village has. Development would change the character of the conversation village and would be out of scale to the village. the need for the conservation of nature should not be taken lightly. By changing the land usage you are not only removing nature when the houses are built but you are increasing the number of cars in the village increasing the air pollution.
LPR-B-105	Samantha Cox	LPR-A-175	Objects on following grounds - The significant number of new house proposed are not sustainable because of lack of services. They are also out of scale to the character of the village. Such a development would result in a significant change of character of a conservation village
LPR-B-106	Robert Gottlieb	LPR-A-041	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. Additional development around Henge Close at LPR-A-041 would directly abut the Conservation Area and would therefore be detrimental to the setting of the listed buildings on Horn Hill Rd. Development would also be detrimental to the open nature of the Henge Close estate and to the green space and play area to the east. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.

LPR-B-106	Robert Gottlieb	LPR-A-086	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. The large-scale developments proposed for sites LPR-A-086 would utterly change the approach to the village and would create a jarring transition from agricultural land to modern, dense housing. if developed, double the size of West Adderbury overnight. Such large scale development is entirely inappropriate for a village the size of Adderbury and is far more suited to a large town or even a city. few facilities present in Adderbury would be completely swamped by a development of this scale, placing massive pressures on local schools and services. Precious public footpaths over these sites, which are in daily use by local residents, would be lost forever. Development of LPR-A-086 would lead to the residents of St Mary's Road being completely subsumed by new estates, fundamentally changing the character of the southern edge of West Adderbury. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.
LPR-B-106	Robert Gottlieb	LPR-A-146	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. Additional development around Henge Close at LPR-A-146 would directly abut the Conservation Area and would therefore be detrimental to the setting of the listed buildings on Horn Hill Rd. Development would also be detrimental to the open nature of the Henge Close estate and to the green space and play area to the east. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.
LPR-B-106	Robert Gottlieb	LPR-A-218	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.
LPR-B-106	Robert Gottlieb	LPR-A-258	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. The large-scale developments proposed for site LPR-A-258 would utterly change the approach to the village and would create a jarring transition from agricultural land to modern, dense housing. Development would lead to a substantial decrease in the green space between West Adderbury and Milton, increasing the risk of coalescence and impacting upon the character of both villages. A popular footpath would be lost, and irreversible damage would be caused to the amenity of the homes to the north of Adderbury Fields, and to the adjacent green space. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.

LPR-B-107	Ora Sapir	Kidlington	Land behind the Moors is used daily for walking. Lots of birds and butterflies and some bees. Do not develop them. Do not build on pink areas, need green areas for health. Keep nature and green belt; area in the NE is used by many birds and currently has a planting and hedgerows. Need non-wooded land for biodiversity. Greenbelt land used for recreation. Greenery is essential for our health. Polluted air will result from increased housing and traffic. Green belt is an area of beautiful nature. Areas are used for tranquility and relaxation. Rich in wildlife, essential for ecological balance. Land is part of the character of the area. Areas are historical landmarks. green belt needs protection more than ever.
LPR-B-108	Alan and Lisa Phipps	LPR-A-185	Strong opinion that sites are not suitable for inclusion for development in the local plan. the M40 provides a natural end to the urban sprawl and the land East provides an appropriate green area before the Northamptonshire border; this green space really deserves protection. development should be directed to previously developed land and not greenfield sites. the current infrastructure capacity is insufficient at the M40 roundabout and development of these areas would have an unacceptable impact on local roads. the proposal does not represent sustainable development as it fails to meet environmental objectives which include improving biodiversity and enhancing the natural environment. The area is a natural habitat for much wildlife. the allocation of this site would fail to respect the character of the countryside and the history of Banbury that is still preserved after the building of the M40 and A422 dual carriageway. many people come to enjoy the scenery and quiet. development of the area of any type would create an increase in flooding by removing permeable surfaces. The fields South of the A422 are medieval ridge and furrow landform. Development of this area would therefore see many miles of hedgerow ripped out and lost forever. The hedgerow in the area meets criteria that makes it legally protected under the Hedgerow Regulations Act and legally defines the hedgerow as an "important" hedge. There is a Grade II listed building in Nethercote, by this definition it is considered a building that is "of special interest, warranting every effort to preserve it". large-scale commercial development gives no consideration for residents in this quiet, peaceful area and would bring unreasonable disturbances from units such as alarms and machinery. There is an abundance of underground streams within the area and some properties still have Victorian water wells. Shell used the land running alongside the now M40 which ran oil pipes and therefore it is thought that this land does likely still have some contamination. there is no gas connection and there are no mains drains. It would be impractical for commercial units to operate off mains drainage
LPR-B-108	Alan and Lisa Phipps	LPR-A-034	Strong opinion that sites are not suitable for inclusion for development in the local plan. the M40 provides a natural end to the urban sprawl and the land East provides an appropriate green area before the Northamptonshire border; this green space really deserves protection. development should be directed to previously developed land and not greenfield sites. the current infrastructure capacity is insufficient at the M40 roundabout and development of these areas would have an unacceptable impact on local roads. the proposal does not represent sustainable development as it fails to meet environmental objectives which include improving biodiversity and enhancing the natural environment. LPR-B-108	Alan and Lisa Phipps	Nethercote	submit the hamlet of Nethercote as a potential Local Green Space (LGS) in recognition of its importance and to afford the area special protection against development. Nethercote falls to the East of the M40 and borders with Northamptonshire. The M40 sees a natural end to the urban sprawl of Banbury and land East of the M40 is rural, providing an important green space on the edge of Oxfordshire, before the Northamptonshire border. This green space deserves protection. There are numerous public footpaths running through Nethercote, all regularly enjoyed by all; in walking distance of nearby residential estates in Banbury, Overthorpe and Middleton Cheney and many people come to enjoy the scenery and quiet. The area is a natural habitat for much wildlife. consider that the Hamlet of Nethercote meets the criteria, and is deserving of the protection from development that would be afforded by Local Green Site designation. The area is significant to the history of Banbury and local agriculture alike; creates an important and tranquil green space on the edge of the county; provides an accessible green space for the nearby town and is rich in wildlife including rare species.
LPR-B-109	Susan and David Hall	LPR-A-204	Strongly support the LGS designations. Well used space by a variety of volunteers, school groups, beavers, etc. also used for dog walking, reading and meditating. The peacefulness of this lovely space thus promotes wellbeing and decreases stress during these challenging times. The orchard is a unique but easily accessible site; local people and the wildlife it nourishes would suffer if it were lost. sites have provided vital recreational spaces during the pandemic and should in general be safeguarded in line with Bicester's policy of encouraging healthy lifestyles. The message from COP 26 is that nature needs to be safeguarded.
LPR-B-109	Susan and David Hall	LPR-A-125	Gavray Meadows is a precious remnant of the countryside that used to surround Bicester. The site has ridge and furrow meadows bounded by hedgerows dating back to medieval times. This makes it a useful educational resource for history and ancient methods of agriculture. It has magnificent mature trees. it is a designated Local Wildlife Site due to its biodiversity and rare species of butterflies which according to the Upper Thames Branch of Butterfly Conservation, is one of only four sites in the UK where all five species of Hairstreak butterfly have been seen. The site is part of the Upper River Ray Conservation Target Area (CTA) which is protected as an area where action to improve biodiversity should be focused. It is another unique but easily accessible site which needs and deserves additional protection. sites have provided vital recreational spaces during the pandemic and should in general be safeguarded in line with Bicester's policy of encouraging healthy lifestyles. The message from COP 26 is that nature needs to be safeguarded.
LPR-B-110	Adey Evans	Little Bourton	building anymore housing would be at detriment to us. We have narrow roads, only some footpaths, as the villages are so old, no local shop, school or Doctors Surgery, lack of public transport & nothing at all for youngsters. Not to mention the wildlife that would be upset if building work was started in a rural area such as ours. We are Little Bourton residents and chose to live out here but if you keep building, we'll be joined up with Banbury at this rate, which we don't wish to happen.
LPR-B-111	Tom Coyne	LPR-A-041	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. Additional development around Henge Close at LPR-A-041 would directly abut the Conservation Area and would therefore be detrimental to the setting of the listed buildings on Horn Hill Rd. Development would also be detrimental to the open nature of the Henge Close estate and to the green space and play area to the east. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages. Housing should focus on renovating brown field sites particularly due to the change in retail following the coronavirus pandemic. Developments on greenfield sites is not acceptable when there are options to use brownfield sites given the planetary emergency including the biodiversity and climate crisis.

LPR-B-111	Tom Coyne	LPR-A-086	<p>Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. The large-scale developments proposed for site LPR-A-258 would utterly change the approach to the village and would create a jarring transition from agricultural land to modern, dense housing. Development would lead to a substantial decrease in the green space between West Adderbury and Milton, increasing the risk of coalescence and impacting upon the character of both villages. A popular footpath would be lost, and irreversible damage would be caused to the amenity of the homes to the north of Adderbury Fields, and to the adjacent green space. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.

LPR-B-114	Kelly Saunders-Cross	LPR-A-049	Object on following grounds - farming field is home to a wide variety of wildlife. Field floods routinely in winter; has required drains to be installed to protect adjacent properties. Queries local school capacity to accommodate new development and whether roads can accommodate new development. Loss of walking route would be a huge loss both physically and mentally to residents and community. formally object to this particular development proposal owing to the the destruction of natural habitats, risk of flooding, loss of natural views, compromised walking experiences for existing residents, additional traffic in already congested places, additional pollution from building (then sustained with vehicles for residents) and the loss of mental health benefits from having the natural world on our doorstep.
LPR-B-115	Heather Pal	Shutford	Development will result in more problems with roads, parking, etc. Village has a pub, village hall and church. No shop, school or bus service. Cant be suitable for development in the context of looking to reduce carbon footprint with more cars, children looking for places at a full school and nursery at North Newington.
LPR-B-116	MGD Sainsbury	Adderbury	The Proposed development in the field to the east of the pub will not only extend Ribbon development but block off views, and as happened in the 1930ies will be the first step in turning a Village into a sprawling town with infrastructure problems in the future. Previous development in Adderbury has made every effort to avoid ribbon development along the main roads and into the village. Ribbon development in the past has created canyons of bricks and blocking off views and destroying village ambience.
LPR-B-117	Tom and Mary West	LPR-A-107	development would damage valuable countryside and increase growth in a sensitive rural area. It is not a sustainable locations for many reasons and would increase commuter traffic. There are many issues around the unsuitability of the site, including Siting the land is the highest point in the village, next to an AONB. Access and movement, roads, cycleways and footpaths are totally inadequate. Infrastructure inadequate; water supply foul and surface water drainage. Village is a dark sky village. Loss of agricultural land. Damage to ancient hedgerows, mature trees and to the water table. The Oxfordshire Vision emphasis progress towards a carbon negative future and leaving the natural environment in a better state than we found it. It should ensure that the integrity and richness of the countrys historical character and natural environment are valued and conserved.
LPR-B-118	Allan Ziff	LPR-A-041	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. Additional development around Henge Close at LPR-A-041 would directly abut the Conservation Area and would therefore be detrimental to the setting of the listed buildings on Horn Hill Rd. Development would also be detrimental to the open nature of the Henge Close estate and to the green space and play area to the east. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.
LPR-B-118	Allan Ziff	LPR-A-086	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. The large-scale developments proposed for sites LPR-A-086 would utterly change the approach to the village and would create a jarring transition from agricultural land to modern, dense housing. if developed, double the size of West Adderbury overnight. Such large scale development is entirely inappropriate for a village the size of Adderbury and is far more suited to a large town or even a city. few facilities present in Adderbury would be completely swamped by a development of this scale, placing massive pressures on local schools and services. Precious public footpaths over these sites, which are in daily use by local residents, would be lost forever. Development of LPR-A-086 would lead to the residents of St Mary's Road being completely subsumed by new estates, fundamentally changing the character of the southern edge of West Adderbury. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.

LPR-B-118	Allan Ziff	LPR-A-146	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. Additional development around Henge Close at LPR-A-146 would directly abut the Conservation Area and would therefore be detrimental to the setting of the listed buildings on Horn Hill Rd. Development would also be detrimental to the open nature of the Henge Close estate and to the green space and play area to the east. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.
LPR-B-118	Allan Ziff	LPR-A-218	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.
LPR-B-118	Allan Ziff	LPR-A-258	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. The large-scale developments proposed for site LPR-A-258 would utterly change the approach to the village and would create a jarring transition from agricultural land to modern, dense housing. Development would lead to a substantial decrease in the green space between West Adderbury and Milton, increasing the risk of coalescence and impacting upon the character of both villages. A popular footpath would be lost, and irreversible damage would be caused to the amenity of the homes to the north of Adderbury Fields, and to the adjacent green space. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.
LPR-B-119	Alison Grieve	Hempton	Objects to proposals in the hamlet. Hempton does not have any public transport and has not had any for some years. There are no facilities in Hempton so the car is always required to go to shops, doctors surgery, hairdresser, pub etc. New building would create more commuters, more pollution, more traffic congestion and more life threatening incidents at the 'pinch point'.
LPR-B-120	John Minshaw	Deddington	Strongly object. Deddington is a village and has been swamped with housing; there are already three developments in progress – all of which have been vigorously objected to. 85 new homes have already been built in Deddington on Banbury Road. These new homes are having a negative effect on local services. The village is already chocked with traffic and services are under immense pressure. some of the proposed sites are adjacent to protected conservation areas and listed buildings. The Poplars is a particular example of this; as it borders the castle walls. If these sites were to be built on, the heritage of the area, that we have held onto for so long will be lost. The current proposal intends to increase the population of the county by 43%.
LPR-B-121	Susie Minshaw	Deddington	Strongly object. Proposal for 8 further housing sites is ludicrous, extremely worried that Deddington and the surrounding area is at great risk of being swamped by over development. The infrastructure is not suitable for such growth. The knock-on effect will pressure local services, contribute to congestion and pollution. It will also harm local character and the landscape. The Poplars is one such development that has been put forward and this is adjacent to Deddington castle - a conservation site! We must protect our heritage.
LPR-B-122	Alex Springford	Sibford Gower	Objects to development in village. Any development would damage the village significantly. Village has areas of natural hedging and trees which are home to lots of animals and insects, including bats. Development would result in loss of habitat. Village is unlit, so no light pollution or wasted electricity on road lighting. The small village would not be able to handle large amounts of traffic and would be harmful to the environment with added traffic going through to access the site. Need to keep as much green and agricultural land as possible.

LPR-B-123	James and Virginia Price	Wardington	<p>concerned re level of housing proposed in the village; existing village would be swamped and entirely alter its character as a village and community. village would become a dormitory town for Banbury and other centres of population, with the accompanying large increase in traffic. Services in the village are at present entirely inadequate for this; there is no shop in the village at present. The village hall, at present a popular and much used hub for village life, would be entirely unable to cope. The centre of the village has no pavement for pedestrians, so that the village street would have to be reconfigured for pedestrian safety from the considerably increased traffic, scarcely possible given the restricted width of the historic street.</p> <p>Wardington is a conservation village; effort should be made to conserve its character, not to swamp it with modern housing, arranged in a pattern entirely at odds with the historic layout of the village. there is much land contingent to Banbury and elsewhere which is more suitable for development, rather than wrecking a conservation village.</p>
LPR-B-124	Kidlington Development Watch	Question - Housing Policies	<p>CDC failed to acknowledge expert advice submitted to the LPPR which illustrated that the housing figures were not justified. No changes were made as a result. Trust in the integrity of the planning process in Cherwell (and across Oxfordshire) were severely eroded. The council should make this a meaningful consultation where comments are reviewed with an open mind and the plan developed in response to comments. CDC state that the housing requirement is likely to be above the standard methodology set by the Government, which for Cherwell is 756/716 dpa. Surprised by the statement. 716 dpa is very close to the 2014 Local Plan requirement which was overturned by the planning inspector and CDC was forced to adopt a much higher 1140 dpa. CDC is prejudging the outcome of decisions to be made on the Oxfordshire Plan. Councils planning should not be based on supposition; why has this assumption been made. It is hard to see how CDC are at this advanced stage without knowing how many houses are being planned for. Cherwell has a choice both about the housing requirement in its own local plan and, as one of the joint authorities preparing the Oxfordshire Plan, the overall requirement for that plan. Cherwell should therefore plan on the basis of the Standard Method (716dpa) which is already well in excess of demographic need, but is the minimum set by current Government policy. Cherwell Council – as one of the joint authorities - should also insist that the Oxfordshire Plan requirement should also be based on no more than the Standard Method. It would be very unwise to plan for more now when it is not clear that such a high number would be built. It is more likely that planning for an excessive number of houses would result in a choice of sites from which developers could ‘cherry pick’, a free-for-all situation that good land-use planning is intended to avoid.</p>
LPR-B-124	Kidlington Development Watch	Question - Green Belt	<p>support your proposal not to cause more damage by removing further land from the Green Belt. absolutely no justification for further building in the ‘urban fringe’ or Green Belt. However, we are very concerned at the indications that this is exactly what the Oxfordshire Plan will propose. It is not acceptable for Cherwell to say that further Green Belt release around Kidlington is a matter for the Oxfordshire Plan. Cherwell should insist, as one of the joint planning authorities for the Oxfordshire Plan, that there should be no further release of Green Belt land in Cherwell, or in Oxfordshire as a whole. This is also consistent with government policy which states that Green Belt is a permanent designation and that, once established, Green Belt boundaries should be capable of enduring beyond the plan period. As Green Belt boundaries have only recently been established through the LPPR, they should not now be changed.</p>
LPR-B-124	Kidlington Development Watch	Question - Kidlington Infill Housing	<p>Agree that a policy to control redevelopment for apartments is needed. consider that issues to be addressed would include: capacity of the local road network; safety of access to the local road network; adequate parking provision so as not to require further on-street parking; new hard surfaces (for example for parking) to be limited so as (a) to prevent excess water run-off and (b) to be in keeping with the landscaping of surrounding properties; development not to be out of scale or overbearing compared with surrounding buildings; development not to overlook neighbouring properties or to result in additional noise in comparison with the pre-existing situation; conversions should provide a decent standard of living accommodation with adequate space and daylight standards; the number of apartments to be limited in the light of what can be accommodated within the existing building envelope and typical buildings on surrounding plots. suggest that the Council prepares a design guide, addressing these issues, particularly with regards to development along the main Banbury/Oxford Road in Kidlington.</p>
LPR-B-124	Kidlington Development Watch	Option 26	<p>consider that no further small scale Green Belt Review for employment purposes is needed or justified. The ‘Technology Park’ at Langford Lane is only in the early stages of development (possibly 1000- 1500 jobs) and the LPPR has provided for expansion of the Science Park at Begbroke. Both of these have the potential to accommodate a very significant number of jobs. There are other very substantial proposals for employment generating uses nearby in the adjacent Districts such as at Oxford North (4-8,000 jobs) and at Eynsham. Oxford City itself continues to protect large areas of land for employment uses, even though there is little sign that this will be developed. Indeed large sites to the south of the City – the Business Park and Science Park are still not fully built or occupied despite having been under development for very many years.</p>
LPR-B-124	Kidlington Development Watch	Option 28	<p>Supports Kidlington Parish Council’s aim (para 6.4.14) to secure a connected ring of green space around the whole edge of Kidlington through the Local Plan Review and to strengthen Kidlington’s distinctive character of a ‘village set in the landscape’. We also agree with CDC’s proposal – as far as it goes to explore the potential to create a network of accessible, and wherever possible, linked green spaces around Kidlington; there should be a commitment to actually create the network of what green spaces now remain and to retain the distinctive character. Respondent provides commentary re the potential for a green network surrounding the village and provide observations on sites/areas identified on a map described as (a)-(k) which consist of a variety of developed and undeveloped spaces. The review of the potential green networks surrounding the villages concludes that Areas (A) &amp; (G) are constrained by existing development restricting access; Areas (B), (D,part) (F) and (I) are already protected as Green Areas by nature conservation; designations, recreation use or flood risk (in some cases more than one constraint applies); Areas (C), and (D,part) are areas of LPPR sites which are reserved as Green Spaces; Area (E) is also a site in the LPPR where it is now difficult to provide a link in a network of Green Spaces – we strongly suggest that CDC negotiates with the developer on this matter; Areas (H) and (J) provide the best opportunities for realising the aim of ‘a village in the landscape’. Most of these areas are therefore either protected as Green Areas by more than Green Belt designation, or cannot be Green as they are already developed. It is not essential for areas in these two categories to be formally protected by Local Green Space designation, although this might nevertheless be considered worthwhile.</p>

LPR-B-124	Kidlington Development Watch	Question - Local Green Spaces	Land north and north east of Kidlington is proposed for designation as a Local Green Space. A site location plan has been supplied.
LPR-B-124	Kidlington Development Watch	Question - Local Green Spaces	Land at Bury Moor Fields, Kidlington is proposed for designation as a Local Green Space. A site location plan has been supplied.
LPR-B-125	Sally Gray	Sibford Gower	Object to development in the village. Sibford Gower is a small, dark sky village that borders on an AONB. It is limited in infrastructure with services all at capacity at present. There are inadequate roads, cycle ways and footpaths, very little public transport provision, inadequate water supply, foul and surface water drainage. Development of the sites would go against key objectives 15 and 16. makes little sense to build on a greenfield area rich in biodiversity in an area known as Ironstone Downland. Much more in line with Oxfordshire's objectives would be to build on Brownfield sites where amenities already exist. fully support Oxfordshire's vision to progress towards a carbon negative future and 'leaving the natural environment in a better state than we found it.' This proposal would not meet this desire and would involve the destruction of mature trees, hedgerows, the loss of agricultural land and an increase in commuter traffic in a rural village.
LPR-B-126	Elanor Shovlin	LPR-A-178	The proposals for 800 homes will result in the small village feel of Adderbury being lost and would be just another suburb of Banbury, characterised by constant noise and disturbance. Concerns re impact on highway safety as a result of the increase in houses; the village does not have the infrastructure to support the development. Current environmental infrastructure will not cope; problems with sewerage and impact on air pollution will be exacerbated by more cars and motorway junction. Current staff shortages at the council unable to cope with current bin collections in the village; how will they cope with an additional 800 homes? 800 homes is disproportionate with the size of the village and by comparison to those villages in the surrounding area.
LPR-B-128	Clr George Reynolds	Question - Housing Policies	Concerns raised amongst the villages that large housing estates will be tacked on to existing villages, many of which are very unsustainable with little amenities and public transport. 90% of planned rural housing in the current local plan has been delivered - no need for large rural housing sites. If permission is given for an estate of any size to be attached to a village, policies should be set to ensure it is integrated and not cut off as a separate neighbourhood. Conservation Areas not marked on the maps. Villages of Hanwell and Drayton concerned that the creep of housing from Banbury should not be encouraged and a clear areas maintained between the villages and town. The standard method should be used in response to para 5.4.4
LPR-B-128	Clr George Reynolds	Option 1	Support for KO 5 and KO 9
LPR-B-128	Clr George Reynolds	Option 2	KO29, KO23, KO9, KO5 and KO4 most important
LPR-B-128	Clr George Reynolds	Option 3	Employment should be focus on No 1 urban areas and No 3 previous developed land
LPR-B-128	Clr George Reynolds	Option 4	employment land No 2 mixed use but to concentrate on other classes rather than B8
LPR-B-128	Clr George Reynolds	Option 6	No 1 increase the percentage of affordable homes
LPR-B-128	Clr George Reynolds	Option 7	No 2 keep the same tenure mix
LPR-B-128	Clr George Reynolds	Option 8	No 1 all dwellings should meet a minimum standard that allows comfortably living.
LPR-B-128	Clr George Reynolds	Option 9	No 2 rely on Building Control
LPR-B-128	Clr George Reynolds	Option 10	No 2 use standards set by Government.
LPR-B-128	Clr George Reynolds	Question - Retrofitting of Historic Buildings	Historic buildings must be protected even if it means they are not retrofitted.
LPR-B-128	Clr George Reynolds	Option 12	No 1 compensation measures should be as close to the site as possible
LPR-B-128	Clr George Reynolds	Option 14	Children's play. The use of small areas dotted about should be avoided and in villages the Local Parish Council should be involved in play provision. Village facilities should be enhanced rather than another small site.
LPR-B-128	Clr George Reynolds	Option 15	No 3 use contributions to both enhance and build modern facilities Astro type pitches that can be used in all weathers
LPR-B-128	Clr George Reynolds	Question - 20-Minute Neighbourhoods	20 min neighbourhood is impractical in most rural areas
LPR-B-128	Clr George Reynolds	Question - Transport & Connectivity	The car is essential for rural areas it is impossible to place it at the bottom of the transport hierarchy. Eventually electric or hydrogen vehicles will replace petrol but this type of transport will always be needed as neither public transport nor walking or cycling will replace it
LPR-B-128	Clr George Reynolds	Option 16	No 1 developers should provide all the infrastructure needed for digital connections
LPR-B-128	Clr George Reynolds	Question - Transport Policies	no in rural areas there must be provision for car transport.
LPR-B-128	Clr George Reynolds	Option 18	Nos 2,3 and 4 for reasons of sustainability. No 1 site to the north should be discarded.
LPR-B-128	Clr George Reynolds	Option 19	No 2 Must protect and maintain the separation of villages from Banbury.
LPR-B-128	Clr George Reynolds	Option 21	No 1 canalside needs to be developed for housing. It is a brownfield site and if used for housing will protect green field. Policies need to be in the plan to ensure this area is developed as soon as possible
LPR-B-128	Clr George Reynolds	Question - Reducing Car Dependency in Banbury	Banbury's road infrastructure must be improved. We cannot continue to build houses and industrial units without improvement to the roads. Banbury is at cross roads of several A roads and as such needs roads for both local and more regional transport.
LPR-B-128	Clr George Reynolds	Option 29	No 1 as rural areas have already supplied 90% of the rural allocation development should be limited to local needs.
LPR-B-128	Clr George Reynolds	Option 31	No 1 work with communities to provide limited sites preferable small infill plots
LPR-B-128	Clr George Reynolds	Option 32	No 1 build where there are facilities but again even villages without may be able to take infill and conversions. Village boundaries should be carefully looked at and I suspect that I would support this policy.
LPR-B-128	Clr George Reynolds	Option 33	No 1

LPR-B-128	Cllr George Reynolds	Option 34	Nos 1 and2. The country side must be protected and if a village has a conservation area outside the built up limits then this need a separate policy protecting it from development.
LPR-B-128	Cllr George Reynolds	Question - Neighbourhood Planning	Questions the value of neighbourhood plans unless they have planning teeth and are not ignored after only 2-3 years.
LPR-B-129	Tony	LPR-A-041	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. Additional development around Henge Close at LPR-A-041 would directly abut the Conservation Area and would therefore be detrimental to the setting of the listed buildings on Horn Hill Rd. Development would also be detrimental to the open nature of the Henge Close estate and to the green space and play area to the east. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.
LPR-B-129	Tony	LPR-A-086	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. The large-scale developments proposed for sites LPR-A-086 would utterly change the approach to the village and would create a jarring transition from agricultural land to modern, dense housing. if developed, double the size of West Adderbury overnight. Such large scale development is entirely inappropriate for a village the size of Adderbury and is far more suited to a large town or even a city. few facilities present in Adderbury would be completely swamped by a development of this scale, placing massive pressures on local schools and services. Precious public footpaths over these sites, which are in daily use by local residents, would be lost forever. Development of LPR-A-086 would lead to the residents of St Mary's Road being completely subsumed by new estates, fundamentally changing the character of the southern edge of West Adderbury. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.
LPR-B-129	Tony	LPR-A-146	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. Additional development around Henge Close at LPR-A-146 would directly abut the Conservation Area and would therefore be detrimental to the setting of the listed buildings on Horn Hill Rd. Development would also be detrimental to the open nature of the Henge Close estate and to the green space and play area to the east. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.
LPR-B-129	Tony	LPR-A-218	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.

LPR-B-129	Tony	LPR-A-258	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. The large-scale developments proposed for site LPR-A-258 would utterly change the approach to the village and would create a jarring transition from agricultural land to modern, dense housing. Development would lead to a substantial decrease in the green space between West Adderbury and Milton, increasing the risk of coalescence and impacting upon the character of both villages. A popular footpath would be lost, and irreversible damage would be caused to the amenity of the homes to the north of Adderbury Fields, and to the adjacent green space. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.
LPR-B-130	Emilia Zakrzewska	Sibford Gower and Sibford Ferris	Strongly objects to any large scale development. We live in a small, rural community set in beautiful Oxfordshire countryside which would be destroyed by any extensive development. We need to conserve and cherish what the land has to offer without building monochrome developments which solely satisfy a hunger for money. It is our duty to look after and protect this land and not succumb to greed. It is no match to what nature has to offer.
LPR-B-131	Alan Lodwick	Question - Housing Policies	The current plan provides for numbers well in excess of need, based on the highly exaggerated assessment of the 2014 SHMA. It would seem unwise therefore to plan further for any more than given by the Standard Method (716dpa). As one of the authorities preparing the Oxfordshire Plan, CDC should also press for the Standard Method (unadjusted) to be used in that plan.
LPR-B-131	Alan Lodwick	Question - Green Belt	support CDC's proposal not to make further allocations in the Green Belt. As one of the joint plan authorities for the Oxfordshire Plan and having already recently changed the boundaries of the Green Belt to make substantial allocations for development, CDC should also ensure that there is no further release of Green Belt in the Oxfordshire Plan.
LPR-B-131	Alan Lodwick	Option 26	Disagree with the need for such a review. No further small scale Green Belt review for employment purposes is justified as there is almost certainly already over provision in the area especially when taking into account other committed developments nearby in neighbouring Districts.
LPR-B-131	Alan Lodwick	Option 28	agree with Kidlington Parish Council's aim to secure a connected ring of green space around the whole edge of Kidlington through the Local Plan Review and to strengthen Kidlington's distinctive character of a 'village set in the landscape'. I also support the more detailed proposals submitted to CDC by Kidlington Development Watch (KDW) including those for 2 new areas of Local Green Space on the north and north-east boundary of the built up area of Kidlington for the reasons given in KDW's representations.
LPR-B-131	Alan Lodwick	Kidlington	support all of the representations made by Kidlington Development Watch which provide more detail in addition my comments above.
LPR-B-132	Lois Ann Lawless	Wardington	Proposed development off Greenward and round the Judges would nearly double the size of the village. Deeply concerned that provisions would need to be made to make sure sewerage, water and electricity supplies are adequate for future needs. Village experiences frequent electricity and water cut-offs. There would be a need for a further school, shop and open spaces for childrens play. Increase in traffic in conjunction with HS2 traffic would result in harmful effects on air quality. New builds should be held to stringent construction standards including solar panels, ground or air source heat pumps to meet environmental responsibilities of the future. Failure on the part of the CDC to provide sensitive appropriate infrastructure and building processes to sustain future needs would be irresponsible, immoral and an abnegation of the trust placed in them by the community
LPR-B-133	Hugh Smith	LPR-A-204	Supports LGS designation. The orchard is a rare and tranquil green space just a short walk from the town centre, open to all. It has a wide variety of trees and shrubs providing a much-needed haven for wildlife. The site is well used by the local community and volunteers meet regularly.
LPR-B-133	Hugh Smith	LPR-A-125	Supports the LGS designation. Gavray Meadows is a wonderful and bounteous green space and a precious remnant of the countryside that used to surround Bicester. The area is a Local Wildlife Site due to its biodiversity, and rare species to be found here include brown hairstreak butterflies and great crested newts. The site is part of the Upper River Ray Conservation Target Area (CTA) which is protected as an area where action to improve biodiversity should be focused.
LPR-B-134	The very Revered J. Barrie Lawless	LPR-A-175	Needs to be a balance between the need for housing and the need to maintain the village character. The proposals could and should make sure that the village centre remains unspoilt and provided a range of properties are in the mix, our quality of life and the quality of life for new residents should also be unchanged or improved. Further development in the village should have to meet the following criteria: Each house to have space around it with trees and beautiful views that reflect a natural feeling in keeping with our status as a village in a conservation area; Houses suitable for first time buyers through to large homes for larger families; There is a consideration for children, teenagers, young families, the middle-aged and the aged to have the things they need, including schools, a shop, safe play areas, good pavements for walking and uncongested roads; We can expect that needed infrastructure - water, electricity, sewage, internet access - will be more than adequate to meet future needs for all; We can expect that builders will be held to the highest standards to provide sustainable structures that are not only attractive but meet our environmental responsibilities for energy that do not rely on coal or gas - we need to make that change as a condition for new building permits.
LPR-B-135	Sally Bird	Milcombe	Village does not have the infrastructure in place for this capacity of new builds, the schools and doctors surgeries in the area are already at full capacity/ breaking point. It will our children that will suffer if they cannot get into local schools etc going forward. Milcombe is a small community that will totally lose its identity if this amount of houses are built.

LPR-B-136	Ben Daniels	LPR-A-041	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. Additional development around Henge Close at LPR-A-041 would directly abut the Conservation Area and would therefore be detrimental to the setting of the listed buildings on Horn Hill Rd. Development would also be detrimental to the open nature of the Henge Close estate and to the green space and play area to the east. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.
LPR-B-136	Ben Daniels	LPR-A-086	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. The large-scale developments proposed for sites LPR-A-086 would utterly change the approach to the village and would create a jarring transition from agricultural land to modern, dense housing. if developed, double the size of West Adderbury overnight. Such large scale development is entirely inappropriate for a village the size of Adderbury and is far more suited to a large town or even a city. few facilities present in Adderbury would be completely swamped by a development of this scale, placing massive pressures on local schools and services. Precious public footpaths over these sites, which are in daily use by local residents, would be lost forever. Development of LPR-A-086 would lead to the residents of St Mary's Road being completely subsumed by new estates, fundamentally changing the character of the southern edge of West Adderbury. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.
LPR-B-136	Ben Daniels	LPR-A-146	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. Additional development around Henge Close at LPR-A-146 would directly abut the Conservation Area and would therefore be detrimental to the setting of the listed buildings on Horn Hill Rd. Development would also be detrimental to the open nature of the Henge Close estate and to the green space and play area to the east. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.
LPR-B-136	Ben Daniels	LPR-A-218	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.

LPR-B-136	Ben Daniels	LPR-A-258	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. The large-scale developments proposed for site LPR-A-258 would utterly change the approach to the village and would create a jarring transition from agricultural land to modern, dense housing. Development would lead to a substantial decrease in the green space between West Adderbury and Milton, increasing the risk of coalescence and impacting upon the character of both villages. A popular footpath would be lost, and irreversible damage would be caused to the amenity of the homes to the north of Adderbury Fields, and to the adjacent green space. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.
LPR-B-137	Sarah Obrien	LPR-A-175	Objects to the proposals for 300-450 houses, ridiculous amount and would totally destroy the image of the village. The village no longer has a school, shop, post office and only one pub. Water supply is hit or miss, power cuts are frequent and WIFI is not brilliant. To double the size of the village with a major road running through it is totally unacceptable. Development would cause disruption and the village would suffer from having electric, water/sewers all having to be modernised, HS2 disruption is enough.
LPR-B-138	Janet Powell	Adderbury	Development on the land in St Mary's Road is greenfield. Residents have spent thousands of pounds to maximise views from their properties. The fields are home to wildlife and many local people use the footpath through the field. The site is too far from the school for children to walk which will result in an increase in traffic using the already overcrowded roads and not enough parking available at the school. The village has no doctor/dentist and only a small shop. Need retain sense of community and history. Would be better to build a new town on a brownfield site.
LPR-B-139	Ginny Steven	LPR-A-175	objects to proposal. Size of the land proposed is completely out of scale compared to the size of the village and also greatly extends the curtilage of the village. Wardington has absolutely no services to support extra housing, no doctor surgery, no school, no shop, limited water supply, limited sewerage supply, only 1 pub to serve the community. Our local Cropredy surgery already struggles to serve the local community and increased housing and extra patients would cause a huge problem. The residents choose to live in the village that is a conservation village and not built up because it is surrounded by green fields and nature. Extra housing will greatly change the character of the village and damage wildlife during and after the building of such houses. The village sits on the very busy and dangerous road, A361, which already has huge increased traffic due to the building of HS2. development on this land would prevent a bypass from being an option in the future.
LPR-B-139	Ginny Steven	LPR-A-034	strongly objects. already have enormous warehouses on the other side of the road at 'Banbury 15' which are surplus to demand. Many warehouses remain empty many months after completion. The warehouses already built at 'Banbury 15' will bring extra traffic to a very congested roundabout junction. The site will cause terrible traffic problems for banbury and be a complete eyesore. If this development goes ahead it will cause increased traffic and congestion at busy times. It is also wrong to be building on green fields at a time where we need to protect and nurture our natural environment and wildlife. This sort of development will increase air pollution due to increased traffic in the area and this has already been proven to be harmful.
LPR-B-139	Ginny Steven	LPR-A-168	strongly objects. already have enormous warehouses on the other side of the road at 'Banbury 15' which are surplus to demand. Many warehouses remain empty many months after completion. The warehouses already built at 'Banbury 15' will bring extra traffic to a very congested roundabout junction. The site will cause terrible traffic problems for banbury and be a complete eyesore. If this development goes ahead it will cause increased traffic and congestion at busy times. It is also wrong to be building on green fields at a time where we need to protect and nurture our natural environment and wildlife. This sort of development will increase air pollution due to increased traffic in the area and this has already been proven to be harmful.
LPR-B-140	Keith Stevens	LPR-A-041	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. Additional development around Henge Close at LPR-A-041 would directly abut the Conservation Area and would therefore be detrimental to the setting of the listed buildings on Horn Hill Rd. Development would also be detrimental to the open nature of the Henge Close estate and to the green space and play area to the east. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.

LPR-B-140	Keith Stevens	LPR-A-086	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. The large-scale developments proposed for sites LPR-A-086 would utterly change the approach to the village and would create a jarring transition from agricultural land to modern, dense housing. if developed, double the size of West Adderbury overnight. Such large scale development is entirely inappropriate for a village the size of Adderbury and is far more suited to a large town or even a city. few facilities present in Adderbury would be completely swamped by a development of this scale, placing massive pressures on local schools and services. LPR-B-140	Keith Stevens	LPR-A-258	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. The large-scale developments proposed for site LPR-A-258 would utterly change the approach to the village and would create a jarring transition from agricultural land to modern, dense housing. Development would lead to a substantial decrease in the green space between West Adderbury and Milton, increasing the risk of coalescence and impacting upon the character of both villages. A popular footpath would be lost, and irreversible damage would be caused to the amenity of the homes to the north of Adderbury Fields, and to the adjacent green space. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.

LPR-B-141	Mr & Mrs P Haines	LPR-A-134	Site entrance is opposite a childrens play area which is busy with people and parking on the road; the development will make it more dangerous for children walking to the play area. The site remains the only green land in the village. No shops or schools in the village which means new homes will create more traffic. Will pose a risk to children and general residents as the main lane in the village. disruption caused by the development will not be in the interest of the village. Wildlife on the site is important in addition to the surrounding hedges and trees.
LPR-B-142	Alex Steven	LPR-A-175	Object to the proposal. Totally out of scale with the village and extends beyond the boundary. Residents choose to live in the village as it's a conservation village surrounded by green fields and nature. More homes will greatly change the character of the village and damage wildlife. Village has no services to support extra housing (no shops, doctors, school, limited water supply and sewerage and only 1 pub). local Cropredy surgery already struggles with the number of patients to look after so extra patients would cause a huge problem. The village is on the very busy and dangerous road, A361, which already has huge increased traffic due to the building of HS2. Also building on the proposed change of use land would prevent the village trying to get a bypass in the future.
LPR-B-143	Stephen Betts	LPR-A-041	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. Additional development around Henge Close at LPR-A-041 would directly abut the Conservation Area and would therefore be detrimental to the setting of the listed buildings on Horn Hill Rd. Development would also be detrimental to the open nature of the Henge Close estate and to the green space and play area to the east. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.
LPR-B-143	Stephen Betts	LPR-A-086	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. The large-scale developments proposed for sites LPR-A-086 would utterly change the approach to the village and would create a jarring transition from agricultural land to modern, dense housing. if developed, double the size of West Adderbury overnight. Such large scale development is entirely inappropriate for a village the size of Adderbury and is far more suited to a large town or even a city. few facilities present in Adderbury would be completely swamped by a development of this scale, placing massive pressures on local schools and services. Precious public footpaths over these sites, which are in daily use by local residents, would be lost forever. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.
LPR-B-143	Stephen Betts	LPR-A-146	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. Additional development around Henge Close at LPR-A-146 would directly abut the Conservation Area and would therefore be detrimental to the setting of the listed buildings on Horn Hill Rd. Development would also be detrimental to the open nature of the Henge Close estate and to the green space and play area to the east. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.

LPR-B-143	Stephen Betts	LPR-A-218	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.
LPR-B-143	Stephen Betts	LPR-A-258	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. The large-scale developments proposed for site LPR-A-258 would utterly change the approach to the village and would create a jarring transition from agricultural land to modern, dense housing. Development would lead to a substantial decrease in the green space between West Adderbury and Milton, increasing the risk of coalescence and impacting upon the character of both villages. A popular footpath would be lost, and irreversible damage would be caused to the amenity of the homes to the north of Adderbury Fields, and to the adjacent green space. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.
LPR-B-144	Andrew Price	LPR-A-175	Village is a conservation village. The scale of development proposed would double the size of the village which will have a detrimental and disproportionate impact on the village and its history. Development of the site would contrast starkly with the existing and historical development of the village. The village has no school, shop or otherwise and infrequent and limited public transport. the road infrastructure including the A361 main route is limited, extremely narrow and would struggle to cope with an additional load. Indeed the parish had sought the opportunity for a by pass given the recent and ongoing disruption from HS2 and the plan would take away any future option for such given the proposed land stands in the only feasible route.
LPR-B-145	Joanne Wilson	LPR-A-175	Strongly Disagree with the proposed building application
LPR-B-146	Martin Powell	Adderbury	Effort that was put in to the creation of the Adderbury Neighbourhood Plan has been ridden over roughshod. The plan should have a primary concern to preserve the integrity of the Ironstone villages that North Oxfordshire and the Cotswolds are known for. It is essential that these villages remain as villages rather than continue to grow, get subsumed into suburbs of towns such as Banbury or coalesce with other villages or hamlets. The green space between settlements must be preserved and existing development boundaries maintained. The suggested plan suggests intentions to reduce the separation between Adderbury and Milton and between Adderbury and Bodicote, either of which would lead to a loss of identity for Adderbury. The preservation of these boundaries and gaps must be a priority in the consideration of all future planning applications. Development of any or all the proposed sites will have a devastating impact on the local and regional ecology. Many people use the footpaths through these fields. Any new housing would not be within walking distance of the centre of the village and therefore not feel itself to be part of the village community. Traffic around and through Adderbury village has increased with the new housing built in the last ten years. Additional housing will exacerbate these problems. there are many brown-field sites, particularly disused airports, where new settlements could be constructively planned and well laid out with facilities that could benefit local villages. I commend this approach rather than one that is piecemeal and detrimental to all existing villages.
LPR-B-147	Derek Adams	Hanwell	Rep includes a video illustrating the distance from the proposed development and the village of Hanwell. Hanwell becoming a suburb of Banbury is totally, irrevocably unacceptable. historical village in a protected area with Grade I and II Listed buildings, ancient woodland and a wide variety of wildlife. We and the people of Banbury enjoy this area for its natural beauty and wide reaching views. We will NOT let it be destroyed by new housing developments and will fight for every inch of its natural beauty. Banbury is already overcrowded with hospitals and GP surgeries that have a six month waiting list (I have proof), there aren't enough schools, traffic will increase as will toxic fumes, flooding will increase with lack of drainage and the countryside will be turned into an urban blight. Development will result in the death of farming in the region. Respondent previously contacted CDC in Oct 2020 to seek development details but no records were provided at that time.

LPR-B-148	Susanna Rea	LPR-A-175	Wardington is a beautiful conservation area village. remote position makes accessibility to Wardington unsuitable for larger development; approached by narrow country lanes. The A361 itself, from which lanes lead to the village, is not a good road for the traffic it already carries; another potential 900 vehicles will not help matters. Should the land adjacent to the A361 be needed for a bypass in the future, it will not be possible if the land is developed. Development should be sustainable. Wardington has no school, no village shops, no medical centre. Sewerage would be required. Access for builders would be difficult and disruptive. A development of this size is out of scale to the size of the village, almost doubling it, and would fundamentally change the character of the village. Our conservation status should overwhelmingly inform any intended development. Given the encroaching urbanity of Banbury and the unfortunate spread of giant warehouses across to the north east side of the M40, the need for nature conservation in the surrounding areas of nearby villages has never been more important. Whilst accepting the need for small scale, appropriately designed development to accommodate the housing needs of local people, Wardington should be not be a candidate to accommodate district development needs, such as can be met by continuing development at places like Upper Heyford.
LPR-B-149	Julian Oakley	Hanwell	Concerns re encroachment of the village from Banbury to the south of Hanwell. The proposed development would erode the physical gap of open countryside between the village which would have an impact on the rural effect and character of the village. further development would lead to a greater impact of traffic through the village threatening the safety of the residents as the roads were not designed for the amount of traffic currently seen. Consideration should also be given to the loss of arable farmland, sustainability and the ability to grow food for the population in general. Development of brownfield sites should be considered/undertaken first ahead of looking to develop greenfield sites. The loss of arable farmland will have a dramatic impact on our ability to grow and sell fresh produce, let alone destroy natural wildlife habitats currently in place (which takes us further away from our conservation area status). The character of the village will be lost and would change beyond recognition. The infrastructure is not in place to support further development.
LPR-B-150	Fay Hand	LPR-A-214	passionate about the encroachment of the town on the village. The village is already badly affected by the close proximity of the town. The light pollution and loss of horizon views are an obvious starting point but, along with that, we also now have vastly increased amounts of people traffic traipsing over the fields to the village, not sticking to the footpaths, littering in the churchyard of the 12th century church, dog mess and noise pollution. The very small children's playground in Hanwell is overrun with people at times and simply cannot cope with the influx. Hanwell is a small and very historic village. It seems that there are more obvious locations in Banbury that you could build on to reach your quota which would not have such a destructive impact on the wildlife and conservation area surrounding this village. Surely there must be some consideration in your plan for wildlife and countryside preservation at the very least, especially given the current climate crisis?
LPR-B-151	Carl Portman	Hanwell	Hanwell is but a couple of fields away from being connected to the town of Banbury and it must not proceed any further. defensible boundary was preciously set and agreed at Dukes Meadow Drive and there it must stay. I have had enough. Residents here have had enough, and our simple and clear message is, 'no more.' Hanwell Fields, Hanwell View, Hanwell Chase has already led to a massive increase of traffic, including people using the village as a rat run. It is dangerous and unacceptable. The roads and infrastructure have not been improved, and have eroded. Existing new development has resulted more of a draw on resources and utilities here in terms of water, electricity and telephone. There is no regular bus. The Conservation Area must be protected. Residents here paid a lot of (extra) money for their properties because of the location and standing. reject completely the very idea of more building here. The deleterious effects on nature, wildlife, land value and indeed the naturally occurring views from this ancient village will be trashed forever. rural villages must be retained. The respondent will use a variety of means to fight for the village and bring the ideas proposed to the world if necessary. there are plenty of brownfield sites that can still be developed. It is heresy to pull up more trees and kill more wildlife (flora and fauna) around this area. unequivocally reject the plan to build more houses north of Banbury, especially any closer to Hanwell Village. Recent development has already made living here worse than it ever did with more traffic, more restrictions, stolen views around my village and a negative impact on utilities and services.
LPR-B-152	Karen Holloway	LPR-A-175	Srtongly oppose. majority of the village at present sits within a conservation area and accepting this proposal could potentially double its size. Any increase in size will cause problems with the existing infrastructure such as, water supply, excess traffic on the A361, which is already an accident hotspot, additional traffic has already increased due to HS2, and other planning developments off the A361, there are no schools or Doctors surgeries or even a shop. Our existing power is currently intermittent along with low water pressure within the village, also no mains gas. wildlife and natural beauty of the land that could be irreversibly spoiled by any building of homes, changing the character and historical heritage of the village. Agricultural land is key to our children's future, we should keep it as such protecting our eco balance.
LPR-B-153	Tina Phipps	LPR-A-175	The services provided for Wardington are barely adequate for its current size, be they sewerage, water supply or school. The proposal would potentially triple the size of the conservation area village; designated as such for its historical significance and beauty. The proposal within the Cherwell Local Plan Review, specifically LPR-A-175, most certainly does not meet the requirement of The Planning (Listed Buildings and Conservation Areas) Act 1990; to preserve and enhance Conservation Areas. no objection to small, gradual and sympathetic growth to the village but as presented, the very obvious potential for extreme and destructive growth of this proposal is unacceptable.
LPR-B-154	Susanne Holdsworth	Hanwell	further development of Dukes Meadow Drive will no doubt have a huge impact on the villagers here causing further traffic chaos which already exists due to the failure to provide adequate speed restrictions, and destroy this wonderful village which has history going back some 800 years. Green spaces will no longer exist if the council carries on in this way, and there will be no green spaces left for the children and grandchildren to enjoy.

LPR-B-155	Nora McGloin	Hanwell	devastated that the council is considering more development which will threaten the village status of Hanwell. Surely, you can leave us in peace to enjoy what is left of the countryside and protect that for future generations. We had to cope with the construction of M40 which was unwelcome on many levels although understandable but further encroachment of housing on the village is not justifiable or warranted. Hanwell is a delightful village with a castle and 12th century church and this must be protected and conserved as a matter of heritage preservation. I urge you to reconsider and respect the boundary between Banbury and Hanwell.
LPR-B-156	Sheila Palmer	Hanwell	further development of Dukes Meadow Drive will no doubt have a huge impact on the villagers here causing further traffic chaos which already exists due to the failure to provide adequate speed restrictions, and destroy this wonderful village which has history going back some 800 years. Green spaces will no longer exist if the council carries on in this way, and there will be no green spaces left for the children and grandchildren to enjoy.
LPR-B-157	Pauline Winterborn	LPR-A-041	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. Additional development around Henge Close at LPR-A-041 would directly abut the Conservation Area and would therefore be detrimental to the setting of the listed buildings on Horn Hill Rd. Development would also be detrimental to the open nature of the Henge Close estate and to the green space and play area to the east. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.
LPR-B-157	Pauline Winterborn	LPR-A-086	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. The large-scale developments proposed for sites LPR-A-086 would utterly change the approach to the village and would create a jarring transition from agricultural land to modern, dense housing. if developed, double the size of West Adderbury overnight. Such large scale development is entirely inappropriate for a village the size of Adderbury and is far more suited to a large town or even a city. few facilities present in Adderbury would be completely swamped by a development of this scale, placing massive pressures on local schools and services. Precious public footpaths over these sites, which are in daily use by local residents, would be lost forever. Development of LPR-A-086 would lead to the residents of St Mary's Road being completely subsumed by new estates, fundamentally changing the character of the southern edge of West Adderbury. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.
LPR-B-157	Pauline Winterborn	LPR-A-146	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. Additional development around Henge Close at LPR-A-146 would directly abut the Conservation Area and would therefore be detrimental to the setting of the listed buildings on Horn Hill Rd. Development would also be detrimental to the open nature of the Henge Close estate and to the green space and play area to the east. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.

LPR-B-157	Pauline Winterborn	LPR-A-218	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.
LPR-B-157	Pauline Winterborn	LPR-A-258	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. The large-scale developments proposed for site LPR-A-258 would utterly change the approach to the village and would create a jarring transition from agricultural land to modern, dense housing. Development would lead to a substantial decrease in the green space between West Adderbury and Milton, increasing the risk of coalescence and impacting upon the character of both villages. A popular footpath would be lost, and irreversible damage would be caused to the amenity of the homes to the north of Adderbury Fields, and to the adjacent green space. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.
LPR-B-158	Bev Oakley	Hanwell	Previously led to believe that there would be no further encroachment on the village in the future following the development of Hanwell Fields, north of Dukes Meadow. village is located in a conservation area. The plans would have a serious effect on the character of the village. Since the development of Hanwell Chase and the Sainsburys Local, the village has become even more of a rat run. The pavements are narrow and some sections of the road, which run through the village, are not wide enough for 2 vehicles to pass. This already has an impact on villagers' lives. worries surround the loss of arable farmland, sustainability and the ability to provide food. Another concern is the loss of wildlife habitat and this would have an impact on our conservation area status. should the council consider converting brownfield sites before eroding the ability of our farmers to feed the local population. believe that further development could lead to a potentially dangerous environment within the village. I would urge that the Planning Policy Team reject the consideration and look instead at brownfield sites where there is a much better infrastructure already in place.
LPR-B-159	Arnold Bailey	Hanwell	The current discussion document if implemented would effectively see the end of Hanwell as a village separate from Banbury, as it would narrow the gap to circa 100 metres. One of Cherwell District Council's core strategies in the preservation of the rural landscape. This would totally contradict that strategy. Once the rural nature of Hanwell is lost, it is lost forever and is therefore lost to future generations.
LPR-B-160	Sally Manning	Wardington	small village and this will change the character and conservation of our beautiful village. What about schools? One small primary school in Cropredy really isnt enough. The doctors at Cropredy are already full to capacity and not taking on anymore patients. The A361 is already notorious for traffic accidents. your proposal will only increase the amount of traffic and thus making the road more hazardous. I am totally against this proposal.
LPR-B-161	Karen Rose	LPR-A-185	strongly object. Banbury development has had a devastating effect on the countryside that surrounds the town. Opening of the M40 has created noise and pollution; further warehouse development would add more noise and pollution and would wipe out local nature and wildlife. Nature is vital to our wellbeing and survival and should be looked after. Development would impact those who use Nethercote Lane; used to safely walk home from Banbury. Other walking routes in the area have become busier and dangerous to walk on as there is no footpath, number of vehicles has increased and vehicles drive too fast. Nethercote Lane is used to walk safely and a number of footpaths cross fields which are also accessed from the lane. Concerns that the proposed development would impact the safe use of Nethercote lane and other walking routes in the town.
LPR-B-161	Karen Rose	LPR-A-034	strongly object. Banbury development has had a devastating effect on the countryside that surrounds the town. Opening of the M40 has created noise and pollution; further warehouse development would add more noise and pollution and would wipe out local nature and wildlife. Nature is vital to our wellbeing and survival and should be looked after. Development would impact those who use Nethercote Lane; used to safely walk home from Banbury. Other walking routes in the area have become busier and dangerous to walk on as there is no footpath, number of vehicles has increased and vehicles drive too fast. Nethercote Lane is used to walk safely and a number of footpaths cross fields which are also accessed from the lane. Concerns that the proposed development would impact the safe use of Nethercote lane and other walking routes in the town.

LPR-B-161	Karen Rose	LPR-A-168	strongly object. Banbury development has had a devastating effect on the countryside that surrounds the town. Opening of the M40 has created noise and pollution; further warehouse development would add more noise and pollution and would wipe out local nature and wildlife. Nature is vital to our wellbeing and survival and should be looked after. Development would impact those who use Nethercote Lane; used to safely walk home from Banbury. Other walking routes in the area have become busier and dangerous to walk on as there is no footpath, number of vehicles has increased and vehicles drive too fast. Nethercote Lane is used to walk safely and a number of footpaths cross fields which are also accessed from the lane. Concerns that the proposed development would impact the safe use of Nethercote lane and other walking routes in the town.
LPR-B-162	Christopher Gibbons	Hanwell	Objects to development. Development would effectively turn the historic village in to a suburb of Banbury. The character of the village would be destroyed if the development goes ahead. Village is a conservation area. Previously assured that the south of the village would not be used for housing development. Development would destroy valuable farmland and the paths around which are used by the local residents. The site is home to a variety of wildlife. The country already imports 40% of food from abroad; erosion of farmland will worsen the situation.
LPR-B-163	Paul Manning	LPR-A-175	Objects to proposal. Development will upset and ruin the village. Existing roads could not cope with additional level of traffic, especially the A361. No school to accommodate the new children, only one doctors surgery which is at capacity with no room for new people to the area. Proposal is totally out of scale with the village and the land would be needed for any future bypass.
LPR-B-164	Philip Hilton	Sibford Gower	development has the potential to more than double the existing population which is wholly inappropriate and extremely damaging to the welfare of the village and local environment. village already struggles with traffic along Main Street / Acre Ditch; more residents in the village would bring the main thoroughfare through the village to a standstill. Concerns re the ability of the electrical, water and drainage services/provisions cope with the increase in requirements. The social infrastructure (school, church, village hall, pub) would implode with the population doubling. large housing development scheme that is totally disproportionate to the size of the existing village. Questions why it is acceptable to build on rural green field sites close to AONB, the council should seek to ensure that the integrity and richness of the country's historic character and natural environment are valued and conserved and limit growth in rural areas and direct development to larger and more sustainable towns and villages. Council should be legally bound to preserve, wherever possible, the natural environment and habitat in order to maximise the storage and absorption of carbon. Over development of Sibford Gower would go against the key objectives of the local plan. Development in rural areas has to be sympathetic and proportionate to the needs of the local community, whilst mitigating its impact on the environment. strongly urge you to withdraw them from the Local Plan in their entirety, or significantly reduce the size of any development such that it only serves the needs of the Sibford community.
LPR-B-165	Colin Campbell	LPR-A-175	Objects to proposal. inappropriate development for a small village and is not proportional to the size of the village today. The village has conservation status and is adjacent to important historical battlefields, the development is clearly an unsuitable expansion given that it could potentially double the number of houses in the village, changing the character of small village by significantly increasing traffic and straining current very limited services.
LPR-B-166	Trish Fennell	Adderbury	Proposals would fly in the face of the Adderbury Neighbourhood plan 2018. Before the CDC plan and neighbourhood plan, Adderbury experienced a circa 20% increase in housing developments. Plan was to develop Banbury, Bicester and Kidlington and protect the villages. Adderbury does not have adequate infrastructure to support the increased housing and school places. The development would severely damage what defines a village - its community, individual identity, charm and history.
LPR-B-167	John Hamer	Adderbury	Objects to proposed increase of developments in the village. Adderbury has contributed to more than enough new developments over the past few years, especially when other villages appear to contribute little or nothing. Increasing at this proposed rate will certainly mean eventually the village of Adderbury will be lost and eaten up into Banbury's growth to disappear for ever. Adderbury Neighbourhood Plan seems to have been ignored or acknowledged. Village does not have the infrastructure to support the increase. More houses would create more traffic and more tailback and more pollution on Oxford Road. Additional housing will increase traffic on the recently installed traffic calmed Milton Road.
LPR-B-168	Barbara Spicer	Little Bourton	Strongly objects to development at the end of Chapel Lane. presence of large numbers of new homes is entirely inappropriate as it would adversely affect the character; The roads in the village are often single-track width and could not sustain an increase in vehicles; There are no amenities to support more residents eg. no shop, no post office, no community hall, no school; Transport connections are poor; Access is poor and the village would be unable to sustain an increase in traffic; Large farm machinery need access and more parked carts build be unsustainable; Developments would have an unjustified and detrimental effect on wildlife.
LPR-B-169	Robert Sawala	LPR-A-196	I feel strongly that the above site should be kept as a valuable green site for sport and recreation. The site is centrally located and is in close walking and cycling for most Bicester residents. It means that most Bicester residents can walk or cycle to take part in or spectate in sport or recreational activities. This makes it accessible to the majority of people and thus minimises traffic, noise, and pollution, and thus encourages general exercise. The Oxford rd sports facilities have an extremely important and significant attachment to local residents. They were purchased by public subscription by residents of Bicester and intentionally put into a trust by a committee of notable residents and sportspeople in order to safeguard them from development and in the long term interests of future generations. Oxford rd has been used for public events and hosts one of the oldest amateur football league finals.
LPR-B-169	Robert Sawala	LPR-A-122	strongly object to the suggestion put forward of developing the Oxford rd pitches in central Bicester. These should be kept as local green spaces as proposed by the Bicester town council. The Oxford rd have been used by generations of Bicester residents to play, spectate or meet friends at sporting or other community events. It is well located within walking and cycling distance of the majority of Bicester residents. To lose one of the few remaining green areas in central Bicester, to be used by visitors from mostly long distance away, makes little sense, when there are plenty of development sites around Bicester and in the district that are more accessible and of little value as local green spaces.

LPR-B-169	Robert Sawala	Question - Bicester's Heritage & Historic Buildings	The Oxford rd sports ground (should be specifically protected through the Local Plan).
LPR-B-169	Robert Sawala	Question - Local Green Spaces in Bicester	Strongly support the saving of the Oxford rd sports and recreation facilities as local green space. The Oxford rd ground are centrally located, in close walking and cycling distance for the majority of Bicester residents. The location means that most people can walk or cycle , to participate or spectate in sports events. This makes it accessible to more people, and active travel to the site, minimise traffic, noise and pollution and encourage general exercise. The Oxford rd sports ground has an extremely important significance for local people. It was purchased by public subscription by residents of Bicester and intentionally put in to a trust by a comittee of notable residents and sports people, in order to safeguard them from development and in the long term interests of future generations. Many generations of residents have played football, hockey, cricket, athletics and tennis on the pitches, or watched friends and neighbours representing their town. Historically the ground have been used for many public events. Their is ever significant pressure on sporting and recreational green spaces which is lacking in central Bicester. Preservation of the Oxford rd as a local green space is essential for the well being of local residents.
LPR-B-170	Andrew Steven	LPR-A-175	Strongly objects.Wardington is a conservation village and the scale of the proposal is out of all proportion and would fundamentally change the character of the village. Furthermore, the provision of services are inadequate at present, let alone should there be significant additional houses. There is one single pub, no shop, no school, and the village is on the A361, a highly dangerous and overused road that was, until relatively recently, a B road. Water pressure is also intermittent. Local schools and doctors surgery dont have capacity for new development and would result in additional car journeys putting pressure on the local roads and villages. Serious doubts over the ability of the canal bridge at Cropredy having the capacity to cope with existing traffic never mind the doubling the size of Wardington. The A361 is significantly over capacity at present, not least because of HS2 construction traffic; it is a particularly unsafe road. In addition, the congestion at the M40 roundabout is significant even today, and the pressure of so many additional houses would make travelling in to Banbury even more intolerable. Site is totally unsuitable.
LPR-B-171	Mary Rose	LPR-A-185	strongly objects. An industrial building development such as that proposed would completely destroy the Nethercote community. development would have a very significant negative impact on way of life and properties in Nethercote. Residents would also all suffer increased noise from industrial processes, potentially 24hrs a day and a large increase in light pollution in to what is a rural dark area. There would undoubtedly be a further increase in traffic noise and pollution from the proposed new road and also an increase in traffic taking, for example, the new alternative route to Chalker Way from the A422 so as to avoid the bottle neck on J11 and the roundabout at the bottom of Hennef Way. The proposal should not be accepted to go any further as it is absolutely not in keeping with the area and wholly inappropriate.
LPR-B-171	Mary Rose	LPR-A-034	strongly objects. An industrial building development such as that proposed would completely destroy the Nethercote community. development would have a very significant negative impact on way of life and properties in Nethercote. Residents would also all suffer increased noise from industrial processes, potentially 24hrs a day and a large increase in light pollution in to what is a rural dark area. There would undoubtedly be a further increase in traffic noise and pollution from the proposed new road and also an increase in traffic taking, for example, the new alternative route to Chalker Way from the A422 so as to avoid the bottle neck on J11 and the roundabout at the bottom of Hennef Way. The proposal should not be accepted to go any further as it is absolutely not in keeping with the area and wholly inappropriate.
LPR-B-171	Mary Rose	LPR-A-168	strongly objects. An industrial building development such as that proposed would completely destroy the Nethercote community. development would have a very significant negative impact on way of life and properties in Nethercote. Residents would also all suffer increased noise from industrial processes, potentially 24hrs a day and a large increase in light pollution in to what is a rural dark area. There would undoubtedly be a further increase in traffic noise and pollution from the proposed new road and also an increase in traffic taking, for example, the new alternative route to Chalker Way from the A422 so as to avoid the bottle neck on J11 and the roundabout at the bottom of Hennef Way. The proposal should not be accepted to go any further as it is absolutely not in keeping with the area and wholly inappropriate.
LPR-B-172	Georgina Rawson	LPR-A-175	Objects. village is a conservation area and new houses would be damaging to the character of the area which is supposed to be protected. The size and scale of the development would also detract from the village. This is not in line with the purpose of designating somewhere as a conservation area. village has no school or GP and it seems likely that other local services would be overwhelmed if so many houses were built. It is rare that housing developers put in the infrastructure required to support these developments, which would directly impact not just Wardington but also Cropredy and other surrounding villages. If the proposed housing expansion goes ahead A361 would become more dangerous, on top of which any potential for a bypass to preserve the road safety in the village is lost if the land is turned over for housing.
LPR-B-173	Karra McFarlane	Option 30	Development of housing in rural areas need to be proportionate. A much smaller offering of fewer houses proportionate to the current size of the village would be more appropriate.
LPR-B-173	Karra McFarlane	North Newington	Small village that does not have the infrastructure of a larger village. Shutford Road has traffic issues and cant take more cars. More homes would mean more requirements for access to schools and preschool. Access to the preschool would be primarily by car as there is no footpath link. Too many parking issues at present in the village. Changes required to infrastructure to allow development to happen would have a huge impact on all residents and costs would be high. Existing residents paid a premium to live in a quiet village.
LPR-B-173	Karra McFarlane	LPR-A-004	The change to the village footprint if the plans for Plot LPR-A- 004 went ahead would be huge and the village infrastructure as it is would not cope.
LPR-B-173	Karra McFarlane	Option 31	Option 3 seems to be the best option but it's important that all affected are made aware of the plans in good time. These plans heavily affect the lives of local residents and they have a right to make their opinions heard.

LPR-B-173	Karra McFarlane	Option 32	Both options equally important. particularly in the case of a small village like North Newington, the existing village infrastructure needs to be the prime consideration. North Newington has narrow roads, very limited parking, no direct access by footpath to the preschool, no safe access by foot to town/shops, unsafe pavements that don't run continuously around the village, extremely low water pressure, regular power outages, storm flooding, is inaccessible in snowy conditions, no regular bus, no village hall, a very tiny children's play area and no safe cycle routes. All of this would need to be addressed before any significant increase in housing could be considered. The development of conservation areas also needs to be a serious consideration. The nature and character of the village should be considered and this should be considered as a high priority.
LPR-B-174	Nicholas Rawson	LPR-A-175	Strongly oppose. Scope of development is entirely out of character due to its high density and lack of scale relative to other buildings. The purpose of a conservation area is to preserve the character and history of an area. This development would irreparably damage the character of the village. The village also does not benefit from any services such as a school, medical care facilities or shops. The development location would require owners to use their car, which is not environmentally acceptable, but will also increase traffic density on the already dangerous and 'unsuitable for development' A361. Further housing would contribute to the existing issues at the M40. The use of this land would also prevent the development of a future bypass that I strongly support. There are far more suitable locations for the development of this scale that are not in well preserved conservative areas or subject to the other issues raised above. The housing needs of the council should utilise these areas.
LPR-B-175	Bernard Wimbury	Little Bourton	No infrastructure in the village; makes as much sense to build houses in the middle of nowhere and not destroy existing villages. Respondent has seen villages get swallowed up in to towns, and towns swallowed up by cities in Manchester. The Council should identify if they intend to remove villages and thier communities so it can be voted on. Villages have lanes to walk down and visit, communities that are small enough to act together and are an asset to all in the area; removing it means it can never be recreated.
LPR-B-176	Jane Wimbury	Little Bourton	Merging the village in to greater Banbury will take away the very nature of village life. The village has only one pub and shars village halls and parish church with Great Bourton; neither village has a shop. Parking is mostly on street and the narrow lanes are used by the farming community with large vehicles. No infrastructure capacity for hundreds of new homes. Internet connection is very slow. May soon be getting a small bus service but preferred travel to Banbury's amenities would be by car. Plans will erod he countryside to the point of extinction.
LPR-B-177	Joanne Gasson	LPR-A-175	Strongly objects. 2015 Local Plan idenified that Cat B villages would not be suitable for larger scale developments; the proposed allocation would increase the number of houses by 300-450; this is not a minor development. Proposals would result in a change of character to the conservation village and would be out of scale to the existing village. Village has minimal services; one pub and one church. Development is not suitable due to the lack of services. The proposals would result in the increase of the village by nearly 50% which is not sustainable given the lack of services. Nature conservation shouldnt be taken lightly; the development would remove nature and increase cars in the village/increase air pollution. The land is needed for any future plans for a by-pass.
LPR-B-177	Joanne Gasson	LPR-A-168	Strongly objects. The development is unnecessary; warehouses already being built between M40 and A361; further warehouses would be out of character with the town. The roundabout on junction 11 of the M40 is often congested; further development of this area would increase the traffic and would create even more congestion. the A361 will clearly not be fit for purpose if the change of usage is approved and further warehouses are built as this would significantly increase the traffic further. a significant increase in traffic which will increase the air pollution in an area which is already one of the most polluted areas in Oxfordshire. Air pollution shouldnt be taken lightly; it has a negative impact on climate change. Nature conservation should not be dismissed. development would remove nature and increase the number of vehicles/air pollution. CDC should be looking to brownfield sites.
LPR-B-177	Joanne Gasson	LPR-A-034	Strongly objects. The development is unnecessary; warehouses already being built between M40 and A361; further warehouses would be out of character with the town. The roundabout on junction 11 of the M40 is often congested; further development of this area would increase the traffic and would create even more congestion. the A361 will clearly not be fit for purpose if the change of usage is approved and further warehouses are built as this would significantly increase the traffic further. a significant increase in traffic which will increase the air pollution in an area which is already one of the most polluted areas in Oxfordshire. Air pollution shouldnt be taken lightly; it has a negative impact on climate change. Nature conservation should not be dismissed. development would remove nature and increase the number of vehicles/air pollution. CDC should be looking to brownfield sites.
LPR-B-178	Pete Butterworth	Islip	Appalled by the plans. Unacceptable to consider destroying the character and identity of the village to turn it into another commuter village. Too obvious that the wishes and needs of the local communities are of secondary importance. Anyone supporting these plans will have a tough time convincing the local communities that they have thier best interests at heart.

LPR-B-179	James and Anne O'Neill	LPR-A-041	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. Additional development around Henge Close at LPR-A-041 would directly abut the Conservation Area and would therefore be detrimental to the setting of the listed buildings on Horn Hill Rd. Development would also be detrimental to the open nature of the Henge Close estate and to the green space and play area to the east. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.
LPR-B-179	James and Anne O'Neill	LPR-A-086	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. The large-scale developments proposed for sites LPR-A-086 would utterly change the approach to the village and would create a jarring transition from agricultural land to modern, dense housing. if developed, double the size of West Adderbury overnight. Such large scale development is entirely inappropriate for a village the size of Adderbury and is far more suited to a large town or even a city. few facilities present in Adderbury would be completely swamped by a development of this scale, placing massive pressures on local schools and services. Precious public footpaths over these sites, which are in daily use by local residents, would be lost forever. Development of LPR-A-086 would lead to the residents of St Mary's Road being completely subsumed by new estates, fundamentally changing the character of the southern edge of West Adderbury. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.
LPR-B-179	James and Anne O'Neill	LPR-A-146	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. Additional development around Henge Close at LPR-A-146 would directly abut the Conservation Area and would therefore be detrimental to the setting of the listed buildings on Horn Hill Rd. Development would also be detrimental to the open nature of the Henge Close estate and to the green space and play area to the east. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.
LPR-B-179	James and Anne O'Neill	LPR-A-218	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.

LPR-B-179	James and Anne O'Neill	LPR-A-258	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. The large-scale developments proposed for site LPR-A-258 would utterly change the approach to the village and would create a jarring transition from agricultural land to modern, dense housing. Development would lead to a substantial decrease in the green space between West Adderbury and Milton, increasing the risk of coalescence and impacting upon the character of both villages. A popular footpath would be lost, and irreversible damage would be caused to the amenity of the homes to the north of Adderbury Fields, and to the adjacent green space. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.
LPR-B-180	Richard Martinson	Option 30	recognise the challenges faced at national and regional levels in meeting housing demand and that all communities need to contribute. Oxfordshire rural areas are in the main well connected to major conurbations and all villages fall within reasonable commuting distance (compared to other more rural/disconnected regions of the UK). For this reason, villages cannot be treated as closed economies where development is limited to local needs (CDC proposed option 1) since external factors will always come into play and defining local needs will be open to ambiguity. This does not lead to the only other option offered of proportionate development in rural areas (CDC option 2). It is our view that the options provided are too narrow considering the adverse impact they may have for thousands of existing rural residents unless explored holistically against the wider Local Plan Review document. Our urban centres such as Banbury have already changed beyond any recognition of boundaries of even twenty years ago. The focus has been on the development of easy green field sites. This outward expansion has not been balanced by the redevelopment of brownfield sites within urban centres. These areas offer genuine affordable housing provision and for those of diverse demographic and financial status they offer access to vibrant town centre living. The suburban sprawl towards Bloxham, Hanwell and Adderbury has already placed strain on our rural places. Developments are being marketed as offering rural living (Banbury Rise (Bloor Homes), Bloxham Vale (Redrow) for example) and yet it appears the sites are not recognised as rural development by Council Officers in this consultation. We would go so far as to suggest that the rural areas are already making a considerable contribution to housing demand and the resultant impact of faster deterioration of our rural roads, beauty spots, increased fly-tipping and walkers straying from public rights of way. We do recognise there are benefits to rural businesses that counter some of the negatives mentioned. This doesn't mean that rural communities should be exempt from development, but rather proportionate to the size of village. It is our view that proportionate and appropriately located development infill allows for the organic growth of communities. the options presented are too limited and fail to recognise the impacts upon rural communities that already exist as a result of urban expansion into areas once considered rural spaces. Urban spaces already have the critical mass and through effective placemaking can make a substantial contribution to meeting housing demands supplemented by considered site by site appraised development in the remaining rural areas.
LPR-B-180	Richard Martinson	North Newington	a danger that in providing additional housing within villages to those seeking greater access to the countryside, the very reasons for seeking rural lifestyle such as quietness, community and visual amenity etc are destroyed for all. Proposed development at LPR-A-004 would result in excess of 20 houses sharing a boundary with the new development which would de-value properties and privacy and wellbeing would be substantially adversely affected. The development proposed is not proportionate development; would see a 20-30% increase in the village size which is well in excess of the 5% delivered during the current plan period. Should all north newington proposals come forward that would see a 200% increase which is unreasonable.
LPR-B-180	Richard Martinson	Option 31	option 3 seems most appropriate whereby there is a combination of Local Planning Authority and Parish Council consultation to make informed decisions. Asking Parish Councils to agree a figure for each area would be disastrous. The potential to split a community with accusations of exploiting positions of authority and 'nimbyism' come immediately to mind. Allowing Local Planning Authorities to act in isolation to set Parish targets suggests an autocratic approach and the high potential for local representations to be ignored.
LPR-B-180	Richard Martinson	Question - Neighbourhood Planning	The current local plan review has not been well published and does not set a good example for appropriate engagement and only acts to erode the faith in Council Officers that they will listen to the views of those best placed to understand the impacts on communities..

LPR-B-180	Richard Martinson	Option 32	support the development of a rural settlement hierarchy but with additional weighting given to those areas with appropriate infrastructure services and facilities. This would suggest a common sense approach as we shift our world to a more sustainable place. As a generalisation, rural public transport to villages does not seem to be economically sustainable unless subsidised. Public accounts are becoming more stretched and developments in rural areas are often not of sufficient scale to enable developer contributions (S106 or CIL) of any significance. It would therefore suggest that rural development outside of already established regular public transport routes would be problematic. Safe cycle and walking routes to places of work and play are certainly beneficial. The rural road network is not safe for those modes of transport particularly at night which again suggests that the hierarchy for development is skewed towards established communities with immediate or nearby access to a safe cycle network. Other services for consideration would be sustainable transport modes for accessing primary and secondary schools and with sufficient capacity to accommodate the additional demands proposed. Additional housing requires increased capacity from power, water, drainage and communications infrastructure. Small scale rural developments could incrementally place excessive demand upon existing limited utility services. Resilience testing of the networks should be a consideration at this early stage of consultation. The Local Plan review also mentions how Banbury has great access to the M40 and rail connections north and south. This remains the case for those living to the east of the town but for those to the west, access is becoming increasingly poor due to the outward expansion of the suburbs to the west. Geographical location of settlements in relation to the major transport nodes should also carry suitable weighting rather than sweeping statements about the fantastic connectivity of our towns.
LPR-B-180	Richard Martinson	LPR-A-004	Land north of Broughton Rd): It is difficult to comment on this site due to its distance from the village, other than to say that any increase in dwellings to the west of Banbury has a transport impact on rural communities further west and that any development on this site needs to be considered in the statistical assessment on how many dwellings are being proposed within the Parish.
LPR-B-180	Richard Martinson	LPR-A-004	(Land within N. Newington village): Any development on this plot will have an adverse impact on the community. Emphasise that under the current Local Plan, 'backland' development of our village was not supported by policy and would advocate that this policy remains appropriate.
LPR-B-180	Richard Martinson	LPR-A-135	development on this site is within the village footprint and may be considered infill development depending on the scale and form of development proposed. Infrastructure capacity checks should accompany any application for development in order to protect existing resident services which are already felt to be declining (water pressure, drains, internet connectivity). Also question the energy strategy for new developments since the village is not served by gas (legislation will mean gas boilers in new dwellings won't be permitted), therefore an all-electric solution is likely and this will place more strain on the current supply network. it is evident that the 'call for sites' has brought forward more sites than the existing rural infrastructure can accommodate without leading to a detrimental effect on the immediate communities and areas 'downstream' when multiple development sites are completed; the increased number of vehicle movements affect all communities on the routes to our urban centres, not just the village in question.
LPR-B-181	S Perham	LPR-A-041	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. Additional development around Henge Close at LPR-A-041 would directly abut the Conservation Area and would therefore be detrimental to the setting of the listed buildings on Horn Hill Rd. Development would also be detrimental to the open nature of the Henge Close estate and to the green space and play area to the east. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.

LPR-B-181	S Perham	LPR-A-086	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. The large-scale developments proposed for sites LPR-A-086 would utterly change the approach to the village and would create a jarring transition from agricultural land to modern, dense housing. if developed, double the size of West Adderbury overnight. Such large scale development is entirely inappropriate for a village the size of Adderbury and is far more suited to a large town or even a city. few facilities present in Adderbury would be completely swamped by a development of this scale, placing massive pressures on local schools and services. Precious public footpaths over these sites, which are in daily use by local residents, would be lost forever. Development of LPR-A-086 would lead to the residents of St Mary's Road being completely subsumed by new estates, fundamentally changing the character of the southern edge of West Adderbury. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.
LPR-B-181	S Perham	LPR-A-146	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. Additional development around Henge Close at LPR-A-146 would directly abut the Conservation Area and would therefore be detrimental to the setting of the listed buildings on Horn Hill Rd. Development would also be detrimental to the open nature of the Henge Close estate and to the green space and play area to the east. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.
LPR-B-181	S Perham	LPR-A-218	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. LPR-B-181	S Perham	LPR-A-258	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. The large-scale developments proposed for site LPR-A-258 would utterly change the approach to the village and would create a jarring transition from agricultural land to modern, dense housing. Development would lead to a substantial decrease in the green space between West Adderbury and Milton, increasing the risk of coalescence and impacting upon the character of both villages. A popular footpath would be lost, and irreversible damage would be caused to the amenity of the homes to the north of Adderbury Fields, and to the adjacent green space. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.

LPR-B-182	Roderick Stell	LPR-A-175	Objects. Concerned that a change of use could result in the development of approx.300 homes which would irrevocably change the character of the village and more than double the population. Existing village facilities comprise a church, a pub, a Memorial Hall, a children's play area and a single cricket/football field. Site lies in the path of the proposed bypass which is urgently needed. The plan would open up the possibility of mass housing which would be severely detrimental to the character of the village. Proposals conflict with the future bypass.
LPR-B-182	Roderick Stell	Option 31	does not object to the principle of additional housing in the village and would be happy for Option 31, referred to in the review (working with communities) to be pursued.
LPR-B-183	Sarah Crothers	Shutford	Cat C village where insufficient local services have already been recognised. Bus service recently withdrawn and residents have to travel by car to access Banbury, Oxford and Stratford. Housing developments at either site would require significant groundworks which would be hampered by the bedrock. Development on Thistle Hill would block light to the properties on Lower End, Ivy Lane, and to those houses on the opposite side of the village - most notably Malthouse Lane and Cooks Hill. Additionally, those properties would also experience a significant change in their view and reduce the property values for many residents' homes and have a negative effect on Shutford's unique identity, charm and desirability. negative impact that the developments would have on the roads through and around the village. Roads throughout the village and outlying areas are narrow and unsuitable for the increased usage from new residents and construction traffic. Construction traffic would have difficulty accessing the sites; significant pinch points and dangerous junctions. Many roads in the village dont have pavements, therefore there would be no safe access to the few amenities (pub, play ground and village hall) from the new sites, and no scope to add pavements. Insufficient parking at present; further pressure on amenities. The proposed development would impact greatly on many species of wildlife.
LPR-B-183	Sarah Crothers	North Newington	Expansion of Shutford would exacerbate the traffic problems that already blight North Newington.
LPR-B-184	PM Clancy	Sibford Ferris	Approved development on the edge of Sibford Ferris has not resulted in any obligation for CDC to improve roads or footpaths nor for Severn Trent Water to upgrade the sewage treatment facility to ensure extra demand is accommodated. Three sites proposed in the village on good agricultural land. Village has few employment opportunities resulting in the need to travel to work, shops, schools, etc by car. Village roads cannot accommodate an increase in usage. Public transport is not seen as an option as people prefer to travel at times that suit them. the plan fails to include any provision for extra infrastructure and no obligation on service providers or schools to improve the existing facilities which the increase in the number of people and cars will require. cannot be expected to take these proposals seriously unless they are accompanied by a comprehensive, far reaching development plan for the village; but expect that there would still be strong opposition.
LPR-B-184	PM Clancy	Option 30	Existing rural roads are dangerous due to erosion from the increase in usage resulting from commercial and farm vehicles.
LPR-B-185	Melinda Ziff	LPR-A-041	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. Additional development around Henge Close at LPR-A-041 would directly abut the Conservation Area and would therefore be detrimental to the setting of the listed buildings on Horn Hill Rd. Development would also be detrimental to the open nature of the Henge Close estate and to the green space and play area to the east. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.
LPR-B-185	Melinda Ziff	LPR-A-086	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. The large-scale developments proposed for sites LPR-A-086 would utterly change the approach to the village and would create a jarring transition from agricultural land to modern, dense housing. if developed, double the size of West Adderbury overnight. Such large scale development is entirely inappropriate for a village the size of Adderbury and is far more suited to a large town or even a city. few facilities present in Adderbury would be completely swamped by a development of this scale, placing massive pressures on local schools and services. Precious public footpaths over these sites, which are in daily use by local residents, would be lost forever. Development of LPR-A-086 would lead to the residents of St Mary's Road being completely subsumed by new estates, fundamentally changing the character of the southern edge of West Adderbury. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.

LPR-B-185	Melinda Ziff	LPR-A-146	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. The large-scale developments proposed for site LPR-A-258 would utterly change the approach to the village and would create a jarring transition from agricultural land to modern, dense housing. Development would lead to a substantial decrease in the green space between West Adderbury and Milton, increasing the risk of coalescence and impacting upon the character of both villages. A popular footpath would be lost, and irreversible damage would be caused to the amenity of the homes to the north of Adderbury Fields, and to the adjacent green space. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.
LPR-B-189	Tracey and Derek Boshier	LPR-A-001	strongly oppose any access through the The Lane, Hempton, as this is a narrow single track road and unsuitable for additional traffic to use. Great concern, as this is a quiet no through road, which is the reason why we have chosen to live here. Also any development on south of Hempton Road, would again be opposed due to the traffic and if the access onto Hempton Road were to be close to the one way point, this will cause a number of problems, as it is a dangerous part of the road already.
LPR-B-189	Tracey and Derek Boshier	LPR-A-150	strongly oppose any access through the The Lane, Hempton, as this is a narrow single track road and unsuitable for additional traffic to use. Great concern, as this is a quiet no through road, which is the reason why we have chosen to live here. Also any development on south of Hempton Road, would again be opposed due to the traffic and if the access onto Hempton Road were to be close to the one way point, this will cause a number of problems, as it is a dangerous part of the road already.
LPR-B-190	Fraser S Allan	LPR-A-175	Strong objection. already a lack of infrastructure and services for the existing villagers. The road system around the village is inadequate even before the impact of HS2. Residents experience regular power cuts sewage problems and low water pressure. The amenities are already struggling to support the existing villagers. The Doctors surgery in Cropredy is oversubscribed, there is no school or shop and a limited bus service. proposed development is completely out of scale/proportion with the rest of the village which has only 350 residents. It would undoubtedly change the character of this historic village most of which is in a conservation area This would set a precedent for further development and expansion without further consolation. support the proportionate development of the village in keeping with its scale and character, this proposal is totally inappropriate.
LPR-B-191	Gordon Polson	LPR-A-152	Disappointed with continuous development from Banbury towards Hanwell; proposals would be the final straw in the loss of hanwell's identity from Banbury. The proposals would not retain local, rural identities. Proposals would result in unnecessary merging of the village with Banbury, resulting in loss of identity. Proposals would result in local traffic congestion, increased traffic through Hanwell, Hanwell being used as a rat run to avoid other traffic calmed routes, Hanwell has narrow streets with no pavements. Hanwell's identity and conservation status will be detriemntally impacted.
LPR-B-191	Gordon Polson	LPR-A-214	Disappointed with continuous development from Banbury towards Hanwell; proposals would be the final straw in the loss of hanwell's identity from Banbury. The proposals would not retain local, rural identities. Proposals would result in unnecessary merging of the village with Banbury, resulting in loss of identity. Proposals would result in local traffic congestion, increased traffic through Hanwell, Hanwell being used as a rat run to avoid other traffic calmed routes, Hanwell has narrow streets with no pavements. Hanwell's identity and conservation status will be detriemntally impacted.
LPR-B-192	Lesley Smith	Hanwell	Alarmed by encroachment on the village from Banbury. Led to believe that there would be no further development north of Dukes Meadow Drive, but this principle has been eroded and clear that it is contemplated for it to be eroded again.
LPR-B-193	ID Planning OBO NYC Estates Ltd	Option 1	Support the vision of the plan.
LPR-B-193	ID Planning OBO NYC Estates Ltd	Option 8	support the introduction of a policy for nationally described space standards as a minimum requirement for new development.
LPR-B-193	ID Planning OBO NYC Estates Ltd	Option 10	do not consider further sustainable design standards should be set in the Cherwell Local Plan and that these should be left for Building Regulations and the Oxfordshire Plan.

LPR-B-193	ID Planning OBO NYC Estates Ltd	Question - 20-Minute Neighbourhoods	support the principle of the 20 minute neighbourhood in urban areas. Whilst the principle of an active neighbourhood can be applied to rural areas the adoption of the concept would require careful consideration.
LPR-B-193	ID Planning OBO NYC Estates Ltd	Option 30	Support a policy to direct more development to the rural areas over the plan period to meet the wider district needs and support sustainable communities across the district. support the existing and proposed approach to deliver housing in existing urban areas, the existing approach has not delivered housing to meet the identified need with the district currently unable to demonstrate a five year supply of housing (4.7 year supply 2021 - 2026 according to the 2020 Monitoring Report). In contrast the existing Policy 2 Villages which limits the number of homes to be delivered in villages has been exceeded (approximately 2,000 homes completed or have planning permission in the rural areas).
LPR-B-193	ID Planning OBO NYC Estates Ltd	Option 31	Current policy provides a single housing figure for all rural areas. This has not provided a plan led approach with the policy leading to disparity in provision in rural areas based on developer interest and options on sites. Considers a combination of the allocation of specific sites and a parish level figure provides an appropriate balance between a plan led approach to growth whilst also not preventing sustainable and available sites that may come forward over the plan period. Finmere is a popular sustainable village with access to Bicester, Banbury and neighbouring Buckingham. Development of new homes would provide social and economic benefits by contributing to the five year supply of housing and providing construction opportunities to the district and supporting rural businesses and services. We have submitted site adjoining the village off Fullwell Road via the call for sites form that we consider is suitable for development of up to 10 dwellings and should be allocated for housing. The proposed form and quantum of development proposed would relate well to the traditional pattern of development whilst delivering sustainable growth to the rural areas.
LPR-B-193	ID Planning OBO NYC Estates Ltd	Option 32	consider that weight should be attached to the availability of services and facilities in villages with a Primary school being one of the most important considerations. In addition, access to urban centres and particularly those of adjoining districts is equally relevant in developing a settlement hierarchy
LPR-B-193	ID Planning OBO NYC Estates Ltd	Call for Sites Promotion - Land at Fulwell Road, Finmere	Land at Fulwell Road, Finmere is promoted for housing. Update to HELAA415. A Vision Document has been supplied.
LPR-B-194	Charles Holbech	LPR-A-175	Development of 300-400 homes would fundamentally change the nature of the conservation village in a rural area. The potential for a further 1000 residents would represent a fundamental change, in scale and character, to the nature of the village. It would be inconsistent with Wardington's status as a conservation area. One of the parcels of land is used for walking by local residents. The village has no shop, only one pub, and no school and could not sustain the large increase in residents. Increase in traffic through the village due to HS2 construction traffic and new developments on the A361 by M40. Concerned about safe access to and from property with increased traffic. Issues with drains and clanking manhole covers on the A361 will be exacerbated by increased traffic. If there is to be any additional housing in Wardington, it should be in conjunction with the construction of a bypass. The A361, as it passes through Wardington, is not suitable for heavy traffic.
LPR-B-195	MOD-DIO	Safeguarding Concerns	Four areas of interest for the MOD. DIO safeguarding have areas of interest in RAF Weston on the Green, RAF Barford St John and RAF Croughton. The authority area of Cherwell District Council encompasses areas within the Statutory Height and Technical Safeguarding Zones surrounding Weston On the Green and the Technical Safeguarding Zone surrounding RAF Barford St John and RAF Croughton. RAF Croughton is adjacent to the North of Cherwell District Council local authority area. The aerodrome height and technical safeguarding zones serve to protect the airspace above and around aerodromes to maintain an assured, obstacle free environment for aircraft manoeuvre and ensure that line of sight navigational aids and transmitter/receivers are not impeded. This airspace needs to be kept free of obstruction from tall structures to ensure that aircraft transiting to and from or circuiting the aerodrome can do so safely. where development falls outside designated safeguarding zones the MOD may also have an interest, particularly where the development is of a type likely to have an impact on operational capability. Examples of this type of development are the installation of renewable energy generation systems and their associated infrastructure. The MOD has, in principle, no issue or objection to renewable energy development though some methods of renewable energy generation, for example wind turbine generators or solar photo voltaic panels can, by virtue of their physical dimensions and properties, impact upon military aviation activities, cause obstruction to protected critical airspace encompassing military aerodromes, and impede the operation of safeguarded defence technical installations. In addition, where turbines are erected in line of sight to defence radars and other types of defence technical installations, the rotating motion of their blades can degrade and cause interference to the effective operation of these types of installations with associated impacts upon aviation safety and operational capability. the MOD would wish to be consulted within the Cherwell District Council Developing our Options Consultation Paper of any potential development within the Aerodrome Technical Safeguarding Zones surrounding RAF Weston on the Green, RAF Barford St John and RAF Croughton and any potential development within the Aerodrome Height Safeguarding Zones surrounding RAF Weston On The Green which consists of structures or buildings exceeding 45.7M Above Ground Level.
LPR-B-195	MOD-DIO	Option 11	In order to provide a more broad representation of MOD interests, and to ensure prospective developments are aware of the implications of developing within an area containing MOD safeguarded zones, it is requested that the diction of Renewable Energy Policy 5.5.13 is supplemented with a statement that explains that applications for development that would not compromise, restrict or otherwise degrade the operational capability of safeguarded MOD sites and assets will be supported.
LPR-B-195	MOD-DIO	Question - Development Management Policies	Suggested policy on MOD Establishments: POLICY Military Establishments: New development at military establishments that helps enhance or sustain their operational capability will be supported. Redevelopment, conversion or change of use of redundant MOD sites and buildings will be supported. Non-military or non-defence related development within or in the areas around a MOD site will not be supported where it would adversely affect military operations or capability, unless it can be demonstrated that there is no longer a defence or military need for the site. DIO has previously provided detailed plans to the Planning Authority of the MOD's land ownership across the District. But a summary plan of the sites is also included for the Bicester Area for ease of reference.

LPR-B-195	MOD-DIO	LPR-A-095	Site is immediately to the East of St David's Barracks Bicester shown in the Ambrosden CP map. There is a need to ensure that any such proposals do not impact adversely on existing MOD operations or capabilities. We are therefore very concerned by these proposals and would wish to work with the Planning Authority in respect of those sites.
LPR-B-195	MOD-DIO	LPR-A-143	Site is immediately to the East of St David's Barracks Bicester and north of the MOD owned Railway line. There is a need to ensure that any such proposals do not impact adversely on existing MOD operations or capabilities. We are therefore very concerned by these proposals and would wish to work with the Planning Authority in respect of those sites.
LPR-B-195	MOD-DIO	LPR-A-011	Site is immediately to the South of MOD owned land at Arncott. There is a need to ensure that any such proposals do not impact adversely on existing MOD operations or capabilities. We are therefore very concerned by these proposals and would wish to work with the Planning Authority in respect of those sites.
LPR-B-195	MOD-DIO	LPR-A-103	Site (three parcels) immediately to the North and West of St George's Barrack and shown on the Arnott CP map. There is a need to ensure that any such proposals do not impact adversely on existing MOD operations or capabilities. MOD was consulted previously about proposals for development at sites LPR-A-103 at St George's Barracks in 2015; that consultation identified that proposal if developed, could impact on Nationally Significant and Unique Training Resources at MOD Bicester. Significant issues arising including overlooking, noise and vibration impact, noise impact, adjacency, economic and military use impact and drainage. that We are therefore very concerned by these proposals and would wish to work with the Planning Authority in respect of those sites.
LPR-B-195	MOD-DIO	Question - Neighbourhood Planning	Neighbourhood Plans - It should be noted that separate legislation applies to the Crown estate and the operational military nature of MOD sites means that engagement and enacting of Neighbourhood plans to cover the area would not be appropriate. It is therefore suggested that designated Neighbourhood Plan areas should exclude MOD establishments.
LPR-B-195	MOD-DIO	General	Further background provided in relation to MOD development. Transport - Many MOD establishments have specific operational access requirements, in particular logistics. The dimensions and weights of some of the vehicles used by the MOD can be beyond that normally used by public/ commercial vehicles. When designing schemes which affect key access routes to MOD establishments it is therefore recommended that.....???? It should be noted that the controls on levels of noise arising from MOD establishments are not the same as for other properties. These noise levels can vary significantly according to operational needs. It is therefore important to consider the possible impacts on proposed adjacent development of such noise and the need to incorporate appropriate mitigation (if possible). It would be good practice for Planning Authorities to consult DIO on all significant planning applications within at least 250 metres of the boundary of an MOD establishment. Single Living Accommodation (SLA) & Service Families Accommodation (SFA)- SLA is provided to meet operational needs on MOD establishments and is ancillary to its use. SFA is provided to meet a specific need, has no commercial value and is subject to national guidance on its location, use and provision of supporting facilities. It is recognised that SFA directly provided by the MOD should be considered in the same way as affordable housing provided by a Registered Provider. In both instances, there is an element of subsidy, which sets it apart from housing that is either sold or rented, without restriction, through the open market. Both parties recognise that the SFA to be developed by the MOD will not be a commercial proposition and can only be delivered with substantial amounts of public funding. As such, there is no commercial viability in its provision. It is therefore logical given the considerations discussed within this statement that SFA should have a zero charge for CIL, following the practice that is applied to affordable housing. Such an approach accords with the definitions in the NPPF of affordable housing and essential local workers. SFA will not be released onto the open market or use for any other purpose than for SFA without the approval of the planning authority. This will ensure that the SFA 'housing' is developed and managed for its intended purpose, rather than open market housing. Such an obligation would also ensure that if the SFA becomes surplus to MOD requirements and is released in the open market the need to provide for affordable housing would be triggered.
LPR-B-196	Chris Cudahy	LPR-A-041	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. Respondent is an owner of a LB and is not adverse to progress through considered development of small sites which build houses with character and aesthetic of the village. Developments where profit is put first and quality, landscaping and design as an after thought impact LBs and thier environment. 825 homes appoved in 2021 at Lonford Park; this makes sense; why propose to ruin a village with multiple new building sites. Requests data to explain why more sites are needed in a village. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding. Infrastructure is not available for new housing estates. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare.
LPR-B-196	Chris Cudahy	LPR-A-086	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare.
LPR-B-197	Johhn and Enid Frost	LPR-A-041	Strongly object to the potential planning sites. The neighbourhood plan (3 years old) has seemingly been thrown out the window after much time and money spent preparing it. Site falls outside the Residential Settlement Boundary, set out by the Adderbury Neighbourhood Plan, and so contravenes Policy AD1. The developments already up and running in the village have begun to change the rural character. We already have substantial traffic volume, parking and speeding problems, which will only be exacerbated by yet more houses.
LPR-B-197	Johhn and Enid Frost	LPR-A-086	Strongly object to the potential planning sites. The neighbourhood plan (3 years old) has seemingly been thrown out the window after much time and money spent preparing it. Site falls outside the Residential Settlement Boundary, set out by the Adderbury Neighbourhood Plan, and so contravenes Policy AD1. The developments already up and running in the village have begun to change the rural character. We already have substantial traffic volume, parking and speeding problems, which will only be exacerbated by yet more houses.

LPR-B-197	Johhn and Enid Frost	LPR-A-258	Strongly object to the potential planning sites. The neighbourhood plan (3 years old) has seemingly been thrown out the window after much time and money spent preparing it. Site falls outside the Residential Settlement Boundary, set out by the Adderbury Neighbourhood Plan, and so contravenes Policy AD1. The developments already up and running in the village have begun to change the rural character. We already have substantial traffic volume, parking and speeding problems, which will only be exacerbated by yet more houses.
LPR-B-198	Jean Scouse	Sibford Gower	Praises Sibford Gower PC for raising most salient of issues related to a large development in the village; this would have a disaterous effect on the rural community. Key points are important - Siting on high ground thereby spoiling skyline; Access – roads already inadequate; Infrastructure – water supply struggles already; Loss of agricultural land and country aspect of the lane; Inappropriate transport links; and Environmental damage.

LPR-B-199	Gillian Round	Hanwell	Strongly object the proposal to extend the housing development north of Dukes Meadow. Entitled to maintain the current green field areas that define the village as a village and not as a suburb of Banbury. Hanwell is a Cat C village where only infill and building conversions are permitted to preserve the nature of the village. Development would have additional impact on the countryside, wildlife and increased traffic and direct impact on the chosen lifestyles of residents. Villages are a quintessential part of the fabric of Great Britain and should not be swallowed up by yet another faceless housing development. Bodicote, Neithrop, Easington, Ruscote, Hardwick and Grimsbury have already been lost to Banbury sprawl. Villages do not often provide affordable accommodation anymore (which needs to be addressed) and can be viewed as only for those privileged few who can afford to live there but the countryside is for everyone, not just for those who choose to live and work in rural communities. This housing development will destroy yet another swathe of green fields and wooded areas along with the public footpaths that both those in the village and in nearby Dukes Meadow / Hanwell fields enjoy using (especially in recent times).
LPR-B-200	Lindsey Shotton	Hanwell	Object. Expresses immense concern regarding the proposed encroachment on the village of Hanwell. Previously led to believe by the Local Authority that there would be no development north of Dukes Meadow Drive. Given the current global climate context of COP26; amazed that there is discussion about removing large amounts of conservation areas leading to further destruction of our wildlife habitats. Completely understand the need to create housing in towns like Banbury given population growth, but struggles with the rationale of eroding what is most special about Oxfordshire – village life and landscapes. Particularly with places like Hanwell village which is over 800 years old, surely need look to retain these locations to create aspirational places as a draw for people moving to Banbury. If we end up with villages like Hanwell consumed by newer housing estates (like in Bodicote), we risk not only the destruction of wildlife habitats but also the desire for people to want to move here in the future. There are multiple other locations which should be reviewed as options which don't have the same level of impact on society, wildlife and the special nature of Oxfordshire's villages.
LPR-B-201	Paul and Cynthia Miller	Option 32	Preference to Option 1 (Give additional weight to the availability of certain services and facilities). The principal considerations are enumerated under option 32.
LPR-B-202	Nigel Bankes	LPR-A-175	Objects. It would destroy the landscape and character of a Category B Conservation village; the scale of the proposal is out of proportion to the existing village; no current services in the village which would overwhelm local services such as the GP surgery and Primary School in the vicinity; impact on local roads, essentially single track roads and additional traffic on the A361. Wardington should not be a candidate to accommodate district level development needs.
LPR-B-203	Joanne Evans	LPR-A-175	Object. Wardington is a small village with very few amenities and this level of development would not be sustainable. New residents would have little or no access to schooling, employment or sports and leisure activities that would not require private transportation. The number of houses proposed would be out of scale with the character of the village. This level of development would have an adverse impact on the character of the village which is within a conservation area and has a number of listed buildings. The village falls across the busy A361 and does not seem to be a natural fit for a substantial number of new houses with a resulting increase in traffic and decrease in pedestrian safety. There is often flooding between the M40 junction and Wardington. This could be exacerbated by building on the proposed scale on what is currently farmland.
LPR-B-203	Joanne Evans	LPR-A-034	Previously been a clear delineation between the town of Banbury, including its industry and commercial infrastructure on one side of the M40 junction and the appealing rural nature of the land adjacent to the A361. The warehouse, already built, is an eyesore and a proliferation of this type of building would, in our view, be extremely detrimental to the surrounding landscape and to the wider environment.
LPR-B-204	Norman Hudson	LPR-A-175	Object. The majority of Wardington is designated as a Conservation Area and the proposed development would be out of scale with the existing village, and change its character. The existing infrastructure is stretched with a considerable number of electricity cuts; and the pressure of the mains water supply is erratic. Cropredy school would not have the capacity to accommodate additional places required without significant expansion. There has been a strong case for Wardington being bypassed because of the substantial increase in traffic on the A361 and the bends on the road as it passes through the village. A bypass will be required in the future and the obvious route would traverse one of the proposed sites. Any development of this site would either eliminate the possibilities for a bypass or make one substantially more expensive. Existing and proposed Commercial development, either side of the A361, on the Wardington side of the M40 junction 11 will increase traffic on the A361. It is accepted that additional housing is required in Oxfordshire (understood that CDC are currently exceeding targets). The present Local Plan allows for some expansion of Wardington through conversion, infilling and extension which is reasonable. There are other areas where a development of the scale would be better suited. I do not believe that the landowner understood the resulting scale of development when the land was put forward, were it to be included in the Local Plan, and now says he is less happy to have done so.
LPR-B-204	Norman Hudson	LPR-A-168	Banbury sits within the countryside which noticeably and to visual advantage stretches away up from the lower ground of the motorway to the higher ground approaching Northamptonshire. The M40 provided a physical and visual border to eastward expansion. Now with commercial development between the M40 and the A361, the A361 provides that important boundary. Any breach will negatively impact the approach and visual setting of Banbury, from the A361 and A422. Frequent congestion at the M40 J11 is already a deterrent from using the services and retail in Banbury. North and east of Banbury, Brackley and Daventry are more easily accessible with further development to the east of the A361 exacerbating this. Is there justification of the need for this allocation? - When Banbury cattle market, was closed it seemed logical that this or the adjacent site could provide an appropriate alternative with low visual impact with the demand for a cattle market no longer exists.

LPR-B-205	Juliet Bankes	LPR-A-175	Object. The size of the development is inappropriate to the settlement of Wardington as it stands today. The main objections are: access to the development would significantly increase the traffic and pollution on the A361 and surrounding very minor roads; increased congestion on the J11 M40; population of Wardington would increase by 300% which is unsustainable with no amenities in Wardington; and, the village is on the county boundary of Northamptonshire and Oxfordshire increasing difficulty of access to primary and secondary schools and other amenities. Developments of this size next to a conservation village are not in line with the Oxfordshire 2050 in achieving a carbon neutral target.
LPR-B-206	Steve Waterman	Option 12	Did not understand the meaning behind the option and therefore struggled to respond. Similar to other Options were just the same.
LPR-B-206	Steve Waterman	Question - Settlement Boundaries	I would strongly support defining settlement boundaries or have an overall population figure to provide an upper limit for development, and use this limit together with settlement boundaries to maintain a realistic definition of what 'village' and 'rural' mean. Small villages are in the longer term better placed to increase their size. If rural settlement based on existing villages was capped by either settlement boundaries or upper population figures then it might become necessary to consider the development of new settlements.
LPR-B-206	Steve Waterman	Question - Neighbourhood Planning	Neighbourhood Plans should be used as the correct basis for deciding where new growth should occur. It would be good for the District Council to maintain a role as 'referee' in order to ensure that the decision making process is made in as objective and democratic way as possible when it comes to Neighbourhood Planning.
LPR-B-206	Steve Waterman	Question - Transport & Connectivity	There was a lot of reference to the need for minimise carbon based transport but no recognition given to the advent of all electric cars and commercial vehicles. This should be factored in to planning assumptions. This could reduce congestion without any effect on carbon emissions. Active travel is unnecessary jargon for walking and cycling. Place shaping is initially off putting bit of jargon and needs to be replaced with something more understandable.
LPR-B-206	Steve Waterman	Question - Achieving Good Design & 'Beauty'	The advantages of new settlements building in area heating schemes, ensuring good design, planning for employment and services, improving the biodiversity compared with the monoculture fields that they would be built on.
LPR-B-206	Steve Waterman	Question - Local Green Spaces	Green and blue spaces need to be defined.
LPR-B-206	Steve Waterman	Option 30	Growth should take place in areas of the country where it is needed and can more easily be accommodated and managed, and do less environmental damage. The main stumbling block for rural development is that there are very few employment opportunities in the villages. Most people in villages either commute or work from home. It is difficult to make a case for 'local housing need' in any one particular village. Continuing and significant housing growth in the villages undermines the reason for village existence and harms rural life.
LPR-B-206	Steve Waterman	General	There is a massive underlying assumption for significant levels of growth in this area and it is a major failing of this document that such assumptions have simply been accepted without any evaluation. There is no opportunity to challenge this growth. If Cherwell is hamstrung by the prospect of major population and housing requirements forced upon it, it seems to be wrong for the document simply to accept and even apparently to rejoice in these figures. Sustainability, what does this word actually mean as used in the document? The use of the word sustainable has lost its core meaning and become a buzz word. The word should only be used when it can properly be seen as conveying its original and easy to understand meaning.
LPR-B-207	Wardington Parish Council	LPR-A-175	Objects. If developed intensively it has the potential to increase the number of houses in Wardington by 300% and for the parish as a whole by 200. It would increase pressure on the A361, the side roads to Cropredy and Chacombe and the congested J11 M40. Wardington residents are against this potential development. Cherwell District Council are likely to insist on between 20 and 30 new houses per hectare if it is to be accepted disproportionate to the size of the village. There was great concern about the permanent harm such a development would do to the village and its character. The land is outside the village boundaries. The lack of services in the village means development is not sustainable. Losses of water and power with the capacity of the sewerage system limited. The control of surface water, particularly on the A361, gives constant problems. The A361 is used as a main route between the M1 and the north and the M40 north and south. The A361 runs through the centre of Lower Wardington which is narrow with blind corners. Lorries struggle to pass by each other. The pavement is narrower than legally required. There are frequent accidents on the A361 close to Wardington. For other vehicles there are no convenient diversions and none which heavy lorries can use. Despite being an A road it is, in reality, more like a dangerous country lane. Extra development would increase the pressure on the A361 making it more dangerous. Traffic on it is increasing by 6% a year without taking account of HS2 construction vehicles. M40 Junction 11 is already a problem at busy times and one of the most air polluted locations in Oxfordshire. These problems will get worse because of the commercial developments at Banbury 15 and any major new housing development. The only feasible route for a bypass round Wardington is threatened by this development. The local side roads, mainly single track, will be increasingly used as rat runs which will adversely affect the quality of life of other communities and increase the dangers to other users. The quality of local nature for recreation and biodiversity will become increasingly important and new substantial development around Wardington would threaten this. The Planning (Listed Buildings and Conservation Areas) Act 1990 places a duty on local planning authorities to formulate and publish proposals for the preservation and enhancement of its Conservation Areas. Development would destroy the character and Category B Conservation Village. The proposal does not meet the requirement of The Planning (Listed Buildings and Planning Areas) Act 1990.

LPR-B-208	Caroline Pigden	LPR-A-152	Object. Led to believe by the Local Authority that there would be no development north of Dukes Meadow Drive. The Authority appears to be resiling on its word. The countryside around Banbury is under threat. There have already been several significant housing developments recently. Any more development will leave just metres between the edge of the conservation area down Gullicote Lane and track. New housing will not be shielded from the sight of the village by any significant natural border, such as currently exists with the trees which hide the current Banbury 5 development. Hanwell is a village with significant historical antecedents. The village boasts a thriving rural community. The housing stock is predominantly 300 years or more old. Further development between Hanwell and Banbury would permanently and irrevocably destroy the character of the village. Development of the site is contrary to the Local Plan. Development of what is currently active agricultural land would go against KO5, KO9 and KO15. Development of the proposed sites would be akin to coalescence and would ride roughshod over views you know to be held by the local community. The development of site would allow some expansion to the north of Banbury without encroaching upon any local villages. There are precious few villages such as Hanwell in the environs of Banbury which must be preserved for heritage. The wildlife (flora and fauna) that currently thrives in the countryside surrounding Hanwell is under threat. It is in the public interest to retain the fields, footpaths, woodland and waterways lying between the urban sprawl of Banbury and Hanwell. The general public use the land for recreation. Please consider the health, and wellbeing of Hanwell residents and the historic character of the village before committing to the irreversible annihilation of the landscape and the community as a whole.
LPR-B-208	Caroline Pigden	LPR-A-214	Object. Led to believe by the Local Authority that there would be no development north of Dukes Meadow Drive. The Authority appears to be resiling on its word. The countryside around Banbury is under threat. There have already been several significant housing developments recently. Any more development will leave just metres between the edge of the conservation area down Gullicote Lane and track. New housing will not be shielded from the sight of the village by any significant natural border, such as currently exists with the trees which hide the current Banbury 5 development. Hanwell is a village with significant historical antecedents. The village boasts a thriving rural community. The housing stock is predominantly 300 years or more old. Further development between Hanwell and Banbury would permanently and irrevocably destroy the character of the village. Development of the site is contrary to the Local Plan. Development of what is currently active agricultural land would go against KO5, KO9 and KO15. Development of the proposed sites would be akin to coalescence and would ride roughshod over views you know to be held by the local community. The development of site would allow some expansion to the north of Banbury without encroaching upon any local villages. There are precious few villages such as Hanwell in the environs of Banbury which must be preserved for heritage. The wildlife (flora and fauna) that currently thrives in the countryside surrounding Hanwell is under threat. It is in the public interest to retain the fields, footpaths, woodland and waterways lying between the urban sprawl of Banbury and Hanwell. The general public use the land for recreation. Please consider the health, and wellbeing of Hanwell residents and the historic character of the village before committing to the irreversible annihilation of the landscape and the community as a whole.
LPR-B-208	Caroline Pigden	Option 18	Development is most appropriate to the East or South of Banbury where there is lesser prospect of incursion on neighbouring villages.
LPR-B-208	Caroline Pigden	Option 19	Support Option 2 to limit development at Banbury and protect its landscape setting and maintain separation between the town and surrounding villages.

LPR-B-209	Alex Jeyes	LPR-A-041	<p>Object. The site falls outside the Residential Settlement Boundary set out in the Adderbury Neighbourhood Plan, and therefore contravene Policy AD1. Adderbury village has been substantially developed since 2011, where 1064 dwellings were registered. Owing largely to post-2015 developments on each of the roads into the village, the village now has more than 1250 dwellings. This constitutes a 17% increase in housing. If one adds to this the permitted developments yet to be built this amounts to a 21% increase in housing since 2011, before any further development is considered. The large scale, generic style and rapidity of the expansion of the village in the past 6 years has been overwhelming and upsetting to many residents, and the urbanisation imposed on the village has already begun to compromise its rural tranquillity. Additional substantial development would detract even more significantly from the village's character and place an even greater burden on both struggling infrastructure and local amenities. Residents of St Mary's Road have had to accept developments immediately to the west and north, which have changed the setting and feel of their homes significantly. Many residents would be devastated by the only fields left adjacent to them being built on. The site contravenes the policies in the Adderbury Neighbourhood Plan, by building outside of the accepted boundary of the village and narrowing the amenity gap between Adderbury and both Bodicote and Bloxham/Milton. The preservation of these boundaries and gaps ought to be prioritised in consideration of future planning applications. Based on a presumption of a density of 30 homes per hectare, the site would be vastly disproportionately large to the precedent set by previous developments in Adderbury, and vastly exceeding the limit of what is acceptable in a village setting. Adderbury's infrastructure is already at capacity. Congestion and parking in the village is a significant issue. Congestion will worsen where queues at other junctions inevitably increase. West Adderbury is distant from the vast majority of facilities. The proposed development is unsustainable and encourage private car use. The extra traffic brought by development would bring to existing pinch points in Adderbury's highways, particularly at the junction between the Oxford/Aynho Roads, will add to the existing air quality pollution in this area. Additional car fumes and particulate emissions from traffic is of concern to nearby residents and those whose children attend Christopher Rawlins School. Christopher Rawlins Primary School was extended and increased its intake by 50% in 2017 though scope for further development is limited by the constraints of the site. There are already tensions in the village associated with parents parking at drop-off and pick-up times. Although the school isn't currently at capacity, for example, 100 extra houses in the village would mean the school will be over capacity. Development will have a hugely destructive impact on the regional ecology and wildlife habitats: the destruction of hedgerows, pasture and scrubland is intrinsically linked with the depletion of numbers of birds, insects, mammals and amphibians. Concerned about the effects that water run-off from substantial developments might have on the existing floodplain. If housebuilding takes place in areas adjacent to it, as several of the proposed sites are, the floodplain may not be able to cope. We need to ensure that floodplain requirements are regularly re-assessed and allowed buffer zones to cater for the increased frequency of flooding. In an area known for its high water table and numerous springs, development of these sites will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. The site contains popular rural public footpaths and surrounding these footpaths with housing estates will render them less safe and pleasant to use. The presence of fossils will be greatly diminished. Adderbury has limited light pollution and substantial additional development will diminish the dark sky. Once the latest phase of Longford Park, the new developments on the Bloxham Rd and the additional housing to the north of Banbury are complete, it is inconceivable that Cherwell will not have at least a 5 year housing supply. The rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few.</p>

The rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few.
LPR-B-210	Philip Styan	Option 21	Regular bus service from villages would reduce car travel. North Newington had the bus service removed – 25th October 2021 and now have to always drive into Banbury town centre.
LPR-B-210	Philip Styan	Option 30	Development in rural areas should be limited to local needs, but due consideration should be given to the services that are available to support any development. Any development needs to be considered in the wider context of the character of a village and the relevance of conservation area status.
LPR-B-210	Philip Styan	Option 31	Meaningful consultation is always welcome and so point 3 above would be best. Meaningful consultation means involving the whole community affected by any changes/developments.(many villages still have poor internet connections using out of date copper wire connections!)
LPR-B-210	Philip Styan	Option 32	There are a range of services that need to be considered when looking at rural villages, such as narrow roads, on street parking, lack of pavements. Infrastructure needs to be considered, such as drainage, waste water treatment, mobile phone coverage and broadband speeds. North Newington had the bus service removed on the 25th October 2021 and cycling into Banbury is not a safe option as no cycling lanes are provided.
LPR-B-210	Philip Styan	LPR-A-004	This proposal is backland development which is not supported by the policy in the current plan. The area identified is steeply rising ground outside the village footprint and will dominate the skyline on that side of the village and properties will over look directly into the properties on Main Street. Main Street is an important part of the village conservation area.
LPR-B-210	Philip Styan	LPR-A-135	This proposal is backland development which is not supported by the policy in the current plan. The area identified is steeply rising ground outside the village footprint and will dominate the skyline on that side of the village and properties will over look directly into the properties on Main Street. Main Street is an important part of the village conservation area. Support services are an important criteria, however this particular parcel of land is within the village boundary and if the village is to expand and if the infrastructure is provided to support it then this development could be considered.
LPR-B-211	Simon Gibbs	LPR-A-175	Having been a resident in Wardington for almost 10 years, I am greatly concerned by the suggestion that the village could almost double in size. Wardington is a beautiful conservation village which should be protected and to double its size would change its character. Wardington has one church, one pub, a village hall and a garden centre that just meets the needs of the current population. It does not have the infrastructure, services and facilities to accommodate an increasing population. All basic utilises would be put under pressure and add to existing traffic congestion.

LPR-B-212	Catriona Geber	Hanwell	Strongly object. More housing that would essentially almost encroach and envelop Hanwell village. Apart from all the environmental fall out; destruction of wild life habitats, damage to ecosystems, generation of more traffic, it will essentially erode village life. I request that all our appeals are carefully considered and the plans for housing rejected. The council previously advised there would be no further developments north of Dukes Meadow. This commitment clearly has been disgracefully defaulted upon once; to do so again is simply unacceptable and cannot be tolerated.
LPR-B-213	Hannah Gibbs	LPR-A-175	Strongly object. The village could almost double in size. Wardington is a beautiful conservation village which should be protected and to double its size would change its character. Wardington as a small village with one pub and a garden centre, simply does not have the infrastructure, services and facilities to accommodate a increased population. Basic facilities such as sewerage would be put under pressure. The local area already suffers from huge increases in traffic due to the new developments proposed for the A361/M40 access. HS2 is also a factor, any further development works and disruption would be terrible for the local residents.
LPR-B-214	Diane Hanney	LPR-A-034	Strongly Object. The area will encroach into our green fields around Banbury, taking away the natural enviroment. There will be an unacceptable amount of heavy traffic joining the A361, already coping with with increased traffic from HS2, and warehouses currently being built. Never mind a hotel, garage etc that has been applied for. It can at times take 45 mins to travel from Chacombe or Wardington now, which is totally unacceptable for the local economy and pollution levels. Banbury should not keep developing residential or commercial areas without any improvements to infrastructure. Permissions should not be granted for any more of the grotesque buildings that are being already built on the A361.
LPR-B-214	Diane Hanney	LPR-A-168	Strongly Object. The area will encroach into our green fields around Banbury, taking away the natural enviroment. There will be an unacceptable amount of heavy traffic joining the A361, already coping with with increased traffic from HS2, and warehouses currently being built. Never mind a hotel, garage etc that has been applied for. It can at times take 45 mins to travel from Chacombe or Wardington now, which is totally unacceptable for the local economy and pollution levels. Banbury should not keep developing residential or commercial areas without any improvements to infrastructure. Permissions should not be granted for any more of the grotesque buildings that are being already built on the A361.
LPR-B-215	John Henshaw	LPR-A-091	Object. Bodicote has already been surrounded by new housing developments leading to continual traffic congestion and pollution with insufficient green spaces against National Planning Policy. The traffic problems in Banbury have worsened considerably recently as a result of overdevelopment and this has had a detrimental impact on Bodicote.
LPR-B-216	Gordon Paxton	Hanwell	Strongly Object to the possibility of more houses encroaching on the boundaries of Hanwell Village. Hanwell is a small community and the residents would like it to remain this way. We have a beautiful 12th century church right on the edge of the village. Please vote against this planning proposal and allow Hanwell to keep its charm and village status.
LPR-B-217	Hazel Paxton	Hanwell	Object. Surprised by the proposal to build more houses nearer to Hanwell Village. The village will be use even more of a rat run, and as there are now cars parked at curb side it will be much more dangerous to walk in the village. I moved into the village a long time ago and love living here but if these plans go ahead the village atmospshere will be will be lost and we will be just another suburb of Banbury with an historic castle on the edge of village, which must not happen.
LPR-B-218	Chris Douglas	Hanwell	Object. New proposals would lead to the eventual engulfing of the village of Hanwell. The beauty and character of England is in a large part down to the quaintness of villages like Hanwell. Villages with an identity in place for 100's of years and encourages villagers to aspire to live a more tranquil lifestyle. In 2003, we were told that there would be no more development North of Dukes Meadow. The traffic and and congestion has increased due to more development. This village is surrounded by beauty and teeming with wildlife. The road through the village is small and in parts only suitable for one vehicle - by potentially engulfing the village with surrounding estates, then the likelihood of traffic increasing and becoming a rat run grows. The road and pavements are not designed to cope with that. There are brownfields sites, unused industrial areas or areas dotted on the outskirts which could be turned into their own new villages, as opposed to just expanding Banbury and erodes the identity and tranquility of an already established community.
LPR-B-219	Councillor Phil Chapman	Hanwell	The villages of Hanwell are very concerned that the proximity of housing from Banbury should not be encouraged and a clear seperation should be maintained between the villages and Banbury.
LPR-B-219	Councillor Phil Chapman	Drayton	The villages of Drayton are very concerned that the proximity of housing from Banbury should not be encouraged and a clear seperation should be maintained between the villages and Banbury.
LPR-B-219	Councillor Phil Chapman	Option 1	Support KO5 and KO9.
LPR-B-219	Councillor Phil Chapman	Option 2	Consider the following most important: KO29, KO23, KO9, KO5 and KO4.
LPR-B-219	Councillor Phil Chapman	Option 3	Employment should be focus on urban areas and previous developed land
LPR-B-219	Councillor Phil Chapman	Option 4	Provide mixed use sites to include general industry, distribution (B2 and B8 uses), light industry and other potentially compatible uses such as retail and leisure (E use classes)
LPR-B-219	Councillor Phil Chapman	Option 6	Increase the percentage requirement of affordable housing required on housing developments of 10 or more units?
LPR-B-219	Councillor Phil Chapman	Option 7	Keep the same affordable housing tenure mix as set out in the 2015 Local Plan with 70% Affordable and Social Rent and 30% Social Rent?
LPR-B-219	Councillor Phil Chapman	Option 8	Introduce a policy which requires all new dwellings to meet the nationally described space standard and if so, should this be a minimum requirement?
LPR-B-219	Councillor Phil Chapman	Option 9	Continue to rely on Building Regulations in respect of accessibility?
LPR-B-219	Councillor Phil Chapman	Option 10	Set sustainable design and construction standards for new residential and non-residential development that only meet standards set by Government.
LPR-B-219	Councillor Phil Chapman	Option 12	Secure as close to the site as possibl - compensation measures should be as close to the site as possible.
LPR-B-219	Councillor Phil Chapman	Option 14	For children's play, the use of small areas dotted about should be avoided and in villages the Local Parish Council should be involved in play provision. Village facilities should be enhanced rather than another small site.

LPR-B-219	Councillor Phil Chapman	Option 15	Use financial contributions from developers in lieu of on-site provision on strategic sites to enhance existing facilities, to enable increased use. Use contributions to both enhance and build modern facilities Astro type pitches that can be used in all weathers.
LPR-B-219	Councillor Phil Chapman	Question - 20-Minute Neighbourhoods	20min neighbourhood is impractical in most rural areas.
LPR-B-219	Councillor Phil Chapman	Question - Transport & Connectivity	The car is essential for rural areas it is impossible to place it at the bottom of the transport hierarchy. Eventually electric or hydrogen vehicles will replace petrol but this type of transport will always be needed as neither public transport nor walking or cycling will replace it.
LPR-B-219	Councillor Phil Chapman	Option 16	Provide a policy with the requirements expected from new development to provide digital connections and be designed to accommodate future digital infrastructure needs (future proofing). Developers should provide all the infrastructure needed for digital connections.
LPR-B-219	Councillor Phil Chapman	Question - Transport Policies	There must be provision for car transport in rural areas.
LPR-B-219	Councillor Phil Chapman	Option 18	Limit development at Banbury to protect its landscape setting and maintain separation between the town and surrounding villages. Must protect and maintain the separation of villages from Banbury.
LPR-B-219	Councillor Phil Chapman	Option 19	Consider sites to the south, east and west of town for reasons of sustainability. Site to the north should be discarded.
LPR-B-219	Councillor Phil Chapman	Option 20	Banbury must be steadfast in becoming a 'destination' town centre. If not Castle Quay 2 and Canal side will be pointless and homes may not get built at Canalside. Appropriate increasing of cycling is good. If this strays to 'shutting off' the town as a destination except for cyclists this will be incoherent and harmful for the towns future.
LPR-B-219	Councillor Phil Chapman	Option 21	Continue to allocate the site for residential led redevelopment involving a transition of the site away from commercial uses to a sustainable, well designed residential area. Canalside needs to be developed for housing. It is a brownfield site and if used for housing will protect greenfield. Policies need to be in the plan to ensure this area is developed as soon as possible.
LPR-B-219	Councillor Phil Chapman	Question - Reducing Car Dependency in Banbury	Banbury's road infrastructure must be improved. We cannot continue to build houses and industrial units without improvement to the roads. Banbury is at cross roads of several A roads and needs roads for both local and more regional transport.
LPR-B-219	Councillor Phil Chapman	Option 29	Allocate further land for housing and employment at Heyford Park (e.g. beyond that planned for). Rural areas have already supplied 90% of the rural allocation development should be limited to local needs.
LPR-B-219	Councillor Phil Chapman	Option 30	My major concern is the outlandish scale of many of the sites 'promoted' in villages around Banbury. Village meetings have been held by many Parishes which are well attended with residents shocked at the scale of development proposed. There has been balance with support for development within the current policies but people who would support the new starter home scheme find promotions for land that at policy density would require over 600 houses on some sites and hundreds on many more. There is no need for such scale of housing in the rural setting. Many 'villages' would effectively be consumed into Banbury with 'rural' losing its meaning. The consultation has been a major concern amongst the villages in the Ward with large village meetings. Large housing estates will be stuck on to villages many of whom are very unsustainable with very little amenities and public transport. Most village accept infill and conversions as they are within the policies of Cherwell. I also notice that 90% of the planned rural housing has been delivered and see no need for large rural sites, other than those that comply with the policies. Should permission be given for an estate of any size attached to a village there should be policies to ensure it is integrated with the village not cut off as a separate neighbourhood. Concern has raised that conservation areas were not marked on the maps as these areas have been designated as important to the setting of villages and need to be protection. It seems Conservation area does not mean anything now as an input in to this consultation. Parish councils should be involved on compensation decisions. We have cases where this has not happened and long term division and ultimately extra cost will be forced on the Parish.
LPR-B-219	Councillor Phil Chapman	Option 31	Work with communities to provide limited sites preferable small infill plots.
LPR-B-219	Councillor Phil Chapman	Option 32	Give additional weight to the availability of certain services and facilities (which do you think are the most important?) - build where there are facilities but again even villages without may be able to take infill and conversions.
LPR-B-219	Councillor Phil Chapman	Question - Settlement Boundaries	As village boundaries should be carefully looked at and I suspect that I would support this policy.
LPR-B-219	Councillor Phil Chapman	Option 33	Apply criteria-based policies to assess development proposals
LPR-B-219	Councillor Phil Chapman	Option 34	Retain the current approach of seeking to conserve and enhance the countryside and landscape character of the whole district and define valued landscapes/landscape features in the district which would be the subject of additional policy guidance. The countryside must be protected and if a village has a conservation area outside the built up limits then this need a separate policy protecting it from development.
LPR-B-219	Councillor Phil Chapman	Question - Neighbourhood Planning	I have to question the value of neighbourhood plans unless they have planning teeth and are not ignored after only 2-3 years.
LPR-B-220	Sarah and John Cochrane	Sibford Gower	Object. There have been 3 neighbouring properties carrying out renovations and extensions which has already caused power cuts; damage to the banks and verges; and, chaos and road closures on Pound Lane. The disruption of building additional houses to those living in Sibford Gower would be catastrophic. It is a quiet, rural location with a "dark sky". There is not the infrastructure in place for increasing population. The impact on electricity, telecoms and sewage/ water would be immense, and as you are suggesting the development be sited at a high point in the village which would reduce the natural soakaways. Any heavy rainfall will flood the village as already evidenced by the amount of debris on Pound Lane from recent heavy rains. The roads are inadequate to allow for access and movement of additional vehicles and people. There is no local employment, which would require commuting. Colony Road is a single carriageway and almost impassable with potholes and destroyed verges, and could not accommodate further traffic. It would be irresponsible and dangerous to even consider it. This is without the environmental impact: additional vehicle and energy pollution, noise pollution, skyglow pollution, loss of agricultural green fields and mature trees, the effect our hedgerows and our abundant wildlife.

LPR-B-221	Andrew and Brigette Boyd	LPR-A-107	Strong object. The site is part of the beautiful and valuable countryside surrounding the village of Sibford Gower and would not be suitable for a housing development. It is neither sustainable nor does the necessary infrastructure exist within the village to support it. The ambience of this ancient village, would be ruined by adding more housing along Pound Lane. Sibford Gower is a 'dark sky village' which would rule out street lighting and building large paved areas at the highest point of the village would add to the ever-growing risk of flooding elsewhere. Access to the development would be very problematic. Pound Lane is a narrow rural lane of great character which would be incapable of coping with the extra traffic. Developing the site would seem to violate many Key Objectives of the Cherwell Local Plan .
LPR-B-222	Launton Parish Council	Option 1	The vision is at odds with the approval of the gas fired power station (19/00163/F) at the village in the spring of 2019.
LPR-B-222	Launton Parish Council	Option 2	Objectives KO5 and KO8 are important to Launton.
LPR-B-222	Launton Parish Council	Option 3	At our main urban centres of Banbury, Bicester and Kidlington. On sites already allocated but not developed (south of Tesco, Bicester)
LPR-B-222	Launton Parish Council	Option 4	Provide a mixture of the above - But without retail as this should be sited in urban locations/town centres.
LPR-B-222	Launton Parish Council	Question - Supporting Employment	Support for home working, particularly providing reliable, fast internet connections.
LPR-B-222	Launton Parish Council	Option 5	Neither – stop building out of town retail which is closing high street shops.
LPR-B-222	Launton Parish Council	Question - Town Centre Uses (Banbury, Bicester & Kidlington)	A Central Government Business Rate review is urgently needed with an outcome which enables businesses to be able to afford to stay to support town centres.
LPR-B-222	Launton Parish Council	Option 6	Not enough experience or information to comment.
LPR-B-222	Launton Parish Council	Option 7	Not enough experience or information to comment.
LPR-B-222	Launton Parish Council	Option 8	All new dwellings should meet the nationally described space standard.
LPR-B-222	Launton Parish Council	Question - Separation Distances	Supports a policy on separation distances.
LPR-B-222	Launton Parish Council	Option 9	Rely on Building Regulations – stay focussed on making them work.
LPR-B-222	Launton Parish Council	Question - Travelling Communities	No specific locations are available within the Launton district
LPR-B-222	Launton Parish Council	Option 10	Not set further standards. Building Regulations should be adhered to.
LPR-B-222	Launton Parish Council	Question - Retrofitting of Historic Buildings	Historic buildings should not be 'set in aspic' but should be developed and improved to make sure that they can be used and are fit for the 21st century. The whole issue needs a review, particularly the environmental impacts.
LPR-B-222	Launton Parish Council	Option 11	Specific sites - installation of PV panels should be a planning requirement, particularly for warehousing, which frees up land for farming and food.
LPR-B-222	Launton Parish Council	Question - Green Belt	While the northern boundary of the Green Belt finishes at J9 of the M40, the whole of the Green Belt should be reviewed as it is not fit for purpose. While it purports to protect Oxford, none of the villages surrounding the other large towns outside Oxford are provided any such protection. There should be mini-Green Belts protecting the villages surrounding the larger towns in Cherwell to stop the potential for coalescence.
LPR-B-222	Launton Parish Council	Option 12	Secure as close to the site as possible or Secure contributions to local environmental bodies undertaking biodiversity enhancement projects within the district. If biodiversity net gain cannot be achieved on site, it is the wrong site? Better liaison between bodies before allocation would be more appropriate.
LPR-B-222	Launton Parish Council	Option 13	Include a policy in the Plan requiring major development proposals to: a) be supported by a natural capital assessment to demonstrate the impact of the proposals and b) demonstrate environmental net gain
LPR-B-222	Launton Parish Council	Option 14	Provide children's play facilities through minimum provision combined all-age areas of play. The focus should be on play areas which are of a sensible size, well-designed and easily maintained. Smaller play parks with two or three pieces of equipment are not fit for purpose. Larger areas are usually easier to maintain and are more popular both with children and carers.
LPR-B-222	Launton Parish Council	Option 15	A mixture of continue with the current policy approach of securing new pitch provision as part of strategic development sites and seek to secure and establish sports hubs at our main settlements.
LPR-B-222	Launton Parish Council	Question - 20-Minute Neighbourhoods	Many of the features of a 20-minute neighbourhood would work in Launton.
LPR-B-222	Launton Parish Council	Question - Transport & Connectivity	Infrastructure for car charging should be more widely available including provision for on street charging points in rural villages to encourage electric car use. Low carbon/hydrogen/ electric public transport for village use and more cycle paths.
LPR-B-222	Launton Parish Council	Question - Transport Policies	A policy to consider the solutions for the Bicester London Road level crossing. Implementation of road infrastructure should be completed before any development is started.
LPR-B-222	Launton Parish Council	Option 17	Update the methodology to consider social and environmental benefits of schemes and the contributions they make to Climate Action, Healthy Place Shaping, and a Sustainable Economy and look at areas by catchment and how accessible they are?
LPR-B-222	Launton Parish Council	Question - Reducing Car Dependency in Banbury	Bringing back the Magistrates Court and a Job Centre to Bicester would reduce car dependency for those who have to travel to Banbury from Bicester and the surrounding villages for these things.
LPR-B-222	Launton Parish Council	Option 22	Limit development at Bicester to protect its setting and maintain separation between the town and surrounding villages. Reduce coalescence between the town and the surrounding villages.
LPR-B-222	Launton Parish Council	Option 23	Before building on greenfield sites, the currently allocated brownfield sites should be completed.
LPR-B-222	Launton Parish Council	Option 24	Neither suggestion. A broad conversion of shops and restaurants to residential use on the high street would necessitate the out of town shopping which could negate the 20 minute neighbourhood policy. Certainly not all shops should be converted to residential use. A full review of what a high street is and what it is for, together with a review of facilities should be undertaken.

LPR-B-222	Launton Parish Council	Option 25	Yes to both suggestions (Community and cultural facilities).
LPR-B-222	Launton Parish Council	Question - Bicester's Heritage & Historic Buildings	It is presumed that the town centre areas such as St Edburg's, Dovecot, Causeway are already protected. The historic area around and over Graven Hill should be protected, as it is presumed to be of significant importance to Bicester's Heritage (see Battle of Graven Hill in AD 871).
LPR-B-222	Launton Parish Council	Question - Bicester's Open Spaces	Don't build on Bicester open space and provide more funding/S106 to maintain and update them – suggest a Green Spaces Champion.
LPR-B-222	Launton Parish Council	Question - Local Green Spaces in Bicester	More green space should be provided.
LPR-B-222	Launton Parish Council	Question - Reducing Car dependency in Bicester	Proper cycle lanes and a decent bus service with accessible facilities (including GP surgeries, Job Centre and Magistrates' Court) within the town centre rather than out of town.
LPR-B-222	Launton Parish Council	Option 30	Limit development in the rural areas to that required to meet local needs
LPR-B-222	Launton Parish Council	Option 31	Use a combination of the above. Many parishes have not been encouraged or are not able to instigate Neighbourhood Plans, particularly due to the cost, the amount of work and volunteer time it requires. The previous iteration of the Local Plan had made it clear that Local Plan Part 2 would include a 'Villages section' and would protect the villages surrounding the larger conurbations. But this appears not to be included, much more consideration should be given to how villages can be sympathetically developed.
LPR-B-222	Launton Parish Council	Option 32	The 20-minute neighbourhood principle should be applied. Then the availability of services such as schools, shops, GP surgeries etc and then accessibility to urban centres.
LPR-B-222	Launton Parish Council	Option 33	A combination
LPR-B-222	Launton Parish Council	Option 34	A combination of both. Surely the valued landscapes have already been defined?
LPR-B-222	Launton Parish Council	Question - Neighbourhood Planning	Smaller villages (even Category A) were assured that there was no need for the expense and effort of producing a village Neighbourhood Plan as the Local Plan Part 2 villages section was due to be developed which would encompass this. It is far more sensible for planners to work with the villages to develop neighbourhood plans in conjunction with the emerging Local Plan.
LPR-B-223	Thelma Spratt	Hanwell	Object. It is a very special village with a lovely community which upholds a traditional view of country life and village community events. The proposed development will erode the spirit of a village which is a conservation area with its 800 year old church surrounded by its country landscape and wildlife habitats. Our local authority has led me to believe that this would all be protected and it is unthinkable that it would allow us to lose what can never be replaced if lost. The local authority should feel proud to have guardianship.
LPR-B-224	Simon Pigden	LPR-A-152	Object. We were led to believe by the Local Authority that there would be no development north of Dukes Meadow Drive. It appears that this principle has been eroded. The Authority appears to be resiling on its word. The countryside around Banbury is under threat. There have already been several significant housing developments in recent times. Any more development will leave just metres between the edge of the conservation area down Gullicote Lane and track. New housing will not be shielded from the sight of the village by any significant natural border, such as currently exists with the trees which hide the current Banbury 5 development. Hanwell is a village with significant historical antecedents. The Castle and St Peter's Church are iconic. The village boasts a thriving rural community. Hanwell attracts visitors to the mediaeval Church and local events and festivals. The housing stock is predominantly 300 years or more old. Further development between Hanwell and Banbury would permanently and irrevocably destroy the character of the village. Development of the site is contrary to the Local Plan. Development of what is currently active agricultural land would go against KO5, KO9 and KO15. Development of the proposed sites would be akin to coalescence and would ride roughshod over views you know to be held by the local community. The development of site would allow some expansion to the north of Banbury without encroaching upon any local villages. There are precious few villages such as Hanwell in the environs of Banbury which must be preserved for our heritage. The wildlife (flora and fauna) that currently thrives in the countryside surrounding Hanwell is under threat. It is in the public interest to retain the fields, footpaths, woodland and waterways lying between the urban sprawl of Banbury and Hanwell. The general public use the land for recreation. Although Hanwell is a small community and cannot field large numbers when it comes to objecting please consider these points. Please consider the health, and wellbeing of Hanwell residents and the historic character of the village before committing to the irreversible annihilation of the landscape and the community as a whole.
LPR-B-224	Simon Pigden	LPR-A-214	Object. We were led to believe by the Local Authority that there would be no development north of Dukes Meadow Drive. It appears that this principle has been eroded. The Authority appears to be resiling on its word. The countryside around Banbury is under threat. There have already been several significant housing developments in recent times. Any more development will leave just metres between the edge of the conservation area down Gullicote Lane and track. New housing will not be shielded from the sight of the village by any significant natural border, such as currently exists with the trees which hide the current Banbury 5 development. Hanwell is a village with significant historical antecedents. The Castle and St Peter's Church are iconic. The village boasts a thriving rural community. Hanwell attracts visitors to the mediaeval Church and local events and festivals. The housing stock is predominantly 300 years or more old. Further development between Hanwell and Banbury would permanently and irrevocably destroy the character of the village. Development of the site is contrary to the Local Plan. Development of what is currently active agricultural land would go against KO5, KO9 and KO15. Development of the proposed sites would be akin to coalescence and would ride roughshod over views you know to be held by the local community. The development of site would allow some expansion to the north of Banbury without encroaching upon any local villages. There are precious few villages such as Hanwell in the environs of Banbury which must be preserved for our heritage. The wildlife (flora and fauna) that currently thrives in the countryside surrounding Hanwell is under threat. It is in the public interest to retain the fields, footpaths, woodland and waterways lying between the urban sprawl of Banbury and Hanwell. The general public use the land for recreation. Although Hanwell is a small community and cannot field large numbers when it comes to objecting please consider these points. Please consider the health, and wellbeing of Hanwell residents and the historic character of the village before committing to the irreversible annihilation of the landscape and the community as a whole.

LPR-B-224	Simon Pigden	Option 18	Development is most appropriate to the East or South of Banbury where there is lesser prospect of incursion on neighbouring villages.
LPR-B-224	Simon Pigden	Option 19	Support 2) to limit development at Banbury and protect its landscape setting and maintain separation between the town and surrounding villages.
LPR-B-225	Gemma Davis	Hanwell	Object. The village is already under threat from the numerous estates and developments that have seen the identity of the village eroded considerably. The village has become a 'rat-run' for traffic passing from the A422 to the A423 and vice versa (Warwick Road/Southam Road). The existing infrastructure cannot cope with the burden of all the developments that have transformed the appearance of a once rural area into a sprawling housing estate. The village is seriously under threat of becoming absorbed as a suburb of Banbury which must not happen. The establishment of yet another development that encroaches closer to the village is a disgrace, destroying conservation areas, replacing them with yet another estate that contributes towards traffic chaos and pollution.
LPR-B-226	Robert Davis	Hanwell	Object. The village is already under threat from the numerous estates and developments that have seen the identity of the village eroded considerably. The village has become a 'rat-run' for traffic passing from the A422 to the A423 and vice versa (Warwick Road/Southam Road). The existing infrastructure cannot cope with the burden of all the developments that have transformed the appearance of a once rural area into a sprawling housing estate. The village is seriously under threat of becoming absorbed as a suburb of Banbury which must not happen. The establishment of yet another development that encroaches closer to the village is a disgrace, destroying conservation areas, replacing them with yet another estate that contributes towards traffic chaos and pollution.
LPR-B-227	Allan and Gillian Hunt	LPR-A-041	Object. This site falls outside the Residential Settlement Boundary set out in the Adderbury Neighbourhood Plan and therefore contravene Policy AD1. Between 2015-2021 there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more new homes approved at appeal on the site north of Berry Hill Road. (90 houses already build plus outline for 40 and the community centre on Berry Hill Road/Milton Road in less that one mile). These developments have already begun to change the fundamental character of the village, particular of West Adderbury, which has traditionally been rural with limited number of more modern houses. West Adderbury is a distinct area, distant from the vast majority of facilities listed in the Parish Provile. The proposed sites would double the size of West Adderbury which is inappropriate for an area with no facilities and would put an massive pressure on local schools and local facilities nearby.
LPR-B-227	Allan and Gillian Hunt	LPR-A-086	Object. This site falls outside the Residential Settlement Boundary set out in the Adderbury Neighbourhood Plan and therefore contravene Policy AD1. Between 2015-2021 there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more new homes approved at appeal on the site north of Berry Hill Road. (90 houses already build plus outline for 40 and the community centre on Berry Hill Road/Milton Road in less that one mile). These developments have already begun to change the fundamental character of the village, particular of West Adderbury, which has traditionally been rural with limited number of more modern houses. West Adderbury is a distinct area, distant from the vast majority of facilities listed in the Parish Provile. The proposed sites would double the size of West Adderbury which is inappropriate for an area with no facilities and would put an massive pressure on local schools and local facilities nearby.
LPR-B-227	Allan and Gillian Hunt	LPR-A-146	Object. This site falls outside the Residential Settlement Boundary set out in the Adderbury Neighbourhood Plan and therefore contravene Policy AD1. Between 2015-2021 there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more new homes approved at appeal on the site north of Berry Hill Road. The proposed sites would double the size of West Adderbury which is inappropriate for an area with no facilities and would put an massive pressure on local schools and local facilities nearby.

LPR-B-228	Nigel Buttler	LPR-A-091	Strongly object. There remains very little land in the current parish boundary which has not already been allocated for residential use, and which can be used for recreational and agricultural use, following the granting of planning applications for residential use of land both to the north of the parish (The Pavilions - currently under construction) and to the east of the Oxford Road (Longford Park). Land at Longford Park was subsequently transferred to Banbury by Cherwell District Council. To the east of Bodicote only those existing properties lying to the east of Oxford Road (including the Rugby Club site), those in Merlin Close and some three or four in Canal Lane remain in the Parish of Bodicote. Even Tappers Field (corner of Oxford Road and White Post Road) has been granted planning permission for residential use. The loss of agricultural land would deprive residents of Austin Road, Deers Farm, Keyser Road, Sefton Place, and Wards Crescent and any visitors with the site popular with rambles, a view across the countryside looking towards Adderbury. There would also be a large loss in bird life currently being experienced in these areas. Thus the open nature of the south boundary of the village should be preserved to maintain the characteristics of the landscape.
LPR-B-229	Imogen Davis	Hanwell	Object. The village is already under threat from the numerous estates and developments that have seen the identity of the village eroded considerably. The village has become a 'rat-run' for traffic passing from the A422 to the A423 and vice versa (Warwick Road/Southam Road). The existing infrastructure cannot cope with the burden of all the developments that have transformed the appearance of a once rural area into a sprawling housing estate. The village is seriously under threat of becoming absorbed as a suburb of Banbury which must not happen. The establishment of yet another development that encroaches closer to the village is a disgrace, destroying conservation areas, replacing them with yet another estate that contributes towards traffic chaos and pollution.
LPR-B-230	Savills OBO Vistry	Option 1	Supports the suggested Vision which appears to be closely matched to the overarching vision of the Oxfordshire 2050 Plan. We welcome the ambition to have energy efficient, well-designed homes, sufficient in numbers, location, type, size, tenure and affordability, to meet the needs of our growing economy, young people, residents and future generations in Oxfordshire. Vistry, as a major house builder, is well placed to support the Council. We are particularly keen to explore what is meant at point 12) of the draft Vision in regard to how Banbury, Bicester and Kidlington are 're-shaped and adapted' to maintain their roles as attractive, vibrant, retail, cultural and social centres for communities and visitors. We agree with the text at 1.1.8 that the Plan needs to reflect on the NPPF amendment requiring a possible 30 year time horizon for strategic sites. We also agree that the impacts of COVID are significant. However, it is difficult to predict how long term these may be, and whether the Plan should be significantly informed by them or reflect a 'tapering' in impacts. The climate emergency and the approach that we take to our lifestyles including: where we live and work, how we meet our demand for resources, such as food, water and energy, and the infrastructure for the way we travel, is likely to have a greater impact than that created by the pandemic in the coming years. We would be interested to understand the scope of the capacity of the transport network and the sensitivity of the landscape study and town centre and retail study, and how the work has been framed, as soon as details are available.
LPR-B-230	Savills OBO Vistry	Option 2	The Key Objectives all appear to be supportable principles, although we would suggest there are quite a lot of them and that, perhaps, these should be rationalised and simplified. The most important objectives are: KO1, KO10, KO11, KO13, KO16, KO23, KO24, KO26, KO28, KO29, KO30 AND KO31.
LPR-B-230	Savills OBO Vistry	Option 3	Recent comments by the Prime Minister, about the desire not to build any unnecessary housing on green field sites, has had a ripple effect with motions passed by SODC and Cherwell to await further news on national legislation. We consider that the general spirit of making best use of previously developed land will remain. However, it is the degree to which that land can absorb the necessary levels of growth that is key, and previous studies of Cherwell's available brownfield land have presented significant limitations. There should certainly not be a blanket embargo on developing greenfield sites just because they are not previously developed land. Some brownfield sites present greater richness in biodiversity, and present greater constraints in terms of contamination, flood risk etc. Oxfordshire has shown stronger resilience to the pandemic than many areas, and is well placed for a faster recovery, especially along the 'knowledge spine' (which runs centrally through Wantage/Didcot, Oxford and Bicester). A review of the settlement hierarchy seems sensible to re-calibrate and understand the carrying capacity of settlements, and their relationship within the wider spatial options that will fall from the 2050 Plan. Overall, Vistry supports option 1 and, in order to support sustainable growth, a similar focus for residential development on those centres. Cherwell has commissioned an Employment Land and Needs Assessment, to complement the OGNA, but we would need to see the details of this to comment further. Changes to the Use Classes Order and increased flexibility in Class E will also be important in the emerging strategy, especially for town centres and business parks.
LPR-B-230	Savills OBO Vistry	Option 4	Taking account of the Oxfordshire Industrial Strategy and the associated Delivery Plan, there is a strong ambition to drive up the provision of R&D space and to increase employment skills to better respond to local demand and provide people with longer and more flexible careers. Oxfordshire lacks flexible laboratory and innovation space as well as Grade A office space, which are critical to attracting foreign investment and secure international business headquarters. The desire to create a world-leading ecosystem for high-growth businesses requires a support network of business spaces to assist in commercialising technologies, grow to scale, and export. Trends towards increased provision of distribution space on main transport nodes indicates the importance of B8 uses in this part of the County. The approach to identifying employment land should recognise the need for a mixture of business spaces, as well as the importance of improved physical, training and digital infrastructure needed to support this. Part of the offer should include flexible business space, associated with local community hubs, and where people can be part of local employment networks without having to travel away from their local area.
LPR-B-230	Savills OBO Vistry	Option 5	Provide more flexibility within our town centres for different uses including residential development but protect key shopping areas by restricting use to retail, restaurants and cafes. We would support increased flexibility for different town centre uses, including residential development, but recognise the importance that the retail, tourism and leisure role that town centres play and how this needs to be protected.

LPR-B-230	Savills OBO Vistry	Option 6	It is difficult to comment on this meaningfully without wider viability evidence around new policy aspirations for affordable housing provision. Vistry has a strong track record of affordable housing delivery as both Vistry Housebuilding and Vistry Partnerships and would welcome further engagement with the Council in this regard.
LPR-B-230	Savills OBO Vistry	Option 7	It is difficult to comment without the evidence base, but Vistry would suggest that it is reasonable to retain the same tenure mix as set out in the 2015 Plan.
LPR-B-230	Savills OBO Vistry	Option 8	Support, introduce a policy which only requires affordable homes to meet the nationally described space standard and if so, should this be a minimum requirement? With a view to supporting housing internal space standards unless there are site specific or viability reasons why this is not achievable in any particular development and so any future policies should retain flexibility in this regard.
LPR-B-230	Savills OBO Vistry	Question - Separation Distances	The imposition of minimum separation distances would be arbitrary, and not take account of local conditions and design ingenuity. There are better ways of ensuring good design that is neighbourly and protects amenity, through compliance with the principles of the National Model Design Code and any local design code or SPD that is in place.
LPR-B-230	Savills OBO Vistry	Option 9	Vistry would advocate continuing to rely on the Building Regulations, as per 2) above – but if Cherwell is minded to proceed with 1) it should be reflected in the Council's viability evidence, and set at an appropriate level to meet identified needs (i.e. not required for all properties).
LPR-B-230	Savills OBO Vistry	Question - Housing Policies	We consider that there is no need for a policy relating to Modern Methods of Construction – and that it would be more appropriate to let the market resolve this, in the context of meeting other sustainability requirements and legislation.
LPR-B-230	Savills OBO Vistry	Option 10	Section 5.5.7 highlights that the Government will shortly amend the Building Regulations to improve the energy efficiency of new homes. The Future Homes Standard should ensure that all new homes-built from 2025 will produce 75-80% less carbon emissions than homes delivered under current regulations. The Government is proposing to consult on a Future Building Standard which will look at measures to improve the energy efficiency of non-domestic buildings. We would emphasise that policies should align with, and not necessarily exceed, national targets. The term 'net zero' will require careful definition. Vistry has committed to collaborate through the Future Homes Delivery Hub, which has been developed by the Home Builders Federation. The Future Homes Delivery Hub will support the industry in meeting Government targets to ensure that homes are zero carbon ready from 2025 through the Future Homes Standard, and that production and construction methods are net zero by 2050. For these reasons we support Option 2 in relation to sustainable construction.
LPR-B-230	Savills OBO Vistry	Option 11	Both options should be pursued. The identification and potential allocation of specific sites for renewable energy generation involves a complex approach to a range of environmental, engineering and economic issues, and would require the detailed involvement of the energy network companies, landowners and communities, as well as a careful assessment of network capacity and infrastructure requirements. It is sensible to seek to make some strategic decisions about where the best areas for solar, wind, and associated energy storage plant, may be best situated, but that should not preclude individual applications that may fall outside those areas, where criteria based policy and assessment of impacts and benefits can also be used.
LPR-B-230	Savills OBO Vistry	Question - Policies for Climate Change, Sustainable Construction & Renewable Energy	We cannot know how changes in technology, resources and society as a whole may affect things, and so there needs to be flexibility built into the policies as the context may change during the plan period, especially for strategic locations.
LPR-B-230	Savills OBO Vistry	Option 12	We don't see these options as mutually exclusive. We will need some flexibility on compensatory and proactive measures, whilst all parties learn to deal with Biodiversity Net Gain, particularly if the Council is to seek standards higher than those to be mandated through the emerging Environment Bill.
LPR-B-230	Savills OBO Vistry	Option 13	Without a standardised methodology for Environmental Net Gain, it will be extremely difficult to measure and prove at this point. Until the Environment Bill becomes statute, and the measures in that legislation are translated into the NPPF and guidance it is difficult to make an objective comment on this question. The EIA Regulations require the assessment of significant environmental effects for schemes that trigger certain thresholds, already cover a key component of what might be required, and could be adapted to reflect the need to consider natural capital. The development industry needs to find its feet with assessing and proposing Biodiversity Net Gain, before moving onto the next step. The answer to the above should be Option 3, not to require natural capital assessment.
LPR-B-230	Savills OBO Vistry	Option 14	The current Cherwell policy approach to play provision lacks flexibility and finesse. We agree that option 3 seems a more progressive approach, and Vistry would support this.
LPR-B-230	Savills OBO Vistry	Option 15	Vistry suggests that a blend of seek to secure and establish sports hubs at our main settlements and use financial contributions from developers in lieu of on-site provision on strategic sites to enhance existing facilities, to enable increased use is helpful to deliver meaningful sports and recreation facilities in the best locations for communities. Option 1 is also appropriate where strategic development is of a scale to warrant on-site provision, and where no facilities exist locally that can be upgraded. The 2017 CDC Sports and Recreation Assessment should be updated to reflect latest needs and supply issues.
LPR-B-230	Savills OBO Vistry	Question - Local Green Spaces	Vistry considers that Local Green Space designations should not be used to frustrate development, as per the National Planning Policy Guidance. Plans must identify sufficient land in suitable locations to meet identified development needs and the Local Green Space designation should not be used in a way that undermines this aim of plan making. Local Green Space may be a more useful designation for Neighbourhood Plans to consider.
LPR-B-230	Savills OBO Vistry	Question - Achieving Good Design & 'Beauty'	Achieving good design and 'beauty' can be best supported by avoiding ambiguity between National Model Design Code and local codes/guidance, thus providing developers with certainty. If the Council intends to produce a Local Design Code, any standards must reflect this Local Plan process to ensure that they do not negatively impact upon the viability of developments, thus compromising the deliverability of the plan.
LPR-B-230	Savills OBO Vistry	Question - 20-Minute Neighbourhoods	We are supportive of the 20-minute neighbourhood principles.

LPR-B-230	Savills OBO Vistry	Question - Transport & Connectivity	Vistry agrees with the proposed transport and connectivity approach. We support the aims of moving towards a net zero transport network and agree that spatial planning has a clear role in supporting a decarbonised transport system. Sites such as those being promoted by Vistry to the north of Caversfield, on the edge of Bicester, have the opportunity to make a significant contribution to this agenda, compared to more rural or isolated sites.
LPR-B-230	Savills OBO Vistry	Option 16	Provide a policy with the requirements expected from new development to provide digital connections and be designed to accommodate future digital infrastructure needs (future proofing) as a reasonable aim in relation to digital infrastructure but consider that it may be difficult to make policy requirements mandatory, depending on location and infrastructure networks, and the ability to predict emerging technology.
LPR-B-230	Savills OBO Vistry	Question - Transport Policies	We support the range of policies and documents identified, but note the additional work that Cherwell has commissioned on transport network capacity. We will await more information to make more detailed comment.
LPR-B-230	Savills OBO Vistry	Option 17	We would advocate an overhaul of the methodology that is used to assess social and environmental benefits, in line with Option 1 and then use this to inform the approach to the Infrastructure Delivery Plan.
LPR-B-230	Savills OBO Vistry	Option 18	Vistry supports the opportunity for further urban extensions to Banbury, as per Option 1 and notes that Cherwell studies will include assessment of landscape sensitivity.
LPR-B-230	Savills OBO Vistry	Option 19	Vistry supports sites to the north of Banbury, as per Option 1 and is promoting land for approximately 200 units in that area (LPR-A-214).
LPR-B-230	Savills OBO Vistry	Option 20	Vistry accepts that it may be appropriate to remove certain permitted development rights within the town centre to protect the vitality and function of town centres. It is important to note though that the recent changes to the Use Classes Order simply re-classify a group of previous uses in order to optimise flexibility of use, and that those changes are not capable of being limited by Article 4 Direction.
LPR-B-230	Savills OBO Vistry	Option 22	Vistry supports further major urban extensions into the open countryside and development at an existing or new settlement(s) well connected to Bicester given Bicester's role as a key employment and housing growth area, and its location on a sustainable transport corridor. The existing allocations indicate that areas under construction are mainly to the south, and some to the west, based on the connectivity and access to sustainable travel, and growth at Bicester Heritage, new allocations to the north and east would help balance the delivery. Delivery of the Eco Town and some of the allocations has slowed, and that there may be concerns about the ability to deliver existing and further commitments alongside each other. Vistry currently has two live sales outlets in Bicester: Kingsmere (Bovis Homes brand) and Hawkswood (Linden Homes brand). These have been very popular sites, providing a mix of 2-5 bedroom properties of varying design. Sales rates have been strong, considered in part to relate to Bicester's excellent service offering and good connections to Oxford and further afield. Availability has been challenging, having sold many plots in advance. The proximity of other developers building and selling nearby has not been a constraint to sales which indicates a demand for new homes. Progress is being made in respect of other major development sites around Bicester, including the recent EIA Scoping Opinion in respect of land at North West Bicester, allocated in the adopted Cherwell Local Plan. The Council should recognise that whilst strategic sites can take some time to be delivered through the planning system, the benefits of directing growth to sustainable locations such as Bicester, remain. The land to the north of Caversfield represents the next logical extension of Bicester, and is controlled by a house builder with a strong track record of delivery. Vistry Group would be pleased to discuss their proposals with officers and consultees in order to provide an indication of a development programme and anticipated rates of delivery.
LPR-B-230	Savills OBO Vistry	Option 23	Strongly supports growth to the north of Bicester, in particular land at Dymock's Farm, Caversfield (LPR-A-147), and where there are opportunities to provide a range of services, sustainable transport and community facilities that would support the existing community, as well as new residents. The Vision Statement for that site sets out the proposals in some detail, and is supported by a substantial amount of baseline evaluation work. We have received direct support from Stagecoach, in terms of the opportunities to consolidate and improve local bus services and connections. We have included a copy of a letter of support from Stagecoach. There is an opportunity for connectivity with the Bicester Motion initiative, which is a key area of regeneration and growth for employment, tourism and innovation. This could include making connections and better use of former quarry workings for public recreation and access on land to the east of the A4421 Buckingham Road, which is also controlled by the owner of Dymock's Farm.
LPR-B-230	Savills OBO Vistry	Option 24	Vistry accepts that it may be appropriate to limit permitted development rights in order to protect the function and vitality of Bicester Town Centre.
LPR-B-230	Savills OBO Vistry	Question - Reducing Car Dependency in Bicester	The creation of sustainable new neighbourhoods, which are walkable, well-serviced and which support the 20 min neighbourhood principle, would significantly reduce the need to make trips by private car in Bicester. Our Vision Statement for Dymock's Farm sets out the credentials of the local movement network, the opportunities for betterment to services, and the ability to stitch this scheme into the existing fabric in a manner that supports sustainable growth.
LPR-B-230	Savills OBO Vistry	Option 30	Vistry considers that the approach set out in Option 1 would be the best approach, in order to meet the vision and key objectives of the 2040 Plan, which are much better served through continuing to focus development at urban centres.
LPR-B-230	Savills OBO Vistry	Option 31	Use a combination of the above, the best approach for delivering housing needs in rural areas is a combination of partnership working and high level guidance for Parishes in preparing community led plans.
LPR-B-230	Savills OBO Vistry	Option 32	Vistry would advocate an approach aligned with Give additional weight to the accessibility of the settlement to our urban centres by public transport, walking and cycling, where the urban centres and the connectivity available to them is given additional weight, as these centres provide the greatest range and choice of facilities and services.
LPR-B-230	Savills OBO Vistry	Option 34	Support a review of landscape sensitivity. The consideration of landscape capacity and sensitivity needs to be reasonably detailed however, or otherwise a lack of granularity could risk opportunities for development being ruled out.

LPR-B-230	Savills OBO Vistry	LPR-A-147	Representation is supported by a letter from Stagecoach and a Vision Statement promoting the allocation of the site for residential use. Vistry is promoting a strategic site as suitable for residential-led development to the north of Bicester which provides the opportunity to incorporate flexible business space in line with new working patters. As part of our work to support proposals at Dymock's Farm, Caversfield, Vistry has looked carefully at the network of uses and connections that will support the existing community and create a new walkable neighbourhood. Strongly supports growth to the north of Bicester, in particular land at Dymock's Farm, Caversfield, and where there are opportunities to provide a range of services, sustainable transport and community facilities that would support the existing community, as well as new residents. The Vision Statement for that site sets out the proposals in some detail, and is supported by a substantial amount of baseline evaluation work. We have received direct support from Stagecoach, in terms of the opportunities to consolidate and improve local bus services and connections. We have included a copy of a letter of support from Stagecoach. There is an opportunity for connectivity with the Bicester Motion initiative, which is a key area of regeneration and growth for employment, tourism and innovation. This could include making connections and better use of former quarry workings for public recreation and access on land to the east of the A4421 Buckingham Road, which is also controlled by the owner of Dymock's Farm.
LPR-B-231	Hazel Skwirzynska	Hanwell	Object. The historic village will be consumed with this development. At the last stage of the development plan the residents of Hanwell were assured that there would be no more development north of Dukes Meadow Drive. This principle was eroded and it would appear that it is yet again under threat. It is a dreadful situation when the integrity of our village community, a conservation area, is put at risk. The traffic disruption is already awful without adding to this with further development. Furthermore the infrastructure is not in place to support further development. Schools and GP practices have waiting lists. I am passionate that this Village must be protected for the future. Please do not consider future developments that will cause this small and historic Village to be lost.
LPR-B-232	Deddington Development Watch	Option 2	KO 16 is one of the most important objectives for addressing the climate emergency. Policies should discourage development in locations where residents will be largely dependent on the private car as a mode of travel, especially for commuting. If there is a bus service nearby, the timetable, route, and actual usage should be critically analysed to assess its viability for commuting. KO 23: There is only one reference to brownfield land in the entirety of the LPR consultation document. Development in the Rural Areas should meet local needs and be sustainable. Imposing wider district housing needs on the rural areas would raise significant sustainability issues. Sustainability factors to be considered, amongst others, would include transport sustainability credentials, infrastructure capability (including schooling, health care, not just drains etc.), impact on the environment and digital connectivity. The rural area of Cherwell s thriving, but it does not need spoiling by unnecessary or inappropriate development. To make more efficient and effective use of land, apart from the need to develop more brownfield sites, development in urban areas, in particular within walking distance of transport interchanges, should be high density. KO 25: This objective is particularly important in the case of the rural areas if the environment and landscapes in north Oxfordshire, and the setting and character of our villages, are to be conserved for the benefit of generations to come rather than spoiled by overdevelopment.
LPR-B-232	Deddington Development Watch	Option 3	Support at our main urban centres of Banbury, Bicester and Kidlington and at significant transport interchanges. Transport routes are focused on main urban centres.
LPR-B-232	Deddington Development Watch	Option 6	This is a complex issue. To what extent have the targets in the 2015 Local Plan been met by developers ? Would higher targets be economically viable ?
LPR-B-232	Deddington Development Watch	Option 7	Keep the same affordable housing tenure mix as set out in the 2015 Local Plan with 70% Affordable and Social Rent and 30% Social Rent?. Should 30% Social Rent instead read 30% affordable homes to buy?
LPR-B-232	Deddington Development Watch	Option 8	All new homes should meet national internal space standards as a minimum.
LPR-B-232	Deddington Development Watch	Question - Separation Distances	Seperation distances would be appropriate in the Rural Areas to help to preserve local character.
LPR-B-232	Deddington Development Watch	Option 11	A criteria-based approach would be more appropriate.
LPR-B-232	Deddington Development Watch	Option 12	Secure as close to the site as possible. To make mitigation of harmful effects on biodiversity meaningful, any measures need to be as close to the site as possible.
LPR-B-232	Deddington Development Watch	Option 13	Include a policy in the Plan requiring major development proposals to: a) be supported by a natural capital assessment to demonstrate the impact of the proposals and b) demonstrate environmental net gain. Consistent with Key Objectives on the Challenge of Climate Change.
LPR-B-232	Deddington Development Watch	Option 15	Use financial contributions to enhance existing facilities near new sites. This will serve to reduce the need to travel.
LPR-B-232	Deddington Development Watch	Question - Local Green Spaces	We support the identification and designation of Local Green Spaces to help to maintain local character. These are also coming forward under the neighbourhood planning process.
LPR-B-232	Deddington Development Watch	Option 16	Provide a policy with the requirements expected from new development to provide digital connections and be designed to accommodate future digital infrastructure needs (future proofing). This will help to facilitate home working and reduce the need to travel.
LPR-B-232	Deddington Development Watch	Option 17	Update the methodology to consider social and environmental benefits of schemes and the contributions they make to Climate Action, Healthy Place Shaping, and a Sustainable Economy?. The current methodology would benefit from being reviewed.
LPR-B-232	Deddington Development Watch	Option 18	None of these options appears particularly attractive.

LPR-B-232	Deddington Development Watch	Option 30	Limit development in the rural areas to that required to meet local needs - Imposing wider district housing needs on the rural areas instead of meeting truly local needs, would raise important sustainability issues, and be the ruination of some villages. Under 2) - instead of delivering sustainable development, villages would be placed at risk of over-development, with consequent harm to local character and the environment, pressure on infrastructure, and more road congestion and pollution from additional commuting. This would be contrary to the Key Objective of combatting climate change.
LPR-B-232	Deddington Development Watch	Option 31	It is Government policy to encourage 2), since it makes sense to take advantage of local knowledge in assessing and allocating sites through the neighbourhood planning process.
LPR-B-232	Deddington Development Watch	Option 32	Weighting formulae are necessarily subjective and thus risk being arbitrary. Support No. 2 as more likely to address the Key Objective of meeting the challenge of climate change. Any Trsnport assessment should take account of the following: distance of settlement from main employment areas and major retail centres; distances travelled from individual settlements to work destinations, average network distances, and proportion of workers travelling to each identified destination; accessibility, timetabling, routes, usage and cost of any rail services in the vicinity (rail being the most sustainable form of public transport available); accessibility, timetabling, routes, usage and cost of local bus services (often little if barely used for a variety of reasons); limited capacity, and the condition, of rural roads; and, likely degree of dependence on the private motor car as a mode of travel, and consequent effect on meeting net zero carbon ambitions.. Assessed using methodology similar to the Cherwell Rural Area Integrated Transport and Land Use.
LPR-B-232	Deddington Development Watch	Question - Settlement Boundaries	Defining settlement boundaries provides greater certainty for developers and the community as to what is acceptable in planning terms. This is also supportive of a plan-led approach to development. It protects the countryside from unnecessary development such as ribbon development, and it is easy to identify a 'settlement' from 'open countryside'. It would help to ensure that development takes place in the most suitable locations in terms of accessibility and infrastructure, as well as protecting local character and the landscape. The Neighbourhood Plans for Adderbury and Mid-Cherwell have adopted settlement boundaries. Settlement boundaries are an understood and accepted planning tool for guiding and controlling developments. It is understood that Cherwell is one of the few LPAs which does not define settlement boundaries.
LPR-B-232	Deddington Development Watch	Option 33	Criteria-based policies are more focused and flexible.
LPR-B-232	Deddington Development Watch	Option 34	Support both options. It is vital existing policies should not be diluted. Defining valued landscapes per 2) would add focus and provide useful additional protection.
LPR-B-232	Deddington Development Watch	Question - Neighbourhood Planning	Being proactive in guiding, and providing information (e.g. housing targets) to neighbourhood planning groups.
LPR-B-232	Deddington Development Watch	Sustainability Appraisal	representation provides an extract of table 3.5 from the sustainability appraisal and notes that the table is difficult to understand and interpret. Comments provided in relation to table 3.5 - 1. Air and wider env'l quality – This must be made worse by higher growth. The negative should be shown against Option 2. 2. Biodiversity – Higher growth means greater loss of habitat. Significant negative should apply to option 2. 3. Climate change mitigation – agree their finding. 4. Climate change adaptation - ? 5. Communities – Higher growth puts greater stress on services and infrastructure, which are not increased in proportion. Therefore a negative against higher growth. 6. Crime – more people means more crime, so moderate negative against Option 2. 7. Digital infrastructure - = 8. Education and skills - = 9. Employment and Economic Growth – Higher growth means more car dependence and commuting, as employment prospects are not increased – significant negative against Option 2. 10. Flood risk - = 11. Health – Health services are not increased to match higher growth, so services will be more stressed. Negative against Option 2. 12. Historic environment. – Higher growth has an adverse effect on the historic environment. Significant negative against Option 2. 13. Homes – the only positive for Option 2 14. Land and soils – development means loss of agricultural land. Significant negative against Option 2. 15. Landscape – Development must cut off views of the landscape. It can't improve it. Significant negative against Option 2. 16. Poverty etc - = 17. Transport – Significant negative against Option 2. 18. Waste – The local rivers are already polluted by sewage discharge. Higher growth will increase this. Significant negative against Option 2. 19. Water - Higher growth means greater demand for scarce resource. Moderate negative against Option 2.
LPR-B-232	Deddington Development Watch	Parish Profile - Deddington	LPR site submissions: The list, and map, of sites submitted are defective. 4 of the 5 sites submitted by Ridge & Partners on behalf of M&G have been omitted. Public house/restaurant/take away: The list needs updating as follows: Otters in Market Place is closed. May Fu 2 in New Street has closed. The Crown & Tuns in New Street is closed, the "Pie Pub" having relocated to premises in Milton. Flooding and Pollution: According to a report on flooding and pollution in Oxfordshire published by CPRE Oxon on 4th November 2021, one in five Oxfordshire towns and parishes face flooding and pollution issues. The findings in relation to Deddington are as follows: Deddington: Serious and frequent flooding issues and serious sewerage infrastructure issues. Whenever the sewage treatment plant suffers a "pollution event" the effluent has to be tankered off-site. Occasionally the surface water flooding has overwhelmed the sewage treatment plant leading to untreated flooding surrounding farm land, fish ponds and paddocks
LPR-B-233	Mr and Mrs M Wilkinson	LPR-A-175	
LPR-B-234	Kevin Briggs	Question - Settlement Boundaries	There should be community boundaries to limit development. Developments outside of these community boundaries should not normally be permitted In the interests of environmental protection.
LPR-B-234	Kevin Briggs	LPR-A-091	Object. With Longford Park and Cotefield near completion, Bodicote is now overdeveloped. By doubling the number of houses in the village, the council has ensured that the character of the village has been completely changed despite government regulations. Now there is a further element of development being proposed, these fields need to be protected from development on the grounds that the village is already over-developed and does not require further housing.

LPR-B-235	Mark Stapley	LPR-A-104	Object. My objections can be summarized as follows: the proposed site does not benefit from any existing access and will require significant new road construction; there is no obvious place for any new thoroughfare as where Chapel Close ends there is only a narrow bridleway which is unlikely able to accommodate more than single lane traffic; there is no room for pavement on the bridleway which will impact user safety of a popular bridleway part of the Deddington Loop; and, Chapel Close is narrow in places and unsuitable for more than single lane traffic in relation to environment: Chapel Close already channels storm flood water run off; the site is sloping with a lake/large pond above it, and Thames Water Sewage Treatment plant below it requiring careful assessment; the site has been known to suffer flooding from the nearby Sewage Water Treatment plant which only has adequate capacity to deal with existing volumes; impact on wildlife will be severe with a variety of animals using the site as a habitat; development would result in a significant increase in light pollution with all its consequential impacts on the countryside; and, embedded environmental costs of construction of between 40-50 dwellings plus associated infrastructure will be greater than other sites which already have more immediate access to existing infrastructure. In relation to local Impact: Clifton is a small village/hamlet that has no existing amenities (beyond a pub) to support its existing community let alone an expanded one; Clifton is a rural community with no/limited infrastructure to support access to nearest larger communities (ie Deddington, Aynho); and, no bus service to connect Clifton with these communities meaning that any development will increase vehicle journeys, especially shorter ones to these communities, with its higher consequential environmental impact. Clifton has very little existing light industry or similar operations that could provide local employment meaning any residential development in Clifton will only result in an increased volume of commuter journeys with its consequential impact on the environment: The main road in Clifton (from Deddington to Aynho) is difficult to navigate at various times in the day and any development would only exacerbate this. As a rural village, Clifton does not have the capacity, infrastructure or the amenities to support material development and would certainly not be able to support a near doubling of the housing stock (given existing planning permission) that any development would entail. I do not consider that the site is inherently a suitable plot for development with a high environmental impact which would have a disproportionate impact on the Clifton community.
LPR-B-234	Kevin Briggs	Question - Retrofitting of Historic Buildings	There should be more flexibility in allowing energy conservation in listed buildings and buildings in conservation areas. For example, electric vehicle charging points can be installed in these buildings without the need for planning consent and similarly for replacement windows. If the point about charging points cannot be catered for by virtue of the Town and Country Planning Act, then the council needs to provide public charging points to facilitate the extent of electric vehicle ownership that the UK Government envisages by 2030.
LPR-B-236	Cherwell Development Watch Alliance	Question - Green Belt	It is acknowledged the the Green Belt 'is highly valued by residents' yet neither the consultation flyer nor the consultation poster mention that this review considers 'whether exceptional circumstances remain for further small-scale Green Belt release to meet employment needs'. The flyer and the poster are the documents most likely to be seen by residents. The omission in these documents, of any mention of further Green Belt release (even if considered by the Council to be 'small-scale'), is a woeful omission. The Green Belt is highly valued by many residents and they are concerned for its future, particularly in the light of the already very substantial Green Belt Release in the Cherwell Local Plan Partial Review to 2031. We believe the above-mentioned omission will have led to significant under-representation of the views of residents on further Green Belt release. The statement in 5.4.4 pre-supposes the outcome of OP2050 which is still being prepared, will be subject to further consultation and will not be adopted for at least a year which is not acceptable. Neither is it acceptable to base this review on a pre-supposed scenario but one where the number of homes being planned for is not actually known. There is already an extremely high level of growth committed to in existing Oxfordshire Local Plans including the Cherwell one. This growth is significantly in excess of real need for local people and is based on what we believe are unrealistic ambitions for economic growth and attracting people to move into Oxfordshire. Cherwell District Council should insist, via its input to OP2050 and via this Partial Review, that the housing requirement for Cherwell is kept to the lowest level possible. For Cherwell this will be the Standard Method figure of 716 dwellings per annum. This is already above real need but we acknowledge that it is the minimum set by Government. Cherwell District Council should ensure that the housing requirement in OP2050 is also kept to a minimum ie it should be based on the Standard Method.
LPR-B-236	Cherwell Development Watch Alliance	Question - Green Belt	The inter-relationship between this review and Oxfordshire Plan 2050 (OP2050) is unclear. However, this review seems to choose to assume that any new strategic matters relating to the Green Belt will be addressed by OP2050. But the review then suggests that it will need to consider whether there is a need to release further land in the Kidlington area for employment purposes. Either further Green Belt release is a matter for OP2050, or it is not. Neither is the current situation where there is no meaningful understanding as to the inter-relationship between OP2050 and this review is not acceptable. This lack of clarity severely curtails the ability of this consultation to be meaningful. Substantial areas of Green Belt have already been allocated for development around Kidlington, Yarnton, Begbroke and north of Oxford. There should be no further development of the Green Belt in this area, or indeed in any part of Oxfordshire. National policy states that Green Belt is a permanent designation and that, once established, Green Belt boundaries should be capable of enduring beyond the plan period. As the Green Belt boundaries have only just been established through the Cherwell Local Plan Partial Review, to change them now would be to ignore the National Policy in respect of the Green Belt. Whilst it was claimed that the percentage area of Green Belt released in the Cherwell Local Plan Partial Review was very small, this approach overlooked the fact that the effect around Kidlington, Yarnton, Begbroke and north of Oxford was considerable and indeed overwhelming for these relatively small communities. The areas of land left as separation between settlements is generally very small and this will lead to the effective coalescence of this large area and its communities. There should be no further release of Green Belt in Cherwell, or indeed in Oxfordshire as a whole.
LPR-B-236	Cherwell Development Watch Alliance	Option 26	There are very substantial proposals for further employment land such as at Salt Cross (Eynsham – 24ha) and Oxford North and Begbroke and Langford Lane and elsewhere. These have the potential for very large numbers of jobs – 4,500 at Oxford North alone. Existing employment areas, despite having been available for development for many years, are still far from fully occupied. An example is Oxford Science Park which already has further plans for significant expansion as part of the 'Grenoble Road' development.

LPR-B-237	Brian Joynes	LPR-A-107	Object. Any development on this site is inappropriate, undesirable and contradicts many Government Policies, and a number of 'Key Objectives'. There is no significant employment or senior education, in the area therefore would be a daily commuters, and return, by car, to nearby, and distant, places of work and education. The infrastructure; water, sewerage, electricity, roads and footpaths, already undersupplied, would need major works. The village is a 'dark village' new residents would be likely demand street lighting. In the case of commercial development, all the above apply, plus, commuting workers, a match between new residents and employment opportunities being unlikely, and commercial traffic.
LPR-B-238	Jill and Frank Eden	Milcombe	Object. We understand the need for more homes but the existing residents quality of life must be considered. ,There has been a negative impact on the landscape with the 2nd phase of oak farm estate which is totally out of character and has been amended multiple times. The impact is yet to be seen. Trying to house so many people in a small area is problematic. The mains water and sewerage pipes in the main road are struggling with existing amounts, drains are blocked and the smell sometimes is not nice. The impact on the doctors, and schools are struggling to deal with the existing population, especially with the planned builds in Adderbury and Bloxham which will also have an impact .Any building within the village would have a direct impact. The field by the church is a historic fallow field, which floods every year. The field in paradise lane has no access and only through Oak farm. The field has already been affected by the new houses as it does not drain properly. There is also farm access across the field to the hill fields. Both fields have been used for village events and are used for recreation. There would be an impact to wildlife. There is no need to develop in the villages.
LPR-B-238	Jill and Frank Eden	LPR-A-119	Object. We understand the need for more homes but the existing residents quality of life must be considered. ,There has been a negative impact on the landscape with the 2nd phase of oak farm estate which is totally out of character and has been amended multiple times. The impact is yet to be seen. Trying to house so many people in a small area is problematic. The mains water and sewerage pipes in the main road are struggling with existing amounts, drains are blocked and the smell sometimes is not nice. The impact on the doctors, and schools are struggling to deal with the existing population, especially with the planned builds in Adderbury and Bloxham which will also have an impact .Any building within the village would have a direct impact. The field by the church is a historic fallow field, which floods every year. The field in paradise lane has no access and only through Oak farm. The field has already been affected by the new houses as it does not drain properly. There is also farm access across the field to the hill fields. Both fields have been used for village events and are used for recreation. There would be an impact to wildlife. There is no need to develop in the villages.
LPR-B-239	Rudi Sellers	LPR-A-041	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. Additional development around Henge Close at LPR-A-041 would directly abut the Conservation Area and would therefore be detrimental to the setting of the listed buildings on Horn Hill Rd. Development would also be detrimental to the open nature of the Henge Close estate and to the green space and play area to the east. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.
LPR-B-239	Rudi Sellers	LPR-A-086	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. The large-scale developments proposed for sites LPR-A-086 would utterly change the approach to the village and would create a jarring transition from agricultural land to modern, dense housing. if developed, double the size of West Adderbury overnight. Such large scale development is entirely inappropriate for a village the size of Adderbury and is far more suited to a large town or even a city. few facilities present in Adderbury would be completely swamped by a development of this scale, placing massive pressures on local schools and services. Precious public footpaths over these sites, which are in daily use by local residents, would be lost forever. Development of LPR-A-086 would lead to the residents of St Mary's Road being completely subsumed by new estates, fundamentally changing the character of the southern edge of West Adderbury. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.

LPR-B-239	Rudi Sellers	LPR-A-146	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. Additional development around Henge Close at LPR-A-146 would directly abut the Conservation Area and would therefore be detrimental to the setting of the listed buildings on Horn Hill Rd. Development would also be detrimental to the open nature of the Henge Close estate and to the green space and play area to the east. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.
LPR-B-239	Rudi Sellers	LPR-A-218	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.
LPR-B-239	Rudi Sellers	LPR-A-258	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. The large-scale developments proposed for site LPR-A-258 would utterly change the approach to the village and would create a jarring transition from agricultural land to modern, dense housing. Development would lead to a substantial decrease in the green space between West Adderbury and Milton, increasing the risk of coalescence and impacting upon the character of both villages. A popular footpath would be lost, and irreversible damage would be caused to the amenity of the homes to the north of Adderbury Fields, and to the adjacent green space. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.
LPR-B-240	Dr Stephanie Cloete	Option 25	I moved to Bicester recently, attracted by what I read about its commitment to a Green Town policy. Consequently I would be deeply disappointed if this aspect of life in Bicester were to become less prominent. The presence of green areas within and close to the town gives Bicester a great opportunity to be a leader in the vital work of protecting biodiversity at this crucial time. Bicester can set a valuable example proving that a town can maintain prosperity while also fostering and protecting the natural environment.
LPR-B-240	Dr Stephanie Cloete	LPR-A-204	Support the designation of Langford Community Orchard as a local green space. I discovered Langford Community Orchard after I moved to Bicester and it has been a delight, providing opportunities both for quiet reflection in nature and for learning about agricultural methods past and present. It offers excellent opportunities for community participation; there is a great sense of camaraderie amongst the enthusiastic group of volunteers who maintain it to a high standard.
LPR-B-240	Dr Stephanie Cloete	LPR-A-125	Support the designation of Gavray Meadows Local Wildlife Site as Local Green Space. Gavray Meadows is a rich wildlife site, supporting rare species of butterflies and newts. So many areas like this, with meadows, hedgerows and other features dating back to medieval times, have been lost. It has been one of the joys of moving to Bicester for me to discover that there is still this presence of local history and biodiversity so close to town. Not only is it a precious remnant of England's heritage but an established protective environment for threatened species. To lose it would be a tragedy.

LPR-B-241	Buckinghamshire Council	General	<p>Cherwell is covered under the Oxfordshire authorities' agreement to meet all development needs within Oxfordshire therefore we will not be asked to accommodate any unmet development needs from Cherwell. Buckinghamshire is at a very early stage of plan making on a new local plan and so hasn't undertaken the evidence on need and capacity to know if there will be any request from us to Oxfordshire or other areas during the preparation period of the Buckinghamshire Local Plan to accommodate our unmet development needs. England's Economic Heartland Needs to be part of Duty to Co-operate Discussions as they provide the region's voice on strategic infrastructure and services. They are the sub-national transport body for the region covering more than Buckinghamshire and Oxfordshire and can ensure strategic infrastructure is focused on making sure investment in transport, digital and utilities infrastructure is 'joined up'. The Council supports the approach to the Strategic Matter on Homes Needed in the Area on page 6. The Council would appreciate an explanation of why each issue identified in Table 1 is a strategic Duty to Co-operate Matter between Buckinghamshire and Cherwell Councils within Page 11. The Oxfordshire Plan commits Cherwell to meeting development needs within Oxfordshire and not Buckinghamshire. Unless there are specific proposals in Cherwell not already identified in proximity to Buckinghamshire then these may not all be Strategic Matters for the Duty to Co-operate. The Council is not aware of areas where flooding is of a significant concern between Buckinghamshire and Cherwell. The Council is not aware of any crossboundary utility issues to discuss. However, we would like to keep such matters under review as our Local Plan strategies develop further. Flood risk is identified as a strategic matter in Table 1 on page12-13. Buckinghamshire has established a county-wide flood risk management group that includes the Environment Agency, Drainage Boards and Water Companies. Such a forum may be useful for Oxfordshire if it does not already exist. Table 3, page 14, despite Table 1 listing all strategic matters affecting Buckinghamshire and Cherwell there is no joint working listed in Table 3. We have suggested in our Local Plan options paper response the need to have joint working between planning and highway authorities on transport impact from growth along the A41 between Bicester and Aylesbury for example. Table 5, page 17, we look forward to meeting with officers at the stages set out in the table, and welcome discussions on any Statement of Common Ground from the Draft Plan stage. It would make such Statements more effective at the plan examination if they are signed by all DTC bodies affected by an issue: e.g. transport on the A41 from Bicester to Aylesbury would be signed by both planning and highway authorities; or flooding would have the Environment Agency signing as well as other local lead flood authorities and the Council.</p>
LPR-B-241	Buckinghamshire Council	Option 2	<p>The council supports objective KO1 to allocate sufficient land in the plan to meet Cherwell's housing and employment needs (p.25). There is a typo on objective KO14 'Secure' and it is considered there is a missed opportunity in KO14/KO26 to consider 'networks' not merely provision and mitigation of Blue and Green Infrastructure. Such networks may well be wider than a single Council area so could be a matter for Duty to Co-operate and involve Local Nature Partnerships.</p>
LPR-B-241	Buckinghamshire Council	Option 3	<p>Bicester is the location where growth proposals could potentially have impacts into Buckinghamshire of increased traffic levels, air quality or pollution depending on the scale, type and location of employment land. Employment land allocations falling within Use Class B8 Storage or Distribution on a large scale could generate significant regular traffic movements and would in principle be better located closer to the M40 motorway junctions. Impacts on a sensitive route like the A41, which does not bypass villages en-route to Aylesbury, should be avoided.</p>
LPR-B-241	Buckinghamshire Council	Question - Transport & Connectivity	<p>The diagram on p.24 showing the spatial and connectivity elements should include the A41 as this is a key link between Cherwell and Buckinghamshire. With significant growth proposed/committed/under construction at both Bicester and Aylesbury, there needs to be a joined up approach to the growth impacts on the A41 corridor – we would expect Cherwell/Oxfordshire district and county planning authorities to be working with Buckinghamshire Council on developing the approach for this corridor. The A41 Corridor is also home to the Westcott Venture Park which is expanding and developing its space related industrial provision as identified in the Buckinghamshire Local Infrastructure Strategy. The nearby provision of rail access from Oxford to Bicester provides a potentially important link for the business park. The document makes no reference to England's Economic Heartland (EEH) and its adopted Transport Strategy nor the connectivity studies which will develop proposals to improve both east-west and north-south connectivity. EEH should be listed as a further body to be involved in duty to cooperate discussions. In relation to economic growth, the Buckinghamshire Local Enterprise Partnership should also be consulted as the LEPs in this area are ultimately contributing toward economic growth strategies for the Oxford-Milton Keynes- Cambridge corridor. We have passed the consultation to them for their awareness.</p>
LPR-B-241	Buckinghamshire Council	Option 23	<p>p.80 – There needs to be an assessment of infrastructure capacity particularly road infrastructure before a preferred option for direction of strategic growth is taken. The impact of further traffic on the A41 corridor to Aylesbury should be considered comprehensively. We recommend that a density and capacity evidence study be undertaken to maximise the potential from brownfield sites with links to public transport and the town centre, so reducing any requirement for greenfield land further out from the town centre.</p>
LPR-B-241	Buckinghamshire Council	Option 34	<p>p.99 – In Buckinghamshire we have locally designated landscapes as well as landscape character and nationally designated landscapes. We consider it is important to consider the issue of landscape impact from development beyond the Cherwell district boundaries and so take account of Landscape Character Assessments to define the value, key qualities or detracting features regardless of which district/council they fall within.</p>
LPR-B-242	Aleks Skwirzynski	Hanwell	<p>Object. Living in this historic village is very special and I'm concerned that the plans to further develop the area past Dukes Meadow will consume Hanwell and lose forever the historic integrity of our village, my home but also the beauty of the 12th century church and churchyard are at risk, as the natural habitats in and around the village.</p>

LPR-B-243	Heather Jakerman	Hanwell	Strongly object. Development could absorb the beautiful village of Hanwell. We were led to believe by the Local Authority that there would be no development north of Dukes Meadow Drive, but this principle has been eroded and it is now clear that it is contemplated it will be eroded again. Hanwell is a peaceful rural countryside which is being threatened. Development would destroy wildlife, habitats and countryside views. We have many old houses in the conservation area with a castle and it's landscape gardens which have recently had very successful archaeological digs. Having walked around the village and surrounding fields for many years what a sadness to think a lot will disappear. The additional traffic in the village, as it would be used as a cut through, would cause chaos and be an serious problem with the narrow winding roads.
LPR-B-244	Robert Jakeman	Hanwell	Strongly object. Hanwell is a peaceful rural village and a joy to live in, with its 12th century Church, a castle, pub and many old houses in this conservation area. The threat of this housing development to our small village is very alarming which could end village life as we know it. Having enjoyed the rural life with its many walks and fantastic views also the abundance of wild life it would be a very sad loss indeed. We were led to believe by the Local Authority that there would be no development north of Dukes Meadow Drive, but this principle has been eroded.
LPR-B-245	Stuart Yeatman	LPR-A-077	Object. About 20-years ago this land was the subject of a planning application to redevelop farm buildings for residential development (I supported that planning application). The consequent planning permission was implemented. If I recall correctly (please advise if my recollection is incorrect), the planning permission was tied to a legal agreement restricting the development of the remaining land, thus protecting the character and appearance of this part of the Adderbury Conservation Area. My question is, would those same considerations prevail today?
LPR-B-246	Pamela Jones	LPR-A-175	Object. An exponential increase in housing numbers in Wardington will have a negative impact on the existing infrastructure, many of the roads into and through the village are narrow and difficult to negotiate with current levels of traffic. The addition of a large number of new houses will fundamentally change the character of the village and is not in keeping with much of the established village which falls in a conservation area. There are currently no facilities in the village and those in the surrounding area are over subscribed such as GP Surgery, schools and so on. The village already struggles at times with water and electricity supplies and a development of the size proposed would put further strain on these services. A large housing development would invariably put more strain on the A361 and traffic movements in and out of Banbury; the M40 roundabout and access onto and off the A361 and flow of traffic through the main road section of the village. I am not against development and the building of new housing but believe that it needs to be proportional to the area where it is proposed. Otherwise, it is like giving permission for a "new town" to grow on the green fields beyond where a village once stood.
LPR-B-246	Pamela Jones	LPR-A-034	Object. Development will significantly impact on the spread of Banbury to the east of the M40. It will destroy the appearance of the approach to Banbury and would be development of a greenfield site and would have the inevitable consequence of destroying countryside and wildlife habitat. As we are supposed to be more sustainable society, demand for large distribution warehouses will diminish. Banbury does not have a large workforce-in-waiting who would fill the jobs generated by a new development. New businesses or housing would generate more traffic. The M40 roundabout is already badly congested and Hennef Way is one of the most polluted roads in the country. The building of distribution warehouses or offices (in addition to those currently being constructed) would result in extending the area of pollution currently suffered. Less people are going to Banbury due to traffic issues. Banbury is acquiring the reputation of being an unattractive and unpleasant place to live, work or visit. Development would add to that reputation. The Council has a responsibility and duty of care to ensure that developments such as this on greenfield sites and countryside are ruled out of Cherwell's local plan for the future of this town and that it adopts this approach when considering other, similar proposals.
LPR-B-247	Angela Douglas	LPR-A-152	Object. We have are devastated to learn that neighbouring fields may be built upon. We moved to Hanwell because of its historic beauty and wildlife. Further developments may spoil the beautiful landscape and views around the village as increasing the traffic on a small, narrow rural road (causing danger to people and wildlife). The sense of community will be lost if the plans go ahead.
LPR-B-247	Angela Douglas	LPR-A-214	Object. We have are devastated to learn that neighbouring fields may be built upon. We moved to Hanwell because of its historic beauty and wildlife. Further developments may spoil the beautiful landscape and views around the village as increasing the traffic on a small, narrow rural road (causing danger to people and wildlife). The sense of community will be lost if the plans go ahead.
LPR-B-247	Angela Douglas	LPR-A-154	Object. We have are devastated to learn that neighbouring fields may be built upon. We moved to Hanwell because of its historic beauty and wildlife. Further developments may spoil the beautiful landscape and views around the village as increasing the traffic on a small, narrow rural road (causing danger to people and wildlife). The sense of community will be lost if the plans go ahead.
LPR-B-247	Angela Douglas	LPR-A-047	Object. We have are devastated to learn that neighbouring fields may be built upon. We moved to Hanwell because of its historic beauty and wildlife. Further developments may spoil the beautiful landscape and views around the village as increasing the traffic on a small, narrow rural road (causing danger to people and wildlife). The sense of community will be lost if the plans go ahead.
LPR-B-248	Antony and Louise Harwood	LPR-A-107	Object. Our very small village does not have the infrastructure to support growth on this scale e.g. sewage, public transport, size and quality of roads etc etc. Development cuts directly against Cherwell's own stated policy of protecting rural areas. The site borders an area of outstanding natural beauty, Sibford Gower is a gem that should be preserved. Any development would be at a huge environmental cost, when we all should be striving to reduce the carbon footprint. Cherwell is bound to ensure its local plan contributes to the mitigation and adaptation to climate change, it must surely restrict development to urban areas.

LPR-B-249	Seaton Price	Hanwell	Object. I am appalled and dismayed at the proposal to build more houses on the metropolis that is Hanwell Fields. The intention to increase the Northern boundary of the development to reach within a few hundred yards of Hanwell village is preposterous. Historic and characterful settings like Hanwell retain their character, value and appeal by being villages. How can a village retain its character and feeling when it is the length of a football field from thousands of homogeneous new homes? Hanwell Fields is akin to one giant ocean of bricks and mortar, devoid of history and character. Does Hanwell have to be consumed by this encroaching development and completely swamped before you will abate this policy? I understand the need to provide housing for an expanding population (albeit I am confused as to why you allow Banbury to be so blighted at each plan review). If you have to find new land for development why not look to the East of the town near Junction 11 where there are no villages nearby. There is plenty of land near recent commercial developments that could be surely be developed for housing. The Council should stop allowing Banbury to be developed at the rate that it is currently being developed. I moved here 15 years ago when it was a relatively small and quaint town on the edge of the Cotswolds. Today it is becoming a characterless and congested town with less and less appeal. I very much hope that you will do more to preserve the character, history and value of the beautiful villages that surround it.
LPR-B-250	Sir Stephen Gomersall	Option 10	Ensure that all new buildings, including those built by the private sector, conform to the highest emission and space standards. I support the suggestion that Oxfordshire/ Cherwell should aim higher than what is nationally prescribed. This is because buildings which are attractive to live and work make people happier and more productive, and will have a longer economic life. Good buildings contribute to civic pride.
LPR-B-250	Sir Stephen Gomersall	Question - Supporting our Town Centres	Thank you for a high-quality Consultation Document. New development is necessary for growth. Though Sustainability is highlighted in the document, it could be more strongly stated in the final Plan as a principle for consideration of new development. A key aim for the next two decades will be brownfield redevelopment. This principle already exists within the Oxfordshire plan, but in practice the percentage of new builds achieved relative to target in the urban areas is less than in the rural ones. This should be reversed with a view to carbon reduction and regeneration of town centres. There is evidence everywhere of the "hollowing out" due inter alia to the decline of shop retail, displacement to the periphery of towns etc. Allowing centres to further decline will have negative consequences for local identity, revenue (from tourism etc), health and social cohesion. Centres need to be made attractive again by conserving heritage buildings and a nucleus of retail and recreational facilities in a pedestrian environment while repurposing (or demolishing and rebuilding) disused or declining assets into housing, green space and public facilities such as schools, medical facilities, libraries etc.
LPR-B-250	Sir Stephen Gomersall	Option 2	Strongly agree with key Objectives 10, 15 and 16.
LPR-B-250	Sir Stephen Gomersall	Sibford Gower and Sibford Ferris	The area to the West of Banbury stretching to the Warwickshire border has a long and continuing agricultural heritage, a fine landscape, and contains many villages of historical interest. This is a huge asset for tourism, recreation, agricultural production and health. The Plan should aim to conserve the unique character of this area, and should establish that growth in these communities will be permitted only for their organic expansion (new housing developments for people from outside the immediate area should not be permitted). It may be desirable for example to allow updating, insulation etc of existing buildings including listed ones, conversion of old buildings for housing or workshops providing local employment, to renovate schools, enlarge health facilities etc. There can be a case, subject to location and design, for facilities to generate renewable energy, providing that they do not adversely affect the landscape. Planning should no longer consider significant new housing developments on the fringes of small rural villages. With net zero by 2050 established as a major goal of the Oxfordshire and Cherwell plans, it does not make sense to construct greenfield developments on sites with poor transport, forcing more people to commute and bringing more cars into quiet lanes. These villages generally lack heating, power and drainage infrastructure. Taking away agricultural land threatens diversity, leisure, and a valued way of life. New developments should be concentrated in sites in and around the towns where amenities, transport and infrastructure are already in place.
LPR-B-250	Sir Stephen Gomersall	LPR-A-107	Sibford Gower and Sibford Ferris do not constitute a "larger and more sustainable village" for the purpose of new housing. One new medium-size development has already been approved recently with no improvement to an already basic infrastructure in the two small settlements. A large-scale development would: be in contravention of existing and proposed planning policy; be unsustainable due to the carbon impact of fresh building in an area with no pre-existing infrastructure and very little public transport be totally out of scale and destroy the character of Sibford Gower; destroy a fine landscape which is an extension of the Cotswold AONB Locating development in sustainable locations; harm wildlife and cause the loss of dark skies; and, be impractical and dangerous due to lack of safe road and pedestrian access. The site should not be developed for housing.
LPR-B-251	Spencer Cliff	LPR-A-175	Object. It would mean a fundamental change to the village, nearly doubling the population in a conservation area. There is insufficient services too support this level of change, the village has no school, shops etc. There would need to be a major overhaul of basic services, sewerage, water, electricity, which would cause major disruption to the village. It would increase in traffic on Mount Pleasant causing increased CO2 emissions. Plus the A361 already has increased traffic not helped by the H52 construction which would only cause further delays and pollution. As a community we feel that the village needs to remain as is.
LPR-B-252	Henry Brougham	Question - Green Belt	Given the extent of the areas removed from the Greenbelt in the partial review, no further changes to the Greenbelt boundaries around Kidlington and the neighbouring villages should be considered in the period to 2040. Given the scale of economic development occurring or proposed in Kidlington and at Begbroke there is no need for a limited review of the Greenbelt for employment land.
LPR-B-252	Henry Brougham	Option 26	Accommodate employment land needs outside the existing Green Belt boundaries?
LPR-B-252	Henry Brougham	Question - Local Green Spaces	I support the designation of the sites put forward by Kidlington Parish Council and Kidlington Development Watch as LGS. In particular, the sites on the NE boundaries of the Village help preserve historic landscapes and preserve the setting of Grade 1 Listed St Mary's Church.
LPR-B-252	Henry Brougham	Question - Transport & Connectivity	It is unfortunate that the proposals to close Sandy Lane LC make public transport links between Kidlington and the growth areas of Begbroke and Yarnton challenging. Replacement bridges at Sandy Lane and Yarnton Lane should allow unrestricted cycling and facilitate the passage of cargo bikes.
LPR-B-252	Henry Brougham	Option 27	Investigate expanding the village centre to incorporate Exeter Close.

LPR-B-252	Henry Brougham	Question - Reducing Car Dependency in Kidlington & the Surrounding Villages	Improve pedestrian and cycle links across and along the Banbury Road.
LPR-B-252	Henry Brougham	Option 28	Explore the potential for creating a network of accessible, and wherever possible, linked green spaces around Kidlington.
LPR-B-253	Laszlo Fikner	Question - Transport & Connectivity	Is it possible to build a pedestrian route between Banbury and Overthorpe as the road is very dangerous to walk? When you arrive from Banbury, before the road turn left your speed used to be shown. I speed camera should be put in its place. 80% of the drivers don't care about the speed limit which is very annoying, noisy and dangerous. Sometimes when I try to park to my driveway they come after me very fast and make my mind crazy.
LPR-B-254	Anne Skowronska	LPR-A-107	Object. The scale of development would swamp the village and be completely out of proportion to the existing community. The proposals are inconsistent with existing and proposed planning policy. This development would destroy the character of the village and surrounding countryside. Cherwell is legally bound to make sure the local plan contributes to the mitigation and adaptation to climate change. How can building on such a large scale in a small village like Sibford with few employment opportunities and poor public transport services be a good green option which is not in line with Key Objective 15. New residents would have no option but to use private cars to commute for work so going directly against Key Objective 16 of the existing plan. Surely a more suitable site for new homes would be on brownfield sites on the outskirts of bigger communities such as Banbury where there are already good public transport links and the infrastructure already exists. I hope Cherwell District Council will resist this attempt by the land-owner to make money at the expense of the countryside and our unique historic village taking no effect of the importance of a carbon negative future.
LPR-B-255	Lisa Cliff	LPR-A-175	Object. This is a conservation village and it would fundamentally change the character and closeness of it. We do not have the infrastructure to support with no shop, school and lack of services (sewage etc.). Traffic passing through the centre of the village would increase pollution and the level of traffic would negatively impact the A361. We need designated land for a future bypass traffic. At the moment H52 lorries are a regular occurrence and this is set to continue for the next few years, extra building works is not what is needed for the environment and our village.
LPR-B-256	Antoni Skwirzynski	Hanwell	Strongly object. Previous assurances regarding no development outside of the Dukes Meadow Drive are being ignored. Land between Hanwell and Banbury seems to be available for development. The level of new building close to Hanwell has been at unprecedented levels over the past few years. The very essence of Hanwell being a village is being eroded away as new developments creep ever closer. Such development is destroying an intrinsic part of our rural life by turning Hanwell village into a suburb of Banbury rather than a rural Conservation area, supporting all manner of wildlife. Furthermore, where is the appropriate infrastructure to support such an extended development? The levels of traffic through Hanwell village are already at higher levels than before due to the recent expanding developments on the edges of Banbury. Where are the extra schools? The extra doctor's surgeries etc to support these extra dwellings??We have a beautiful and ancient village here with tremendous history by virtue of having a 12th Century church in our midst. It is at risk of being subsumed by a modern development which will be completely forgettable in the future. We owe this to future generations to be able to enjoy the tremendous history in its rightful setting that is here today.
LPR-B-257	Mrs C Martin	Bloxham	Strongly object. I have strong concerns over the planned developments. The small village is already congested and the increase in traffic congestion and pollution will have a negative impact on the village. The increase in road use through the village is a huge concern. The increase in village population would put the village services under lots of pressure which is a particular concern for key services which are at capacity. There are two district wildlife sites located in the village of Bloxham including The Slade Nature Reserve which has obtained status under the National Parks Act 1948. The Slade is used as a vital educational resource which must not be jeopardised by planned housing developments. Bloxham includes a Conservation Area with buildings which have considerable heritage sensitivity - this historical part of the village will be negatively threatened by the increase in housing developments planned for Bloxham. The increased risk of flooding would be escalated by the planning developments putting existing houses and properties in danger which is unacceptable. Extending the Bloxham boundary by further building of housing developments is detrimental to the current families living and working in Bloxham.
LPR-B-258	Lienza Phipps	Adderbury	Object to the suggested size of housing development proposed. It would see a huge increase in the current size of the village and soon there will be no boundary between Adderbury and Bodicote. The roads are frequently gridlocked and at capacity.
LPR-B-259	Neil Forbes	LPR-A-175	Object. A substantial increase in housing numbers in Wardington would have a negative impact on the existing infrastructure - many of the roads into and through the village are narrow and already difficult to negotiate with current levels of traffic. The addition of a large number of new houses would fundamentally change the character of the village and is not in keeping with much of the established village which is a conservation area. There are currently no facilities in the village and those in the surrounding area are over subscribed - GP Surgery, schools, etc. The village already struggles at times to maintain adequate levels of water and electricity supply, and a development of the size proposed would put further strain on this infrastructure. A large housing development would put more strain on traffic in and out of Banbury, especially the M40 roundabout and access onto and off the A361. I am not against development and the building of new housing per se but believe that it needs to be proportional to the area where it is being proposed.

LPR-B-259	Neil Forbes	LPR-A-034	Object. Development will significantly impact on the spread of Banbury to the east of the M40. It will further destroy the appearance of the approach to Banbury and would be development of a greenfield site. It is bizarre that during the COP26 I am writing to object to a plan which would have the inevitable consequence of destroying countryside and wildlife habitat. The outcome of the development could have a detrimental impact upon the environment. As we are supposed to be moving towards a less consumer-based, disposable society we can only hope that the need for land for large distribution warehouses will diminish. Banbury does not have a large workforce in- waiting to fill the jobs generated. New businesses would generate more traffic. The M40 roundabout is already badly congested and Hennef Way is one of the most polluted roads in the country. The building of distribution warehouses or offices (in addition to those currently being constructed at the bottom of the A361) would surely result in extending the area of pollution currently suffered on Hennef Way. I believe that the Council has a responsibility and duty of care to ensure that developments such as this on greenfield sites and countryside are ruled out of Cherwell's local plan for the future of Banbury, and that it adopts this approach when considering other, similar proposals.
LPR-B-260	Simon Gear	Hanwell	Object. When I moved here I spoke to a member of Cherwell planning team as I wanted to check there were no plans for development like this to happen. I was told categorically that Banbury would always be separate to Hanwell village. This planning proposal clearly goes against this promise and shows clear encroachment on the village. Hanwell village has a clear and distinct history, including the castle and historic church. To preserve this must be a priority, and being engulfed by Banbury will further erode this unique history. Hanwell is already a traffic cut through, leading to traffic issues given the narrow nature of the road through the village. To add even more housing, and the inevitable increase in cars and deliveries, to the village surroundings will cause chaos in the village, along with the risk of harm to the residents of the village. This side of Banbury has already had vast housing development and to continue this towards Hanwell village, would be a huge mistake. I hope that you will see the need to maintain villages in the area as separate dwellings to preserve the landscape, vital ecological habitats and history that this brings.
LPR-B-261	Joanna Wilford	LPR-A-214	Strongly object. Hanwell Village is a historic village which has previously been designated an Area of High Landscape Value and a large part of the village falls within a Conservation Area. There are two Grade I listed buildings and several Grade II listed buildings. Development will increase traffic in the village which is a single narrow road with several pinch points. Congestion is already a problem between the B4100 and the A423. The village is surrounded by good quality arable land which should not be used for housing to support the encouragement of plant based diets. Brownfield sites such as Bankside and Canalside are more suitable for housing. Town Centre development would work well alongside the new development of Castle Quay, giving life to the town centre itself. Development of these proposed sites would go against views you know to be held by the local community.
LPR-B-261	Joanna Wilford	LPR-A-152	Strongly object. Hanwell Village is a historic village which has previously been designated an Area of High Landscape Value and a large part of the village falls within a Conservation Area. There are two Grade I listed buildings and several Grade II listed buildings. The development of LPR A-152 would leave just metres between the edge of the conservation area down Gullcote Lane and would not be shielded from the sight of the village by any significant natural border, such as currently exists within Hanwell Chase. Development will increase traffic in the village which is a single narrow road with several pinch points. Congestion is already a problem between the B4100 and the A423. The village is surrounded by good quality arable land which should not be used for housing to support the encouragement of plant based diets. Brownfield sites such as Bankside and Canalside are more suitable for housing. Town Centre development would work well alongside the new development of Castle Quay, giving life to the town centre itself. Development of these proposed sites would go against views you know to be held by the local community.
LPR-B-262	Dr Hazel and Prof David Jones	LPR-A-113	Object. If the fields were developed, it would link Chesterton with Kingsmere and developments north of the Middleton Stoney Road and negate the buffer between the village and Bicester. The fields should remain as pasture or be designated as recreational space. The suggestions that the hamlet could be surrounded by new development with no buffer are currently seriously affecting their wellbeing. This flooding is aggravated by an increase in storm water from the field labelled LPR-A-118 in the Chesterton Parish Profile. Because of a blocked drain, the drainage ditch on the east side of the lane overflows more frequently, flooding the lane and our land on the opposite side of the lane. Wendlebury has also experienced an increase in storm water from Chesterton because an existing ditch being used take surface water away from Alchester Park. The flow is along the boundary of LPR-A-118 and LPR-A-046, then on the LPR-A-225 land margin to LPR-A-046, following the curve and on through LPR-A-046 to pass under the lane from Little Chesterton into LPR-A-173 before flowing under the A41 and into Wendlebury. There should be no further building contemplated upstream of Wendlebury until the effects of the Great Lakes and Bicester Sports Association have been functional for at least ten years.
LPR-B-262	Dr Hazel and Prof David Jones	LPR-A-106	The Bicester Sports Association development will have a severe effect on the wildlife we have been recording since 2012, particularly the mammals and birds using camera traps. Six of the species recorded regularly have statutory protection: badgers, barn owls, muntjac, otters, polecates and roedeer. Additionally, we have recorded Stoats, Foxes, Grass Snakes, Frogs and the usual small mammals of grass and woodland. During surveys, other people have caught newts in the pond. The elimination of the foraging areas of these mammals and the covering over of the streams below the hamlet will lead to their local disappearance and unacceptable reduction in biodiversity. Any buildings between Little Chesterton and the A41 would cut off otters from the upper reaches of the stream that flows through our land and that to the west of the M40. That includes the Siemens buildings and carparks. There are a couple of badger setts used intermittently. The stream that flows through our land in Little Chesterton is the only storm water drain from both the Great Lakes site and the Bicester Sports Association. The proposed mitigation for these two sites is grossly inadequate because of climate change. After it leaves our land, this stream regularly floods the lane of Little Chesterton. A little further south, it joins another stream which starts near Simms Farm and flows under the M40 to pass through Wendlebury. The lower reaches of this stream (on the Little Chesterton side of the M40) and the lowest regions of the stream that flows through Little Chesterton are within the planned Siemens development. Thus, some major works would be needed to prevent increased surface water run-off to Wendlebury.

LPR-B-263	Chris Wild	Hanwell	Object. Local Authority informed that there would be no housing development north of Dukes Meadow Drive. Hanwell has been an established village with its own cultural identity for more than 800 years and the planned development would impact this. There has been a significant traffic increase using Hanwell as a cut through since recent developments and the proposed development could significantly increase this causing congestion as the roads through Hanwell are narrow in places.
LPR-B-264	Simon Collins	Wardington	Object. Development would double the size of the village. Appears to be in direct contravention to the concept of a conservation area. Wardington lacks on street parking and has narrow roads with minimal borders and pavements. The village is served by an infrequent bus service and an over subscribed local doctors surgery. The A361 is congested and hazardous with an urgent need for a bypass through lower Wardington via this site. There are often power cuts and water leakage and pressure problems. The local services cannot cope with current demand and could not easily be upgraded to cope with a doubling of houses. Wardington cannot cope with the increase in people and traffic a large development would bring. Development would ruin the character and concept of the village.
LPR-B-265	Elaine Strachan-Hall	Hanwell	Strong object. The traffic through Hanwell village has increased and have been concerned about the destruction to wildlife and the overall impact on the surrounding countryside. Further development north of Dukes Meadow Drive is contrary to previous commitments. Any plans to develop would affect a beautiful area of downland and its wildlife, trees and scrub land including enveloping the wildlife area of Hanwell Fields. Any further development north of Dukes Meadow Drive threatens to encroach onto Hanwell village borders and change the nature of Hanwell; adversely affect this conservation area; reduce property value in the village; and, impact on the wellbeing of Hanwell residents.
LPR-B-266	J I Hopkyns	LPR-A-266	Object. This village is adjacent to an area of outstanding natural beauty. There is no street lighting, the lane is narrow and without pavements. The village could double in size and destroy this lovely and quiet village. There are many brownfield sites within a 10 mile radius the developers should be encouraged to build on. The existing Cherwell Local Plan has a policy of 'limiting growth in our rural areas and directing it towards larger and more sustainable villages'
LPR-B-267	Lesley Collins	Wardington	Object. It will almost double the size of the village and hugely strain the minimal local services available. We have one over stretched local surgery and sometimes full local bus service. Where is the infrastructure to support this plan. Continual power cuts and water pressure problems that development could make worse. The roads accessing upper Wardington are single track and full of potholes already insufficient to support existing traffic. Its not okay destrou rural parts of Oxfordshire for new development. House building and over population has a distinct impact on the environment. The A361 will be further congested and ther is minimal opff street parking in the village.
LPR-B-268	Kenton Bromby	Hanwell	Object. Hanwell is a historic rural village with a strong community that Cherwell District Council has promised to protect on numerous occasions but is not honouring its commitments. Hanwell should be seperate from Banbury and latest proposal will eliminate the greenspace. The new developments north of Dukes Meadow Drive have already had a significant impact. New developments have destroyed what was farmland and meant that traffic through the village is at an all-time high. The traffic infrastructure is not capable of sustaining increases in traffic. Further increases to the traffic volume will surely lead to serious accidents and destroys the village character, increasing noise levels beyond those experienced. Our community benefits from reduced ambient light and future development would increase this. Coalescence with Banbury will force those who wish to live in a rural village to move. Cherwell committed to Dukes Meadow Drive being the urban limit on the north side of Banbury. That urban limit was carefully set by the Council's adopted 1996 Local Plan, and the Hanwell Fields Development Brief and Design Brief in 1997 as a "defensible boundary". Developing the new site would not honour the commitments when Hanwell was designated as a conservation area. The porposal is in direct conflict with Cherwell's Core Strategy. Cherwell has not only a commitment but also a moral responsibility to plant trees, preserve/improve the environment. There has been no evidence that Cherwell has pushed the development of brownfield land. Cherwell should better protect the environment and refuse developments in the countryside. The newly proposed sites north of Dukes Meadow Drive will be a step too far in the erosion of Hanwell, permanently and irreversibly destroying Hanwell's identity, semi-rural setting, character and community.
LPR-B-269	Jayne Allen	Sibford Gower	Object. The proposed sites for housing on Pound Lane are unsuitable for the following reasons: quantity of housing is disproportionate to the size of the village and could double the population; access road is unsuitable; site is prone to flooding; area is not sustainable and would create a disproportionate amount of commuter traffic damaging the environment and wildlife; currently a 'dark sky' village and this precious resource would be destroyed; and, attractive countryside would be lost. Three tree line as part of the previous development was meant to be the new boundary.
LPR-B-270	Greenway Group of North Oxford Golfers	Question - Green Belt	There must be no further land taken out of the Green Belt, and there needs to be concerted action to challenge the long-standing expansionist policy of Oxford City.
LPR-B-270	Greenway Group of North Oxford Golfers	General	There is a very high level of housing commitment around Oxfordshire, much of which has been on Green Belt. Planning and housing policy needs fundamentally to change to address the Climate Emergency and provide more green 'infrastructure' to the public health crisis. References to the Ox-Cam Arc worsens concerns. As there was little consultation on this. Cherwell should be planning for only gentle and natural change, economic and housing growth and even then, planning contingently, particularly given the large housing and employment commitments (many not yet taken up) in the recent Local Plans. The housing requirement for Cherwell should be kept to the absolute minimum of real need (which would be below the unadjusted standard method; it is possible to demonstrate that under the NPPF), and all the policies and proposals in your 2040 Plan as it emerges, should reflect that. There are many more permissions and allocations available in Cherwell than needed for likely building rates. As a result of new Secretary of State recent announcements, there might be a redirection of growth to the North of England, and the current reduction of building rates. The Partial review did not adopt a contingent approach.
LPR-B-270	Greenway Group of North Oxford Golfers	Option 13	Support the principle of natural capital measurement, and note that it might have led to the omission of our golf course from the Partial Review.

LPR-B-270	Greenway Group of North Oxford Golfers	Question - 20-Minute Neighbourhoods	Support the 20 (or better, 15) minute neighbourhood concept. The way to get there is by not accepting Oxford overspill, but pushing for building housing in the City. The City needs to release many of its underused or reserved employment sites for housing; this would achieve much better balance. This would help reduce commuting and emissions.
LPR-B-270	Greenway Group of North Oxford Golfers	Question - Policies for Climate Change, Sustainable Construction & Renewable Energy	In climate (and health) terms, rather than talk about 'connectivity' (which favours 'business as usual'), instead look at 'accessibility' which is a much greener approach.
LPR-B-270	Greenway Group of North Oxford Golfers	Question - Green Belt	Support the principle of green infrastructure; though we note it gets summary treatment in the consultation, and regret the loss of the golf course in this context. The Partial Review put all the Cherwell housing allocation in the Green Belt and will reduce separation to tiny bits of land. This also applies to the 6a and 6b (golf course) allocations which similarly reduces the separation of Oxford. Very worrying that you seem even to contemplate further employment or housing allocations in this entirely Green Belt area. The Plan should make no proposals for further housing or employment on greenfield sites over this whole area; not just because in practice the ravages of the Partial Review development will continue to be developed throughout the 2040 plan period, but critically that the very concept of the Green Belt is about permanence. Should develop only green infrastructure and recreation and open space uses in this area. That the Partial Review allocations 'will provide improved access to the countryside, new opportunities for nature conservation and enhancement, and improved provision for outdoor sport and recreation', the comment is risible.
LPR-B-270	Greenway Group of North Oxford Golfers	LPR-A-111	We see no mention of the re-provision of the golf course. Exeter College is still seeking 'mixed uses' on Frieze Farm (site 111) – and have concerns about that, in the light of these Specific, and General comments above. We hope that you will resist anything but golf and related facilities on that site.
LPR-B-271	Mr and Mrs Jackson	LPR-A-175	Object. Not sustainable because of lack of facilities and services ie no school, no shop and low water pressure. The roads are not adequate for more traffic and will increase the traffic along the A361 with all the new developments proposed on the M40 roundabout.
LPR-B-272	JP Loof	Hanwell	Object. All those appeals are being lost by the growth of Banbury taking over the village. Developments threatens the fabric, nature, and the hard work Cherwell Council has done to protect the village as a conservation area.
LPR-B-273	Zoe Wesson	LPR-A-107	Object. Can you please confirm that the village will be given the opportunity to have its say about this proposal? Development could double the size of the village. The roads around the village are dangerous, full of potholes, difficult to navigate and at capacity. There are practically no buses. All the roads from the village to Banbury (B4035) are challenging and are dangerous. Pound Lane is very narrow. This proposal will ruin the beautiful village of Sibford Gower which is in an area of outstanding natural beauty and unique for its lack of street lighting. If houses are built with all the hard surfaces this will increase surface water levels. This development is at the highest point of the village and will change the landscape. There is no infrastructure in a remote village the number of houses proposed.
LPR-B-274	Jake Oliveira	LPR-A-175	Strongly object. Additional housing to a village with such limited services, supplies, amenities would have a significant detrimental impact to the village: A361 is congested and prone to accidents; no doctors surgery; no shop; limited bus service to Banbury; power issues; low water pressure; no school; countryside erosion and wildlife disruption; and, closure of ancient footpaths. The village is almost entirely a conservation area and must be protected. If the village expands it risks losing its identity. There are much better propositions for housing in the district with good services, like Bicester and/or Upper Heyford which are set up to receive more homes and provide all the amenities these require.
LPR-B-275	Robert brown	LPR-A-175	Object. The size of Wardington could potentially double in size. Wardington has grown moderately in line with predominately specific local needs. It would be completely out of character to allow a large scale development harming the historic structure of the village. I am sure there are planning policies specifically designed to protect rural villages and I urge the council to use these policies to reject the above application.
LPR-B-276	Michael R Lovatt	LPR-A-175	Strongly object. Development would be out of proportion to the existing village. The roads in and around the village are barely adequate for the current traffic levels. The school does not have the capacity for a large influx of additional pupils. The doctors surgery would not be able to support a large influx of new residents. Any new development of such a size would have to comply with modern regulations and have street lighting whilst Sibford Gower is a "dark village". I am not sure that the electricity and water supply to the village could support a large increase in demand. The development would change the present character of the village.
LPR-B-277	Jeanette Brown	LPR-A-175	Strongly object. Wardington is historically a small historical rural village with very little development. Even small infill plots have been turned down through planning policy. It would seem ludicrous if large development could now be approved through change of use. I would expect the council to help in protecting the integrity of our village and use its powers and relevant planning policy to refuse this application.
LPR-B-278	Mr N Court	Sibford Gower	Strongly object. Development would double the size of the village and destroy the beauty and nature of the village. Pound Lane is a narrow road and has limited access for cyclists and pedestrians. There are little amenities in the village. Sibford Gower is a Dark Sky Village; Villagers voted to retain this natural aspect. Has Cherwell considered the significant damage to ancient hedgerows, mature trees, the water table and loss of agricultural land. This site is the highest in the village and is next to an area of outstanding natural beauty. There is a brownfield site that can be used.
LPR-B-279	Alexandra Oliveira	LPR-A-175	Object. Wardington is not the location for a large amount of new housing. There are no essential services in the village ie. doctors, shops, schools, post office. Residents currently have to travel to Cropredy for such services which are already limited and close to capacity. There is a limited bus service. We regularly experience power outages, low water pressure and bad phone signal. A lot of the roads are narrow and would worry how they would cope with extra traffic. The special qualities of this village need to be protected and preserved with the majority of the village a conservation area. A large new housing development would disrupt the tight knit community and deteriorate the special character of the village.

LPR-B-280	Carl Watts	LPR-A-175	Object. Development will completely destroy the character and the original "concept" of the village. The impact of adding these houses to Banbury or Middleton Cheney are negligible. I seriously doubt whether the numbers have been correctly assessed. Building close to a large population centre will have a 5 to 10 fold less impact on the environment than building near a village consider transport of people waste, deliveries, water, power distribution, sewerage etc. All will have disproportionate environmental cost compared when building close to a population centre. The removal of hedgerows containing habitats will have a devastating impact. I was advised that weight of numbers of respondents is a consideration in your assessment of this "scheme". This must be patently incorrect, surely due to its size the village cannot get a decent number to make an argument. The argument should therefore not be down to the feelings of Wardington people. This plan is not aligned with traditional planning ethos.
LPR-B-281	Debby Andrews	Option 30	The two proposal statements are ambiguous. "Required to meet local needs" and "to meet the wider district needs" – these statements are open to interpretation. A third option should be offered: Development in rural areas must be in keeping with the size and character of the existing community.
LPR-B-281	Debby Andrews	Option 31	Use a combination of the above. The Local Plan review was not well publicised and only a very short timescale has been given for response. Consultation needs to be open, honest and all views need to be listened to.
LPR-B-281	Debby Andrews	Option 32	Give additional weight to the availability of certain services and facilities and give additional weight to the accessibility of the settlement to our urban centres by public transport, walking and cycling are important. Public transport to villages has been cut considerably and does not seem to be economically viable. Development should take place where public transport is already available. North Newington has no such transport available. Transport via foot and cycle needs to be safe. North Newington has narrow roads and lacks footpaths. There is not even a footpath from the village to the nursery. A local school should be available, one children can walk to is preferable. North Newington school is already over-subscribed.
LPR-B-281	Debby Andrews	North Newington	Possible development sites are not in keeping with the size and character of the existing community. If all the proposed sites were used, North Newington would double in size and the character of the village would be completely lost. Building in North Newington would go against these NPPF. Traffic would increase exponentially and add to already congested access road through the village. Cars have to be parked on the road as many houses do not have driveways and this leads to traffic congestion at busy times. Roads are narrow in places and this problem is already exacerbated by the parking of cars. Infrastructure in the village is limited. Public transport is minimal, the play area is very small and appropriate for only younger children and the playing field has minimal equipment. The village school is already over-subscribed and the roads surrounding the school are extremely busy at times. The Nursery is only safely accessible by car. Broadband connectivity is often poor due and mobile phone reception is terrible. There is no village shop or village hall. Much of the land next to the housing in North Newington is defined as being within the conservation area. This protects the character of the village contributing to well being. Taking agricultural land to build houses is not adhering to this environmental objective. Animal and wildlife habitats would be destroyed.
LPR-B-281	Debby Andrews	LPR-A-004	Object. The site is not suitable due to the increased traffic on Main Street. Existing properties would be overlooked as the proposed building plots would be built on higher ground. Flooding of existing properties could be an issue during heavy rainfall. Privacy would be lost and houses devalued. Well-being would be affected.
LPR-B-282	Juliet Dessain	Hanwell	Object. Hanwell is a small attractive Ironstone village in a conservation area with a 12th century church, a castle, some listed houses and lots of charm and character. The main road through the village is very narrow in places. During busy times of day, the village is used as cut through route. Development would ruin Hanwell's identity as a village, add to the volume of traffic passing through the village on unsuitable roads.

LPR-B-283	Olivia Wilson	LPR-A-077	Object. Since 2014 Cherwell has made a disproportionately large contribution to meeting the District's housing supply. A significant part of this contribution has been made by Adderbury. These proposals contradict Cherwell Local Plan Key Objectives and existing Planning Policies. Any further development will have a severe visual impact on the rural character of Adderbury, specifically those proposed within the conservation area or adjoining its boundary. Indeed, Sufficient land has already been allocated in the district to meet predicted demand for the next 13 years. Development on these sites contradicts Policy ESD1. Adderbury is not a sustainable location as described in the Local Plan. The local infrastructure, particularly the roads are at or near capacity and create a health and safety risk to residents. Any further development would place an unnecessary strain on these services and does not support a sustainable economy. Any development of this land would be contrary to NPPG - Rural housing para 78. In rural areas, planning policies and decisions should be responsive to local circumstances and support housing developments that reflect local needs. The current supply of housing more than adequately provides for the housing demand, therefore no further need for housing. Continued development of land would severely impact the character and beauty of Adderbury's natural heritage. lessen its natural capital and degrade its ecosystem. Any development would be contrary to Policy ESD10. Substantial new build structures on elevated land, filling a space within the village that positively contributes to the character and appearance of the Conservation Area in its undeveloped form, should be resisted. This area should remain free of substantial new build structures. Any new development would appear unusually incongruous and out of character to the historic character of the immediate locality. Wild Oxfordshire have included this proposed development land within their North Cherwell Conservation Target Area and according with Policy ESD11, development should not be permitted. Further and increased residential development in inappropriate locations where the local road infrastructure is at or near capacity has resulted in a significant increase in traffic. Increased traffic congestion substantially increased vehicle emissions and degraded ambient air quality. Further residential development in Adderbury does not support this objective. The Local Plan Review must resist the continued erosion of villages in Cherwell and specifically around Adderbury. Cherwell have confirmed that their "existing 2015 Plan provides enough homes to the period to 2031."Based on current build rates and planning consent together with existing available sites, Cherwell has over 13 years of underutilised supply to meet future demand. Any development would be contrary to Policy AD5. Proposals to increase residential development in Adderbury will place unnecessary and restrictive burdens upon the health, mental well-being and accessibility of the village. There is a lack of affordability of new developments in Adderbury. The fact that affordable housing is currently only sought on 'qualifying' sites, demonstrates the applicant's non-compliance with this objective.
LPR-B-284	Sue Lovatt	Sibford Gower	Object. Far too many new homes in a small village, this amounts to as many if not more houses than are currently in Sibford Gower. Such development would damage Oxfordshire's valuable countryside. The proposed development is at the highest point in the village and would be very damaging aesthetically. The current village roads are appalling and dangerous. There isnt any employment in Sibford Gower and new development would lead to commuting. The village is currently without street lighting but a new development of this size would incur street lighting and this would spoil the village with light pollution. The school does not have capacity for additional children that would require schooling. This is a huge consideration when considering this large development at Sibford Gower. There is already inadequate water supply, foul and surface water drainage, adding more would be a further burden leading to inefficiency of services. Such a vaste development would cause loss of agricultural land, damage ancient hedgerows, mature trees and the water table.
LPR-B-285	Williams Family	Hanwell	Object. Hanwell village has a unique environment. Closer development will have a negative impact for people, wildlife and ultimately the planet which is understood particularly in the light of COP26. We were led by the Local Authority that there would be no development north of Dukes Meadow Drive. Think about: tree planting instead of development; traffic chaos; destruction of wildlife; Hanwell's 12th century church; and, Conservation Area Focus on Banbury's economy - the number of vacant commercial properties is a disgrace.
LPR-B-286	Ben Eden	LPR-A-175	Strongly object. Adding housing to a village with such limited services, supplies, amenities would have a significant detrimental impact to the existing village for a number of reasons: adding traffic to an already congested and accident heavy area of the A361; no doctors surgery; no shop or convenience store in the village; limited bus service to Banbury; power cuts; low water pressure; no school; countryside erosion and wildlife disruption, and, the closure of ancient footpaths in the area and area of historical importance. The village is almost entirely a conservation area and must be protected. If the village expands it risks losing it's identity. There are much better propositions for housing in the district with good services, like Bicester and/or Upper Heyford which are set up to receive more homes and provide all the amenities these require.
LPR-B-287	Andrea Keeping and Daniel Hill	Option 19	Banbury has seen so much development in the past few years, scores of farmland lost to housing, and no consideration for amenities and infrastructure. We do not think it is fair to try to play areas off of each other as you are doing by asking us to choose between greenfield sites. Banbury has already contributed enough. Limit development at Banbury to protect its landscape setting and maintain separation between the town and surrounding villages.

LPR-B-287	Andrea Keeping and Daniel Hill	LPR-A-185	Object. This proposal is suggesting bulldozing a HGV route through the very heart of Nethercote and its fields, and surrounding homes with industrial units. The number of homes affected by this proposal is obscured on their documentation. There are ~15 homes in Nethercote and the proposals seek to split and isolate these homes. Development would destroy the Green Buffer 3: Nethercote. The plans are not coincident with the neighbouring local gap policy. The fields in the proposal all receive constant use for agriculture. The developers are trying to circumvent policies to protect agricultural land and soil, in particular, The Town and Country Planning (Development Management Procedure) (England) Order 2015. The complete lack of concern for local wildlife and their habitat. We have an array of local species, including deer, pheasants, bats, owls, weasels, badgers, woodpeckers and other birds. The plan not only removes over 96 acres of trees, hedgerows and pastures, it almost encircles/cuts off an area listed on the "Primary Habitat Inventory – Deciduous Woodland (England)", and "National Forest Inventory (GB)" lists. There are a number of streams and flowing ditches throughout Nethercote that handle the water from the hills. Many of the fields included in the proposal flood or become boggy in the winter. If these fields are built upon, would most likely flood the homes in Nethercote. The homes in Nethercote do not have access to the national sewage system. The current lane is single track in many places and there are drainage ditches. The roads are not accurately shown on the proposals. The proposals implies that the new roads will either be the same width as the current lane (not wide enough for HGVs), or that the current lane will be widened to match the new roads (and thus the destruction of the water courses and nature). Part of the lane is missing from the proposal maps. This makes the proposal deceiving. The straight roads proposed will encourage racer drivers to speed through. Proposal does not create further employment land, due to a lack of highways for staff to reach these commercial units and no inclusion of non-driving access for staff. Proposal will not relieve traffic at the M40 junction and the current bridge on Overthorpe Road over the motorway is not built to be able to take heavy traffic. Providing a new link road from the A422 into the existing employment areas would only help workers from towns in Northamptonshire. Seeks to destroy many public right of ways and a popular recreational area. Building commercial units in Nethercote will invariably encourage low level crime and anti-social behaviour. Nethercote residents have to suffer the monotonous sound of the motorway and the associated traffic fumes. Having HGVs and high traffic volumes right outside our homes will significantly worsen our quality of life. Banbury causes a lot of light pollution and more commercial units are going to make this even worse.
LPR-B-287	Andrea Keeping and Daniel Hill	LPR-A-198	Object. Since 1990, the building of the M40 has isolated Nethercote from Grimsbury and its amenities. The Bowling Green Pub is our last amenity within walking distance. Development would destroy the Green Buffer 3: Nethercote. The plans are not coincident with the neighbouring local gap policy. The complete lack of concern for local wildlife and their habitat. We have an array of local species, including deer, pheasants, bats, owls, weasels, badgers, woodpeckers and other birds. The plan not only removes over 96 acres of trees, hedgerows and pastures, it almost encircles/cuts off an area listed on the "Primary Habitat Inventory – Deciduous Woodland (England)", and "National Forest Inventory (GB)" lists. Proposal does not create further employment land, due to a lack of highways for staff to reach these commercial units and no inclusion of non-driving access for staff. The current bridge on Overthorpe Road over the motorway is not built to be able to take heavy traffic. Building commercial units in Nethercote will invariably encourage low level crime and anti-social behaviour. Nethercote residents have to suffer the monotonous sound of the motorway and the associated traffic fumes. Having HGVs and high traffic volumes right outside our homes will significantly worsen our quality of life. Banbury causes a lot of light pollution and more commercial units are going to make this even worse.
LPR-B-288	Rosie Kite	LPR-A-091	Object. The high street is the main access road to Wards Crescent and struggles with existing levels of traffic. Due to the amount of cars parked , the road is not wide enough for two cars and would struggle with the volume of traffic for new houses. This would have a detrimental impact on the wider village. The field is locked by existing houses which presents no natural access point without making large changes to the current roads or fields in the area. Bodicote and the surrounding area has undergone significant development in recent years via Longford park and the developments near the cricket field. While Bodicote is a desirable place to live there is a limit to how much development should go in within one area. These fields are away from the main roads and are considered by many locally as an area that should be preserved for wildlife. The area is undeveloped and would cause disruption to many of the existing villagers.
LPR-B-289	Elsbeth and David Mackenzie	LPR-A-185	Strongly object. Development would impact upon the local wildlife and ruin what has always been a rural area. There has been significant development to the north of the Saltway and in Bodicote recently which sees loss in countryside . More housing in the areas proposed will only make things worse and we will see wildlife struggling to survive in an ever dwindling habitat. This development would be replacing existing land used for agriculture when we should be preserving green spaces and enhancing our 'natural capital' assets. The Saltway is a natural cut off from development and land to the south of the Saltway to Wykham Lane should be excluded from further developments.
LPR-B-289	Elsbeth and David Mackenzie	LPR-A-116	Strongly object. Development would impact upon the local wildlife and ruin what has always been a rural area. There has been significant development to the north of the Saltway and in Bodicote recently which sees loss in countryside . More housing in the areas proposed will only make things worse and we will see wildlife struggling to survive in an ever dwindling habitat. This development would be replacing existing land used for agriculture when we should be preserving green spaces and enhancing our 'natural capital' assets. The Saltway is a natural cut off from development and land to the south of the Saltway to Wykham Lane should be excluded from further developments.
LPR-B-290	Savills for Oxford Technology Park	Call for Sites Promotion - The Piggeries and associated land, Langford Lane, Kidlington	The Piggeries and associated land, Langford Lane, Kidlington is promoted for community / leisure use. Update to HELAA448. Concept plans and images have been supplied.
LPR-B-290	Savills for Oxford Technology Park	Call for Sites Promotion - Land to the south of Langford Lane, Kidlington	Land to the south of Langford Lane, Kildington is promoted for employment. Update to HELAA336. Concept plans and images have been supplied.

LPR-B-291	Chris Stylianou	LPR-A-041	<p>Strongly object. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more new homes approved at appeal on the site north of Berry Hill Rd. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding, particularly along the A4260, Aynho Rd, Berry Hill Rd, Milton Rd and Horn Hill/Cross Hill/New Roads. OCC have installed traffic calming measures on Berry Hill Rd and Milton Rd. New development will add additional traffic on these already dangerous roads. West Adderbury is a distinct area of the parish. The proposed development sites are entirely unsustainable and every household would need to drive to access essential facilities. Several of the proposed sites would destroy the rural entrances to the village. The Adderbury Fields estate is set well back from the road with a green space acting as a buffer. The Henge Close development is shielded from the road by established hedgerows. At the other end of Berry Hill Rd, greenfields are very gradually replaced by large, individual houses. Additional development around Henge Close LPR-A-041 would directly abut the Conservation Area and be detrimental to the setting of the listed buildings on Horn Hill Rd. Development of these sites would be detrimental to the open nature of the Henge Close estate and to the greenspace and play area to the east. The proposed sites listed as LPR-A-086, to the north and south of the junction of the A4260 and Berry Hill Rd, would double the size of West Adderbury. Such large scale development is entirely inappropriate for a small village and is far more suited to a large town or even a city. The few facilities present in Adderbury would be completely swamped by a development of this scale. Important and well used public footpaths over these sites would be lost. The residents of St Mary's Rd would lose their existing connection with local farmland. West Adderbury is a haven for wildlife of all kinds, including hedgehogs, buzzards, kites, badgers, foxes, bats and several varieties of deer. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity. Development of these sites will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. Once the latest phase of Longford Park and the additional housing to the north of Banbury are complete, it is inconceivable that Cherwell will not have at least a 5 year housing supply. The rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests.</p>
LPR-B-291	Chris Stylianou	LPR-A-086	<p>Strongly object. The rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests.
LPR-B-292	Penny Stylianou	LPR-A-041	Strongly object. Would destroy the rural entrances to the village. Adderbury Fields estate is set well back from the road with a green space acting as a buffer. The Henge Close development is shielded from the road by established hedgerows. At the other end of Berry Hill Rd, green fields are very gradually replaced by large, individual houses which are again well set back from the road.
LPR-B-292	Penny Stylianou	LPR-A-146	Strongly object. Would destroy the rural entrances to the village. Adderbury Fields estate is set well back from the road with a green space acting as a buffer. The Henge Close development is shielded from the road by established hedgerows. At the other end of Berry Hill Rd, green fields are very gradually replaced by large, individual houses which are again well set back from the road.
LPR-B-292	Penny Stylianou	LPR-A-258	Strongly object. Would destroy the rural entrances to the village. Adderbury Fields estate is set well back from the road with a green space acting as a buffer. The Henge Close development is shielded from the road by established hedgerows. At the other end of Berry Hill Rd, green fields are very gradually replaced by large, individual houses which are again well set back from the road. The large-scale developments proposed for sites LPR-A-258 would change the approach to the village and would create a jarring transition from agricultural land to modern, dense housing.
LPR-B-292	Penny Stylianou	LPR-A-218	Strongly object. Would destroy the rural entrances to the village. Adderbury Fields estate is set well back from the road with a green space acting as a buffer. The Henge Close development is shielded from the road by established hedgerows. At the other end of Berry Hill Rd, green fields are very gradually replaced by large, individual houses which are again well set back from the road.
LPR-B-292	Penny Stylianou	LPR-A-086	Strongly object. Would destroy the rural entrances to the village. Adderbury Fields estate is set well back from the road with a green space acting as a buffer. The Henge Close development is shielded from the road by established hedgerows. At the other end of Berry Hill Rd, green fields are very gradually replaced by large, individual houses which are again well set back from the road. The large-scale developments proposed for sites LPR-A-086 would change the approach to the village and would create a jarring transition from agricultural land to modern, dense housing.
LPR-B-293	Ellen Gordon	Hanwell	Object. We were led to believe by the Local Authority that there would be no development north of Dukes Meadow Drive. As more housing estates have been built around us we have seen an immense increase in traffic, litter, vast fly tipping and unknown vehicles stopped near the village at night. I don't feel safe in my village anymore. Our village is beautiful and a glimpse into history, but that will disappear through new development. I am surprised that developments like this that would destroy even more land are considered. Farm land around Hanwell is rich in hedgerows, with frequent tree copses and wide headlands that are allowed to grow tall supporting wild species to thrive: kites, buzzards, deer, bats, rabbits, voles, woodpeckers, wrens, owls, foxes, hedgehogs, pheasants, badgers, and a variety of insects.
LPR-B-294	Jonathan Meredith	LPR-A-175	Strongly object. The village is on the main A361, Daventry Road, the route for all HS2 traffic with lots of lorry movements through the village. How would the village cope with new houses. The village is continually becoming noisier and busier. Maintaining the character of any village is important and keeping the conservation area restrictions. Any development should not be out of character and be detrimental to the village. An expansion of that proposed would be out of all proportion to the size of village. There is a lack of infrastructure (water mains/sewerage) in the village and no additional housing of any sort should be contemplated without that being addressed with additional facilities. Without a complete improvement for road access, Wardington is already a nightmare and danger in which to drive or be a pedestrian on the existing roads.

LPR-B-295	Sarah Walker	Sibford Gower	Object. I'm not against small developments in villages in the Cherwell, particularly where sites contain affordable housing, it seems absurd to consider building vast swathes of housing that would radically change a sensitive rural environment at the edge of a site of outstanding natural beauty. Cherwell District Council has a duty to maintain the rich historical heritage of its region, which cannot be achieved by swamping small, rural villages with large-scale developments. A rural village does not have the infrastructure to support such a large influx of people and vehicles and this can only be achieved by radically changing the nature of the environment which destroys the rural setting. The village does not want street lights and the increase in commuter traffic is likely because there are very few employment opportunities in a small village and few bus services to nearby towns. Such developments should be directed towards brownfield sites in and around towns, where local amenities can support the increased population. The loss of rural agricultural land, with its hedgerows, trees and wildlife should not be supported when viable alternatives are available and at a time when conservation and sustainability should be a priority.
LPR-B-296	Donna Resek	Question - Green Belt	Object to building on green belt. Has no one thought about our precious wildlife in all of this? Wildlife is dwindling as it is. We will have to travel which increases pollution and traffic problems. There is already a traffic problem along the Woodstock Road, which increases pollution and cost just sitting in your car waiting for the traffic to move. Try walking along the Woodstock Road at rush hour in Yarnton, the exhaust fumes are horrible. Closing down Sandy Lane for the new houses will increase the traffic on the Woodstock Road. I do wonder if anyone has really thought about this. It would seem all the councillors voting for this plan do not live in the area so could care less, all they care about is money this will bring in. Why not think about all the empty building that have been vacated and turn them into housing.
LPR-B-297	Stuart Godman	Sibford Gower	Object. The local access infrastructure will not support any dwellings of this size, roads, cycleways and footpaths are inadequate. The proposed parcels of land are next to an Area of Outstanding Natural Beauty (Ironstone Downland). This land also sits at the highest point in the village, hence the concerns around the water table. The village already supports many environmental policies such as the 'dark sky' approach hence reducing the need for street lighting. We are also a low carbon village with literally zero public transport so any development will promote the use of more cars. I believe this also goes against the local Cherwell Plan i.e. key objectives 15 & 16. There will be a huge impact on agricultural land and damage to local countryside. If we want sustainable housing then we should be looking for development land nearer towns, such as Banbury, as they have the road infrastructure and local employment opportunities to support new housing. There is simply no economic and environmental benefit for developing small villages out of town. The plan is simply unsustainable.
LPR-B-298	Peter Gordon	Hanwell	Strongly object. Despite the council's commitments to build no further north than Dukes meadow road boundary, your new proposals disregard your promises. These proposals leave barely any space between North Banbury and Hanwell village. They would basically engulf Hanwell and the village would no longer exist. The conservation area status is being ignored. There are many consequential problems with these proposals, some of which are; countryside, village views and horizons destroyed; many and varied wildlife habitats ruined; increase in traffic through the village which is at breaking point; felling of trees and Co2 emissions contrary to the governments commitments; littering and fly tipping in the village; and, peace and solitude of rural village life gone. I understand there is a need for even more housing in Banbury. Please consider other sites, less damaging than these proposals. There seem to be many brownfield sites and inner town retail properties in Banbury that have fallen into disuse and could be converted to housing.
LPR-B-299	Mr and Mrs Cox	LPR-A-185	Object. Development would have an adverse effect on the character and appearance of a rural area and result in a visual intrusion into the countryside contrary to the Cherwell Plan and government guidance. Commercial development is not in keeping with the nature of the site and in an area of high landscape value. It does not protect the character of the landscape, respect the surroundings and is not in keeping with the location and the Green Buffer. The loss of the village to a commercial industrial park would be a significant loss to Cherwell from both a historical point of view and for the recreation and health of the residents of Banbury. Commercial development will have a detrimental impact on the natural environment and biodiversity and is likely to create noise, air and light pollution to nearby residential properties as well as creating a flood risk in a low lying areas. Despite the site's close proximity to the M40 junction the infrastructure is already insufficient and development will lead to further transport issues.
LPR-B-299	Mr and Mrs Cox	LPR-A-198	Object. Commercial development on this site would create a loss of a local amenity. The pub was always very popular and could be again having been recently developed. Development would have an adverse effect on the character and appearance of the rural area and result in a visual intrusion into the countryside contrary to the Cherwell Local Plan and government guidance. Commercial development is not in keeping with the nature of the site and in an area of high landscape value. It does not protect the character of the landscape, respect the surroundings and is not in keeping with the location and the Green Buffer. Commercial development will have a detrimental impact on the natural environment and biodiversity and is likely to create noise, air and light pollution to nearby residential properties as well as creating a flood risk in a low lying area with already high level of surface water flooding.
LPR-B-299	Mr and Mrs Cox	LPR-A-034	Object. Commercial development on this site would create a loss of a local amenity. The pub was always very popular and could be again having been recently developed. Development would have an adverse effect on the character and appearance of the rural area and result in a visual intrusion into the countryside contrary to the Cherwell Local Plan and government guidance. Commercial development is not in keeping with the nature of the site and in an area of high landscape value. It does not protect the character of the landscape, respect the surroundings and is not in keeping with the location and the Green Buffer. Commercial development will have a detrimental impact on the natural environment and biodiversity and is likely to create noise, air and light pollution to nearby residential properties as well as creating a flood risk in a low lying area with already high level of surface water flooding. Despite the site's close proximity to the M40 junction the infrastructure is insufficient and development will lead to further transport issues.

LPR-B-299	Mr and Mrs Cox	LPR-A-168	Object. Commercial development on this site would create a loss of a local amenity. The pub was always very popular and could be again having been recently developed. Development would have an adverse effect on the character and appearance of the rural area and result in a visual intrusion into the countryside contrary to the Cherwell Local Plan and government guidance. Commercial development is not in keeping with the nature of the site and in an area of high landscape value. It does not protect the character of the landscape, respect the surroundings and is not in keeping with the location and the Green Buffer. Despite the site's close proximity to the M40 junction the infrastructure is insufficient and development will lead to further transport issues.
LPR-B-300	Nicola Hale	LPR-A-077	Strongly object. Since 2014 Cherwell has made a disproportionately large contribution to meeting the District's housing supply. A significant part of this contribution has been made by Adderbury. The existing 2015 Local Plan provides enough homes to the period to 2031. Twelve potential sites measuring a total of 109.28 hectares could provide a minimum of 3,250 new houses have been proposed around Adderbury including a large 60 hectare site between Twyford and the M40. These proposals contradict Cherwell District Council's Local Plan Key Objectives and existing Planning Policies. Any further development will have a severe visual impact on the rural character of Adderbury. Sufficient land has been allocated in the district to meet predicted demand for the next 13 years. Development on these sites expressly contradicts Policy ESD1. Adderbury is not a sustainable location. The local infrastructure, particularly the through road, road junctions, access roads and roads adjoining the school are at or near capacity and create a health and safety risk to residents. Any further development would place an unnecessary strain on these services and does not support a sustainable economy. Any development would be contrary to NPPG - Rural housing para 78. The current supply of housing more than adequately provides for the housing demand, therefore there is no further need for housing in this location. Continued development of land, particularly located within the conservation area and green belt should be refused on the basis that any further loss of this attribute would severely impact the character and beauty of Adderbury's natural heritage, lessen its natural capital and degrade its ecosystem. Any development on these sites would be contrary to Policy ESD10. Substantial new buildings on elevated land, filling a space within the village that positively contributes to the character and appearance of the Conservation Area in its undeveloped form, should be resisted. Any new development in this area would appear unusually incongruous and out of character to the historic character of the immediate locality. Wild Oxfordshire have included this proposed development land within their North Cherwell Conservation Target Area and, according with Policy ESD11 development which would prevent the aims of a Conservation Target Area being achieved will not be permitted. The CNC Local Plan Review must resist the continued erosion of villages in Cherwell and specifically around Adderbury. Cherwell has over 13 years of underutilised supply to meet future demand. Residential development on this land will harm both the function and open character of the village in the Conservation Area. Proposals to increase residential development in Adderbury will place unnecessary and restrictive burdens upon the health, mental well-being and accessibility of the village and place developer profit ahead of recreational, social and community needs and vastly increase social exclusion. This is of particular relevance given the lack of affordability of new developments in Adderbury. Cherwell is a high growth area and demand for housing is high. It can be an expensive place to live especially in areas of the district where average median house prices The fact that affordable housing is currently only sought on 'qualifying' sites demonstrates the applicant's non-compliance with this objective. Any residential development in Adderbury does not support Local Plan and does not meet the existing local plan objective that 'seeks to deliver growth as part of an 'urban focused strategy', in other words most of the housing and employment was allocated in the main towns.'
LPR-B-301	Oxford Green Belt Network (OGBN)	Option 2	Cherwell District Council should not leave the determination of any future housing need and the setting of housing targets to the emerging Oxfordshire Plan 2050, but should use the Standard Method to determine this based strictly upon local need and revised demographic forecasts. The Oxfordshire Plan 2050 will be designed to incorporate all the local housing needs in each District, so each District must first define these local housing needs for these to be included within OP 2050. The definition of the local housing need using the Standard Method in Cherwell District is a major omission in the Local Plan 2040 and in this public consultation
LPR-B-301	Oxford Green Belt Network (OGBN)	Question - Green Belt	Object. There is no justifiable need for any small scale review of the Green Belt land in the District for additional future employment use. The area of land already allocated in Langford Lane and in the Begrbroke Science Park will be sufficient for all future needs within the lifetime of CDCLP.
LPR-B-301	Oxford Green Belt Network (OGBN)	Question - Local Green Spaces	A connected network of Local Green Spaces should be designated around the built-up area of Kidlington, as proposed by Kidlington Parish council, and should include all of the existing Green Belt land. This would be in accordance with policy guidance expressed in NPPF paragraph 142. The designation of these Local Green Spaces would also be supported in NPPF paragraph 145.
LPR-B-301	Oxford Green Belt Network (OGBN)	Question - Green Belt	Suggests that there should be a greater emphasis on planting trees, in line with NPPF paragraph 131 and 146 and that in Cherwell there will multiple opportunities to plant more tree within and around settlements, and especially in the Oxford Green Belt. Suggests there is a need in the CDC Local Plan 2040 to provide some specific policy incentives so that this can be achieved, in accordance with national policy to increase carbon capture by trees and to increase the interception of airborne pollution by trees. Highlights that there is also a local need in nearby Oxford City to draw clean cool air from the surrounding Green Belt to mitigate the negative impact of the summer heatwaves forecast to affect this city during the coming decades.
LPR-B-302	Caroline More	Sibford Gower	Object. Suggests that Sibford Gower is very rural and does not have the facilities to support large development proposals. Greenfield sites should not proceed when there are so many disused buildings and brown filed sites available. Concerns that the public transport in the village is not amenable to current residents and that increasing the need for people to travel further to work will be bad for the climate. Development in small villages like Sibford Gower should be for small started homes, as the current housing stock is too expensive for young families.
LPR-B-302	Caroline More	Question - Transport & Connectivity	Housing development in rural areas should be accompanied by a major increase in the availability of public transport.

LPR-B-303	Colin & Judy Reeves	Hanwell	Strong object. Concerned about encroachment on the village from Banbury to the south. Hanwell village is currently used by many as a short cut from Warwick Road to Southham Road, on a route where in some places it is not wide enough for two cars to pass. More development will make this issue worse. Development should not be approved as Hanwell lies within a conservaton area, and there are few facilities in the village.
LPR-B-304	Chesterton Parish Council	Chesterton	Object. If the site submissions outlined in LPR-A-173, LPR-A-046 and LPR-A-106 came into fruition they would swamp the hamlet of Little Chesterton. Other associated developments (LPR-A-225 and LPR-A-118 would also have indirect effects). Permission must not be given to LPR-A-118 proposal on material considerations, including transport links, and the Parish Council would wish to expand the playing field provision on a section of this land. LPR-A-113 should also not go forward as it adjoins the Community Woodland and Countryside Properties had agreed there would be no further housing on land to the south of Vendee Drive. The services and facilities outlined in the village should read: Chesteron Community Centre, 2 Geminus Road, leisure and community activities Chesterton Village Hall - used by Chesterton Play Group Employment sites (not 0) - commerical sites on Bignell Park Barns & employment at Chesterton Hotel, Bicester Hotel, Golf & Spa and the Holiday Inn Bus services - A bus service quoted in profile goes one way to Bicester at 7.25am whcih usally very little passengers Library - free librarty on the Top Green in a bus shelter Profile should also include Chesterton Hotel (including a restaurant), Taxi Service (Banks Furlong), Allotments, Bicester Hotel, Golf & Spa, WYG Engineering industrial unit, Bruern Abbey School The parish extends to the Wendlebury Road to the south and includes the Holiday Inn on the A34, Bicester Avenue & Garden Centre and Bicester Wetland Reserve. Concerns over the inaccuracies in the Chesterton Profile which suggest that the authors do not have a close knowledge of the Parish boundaries. The Parish should have been consulted to check the data before its inclusion in the Review document. Population figures for Chesterton need to be updated as they are inaccurate. P.77. Concerns over building delays on planned school buildings at Kinsmere and Graven Hill. Coordinated planning is needed to ensure that children can use a local schooland not one in East Bicester. CDC should address such issues with OCC, who give impression that they do not plan in coordinated way with CDC. SOME MORE AT END OF COMMENT. Para 6.3.23. The Burnehyll Community Woodland in Chesterton Parish is accessible to Kingsmere residents, but it is not easily accessible for Chesterton residents. CDC should contribute to resolving this issue. Para 6.3.28. In relation to the potential impacts on the setting of nearby vilages such as Launton and Chesterton by unconstrained development, please refer to comments made by Chesterton PC on the future swamping of little Chesterton if submitted plans are approved. Para 6.3.30. Suppports improved access to Bicester's hinterland with the recognition that many villages, like Chesterton, cannot be readily accessed by public transport.
LPR-B-304	Chesterton Parish Council	LPR-A-173	Object. If the site submissions outlined in LPR-A-173, LPR-A-046 and LPR-A-106 came into fruition they would swamp the hamlet of Little Chesterton. Other associated developments (LPR-A-225 and LPR-A-118 would also have indirect effects). Permission must not be given to LPR-A-118 proposal on material considerations, including transport links, and the Parish Council would wish to expand the playing field provision on a section of this land. LPR-A-113 should also not go forward as it adjoins the Community Woodland and Countryside Properties had agreed there would be no further housing on land to the south of Vendee Drive.
LPR-B-304	Chesterton Parish Council	LPR-A-046	Object. If the site submissions outlined in LPR-A-173, LPR-A-046 and LPR-A-106 came into fruition they would swamp the hamlet of Little Chesterton. Other associated developments (LPR-A-225 and LPR-A-118 would also have indirect effects). Permission must not be given to LPR-A-118 proposal on material considerations, including transport links, and the Parish Council would wish to expand the playing field provision on a section of this land. LPR-A-113 should also not go forward as it adjoins the Community Woodland and Countryside Properties had agreed there would be no further housing on land to the south of Vendee Drive.
LPR-B-304	Chesterton Parish Council	LPR-A-106	Object. If the site submissions outlined in LPR-A-173, LPR-A-046 and LPR-A-106 came into fruition they would swamp the hamlet of Little Chesterton. Other associated developments (LPR-A-225 and LPR-A-118 would also have indirect effects). Permission must not be given to LPR-A-118 proposal on material considerations, including transport links, and the Parish Council would wish to expand the playing field provision on a section of this land. LPR-A-113 should also not go forward as it adjoins the Community Woodland and Countryside Properties had agreed there would be no further housing on land to the south of Vendee Drive.
LPR-B-304	Chesterton Parish Council	LPR-A-225	Object. If the site submissions outlined in LPR-A-173, LPR-A-046 and LPR-A-106 came into fruition they would swamp the hamlet of Little Chesterton. Other associated developments (LPR-A-225 and LPR-A-118 would also have indirect effects). Permission must not be given to LPR-A-118 proposal on material considerations, including transport links, and the Parish Council would wish to expand the playing field provision on a section of this land. LPR-A-113 should also not go forward as it adjoins the Community Woodland and Countryside Properties had agreed there would be no further housing on land to the south of Vendee Drive.
LPR-B-304	Chesterton Parish Council	LPR-A-118	Object. If the site submissions outlined in LPR-A-173, LPR-A-046 and LPR-A-106 came into fruition they would swamp the hamlet of Little Chesterton. Other associated developments (LPR-A-225 and LPR-A-118 would also have indirect effects). Permission must not be given to LPR-A-118 proposal on material considerations, including transport links, and the Parish Council would wish to expand the playing field provision on a section of this land. LPR-A-113 should also not go forward as it adjoins the Community Woodland and Countryside Properties had agreed there would be no further housing on land to the south of Vendee Drive.
LPR-B-304	Chesterton Parish Council	Bicester	The map on p. 78 fails to show Vendee Drive which is an important routeway from A4045 to the A412/A34.
LPR-B-304	Chesterton Parish Council	Question - Transport & Connectivity	Para 6.3.1. Concerns that out commuting as not been adequately adressed in terms of the necessary infrastructure, especially in roads. The A4095/The Hale/Akeman Street is used by commuting traffic to access B430 and A34 but the roads are not adequate to support this traffic and the neither the Hale or Akeman Street have footpaths. Further development on NW Bicester will exacerbate these problems.
LPR-B-304	Chesterton Parish Council	Option 24	In agreement that the Town Centre has lost its distinctiveness and this needs addressing. Concerns that out-of-town shopping centres only serve to diminish the Town Centre. Requests the release date for the Retail and Town Centre Study. CDC should consider an article 4 direction to prevent the conversion of shops and restaurants to residential.

LPR-B-305	Graham Chamberlain	LPR-A-086	Object. Adderbury has seen significant development since the 2011 census, when 1064 dwellings were registered, compared to 1250 now. Adding permitted developments to this also amounts to a 21% increase in housing since 2011. Large scale, generic style of new development has been upsetting to residents and is compromising the rural character of the village. Residents at St Mary's Road have had to accept developments to west and north and if two fields to the west of Berry Hill Road are developed, St Mary's Road will be hemmed in by development. Several of the sites put forward contravene the policies set out in the Adderbury Neighbourhood Plan, as they intend to build outside of the accepted boundary of the village and narrow the amenity gap between Adderbury and both Bodicote and Bloxham/Milton. The preservation of these boundaries and gaps ought to be prioritised in consideration of future planning applications. Based on the presumption of density of 30 dph, several of the proposed sites would be vastly disproportionately large compared to previous developments in the village. Adderbury's infrastructure is already at capacity and congestion and parking in the village is a significant issue. The sites proposed at the village would make it more of a rat run as queues on the A4260 often stretch back from Oxford Road traffic lights to Station Road industrial estate. Christopher Rawlins Primary School was extended and increased its intake by 50% in 2017 from 30 to 45 children per year. Anything more than 100 extra houses in the village would mean the school will be over capacity. Extra traffic at existing pinch points, particularly at junction between Oxford/Aynho Roads, will add to the existing air quality pollution in the area. Many parents already avoid walking children to school due to air pollution along the Oxford Road north of The Green. Development on greenfield sites around the village will have a destructive impact on regional ecology. Concerns about effects of water run-off from substantial development might have on existing floodplain. None of sites in Adderbury are within floodplain, but they are adjacent to it and therefore with climate change this could become an issue. A number of the sites proposed contain what are presently rural public footpaths popular with residents. The presence of fossils in the ploughed fields are great educational opportunities. There is currently a lack of light pollution in the village, but substantial new development will diminish this.
LPR-B-305	Graham Chamberlain	LPR-A-258	Object. Adderbury has seen significant development since the 2011 census, when 1064 dwellings were registered, compared to 1250 now. Adding permitted developments to this also amounts to a 21% increase in housing since 2011. Large scale, generic style of new development has been upsetting to residents and is compromising the rural character of the village. Residents at St Mary's Road have had to accept developments to west and north and if two fields to the west of Berry Hill Road are developed, St Mary's Road will be hemmed in by development. Many parents already avoid walking children to school due to air pollution along the Oxford Road north of The Green. Development on greenfield sites around the village will have a destructive impact on regional ecology. Concerns about effects of water run-off from substantial development might have on existing floodplain. None of sites in Adderbury are within floodplain, but they are adjacent to it and therefore with climate change this could become an issue. A number of the sites proposed contain what are presently rural public footpaths popular with residents. The presence of fossils in the ploughed fields are great educational opportunities. There is currently a lack of light pollution in the village, but substantial new development will diminish this.
LPR-B-306	Kirsten Tisdale	LPR-A-175	Object. It is a greenfield site on agricultural land that needs to be retained as such. Many of the current community has either been born or brought up in Wardington or has actively chosen to move to a village - doubling the size of the village will completely change the environment. In particular, much of Wardington is a conservation area.
LPR-B-306	Kirsten Tisdale	LPR-A-034	Object. This is a greenfield site on agricultural land and it should be retained as such. Additional traffic will be a major obstruction and offer little in the way of benefit to local people. Unless there are restrictions on accessing the A361 to Daventry, there may well be additional accidents on what is already a route with high casualties.

LPR-B-307	Woodstock Town Council	LPR-A-063	<p>Objection to major development at the site and consideration of submitting a pre-emptive submission to the Consultation noting the Inspector's actions to replace the site despite being promoted in the previous Draft Plan by Cherwell District Council. The Town Council can consider that many of the concerns reinforcing reasons for objecting now carry even further weight for the future, bearing in mind the same landowner's 'Land at Begbroke' submission referred to in their same submission document (Appendix 3 to this report) suggests a further nearby allocation of a 25 hectare site for up to 750 dwellings a short way along the A44 (near the traffic light junction of the A44 and Campsfield Road by the Airport). The Town Council is also concerned that allocation would strain Woodstock severely, without any degree of benefits in terms of Council Tax precept revenue, local eligibility for affordable housing etc.. Should circumstances regarding constituency opinion change materially, the Town Council would withdraw its objections. The Town Council is in agreement with inspector's comments that the site lies well beyond Begbroke and Yaunton, but they also consider that the site would not be seen as part of Woodstock either as it lies outside of the Woodstock boundary and outside West Oxfordshire. Object. It is unsurprising that Blenheim do not feel setting of the WHS will be significantly harmed by development as they are both landowner and development. Majority of visitors to the WHS come from south of Woodstock, entering the WHS at Hensington Gate and the development will disrupt the existing rural estate. It will take years for any green landscaping to achieve any disguise for the proposed development. The outline proposal of the site gives little attention to the site of the Roman Villa, Developments in the area have been justified on the basis that they are essential in order to maintain the structures of the WHS, but how many more tranquil, peaceful green fields in Oxfordshire must be destroyed before the need to support the WHS is satisfied. There needs to be substantial infrastructure improvements in Woodstock before further development and not later when problems are recognised and change may not be possible. Tivitating sections of road to widen or change traffic flow as part of development does not resolve the problem of more traffic on main roads around this development. There are immovable bottlenecks close to the A4095 and A44 in the centre of Bladon and across the Glyme in Woodstock. The suggested road running through the development linking the A44 at Park View to the A405 could become a rat run. There is an ongoing problem with parking in Woodstock and no opportunities for increasing parking space in either Bladon or Woodstock. The Park &amp; Ride at the south of Woodstock will not solve the parking problem for those in the new developments proposed for the east and north of the town. Without the development, there are issues over Primary School places. Further development will mean the Marlborough School will have to include many more pupils from Woodstock. The current Doctor's surgery is unfit for purpose in terms of size and layout and plans for a new surgery will not be complete in time for new development. As already suggested the boundary of Woodstock will have to be extended to incorporate this development if the development is to be considered 'Woodstock'. The proposed site extends to the Bladon roundabout. This brings the development area right up to the Green Belt of Bladon and, more significantly, it means that Bladon and Woodstock will no longer be spatially separate. The two communities will, in effect, become one - something made even more obvious if the caravan site at Bladon Chains becomes a series of holiday chalets. . We need to avoid merging of distinct communities if we are to prevent a Greater Oxford stretching not only to Begbroke and Yarnton but out to Woodstock and Bladon as well.</p>
LPR-B-308	Natalie Chamberlain	LPR-A-086	<p>Object. Adderbury has seen significant development since the 2011 census, when 1064 dwellings were registered, compared to 1250 now. Adding permitted developments to this also amounts to a 21% increase in housing since 2011. Large scale, generic style of new development has been upsetting to residents and is compromising the rural character of the village. There is currently a lack of light pollution in the village, but substantial new development will diminish this.
LPR-B-309	David Harris	LPR-A-175	Object. The proposed development is out of proportion to any conceivable need as there are already many industrial estates and warehouses to the west of the A361/M40 roundabout, with several more being built to the south. These have existing services and facilities. The current permitted development being constructed to the east of the M40 is both depressingly ugly in an area of beautiful countryside, but has already caused significant disruption to A361 traffic and to all users of the junction roundabout. Even to conceive of a large commercial development to the east side of the A361 seems extraordinary: without direct access to the M40 the traffic congestion would become intolerable. In light of COP26 and with AONBs nearby, the Council should not be permitting large developments like this.
LPR-B-309	David Harris	LPR-A-175	Object. Concerned of suggestion that 15ha of land are being considered for change of use to permit housing developments in Wardington at a rate of 20-30 houses per hectare. There is no shop or school, only one pub, which is struggling to reopen and the local GP surgery in Cropedy has had to twice close its list due to excess demand. The A361 in the village would not be able to cope with an increase in traffic. There are considerably more suitable areas for expansion nearby such as Upper Heyford.
LPR-B-310	Martin Scott	LPR-A-041	Strongly object. Site falls outside the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. Additional development around Henge Close at LPR-A-041 would directly abut the Conservation Area and would therefore be detrimental to the setting of the listed buildings on Horn Hill Rd. Development would also be detrimental to the open nature of the Henge Close estate and to the green space and play area to the east. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. Development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. Inconceivable that Cherwell will not have at least a 5 year housing supply. Rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.
LPR-B-311	Lucy Foley	LPR-A-091	Object. Site has no natural access point and creating one would result in significant disruption to local residents. Other areas closer to main roads could be developed without disruption to people living in the area.
LPR-B-311	Lucy Foley	LPR-A-091	Object. The site would create significant traffic and disruption to local residents who have lived in the area for many years.
LPR-B-312	Colin and Anne Ewles	LPR-A-258	Strong object. All of the sites fall outside Residential Settlement Boundary as set out in Adderbury Neighbourhood Plan, and therefore contravene Policy AD1.
LPR-B-312	Colin and Anne Ewles	LPR-A-041	Strong object. All of the sites fall outside Residential Settlement Boundary as set out in Adderbury Neighbourhood Plan, and therefore contravene Policy AD1.
LPR-B-312	Colin and Anne Ewles	LPR-A-086	Strong object. All of the sites fall outside Residential Settlement Boundary as set out in Adderbury Neighbourhood Plan, and therefore contravene Policy AD1. Will create additional traffic which, together with increased traffic as we come out of Covid, will make accidents more likely.
LPR-B-312	Colin and Anne Ewles	LPR-A-146	Strong object. All of the sites fall outside Residential Settlement Boundary as set out in Adderbury Neighbourhood Plan, and therefore contravene Policy AD1.
LPR-B-312	Colin and Anne Ewles	LPR-A-218	Strong object. All of the sites fall outside Residential Settlement Boundary as set out in Adderbury Neighbourhood Plan, and therefore contravene Policy AD1. Will create additional traffic which, together with increased traffic as we come out of Covid, will make accidents more likely.

LPR-B-313	Stephen Skinner	LPR-A-175	Object. Services at Wardington are barely adequate for its current size, be they sewerage, water supply, power, roads or school. Low water pressure and power cuts are a regular annoyance in Wardington and the A361 that cuts through the village is unsuitable for increasing demand. Proceeding with development will result in fiscal implications for the Council. The environment is also likely to suffer from increased people using their cars as there is limited public transport.
LPR-B-313	Stephen Skinner	LPR-A-175	The proposed scale of development (15.4ha, maximum housing density of 30 houses/ha, equating to 462 houses, equates to 1,104 inhabitants) is too much for a village that currently has some 453 inhabitants and only 189 houses. This represents tripling the village size in a Conservation Area. The Council are of course fully aware that The Planning (Listed Buildings and Conservation Areas) Act 1990 places a duty on local planning authorities to formulate and publish proposals for the preservation and enhancement of its Conservation Areas. The proposal within the Cherwell Local Plan Review, specifically LPR-A-175, most certainly does not meet the requirement of The Planning (Listed Buildings and Conservation Areas) Act 1990.
LPR-B-314	Ridge and Partners for M&G Real Estate	Option 1	generally supportive of the draft vision and agree with its ambition at points 1) and 2) to meet climate action targets and ensure energy production is sustainable whilst delivering new, high energy efficient developments. The client team considers these aims can be achieved through the delivery of future development within rural areas. Also support point 3) - growth of rural areas is needed for point 3) of the vision to succeed across the district, so long as that growth is planned sustainably and is reflective of existing built form insofar that it is proportionate to the settlement size and comprises a high quality design reflective of the character of the area. Point 14) - encouraging to see this forms part of the Council's draft vision, which in turn could help rural communities reach their full potential in order to be sustainable neighbourhoods. paramount that the final vision supports a level of sustainable rural growth, which would lead to these areas having greater access to key services and facilities and be better to connected to towns, and major employment and service centres.
LPR-B-314	Ridge and Partners for M&G Real Estate	Option 2	supports KO1 and believes there is sufficient land in rural areas to help meet it. . Support KO4 - would help support the growth of development within rural areas by becoming digitally connected with the wider area, creating a sense of community, and reducing their reliability on services that would otherwise be found outside the bounds of rural settlements. Supports KO5 - delivery of sustainable rural developments can help achieve this and this objective acknowledges the support for local food production. Supports KO10 and welcomes the opportunity for new developments in rural areas to meet sustainable construction standards to support carbon neutrality. KO11-the delivery of rural development would support KO11 by allowing settlements to become more self-sufficient, therefore reducing the rate of commuting and the output of carbon emissions. KO16- the delivery of rural growth would help meet this objective Allowing sustainable growth proportionate to the size of settlements in these areas will help facilitate and secure their sustainability in the future, reducing the need to travel to other more urban areas for travel. KO20-agrees with KO20 insofar that there needs to be particular focus towards providing homes, particularly of an affordable tenure, within rural areas. allowing growth to the rural areas will help meet rural housing needs, whilst securing their future vitality and sustainability. KO21-positive to see affordable housing is identified as a key objective.it should be recognised that there is a specific affordable housing need within rural areas that needs to be addressed. the delivery of housing, and in particular affordable housing, as part of the emerging spatial strategy within Cherwell is key to preserve and enhance the sustainability of rural areas. This particular need has been conveyed within KO21 which is welcoming. KO23-believe that sustainable levels of development are required within rural areas to ensure they can become sustainable in their own right. Proportionate, well planned and well-designed growth should be accommodated to ensure that all rural settlements can grow sustainably. sites that are situated within or adjacent to smaller villages, and which may currently have access to fewer services and facilities or less frequent public transport services, should still be considered suitable locations for development proportionate to the settlement size and its function, allowing for incremental growth which will help sustain and enhance rural villages. KO24- supportive of KO24.The growth of rural areas would provide opportunities for those areas to be better designed to enable walking and cycling along with public/shared transport options. development in rural areas could create multi modal active travel corridors, linking rural settlements with one another in order to become collectively more sustainable. KO27-agrees with KO27; any new development within rural areas can enhance the local distinctness of its villages and become well connected to existing communities. opportunity within Deddington to allow for growth in rural areas which does not adversely impact upon its character. KO31 - strongly supports KO31; consider sustainable levels of rural development are required in order for rural communities to have access to a range of services, facilities and affordable housing to meet local needs, allowing those communities to become more socially inclusive. Whilst welcoming the Council's previous intention to help to deliver some rural growth, clearly, given the results of the HIA accompanying this consultation it is concluded that the emerging spatial strategy should provide greater flexibility to ensure rural areas do not become unsustainable. greater emphasis should be placed on the growth of rural communities when compared to the adopted local plan, helping to secure their future vitality.
LPR-B-314	Ridge and Partners for M&G Real Estate	Option 30	neither option is preferred and rather it is proposed a combination of both is considered as part of the Council's emerging spatial strategy. Progressing point 1) would ensure that local rural housing needs are met, addressing the affordability issues currently received. However, actioning point 2) would not restrict rural development to where there is an identified local housing need. This provides greater flexibility for proposals to come forward that could help raise the economic prospects and vitality of existing service and facilities within a settlement, which in turn will help increase the sustainability of those settlements, allowing them to become self-sufficient whilst helping to tackle climate change. Point 2) also ties in with the transformational change in which the Oxfordshire Plan 2050 proposes to help meet a higher housing need over the emerging plan period. We assert that rural areas would be able to accommodate a certain amount of growth to help achieve this higher housing need number, helping remove barriers of affordability and sustainability. allocating small-scale growth that is proportionate to the settlement size results in those settlements (and others in close proximity) becoming more self-sufficient. increasing development in the Cat B villages of Clifton and Hempton would help support Deddington's role as a service village.
LPR-B-314	Ridge and Partners for M&G Real Estate	Option 31	Point 3) is preferred.

LPR-B-314	Ridge and Partners for M&G Real Estate	Option 32	Other - an amalgamation of points 1) and 2) should be considered as the rural settlement hierarchy is developed. This provides rural settlements that contain several key services the opportunity to grow sustainably, enhancing the vitality of those services and facilities and the self-sufficiency of those settlements. Key services and facilities include educational facilities, a local shop/supermarket, health facilities such as a doctor's surgery/pharmacy, a place of worship, public open spaces and public transport facilities (i.e. bus stops). giving weight to rural settlements that are within close proximity to the district's urban centres or are linked sustainably by means of public transport, cycling and walking should also be considered sustainable locations for growth. Those settlements should be given weight to the within the hierarchy. other factors that should be considered as part of the rural settlement hierarchy, as above, the growth of settlements that would help support the vitality of other nearby settlements and the services and facilities within them should also be given weight within the hierarchy. Moreover, the Council should have regard to settlements which are digitally more connected given the increase of home working since the pandemic and the digital future in which we live in. This in turn will help the Council tackle its climate change agenda. Paragraph 6.6.9 of the consultation document provides justification for continuing the rural settlement hierarchy approach, having regard to Paragraph 79 of the NPPF. highly support the principles of this, but it is noted the Council have failed to recognise the final part of Paragraph 79. it is requested that the review of the rural settlement hierarchy considers growth within settlements that may in themselves not contain many services and facilities but, are located to other rural settlements that do contain a sufficient level. Moreover, consideration again should be given to Paragraph 104 of the NPPF whereby opportunities to maximise sustainable transport solutions will vary between urban and rural areas and this should be taken into account in plan-making and decision-making.
LPR-B-314	Ridge and Partners for M&G Real Estate	Option 19	the Council's emerging spatial strategy is similar to that contained in their adopted local plan, focusing growth at Banbury and Bicester primarily. This is reflected within options 19 and 22 of the consultation document. It is not disputed that further growth should not be accommodated within these areas given the sustainability attached to them. Rather it is welcoming that point 3) attached to options 19 and 22 considers focusing development at an existing or new settlement well connected to Banbury/Bicester. This provides greater flexibility in allowing other settlements "well connected" to these towns to grow.
LPR-B-314	Ridge and Partners for M&G Real Estate	Option 22	the Council's emerging spatial strategy is similar to that contained in their adopted local plan, focusing growth at Banbury and Bicester primarily. This is reflected within options 19 and 22 of the consultation document. It is not disputed that further growth should not be accommodated within these areas given the sustainability attached to them. Rather it is welcoming that point 3) attached to options 19 and 22 considers focusing development at an existing or new settlement well connected to Banbury/Bicester. This provides greater flexibility in allowing other settlements "well connected" to these towns to grow.
LPR-B-314	Ridge and Partners for M&G Real Estate	Deddington	Deddington is approximately 6 miles away from Banbury town centre and is already well connected to Banbury as the village contains several bus stops providing regular services to it. However, it should also be recognised that settlements not "well connected" to Banbury or Bicester can in their own right be sustainable. Notwithstanding Deddington's connections to Banbury, the parish profile accompanying this consultation outlines that the area contains a number of key services such as a village shop, pharmacy and a primary school. It is our primary contention that Deddington is a well functioned settlement that could fully support rural development. Consequently, in line with Paragraph 79 of the NPPF, the growth of that settlement would help support the vitality of other settlements such as Hempton and Clifton, and vice versa. We reiterate that this should be reflected in the emerging spatial strategy.
LPR-B-314	Ridge and Partners for M&G Real Estate	Option 16	Option 1) would be transformational and innovative, helping best deliver the aims of this option by requiring all developments to at least consider connecting digitally to the wider area. This would particularly be advantageous for rural areas insofar that it would allow persons to work from home easily, an increasingly popular trend since COVID-19, and could increase small enterprises and businesses to grow within such areas, in turn improving its sustainability. Moreover, becoming digitally connected enhances social cohesion and is environmentally beneficial, reducing the reliance on the private vehicle to access the 'everyday' needs.
LPR-B-314	Ridge and Partners for M&G Real Estate	Call for Sites Promotion - Land at Home Farm, Clifton, Deddington	Land at Home Farm, Clifton, Deddington is promoted for housing. Update to HELAA114. Update to HELAA456. Representation supported by copy of submission to the Oxfordshire Plan 2050 Reg 18 Part 2 consultation, site submission in response to Cherwell Local Plan Review Issues consultation and copy of submission to emerging Deddington Neighbourhood plan.
LPR-B-315	Ian Tisdale	LPR-A-175	Strong objection. Allocation of the proposed development threatens to ruin the rural character and the environment enjoyed by residents of the village. Previous proposals for 'affordable' housing have found no support in our village, some of which is a conservation area. Post-brexit economic challenges make it all the more vital to ramp up agricultural productivity, and rolling out this unwelcome project over land that's been farmed for centuries is destructive.

LPR-B-315	Ian Tisdale	LPR-A-034	Strong objection. Development of industrial units will destroy the rural character of the area we've chosen to live in and will remove acres of prime agricultural land. The post-Brexit challenges make it even more vital to ramp up domestic food production, and the seizure of greenfield sites like this is absolutely counter to the efforts we should be making. Additionally, access to and across the M40 junction is already problematic towards Banbury and will likely become intolerable with the proposed development.
LPR-B-316	Jan Warner	Sibford Gower	Strong objection to development on land at top of Pound Lane. This is a dark sky village and it should stay that way. Any new development will likely include street lighting and utilities. There has been raw sewage running down road for weeks in summer so more development in Pound Lane would put added pressure on already overloaded system.
LPR-B-317	Simon Bion	LPR-A-104	Object. Proposals to virtually double the size of the Clifton hamlet through the development of a 5 acre site at south end of Chapel Close are unnecessary and will ruin any existing community culture. The site is currently occupied by unspoilt green space that is enjoyed by residents with little light or sound pollution. There are no amenities for public transport links in the hamlet. The proposed development would lead to disastrous increases in traffic. Inclusion of the site would likely not be influenced by local planning in terms of design and density. Access to the site is not feasible as there are pinch points in road widths. A PRoW lies adjacent to the site, which is in constant use, loss of this is not acceptable. Plot 104 is subject to flooding from ground water and the Thames Water Sewerage Plant. Heavy rainfall consistently floods in Chapel Close. There are already a number of linear sites along Clifton Road that have been identified which are more accessible and less intrusive.
LPR-B-318	Celia Chasey	Hanwell	Strong object. Concerned over encroachment on the village from Banbury to the south. Residents were led to believe there would be no development north of Duke Meadows Drive, but it appears now there will be. With the threat of climate change, we should not be eroding the countryside and cutting down mature trees. The roads in Banbury are heavily congested and journeys to work from Hanwell to Banbury can take over an hour. The road infrastructure in the area can't cope with further development and there will be decreased air quality for future children. The doctor's surgeries are at capacity and cannot cope with further development. The village is 800 years old with a 12th century church and conservation area and further development will erode the character of the village.
LPR-B-319	Nicola Still	LPR-A-175	Object. The proposal would double the size of the village, which is appalling. Wardington is a conservation village with a large number of listed buildings. There are few facilities within the village and they would be swamped by further development. The A361 already has more traffic than it can cope with and the village needs a bypass, not 400 more houses.
LPR-B-320	Ann Gibbons	Hanwell	Object. Concerned over plans to build right up to Hanwell from Banbury. The development plans will disrupt resident's peaceful lifestyles and local wildlife. It would also encroach on farmland that we need more than ever to become self sufficient. Banbury has already seen huge development in all directions, please allow some space between the town and country villages.
LPR-B-321	Susan and Ian Jelfs	LPR-A-258	Object. Falls outside residential settlement boundary as per the Adderbury Neighbourhood Plan, which contravenes Policy AD1. Adderbury has seen six housing estates in recent years and 40 more houses approved on appeal. Adderbury is changing in character as a result and developments so far have not enhanced the village. Traffic in the village is a problem and further development will make the problem worse. Any development close to the conservation area would overwhelm the area. Sites to the north and south of the junction of the A4260 and Beny Hill Road are very large and more suited to an urban setting. Further development in village would increase risk of floods to properties near Sor Brook. It is not clear why the Category A villages in Cherwell have been treated far more favourably in terms of the number and area of proposed sites.
LPR-B-321	Susan and Ian Jelfs	LPR-A-041	Object. Falls outside residential settlement boundary as per the Adderbury Neighbourhood Plan, which contravenes Policy AD1. Adderbury has seen six housing estates in recent years and 40 more houses approved on appeal. Adderbury is changing in character as a result and developments so far have not enhanced the village. Traffic in the village is a problem and further development will make the problem worse. Any development close to the conservation area would overwhelm the area. Sites to the north and south of the junction of the A4260 and Beny Hill Road are very large and more suited to an urban setting. Further development in village would increase risk of floods to properties near Sor Brook. It is not clear why the Category A villages in Cherwell have been treated far more favourably in terms of the number and area of proposed sites.
LPR-B-321	Susan and Ian Jelfs	LPR-A-086	Object. Falls outside residential settlement boundary as per the Adderbury Neighbourhood Plan, which contravenes Policy AD1. Adderbury has seen six housing estates in recent years and 40 more houses approved on appeal. Adderbury is changing in character as a result and developments so far have not enhanced the village. Traffic in the village is a problem and further development will make the problem worse. Any development close to the conservation area would overwhelm the area. Sites to the north and south of the junction of the A4260 and Beny Hill Road are very large and more suited to an urban setting. Further development in village would increase risk of floods to properties near Sor Brook. It is not clear why the Category A villages in Cherwell have been treated far more favourably in terms of the number and area of proposed sites.
LPR-B-321	Susan and Ian Jelfs	LPR-A-218	Object. Falls outside residential settlement boundary as per the Adderbury Neighbourhood Plan, which contravenes Policy AD1. Adderbury has seen six housing estates in recent years and 40 more houses approved on appeal. Adderbury is changing in character as a result and developments so far have not enhanced the village. Traffic in the village is a problem and further development will make the problem worse. Any development close to the conservation area would overwhelm the area. Sites to the north and south of the junction of the A4260 and Beny Hill Road are very large and more suited to an urban setting. Further development in village would increase risk of floods to properties near Sor Brook. It is not clear why the Category A villages in Cherwell have been treated far more favourably in terms of the number and area of proposed sites.
LPR-B-322	Jessica and Kate Sadler	Hanwell	Object. Please don't build houses next to Hanwell, it is its own village and not connected to Banbury. New development at Hanwell will destroy habitats and wildlife. Please build somewhere else that is more appropriate. Hanwell should retain its village character.
LPR-B-323	Edgars for Mr & Mrs Tomes	Call for Sites Promotion - 14-16 Woodstock Road, Yarnton	14-16 Woodstock Road, Yarnton is promoted for housing. Update to HELAA342. A site context plan has been submitted.

LPR-B-323	Edgars for Mr & Mrs Tomes	Option 27	Section 6.4 considers Kidlington and surrounding villages. This identifies that Kidlington together with Yarnton and Begbroke have an immediate and close relationship with Oxford and play an important role as shopping and employment centres being within Oxfordshire's knowledge spine. It is identified that this area will see significant change following the allocation of land for construction of 4,400 new homes and creation of new residential neighbourhoods. Text of paragraph 6.4.4 is incomplete. The following text identifies that the Kidlington area is being considered within the spatial options of the Oxfordshire Plan but this does not mean that further development will be located at Kidlington.
LPR-B-324	Nigel Hall	Hanwell	Objection to plan to develop land north of Duke Meadow Drive. The proposals are counter to the council's duties to maintain a rural gap between Banbury and Hanwell so that they remain separate entities. The plan will destroy rural lifestyles in the area and the rural environment. Hanwell has seen its rural identity eroded in recent years as Banbury has edged closer and closer. It would be a shame for Hanwell to be built upon to the extent that Bodicote has been, which was once a gem of a small rural community.
LPR-B-326	James Dobbs	Wardington	Objection to change of use of land at Wardington, particularly the 4.6ha off the Greensward and the 10.8ha adjacent to the A361. The scale of development proposed would overwhelm village infrastructure and resources, especially since the area is prone to both electrical service and sewage issues. Development would also interrupt the character of the village and impact the quality of life of existing residents. New development will put too much pressure on the A361 and would also cause safety issues for children in the area. The location of development would cause significant visual impacts to the Grade 1 listed church. Development will result in the loss of important agricultural land and key habitats for wildlife. Whilst in favour of development and growth at Wardington, it must be done in a more sympathetic manner.
LPR-B-327	Rachel Gascoigne	Hanwell	Objection to development proposals that will encroach on Hanwell from Banbury to the south. Local authority led residents to believe there would be no development north of Dukes Meadow, but this has been eroded. The village is experiencing severe light pollution as a result of development of Hanwell Fields and it is deeply concerning that development is contemplated that will result in further light pollution, an increase in traffic and the destruction of wildlife habitats.
LPR-B-328	Chris Robins	Option 3	Beyond the green belt all of the above options should be considered. Within the green belt, including Kidlington, Yarnton, Begbroke and areas removed from the green belt by the Partial Local Plan Review, only previously developed land should be considered.
LPR-B-328	Chris Robins	Option 5	The centre of Kidlington is relatively small, and the shopping area should be protected by restricting uses. In the larger centres of Banbury and Bicester, other community and leisure uses could also be considered.
LPR-B-328	Chris Robins	Option 6	Requirement for 50% affordable housing was one of the few welcome elements in the Partial Local Plan Review. The percentage requirement of affordable housing should now be similarly increased throughout the rest of District.
LPR-B-328	Chris Robins	Option 7	In areas such as Oxfordshire, where property values are high, social rented housing is often the only truly affordable housing available. Social rented housing should therefore be priorities above other 'affordable' housing tenures.
LPR-B-328	Chris Robins	Option 8	All new dwellings should meet nationally described space standard; this should be a minimum requirement.
LPR-B-328	Chris Robins	Question - Separation Distances	There should be a minimum separation distance. High ridge lines cast longer shadows than low ridge lines. To avoid overshadowing in midwinter, the minimum separation distance across street needs to be at least four times the ridge height.
LPR-B-328	Chris Robins	Option 9	Demographic change means needs of older residents are likely to become increasingly relevant. Accessibility standards should be introduced.
LPR-B-328	Chris Robins	Option 10	It is essential we minimise carbon cost of new development by setting design and construction standards above those required by Central Government.
LPR-B-328	Chris Robins	Question - Green Belt	There should be no further release of green belt land beyond that already envisaged in the Partial Review.
LPR-B-328	Chris Robins	Option 13	The environment has all too frequently been trashed by developments that take no account of environmental considerations. Proposals should be able to demonstrate environmental net gain.
LPR-B-328	Chris Robins	Question - 20-Minute Neighbourhoods	20-minute neighbourhoods are an interesting and innovative concept that needs to be explored further
LPR-B-328	Chris Robins	Question - Transport & Connectivity	Agree. It is essential to avoid unnecessary journeys and to undertake those that are necessary in the most sustainable way possible in order to minimise carbon emissions.
LPR-B-328	Chris Robins	Option 17	Climate change is now such a pressing problem that it is essential to take this into account in all proposals. The methodology should be updated.
LPR-B-328	Chris Robins	Option 26	There should be no further erosion of the Green Belt (except perhaps for use of previously developed land at Shipton-on-Cherwell. Any further employment land should be accommodated beyond the Green Belt.
LPR-B-328	Chris Robins	Option 27	These three options do not appear to be mutually exclusive and all should be adopted. It is important to recognise Exeter Close as part of the village centre.
LPR-B-328	Chris Robins	Question - Reducing Car Dependency in Kidlington & the Surrounding Villages	The proposed closure of Sandy Lane has the effect of lengthening car journeys, and so helps to undermine sustainable travel. Sandy Lane should therefore remain open, recognising that this may necessitate replacement of the level crossing with an overbridge, together with reconstruction of the canal bridge. This link will become particularly important in the event that a rail station is provided at the site of the level crossing.
LPR-B-328	Chris Robins	Option 28	Support proposals of Kidlington Parish Council
LPR-B-329	Satnam Group	Option 1	Point 14 does not mention housing growth in rural areas, yet this will be required and is essential
LPR-B-329	Satnam Group	Option 2	Too brief and should not solely relate to quantum of development to be allocated. That level of development is required to be provided in locations that assist the achievement of sustainable development, relative to the pressures and opportunities that exist in Cherwell- such as Oxford related growth, good communication links, the need for affordable housing, and so on.
LPR-B-329	Satnam Group	Option 3	Should include employment development of a suitable scale, in villages

LPR-B-329	Satnam Group	Option 6	Plan needs to be flexible with regard to affordable housing tenure split, so it can respond to different policy approaches and varying demand without formal revision over plan period.
LPR-B-329	Satnam Group	Option 7	Plan needs to be flexible with regard to affordable housing tenure split, so it can respond to different policy approaches and varying demand without formal revision over plan period.
LPR-B-329	Satnam Group	Option 8	Plan should not be overly prescriptive regarding the application of standards principally dealt with under other legislation. The plan should not duplicate other legislation.
LPR-B-329	Satnam Group	Option 9	Plan should not be overly prescriptive regarding the application of standards principally dealt with under other legislation. The plan should not duplicate other legislation.
LPR-B-329	Satnam Group	Question - Green Belt	The Local Plan should undertake a comprehensive review of the green belt. To exclude green belt sites that could provide sustainable options for development is not good planning. Without comprehensive review, development needs of the Borough will be forced outside of green belt, perhaps to detriment of environment and local needs.
LPR-B-329	Satnam Group	Option 31	Development in rural areas and need for development should be a combination of proposed sites and Parish level figures. Without meaningful green belt review, this approach becomes partial and ineffective for some areas.
LPR-B-329	Satnam Group	Option 32	A settlement hierarchy is important tool in setting of locational strategy that benefits from existing infrastructure and services and therefore should be created. Where settlements such as Bletchington score highly, with a good level of everyday services and facilities, in close proximity to nearby rail and road strategic infrastructure, and so on, it is clear that further development that meets locally arising development needs, will assist in the delivery of sustainable development.
LPR-B-329	Satnam Group	Option 33	Option 33, The Rural Economy is an important facet of the nature of Cherwell, and it will be important to consider the needs of the Rural Areas as a whole, including the need for employment, tourism, workers accommodation and market housing.
LPR-B-330	John Collier	Question - Green Belt	Extensive construction of houses on greenfield sites should be avoided wherever possible and brownfield sites should be used instead. Apartment buildings should be adopted where possible instead of discrete housing units. Hard to imagine how delivering an additional 100,000 homes across Oxfordshire by 2031 will mean that we will be "first generation to leave natural environment in better state than that in which we found it". Why does Cherwell have to 'grow' economically at the expense of the natural environment. Good, well paid jobs are needed but not at expense of natural environment. Managing biodiversity and green infrastructure is not compatible with building houses over thousands of acres of farmland. The number of new homes proposed is quite frankly astonishing. The predict and provide approach is dangerous and more caution should be used.
LPR-B-330	John Collier	Question - Transport & Connectivity	Public transport links should be strengthened to minimise the need for cars
LPR-B-330	John Collier	Option 3	Employment centres should be strengthened in existing centres of Banbury, Bicester and Kidlington where there is much scope for re-development and improvement. Each of these destinations should be established as places to live and work, and not necessarily just destinations for commuters.
LPR-B-330	John Collier	Option 4	It seems unlikely that shopping will be primary function of towns in future. This is recognised in the paper but much more should be made of it in evaluating choices for Cherwell. Villages should be left much as they are although provision of local shops could be encouraged.
LPR-B-330	John Collier	Question - Policies for Climate Change, Sustainable Construction & Renewable Energy	The Thames Water regio has been designated by the Environment Agency as being seriously water stressed. There is surface water flooding and widely fluctuating river levels in North Oxfordshire. Building more houses with more concrete and roads will not help.
LPR-B-330	John Collier	Adderbury	If more than a fraction of the sites (listed in the Schedule of sites in Adderbury in Appendix 2) are developed the character of Adderbury will be changed for good and another lovely village will be just another bit of commuter land.
LPR-B-331	Oxford & Country Planning OBO Mewslade	Call for Sites Promotion - Land north of Rau Court, Caversfield.	Land north of Rau Court, Caversfield is promoted for housing.
LPR-B-331	Oxford & Country Planning OBO Mewslade	Call for Sites Promotion - Land south of Springfield Road, Caversfield	Land south of Springfield Road, Caversfield is promoted for housing.
LPR-B-331	Oxford & Country Planning OBO Mewslade	Call for Sites Promotion - Garage court off Springfield Road, Caversfield	Garage court off Springfield Road, Caversfield is promoted for recreation.
LPR-B-331	Oxford & Country Planning OBO Mewslade	Call for Sites Promotion - Garage court off Woodcote Road, Caversfield	Garage court off Woodcote Road, Caversfield is promoted for recreation.
LPR-B-331	Oxford & Country Planning OBO Mewslade	Call for Sites Promotion - Land off Woodcote Road, Caversfield	Land off Woodcote Road, Caversfield is promoted for open space or access.

LPR-B-332	Matthew Smith	LPR-A-086	Object. Adderbury has seen significant development since the 2011 census, when 1064 dwellings were registered, compared to 1250 now. Adding permitted developments to this also amounts to a 21% increase in housing since 2011. Large scale, generic style of new development has been upsetting to residents and is compromising the rural character of the village. Residents at St Mary's Road have had to accept developments to west and north and if two fields to the west of Berry Hill Road are developed, St Mary's Road will be hemmed in by development. Several of the sites put forward contravene the policies set out in the Adderbury Neighbourhood Plan, as they intend to build outside of the accepted boundary of the village and narrow the amenity gap between Adderbury and both Bodicote and Bloxham/Milton. The preservation of these boundaries and gaps ought to be prioritised in consideration of future planning applications. Based on the presumption of density of 30 dph, several of the proposed sites would be vastly disproportionately large compared to previous developments in the village. Adderbury's infrastructure is already at capacity and congestion and parking in the village is a significant issue. The sites proposed at the village would make it more of a rat run as queues on the A4260 often stretch back from Oxford Road traffic lights to Station Road industrial estate. Christopher Rawlins Primary School was extended and increased its intake by 50% in 2017 from 30 to 45 children per year. Anything more than 100 extra houses in the village would mean the school will be over capacity. Extra traffic at existing pinch points, particularly at junction between Oxford/Aynho Roads, will add to the existing air quality pollution in the area. Many parents already avoid walking children to school due to air pollution along the Oxford Road north of The Green. Development on greenfield sites around the village will have a destructive impact on regional ecology. Concerns about effects of water run-off from substantial development might have on existing floodplain. None of sites in Adderbury are within floodplain, but they are adjacent to it and therefore with climate change this could become an issue. A number of the sites proposed contain what are presently rural public footpaths popular with residents. The presence of fossils in the ploughed fields are great educational opportunities. There is currently a lack of light pollution in the village, but substantial new development will diminish this.
LPR-B-332	Matthew Smith	LPR-A-041	Object. Adderbury has seen significant development since the 2011 census, when 1064 dwellings were registered, compared to 1250 now. Adding permitted developments to this also amounts to a 21% increase in housing since 2011. Large scale, generic style of new development has been upsetting to residents and is compromising the rural character of the village. Residents at St Mary's Road have had to accept developments to west and north and if two fields to the west of Berry Hill Road are developed, St Mary's Road will be hemmed in by development. Several of the sites put forward contravene the policies set out in the Adderbury Neighbourhood Plan, as they intend to build outside of the accepted boundary of the village and narrow the amenity gap between Adderbury and both Bodicote and Bloxham/Milton. The preservation of these boundaries and gaps ought to be prioritised in consideration of future planning applications. Based on the presumption of density of 30 dph, several of the proposed sites would be vastly disproportionately large compared to previous developments in the village. Adderbury's infrastructure is already at capacity and congestion and parking in the village is a significant issue. The sites proposed at the village would make it more of a rat run as queues on the A4260 often stretch back from Oxford Road traffic lights to Station Road industrial estate. Christopher Rawlins Primary School was extended and increased its intake by 50% in 2017 from 30 to 45 children per year. Anything more than 100 extra houses in the village would mean the school will be over capacity. Extra traffic at existing pinch points, particularly at junction between Oxford/Aynho Roads, will add to the existing air quality pollution in the area. Many parents already avoid walking children to school due to air pollution along the Oxford Road north of The Green. Development on greenfield sites around the village will have a destructive impact on regional ecology. Concerns about effects of water run-off from substantial development might have on existing floodplain. None of sites in Adderbury are within floodplain, but they are adjacent to it and therefore with climate change this could become an issue. A number of the sites proposed contain what are presently rural public footpaths popular with residents. The presence of fossils in the ploughed fields are great educational opportunities. There is currently a lack of light pollution in the village, but substantial new development will diminish this.
LPR-B-332	Matthew Smith	LPR-A-146	Object. Adderbury has seen significant development since the 2011 census, when 1064 dwellings were registered, compared to 1250 now. Adding permitted developments to this also amounts to a 21% increase in housing since 2011. Large scale, generic style of new development has been upsetting to residents and is compromising the rural character of the village. Residents at St Mary's Road have had to accept developments to west and north and if two fields to the west of Berry Hill Road are developed, St Mary's Road will be hemmed in by development. Several of the sites put forward contravene the policies set out in the Adderbury Neighbourhood Plan, as they intend to build outside of the accepted boundary of the village and narrow the amenity gap between Adderbury and both Bodicote and Bloxham/Milton. The preservation of these boundaries and gaps ought to be prioritised in consideration of future planning applications. There is currently a lack of light pollution in the village, but substantial new development will diminish this.
LPR-B-333	Alastair Cooke	Shutford	Strong objection to Land at Lower End & Thistle Hill and Land to the North of Epwell Road. Shutford is a category C village and therefore least suitable for development in terms of services and facilities. Previous development applications for Epwell Road have been refused for impacts on views and previous development applications for Thistle Hill have also been refused. Roads around Shutford are narrow and in a poor state of repair and are unsuitable for further development. Parking is also a problem and there is no village bus service. On the approach roads to Shutford there are no footpaths and no lighting. There are drainage problems in the village with raw sewage overflowing into Sor Brook. Thistle Hill is unsuitable for development as the houses would either be very high up and obtrusive or if lower down they would overlook the houses already there and block out light to properties at the bottom. Thistle is a valuable natural resource and so the area should not be developed. Any development should respect the green belt and consider brown field sites before.
LPR-B-334	Charles Wilford	Hanwell	Ongoing regeneration of Banbury town centre is to be welcomed but with the inevitable consequence that the retail heart of the town will be shifting further towards the new Castle Quay development. As the patterns of use and occupation of our town centres change we should be looking to encourage an increase in housing in towns to ensure they remain vibrant and reduce the reliance on transportation. To this end I am wholly in favour of bringing forward Bankside and Canalside scheme for residential use, utilising existing brownfield sites.
LPR-B-334	Charles Wilford	LPR-A-212	Concerned about any further development to north of Banbury adjacent to Hanwell fields. The review document recognises the need to protect both rural environment and heritage. However, encroachment on the boundary of Hanwell Fields and Dukes Meadow Drive has gone far enough. Any further development will cause the village to lose its identity. The development of LPR-A-152 would leave just metres between edge of conservation area down Gullcote Lane. Development of the proposed sites would be akin to coalescence.
LPR-B-334	Charles Wilford	LPR-A-152	Concerned about any further development to north of Banbury adjacent to Hanwell fields. The review document recognises the need to protect both rural environment and heritage. However, encroachment on the boundary of Hanwell Fields and Dukes Meadow Drive has gone far enough. Any further development will cause the village to lose its identity. The development of LPR-A-152 would leave just metres between edge of conservation area down Gullcote Lane. Development of the proposed sites would be akin to coalescence.
LPR-B-334	Charles Wilford	Option 18	Development is most appropriate to the east or south of Banbury where there is lesser prospect of incursion on neighbouring villages.

LPR-B-334	Charles Wilford	Option 19	Limit development at Banbury and protect its landscaper setting and maintain separation between the town and surrounding villages.
LPR-B-334	Charles Wilford	LPR-A-205	Support for sites such as this, which would allow some expansion to the north of Banbury without encroaching upon any local villages.
LPR-B-335	Carla Colombani	LPR-A-175	Object. The services for Wardlington are only adequate for current size of village. Sewerage, water supply, power and road provision are poor. There will be impacts to the environment from more cars on the road as there is a limited availability of public transport to access essential services. The proposed scale of development (15.4ha, maximum housing density of 30 houses/ha, equating to 462 houses, equates to 1,104 inhabitants) is too much for a village that currently has some 453 inhabitants and only 189 houses. This represents tripling the village size in a Conservation Area. The Council are of course fully aware that The Planning (Listed Buildings and Conservation Areas) Act 1990 places a duty on local planning authorities to formulate and publish proposals for the preservation and enhancement of its Conservation Areas. The proposal within the Cherwell Local Plan Review, specifically LPR-A-175, most certainly does not meet the requirement of The Planning (Listed Buildings and Conservation Areas) Act 1990.
LPR-B-336	John Spratt	Hanwell	Concerned by encroachment on Hanwell from Banbury, around Dukes Meadow Drive. Hanwell is an 800 year old village with a conservation area and it is supposed to be the planning authority's policy to keep it separate from Banbury. With the threat of climate change, there should not be further houses on greenfield land adjacent to the village. It should be retained as farmland or for planting trees. Instead of allowing builders to stretch out from Banbury, development should be built within Banbury itself.
LPR-B-337	Hanwell Parish Council	Hanwell	strongly opposed to the encroachment of Banbury urban area on the landscape setting of the village with development north of Dukes Meadow Drive. Developments north of this area increasingly threaten the rural setting and character of the village. Reasons to resist further housing sites to protect fragile and important strategic gap to prevent coalescence. Impacts on climate emergency, high landscape value and natural capital, traffic and further demand on existing infrastructure, conservation area, historic importance and sustainability. Site has not shown to be sustainable. Site is unacceptable on a number of key planning and conservation grounds.
LPR-B-337	Hanwell Parish Council	LPR-A-047	Object to any development on this site. Breaches previous agreement from CDC regarding boundaries at Dukes Meadow Drive and the tree line forming the boundary of existing developments. Direct breach of Councils commitments to protect the rural setting of the CA. Development would adversely impact the CA of the village and destroy the semi-rural setting. CDC should not be considering sites north of Banbury. Site has not shown to be sustainable. Site is unacceptable on a number of key planning and conservation grounds. Development of the site will seriously erode and completely destroy the "strategic" physical gap in open countryside. Insufficient consideration has previously been given to the fundamental effects of the erosion on the overall rural setting and character of the small conservation village. Assessing the narrowing of the gap in purely visual impact terms misses the point; the greatest impact is on the rural character of the area. Impact on Hanwell CA - 2007 CA appraisal clearly sets out why development should be rejected. Development to the south of Hanwell will effectively join the CA with Banbury which is unsympathetic to the rural setting and destroys the semi-rural nature of the CA; Hanwell must be protected from this as stated in the 2007 CA Appraisal. Development which is visually intrusive of affects the CA setting must be avoided. The proposed site does not protect the setting of the CA. Developing Hanwell upto Babury is not retaining significant open spaces and field systems around the village/CA. Development of this scale will have a harmful impact on the overall quality of the landscape in the open countryside north of Dukes Meadow Drive; it does not protect or enhance it. It is vital to protect Hanwell village and its rural setting from urbanising development. Unclear how the various green buffers will be achieved and there appears to be no provision for wider landscape mitigation or protection. Further development will seriously impact light pollution and the publicly funded community observatory. Development has caused the loss of best quality farmland; Hanwell has been studied to review soil fertility and crop suitability which shows importance of the quality of farmland surrounding Hanwell. The site is relatively remote from key facilities and will encourage more car usage which will impact transport infrastructure. Against undesirable piecemeal development. additional housing will put additional strain on existing infrastructure, particularly through the village and the village already suffers from serious problems from heavy traffic usage.
LPR-B-337	Hanwell Parish Council	LPR-A-154	Object to any development on this site. Breaches previous agreement from CDC regarding boundaries at Dukes Meadow Drive and the tree line forming the boundary of existing developments. Direct breach of Councils commitments to protect the rural setting of the CA. Development would adversely impact the CA of the village and destroy the semi-rural setting. CDC should not be considering sites north of Banbury. Site has not shown to be sustainable. Site is unacceptable on a number of key planning and conservation grounds. Development has caused the loss of best wuality farmland; Hanwell has been studied to review soil fertility and crop suitability which shows importance o fthe quality of farmland surrounding Hanwell. The site is relatively remote from key facilities and will encourage more car usage which will impact transport infrastructure. Against undesirable piecemeal development. additional housing will put additional strain on existing infrastructure, particulalry through the village and the village already suffers from serious problems from heavy traffic usage.</p>
LPR-B-337	Hanwell Parish Council	Hanwell	<p>Instead of building more housing north of the urban limits of Banbury, there should be extensive tree planting undertaken to help offset emissions from Banbury and the nearby heavy traffic at Hennef Way. Oxfordshire Housing and Growth Deal has been acheieved at cost - many market towns and villages have been changed beyond recognition, threatening the rural character. Nearly 20,000 houses planned for the Oxford Green belt which removes countryside access, coaleses villages and puts the setting of the historic city at risk. Urbanisation has streessed natural drainage and added to flood risk in the area. UK already imports 45% of its food. Land is a scarce resource that we need for climate change mitigation for planting of trees and hedgerows.</p>
LPR-B-337	Hanwell Parish Council	Option 1	<p>The suggested vision is strong. Opening sentence lends support to protection of villages. Appropriate prominence should be given to the goal of ensuring the distinctive natural and built environmet and rich historic heritage is cherished, protected and enhanced; this goal should be ranked higher in the vision to indicate its importance. The importance of protecting what is special about Cherwell must be taken in to account when considering proposals that expand larger towns in to the countryside and directly threaten histirc rural villages and communities.</p>
LPR-B-337	Hanwell Parish Council	Option 2	<p>KO23 - If further housing sites are accepted north of Banbury this would merge Hanwell and Banbury which would be a direct conflict with KO23 as it would not conserve the setting and character of Hanwell.</p>
LPR-B-337	Hanwell Parish Council	Question - Local Green Spaces	<p>The Village Playing Field, off Muddy Lane, Hanwell and Field between Park Farm and the Castle Grounds, Hanwell are proposed for designation as a Local Green Space. A site location plan has been supplied.</p>
LPR-B-337	Hanwell Parish Council	Option 18	<p>The urban area of Banbury has seen considerable housing building over the last 30 years and provided a substantial proportion of CDCs overall housing provision. The topography and landscape means that development is not reaching the natural limits. Too much development to the north of the town already and that further development north would threaten the fragile open strategic gaps between Banbury and the conservation villages of Hanwell and Drayton; the individul rural setting and character of the village of Hanwell and its CA would be permanently destroyed by further housing.</p>
LPR-B-337	Hanwell Parish Council	Option 19	<p>Preference is Option 2. The urban area of Banbury has seen considerable housing building over the last 30 years and provided a substantial proportion of CDCs overall housing provision. The topography and landscape means that development is not reaching the natural limits. further emphasis for greenfield sites should be in the southern parts of Cherwell such as Bicester. However there should be renewed efforts to regenerate brownfield sites in Banbury and its centre.</p>
LPR-B-337	Hanwell Parish Council	Option 30	<p>Option 1.</p>
LPR-B-337	Hanwell Parish Council	Option 31	<p>Option 1. Hanwell itself is not a category of village that should allocate specific sites.</p>
LPR-B-337	Hanwell Parish Council	Option 32	<p>Both matters should be taken in to account together with the need to preserve the identity of historic villages. Other factors to consider - for villages near towns, the availability of services associated with urban settings and the accessibility to the urban areas can increase following previous expansion of those towns. It would be wrong for this accessibility to move such villages up the rural settlement hierarchy since this would be detrimental to teh preservation of thier identify discrete from the neighbouring urban area.</p>
LPR-B-337	Hanwell Parish Council	Option 33	<p>Option 3. The natural capital assets north of Banbury's edge shold be used to further enhance the rural economy and to conserve and protect vital landscape and woodland that is regionally important not just to agriculture, tourism and leisure but for wellbeing and mental health.</p>
LPR-B-337	Hanwell Parish Council	Question - Settlement Boundaries	<p>Boundaries should be used for villages and towns. This can prevent towns expanding too close to existing villages and so preserve the countryside buffer between settlements. Boundaries in villages should be applied to restrict their expansion as a measure to preserve natural capital and countryside.</p>

LPR-B-337	Hanwell Parish Council	Option 34	Both options. Strongly promote the conservation and protection of the countryside where it will protect Hanwell's character and identity. Planting trees north of Banbury would help to combat climate change on a local scale and continue to provide access to the countryside for local residents.
LPR-B-337	Hanwell Parish Council	Question - Neighbourhood Planning	Provide finance to allow the preparation of a neighbourhood plan.
LPR-B-337	Hanwell Parish Council	Question - Development Management Policies	A formal clarification and policy on "green buffers" would explain the approach in respect of maintaining buffer zones between towns and villages; this should build upon the Sept 2013 report ENV04 Banbury Green Buffers as used in the 2011-2013 evidence base. Such a policy would greatly clarify the framework under which future decisions are made in respect of the expansion of towns into the countryside. Green buffers would prevent development extending beyond the settlements to such an extent that the identity of the individual settlement is lost, development coalesces and valuable countryside is lost. The policy would be essential to protect important gaps, preventing development which would harm character. Such a policy would be especially valuable where development is proposed on land that is currently described as "permanent green buffers"
LPR-B-337	Hanwell Parish Council	Question - Important views of Banbury	Yes. There is an equal duty to protect the conservation area for the historic heritage of neighbouring settlements. There should be a policy to protect views of other significant Places of Worship. An update of Policy C34 should apply to ancient Places of Worship such as St Peter's Church in Hanwell. This church can still be viewed from open countryside in the south, which is a vista that has been protected for many centuries. This is especially important now as it is under threat from the latest proposals for more housing development north of Banbury
LPR-B-338	Mary Whatman	Hanwell	Object. Residents were assured the Hanwell would not be engulfed into the Banbury conurbation. Hanwell is in a conservation area and has significant historical relevance that shouldn't be destroyed by greed of developers. The village does not have the infrastructure for a larger population. Through traffic between the Southham and Warwick roads already causes chaos. The village is also surrounded by productive farmland and valuable wildlife habitats.
LPR-B-339	Michael Whatman	Hanwell	Object. Residents were assured that there would be no further encroachment of Banbury towards Hanwell village. It is an old village with a 12th century church and the road through the village would not cope with extra traffic the proposal would produce. Hanwell has no infrastructure apart from a public house, there are no services for an increased population. The wood to the south side of Hanwell is the site of century old fishing ponds now dry and planted with mature trees. This is full of a wonderful variety of flora and fauna that would be decimated with a larger local population.
LPR-B-340	Trevor Trivett	Adderbury	Object. The proposals take no account of the Neighbourhood Plan developed for Adderbury. Adderbury has taken a huge rise in housing development over the last few years with little or no increase in employment prospects or village amenities. Traffic through the village has increased dramatically and further housing would exacerbate this. Additional housing would inevitably increase schooling requirements. There is already a problem with 16+ children being denied transport to the secondary school in Bloxham. It's time for the local authority to stand up to developers and honour the conditions of approved Neighbourhood Plans.
LPR-B-341	Mario Pascoe	LPR-A-175	Object. The proposed development will significantly impact on the traffic on A361, particularly through the narrow and dangerous stretches within Wardington. The proposed increased number of residents and therefore traffic around junction 11 of the M40 will require a by-pass, which could use one of the parcels of land identified for houses or a further widening of the A361 which will impact existing roadside properties significantly. The blind and narrow turns and very poor quality roads will need considerable improvement to accommodate increased traffic using Wardington village and particularly Thorpe Road as a short-cut between the A361 and B4525. The inappropriate extension of the village boundary/infrastructure changes all aspects of current village life. Wardington has very limited amenities and public transport. The use of a car is essential for day to day life. Any increase in population will stress the current amenities and add to road traffic and congestion. Current infrastructure within the village is not equipped to deal with current village needs with sewer, water (current poor pressure), broadband, electrical outages and roads (pot holes and eroded verges) all requiring significant improvement. The latest Wardington Conservation Area Appraisal from Cherwell District Council highlights: 'the appraisal process enables the special character and appearance of Wardington can continue to be identified; thereby ensuring that any future development preserves or enhances that identified special character'. It is hard to see how the development will meet the Cherwell District Council management plan, how the proposal will not significantly change the village or village life beyond recognition or how without significant infrastructure projects will not cause significant detriment to Wardington village, its inhabitants old and new and those who have to travel through or around Wardington.
LPR-B-342	Sarah Triandafillidis	LPR-A-104	Object. No existing access in for proposed site - new access will require substantial new road construction along with pedestrian walkways. No obvious place for new road layout, as at the end Chapel Close the road narrows to a bridleway which will restrict two-way traffic measures. Limited space for pavement on the bridleway which affects the safety of users. Chapel Close is already affected by storm flood water run off. The site is equally a sloping site with a lake/large pond which will require in-depth assessment into the drainage/soak-away requirements. The site is subject to flooding from the nearby Thames sewage water plant. The plant is at full capacity and is unlikely to cope with additional housing sewerage. Impact to local Wildlife will be significantly affected by any development. Any development would result in a significant increase to light pollution affecting both the environment and wildlife. Environmental costs of construction associated to new infrastructure will be greater than other proposed sites which offer more immediate access and uses existing infrastructure Clifton is small hamlet that has no existing amenities apart from the local pub to support its current community. Clifton is a rural community with no or limited infrastructure to support the safe access to neighbouring villages such as Aynho or Deddington. Clifton offers no bus service to connect its residents to other communities therefore any development will increase the number of vehicles on roads which are already heavily populated. The main road through Clifton linking Deddington and Aynho is difficult to navigate through and at times is reduced to a single lane carriageway, increased dwellings would exacerbate the situation. It is recognised that the proposal is at a preliminary stage, that said, I do not consider the site suitable for future development considering the high environmental and infrastructure impact it will have on the current residents of Clifton, when more suitable sites are readily available and pose less of an impact to the environment or the wildlife habitat.

LPR-B-343	Steve Triandafillidis	LPR-A-104	Object. No existing access in for proposed site - new access will require substantial new road construction along with pedestrian walkways. No obvious place for new road layout, as at the end Chapel Close the road narrows to a bridleway which will restrict two-way traffic measures. Limited space for pavement on the bridleway which effects the safety of users. Chapel Close is already affected by storm flood water run off. The site is equally a sloping site with a lake/large pond which will require indepth assessment into the drainage/soak-away requirements. The site is subject to flooding from the nearby Thames sewage water plant. The plant is at full capacity and is unlikely to cope with additional housing sewerage. Impact to local Wildlife will be significantly affected by any development. Any development would result in a significant increase to light pollution affecting both the environment and wildlife. Environmental costs of construction associated to new infrastructure will be greater than other proposed sites which offer more immediate access and uses existing infrastructure Clifton is small hamlet that has no existing amenities apart from the local pub to support its current community. Clifton is a rural community with no or limited infrastructure to support the safe access to neighbouring villages such as Aynho or Deddington. The main road through Clifton linking Deddington and Aynho is difficult to navigate through and at times is reduced to a single lane carriageway, increased dwellings would exacerbate the situation. It is recognised that the proposal is at a preliminary stage, that said, I do not consider the site suitable for future development considering the high environmental and infrastructure impact it will have on the current residents of Clifton, when more suitable sites are readily available and pose less of an impact to the environment or the wildlife habitat.
LPR-B-344	Pegasus OBO Dorchester & New College	Call for Sites Promotion - Heyford Park	Heyford Park is promoted for housing. The representation includes a concept plan and a context plan for Heyford Park showing the proposed SRFI.
LPR-B-344	Pegasus OBO Dorchester & New College	Option 1	The suggested vision is broadly supported. The context for the vision is provided not only by the Oxford- Cambridge Arc, but by the Oxfordshire 2050 Plan and in accordance with the NPPF. The vision is comprehensive and covers many issues. Heyford Park is mentioned in the vision (point 13) in the context that, along with other areas of planned growth, it will benefit from enhanced community facilities, sustainable transport links and other infrastructure investments required to support existing and new neighbourhoods. However, the role of Heyford Park in the settlement hierarchy should be acknowledged, it is a more sustainable location than given credit for. Heyford Park is providing a role equivalent of Banbury, Bicester and Kidlington, as it functions not only as a sustainable settlement, but also functioning as a service centre for the surrounding villages. Heyford Park provides a range of services in retail, healthcare, education and employment so that neighbouring villages do not need to travel to Bicester. Heyford Park is the only settlement outside Banbury, Bicester and Kidlington that has a secondary school. There are opportunities for green energy at Heyford Park and the nearby waste to energy plant. The growth at Heyford Park was recognised by the Minister. Dorchester has a track record of not only building houses, but establishing vibrant, popular and dynamic new communities, with an emphasis on upfront social infrastructure and design solutions. Dorchester also has a track record of delivering infrastructure early in the scheme. Further development at Heyford Park will continue the strategy of co-location of employment and residential provision and will support the sustainability of the location.
LPR-B-344	Pegasus OBO Dorchester & New College	Option 2	The objectives should be capable of being monitored as mechanism to assess whether the plan is "on track" to meet the vision. Whilst not necessarily a comment on the objectives of the Plan, it is important that the Plan is clear on the relationship to the Oxfordshire 2050 Plan and its policies. The Oxfordshire 2050 Plan is a joint statutory spatial plan. Once adopted, the Plan will form part of the Development Plan for all of the districts in Oxfordshire. The Local Plan can contain strategic and non-strategic policies and as set out in the NPPF, but as set out in paragraph 21, plans should make explicit which policies are strategic policies. Non-strategic policies should set out more detailed policies for specific areas, neighbourhoods and types of development, including allocating sites. Paragraph 6.7.1 of the Local Plan review confirms that the plan will contain a mix of strategic and non-strategic policies and that it will be important to distinguish these policies.
LPR-B-344	Pegasus OBO Dorchester & New College	Option 3	Cherwell Local Plan review needs to reflect the strategy from Oxfordshire 2050 and Oxford-Cambridge Arc Spatial Framework, and develop a consistent approach to the delivery of employment land. The Local Plan strategy should reflect the "knowledge spine" and implement the Oxfordshire LIS. The OGNA states that central Oxfordshire, including the Knowledge Spine (including Oxford City and Fringe) is expected to remain a significant driver of economic activity. Heyford is in the area identified as the "Knowledge Spine North" Figure 7 of the Oxfordshire Local Industry Strategy (LIS) Proposed network of global hubs and international clusters includes Heyford Park. The emphasis is on sustainable development, the NPPF states that planning policies should set out a clear economic vision and strategy which positively and proactively encourages sustainable economic growth, having regard to LIS and other local policies for economic development and regeneration (para 82) and reflect the locational requirements of different sectors and be flexible enough to accommodate needs not anticipated in the plan. As part of the evidence base to support the Local Plan review it is noted that the Council have commissioned a Cherwell Employment Land and Needs Assessment (September) which has made a number of recommendations. Heyford Park in the adopted Local Plan was allocated for residential led mixed uses as enabling development to secure environmental improvements and conservation of the heritage interest of the site associated with its former use as a Cold War military base. There continues to be further scope at Heyford Park to accommodate future needs in the plan period to 2040 and in the period of the Oxfordshire 2050 Plan on both brownfield and greenfield land. A combination of the options at the most sustainable locations should be the basis of the local plan strategy in accordance with the NPPF and the emerging Oxfordshire 2050 and the Oxford-Cambridge Arc Spatial Framework.

LPR-B-344	Pegasus OBO Dorchester & New College	Option 4	When identifying sites for employment land, these should be provided consistent with the NPPF and the emerging Oxfordshire 2050 and the Oxford-Cambridge Arc Spatial Framework. Heyford Park is identified in the options to accommodate growth in the emerging Oxfordshire 2050 Plan. It is already identified in the Oxfordshire LIS as part of the network of global hubs and international clusters in Oxfordshire. Land at Heyford Park continues to provide the opportunity for both residential and employment development in what is a highly sustainable location. The Local Plan review should provide the policy framework to ensure this employment location is supported and extended in order to continue to attract inward investment into the District and to provide new training and employment opportunities. Heyford Park provides a wide range of commercial property opportunities with over 1,300,000 sq ft of commercial accommodation. The accommodation is made up of warehousing, workshops, lab space and offices ranging from 700 sq ft to 30,000 sq ft. Heyford Park has established itself as one of Oxfordshire's leading business parks, attracting a broad range of occupiers from both the private and public sectors. The park is home to over 100 established businesses that employ over 1,200 people. The proposed Creative City at Heyford Park, will provide for the film, media sector, it has the clear potential to attract extensive inward investment into the District. As this facility grows and develops, the cumulative benefits it provides will generate further spin-off benefits for other businesses more widely across the surrounding area. The intention is that Heyford Park can accommodate sectors important to the Oxfordshire economy as set out in the Oxfordshire LIS 2020, this should be reflected in the emerging Cherwell Local Plan. The Local Plan should also recognise that there are also opportunities for green technology and transport which can support existing businesses. Heyford Park has the potential for higher levels of containment given the provision of employment and residential development and opportunities to secure 20 minute neighbourhoods. The attached draft concept plan illustrates that approximately 5,000 dwellings and 5,500 jobs (approximately 110,000sqm) can be accommodated at Heyford Park to meet Oxfordshire 2050 needs.
LPR-B-344	Pegasus OBO Dorchester & New College	Question - Supporting Employment	Further residential and commercial development can be accommodated at Heyford Park. A policy should be included in the Local Plan to support the opportunity to strengthen existing clusters. A policy should also be included to support a containment strategy where housing and employment growth can be accommodated in close proximity, this strategy should be prioritised as it strongly supports sustainable development and reflects the climate change agenda.
LPR-B-344	Pegasus OBO Dorchester & New College	Option 5	The role and function of Heyford Park as an emerging service centre should be reflected in policy in the Local Plan. The facilities and services at Heyford Park support not only the residents/employees of Heyford Park, but also those from the neighbouring villages. Further development at Heyford Park of retail and leisure uses will increase the inward trips and support the sustainable centre of Heyford.
LPR-B-344	Pegasus OBO Dorchester & New College	Question - Town Centre Uses (Banbury, Bicester & Kidlington)	Services at Heyford Park have continued to grow in support of the residential and employment provision on site and also supporting the neighbouring villages. Providing facilities for Heyford Park and neighbouring villages is therefore supporting sustainable development, reducing the need to travel to the other towns for facilities and services.
LPR-B-344	Pegasus OBO Dorchester & New College	Question - Supporting our Town Centres	There is a need for flexibility in the provision of facilities and services. Dorchester Group would encourage the Council to undertake a regular review of business rates, to achieve a more equitable yield across Cherwell district. The changing role of the High Street should be recognised as it provides more than the sum of its parts in terms of a place shaping/experience etc, this could be reflected in business rates to support the valuable role the town contributes to the sense of place/place shaping. The approach at Heyford Park so far, has focused on bringing forward a mix of provision, retail, hotel, bowling alley, cycle shop and café to provide an attractive offer and so that Heyford Park becomes a "destination" in its own right.
LPR-B-344	Pegasus OBO Dorchester & New College	Option 6	The % levels for affordable housing should be kept the same as in the Local Plan, but recognising that the same % should be applied to Heyford Park as it is to Banbury and Bicester, thereby recognising Heyford Park's role in the settlement hierarchy and the extent of affordable housing that has been provided to date. Heyford Park has continued to deliver at 30% affordable housing, delivery has moved forward at a pace and has not deviated from the headline figure of 30%. Looking to the future there is scope to accommodate further residential and employment development at Heyford Park, and a delivery rate of 30% affordable housing is envisaged. The delivery of affordable housing and the mix of tenures for all stages of life and socio-economic groups is an important part of the housing delivery model for Heyford Park. Heyford Park is providing to be a good centre for a mixed economy and aiming to provide housing so that people can live on site whatever their needs throughout their lives. The mix of housing is an important aspect of maintaining the community.
LPR-B-344	Pegasus OBO Dorchester & New College	Option 7	The question does not reflect the adopted Local Plan Policy BSC3. Option 2 is preferred, but it should be recognised that tenure mix could affect the quantum delivered. The policy should be drafted so that there is some flexibility to address different circumstances.
LPR-B-344	Pegasus OBO Dorchester & New College	Option 8	The Policy for space standards should be consistent with Government Guidance.
LPR-B-344	Pegasus OBO Dorchester & New College	Question - Separation Distances	The PPG provides guidance on how planning authorities can gather evidence to set optional requirements and the nationally described space standard. The Government set out its policy on the application of these standards in decision making and plan making in a written ministerial statement, which also withdrew the Code for Sustainable Homes. In other authorities these issues are addressed in for example residential design guides and such matters of detail may be covered in an SPD which expands upon policies in the plan showing how they will be implemented. The approach to separation standards should allow for some flexibility and support the objective of using land efficiently (paragraph 124 of the NPPF) especially in the context of climate change. Separation distances can be addressed by good design.
LPR-B-344	Pegasus OBO Dorchester & New College	Option 9	A consistent approach relying on Building Regulations is preferred.
LPR-B-344	Pegasus OBO Dorchester & New College	Question - Housing Policies	The Local Plan should only include those policies which are appropriate and consistent with the NPPF. National Planning Policy Guidance exists on Self-build and custom housebuilding. A review of storey heights, would ensuring efficiency of land uses, whilst also recognising the need for flexibility in some circumstances.

LPR-B-344	Pegasus OBO Dorchester & New College	Option 10	Sustainable Construction is best addressed through building regulations so that a national approach is applied. The Government has confirmed that improvements to energy efficiency in new homes are most likely to come through building regulations, but at the same time the Government has indicated that Councils can continue to set local targets for reductions in emissions. The policies in the Cherwell Local Plan should be led not only by the national guidance, but by the Oxfordshire 2050 Plan. In the recent consultation on the Reg 18 Oxfordshire 2050 Plan the preferred policy approach is to define an Oxfordshire-wide definition for net zero carbon design and construction for development in Oxfordshire which will assist in achieving the county's objectives. Such an approach would also ensure consistency between the various district local plans. The emerging Oxfordshire 2050 Plan also states that the preferred approach to sustainable design and construction is to include in the Oxfordshire Plan a policy setting out sustainable design and construction requirements to be applied to major residential and non residential developments within Oxfordshire; this policy would be subject to viability and deliverability testing. A countywide approach is preferred.
LPR-B-344	Pegasus OBO Dorchester & New College	Question - Retrofitting of Historic Buildings	The Local Plan policy should reflect the NPPF and PPG and in summary the approach to retrofitting of historic buildings should be to safeguard the fabric and enable the building to function with an appropriate use. At Heyford Park there has been an emphasis on re-use/re-purpose buildings on site where possible into employment use. This area will utilise the existing HAS structures on the former base by refurbishing the existing structures as well as providing new employment buildings, which will be separated from the HAS structures. There are further opportunities to reuse/repurpose buildings on site for commercial use
LPR-B-344	Pegasus OBO Dorchester & New College	Option 11	The emerging Oxfordshire 2050 Plan states that in order to achieve a net zero carbon energy balance within the county there is a need to significantly increase the proportion of renewable electricity generated within the county. The approach adopted in the Cherwell Local Plan needs to sit within the framework set out by the Oxfordshire 2050 Plan and compliment the strategy. There are several renewable energy elements that could be delivered at Heyford Park including solar. For example, there are opportunities for possible solar use on the flying field, producing local sustainable green energy; it is possible that Heyford could become a net contributor powering not only its own development, but also exporting to the surrounding area. This opportunity cannot be produced on the edge of Bicester or Banbury.
LPR-B-344	Pegasus OBO Dorchester & New College	Question - Policies for Climate Change, Sustainable Construction & Renewable Energy	The Cherwell Local Plan review refers to the fact that there are a suite of strategic policies in the adopted Local Plan that are aimed at mitigating and adapting to climate change. These policies will have been formulated in the early part of the last decade and are consequently in need of review in line with the NPPF and PPG other relevant government guidance. As the Oxfordshire 2050 Plan is in preparation this should provide the overall strategic approach to many of these issues and the framework for any local policies that are considered necessary and can be justified. It is important that a consistent approach is applied and matters are not duplicated at a local level.
LPR-B-344	Pegasus OBO Dorchester & New College	Option 12	The emerging Oxfordshire Plan proposes ambitious targets above the national requirements to support the importance of nature's recovery and to improve environmental quality throughout the county. The Plan proposes a 20% biodiversity net gain, providing a countywide framework for all the local authorities to work within. This approach is intended to support Oxfordshire's efforts to support nature's recovery and an attempt to redress some of the past losses to biodiversity. A consistent approach throughout the county is supported. Dorchester Living is proposing further development at Heyford Park in response to the Oxfordshire 2050 Plan, increasing the areas within the existing site and with additional development to the south, whilst retaining a buffer to Caulcott. In terms of the policy approach to be included in the local plan, where designations are proposed there needs to be a flexible approach to mitigation, this must involve discussions with landowners. One of the challenges of developing on brownfield sites is that often the baseline is higher than greenfield sites, there is a conflict with trying to maximise the efficient use of the site whilst also addressing biodiversity. It is challenging whilst ensuring the effective use of land in accordance with the NPPF paragraphs 119, 124 and 125 and addressing biodiversity net gain. Brownfield sites are often more diverse than farmland, in which case it may be more appropriate to seek contributions towards a county/district biodiversity scheme whereby many development proposals can contribute to securing a larger area of Biodiversity Net Gain which can be enjoyed by future generations.
LPR-B-344	Pegasus OBO Dorchester & New College	Option 13	The emerging Oxfordshire 2050 Plan outlined the Preferred Option which seeks to use the draft Nature Recovery Network to shape the policies and define the spatial strategy and determine the spatial distribution of development in the Oxfordshire 2050 Plan, reflecting the commitment to strengthening ecological networks and delivering biodiversity net gains and building resilience to climate change, recognising the importance of the county's habitats, natural resources and landscapes in supporting biodiversity, connecting habitats and supporting nature's recovery. Paragraph 5.7.10 of the Cherwell Local Plan review refers to the mapping of Oxfordshire's natural capital undertaken by the University and supported by the Council. The consultation document then states that the Council will apply this approach to help develop policies in the local plan where for example, it will be used as a means of informing where development is located so that the Council protect the most valued areas, and locating uses where they would have the greatest benefit. Whilst in principle the approach proposed in the emerging Oxfordshire 2050 Plan is supported, there are some difficult decisions to make when the three zones of the NRN are mapped. The three zones cover the entire county of Oxfordshire, so it is not clear how such an approach affects the development of brownfield sites and the emphasis on the more efficient use of land to minimise the use of greenfield sites. The Draft Nature Recovery Network for Oxfordshire does not mention brownfield sites. It is considered that a county wide approach to some form of offsetting should be applied to allow optimization of brownfield land that comes forward for development which is usually more biodiverse than farmland. Our concern is how the approach to Natural Capital is compatible with accommodating growth consistent with the wider agenda. Consideration should be given to the role of mitigation and where this can be applied rather than seeking to prevent/restrict development. The policy approach in the Cherwell Local Plan needs to be consistent with the Government agenda and policy framework in the NPPF and the PPG.

LPR-B-344	Pegasus OBO Dorchester & New College	Question - Biodiversity & the Natural Environment	The framework for the policies on biodiversity and the natural environment is provided by the NPPF and the PPG and by the approach taken in respect of the policies included in the emerging Oxfordshire 2050 Plan, so long as they are consistent with national guidance. The preferred policy approach is for an Oxfordshire wide Policy e.g. flood risk, the preferred approach is to provide a planning framework for managing flood risk in Oxfordshire, local plans could then provide further detail as appropriate. A county wide or in this case district wide approach to some form of offsetting should be applied to allow optimization of brownfield land that comes forward for development which is usually more biodiverse than farmland and which could achieve so much more for the wider community.
LPR-B-344	Pegasus OBO Dorchester & New College	Option 14	No. 1 is preferred, but with some flexibility so that consultation can take place with local communities to ascertain their thoughts about what is needed in terms of play facilities. There also needs to be some flexibility about the type of provision e.g. play with nature and factor in health and wellbeing. All these are important points to consider in the place shaping of the community.
LPR-B-344	Pegasus OBO Dorchester & New College	Option 15	The policy approach in the Local Plan should be consistent with the NPPF and PPG and be supported by an evidence base/assessment of need/provision. Continue with the current policy approach of securing new pitch provision as part of strategic development sites is the preferred approach to sports provision as part of the development of strategic sites. Similar to the provision of play areas there is a need for consultation and to ascertain what is locally important.
LPR-B-344	Pegasus OBO Dorchester & New College	Question - Protecting the Historic Environment	The overall context is protecting the historic environment, this involves sensitive and appropriate development, not necessarily to prevent development. At Heyford Park the historic and cultural heritage of the site has been fully embraced within the ongoing development of the site, with the creation of a central heritage parkland, interpretation of Heyford Park's story and investment into key structures across the site. The same approach would be adopted when considering future development opportunities of the site, with appropriate and relevant protection and enhancement of features which contribute to the ongoing understanding of the historic and cultural heritage of the site in the local, national and international context. The heritage is an important component of the evolving development and the creation of a dynamic places, considering re-use, re-purpose of the buildings and the site, introducing new element to be complementary.
LPR-B-344	Pegasus OBO Dorchester & New College	Question - Achieving Good Design & 'Beauty'	The experience at Heyford Park shows the balance that can be achieved between heritage and new design and reflects that a design code is not always necessary to shape a place, instead a flexible approach considering all the issues and engagement with the local community has created an attractive sustainable place. Dorchester has a track record of not only building houses, but establishing vibrant, popular and dynamic new communities, with an emphasis on upfront social infrastructure and design solutions.
LPR-B-344	Pegasus OBO Dorchester & New College	Question - 20-Minute Neighbourhoods	20-minute neighbourhoods are supported, these have been seen to work well at Heyford Park because of the provision of employment and residential development, retail and leisure and education facilities and services creating and supporting place shaping community.
LPR-B-344	Pegasus OBO Dorchester & New College	Question - Transport & Connectivity	The approach proposed in the review is too narrow and does not recognise potential opportunities such as the SRFI and anticipated investment in road improvements. Dorchester are promoting passenger rail which should be taken into account. In future higher growth targets could be linked to rail provision. Heyford Park represents opportunities for increasing containment where residential development takes place alongside employment growth such as reducing the need to travel and the creation of 20 minute neighbourhoods. There is the potential for modal share to shift to towards greener, more sustainable active forms of transport and for more private vehicles to be removed from the roads Through internalisation of trips. These outcomes would be consistent with the Oxfordshire 2050 vision.
LPR-B-344	Pegasus OBO Dorchester & New College	Option 16	Digital infrastructure should be provided as standard with developments.
LPR-B-344	Pegasus OBO Dorchester & New College	Question - Transport Policies	The transport policies in the Cherwell Local Plan should be consistent not only with the NPPF, but also with the emerging Oxfordshire 2050 Plan and the County's Local Plan Transport Plan "Connecting Oxfordshire"; but avoiding duplication/repetition of policies covered elsewhere.
LPR-B-344	Pegasus OBO Dorchester & New College	Option 17	The preparation of a new IDP is supported to identify the infrastructure needed to support the Plan's proposals. There is no need to update the methodology given that this could be a source of delay in the provision of infrastructure. Once sites are appraised and allocated the expectation should be that the developer delivers on site infrastructure and public bodies deliver off site infrastructure. The IDP should allow the Council to deliver the offsite infrastructure improvements on a district basis increasing delivery.
LPR-B-344	Pegasus OBO Dorchester & New College	Question - Delivering Infrastructure	Any policies on infrastructure should be consistent with the NPPF and the emerging Oxfordshire 2050 Plan.

LPR-B-344	Pegasus OBO Dorchester & New College	Option 29	<p>There is scope for significant further sustainable development to be accommodated at Heyford Park, by extending the current development boundary of the site and by developing suitable brownfield areas. This can be undertaken through a phased approach. The re-use of brownfield and underutilised land to achieve a more efficient use of land and to minimise the use of new greenfield land is supported. In order to maximise the amount of brownfield land, this requires continual reassessment of the constraints and opportunities that can arise from the brownfield sites. Heyford Park demonstrates such sustainable credentials with approximately 1,000 dwellings that are occupied and a wide range of employment uses in place, many looking to expand. There is scope to develop the land to the south of Heyford Park beyond the boundary of the site, whilst sensitively redeveloping some of the areas of brownfield land within the site. Land at Heyford Park can be considered to meet the future needs arising in Cherwell as a result of the Oxfordshire 2050 Plan and depending on the scale of growth to be accommodated in Oxfordshire 2050, the site could meet some of the needs from neighbouring authorities. The wider transport improvements would be complimentary to the Heyford Park. Further development in the short term at Heyford Park, should be considered as organic growth providing further support for public transport services, while in the long term possibly related to the SRFI at Ardley and a passenger halt, development could result in a change in terms of the level of development, this could be transformational for the area and consistent with paragraph 106 of the NPPF 2021. The location of Heyford Park has already demonstrated that it is a sustainable community. The new masterplan created a pioneering opportunity in Heyford's history to provide true accessibility to the heritage of the airfield for local residents. The additional homes allowed for greater improvements to Heyford's social infrastructure, ensuring a sub-hub status for the local community can be cemented by providing more amenities. Heyford has the opportunity to grow existing and emerging business clusters. There are opportunities for energy production. Further development at Heyford Park will continue the strategy of co-location of employment and residential provision and will support the sustainability of the location. Given the ratio of jobs to dwellings and the further development in the area there is the potential for modal share to shift to towards greener, more sustainable active forms of transport and for more private vehicles to be removed from the roads Through internalisation of trips. These outcomes would be consistent with the Oxfordshire 2050 vision. The application of urban design objectives will ensure a high quality layout is achieved whilst the identification of the constraints and opportunities will ensure that the proposals are sensitively assimilated on the site and into the surrounding landscape and urban fabric. . The historic and cultural heritage of the site has been fully embraced within the ongoing development of the site, The same approach would be adopted when considering future development opportunities of the site, with appropriate and relevant protection and enhancement of features which contribute to the ongoing understanding of the historic and cultural heritage of the site. Development at Heyford Park has been promoted with the support of local residents, local politicians and officers at Cherwell. Heyford Park is adjacent to the proposed Strategic Rail Freight Interchange (SRFI). The development and movement network at Heyford Park is already designed around the use of active travel modes The transport links to surrounding areas will prioritise sustainable travel modes. Streets will be designed to encourage walking and cycling. There will be easy access from the new dwellings to bus services and key transport hubs. By encouraging active travel between areas of residential development and employment etc this has both health benefits and also reduces the carbon footprint. Further development at Heyford Park provides the opportunities to support the Plan's approach. There will be adequate charging facilities and other infrastructure provided with the Heyford Park, development for individual houses and for the public areas. An objection is made to the high level assessment in the Interim SA. It is not clear on what basis the assessment has been made. There is a clear lack of any evidence to justify the arbitrary scoring. It is considered that there are statements and assumptions about Heyford Park included in the SA that are wholly inaccurate and misconceived. It is assertions and not evidence based and the whole document is misleading.</p>
LPR-B-344	Pegasus OBO Dorchester & New College	Option 30	The approach towards housing in the rural areas should be based upon the NPPF. The Local Plan should limit the amount of development to meet local needs, and housing should be located where it will enhance or maintain the vitality of rural communities.
LPR-B-344	Pegasus OBO Dorchester & New College	Option 31	In order to reflect the NPPF and the PPG, the Local Plan should include a combination of 1 and 2.
LPR-B-344	Pegasus OBO Dorchester & New College	Option 32	The settlement hierarchy should be reviewed. Since the Local Plan was adopted Heyford Park has developed and now functions as a sub hub. It not only provides a range of facilities and services for those living and working in Heyford Park, but also for neighbouring villages. Its form and function and role is distinctive and should be recognised alongside Banbury, Bicester and Kidlington in the Local Plan Review. The review provides the opportunity to recognise the role Heyford Park has in the wider locality and the opportunities to accommodate future growth.
LPR-B-344	Pegasus OBO Dorchester & New College	Option 34	The approach to the historic and natural environment should be consistent with the NPPF in particular in respect of the historic environment paragraph 190.
LPR-B-344	Pegasus OBO Dorchester & New College	Question - Neighbourhood Planning	Heyford Park is the centre of one of the largest neighbourhood plans in England. Working in an active partnership on the preparation of the Neighbourhood Plan assisted Heyford Park and the neighbouring villages, and enabled active issues to be discussed. The relationship with the neighbouring villages continues irrespective that the Neighbourhood Plan has been made.
LPR-B-344	Pegasus OBO Dorchester & New College	Question - Development Management Policies	The policies need to be considered in light of the higher tier strategic plan. The policies included in the Local Plan should not duplicate policies in the Oxfordshire Plan, but add value. The Development Management policies need to be capable of effective implementation to assist in the development process. All policies should be clear on purpose and how they will be monitored.

LPR-B-345	Jayne Gordon	Hanwell	Object. Cherwell District Council not only plagiarised the name of this 800year old village within many other developments, but also totally disregarded its promise and commitment to protect Hanwell from urban encroachment. When Hanwell Fields was developed, it was promised by the council that Dukes Meadow Drive is where it would all stop, which was effectively the top of the 'Banbury Bowl' to the north. Cherwell District Council broke its promise to Hanwell Village and allowed further development to the north of Banbury, beyond Dukes Meadow Drive. By way of some kind of poor 'compensation' the District Council yet again committed to protect Hanwell Village from becoming a part of Banbury by not allowing development to the north beyond the 'substantial' tree line that is merely two fields away from the conservation area of Hanwell. The district council is now considering further development to the north of Banbury, breaching the tree line that protects Hanwell Village from being merged with Banbury. This is neither acceptable nor democratic behaviour. The encroachment of Banbury on the village has brought about a huge increase in traffic in the village; an unacceptable level of light pollution for a rural community; evidence of drug use, litter and constant streams of people walking from the housing estates around the village day and night. Not to mention the significant increase in fly tipping along the lanes between the main roads and the villages. The fields around Hanwell are home to an extremely diverse population of wildlife and plant species. The old, carefully managed hedgerows, copses, spinneys and fields around the village teem with animals, insects and plants. In light of climate change, how can it be considered moral to continue to put our district, and our planet, at risk. There is an abundance of brownfield sites that can be developed. I have been led to believe that the question of further development to the north of Banbury has only reared its head due to an error on the part of the council in submitting its response to its higher bodies. I sincerely hope that this is not the case.
LPR-B-346	Mark Gerold	Adderbury	Object. I appreciate that you put notice of this consultation onto your website and informed the Parish Council, there appears to have been no other publicity about such an important process underway. It is clear many were unaware of this consultation. I appreciate that CDC has a housing supply target to fulfil but I hope that you will not deliver this at the expense of the villages which are a key part of Oxfordshire. I realise that not all these proposals will be adopted. However, even a limited amount would significantly change the character of the village which I thought would be protected. Most of the land parcels seeking allocation within Adderbury do not align with the objectives in the Adderbury Neighbourhood Plan 2014-2031. Even the smallest parcels (LPR-A-077) seem incredibly opportunistic and potentially very damaging. A total of 109.28 acres of proposed residential development land in the Adderbury Parish Profile. Looking at the similar plans, the proposals for Banbury total 264.06 acres and Deddington a mere 38.03 acres. When you look at the size of Banbury (50,000 population) compared to Adderbury (3000), the total land proposals for our village at 41% of those for sought for Banbury, highlights the massive imbalance and implications of these proposals. I would expect landscape protection, particularly views of St Marys Church, the conservation area status of much of the village, the limited amount of local supporting infrastructure and unsuitability of access roads will be considered when assessing. I would hope that CDC will take seriously into account the significant impact upon the village should a large amount of land be allocated. The aims of CDC are clearly set out in the Neighbourhood Plan. It would be a dreadful legacy for CDC to allow such a huge increase in population that would take place. I really would struggle to see how any would meet the above stated objectives. I would be grateful to receive your guidance as to whether there will be further consultation and if so how you suggest the residents of Adderbury should best present their views.
LPR-B-347	West Oxfordshire Council	General	The main consultation paper, flyer and poster, provide a clear and succinct summary of what the plan will include, how this stage fits into the process and how feedback, emerging evidence and government/national planning policy and more local policy will help to inform the local plan. I congratulate you on the use of plain English, particularly in the poster and flyer. 'Image of the future' (Vision); 'the ideas to shape new planning policies' (objectives) and 'choices available for shaping and directing development' (options). The use of a QR code is also a step in the right direction in achieving a user-friendly, digital planning system. The consultation document, it provides a good balance between more traditional themes and issues of local plans, e.g. heritage asset protection and meeting housing needs, and highlighting more recent issues, concepts, concerns and emerging policy/context, such as climate action, Biodiversity Net Gain, natural capital and design codes. We welcome cooperative working, not least because for many issues a District boundary is arbitrary, but because proposals or a particular policy approach in one local plan can have implications for adjoining areas. For example, proposals have been put forward for sites near to West Oxfordshire, e.g. Blenheim/Pye Homes proposals for 450-1000 home development immediately to the east of Woodstock. I request that we could be involved in discussions on such issues and sites. Page 39 definition of Gypsies and Travellers. Typo in c) 'resuming', rather than 'residing'. Page 40. Question on housing policies. By way of example, support for alternative methods of construction is identified. These are important to consider but should be for all types of development, not just homes. It is good to see that a Health Impact Assessment is being undertaken.
LPR-B-347	West Oxfordshire Council	Option 1	All three of your overarching themes are justified and we support their identification.
LPR-B-347	West Oxfordshire Council	General	Sections 2.1 and 2.2 Provide a useful summary of the national context to the plan, particularly the uncertainty as a result of both emerging national policy and the long terms results of COVID-19. It might have been useful here to have identified the national/international context of climate change. Section 3 provides a useful context, with a particular emphasis on economic growth, so it is not surprising that the first theme of the three overarching themes identified for the Local Plan is 'Maintaining and developing a sustainable local economy'.
LPR-B-347	West Oxfordshire Council	Option 1	Overall this is a vision that appears to relate well to the national and local context and the feedback received so far. Given subsequent references in the paper to reduce inequality, specific reference could be added to the second paragraph of the vision to read: '... delivers a healthier, fairer, more prosperous...'. Point 4 could be broadened – it is not just homes that need to be energy efficient and well designed. Points 10 and 11 of the vision should perhaps give recognition to landscape and biodiversity being part of a wider network.

LPR-B-347	West Oxfordshire Council	Option 2	KO 1 sets out that sufficient land will be allocated for Cherwell's housing and employment needs but It may be appropriate here to provide flexibility to accommodate any potential unmet housing needs arising elsewhere. KO 5 relates to the rural economy. A useful addition could be '... ensuring effective and sensitive management of the natural environment.' KO 10-19 - welcome and support these objectives, including those related to net zero carbon, natural capital and active travel. KO 13 includes reference to pollution. In the same way that KO 17 says '(particularly water efficiency)', it would be useful to add to KO 13 '(including air and water quality)'. KO 20 - welcome the recognition of the need to address all sector's housing needs, including those of the travelling communities. (Typo – ageing)
LPR-B-347	West Oxfordshire Council	Option 3	Reference is made to an Employment Land and Needs Assessment and a town centre and retail study. It will be interesting to see the findings of these studies. We would welcome the opportunity to be involved, particularly to get a better understanding of the possible impacts of the pandemic and the changes to the Use Classes Order and to Permitted Development Rights. Given specific reference to the green economy in the vision, I would have expected coverage of this in the employment section.
LPR-B-347	West Oxfordshire Council	Option 5	Reference is made to an Employment Land and Needs Assessment and a town centre and retail study. It will be interesting to see the findings of these studies. We would welcome the opportunity to be involved, particularly to get a better understanding of the possible impacts of the pandemic and the changes to the Use Classes Order and to Permitted Development Rights.
LPR-B-347	West Oxfordshire Council	Option 6	As with West Oxfordshire, I am not surprised there is a focus on affordable housing, both in terms of rates and tenure, in the housing section of the document. This is welcomed.
LPR-B-347	West Oxfordshire Council	Option 10	A question is posed on the introduction of specific housing standards. The government has had concerns in the past about the use of local standards which means it is especially important to have evidence to support the approach.
LPR-B-347	West Oxfordshire Council	Option 13	Given the recognised ecological emergency and the emerging 25 Year Environment Plan, I would encourage you to have strong and robust policies to help address the issues, including on the Nature Recovery Network, biodiversity net gain (BNG), biodiversity off-setting, natural capital approach and ecosystems services. Requiring a natural capital assessment and achieving a high level of BNG is supported. As you may know, we are proposing a 25% BNG through the Salt Cross Garden Village AAP.
LPR-B-347	West Oxfordshire Council	Option 14	While formal facilities can provide an important community resource, the benefits of considering play and sport in its widest sense (and not just for children), including as part of a multifunctional green infrastructure network, is being increasingly emphasised, e.g. by Sports England.
LPR-B-347	West Oxfordshire Council	Option 15	While formal facilities can provide an important community resource, the benefits of considering play and sport in its widest sense (and not just for children), including as part of a multifunctional green infrastructure network, is being increasingly emphasised, e.g. by Sports England. We welcome the emphasis given to placemaking and good quality design and the introduction of the concepts of beauty and 20-minute neighbourhoods. We welcome and support the use of the transport hierarchy. (NB Oxfordshire County Council have approved a new Street Design Guide). As with West Oxfordshire, the need for the timely provision of supporting infrastructure is a particular concern locally. Given the pressing need, it is important that the wider context of social and environmental benefits of infrastructure and the contribution of infrastructure schemes to Climate Action, Healthy Place Shaping and a sustainable economy are considered.
LPR-B-347	West Oxfordshire Council	Option 27	There is a substantial area of West Oxfordshire that abuts and is influenced by Cherwell District, the area of potential greatest change is likely to be that close to Kidlington. It is important that consideration is given to the relationship of Kidlington proposals and policies to, in particular, Woodstock and Bladon, and vice versa - for example, the transport connectivity along the A44, the proposed Park and Ride and the use of the emerging Hanborough Hub at Long Hanborough railway station. We support the identified strategic green corridor running on the western side of the A44 from the A40 through to Bladon and Blenheim Place.
LPR-B-348	Judy Hine	Sibford Gower	This is a greenfield site, good agricultural land on the edge of a village with poor public transport, and with no existing drainage infrastructure on the site. The roads in and around both Sibfords are already unfit for the increased amount of traffic that would result from a housing development. The Council should be aiming to reduce dependency on the car as a mode of travel to reduce carbon emissions and they should be limiting the growth of small villages. The proposed development site would, if given permission to build, double the size of Sibford Gower, putting pressure on the Primary School and causing an increased volume of traffic, as residents would need to drive to both places of employment and to shops - the Sibfords have low local employment opportunities and the Gower has no shop. housing developments should be limited to existing brownfield sites

LPR-B-349	Lucy Wells	LPR-A-077	<p>The proposals, contradict Cherwell District Council's own Local Plan Key Objectives and existing Local Planning Policies. Any further development will have a severe visual impact on the rural character of Adderbury, specifically those proposed within the conservation area or adjoining its boundary. Indeed, sufficient land has already been allocated in the district to meet predicted demand for the next 13 years. development on these sites expressly contradicts Policy ESD 1: Mitigating and Adapting to Climate Change. Adderbury is not a sustainable location as described in the Local Plan. These locations contradict both the current Local Plan Policy and contradict the Key Objectives of the CDC Local Plan Review and therefore the proposal to allocate land at LPR-A-077 for residential development should be dismissed. The proposal does not support KO8; The local infrastructure, particularly the through road, road junctions, access roads and roads adjoining the school are at or near capacity and create a health and safety risk to residents. This risk is not only to children, the elderly, pedestrians and cyclists from a sheer volume perspective but clear links with increased volumes of traffic, particularly stationary, results in poor air quality. Any further development would place an unnecessary strain on these services and does not support a sustainable economy. Any development of this land would also be contrary to NPPG - Rural housing para 78. Proposals do not align with SO12 or KO 9: Continued development of land, particularly that located within the conservation area and green belt should be refused on the basis that any further loss of this attribute would severely impact the character and beauty of Adderbury's natural heritage, lessen its natural capital and degrade its ecosystem. Any development on these sites would be contrary to Policy ESD 10: Protection and Enhancement of Biodiversity and the Natural Environment. Substantial new build structures on elevated land, filling a space within the village that positively contributes to the character and appearance of the Conservation Area in its undeveloped form, should be resisted. Any new development in this area would appear unusually incongruous and out of character to the historic character of the immediate locality. Wild Oxfordshire have included this proposed development land within their North Cherwell CTA and as such, according with Policy ESD 11: Conservation Target Areas, development which would prevent the aims of a Conservation Target Area being achieved will not be permitted. The proposal to allocate land at LPR-A-077 for residential development would result in the loss of the remaining open space to the detriment of the character and appearance of this part of the Conservation Area and therefore should be dismissed. . The proposals do not support KO 23: The CNC Local Plan Review must resist the continued erosion of villages in Cherwell and specifically around Adderbury.</p>
LPR-B-350	Peter Wells	LPR-A-077	<p>The proposals, contradict Cherwell District Council's own Local Plan Key Objectives and existing Local Planning Policies. Any further development will have a severe visual impact on the rural character of Adderbury, specifically those proposed within the conservation area or adjoining its boundary. Indeed, sufficient land has already been allocated in the district to meet predicted demand for the next 13 years. development on these sites expressly contradicts Policy ESD 1: Mitigating and Adapting to Climate Change. Adderbury is not a sustainable location as described in the Local Plan. These locations contradict both the current Local Plan Policy and contradict the Key Objectives of the CDC Local Plan Review and therefore the proposal to allocate land at LPR-A-077 for residential development should be dismissed. The proposal does not support KO8; The local infrastructure, particularly the through road, road junctions, access roads and roads adjoining the school are at or near capacity and create a health and safety risk to residents. This risk is not only to children, the elderly, pedestrians and cyclists from a sheer volume perspective but clear links with increased volumes of traffic, particularly stationary, results in poor air quality. Any further development would place an unnecessary strain on these services and does not support a sustainable economy. Any development of this land would also be contrary to NPPG - Rural housing para 78. Proposals do not align with SO12 or KO 9: Continued development of land, particularly that located within the conservation area and green belt should be refused on the basis that any further loss of this attribute would severely impact the character and beauty of Adderbury's natural heritage, lessen its natural capital and degrade its ecosystem. Any development on these sites would be contrary to Policy ESD 10: Protection and Enhancement of Biodiversity and the Natural Environment. Substantial new build structures on elevated land, filling a space within the village that positively contributes to the character and appearance of the Conservation Area in its undeveloped form, should be resisted. This area should remain free of substantial new build structures. Any new development in this area would appear unusually incongruous and out of character to the historic character of the immediate locality. Wild Oxfordshire have included this proposed development land within their North Cherwell CTA (Conservation Target Area – Other Sites) and as such, according with Policy ESD 11: Conservation Target Areas, development which would prevent the aims of a Conservation Target Area being achieved will not be permitted. The proposal to allocate land at LPR-A-077 for residential development would result in the loss of the remaining open space to the detriment of the character and appearance of this part of the Conservation Area and therefore should be dismissed. Proposals do not support KO 13 or KO 16: Further and increased residential development in inappropriate locations (ie rural villages) where the local road infrastructure is at or near capacity has resulted in a significant increase in vehicular movements. Further residential development in Adderbury does not support this objective as it decreases the areas natural capital, it increases air pollution, lowers connectivity and does not form part of a sustainable transport model facilitating by lowered car usage. The proposals do not support KO 23. The CNC Local Plan Review must resist the continued erosion of villages in Cherwell and specifically around Adderbury.</p>
LPR-B-351	Jane Hudson	LPR-A-175	<p>Strongly objects. Proposal is inappropriate. Proposal would be out of scale with the existing village and detrimental to its character. Important services such as Horton General Hospital maternity unit and primary schools are less accessible from this northern end of Oxfordshire. The site would conflict with the potential route for a future bypass. The A361 is constricted and already causes traffic problems; further development either side of the A361 near J11 of the M40 would increase heavy traffic. The road through the village already has traffic difficulties which would be made worse by the proposed development; the road cannot be easily widened without damage to the conservation area. The village could accommodate minor/infill development but the proposed development of some 300-400 homes would swap the village and damage the conservation area.</p>

LPR-B-352	Jacynth Back	Milcombe	Objects to proposals in the village. Land proposed in the centre of the village is a much valued greenfield site providing a RoW, grazing for horses and occasional sheep, wildflower meadow, popular and safe dog walking space. Field adjacent to Paradise Lane contains horses, a RoW, is used for village fetes, and provides access to walking routes. The site can flood in winter months. Site is located next to an Listed Building; development of the site would result in loss of these attributes. All other proposed sites in the village are on greenfield agricultural land surrounding the village; if approved the village would be overwhelmed and would result in further drainage problems and increased traffic.
LPR-B-353	Peter and Jane Cooper	Option 30	Presenting these two options as the only alternatives is unsatisfactory. It is impossible to understand the implications of option 1. It is unclear what the definition of local needs will be and on what basis they will be assessed. Option 2 is prescriptive and appears to take no account of existing residents' views and wellbeing. Therefore an additional option is required. In this option development of rural areas would give great weight to the existing character and size of the village and the wellbeing and life style of the thousands of existing residents. The rural communities of Bloxham, Adderbury, Bodicote and Hanwell have already provided large areas of what was once rural land for development and become a suburban sprawl. This greenfield development has been partially at the expense of not developing brownfield sites. Brownfield sites at high density can be affordable, increase the vibrancy of urban centres and reduce the need for car transport, so contributing to a more sustainable life. If the villages are to retain their rural character it is important that housing development is proportionate to the size of the village and should not alter its nature. Appropriately located infill allows for the sensitive growth of communities.
LPR-B-353	Peter and Jane Cooper	North Newington	Comments provided in relation to developments in the village. LPR-A-135; could be considered infill development. It does not significantly alter the footprint of the village. In contrast LPRA- 004 is a 'backland' location and would extend the village well beyond its existing boundaries and significantly change the skyline of the village and its setting within the rural environment. The need for a significant road development and the construction of potentially 20-30 houses will have a major impact on the village. Over 20 houses back directly onto this site and a similar number look out over it. These residents would see their property devalued and their privacy and well-being adversely affected. If all the proposed sites in the parish are developed then the parish housing stock would rise by over 100%. Even when the Broughton Road site is excluded the increase in housing stock within the village will be at least 30%. If only Plot LPR-A-135 is developed the increase would be a very proportionate 10-12% of housing stock within the existing footprint of North Newington village. The village has a narrow through road with many parked cars and is already heavily used by traffic from other villages. The narrow pavement is not continuous throughout the village and makes safe walking difficult in many places. Water pressure within the village is often low and the current electricity supply has been insecure at times. Storm drains are not coping with the heavy rain. the bus service has been withdrawn, walking or cycling to Banbury are not sensible options as there is no safe route. North Newington has no regular, established public transport routes and safe cycling and walking routes to work, school, shopping and leisure activities, residents have to rely exclusively on cars. This makes significant development within the village unsustainable in a green environment. Access to the M40 and Banbury train station is becoming more and more difficult because of the increased traffic resulting from the westward expansion of Banbury.
LPR-B-353	Peter and Jane Cooper	Option 31	Option 3 seems most appropriate whereby the Local Planning Authority and Parish council work together to make informed decisions. However for this to work effectively there would be need to be formally agreed procedures that allowed for proper and genuine consultation of residents and Parish councils. CDC's approach to consultation over its Local Plan Review has been extremely poor; Parish Council was not informed until 27 October with accessing and reading the complex documents needed and responses required by 10 November. This is a wholly unsatisfactory time period and calls into question the genuineness of the consultation. Whilst I understand the desire for a paperless process, so far attempts to get paper copies have not been successful which has led to many (particularly older) residents feeling their views are not really being sort.
LPR-B-353	Peter and Jane Cooper	Option 32	Support Option 2 which suggests that rural development should mainly take place where there are regular, established public transport routes and safe cycling and walking routes to work, school, shopping and leisure activities. Before considering what weight to give to certain services and facilities it is important to ensure that the existing infrastructure of each village is resilient enough to cope with any new development (roads, pavements, power, water, sewage, drainage, electricity and broadband). This resilience should be tested. An additional criterion for a rural settlement hierarchy is that the nature and character of the village should not be significantly affected by the development. Put simply the village should mainly look and feel the same before and after the development. This is particularly important where a development abuts a Conservation Area.
LPR-B-353	Peter and Jane Cooper	LPR-A-004	North of Broughton Road - This development comes within the Parish boundary so should be considered as part of the housing increase for North Newington although it does not directly impact on the character of the village. It will increase the traffic on the Broughton Road and storm water will run off the development and worsen the flooding that often occurs on the Broughton Road. South of Shutford Road and Main Street - strongly of the view that this backland development is not supported by the policy in the current local plan and will have a negative impact on the village. It entails a significant development outside the existing footprint of the village and is on rising ground so visually it will overpower many of the cottages on Main Street within the conservation area.
LPR-B-353	Peter and Jane Cooper	LPR-A-135	Providing the scale and type of development proposed is suitable we would see this area as appropriate infill as it sits within the village footprint. Before any site is agreed for development a proper testing of the resilience of the infrastructure should take place

LPR-B-354	Susan and David Davies	LPR-A-064	3000 houses will swap the village and result in urban sprawl of Kildington. Will result in increased traffic and add to pollution. A proposed bypass to the west would have to cross land that regularly floods for long periods of time and would also have to cross the railway line.It will have to be built high enough to clear these areas and be a blot on the beautiful landscape. A bye pass to the east would be a more considered option from the A34 across to Wheatley Road. A bye pass would increase traffic and not necessarily stop traffic going through the village. All of the plans involve building on the GreenBelt. Any building works in the dead end Mill Street would be problematic; resulting in road blockages with deliveries. There is a brownfield site(the oil dump) in the village which would be more suitable. New traffic management with lights is being trialled in Islip and hopefully may have an effect on those using the village as a rat run. The plan would destroy Islip as a village and decrease the quality of life here.
LPR-B-354	Susan and David Davies	LPR-A-124	3000 houses will swap the village and result in urban sprawl of Kildington. Will result in increased traffic and add to pollution. LPR-B-355	Mr and Mrs AP Hartwell	LPR-A-002	Express strong opposition.Development of the areas outlined would result in a huge increase in the area of housing and would result in severe overloading of the present infrastructure especially the roads and major junctions which are already bottlenecks at rush hour. particularly concerned about the loss of green spaces and land that could be used for food production and/or local renewable energy systems.There is reason to manage the rate at which small villages such as Adderbury become overwhelmed by infill and ribbon developments that completely change the nature of the community.
LPR-B-355	Mr and Mrs AP Hartwell	LPR-A-077	Express strong opposition.Development of the areas outlined would result in a huge increase in the area of housing and would result in severe overloading of the present infrastructure especially the roads and major junctions which are already bottlenecks at rush hour. particularly concerned about the loss of green spaces and land that could be used for food production and/or local renewable energy systems.There is reason to manage the rate at which small villages such as Adderbury become overwhelmed by infill and ribbon developments that completely change the nature of the community.
LPR-B-355	Mr and Mrs AP Hartwell	LPR-A-081	Express strong opposition.Development of the areas outlined would result in a huge increase in the area of housing and would result in severe overloading of the present infrastructure especially the roads and major junctions which are already bottlenecks at rush hour. particularly concerned about the loss of green spaces and land that could be used for food production and/or local renewable energy systems.There is reason to manage the rate at which small villages such as Adderbury become overwhelmed by infill and ribbon developments that completely change the nature of the community.
LPR-B-355	Mr and Mrs AP Hartwell	LPR-A-086	Express strong opposition.Development of the areas outlined would result in a huge increase in the area of housing and would result in severe overloading of the present infrastructure especially the roads and major junctions which are already bottlenecks at rush hour. particularly concerned about the loss of green spaces and land that could be used for food production and/or local renewable energy systems.There is reason to manage the rate at which small villages such as Adderbury become overwhelmed by infill and ribbon developments that completely change the nature of the community.

LPR-B-355	Mr and Mrs AP Hartwell	LPR-A-146	Express strong opposition. Development of the areas outlined would result in a huge increase in the area of housing and would result in severe overloading of the present infrastructure especially the roads and major junctions which are already bottlenecks at rush hour. particularly concerned about the loss of green spaces and land that could be used for food production and/or local renewable energy systems. There is reason to manage the rate at which small villages such as Adderbury become overwhelmed by infill and ribbon developments that completely change the nature of the community.
LPR-B-355	Mr and Mrs AP Hartwell	LPR-A-156	Express strong opposition. Development of the areas outlined would result in a huge increase in the area of housing and would result in severe overloading of the present infrastructure especially the roads and major junctions which are already bottlenecks at rush hour. particularly concerned about the loss of green spaces and land that could be used for food production and/or local renewable energy systems. There is reason to manage the rate at which small villages such as Adderbury become overwhelmed by infill and ribbon developments that completely change the nature of the community.
LPR-B-355	Mr and Mrs AP Hartwell	LPR-A-218	Express strong opposition. Development of the areas outlined would result in a huge increase in the area of housing and would result in severe overloading of the present infrastructure especially the roads and major junctions which are already bottlenecks at rush hour. particularly concerned about the loss of green spaces and land that could be used for food production and/or local renewable energy systems. There is reason to manage the rate at which small villages such as Adderbury become overwhelmed by infill and ribbon developments that completely change the nature of the community.
LPR-B-355	Mr and Mrs AP Hartwell	Adderbury	Residents in rural areas are seeing a continued loss of green spaces and the elimination of wildlife corridors. Some of the areas designated for housing could be used more sustainably for local renewable energy system development – making the villages themselves more sustainable and helping to achieve Net Zero. Prior to the pandemic many of the new residents on developments in Adderbury were commuters. There has been no evidence of increases in local employment. There is no evidence that SME housebuilders have benefited from recent developments in Adderbury – quite the contrary. Transport is a major issue for rural communities – efficient public transport systems in towns can minimise the need for vehicle ownership but this is not possible in rural areas. Victorian sewage system is already struggling to cope with increased volumes of sewage and run-off water and we will continue to have issues until this problem is tackled strategically. In Sweden they have, over many years, managed to establish separate systems for some of the rain-water and sewage systems. This reduces peak flows and hence the likelihood of overflows from sewage water treatment systems during the more frequent periods of heavy rainfall. These systems can best be installed in towns and cities rather than dispersed rural areas.
LPR-B-356	Paul Westgate	Bodicote	Objects to development south of Bodicote. seems counterproductive to destroy an area of countryside and the wildlife and amenity that it provides when the canalside development has not even been started. This should be completed before other more damaging construction is considered. The canalside development has numerous advantages: 1. It is already built on; 2. It is in need of regeneration; 3. It would not destroy wildlife or countryside; 4. It would reduce the use of motor vehicles due to its proximity to the town centre; 5. It is within walking distance of the bus and train stations; and 6. It would benefit town centre businesses
LPR-B-357	Ivan Tyrrell	Sibford Gower	Strongly oppose any large scale development. Sibford Gower is a quiet, pleasant village surrounded by beautiful countryside. Already an enormous growth of housing imposed on surrounding villages and towns; no need for any more. The location suggested, which is on valuable agricultural land, would massively increase the amount of traffic in the area. Furthermore the village does not have the infrastructure to service a large increase in population
LPR-B-358	Julian Murphy	LPR-A-104	Site is inappropriate for development. There is little infrastructure to support an increase in the population of Clifton. There is a pub but no other amenities; no buses so transport would entail increased car usage. Access down Chapel Close is narrow and restrictive for current residents due to parked cars and delivery vehicles. An increase in car use would add to the parking problems. The site access would need to be positioned so as not to badly affect the peace of the existing houses at the end of Chapel Close. No room for a pavement for more pedestrian use. More houses would have added strain on service vehicles such as bin lorries. More vehicles would add to the noise in Clifton and Chapel Close. Clifton would lose its identity as a quiet rural village. Additional housing in Clifton would put added strain on Deddington Health Centre and the local school. Flooding is already an issue from storm water, which damages the road surface. Sewerage floods from adjacent sewerage works have affected the Manor Barn area.
LPR-B-359	Sharon Tomkinson	Bloxham	Strongly object to proposed new sites in the village. Development would further extend the village to link up to Banbury and its surrounding villages resulting in damage to the countryside and quality of life for residents and wildlife. If Bloxham gets bigger it will lose its very essence that makes it a village. Village would be unable to cope in terms of infrastructure and traffic levels with more dangerous roads and higher pollution levels. Key reasons to object to further development in Bloxham include - schools at maximum capacity, sewerage cannot cope with existing requirements, narrow central roads already constrained resulting in hazardous conditions for pedestrians, doctors and dental services are at capacity, wildlife should be protected and heavy traffic will result in noise pollution.
LPR-B-359	Sharon Tomkinson	LPR-A-100	Very against the proposed development. directly negatively impact the character of the village, its wildlife, Church views and the graveyard, and disrupt ancient pathways across fields which have for generations linked the villages. Existing new developments are already very dense in the village by rural standards and it is imperative we preserve what remaining rural wildlife and countryside we have around them. An obvious increase in usage of rural paths and fields during pandemic lockdowns as an example has brought the need to contain these areas for positive mental health of residents and preserve countryside/wildlife/outside space that is accessible to villagers - not to mention a small effort around climate change.
LPR-B-359	Sharon Tomkinson	Bloxham	object to the Cherwell Council Local Plan - and the potential land developments over and above those over the last decade that are already having a negative impact on the village. This would include immediate surrounding developments - Milcombe, Milton etc as these residents will depend on Bloxham providing services and travel routes - which it can no longer sustain. These have been put forward as issues year after year for the last decade the Council needs to push back and no longer accept so many planning applications and restore some semblance of rural and quality of life for those paying their taxes.

LPR-B-360	Oliver Foley	LPR-A-091	object to proposals. Bodicote area has undergone significant development in recent years and the village cannot accommodate more houses without significant change to the existing roads and infrastructure.
LPR-B-361	Sarah Smith	LPR-A-041	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. Additional development around Henge Close at LPR-A-041 would directly abut the Conservation Area and would therefore be detrimental to the setting of the listed buildings on Horn Hill Rd. Development would also be detrimental to the open nature of the Henge Close estate and to the green space and play area to the east. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages. The proposals work in total oppositon with the aims of the local plan, Oxfordshire plans and Governement plans in relation to retaining green space, fighting climate change, supporting natural wildlife and eco systems and supporting mental health and well being which has been significantly impacted by the pandemic. children are unable to walk to school because of the speed of traffic along the Milton Road. The safety and quality of life of residents in Adderbury is already at serious risk and further development in the village would be wholly detrimental to the residents.
LPR-B-361	Sarah Smith	LPR-A-086	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. The large-scale developments proposed for sites LPR-A-086 would utterly change the approach to the village and would create a jarring transition from agricultural land to modern, dense housing. if developed, double the size of West Adderbury overnight. Such large scale development is entirely inappropriate for a village the size of Adderbury and is far more suited to a large town or even a city. few facilities present in Adderbury would be completely swamped by a development of this scale, placing massive pressures on local schools and services. Precious public footpaths over these sites, which are in daily use by local residents, would be lost forever. Development of LPR-A-086 would lead to the residents of St Mary's Road being completely subsumed by new estates, fundamentally changing the character of the southern edge of West Adderbury. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages. The proposals work in total oppositon with the aims of the local plan, Oxfordshire plans and Governement plans in relation to retaining green space, fighting climate change, supporting natural wildlife and eco systems and supporting mental health and well being which has been significantly impacted by the pandemic. children are unable to walk to school because of the speed of traffic along the Milton Road. The safety and quality of life of residents in Adderbury is already at serious risk and further development in the village would be wholly detrimental to the residents. site would also be completely inappropriate for affordable (social) housing as is too remote and isolating for anyone living there. There are poor transport links - with long distances needed to be travelled to do anything. There are no real local employment opportunities. As a result it would only increase car usage and dependency and increase traffic and pollution.

LPR-B-361	Sarah Smith	LPR-A-146	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. Additional development around Henge Close at LPR-A-146 would directly abut the Conservation Area and would therefore be detrimental to the setting of the listed buildings on Horn Hill Rd. Development would also be detrimental to the open nature of the Henge Close estate and to the green space and play area to the east. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages. The proposals work in total oppositon with the aims of the local plan, Oxfordshire plans and Governement plans in relation to retaining green space, fighting climate change, supporting natural wildlife and eco systems and supporting mental health and well being which has been significantly impacted by the pandemic. children are unable to walk to school because of the speed of traffic along the Milton Road. The safety and quality of life of residents in Adderbury is already at serious risk and further development in the village would be wholly detrimental to the residents.
LPR-B-361	Sarah Smith	LPR-A-218	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages. The proposals work in total oppositon with the aims of the local plan, Oxfordshire plans and Governement plans in relation to retaining green space, fighting climate change, supporting natural wildlife and eco systems and supporting mental health and well being which has been significantly impacted by the pandemic. children are unable to walk to school because of the speed of traffic along the Milton Road. The safety and quality of life of residents in Adderbury is already at serious risk and further development in the village would be wholly detrimental to the residents.
LPR-B-361	Sarah Smith	LPR-A-258	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. The large-scale developments proposed for site LPR-A-258 would utterly change the approach to the village and would create a jarring transition from agricultural land to modern, dense housing. Development would lead to a substantial decrease in the green space between West Adderbury and Milton, increasing the risk of coalescence and impacting upon the character of both villages. A popular footpath would be lost, and irreversible damage would be caused to the amenity of the homes to the north of Adderbury Fields, and to the adjacent green space. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages. The proposals work in total oppositon with the aims of the local plan, Oxfordshire plans and Governement plans in relation to retaining green space, fighting climate change, supporting natural wildlife and eco systems and supporting mental health and well being which has been significantly impacted by the pandemic. children are unable to walk to school because of the speed of traffic along the Milton Road. The safety and quality of life of residents in Adderbury is already at serious risk and further development in the village would be wholly detrimental to the residents.
LPR-B-362	Caversfield Parish Council	Option 2	Climate change is a priority
LPR-B-362	Caversfield Parish Council	Option 3	Options 1, 2 and 3 but primarily option 2.
LPR-B-362	Caversfield Parish Council	Option 4	Option 3 a mixture but limiting the retail to urban locations / town centres
LPR-B-362	Caversfield Parish Council	Question - Supporting Employment	Improving internet connections so that people can work more flexibly from home.
LPR-B-362	Caversfield Parish Council	Option 5	Option 2 - Other community and leisure uses should be considered before turning into residential development.

LPR-B-362	Caversfield Parish Council	Question - Town Centre Uses (Banbury, Bicester & Kidlington)	A policy of at least 1 hour of free parking for all CDC car parks.
LPR-B-362	Caversfield Parish Council	Option 6	Surely Banbury and Bicester need more social housing rather than less?
LPR-B-362	Caversfield Parish Council	Option 7	Choice 1
LPR-B-362	Caversfield Parish Council	Option 8	Choice 1
LPR-B-362	Caversfield Parish Council	Question - Separation Distances	Yes - there should be minimum separation distances between properties
LPR-B-362	Caversfield Parish Council	Option 9	1, but it should be for all new homes, not just a proportion
LPR-B-362	Caversfield Parish Council	Question - Travelling Communities	No specific locations are available with Caversfield.
LPR-B-362	Caversfield Parish Council	Option 10	Choice 3
LPR-B-362	Caversfield Parish Council	Question - Retrofitting of Historic Buildings	The whole issue needs a review. We must move on into the 21st century and historic buildings must be part of this. An example of this was in the Garden Quarter in Caversfield where it was insisted that the original 1940s aluminium windows had to be maintained and not replaced with new double glazed units, but unsightly, internal secondary glazing could be installed. Surely new 21st century units which were fit for purpose would have been a much better solution to modern living.
LPR-B-362	Caversfield Parish Council	Option 11	2: you need a criteria-based policy in order that you can identify and allocate the sites.
LPR-B-362	Caversfield Parish Council	Question - Green Belt	The whole of the Green Belt should be reviewed as it is not now fit for purpose. While the Green Belt might protect Oxford and the villages surrounding it. Any villages surrounding the larger towns in Cherwell are totally unprotected from coalescence.
LPR-B-362	Caversfield Parish Council	Option 12	Choice 1
LPR-B-362	Caversfield Parish Council	Option 13	Choice 2
LPR-B-362	Caversfield Parish Council	Option 14	Choice 3
LPR-B-362	Caversfield Parish Council	Option 15	A mixture of choices 1 and 2
LPR-B-362	Caversfield Parish Council	Question - Local Green Spaces	Sites off Springfield Road and Rau Court have been previously designated for recreational use. When the MoD owned them, both sites used to have children's play areas, however these were removed by the new land owners. These areas should be reinstated and are of significant importance as green lungs for the village. Two site location plans have been supplied. A small area designated as a Village Green in Old School Close is extremely important.
LPR-B-362	Caversfield Parish Council	Question - 20-Minute Neighbourhoods	Yes. But, not sure how the principles would work in villages with very few facilities.
LPR-B-362	Caversfield Parish Council	Question -Transport & Connectivity	Yes, agree with approach. Yes, the approach should be different for rural areas with much more support to help reduce individual car travel. Until the technology catches up with personal requirements, it is very difficult to consider other measures. Electric cars are a great idea, but are still prohibitively expensive; the infrastructure also needs greater consideration in rural areas.
LPR-B-362	Caversfield Parish Council	Option 16	While it is imperative that digital infrastructure is future-proofed, the Parish Council does not have the knowledge or experience to answer this
LPR-B-362	Caversfield Parish Council	Question - Reducing Car Dependency in Banbury	Reinstatement of the Bicester Magistrates' Court and Job Centre would reduce car travel from Bicester.
LPR-B-362	Caversfield Parish Council	Option 22	Choice 2. Coalescence must be reduced between the town and the surrounding villages.
LPR-B-362	Caversfield Parish Council	Option 23	None of the above on green field sites. Only brown field sites should be selected.
LPR-B-362	Caversfield Parish Council	Option 24	Neither suggestion. Some minor conversion would be acceptable, but not to the detriment of the business of the high street shops. A mix of shops, leisure and community use with meeting spaces would be ideal
LPR-B-362	Caversfield Parish Council	Option 25	Surely you need to have a criteria-based policy to be able to identify the specific sites?
LPR-B-362	Caversfield Parish Council	Question - Bicester's Open Spaces	They should not be built on at any cost, but should have regular funding assistance.
LPR-B-362	Caversfield Parish Council	Question - Reducing Car dependency in Bicester	Proper cycle lanes and a decent bus service. Medical services should be centrally provided and easily accessible.
LPR-B-362	Caversfield Parish Council	Option 30	Choice 1
LPR-B-362	Caversfield Parish Council	Option 31	Choice 1. However, the Parish Council does not believe there are any sites within Caversfield for allocation.
LPR-B-362	Caversfield Parish Council	Option 32	The current policy is working well for Caversfield and would wish to remain a Category C village.
LPR-B-362	Caversfield Parish Council	Option 33	Choice 3
LPR-B-362	Caversfield Parish Council	Option 34	a combination of both.

LPR-B-363	Andy Sorrell	LPR-A-086	site falls outside of the Residential Settlement Boundary as set out in the Adderbury Neighbourhood Plan, and therefore contravene Policy AD1. ironic contradictions of the objectives of the increased housing - e.g. retaining green spaces, fighting climate change and supporting natural wildlife and eco systems, residents' mental health and wellbeing, destruction of existing public footpaths used by local residents for walking and cycling. proposed plans clearly do not enhance the vitality of the village of Adderbury - they will only contravene the very economic, social and environmental objectives set out in the plans. increasing the housing population at this proposed rate is unrealistic, unhealthy for residents and unsustainable for the existing and potential infrastructure in the area. Not to mention it will utterly destroy the natural beauty the village currently has. The site is completely landlocked and would require significant roadworks to support a site of this scale - this would have devastating and irreversible impacts on residents and wildlife. The site would also be completely inappropriate for affordable (social) housing as is too remote and isolating for anyone living there. There are poor transport links - with long distances needed to be travelled to do anything. There are no real local employment opportunities. As a result it would only increase car usage and dependency and increase traffic and pollution. Once the latest phase of Longford Park, the new developments on the Bloxham Rd and the additional housing to the north of Banbury are complete, it is inconceivable that Cherwell will not have at least a 5 year housing supply
LPR-B-363	Andy Sorrell	LPR-A-041	site falls outside of the Residential Settlement Boundary as set out in the Adderbury Neighbourhood Plan, and therefore contravene Policy AD1. ironic contradictions of the objectives of the increased housing - e.g. retaining green spaces, fighting climate change and supporting natural wildlife and eco systems, residents' mental health and wellbeing, destruction of existing public footpaths used by local residents for walking and cycling. proposed plans clearly do not enhance the vitality of the village of Adderbury - they will only contravene the very economic, social and environmental objectives set out in the plans. increasing the housing population at this proposed rate is unrealistic, unhealthy for residents and unsustainable for the existing and potential infrastructure in the area. Once the latest phase of Longford Park, the new developments on the Bloxham Rd and the additional housing to the north of Banbury are complete, it is inconceivable that Cherwell will not have at least a 5 year housing supply

LPR-B-363	Andy Sorrell	Adderbury	Adderbury village has been substantially developed since 2011; a 21% increase in housing when the recent appeal at Berry Hill Road is factored in. Additional substantial development would detract even more significantly from the village's character and place an even greater burden on both already struggling infrastructure and local amenities. several of the sites put forward would result in the narrowing of the amenity gap between Adderbury and both Bodicote and Bloxham/Milton. The preservation of these boundaries and gaps ought to be prioritised. several of the proposed sites, if developed in their entirety, would be vastly disproportionately large to the precedent set by previous developments in Adderbury (a maximum of 65 houses on one site); two sites have capacity for over 400 homes and one could accommodate 1800 homes; more than doubling the number of homes in the village itself. Adderbury's infrastructure in terms of roads and services are at capacity. Congestion and parking in the village is a significant issue, and several of the sites proposed would encourage driving into and through the village, making it more of a rat run. The Christopher Rawins primary school would not be able to accommodate the proposed level of housing. Additional traffic would add to the existing air pollution in the area; particularly at the junction between the Oxford/Aynho Roads, which is also in close proximity to the local primary school. Development on the greenfield sites would have a destructive impact on the regional ecology and wildlife habitats. concerned about the effects that water run-off from substantial developments might have on the existing floodplain. A number of the sites proposed contain what are presently rural public footpaths; These routes are all popular with walkers and local families, and surrounding these footpaths with housing estates is going to render them substantially less safe and pleasant to use. substantial additional development will further diminish the dark skies. If housebuilding within the village over the next decade mirrors or exceeds the rate and scale of development of the past ten years, the village will change beyond recognition in a permanent, completely undesirable and unsustainable way.
LPR-B-364	Bluestone for Mr & Mrs Hockaday	LPR-A-185	Respondent lives in a Grade II listed farmhouse on the boundary of site LPR-A-185. Land circa 150m to the north of the respondents property has outline permission for upto 1000 dwellings and other development. Should the LPA-A-185 site, be brought forward the respondents dwelling will become encompassed by residential development, engulfing their home into Banbury Town and removing the rural character which their listed dwelling has sat within since its erection. the potential connection of the site to the north with outline permission with the submitted site would affect Wykham Farmhouse's setting, views and historic character. This is especially due to the lack of screening along the western boundary of Wykham Farm, which if lined with planting, would obscure the outlook to which the listed building has always enjoyed. Wykham Lane is not suited to accommodate the level of additional vehicles proposed and is not wide enough or capable of being widened without removal of biodiverse hedges.
LPR-B-364	Bluestone for Mr & Mrs Hockaday	LPR-A-116	Respondent lives in a Grade II listed farmhouse on the boundary of site LPR-A-185. Land circa 150m to the north of the respondents property has outline permission for upto 1000 dwellings and other development. Should the LPA-A-185 site, be brought forward the respondents dwelling will become encompassed by residential development, engulfing their home into Banbury Town and removing the rural character which their listed dwelling has sat within since its erection. the potential connection of the site to the north with outline permission with the submitted site would affect Wykham Farmhouse's setting, views and historic character. This is especially due to the lack of screening along the western boundary of Wykham Farm, which if lined with planting, would obscure the outlook to which the listed building has always enjoyed. Wykham Lane is not suited to accommodate the level of additional vehicles proposed and is not wide enough or capable of being widened without removal of biodiverse hedges.
LPR-B-364	Bluestone for Mr & Mrs Hockaday	Option 18	development to the south of the town as denoted by point 2, is resisted to ensure that the rural landscape which bounds both sides of Wykham Lane is maintained.
LPR-B-364	Bluestone for Mr & Mrs Hockaday	Option 19	point 2 and 3 are more preferable, to ensure that no further urban extensions into the open countryside surrounding Banbury are undertaken, especially to the south.
LPR-B-364	Bluestone for Mr & Mrs Hockaday	Option 2	Key Objective 5 is strongly supported. Key Objectives 14 and 15 are supported in full. Key Objective 23 gains strong support.
LPR-B-365	Ria James	Hempton	Objects. The new proposed plans will obstruct countryside views. The village already has many traffic accidents, and congestion on the roads. The speeds driven on the roads has resulted in many pet casualties. Infrastructure in the village cannot cope currently, no amenities in the village which will result in more congestion in local village shops. Protected species are located in the village and their environment should be given consideration. There are no affordable houses available.
LPR-B-366	Anna Sorrell	LPR-A-086	site falls outside of the Residential Settlement Boundary as set out in the Adderbury Neighbourhood Plan, and therefore contravene Policy AD1. ironic contradictions of the objectives of the increased housing - e.g. retaining green spaces, fighting climate change and supporting natural wildlife and eco systems, residents' mental health and wellbeing, destruction of existing public footpaths used by local residents for walking and cycling. proposed plans clearly do not enhance the vitality of the village of Adderbury - they will only contravene the very economic, social and environmental objectives set out in the plans. increasing the housing population at this proposed rate is unrealistic, unhealthy for residents and unsustainable for the existing and potential infrastructure in the area. As a result it would only increase car usage and dependency and increase traffic and pollution. Once the latest phase of Longford Park, the new developments on the Bloxham Rd and the additional housing to the north of Banbury are complete, it is inconceivable that Cherwell will not have at least a 5 year housing supply

LPR-B-366	Anna Sorrell	LPR-A-041	site falls outside of the Residential Settlement Boundary as set out in the Adderbury Neighbourhood Plan, and therefore contravene Policy AD1. ironic contradictions of the objectives of the increased housing - e.g. retaining green spaces, fighting climate change and supporting natural wildlife and eco systems, residents' mental health and wellbeing, destruction of existing public footpaths used by local residents for walking and cycling. proposed plans clearly do not enhance the vitality of the village of Adderbury - they will only contravene the very economic, social and environmental objectives set out in the plans. increasing the housing population at this proposed rate is unrealistic, unhealthy for residents and unsustainable for the existing and potential infrastructure in the area. Not to mention it will utterly destroy the natural beauty the village currently has. Once the latest phase of Longford Park, the new developments on the Bloxham Rd and the additional housing to the north of Banbury are complete, it is inconceivable that Cherwell will not have at least a 5 year housing supply
LPR-B-366	Anna Sorrell	LPR-A-146	site falls outside of the Residential Settlement Boundary as set out in the Adderbury Neighbourhood Plan, and therefore contravene Policy AD1. ironic contradictions of the objectives of the increased housing - e.g. retaining green spaces, fighting climate change and supporting natural wildlife and eco systems, residents' mental health and wellbeing, destruction of existing public footpaths used by local residents for walking and cycling. proposed plans clearly do not enhance the vitality of the village of Adderbury - they will only contravene the very economic, social and environmental objectives set out in the plans. increasing the housing population at this proposed rate is unrealistic, unhealthy for residents and unsustainable for the existing and potential infrastructure in the area. LPR-B-366	Anna Sorrell	Adderbury	Adderbury village has been substantially developed since 2011; a 21% increase in housing when the recent appeal at Berry Hill Road is factored in. Additional substantial development would detract even more significantly from the village's character and place an even greater burden on both already struggling infrastructure and local amenities. several of the sites put forward would result in the narrowing of the amenity gap between Adderbury and both Bodicote and Bloxham/Milton. The preservation of these boundaries and gaps ought to be prioritised. several of the proposed sites, if developed in their entirety, would be vastly disproportionately large to the precedent set by previous developments in Adderbury (a maximum of 65 houses on one site); two sites have capacity for over 400 homes and one could accommodate 1800 homes; more than doubling the number of homes in the village itself. Adderbury's infrastructure in terms of roads and services are at capacity. Congestion and parking in the village is a significant issue, and several of the sites proposed would encourage driving into and through the village, making it more of a rat run. The Christopher Rawins primary school would not be able to accommodate the proposed level of housing. Additional traffic would add to the existing air pollution in the area; particularly at the junction between the Oxford/Aynho Roads, which is also in close proximity to the local primary school. Development on the greenfield sites would have a destructive impact on the regional ecology and wildlife habitats. concerned about the effects that water run-off from substantial developments might have on the existing floodplain. A number of the sites proposed contain what are presently rural public footpaths; These routes are all popular with walkers and local families, and surrounding these footpaths with housing estates is going to render them substantially less safe and pleasant to use. substantial additional development will further diminish the dark skies. If housebuilding within the village over the next decade mirrors or exceeds the rate and scale of development of the past ten years, the village will change beyond recognition in a permanent, completely undesirable and unsustainable way.

LPR-B-367	Savills for Tilstone Ltd	Option 21	Respondent owns a significant area of land within the Banbury 1 allocation. The respondent notes the production of an SPD by the Council for the Canalside site has stalled and that latest LDS estimates suggest at least 2023 until an SPD is progressed. the text of Option 21 clearly looks to re-cast the net in terms of what the main focus for Canalside should be – i.e. either residential led, or a more flexible approach of commercial and residential mixed use area. Although it is not explicit, the third part of Option 21 seems to suggest some sort of approach that might involve setting up an Enterprise Zone using a Local Development Order, akin to that which has operated very successfully at Milton Park at Didcot since 2012, giving permitted development rights to the landowners and operators in order to fast-track development. The latter provides an especially interesting opportunity that the respondent would like to discuss further with the Council in advancing the policy approach for the new Local Plan. Based on Tilstone’s experience and portfolio of property, the commercial uses within our area of Canalside are stable and successful. Contrary to the narrative in the consultation document at paragraph 6.2.20, in respect of Tilstone’s land at least, there is not a high rate of turnover. The respondent welcomes the opportunity to review the balance of commercial space, and the focus for regeneration, based on viability and employment needs, and to consider the potential benefits of an Enterprise Zone in line with the second and third points set out in Option 21. The landowners are keen to work in partnership with the Council and agree that a more flexible approach to the area could deliver a range of high quality commercial space and homes, create jobs and improve local environmental and traffic conditions.
LPR-B-368	Savills for Trinity College Oxford	Option 1	supports the suggested Vision; appears to be well aligned with that of the overarching Oxfordshire 2050 Plan, including proposed action on achieving climate action targets. keen to explore what is meant at point 12) of the draft Vision in regard to how the main settlements in the District are proposed to be ‘reshaped and adapted’ to maintain their roles as attractive, vibrant, retail, cultural and social centres for communities and visitors, and how this interrelates to other larger service level settlements, and those that are well connected to the main towns. interested to understand the scope of the studies noted at para 1.3.4, and how the work has been framed, as soon as details are available.
LPR-B-368	Savills for Trinity College Oxford	Option 2	The Key Objectives all appear supportable, as principles, but they could benefit from rationalisation and reduction in number. The most important objectives, in our view, relate to; focusing the development, of required housing, jobs and training facilities, in sustainable locations, that are well connected to services and facilities, and thereby supporting existing and future communities; providing high quality and well-designed environments; and promoting net zero carbon and highly sustainable construction standards.
LPR-B-368	Savills for Trinity College Oxford	Option 3	The consultation document comments on the need for CDC to review the adopted 2015 Local Plan strategy, which has been ‘urban-focused’, and that the new approach will be partly informed by the 2050 Plan. Brownfield sites will continue to be an important contributor to employment land, but the degree to which that land can absorb the expected levels of growth is key, and previous studies of Cherwell’s available brownfield land have presented significant limitations. A review of the settlement hierarchy also seems sensible to re-calibrate and understand the carrying capacity of settlements, their relationship within the wider spatial options that will fall from the 2050 Plan, and the important link between the location of jobs and houses in order to support sustainable patterns of living. Although a main focus for employment land is likely to be best aimed at the main urban centres, some rural and village locations, especially those adjoining existing employment sites, will continue to provide important opportunities for jobs in the more rural areas. We note that CDC has commissioned an Employment Land and Needs Assessment, to complement the OGNA, and we would need to see the details of that assessment in order to comment further.
LPR-B-368	Savills for Trinity College Oxford	Option 4	suggest that the approach to identifying employment land should recognise the need for a mixture of business spaces , as per 3) above, as well as the importance of improved physical, training and digital infrastructure that is needed to support this.Part of the offer will need to include flexible business space, including that associated with local community hubs, and where people can be part of local employment networks without having to travel away from their local area.
LPR-B-368	Savills for Trinity College Oxford	Option 5	Increased flexibility is implicit in the Government’s recent changes to the Use Classes Order and Permitted Development Rights, and the need to manage the effects of changing retail patterns. We do recognise the continued importance that retail, leisure and tourism play in town centre economies, including historic towns, and that these will need protection.
LPR-B-368	Savills for Trinity College Oxford	Option 6	As per 2) Trinity College considers that the percentage splits should be kept the same, but be subject to future review of viability, as the introduction of changes to Part L of the Building Regulations and the Future Homes initiative will have an adverse impact. Ultimately we need more information around the viability evidence and an understanding of how this can relate to policy aspirations for affordable housing provision.
LPR-B-368	Savills for Trinity College Oxford	Option 7	it is difficult to comment without the evidence base, but Trinity College considers that it is reasonable to retain the same tenure mix as set out in the 2015 Plan. Nb. There is an error in the question as the 30% figure relates to intermediate housing
LPR-B-368	Savills for Trinity College Oxford	Option 8	do not support the imposition of a policy to require nationally described space standards, for any dwellings.
LPR-B-368	Savills for Trinity College Oxford	Question - Separation Distances	No. The imposition of minimum separation distances would be arbitrary, and not take account of local conditions and design ingenuity. We suggest that there are better ways of ensuring good design that is neighbourly and protects amenity, through compliance with the principles of the National Model Design Code and any local design code or SPD that is in place.
LPR-B-368	Savills for Trinity College Oxford	Option 9	Advocate 2) – continuing to rely on the Building Regulations.
LPR-B-368	Savills for Trinity College Oxford	Question - Housing Policies	consider that there is no need for a policy relating to Modern Methods of Construction – and that it would be more appropriate to let the market resolve this, in the context of meeting other sustainability requirements and legislation.

LPR-B-368	Savills for Trinity College Oxford	Option 10	Section 5.5.7 of the consultation document highlights that the Government will shortly amend the Building Regulations to improve the energy efficiency of new homes. This new Future Homes Standard should ensure that all new homes-built from 2025 will produce 75-80% less carbon emissions than homes delivered under current regulations. The Government is also proposing to consult on a Future Building Standard which will look at, amongst others, measures to improve the energy efficiency of non-domestic buildings. Therefore advocate 2) – letting the Building Regulations set the standards.
LPR-B-368	Savills for Trinity College Oxford	Option 11	welcome support for renewable energy generation – but do not have specific recommendations for policy.
LPR-B-368	Savills for Trinity College Oxford	Question - Policies for Climate Change, Sustainable Construction & Renewable Energy	consider that these matters are best dealt with through the Building Regulations
LPR-B-368	Savills for Trinity College Oxford	Option 12	Trinity College considers that the opportunity to make the best contribution to BNG would be across the District, as identified in 3) – but that it also needs to be capable of being consolidated in order to make the best contribution to habitat and biodiversity. The College would therefore also support targeting areas where there is a real chance of achieving something beneficial, where the whole is greater than the sum of the parts, and that 2) is therefore also appropriate. The College has also proposed land in the Call for Sites, at Canal Lane, Banbury (LPR-A-152), adjacent to the Longford Park Phase 2 scheme, which could be made available for Biodiversity off-setting.
LPR-B-368	Savills for Trinity College Oxford	Option 13	Without a standardised methodology for Environmental Net Gain, it will be extremely difficult to measure and prove at this point. Moreover, until the Environment Bill becomes statute, and the measures in that legislation are translated into the NPPF and guidance for plan-making and decision-taking, it is difficult to make an objective comment on this question. The industry needs to get to grips with BNG before moving onto the next step. For this reason we suggest that, presently, the answer should be 3) – not to require natural capital assessment.
LPR-B-368	Savills for Trinity College Oxford	Question - Biodiversity & The Natural Environment	considers that the target for Biodiversity Net Gain should be 10%, in line with the Government target.
LPR-B-368	Savills for Trinity College Oxford	Option 14	would support a more flexible approach, as per 3). We have encountered difficulties in previous schemes, where the rigid application of the existing CDC policy and standards has limited the ability to deliver a more logical, efficient and effective provision of play space.
LPR-B-368	Savills for Trinity College Oxford	Question - Achieving Good Design & 'Beauty'	This can be best supported by avoiding ambiguity between National Model Design Code and local codes/guidance, thus providing developers with certainty.
LPR-B-368	Savills for Trinity College Oxford	Question - 20-Minute Neighbourhoods	supportive of the 20-minute neighbourhood principles, and in proposals for existing allocations and developments at Drayton Lodge has supported masterplans which provide walkable neighbourhoods with key community facilities and services within easy reach.
LPR-B-368	Savills for Trinity College Oxford	Question - Transport & Connectivity	agrees with the proposed transport and connectivity approach. We support the aims of moving towards a net zero transport network and agree that spatial planning has a clear role in supporting a decarbonised transport system. Sites such as those being promoted by Trinity College at Wroxton and on land north of Drayton Lodge Farm, which lie on main public transport routes and near to Banbury, have the opportunity to make a significant contribution to this agenda, compared to more isolated sites where the opportunities for travel by sustainable travel modes, or linked trips, are lower.
LPR-B-368	Savills for Trinity College Oxford	Option 16	support Option 1) as a reasonable aim – but consider that it may be difficult to make policy requirements mandatory, depending on location and infrastructure networks, and the difficulty with being able to predict emerging technology.
LPR-B-368	Savills for Trinity College Oxford	Question - Transport Policies	support the range of policies and documents identified, but note the additional work that CDC has commissioned on transport network capacity. We would therefore reserve the right to comment further once more information is available.
LPR-B-368	Savills for Trinity College Oxford	Option 17	In the same way that CDC is proposing an audit of natural capital, we would advocate an overhaul of the methodology that is used to assess social and environmental benefits, in line with 1) – and then use this to inform the approach to the Infrastructure Delivery Plan.
LPR-B-368	Savills for Trinity College Oxford	Option 18	supports the opportunity to focus development at existing settlements that are well connected to Banbury – as per 3). We note that CDC led studies to support the emerging Plan will include an updated assessment of landscape sensitivity. This will likely include consideration of the issues of coalescence and setting, and that this will need to be balanced with the wider requirements for growth in sustainable locations.
LPR-B-368	Savills for Trinity College Oxford	Option 19	supports sites that lie to the north and west of Banbury – and is directly promoting land for approximately 330 units in that area, at Drayton Lodge and Wroxton. [Additional land owned by Trinity College at Withycombe Farm, Bretch Hill, is also being promoted by Bloor Homes, for an additional 225 homes.]
LPR-B-368	Savills for Trinity College Oxford	Option 30	If growth is to be directed, proportionately, to the rural areas over the plan period, to meet wider district needs, it should be directed to settlements that are located close to, and are well connected to, the main urban centres, and where those settlements are supported by sufficient services and facilities.
LPR-B-368	Savills for Trinity College Oxford	Option 32	would advocate an approach aligned with 2), where the accessibility of the settlement to the urban centres, and the connectivity available to them, is given additional weight.
LPR-B-368	Savills for Trinity College Oxford	Option 34	support a review of landscape sensitivity, which para 1.3.4 of the consultation document says is already underway. The consideration of landscape capacity and sensitivity needs to be reasonably detailed however, or otherwise a lack of granularity could risk opportunities for development being ruled out. The same applies to the assessment of natural capital mentioned in Option 13 – otherwise there is a risk that the outputs are too much of a blunt tool to develop additional policy.
LPR-B-369	Savills for Hallam Land Management	Call for Sites Promotion - Land east of Adderbury	Land east of Adderbury is promoted for housing. Update to HELAA403. A vision statement and illustrative masterplan have been supplied.

LPR-B-369	Savills for Hallam Land Management	Option 1	notes that the suggested Vision set out in the consultation document appears to be aligned with the overarching vision of the Oxfordshire 2050 Plan, including the goals for achieving climate action targets, but should remain flexible to respond where the Oxfordshire 2050 Strategic Vision may change. The ambitions to develop energy efficient, well-designed homes, in the right place and in the right quantity, to meet Oxfordshire's housing needs and to support its economic growth, are welcome. In taking the Vision forward to a draft plan, HLM is keen to explore what is meant at point 12) of the draft Vision in regard to how Banbury, Bicester and Kidlington are 're-shaped and adapted' to maintain their roles as attractive, vibrant, retail, cultural and social centres for communities and visitors. The section of this representation on the directions of development considers this further. Para 1.3.4 of the consultation document states that "We have begun studies on the capacity of the transport network and the sensitivity of the landscape. We have also commissioned a town centre and retail study, and another looking at employment issues." We would be interested to understand the scope of these studies, and how the work has been framed, as soon as details are available. HLM has responded positively to the recent Oxfordshire Plan 2050 consultation, and we understand that the joint spatial strategy will be influential in setting target numbers for housing and employment space, and identifying the general spatial options, and consequently that the 2040 Cherwell Plan can only go so far until the strategic direction is clearer.
LPR-B-369	Savills for Hallam Land Management	Option 2	We consider that the Key Objectives are all supportable as principles, but that there could be some consolidation and reduction in their number. The most important objectives, in our view, relate to; KO1 – as CDC has failed to allocate a sufficient amount of land in the past that has been able to deliver the required housing numbers, and therefore doesn't now have a 5 Year Housing Land Supply; focusing on developing in sustainable locations, that are well connected to services and facilities, and thereby supporting existing and future communities; and to providing high quality and well-designed environments
LPR-B-369	Savills for Hallam Land Management	Option 3	The consultation document comments on the need for CDC to review the adopted 2015 Local Plan strategy, which has been 'urban-focused', and that the new approach will be partly informed by the 2050 Plan. Brownfield sites will continue to be an important contributor to employment land, but the degree to which that land can absorb the expected levels of growth is key, and previous studies of Cherwell's available brownfield land have presented significant limitations. Some brownfield sites may not be in sustainable locations, and the long-term sustainability and reduced need to travel, need to be borne in mind. A review of the settlement hierarchy also seems sensible to re-calibrate and understand the carrying capacity of settlements, their relationship within the wider spatial options that will fall from the 2050 Plan, and the important link between the location of jobs and houses in order to support sustainable patterns of living. Overall, therefore, HLM supports a main focus for employment land at the main urban centres and those locations in close proximity with main urban centres which have good transport links. We also recognise that some locations, such as those required for storage and distribution, and certain manufacturing processes, may be better situated away from housing and/or near to the transport interchanges that can better accommodate these. We note that CDC has commissioned an Employment Land and Needs Assessment, to complement the OGNA, and we would need to see the details of that assessment in order to comment further.
LPR-B-369	Savills for Hallam Land Management	Option 4	Suggests that the approach to identifying employment land should recognise the need for a mixture of business spaces , as per 3) above, as well as the importance of improved physical, training and digital infrastructure that is needed to support this. Part of the offer will need to include flexible business space, including that associated with local community hubs, and where people can be part of local employment networks without having to travel away from their local area.
LPR-B-369	Savills for Hallam Land Management	Option 5	Increased flexibility is implicit in the Government's recent changes to the Use Classes Order and Permitted Development Rights, and the need to manage the effects of changing retail patterns. We do recognise the continued importance that retail, leisure and tourism play in town centre economies, including historic towns, and that these will need protection.
LPR-B-369	Savills for Hallam Land Management	Option 6	As per 2) above, HLM considers that the percentage splits should be kept the same, but be subject to future review of viability, as the introduction of changes to Part L of the Building Regulations and the Future Homes initiative will have an adverse impact. Ultimately, we need more information around the viability evidence and an understanding of how this can relate to policy aspirations for affordable housing provision.
LPR-B-369	Savills for Hallam Land Management	Option 7	As above, it is difficult to comment without the evidence base, but HLM considers that it is reasonable to retain the same tenure mix as set out in the 2015 Plan. [Nb. there is also an error in the question – as the 30% figure in the policy relates to intermediate housing.]
LPR-B-369	Savills for Hallam Land Management	Option 8	HLM does not support the imposition of a policy to require nationally described space standards, for any dwellings.
LPR-B-369	Savills for Hallam Land Management	Question - Separation Distances	No. The imposition of minimum separation distances would be arbitrary, and not take account of local conditions and design ingenuity. We suggest that there are better ways of ensuring good design that is neighbourly and protects amenity, through compliance with the principles of the National Model Design Code and any local design code or SPD that is in place.
LPR-B-369	Savills for Hallam Land Management	Option 9	option 2 continuing to rely on the Building Regulations.
LPR-B-369	Savills for Hallam Land Management	Question - Housing Policies	We consider that there is no need for a policy relating to Modern Methods of Construction – and that it would be more appropriate to let the market resolve this, in the context of meeting other sustainability requirements and legislation.
LPR-B-369	Savills for Hallam Land Management	Option 10	advocates 2) above – and letting the Building Regulations set the standards. Section 5.5.7 of the consultation document highlights that the Government will shortly amend the Building Regulations to improve the energy efficiency of new homes. This new Future Homes Standard should ensure that all new homes-built from 2025 will produce 75-80% less carbon emissions than homes delivered under current regulations. The Government is also proposing to consult on a Future Building Standard which will look at, amongst others, measures to improve the energy efficiency of non-domestic buildings.

LPR-B-369	Savills for Hallam Land Management	Question - Policies for Climate Change, Sustainable Construction & Renewable Energy	we consider that these matters are best dealt with through the Building Regulations
LPR-B-369	Savills for Hallam Land Management	Option 12	considers that the opportunity to make the best contribution to BNG would be across the District, as identified in 3) above.
LPR-B-369	Savills for Hallam Land Management	Option 13	Without a standardised methodology for Environmental Net Gain, it will be extremely difficult to measure and prove at this point. Moreover, until the Environment Bill becomes statute, and the measures in that legislation are translated into the NPPF and guidance for plan-making and decision-taking, it is difficult to make an objective comment on this question. The industry needs to get to grips with BNG before moving onto the next step. For this reason we suggest that, presently, the answer to the above should be 3) – not to require natural capital assessment.
LPR-B-369	Savills for Hallam Land Management	Question - Biodiversity & The Natural Environment	considers that the target for Biodiversity Net Gain would be 10% only – in line with the Government target.
LPR-B-369	Savills for Hallam Land Management	Option 14	support a more flexible approach, as per 3)
LPR-B-369	Savills for Hallam Land Management	Question - Achieving Good Design & 'Beauty'	This can be best supported by avoiding ambiguity between National Model Design Code and local codes/guidance, thus providing developers with certainty.
LPR-B-369	Savills for Hallam Land Management	Question - 20-Minute Neighbourhoods	supportive of the 20-minute neighbourhood principles, and as part of our work to support proposals at Kemps Farm, Twyford, has proposed a masterplan that will support the existing community and create a new walkable neighbourhood.
LPR-B-369	Savills for Hallam Land Management	Question - Transport & Connectivity	agrees with the proposed transport and connectivity approach. We support the aims of moving towards a net zero transport network and agree that spatial planning has a clear role in supporting a decarbonised transport system. Sites such as those being promoted by HLM to the east of Twyford, on a main public transport route and near to Banbury, have the opportunity to make a significant contribution to this agenda, compared to more rural or isolated sites where the opportunities for travel by sustainable travel modes, or linked trips, are lower.
LPR-B-369	Savills for Hallam Land Management	Option 16	support Option 1) as a reasonable aim – but consider that it may be difficult to make policy requirements mandatory, depending on location and infrastructure networks, and the ability to predict emerging technology.
LPR-B-369	Savills for Hallam Land Management	Question - Transport Policies	We note the range of policies and documents identified, but also note the additional work that CDC has commissioned on transport network capacity. We would therefore reserve the right to comment further once more information is available.
LPR-B-369	Savills for Hallam Land Management	Option 17	In the same way that CDC is proposing an audit of natural capital, we would advocate an overhaul of the methodology that is used to assess social and environmental benefits, in line with 1) – and then use this to inform the approach to the Infrastructure Delivery Plan.
LPR-B-369	Savills for Hallam Land Management	Option 18	HLM supports the opportunity to focus development at existing settlements that are well connected to Banbury – as per 3) above. We note that CDC led studies to support the emerging Plan will include an updated assessment of landscape sensitivity. This will likely include consideration of the issues of coalescence and setting, and that this will need to be balanced with the wider requirements for growth in sustainable locations.
LPR-B-369	Savills for Hallam Land Management	Option 19	HLM supports sites to the south of Banbury, as per 2) above – and is promoting land for approximately 900 units at Kemps Farm, Twyford.
LPR-B-369	Savills for Hallam Land Management	Question - Reducing Car Dependency in Banbury	would like to see more work to promote 'walkable / 20 minute neighbourhoods' that support active travel, and the greater integration of pedestrian and cycling infrastructure to support ease of travel to schools and rail stations, including King's Sutton, as part of overall measures to reduce reliance on private cars.
LPR-B-369	Savills for Hallam Land Management	Option 30	support directing proportionately more development to the rural areas over the plan period, to meet wider district needs. This development should be directed to settlements that are located close to, and are well connected to, the main urban centres, and where those settlements are supported by sufficient services and facilities.
LPR-B-369	Savills for Hallam Land Management	Option 32	HLM would advocate an approach aligned with 2) above, where the accessibility of the settlement to the urban centres, and the connectivity available to them, is given additional weight.

LPR-B-370	Phil Sansom	LPR-A-027	<p>strongly object. The Bloxham Neighbourhood Plan was to limit the number of house built in future years and this application exceeds that number. Bloxham does not need any additional houses. potential merging of Banbury and Bloxham. The capacity of existing electrical infrastructure; current experience power cuts, more housing will increase frequency. The local drainage system, ditches and pipework etc plus the pumping station on Crab Tree Close are frequently blocked as they are at capacity, more houses will increase this. Local broadband is poor due to current number of users. The local schools in Bloxham are already at capacity; more houses will increase this problem. The junction of Ells Lane, Crab Tree Close and Bloxham Road is very congested at Peak Times due to use by school buses and parents dropping off and collecting children from the Warriner School. This will increase with more houses and cars. Ells lane is narrow and in poor condition and does need any additional traffic along it. The A361 is a very busy road with a large number of vehicles using it every day at Peak Times. More traffic will only increase this problem. The additional houses would have an adverse affect on the local property values and also spoil the current pleasant views over the Countryside. Houses built to the rear of Crab Tree Close would result in an invasion of privacy. Why has the large field to the rear of the houses been included in this application, as given the height of the land, houses here would be able to see directly into the bedrooms of Crab Tree Close. The plan shows the road going to the rear of the proposed houses. This means future developments could use this to expand into a second development in the large field. This is wrong. Roads in the Banbury area are also getting busier and additional houses will add to this. The proposal shows a foot path from the houses through Crab Tree Close. This is not to be permitted as it is a Private Road managed by the residents. will have a major negative impact on the village and surrounding areas. It does not bring any benefits to the local community, will increase existing problems in the village, ruin views, decrease property prices and blight the lives of people living on Crab Tree Close. It is about lining the pockets of Property Developers and not about improving an area. There is a huge potential at Upper Heyford with existing infrastructure and a motorway connection, this is where Cala Homes should be concentrating their efforts</p>
LPR-B-371	Pat and David Keable	LPR-A-041	<p>Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. Additional development around Henge Close at LPR-A-041 would directly abut the Conservation Area and would therefore be detrimental to the setting of the listed buildings on Horn Hill Rd. Development would also be detrimental to the open nature of the Henge Close estate and to the green space and play area to the east. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.</p>
LPR-B-371	Pat and David Keable	LPR-A-086	<p>Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. The large-scale developments proposed for sites LPR-A-086 would utterly change the approach to the village and would create a jarring transition from agricultural land to modern, dense housing. if developed, double the size of West Adderbury overnight. Such large scale development is entirely inappropriate for a village the size of Adderbury and is far more suited to a large town or even a city. few facilities present in Adderbury would be completely swamped by a development of this scale, placing massive pressures on local schools and services. Precious public footpaths over these sites, which are in daily use by local residents, would be lost forever. Development of LPR-A-086 would lead to the residents of St Mary's Road being completely subsumed by new estates, fundamentally changing the character of the southern edge of West Adderbury. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.</p>

LPR-B-371	Pat and David Keable	LPR-A-146	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. Additional development around Henge Close at LPR-A-146 would directly abut the Conservation Area and would therefore be detrimental to the setting of the listed buildings on Horn Hill Rd. Development would also be detrimental to the open nature of the Henge Close estate and to the green space and play area to the east. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.
LPR-B-371	Pat and David Keable	LPR-A-218	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.
LPR-B-371	Pat and David Keable	LPR-A-258	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. The large-scale developments proposed for site LPR-A-258 would utterly change the approach to the village and would create a jarring transition from agricultural land to modern, dense housing. Development would lead to a substantial decrease in the green space between West Adderbury and Milton, increasing the risk of coalescence and impacting upon the character of both villages. A popular footpath would be lost, and irreversible damage would be caused to the amenity of the homes to the north of Adderbury Fields, and to the adjacent green space. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.
LPR-B-372	K Meadows	LPR-A-178	proposal is completely disproportionate and should not be approved. Any development as proposed would lead to the destruction of Adderbury as a viable village. rapidly expanding villages, as well as our towns and cities add up to an overwhelming urbanisation of the countryside. Further pollution will be generated through increased pressure on already over stretched waste and sewerage infrastructure leaving no room for wildlife; Adderbury Lakes is already suffering from increased pollution with raw sewerage discharges. Pollinators and insects are declining at a frightening rate and this development will add to their further destruction. The scale of this development is completely unsustainable and wholly disproportionate given the size of Adderbury village. development would completely destroy the identity and viability of Adderbury as a village, subjecting Adderbury to increasing "coalescence". Adderbury school, retail and infrastructure generally is already at capacity, the proposal does not address these issues sufficiently. proposal completely overestimates the scale and capacity of Adderbury's existing facilities and infrastructure to cope with a development on this scale. The traffic system is now over capacity and the local road system will not cope. village is already deemed to be at capacity with recent housing developments and this development sits outside the local plan. gap between Adderbury and Banbury and surrounding areas will be narrowed to an unacceptable level. This development impacts negatively on Adderbury's current "spatial feel". The development is on a "greenfield" site and no account has been taken of the impact on the environment as a whole or the considerable impact on local wildlife. The effect on existing residents "mental health" by the removal of open green spaces will be significant resulting in further pressure on already at capacity health facilities. The present government has deemed this to be vital to the health of our nation especially during the recent pandemic and recognised outdoor spaces and wildlife to be one of our saviours during this hard time. Building housing developments and taking away greenspaces surely goes against all that we have learnt over the past year or so. This effect will be magnified by the considerable disturbance over a significant period through the building activity. The development seeks development in key "valued landscapes" which should be protected for future generations.

LPR-B-373	Chloe-May Marshall	LPR-A-175	Objects to the change of use. Wardington would not cope with the added traffic that development would bring to the village. Numerous accidents occur on the A361 due to the large amounts of traffic and lorries which travel along it already, the increase in traffic would not benefit this already growing issue. Changing the land use from farming and agriculture would also have a large disturbance on the local wildlife; by changing the use of the land many of these animals will lose habitats and will be greatly disturbed. I do not believe that a change in use of the land proposed would benefit the village but instead create many issues and disturbances
LPR-B-374	Ian Marshall	LPR-A-175	Objects to proposals. Development will bring additional pollution and remove wildlife from the area. Development will cause overcrowding to the area, bring more traffic within the village onto roads which are already in a poor state and will not take the extra volume and cause further heavy traffic going onto the already dangerous A361 road. The environment to local wildlife will be destroyed, the land is home to a variety of wildlife. The proposed development is too large for the size of the village, a fundamental change to the character of a conservation village with both light and air pollution being increased.
LPR-B-375	Samantha Marshall	LPR-A-175	Objects to the proposals. the development will cause overcrowding and fundamentally change the character of the village. The proposed development is too large for the village which has no facilities to accommodate and will also decline the local wildlife. The development will also cause further heavy traffic onto a already dangerous and hazardous road A361 and within the village of Wardington.
LPR-B-376	Cameron Marshall	LPR-A-175	Objects to proposals. Change of use proposed is not sustainable for the size of a conservation village like Wardington. There are no facilities and the development would increase pollution to the village and would decline all wildlife within these areas in which there are many. The development will not be in keeping with the village of Wardington and cause overcrowding as well as causing a fundamental change to the character of Wardington. Traffic volume will also be increased within the village and onto the A361
LPR-B-377	Mark and Julie Hewish	LPR-A-104	Comments relate to a 5 acre plot in Clifton. The more open linear sites along Clifton Road would be more suitable with less impact on current homes. The village has tight lanes and parking is often an issue. The width of the road would not permit development further out of the apron/border of Clifton. Water and or Sewerage can flood some of the area; the sewerage works can get overwhelmed. Clifton produces a lot of water in heavy rain. No amenities except a pub, no bus service. The field and hedgerows are home to a variety of wildlife.
LPR-B-378	Home Builders Federation	Option 6	Local Viability Guide submitted. In order to assist local planning authorities in preparing their viability assessments the HBF have prepared a briefing note setting out our members key concerns with regard to viability testing and the approach taken by Councils. We would like to highlight four particular issues with whole plan viability assessments. The first issue is with regard to the approach taken to abnormal infrastructure costs. These are the costs above base construction and external costs that are required to ensure the site is deliverable. Prior to the 2019 NPPF viability assessments have taken the approach that these cannot be quantified and were addressed through the site-by-site negotiation. However, this option is now significantly restricted by paragraph 58 of the NPPF. Whilst the HBF recognise that abnormal costs are expected to come off the land value, we are concerned that if abnormal costs are high then it will result in sites not being developed as the land value will be insufficient to incentivise the landowner to sell. As such these abnormal costs must be considered in the whole plan viability assessment. We recognise that the very nature of an abnormal costs is difficult to quantify, but it is a fact that they are often substantial and can have a significant impact on viability. Where and how these costs arise is variable. They can occur in site preparation but can also arise with regard to the increasing costs of delivering infrastructure, such as upgrades to increase the capacity of utilities. It is also the case that abnormal costs are higher on brownfield sites where there can be a higher degree of uncertainty as to the nature of the site and the work required to make it developable. Important to ensure there is significant buffer between the Residual Land Value and the Benchmark Land Value on those sites assessed to ensure any abnormal costs do not make a site undeliverable and for the Council are to state with certainty that those sites allocated in the plan will come forward without negotiation. We would encourage the Council to use the upper end of any of the ranges suggested with regards to fees and profit margins. Again, these will vary from developer to developer but given that the Government want to minimise negotiation on planning obligations it would make sense to use the highest point of any range. The changing landscape with regard to viability assessment could lead to development slowing significantly if the correct variables are not taken into account. Council must ensure that all the policy costs associated with the local plan are included within the viability assessment. Whilst affordable housing and infrastructure contributions from the majority of the additional costs that are placed on developers by the Council it is important that the cumulative impact of all policies are tested. With regard to the local plan review the Council will need to consider the impact of not only their own policies but also proposed changes to building regulations including the delivery of the Future Homes Standard from 2025 as well as the mandatory 10% net biodiversity gain that is set to become a legal requirement on the Royal Assent of the Environment Bill. As such the viability assessment will need ensure that there is sufficient headroom to ensure the policies in the local plan can be delivered alongside the requirements established in national policy and legislation. The approach to land values needs to be a balanced approach and one that recognises that there will be a point at which land will just not come forward if values are too low to take account of policy and infrastructure costs. There are a variety of reasons why a landowner is looking to sell their land and it cannot be assumed that they will absorb significant reductions in land values to meet policy costs. Land is a long-term investment and the returns being offered must take account of this.

LPR-B-378	Home Builders Federation	Option 7	Tenure split that is taken forward will clearly depend on the viability of development to accommodate what that Council proposes. The Council will need to ensure that it meets the national policy requirements for 10% of all homes on major development to be available for affordable home ownership and that 25% of all affordable homes provided are First Homes. It will be important for the viability assessment to treat First Homes in the same manner as market housing. Whilst these homes fall under the definition of affordable housing in terms of viability, they cannot be treated the same as an affordable home ownership product as they are developed and sold by the developer. This is fundamentally different to a shared ownership unit or affordable home for rent where the home is bought up front by a housing association with the developer in affect acting as a contractor. The risk is lower as there is no need to put the affordable home on the open market, as such the developer accepts a lower level of profit. However, a First Home would be sold by the developer and as such they retain the risk and the other costs, such as marketing, in the same ways as they would for any home sold on the open market. The proportion of new homes delivered as First Homes should be treated in the same way as other market homes for sale within the whole plan viability assessment.
LPR-B-378	Home Builders Federation	Option 8	Whilst the HBF shares the Council's desire to see good quality homes delivered across Cherwell we consider that space standards can, in some instances, have a negative impact upon affordability issues and reduce customer choice. In terms of choice some developers will provide entry level two, three and four-bedroom properties which may not meet the optional nationally described space standards, but which would allow on lower incomes can afford a property which has their required number of bedrooms. Given the poor affordability of property in the area and the tight constraints on development it is therefore important that the Council can provide robust evidence that there is a need to introduce the optional space standards.
LPR-B-378	Home Builders Federation	Option 9	If the Council are going to introduce the optional technical standards for accessibility, they will need to ensure that there is appropriate evidence to support the approach taken. This evidence will need to consider not only the need for such homes, as set out in paragraph 147 of the NPPF but also the accessibility of the existing stock, impact on viability and how needs vary across the different housing tenures as set out in paragraph 56-007 of Planning Practice Guidance.
LPR-B-378	Home Builders Federation	Option 10	The housebuilding industry recognises that there is a need to improve the environmental performance of new residential development. We established with a wide range of partners the Future Homes Task Force. This task force examined how the house building industry can work toward delivering net zero carbon homes in order to support the Government's target of the country delivering net zero carbon emissions by 2050. The delivery plan published by the task force in July 2021 outlines the need to operate on a collective basis recognising the need for housebuilders, their supply network and the trades people building homes to successfully transition to the delivery of low carbon homes. In addition, it recognises the need for both national and local government alongside housebuilders to ensure those people buying new homes are confident in the technologies and systems being used. The Future Homes Standard that will be introduced from 2025 will see new homes emit 75% fewer emissions than current standards. However, to deliver further reductions and achieve the national commitment of net zero emissions by 2050 will require the decarbonisation of energy supply at a national level rather than from the Council setting additional requirements for new homes above those set by Government. HBF do not consider it necessary for additional local standards to be set with regard to energy efficiency and CO2 emissions. Only through a nationally consistent and phased approach to the introduction of the new standards and technologies will the house building industry be able to maintain housing supply, ensure consumer confidence and deliver the required improvements in emissions. A national and standardised approach to improving the energy efficiency of buildings is the most effective approach to ensuring improvements in energy efficiency whilst ensuring the continued delivery of housing and infrastructure. HBF considers a universal standard is necessary to allow the development of supply chains that focus upon responding to agreed national targets, and for training providers to plan their programmes to equip the labour force to meet these new requirements. Importantly, a phased approach to delivering these improvements ensures those people buying new homes are fully aware of the new technologies being used in their homes. It is vital that consumers are confident with the technology being used in their new homes and increase the wider appetite for similar standards to be adopted in the existing stock. HBF considers it important that Councils recognise that it will take time to ensure that the technology and supply chains required to achieve the significant reductions in emission from new homes required by the Future Homes Standard. There is considerable work to do to ensure that supply chains are in place to meet demand from the housebuilding industry as well as having a workforce with the technical skills in place to deliver and maintain systems such as ground and air source heat pumps on a much larger scale. These systems when they are used work to ensure that the public are satisfied with the product and can rely on it to meet their needs. Should the Council seek to go beyond what is required by building regulations then they will need to clearly set out in their viability study the additional costs this will place on development. These costs can be significant and can lead to development becoming unviable.
LPR-B-378	Home Builders Federation	Option 12	The location of offsite compensation with regard to biodiversity net gain will need to take account of the Environment Bill, which as the Council will be aware is set to become an Act shortly. The Bill makes provision for the Secretary of State to make arrangements for a developer to purchase Biodiversity credits from the Government for the purposes of meeting the 10% net gain requirement set out in the Bill. As such placing specific requirements with regard to the delivery of off-site compensation may not be consistent with the Government's approach to biodiversity credits.
LPR-B-378	Home Builders Federation	Option 13	If the local plan as a whole is being prepared whilst having regard to the natural capital and ecosystem services, there should be no reason to require major development delivered through the local plan to provide a natural capital assessment. Such an assessment is unnecessary as development that comes forward that is consistent with the local plan should by default be making a positive contribution to the natural capital of the area. Support not require major development proposals to be supported by a natural capital assessment.
LPR-B-378	Home Builders Federation	Option 15	The Council will need to ensure that any requirement to provide or fund outdoor sport provision as clearly evidenced and consistent with paragraph 57 of the NPPF and regulation 122 of the CIL regulations. Where contributions are justified the approach taken to the delivery of outdoor sports provision will depend on the amount of development to be delivered, where it is located and how development it is provided.

LPR-B-378	Home Builders Federation	Question - 20-Minute Neighbourhoods	The principle behind the 20-minute neighbourhood is one that is a reasonable aspiration to take forward within the local plan, but the Council must remember that this should be seen as an aspiration within appropriate locations rather than a blunt tool for development management or site allocations across the Borough. For example, the Council note the application of this principal in more rural areas is inevitably more difficult as populations are generally too low to meet all the features of a 20-minute neighbourhood. This should not prevent development from happening in such locations where appropriate. There may be clusters of villages or suburban communities that provide a range of services for that area within reasonable travelling of each other. These areas might be able to sustainably support a substantial level of development but may not meet the principles of the 20-minute neighbourhood and as such development in such areas is not supported in the local plan. Council will need to recognise that settlements or areas that currently do not have the services that are consistent with the 20-minute neighbourhood could expand to include those services if new development is allocated in those areas. The 20-minute neighbourhood should not be used as a basis for only locating development close to existing services rather identifying where services could be improved through new development. There is a real danger that the principle could be used negatively and become a way of preventing development in certain communities rather than promoting improved neighbourhoods. Council must also recognise that if it seeks to apply this principle there is a need for the Council to provide a strong leadership function for local public services to ensure that these are in place and are retained. The Council must ensure that they and their partners are able and willing to support this concept at larger strategic developments or where the Council is seeking to deliver higher density development. Without this strong co-ordinating role, the Council are unlikely to achieve their aspirations in relation to the 20-minute neighbourhood.
LPR-B-378	Home Builders Federation	General	Representation includes the submission of a HBF Local Plan Viability Guide (Sept 2019)
LPR-B-379	Gail Collingwood-Turner	Hanwell	Objects to development in and around Hanwell. would no doubt add to considerably more traffic passing through the village of Hanwell's old narrow, Main Street - which already struggles at peak times with congestion and damage to vehicles parked outside homes. Not to mention public safety, due to little and narrow pavements, and pollution. Not forgetting the reduced air quality (pm1/2), noise, dust, and damage to roads and natural habitats if any further building sites were permitted. This country has already lost much of the natural hedgerows and wildlife habitats due to developments. The wildlife in Hanwell has already been squeezed into a smaller area; To even consider reducing this further and the erosion of hedge-ways and the like, is completely baffling. Just because a government now allows building on green-belt etc, does not mean it is right to do so... even if there are added incentives. we must do all we can to protect our green and pleasant land, the wildlife, and the necessary insects.
LPR-B-380	Susanne McIvor	Question - Local Green Spaces	comment about the provision (or lack of provision) of allotments. Respondent is on the committee of an allotment association (in Oxford City) where there is an increasing waiting list. One of the reasons for this is the development of the Papermill site in Wolvercote which has meant that there are a lot of new residents in the area. These newcomers, some of whom live in flats with no garden, are very reasonably seeking outdoor space to grow food. Close by there are very substantial housing developments planned. Some are in Oxford City (eg Oxford North) and some are in Cherwell (eg North Oxford Golf Club and the area between Oxford Parkway and Cutteslowe Park, and sites in Kidlington). Unaware of any additional provision being made for allotment sites, which I understand that the council has a statutory duty to provide where there is demand for them. It is reasonable to expect demand to increase as a result of the additional homes being built in and around Kidlington and Cherwell District Council should be assessing the demand for allotments and taking steps to fulfill their statutory duty to provide for them. Only mention of allotments (apart from a proposed site!) is a comment in 5.8.1. There is support for allotment provision and a growing population which can reasonably be expected to increase demand considerably. However there is no mention of how this demand for allotments will be met. This would appear to be a significant omission. Cherwell District Council should consider its statutory duty to provide allotment sites and take steps to ensure that it does so.
LPR-B-381	Brenda Vandamme	Sibford Gower and Sibford Ferris	extremely concerned that Sibford Ferris and Sibford Gower be correctly categorised to protect these villages and the land which are only 1 mile from the border of the AONB and are considered the North Cotswolds. CDC has made numerous studies in the past of the beauty, heritage, and strategic farming importance of these two villages. need to make these villages B villages to protect each one of them from unfair development. Sibford Ferris has not been successfully protected due to shortfalls and failures in the Local Cherwell Plan to protect its landscape, its character, its biodiversity, and its sustainability. An appeal was won by the developers for 25 new homes in Sibford Ferris as not enough protection was offered to the village by the Cherwell Local Plan; this should not happen again. If Cherwell does not limit the growth to the rural areas, Cherwell District is going against the wish of their constituents and against the new National Policies which protect against Climate Change. Cherwell must get ahead of the curve and try to be the example of the District Council that will move Climate Change measures forward and protect the existing communities. CDC should no longer accept planning applications from developers for our area until the Local Plan has been determined, especially since it was a great mistake to have amalgamated the two Sibfords as they should never have been placed together. It doubled their size in so far as target for new housing was concerned whilst they did not have anything near the required facilities and services required.
LPR-B-382	Shaun Costello	LPR-A-107	Strongly objects. Fields proposed are not suitable for housing; greenfield agricultural fields. Development proposed would be completely out of character with the village as it would double in size. Access road is too small, single tracked and damaged in places. Question over water supply. Street lighting not wanted as it is a dark sky village.
LPR-B-383	Hannah Jones	Islip	Objects to proposed development for 3000 homes. Proposals are on green belt which would destroy the ecosystems around the village. Secondly I would like to know how it will impact on flood levels as the ground proposed to be built on is necessary to absorb the increasing rain water to prevent overflow into the river that leads to flooding in the lower village. Thirdly the proposal of another road around the village is concerning as this will create two busy roads running through Islip rather than reducing traffic in the village.
LPR-B-384	Jill Bailey	Hanwell	Strong object to development north of Hanwell Fields. The gap between Hanwell and Banbury would be reduced to 100m and would effectively be the end of Hanwell as a village. The development would contradict the core strategy to preserve the rural landscape. The rural nature of the village would be lost forever. The setting of the Grade 1 Church and Grade 2* Castle would be compromised by development north of Banbury.

LPR-B-385	Johnnie Hand	LPR-A-214	Objects to site development. Village is already impacted by the encroachment of Hanwell Fields and also the vast number of houses that are about to be built on the Drayton site which will, in essence join this proposed site to create an enormous housing estate on the edge of the town/county. To say that this will not devastate the tiny village of Hanwell and the surrounding countryside is simply ridiculous. Other objection points include the resulting Traffic chaos, the destruction of wild life habits, the detriment of the 12th century church and it's churchyard, light pollution and the fact that it is a conservation area. Alternative sites for housing should be sought.
LPR-B-386	Gill Heaton	Islip	The proposal should be significant reduced in scope. Appreciates the need for more housing, particularly affordable. It is not appropriate to turn a historic village of approximately 700 residents into a town of at least 7,000 residents (assuming the extra 3,000 homes all have at least 2 residents). The character and community of the village would be completely lost in the development of this new town. Despite proposed improvements in rail, bus and cycle routes, it can be assumed that every house will have one or two cars, leading to a minimum of 3,000 cars moving into the village/town. Add these to the 41,000 car movements already through the village each week and the level of noise and pollution would undermine any goals for a greener environment. Some traffic would be taken around Islip on the new link road, but this does not change the quantity of traffic travelling through the village centre from Bicester and surrounding villages. Also, a faster link road would encourage more through traffic. The new link road would have to be built at a significant height to ensure it is not blocked by the regular flooding in Islip, which can be expected to get worse with climate change. So the new road would be very noticeable, both visually and for noise. I cannot see how the proposal meets the quoted climate change challenge in relation to traffic increase and flooding. Such a huge increase in housing would not create a healthy place to live, undermining our community, and would be detrimental to social health and wellbeing.
LPR-B-386	Gill Heaton	General	Local Plan Review documents and consultation requirements are simply too complex to understand how to have opinion heard.
LPR-B-387	Stagecoach	General	surprised that the implications of the National Decarbonisation Strategy for Transport for spatial planning (July 2021) has not been picked up in section 2 of this Consultation. Government recognises that current levels of car-dependency cannot be maintained if the national legally-binding trajectory to net zero-carbon in 2050 is to be attained. This makes it plain that Government recognises the need to much more tightly align spatial and land-use planning with transport strategy, and in particular, ensure that patterns of development strongly facilitate a mode shift away from personal car use to meet daily mobility needs. To meet national and local carbon reduction goals, this Local Plan's need to place the highest importance accelerating a transition to first a radically lower-carbon District, then a carbon-neutral one. The scope of the Plan's development strategy to influence the way in which patterns of growth facilitate more compact patterns of interaction on the one hand, and facilitate much higher levels of uptake of active travel and public transport on the other, must not be underestimated. Transport issues should be a principal focus of the plan, to a degree that it has never been previously. Rep includes commentary re the Oxford - Cambridge Arc Spatial Framework and The Oxfordshire Plan 2050.
LPR-B-387	Stagecoach	Option 1	A "business as usual" approach to the Local Plan Review, in which "sustainable transport measures" are retrofitted to development following an approach to site selection and urban design that is generally oblivious to public transport in particular, can only achieve the same car-dependent results as its application has previously. Government has indicated that this will no longer be admissible. Local plan-making will need to fundamentally reorient and realign to ensure that among other things, public transport presents a natural first choice. This will need local plan strategies to have regard to wider transport policies and initiatives. These must themselves transform the relative attractiveness of the public transport offer, as they are already seeking to do for walking and cycling. Consultation on a new Local Transport and Connectivity Plan for Oxfordshire (LTCP5) is imminent. This, when adopted, will perform a very important role in the transport evidence base for the plan. However, this is far from enough. Many of the major strategic issues for this plan really hinge on transport evidence that the Council does not yet have, including the outputs of the Countywide Strategic Transport Model, updates to the micro-simulations around the Oxford Fringe and in Banbury, and the initial outputs from the 2021 Census. Some of this essential data is already emerging, as County performs evaluations of key possible transport interventions, especially in Banbury and on the A41 corridor in and around Bicester. We would expect these to be ready well before the Plan is presented for Regulation 19 pre-submission consultation. It is also equally likely that this plan will be examined under a National Planning Policy Framework that is quite materially different from today's, in terms of its approach to transport and mobility. It is very disappointing and quite troubling that there is virtually no reference in the proposed Vision for Cherwell that demonstrates that the Council considers that a radical change is needed in how people in the District will move around. The closest it gets is to have a vision for "Excellent Connectivity". This of course "moves the dial" towards sustainable mobility not at all: the District already has exceptional levels of connectivity. This is largely afforded by the strategic road network including the (very congested) A34, A43 and the M40 all of which were built or extensively modernised and upgraded between 1989 and 2010; and a wider road network that well facilitates the observed exceptionally high levels of car ownership and use across the vast majority of the District. As currently drafted, the Vision is entirely agnostic about transport issues. If this persists, the result is certain to be a highly car-dependent pattern of development, as this will no doubt be easier and less politically challenging to accommodate.
LPR-B-387	Stagecoach	Option 2	KO16, 28 and 29 are those most closely related to transport, mobility and transport connectivity issues. There is little if any evidence that the previous and current planning strategies for the District have made much progress in achieving these outcomes. The KOs are inspecific and weakly worded. This avoids policy having to make potentially difficult locational choices and set much tougher targets for development to achieve, alongside a mechanism to monitor, review and manage the transport impacts of current and future new development in a manner that demonstrates that the plan is being effective and aligns with the delivery of wider local and national policy. With no clear idea of what achieving the outcomes is likely to involve there is no credible way that policy can be formulated to achieve it. As things stand, the KOs perform little more than aesthetic role. This is obviously very concerning in and of itself, but, from a practical point of view, they risk setting the Plan and its policies up to fail, seriously, at Examination in Public in due course.

LPR-B-387	Stagecoach	Option 3	Option 5. inasmuch as a single approach will not provide for enough suitable employment land in places that meet the reasonable operational needs of business and employment more generally, which are exceptionally diverse. We would say that Option 3) is unlikely ever to be appropriate. larger distribution parks are one of the few forms of development to which we are able to retrofit bus services, based on the pattern of occupier demand and shift changes, because they involve large numbers of people seeking to arrive in one place at one time, from a given labour source with a corresponding outward movement. The key is to ensure such bespoke services can be accommodated on-site when necessary and appropriate. Even better is a situation where existing passing services can provide a credible choice throughout the day, to pick up smaller shifts, part time working and office workers. It is very helpful to site these near the biggest settlements that represent large labour pools, not least to assist cycling. There is no question office and other kinds of development such as laboratories, research and development activities, and anything requiring various kinds of clustering and collaboration however intense or not, really should be steered toward passenger transport hubs. These could be the scale of Banbury Station, but we would urge in the strongest terms that a much more nuanced approach is taken. In key rural settlements, existing, expanded or entirely new, employment hubs can and should complement local inter-modal interchanges.
LPR-B-387	Stagecoach	Option 4	Stagecoach is not in a position to comment at depth in this area. Nevertheless the NPPf requires the council to “positively plan” to meet the economic needs of the District, and to do this we would expect that a suitable and proportionate evidence base on what currently foreseeable employment land demands are likely to require. We do not take such evidence for granted. We are well aware that this is an area where other plan-making bodies have to date placed insufficient emphasis and we urge Cherwell District to leverage all resources it can find including the responses of local chambers of commerce and trade, to establish the appropriate policy suite. However, we dispute that the use of employment sites for “E” class uses would be appropriate in the vast majority of cases. By definition these are those for which town centre locations remain sequentially much more appropriate, mainly because this allows for the easiest access by active travel and public transport, rather than the car.
LPR-B-387	Stagecoach	Option 5	very concerned that town centres, as the most sustainable venues for E-class uses, especially where active travel and public transport are concerned, should be strengthened through formulation and application of effective policy, rather than undermined. cannot lead to a “laissez-faire” attitude to locating town centre uses in the locations that allow cars to continue to offer by far the easiest means of access, if any shift away from already excessive car-dependency is to be achieved. The market for E-class uses will always tend to favour a “car-first” approach to location. It reflects the current trading environment where the vast majority of the audience sought by these occupiers are car owners and users. How the Plan can establish a basis to transition away from this is going to need a great deal of thought and care, and ultimate requires a number of things to change – not least a broader shift in public attitudes and with it, consumer behaviour. This is obviously well beyond the Plan to greatly influence. While the principle of a more nuanced and flexible approach to town centre uses is one we would broadly support it is worth mentioning that a transition to town centre residential uses poses some serious issues for wider policy and the nature of the town centre as a venue, which cause us some concern. We would therefore urge that the Council pursues an option that ensures that town centres remain the preferred location for a broad range of activities that require physical presence, including leisure, eating and drinking, public assembly (including activities such as adult and community education), higher-tier primary care and out-patient health facilities, to mention a few. Development of these uses, especially E-class, outside the town centre, should continue to be generally resisted. Policy should maintain an open and flexible stance to non-retail employment-generating uses in town centres, especially where this can be accommodated on upper floors. Residential development and re-use of wholly or partly redundant buildings must clearly continue to be supported either within DM polices, or SPD - needs to be put in place. This will clearly need to have regard to remaining permitted development rights in the Appendices to the GPDO and changes to national binding Building Regulations that can be expected to be promulgated by Government. This should seek to establish an appropriate standard of quality and a wider range of accommodation, such as 2-bed apartments.
LPR-B-387	Stagecoach	Question - Town Centre Uses (Banbury, Bicester & Kidlington)	Policy to consider how to deal with out of town proposals to ensure that such sites are accessible by all modes is essential. The language with which such a policy needs to be framed will require a great deal of thought especially as CIHT and DfT thresholds for cycling in particular are so generous as to make any development site however far flung, “accessible” by cycle. The kinds of sophistry used with regards to public transport to support developments far distant from a realistic public transport service, much less an attractive one, are regularly even more extreme. where out of town retail is sited directly on high quality public transport corridors, the sites can often be accessed quite well without a car; A spectacular local example of this lies in the Vale of White Horse: the Mollies Diner and Motel lies outside Buckland on the A420 but served by the S6 service. Within or adjoining urban areas, pedestrian and cycle permeability and connectivity into adjoining development must be given hugely greater emphasis than it is today. If the developer cannot deliver it, then the development should be refused. This will incentivise developers securing the control they need to secure sustainable accessibility, prior to an application being lodged. This is also likely to afford better links to higher quality bus services, not all of which may pass directly past the site – though the presumption should be that bus services running at least every 20 minutes serving a variety of origins, should be in place or credibly sustainable at all significant OOT developments. It is likely that only a criterion-based policy is going to be effective in steering outcomes and offering sufficient clarity for development management decisions.

LPR-B-387	Stagecoach	Question - Supporting Our Town Centres	<p>Policy to consider how to deal with out of town proposals to ensure that such sites are accessible by all modes is essential. The language with which such a policy needs to be framed will require a great deal of thought especially as CIHT and DfT thresholds for cycling in particular are so generous as to make any development site however far flung, “accessible” by cycle. The kinds of sophistry used with regards to public transport to support developments far distant from a realistic public transport service, much less an attractive one, are regularly even more extreme. Where out of town retail is sited directly on high quality public transport corridors, the sites can often be accessed quite well without a car; A spectacular local example of this lies in the Vale of White Horse: the Mollies Diner and Motel lies outside Buckland on the A420 but served by the S6 service. Within or adjoining urban areas, pedestrian and cycle permeability and connectivity into adjoining development must be given hugely greater emphasis than it is today. If the developer cannot deliver it, then the development should be refused. This will incentivise developers securing the control they need to secure sustainable accessibility, prior to an application being lodged. This is also likely to afford better links to higher quality bus services, not all of which may pass directly past the site – though the presumption should be that bus services running at least every 20 minutes serving a variety of origins, should be in place or credibly sustainable at all significant OOT developments. It is likely that only a criterion-based policy is going to be effective in steering outcomes and offering sufficient clarity for development management decisions.</p>
LPR-B-387	Stagecoach	Question - Housing Policies	<p>Housing need - There clearly are a number very difficult trade-offs to be assessed. Among which will be the evaluation of what higher levels of growth might imply for the spatial pattern of development, given known environmental constraints, and how that in turn might lead to a more extensive pattern of development that it might be possible to deliver. This in turn could have potentially significant impacts on overall levels of carbon-intensity, especially with regard to patterns of movement and connectivity. Housing Delivery - A very large proportion has been built in the villages, rather than the largest settlements (and virtually none in Kidlington). Banbury has brought a great deal more forward than Bicester where apart from South West Bicester (Kingsmere), which was mainly allocated under the prior planmaking round, relatively little of the plan-led growth allocated has translated into actual dwelling occupations. The range and geographic diversity of this distribution of outlets has greatly assisted the District in “substantially boosting the supply of housing” thus far. It has also allowed policy-compliant levels of affordable housing to be delivered, reflected in a good performance in this regard by the Council, though one that evidently still is falling short of meeting affordable housing need. This is because these smaller developments have generally not needed to make very substantial contributions to major infrastructure.</p>
LPR-B-387	Stagecoach	Question - 20-Minute Neighbourhoods	<p>the vast majority of residents of Cherwell District already live within a 20 minute walk of all day-to-day facilities that they need, and certainly within 20 minutes cycle. However, despite this, they evidently do not walk or cycle sufficiently to avoid the levels of car use and dependency that is observed. The concept, if applicable at all, represents the kind of service distribution we see today, at least as far as the top tier of the urban hierarchy is concerned. There is a strong argument that strategic allocations should be of a scale that either:</p> <ul style="list-style-type: none"> <li>a) consolidates development in such a way that either existing local facilities can be made more effective and/or securely sustainable. This includes education (especially primary) convenience retail, and potentially primary care and other E-class or similar leisure uses such as gyms.</li> <li>b) Creates a sufficiently large new neighbourhood to provide a suitable depth and breadth of local facilities on-site leading to a credibly high level of local self-containment.</li> </ul> <p>As part of this, either upgrade or extension of bus services to provide a credibly attractive alternative to car use needs to be justifiable, and the economic sustainability examined and unequivocally endorsed by experienced reputable bus operators, including ourselves where appropriate. In rural areas, the concept when looked at more carefully, moves us no further forward than a settlement function and service study. This would highlight those settlements that currently accommodate a better range of local services and facilities, and can also highlight those that could attain it, especially on the back of significant population expansion.</p>

LPR-B-387	Stagecoach	Question - Transport & Connectivity	<p>welcomes the recognition that the role of the local plan in facilitating low-carbon and more sustainable travel choices. Where the three largest urban areas are concerned, and the largest villages, the approach set out above that seeks to maximise the relevance of active travel is clearly important. However, as plan-making has demonstrated both locally and much more widely for 20 years, merely focusing on active travel and a level of self-containment for local service needs does not, on its own, meaningfully reduce car dependency at all. The strategy needs to look at the provision of credible options for regular trips over about 2km, and for most people this is likely to need a much higher emphasis on how well development location and design can facilitate efficient, frequent and reliable bus services. A spatial strategy driven by the presence and potential creation of high-quality bus corridors seems to be us to be the only one that is likely to allow this to take place. urgent action is needed to prevent rising levels of congestion in Banbury in particular, leading to the effectiveness and sustainability of the town's bus network being seriously threatened. there is no realistically identifiable strategy that simply ignores this matter in a vain attempt to provide as much highways capacity for unconstrained car use as possible, further assisted by cheap or free parking. Public transport can and does provide a potentially highly relevant and attractive choice outside urban areas. It simply requires the same principles to be followed and achieved as in urban areas: bus services need to be sufficiently frequent, direct and reliable, connecting people to a range of significant destinations – and not just a single local town centre. Experience elsewhere in Oxfordshire – such as the A420 corridor within the Vale of White Horse- shows that direct premium inter-urban bus routes can generate mode shares that are as high as the City of Oxford itself, in specific circumstances. This clearly is only applicable to these kinds of high-quality interurban bus corridors. This nevertheless ought to provide the Council with a significant range of options to meet housing need broadly throughout the District. It could even reduce existing high levels of car dependence since a sufficiently dramatic uplift in bus service quality can be expected to have a greater impact in car use from existing residents, in terms of numbers of journeys, than from even relatively high PT mode shares from new development. Leveraging significant rural service centres as local inter-modal interchanges should be pursued with some vigour. This should align with emerging intermodality strategies that we expect to be advanced through LTCP5. We wish to signal our increasing disquiet with the increase in the number of significant development applications in villages with little or no real availability of local services, far distant from key centres of economic activity and services, where no credible public transport offer is available today, nor is ever likely to be sustainable.</p>
LPR-B-387	Stagecoach	Question - Transport Policies	<p>It is essential that the Local Plan Review has full regard to the Bus Service Improvement Plan (BSIP) for the County, the delivery of which will be underpinned by a Statutory Enhanced Partnership from April 2022. This will offer the basis of much greater certainty that bus service enhancements can and will be delivered in a given corridor. That should not be seen a rigid frozen programme however. The BSIP will be subject to rolling iterative review, and it will be possible for the BSIP and EP to respond to the requirements arising from the Plan strategy where it needs to do so. In the southern part of the District around Kidlington, the Plan must have full regard to the Oxford Transport Strategy, its Review under LTCP5, and any further initiatives that flow out from this especially as Connecting Oxford proposals are implemented within the City Council's area. The transport measures in this part of the District should be seen to act as a unity with these.</p>
LPR-B-387	Stagecoach	Option 17	<p>The approach set out under Option 1 is one that we have great sympathy with, mainly because the appraisal and prioritisation methodologies used to date for transport infrastructure heavily favour reductions in journey time for motor vehicles, with scant consideration of the negative externalities that arise from pursuing programmes established on this basis. Government continues to struggle to arrive at a much more rounded means of assessing the relative value of transport interventions that are most likely to secure a broad range of vital policy objectives, including carbon reduction and increasing levels of personal physical activity. We suspect that until a replacement for the current WebTAG methodology is in place a divergent approach on the part of the Local Plan might have the somewhat perverse outcome of prioritising sustainable transport interventions, which then carry relatively weak Business Cases. The Council, along with the County Council, will want to ensure that as part of any process of prioritisation, this outcome is avoided. It is especially important that transport programmes in support of the Plan's development strategy do not become undeliverable in due course as a result. Of course, development strategies that leverage existing public transport corridors are much less likely to need to seek funding for costly, high-risk capital schemes on the highway. No clear preference in relation to options 3 and 4. Any IDP structure should offer a logical and transparent approach to setting out the range of transport interventions needed to support the plan. Some will sit most comfortably under a place based heading, and others are likely to sit under a District-wide, or corridor heading. Some key inter-urban corridors are clearly not going to sit comfortably under a single place-based heading.</p>
LPR-B-387	Stagecoach	Question - Delivering Infrastructure	<p>We have a problem, both nationally and locally, in that entirely insufficient regard is paid to the timely delivery of infrastructure to facilitate safe and convenient access to bus service from new developments. This is equally true for off-site or closely related infrastructure such as bus stops outside the development, as streets and stops within them. It is not infrequently the case that developments are largely or entirely complete, before any bus service can be made reasonably accessible to residents. This is most likely to be true where developments rely on the completion of a spine road within the development. At no point should more than 50 dwellings on any development currently under construction be more than 500m from a stop served by a regular bus service, at any stage, unless due and thorough consideration of the particular circumstances indicates that this threshold cannot realistically be met. Developments should be phased with clear, enforceable triggers agreed to ensure that delivery of bus, walking and cycling infrastructure is in place at a suitably early stage, in line with this minimum standard.</p>

LPR-B-387	Stagecoach	Banbury	<p>the relevance and effectiveness of bus services within the town is crippled by congestion, and contorted bus routing in and around the town centre. expect this to worsen as plan-led development comes forward on the remaining major sites almost all of which lie to the south of the town. District's adopted Banbury Master Plan, albeit non-statutory, that picks up on the need for better bus connectivity across the town centre, and the County's Tramway Road scheme. We must reiterate that without urgent focused action, the medium to longer-term viability of most of the town's bus service is quite doubtful. However, ironically, the kinds of interventions we think are needed are relatively small in scale and focused and there is good reason to suppose that on their implementation - alongside a wider vision for bus in the town - a much more efficient, frequent, reliable and comprehensive bus offer is achievable. This has clear implications for potential directions of growth around the town. Comments re a transport strategy for Banbury: strongly endorse the high-level logic that lies behind the statement at 6.2.36. clear and increasingly strong evidence that further significant targeted highways measures will be justified to more logically distribute transport demands across the town's highways network, and provide a level of redundancy in the network that is today almost entirely lacking. It is illogical and unsustainable to seek to increase the mode share of cars to the town centre and around what remains a relatively compact town. However, the extent of the built up area has already reached a size where cycling is reaching limits, and topography is also quite unhelpful. The size and nature of the town lends itself very well to developing the local bus offer. The serious congestion arising from the interaction of north-south flows with east-west across the town centre reflects both a huge challenge, but, equally a major opportunity, as the town centre, lying at this convergence of flows, offers potential to act as a radically better public transport hub if central area congestion can be tackled to give buses direct, reliable and efficient passage across the town centre. This is actually not so very difficult to achieve. In line with our long-standing advice, the following interventions could be effected to achieve this while offering nil detriment to motorised traffic, and potentially significantly improving wider conditions for other road users:</p> <ul style="list-style-type: none"> <li>• A short section of northbound bus priority on Cherwell St between George Street and Bridge Street</li> <li>• Substantial rationalisation of turning movements at Bridge Street/Cherwell Street junction, removing almost all right hand turns, and re-purposing carriageway space to prioritise straight ahead movements</li> <li>• Creating a westbound bus-only link using a very short section of High Street East and Broad Street.</li> </ul>
LPR-B-387	Stagecoach	Option 18	<p>a combination of growth to the south, with limited additional expansion to the north and north-west, represent the logical directions of growth. Stagecoach considers that landscape and coalescence issues constrain the further growth of Banbury in most directions, apart from the south and south west, south of Salt Way, and in smaller pockets west of Southam Road. The ability of landscape to accommodate material growth to the west is evidently very low. Growth to the east of the M40 lies close to the inter-urban service to Brackley, but will require an exceptional level of care and creativity to provide a replacement bus route through the middle of any development south of the A422, that is faster than the existing non-stop link between the M40 junction and Middleton Cheney. Growth east of the A361, north of the A422 for employment purposes, might have modest merit, but this is already hard to integrate into the bus service offer and it is likely to become harder. The least constrained sites are south of the current BAN 17 allocation at Wykham Farm, which could easily "hang" off the master plan already consented to the north. We are aware that passive provision for a loop road extending into this land has been made that would be able to accommodate an extension of a bus service already anticipated to serve the consented development. As such the potential extension would consolidate demand substantially and support a higher frequency bus service, as well as local services and retail. Consolidating development west of the A361 Bloxham Road also provides some modest but meaningful additional capacity, and would take advantage of both the existing 488 service, which we anticipate increasing in frequency at least as far as Bloxham, and the ne salt way service. We consider this a sustainable option. Options around Broughton Road and Crouch Hill have seen a great deal of promotion that to date has been unsuccessful. These sites have multiple challenges. As far as public transport is concerned, they are virtually impossible to provide a meaningful relative service to. North of the town, we have repeatedly stressed that consolidating development on Southam Road is now essential, to assure the longer-term delivery of a sustainable bus service (current service B3 running about every 30 minutes) and potentially increase its frequency. Both promotions west of Southam Road have great merit in our view, but require a comprehensive approach to secure an efficient extension of the current terminal loop through all the land to the west.</p>

LPR-B-387	Stagecoach	Option 19	<p>Stagecoach recognises that even if all the logical green field opportunities around Banbury are taken up, these are most unlikely to offer sufficient capacity to meet the levels of housing need that the evidence already suggests exist into the longer term. It is likely that beyond the plan period it will therefore become necessary to limit growth at Banbury and seek opportunities that are closely linked, but beyond the immediate built-up area. The third option, which implies a corridor focus, therefore becomes appropriate and if pursued intelligently and with care, is likely to offer a much more sustainable approach than attempting to further incrementally expand the town itself. The corridors that present themselves as existing and potential high-quality public transport corridors are as follows:</p> <ul style="list-style-type: none"> <li>• A4260 Oxford Road, suggesting further development on an appropriate scale at Adderbury and Deddington; and potentially a new village on the A4260 south of Deddington. Development must directly relate to the A4260, where we see scope for a substantial improvement in the existing S4 service. The identification and delivery of comprehensive bus priority on the Oxford Road, or by some other means using Bankside, will be essential to making this work sustainably.</li> <li>• A361 Bloxham Road, suggesting further modest development at Bloxham, but avoiding greatly extending the settlement greatly to the east away from the public transport corridor. It would be possible to expand Milcombe, especially to the east, but a new settlement between Bloxham and Milcombe might be a more appropriate way to meet needs. A key consideration is the distance a single bus can reach within an hour's scheduled round-trip running time from Banbury. This makes it essential that comprehensive bus priority measures on the bus route into Banbury are identified and delivered.</li> <li>• As we outline above, the promotion south of the A422 east of Banbury could offer some intriguing possibilities. This is likely to depend on creating a bus advantage corridor directly into the site, using Overthorpe Road and creating one and possibly two bus gates. The access and movement strategy for the site could credibly present exceptional opportunities for active travel and bus, and we urge both the promoter and the Council to look at this very seriously.</li> </ul>
LPR-B-387	Stagecoach	Option 21	<p>Stagecoach is a landowner with a significant site with important frontage to Cherwell Street within the BAN1 allocation. We have long sought to make plain to the Council that this site offers a very advantageous location to operate the local bus network from. However, the site is physically highly constrained and is increasingly ageing. As we look to decarbonise operations, it will also be increasingly unfit for purpose. Relocating our operation for the existing site carries two separate sets of cost issues for the business – the opportunity costs and additional capital cost uplift of finding and creating a new site, and the risk a replacement site out-of-town will burden the company with additional operating costs in the long term arising from a materially less efficient operation. The fact that to date BAN 1 has not come forward in supportive market conditions for residential development makes plain that for a range of existing occupiers, the existing change of use value is insufficient to justify relocation. Therefore, the Council needs to consider carefully a policy environment that maximises the net present value of sites. An approach that broadly accords with Option 2 is probably the most likely to achieve this. It might also need to identify specific sites for relocation of businesses – an approach that Stratford-on-Avon District Council has employed within their Local Plan, for a similar canalside regeneration, and which is already starting to bear fruit. For Stagecoach's operational needs, we have very particular requirements which we will need to discuss with the Council, if we are to release our current site for redevelopment. We also consider that evidence suggest that a viability gaps exists and the Council is likely to need to broker a land assembly exercise supported with additional funding from the Department of Levelling Up Housing and Communities. we are aware that particular funding streams for this express purpose are identifiable.</p>
LPR-B-387	Stagecoach	Question - Addressing Inequality in Banbury	<p>The most deprived communities are on the west of the town centre. The existing and growing employment areas are mainly to the east. Cross-town connectivity by bus is essential to maximise access to all kinds of opportunity. Improving the quality and efficiency of cross town bus links, which we have already started to put in place, is essential. As we continue to urge this demands focused and concerted measures in and around Banbury town centre, to get buses through increasingly chronic traffic congestion</p>
LPR-B-387	Stagecoach	Option 22	<p>we have a strong and fundamental concern that allocating a further very large quantum to Bicester over and above that already allocated in the adopted Local Plan Part 1, will merely compound a number of problems already inherent in the existing Local Plan strategy. The existing Plan focuses the largest amount of growth at Bicester despite it being far from the largest settlement. To date the majority has yet to show signs of delivering at scale or at pace, or, indeed, at all. we are also concerned that appropriate directions for further growth beyond that allocated, will present particular challenges for public transport provision, and, probably more relevant still, to the provision of services that could credibly be relevant enough to attract sufficient use to be both effective or sustainable in the longer term. Large scale urban extension of Bicester, much beyond current commitments, looks to have run its course. The constraints are by no means only transport related either. Thus we do not endorse Option 1, and this suggests that an approach along the lines of Options 2 and 3 is most likely to prove to offer a more sustainable approach. Should new or expanded settlements be pursued, as we would recommend should it prove necessary to accommodate an additional quantum in this part of the District, this would be on the basis that they are directly on existing or demonstrably deliverable direct high quality inter-urban bus corridors. We would point out that the town now benefits from new links direct to Headington via Ambrosden, run as service H5; and we would also stress the potential we see for a regular new corridor towards Brackley, and beyond to Silverstone and Northampton. We see a case for further growth at Ambrosden that would both consolidate the settlement further, help to increase local self-containment, and benefit from and help support a substantial increase in the frequency of H5 to half-hourly as well as its extension to Brookes and Churchill hospital, as one obvious option. We can see that employment development pressure is strong around both M40 junctions 9 and 10. If a substantial employment allocation is seen as being appropriate, especially in the Barnard Gate area, we could see a strong case for this to be complemented by a residential element of sufficient scale to support a local centre and a primary school. This would need to be sited such that a fast service on the B4100/A43 could serve it with minimal diversion or delay.</p>

LPR-B-387	Stagecoach	Option 23	<p>Option 5 is our response, based on limited growth to the north and north west, and potential for development to the south on a larger scale. These all carry significant caveats and nuances. Stagecoach is of the very clear view that directions for further growth of Bicester, on any kind of strategic scale, are exceptionally hard to identify, in such a way that these extensions are well integrated into the existing urban form, and local sustainable transport networks. The use of local inter-modal hubs to facilitate broader access to these services existing and future, from off-line neighbourhoods- existing and proposed - needs to be leveraged to the full by the Plan and its supporting transport strategy. There is a vital opportunity to rethink the Infrastructure Delivery Plan within the current Plan to 2031 in Bicester, as it is insufficiently geared to securing the transport outcomes that are now required by local and national transport policy. Comments provided on land to the north west of Bicester - The Eco Town: there is an important opportunity, so far unidentified, to create a high-quality bus corridor linking Bucknell Road to the B4100 that should be designed to facilitate an inter-urban service between Oxford, Bicester, Brackley and Northampton, as well as accommodate local services. Such a service would help anchor for the first time a genuinely relevant PT offer on the northern flank of the Oxford-Cambridge Arc. Given the level of development anticipated even under the existing Local Plan, progress at Silverstne Park and plan-led growth at Brackley and Towcester, such a service should form a major articulating feature of the transport strategy for the Plan, as well as the West Northants Spatial Framework, now in preparation. It could also support delivery of a more local bus link between Bicester and Banbury. We are very keen to discuss this further with the current promoter and the planning and highways authorities as soon as possible. Comments on land to the north of the town - Caversfield: modest extension north of Caversfield to the west of the A4421, is under active promotion. This is of a scale that respects landscape and other constraints. In our view very importantly, it also tackles the lack of self-containment of the existing housing by proposing a school and local centre, and as such it synergistically addresses an existing set of problems, not least by reducing the need of local residents to go a longer distance off-site into Bicester to meet most day-to-day needs. We have identified that there is an opportunity to further improve inter-modality, as well as directly serve this promotion with the X5 service. We are prepared to lend our conditional support to the promotion as a potentially very sustainable option, the more so when set against the reasonable alternatives round Bicester. Comments on land to the east of Bicester: The wider eastern side of Bicester suffers hugely from the severance caused by the rail line – severance that will get substantially more severe with the delivery of the next phases of East West rail. the bus service offer to the east is exceptionally poorly developed. There is very little provision on which to build. The recently introduced hourly service 17 to Aylesbury is the best service that has ever been offered, and while this helpfully replaces an hourly facility we used to run only as far as Launton, we have to stress that levels of patronage for this service, which also provided a direct link to Oxford, were exceptionally low. Nor do we see the longer-term potential for the Aylesbury-Bicester route, in the way we do for provision on the broad A43 corridor. Comments on options south of bicester: there is no potential to create a new public transport spine through land between the A41 and the Oxford-Bicester Rail Laine, which forms a part of East-West Rail. It is conceivable that some remaining portions of the MoD Estate that do not form part of the current allocation or consent could be released in due course by the DIO and if so, this would very effectively help to consolidate development and in so doing, greatly enhance the potential for a much higher degree of local self-containment. There is nevertheless a potentially very significant opportunity south of Bicester, immediately south of Graven Hill, north and east of Wendlebury, which we are aware is under active promotion. This is for development on a very substantial scale, and could be characterised better as a “linked new settlement” than an urban extension. These proposals would take advantage of an existing rail overbridge constructed to replace the Langford Lane level crossing. Forming a high quality connection north-south through Graven Hill, to its south west edge, then seamlessly through this area and over the bridge to the A41 presents a very important opportunity to open up a single new bus corridor east of the railway. This would offer a single logical bus route running from Launton Road in the north, passing past or through Wretchwick Green, then through Graven Hill and finally through this promotion. Towards the northern end, it would also provide direct links from all these sites to the largest concentration of existing and</p>
LPR-B-387	Stagecoach	Question - Reducing Car dependency in Bicester	<p>As far as transforming the attractiveness of bus, national and local experience, including vast amounts of survey work done by Transport Focus simply reflect the fact that the convenience and control that car use represents will be almost impossible to beat, without a substantial rebalancing of the use of road space to allow buses to “close the convenience gap”. There is no doubt that this will also involve a quantum leap in both frequencies and connectivity of bus services, including new direct links to major destinations beyond the town. Our responses above indicate that substantial opportunities exist to align transport planning for public transport, with the development strategy for the town, to achieve this outcome. It is essential that these opportunities, having been identified, are fully taken up – unless there are overwhelming planning factors that prevent this. we must stress that the approach of the Council in continuing to consent major out-of town retail schemes, on the A41 in particular, featuring extensive free parking, has substantially contributed to reducing the relative attractiveness of the town centre as a venue, while the new developments are in most cases difficult to provide a relevant bus choice to, from most areas of the town, despite the presence of the S5 on the A41. By contrast, accessibility by car to any of these sites could hardly be more convenient. The development strategy for Bicester and its environs must support a bus offer that can deliver the following:</p> <ul style="list-style-type: none"> <li>• Much higher frequencies, to maximise convenience and flexibility, not just during the day but on evenings and Sundays</li> <li>• More direct services on highly efficient routes, and better connectivity to key destinations, to close the journey time gap with driving</li> <li>• More reliable journey times</li> <li>• ... as well as faster ones. For both reasons bus priority – including the use of filtered permeability on key links - must be seen as essential.</li> </ul>
LPR-B-387	Stagecoach	Kidlington	<p>We recognise that NPPF and primary legislation require that Green Belt boundaries should be enduring in the long term, and since a strategic Green Belt Review was undertaken recently for the Local Plan Part 1 Partial review, it is not appropriate for this plan to re-open the matter at a strategic scale.</p>

LPR-B-387	Stagecoach	Option 26	<p>emphatically supports option 1. In particular we would advise that no bus operator has sufficient space at their current Operating Centres to undertake additional operations that are certain to be necessary to support even current levels of plan-led growth. Not only that, but it is becoming apparent that the planned accelerated transition to battery electric buses in Oxford, as well as any future decarbonisation of longer distance services, requires more depot space per vehicle. Thus, even to maintain current operations will require additional depot space in the very foreseeable future. Finally, both the main bus depots in Oxford – our own and Oxford Bus Company's - are on the far eastern edge of the City. These are ideal to service the city routes east of the Cherwell and Isis, but far less so for other services. Furthermore, the implementation of the County Council's "Connecting Oxford" strategy, understood to be by 2024, demands the very great augmentation of the bus service offer in this part of the city in particular. As such, there will be a further call on space at the existing depots to accommodate this – whichever operator ends up providing these services. It thus would be especially advantageous, to seek to meet these requirements on that side of the City. Providing additional reasonable opportunities to accommodate bus service Operating Centres should be regarded in our view as much as "essential transport infrastructure" to support the delivery of the plans strategic objectives with regard not only to transport but also carbon mitigation, and thus necessary to support the wider soundness of the plan in the sense of NPPF Chapter 9.</p> <p>We consider that this issue goes beyond even the basic need for the Council to demonstrate that it is "positively planning to meet the identified economic development needs of the District". Stagecoach is one of the largest employers in the area, and one would hope that these generic economic arguments would be reason sufficient to treat these representations very seriously.</p>
LPR-B-387	Stagecoach	Option 29	<p>further development at Heyford Park should be limited. The prospects for creating and sustaining a relevant public transport offer could not credibly exist, by virtue of the location of the site, which is extremely remote from key larger centres of activity, very close to the national SRN, and as a result sees travel demand expressed in a multiplicity of directions. There is no density of flow to leverage – in fact, the opposite is true. The occupation of substantial numbers of new homes has, we understand, had virtually no impact on patronage on the service. We can see a case for a very limited amount of development, perhaps up to about 300-350 additional units that consolidates the current, already substantial Local Plan commitment. There is employment on the site, local retail and a 11-18 education provision, so self-containment is relatively high, notwithstanding the poor choices to leave the sites by more sustainable means. This would help meet local housing needs in the central part of the District. More than this would inappropriately and disproportionately skew the pattern of development away from one that is focused on high quality sustainable transport corridors – which a local service to Bicester even every 30 minutes, does not really exemplify.</p>
LPR-B-387	Stagecoach	Option 30	<p>A corridor-based strategy is inherently flexible in meeting a range of housing needs spread quite broadly across the District. This includes rural housing needs which can obviously be best met, while avoiding excessive car dependency, in rural settlements where a regular direct and reliable bus offer to multiple destinations on the line of route are available. Such services should also be expected to offer regular evening and Sunday services – essential to reducing car dependency in any context and especially in rural areas. The BSIP will be looking to start to secure such outcomes across many more routes in the near term. We are sceptical that sufficient land immediately adjoining the two main towns at Banbury and Bicester can be identified to meet longer-term needs, to the degree that it might, in the case of Bicester in particular, it is arguable that market absorption on the scale available is sustainable. Accordingly, we think it likely that the Plan will need to accommodate a significant quantum in the most sustainable locations, including new or expanded settlements, which are not directly adjacent to the towns themselves. These could well be described as "rural areas". The question is too binary, and unhelpfully reduces the issue to a simple urban and rural split. However, there is a world of difference between development in a sustainable service centre settlement just a 10- 15 minute bus ride from facilities jobs and amenities in Bicester or Banbury, and much less discriminate dispersal of development across a large number of small and relatively remote settlements.</p>
LPR-B-387	Stagecoach	Option 31	<p>The use of the Neighbourhood Planning mechanism to identify land for housing gives rise to substantial risks. It is obvious from national experience that the appetite of NPBs to assume this responsibility greatly varies, as well as the organisation and other substantial resources involved to do this in a sound manner. Examples of extraordinarily sophisticated approaches by NPBs do exist – we can point to Lenham in Maidstone Borough, Kent, as one such. But these are quite exceptional. A hybrid approach having regard to the willingness and capacity of the NPB is likely to be required, informed by an approach to a spatial distribution that sets out clear expectations of what level of development is appropriate at settlements where significant development (that involving more than 10 units of open market housing) is considered necessary. None of this prejudices the role of LPBs in bringing forward very small-scale sites to meet demonstrable acute housing needs arising in the community, under rural exceptions provisions.</p>
LPR-B-387	Stagecoach	Option 32	<p>Stagecoach considers that the presence of 11-16 education, and a medical (primary care) facility should be afforded considerable weight. We also consider that the existing and potential level of public transport provision should also be given substantial weight where this already, or credibly could provide an attractive alternative to car use. We could not agree more strongly.</p> <ul style="list-style-type: none"> <li>• Sites on routes running at least every hour, within 30 minutes bus journey of key town centres should be given very substantial additional weight.</li> <li>• Where two major centres are available within 40 minutes this should be given even more weight.</li> <li>• Where a 30 minute daytime frequency is offered (or can be achieved and sustained) this would afford a further weighting</li> <li>• A 20 minute service should be seen as carrying as much as double the weight of even a 30-minute frequency, given the transformative effect of this on service use. Additionally if a safe segregated cycle route can be provided to a secondary school within 3 km of a site, this should be given very great weight.</li> </ul>
LPR-B-388	Alan Hand	LPR-A-214	<p>strong objection. Village is already severely impacted by its close proximity to Banbury and to consider making a bad situation even worse is beyond belief. There is still a clear boundary of woodland and a couple of fields protecting the village and if these are destroyed, along with all the wildlife that reside there, you are essentially making the historic village of Hanwell a part of Banbury town. Consider the countryside and the villages when you consider these proposals; the countryside and villages need to be protected and that building Banbury right up to the county border, destroying all the countryside and villages in its path is not a sensible solution when there are other, less destructive places, that you could build in the town.</p>

LPR-B-389	Alexis Stevens	LPR-A-175	Objects. the scale and number of houses is totally out of proportion to the village's capacity and surrounding area's sustainability. Such a number of houses could see the need for extra capacity at Cropredy School which is unlikely to be available on that scale. The existing sewerage system would not cope. The new development's drain would go straight down the main road, have bigger capacity and cause the rest of the village's drains to be a side conduit and therefore back up and flood the land it is going across. The sheer number of houses proposed would mean a density that would demand a wholesale clearance of the land as it stands. Such a density of houses and the accompanying hard landscaping would push rain water outwards into the rest of the village and back on to the road. Fields are used for sheep grazing. New development would require streetlighting which is at odds with the dark sky status and its position at the highest point of the village would be a beacon of light. Additional houses will add to the existing traffic issues including additional congestion at the M40 roundabout. Much of the village is without footpaths which is getting more dangerous to walk through the village.
LPR-B-391	Peter Monk	Option 21	The current Local Plan (2015 - 2031) has yet to achieve many of its objectives. great deal of new housing constructed but many unfinished and Canalside has no progress. Perhaps Canalside should be revisited in relation to climate change and possible flooding concerns.
LPR-B-391	Peter Monk	Question - Reducing Car Dependency in Banbury	Rail and bus connections with Bicester must be improved and a reliable, frequent link between Bicester North and Town stations established to open employment opportunities along the revitalised East/West railway to residents of Banbury and the surrounding area.
LPR-B-391	Peter Monk	Banbury	Little evidence of affordable housing needs having been addressed. Evident from the public comments in the review that there is much disquiet and frustration that physical and social fabric ( eg. roads, schools, medical and dentistry surgeries, library facilities etc,) infrastructure has not kept pace with the demands for such features arising from the increases in population provoked by the Local Plan. The Review must address this aspect if any amendments are to have general community support. Development on land around the perimeter of the current developed areas must be resisted. Brownfield sites should be targeted for housing. Ribbon development such as that along Broughton Road must not be allowed. Public transport is minimal and unlikely to improve. The Review should concentrate on the social and economic health of Banbury as infrastructure for those purposes has declined. Opportunities for 'higher -end' employment provided in the first stage of the Plan have been squandered in favour of quick gains, which do not accord with the aspirations of five years ago and this present opportunity must be grasped to 'plug' Banbury and district into the OxCamArc.
LPR-B-391	Peter Monk	LPR-A-107	Brownfield sites should be targeted for housing. Ribbon development such as that along Broughton Road must not be allowed. Public transport is minimal and unlikely to improve.
LPR-B-391	Peter Monk	LPR-A-129	Brownfield sites should be targeted for housing. Ribbon development such as that along Broughton Road must not be allowed. Public transport is minimal and unlikely to improve.
LPR-B-391	Peter Monk	LPR-A-159	Brownfield sites should be targeted for housing. Ribbon development such as that along Broughton Road must not be allowed. Public transport is minimal and unlikely to improve.
LPR-B-391	Peter Monk	LPR-A-166	Brownfield sites should be targeted for housing. Ribbon development such as that along Broughton Road must not be allowed. Public transport is minimal and unlikely to improve.
LPR-B-391	Peter Monk	LPR-A-182	Brownfield sites should be targeted for housing. Ribbon development such as that along Broughton Road must not be allowed. Public transport is minimal and unlikely to improve.
LPR-B-391	Peter Monk	LPR-A-004	Brownfield sites should be targeted for housing. Ribbon development such as that along Broughton Road must not be allowed. Public transport is minimal and unlikely to improve.
LPR-B-391	Peter Monk	Option 20	The revitalisation of Banbury Town Centre as a retail, commercial and community 'hub' is of paramount importance and policies must be put in place to provide attractions for children and teens to augment those of the primary shopping area. This will encourage 'footfall' and enhance the attractiveness of the existing facilities. The Mill is inadequate for a town and catchment area the size of 'Banburyshire' and this glaring need must be addressed.
LPR-B-393	Danielle Tolson	LPR-A-086	Plan should be reviewed and altered. The site is disproportionately large versus the village as it stands now. Adderbury has already seen at least 5 new housing developments in very recent years. Village boundaries are being pushed out, eroding the intrinsic nature of Adderbury being a village. Adderbury has taken more than its fair share of Cherwell's development. If housing is absolutely necessary the brownfield site near Twyford Mill would be a more suitable location for building in the village, however I feel that large brownfield sites such as Heyford Park could take a much greater proportion of housing, as could outlying industrial / ex MOD areas to the North of Banbury and South East of Bicester. Adderbury does not have the infrastructure to support any more housing developments or additional people and the traffic they bring with only one school, one small shop and a part time post office. Development would worsen the constant stress and disrepair of the roads with additional traffic. development around the outskirts of the village has incredibly poor access to public transport with no walkable access to shops, doctors, schools etc. so traffic and cars will continue to increase. This is both a health hazard and a danger. countryside included on the plan is home to many native species of plants, animals and insects and further building will destroy these and have a massively negative effect on the local environment and ecology. Air, noise and light pollution will increase, causing a decrease in the quality of living for current residents.

LPR-B-393	Danielle Tolson	LPR-A-218	Plan should be reviewed and altered. The site is disproportionaely large versus the village as it stands now. Adderbury has already seen at least 5 new housing developments in very recent years. Village boundaries are being pushed out, eroding the intrinsic nature of Adderbury being a village. Adderbury has taken more than its fair share of Cherwell's development. This is both a health hazard and a danger. Countryside included on the plan is home to many native species of plants, animals and insects and further building will destroy these and have a massively negative effect on the local environment and ecology. Air, noise and light pollution will increase, causing a decrease in the quality of living for current residents.

LPR-B-393	Danielle Tolson	Option 10	in general there is a significant shortage of good sized family homes with good sized gardens. The amount and density of housing we have seen spring up on new developments in this area largely does not meet the needs of family life (ie tiny houses on tiny plots) nor does it help any sustainability plan as we look to reduce climate change and environmental damage. In general a good proportion of new houses should have a minimum size garden, should have to have a certain number of trees planted per sq meter of house, should be built from sustainable materials, should have high performance windows and should have non-carbon / non-fossil fuel heating. At present all I see is more concrete, more carbon heavy building materials, more fitting of gas heating systems, more destruction of nature and wildlife and more cutting down of trees and this simply can not continue to happen. sites that must be allocated for building and development in Cherwell come with outstanding environmental and ecological requirements for any building firm so that our district can lead the way in cleaner living for all our futures.
LPR-B-394	Susan Roe-French	Shutford	Development in the village would cause a number of problems. The local roads are 'B' classified and one or two are little more than a single track. this is a vital consideration as we have no public transport in the village so rely on private cars. New housing will generate many more cars. services such as water, drainage and sewage systems would need to be upgraded. We have very little street lighting, and few facilities. The village has no shop, or school. suggest improving and updating the existing housing in Banbury town. Potential to redevelop a former department store and other commercial areas. Perhaps providing mixed accommodation, some small units along with larger ones for larger families. The town has a good rail station with fast links to London and elsewhere. It would be great to regenerate our market town and encourage visitors too, and hopefully bring back prosperity to a place that that was thriving and attractive a few decades ago and could be again.
LPR-B-395	Vincent Arts	Adderbury	Plans to build 750 homes in Adderbury is not acceptable and will transform the village in to a suburb of Banbury. Gone is the scenery, the wildlife, the pleasant atmosphere, the comradery, the tranquil roads, a seat on the bus, community spirit, no antisocial behaviour etc. The list is long. Development will be resisted.
LPR-B-396	Sarah and Stewart Cato	Adderbury	Adderbury village has seen substantial development in recent years without any increase in amenities or infrastructure to cope with the increased demand. The rural feel and character of the village has already been compromised with recent developments and this will be lost forever with the proposed developments. The size of the development proposed is not in keeping with the village environment. Much of the proposals contravene the Adderbury Neighbourhood plan with development outside the accepted boundary of the village. This would result in Adderbury morphing in to Bodicote and/or Bloxham. size of the proposed developments is not proportionate to the existing size of the village. Developments of such size should be restricted to towns not small villages. The village would be more than doubled by some of the proposed developments. Development would obstruct views of the church when entering the village. Infrastructure is not sufficient at present nor to accomodate the proposed development. Congestion on the main road is severe; lengthy queues and gridlock at peak times, resulting in dangerous circumstances for residents. Pollution is also a problem which will increase with increased traffic, noise and light. Safety of children on the roads with increased trafficc is also a concern. The proposed developments would further disturb existing network of fields, footpaths, ecological and wildlife habitats.
LPR-B-397	Kidlington & District Historical Society	Question - Green Belt	Given the extent of the areas removed from the Greenbelt in the partial review, no further changes to the Greenbelt boundaries around Kidlington and the neighbouring villages should be considered in the period to 2040. Given the scale of economic development occurring or proposed in Kidlington and at Begbroke there is no need for a limited review of the Greenbelt for employment land. The Society supports point 2 of Option 26.
LPR-B-397	Kidlington & District Historical Society	Option 26	Given the scale of economic development occurring or proposed in Kidlington and at Begbroke there is no need for a limited review of the Greenbelt for employment land. The Society supports point 2 of Option26.
LPR-B-397	Kidlington & District Historical Society	Option 28	Support Point 1. Specifically, the Society supports the designation of the sites put forward by Kidlington Parish Council and Kidlington Development Watch as LGS (LPA –A -237). In particular, the sites on the NE boundaries of the Village help preserve historic landscapes and preserve the setting of Grade 1 Listed St Mary's Church. The site to the East of the Church is, of course, a Conservation Area as well as Greenbelt.
LPR-B-398	Peter Gay	Deddington	Respondent relays on the Deddington Development Watch representation submission and supplements with further points. concerned that Deddington and other villages are at risk of being overwhelmed by over-development. With the current new builds and already granted planning permissions for rural villages as here in Deddington there appears to be no planned improvement in the infrastructure. Village developments where local public transport is scarce or non existent with limited local employment invariably leading to unsustainable commuting with the consequential unnecessary parking and pollution problems. Greater housing requirements threaten incalculable harm to our environment and rural character of our villages.
LPR-B-399	Stephanie Lea	Adderbury	Against further development in the village due to infrastructure issues. Concerned about the significant increase in traffic on Oxford Road, Milton Road and through the village itself. Already dangerous on these roads and pressure at medical facilities. The 2018 neighbourhood plan didnt propose further development in the village; with the plan being to develop Banbury, Bicester and Kidlington and protect the villages. The village voted for the protection afforded by our current residential settlement boundary and local gaps between Adderbury and Bodicote and Milton. Further development is not what our (already large) village needs, and would severely damage what defines a village - its community, individual identity, charm and history.
LPR-B-400	Jay and Hikari Jopling	LPR-A-175	Object to the proposed developments. It is our understanding that these sites are outwith the settlement boundary. Further, the land in question affords essential open space that contributes to the sense of place and landscape quality which is such a fundamental aspect of the village and area. We completely accept that sensitively designed, well planned and environmentally sustainable residential development can be appropriate where considered in conjunction with a community's needs and aspirations and where local attributes, historic, environmental, archaeological etc. are respected. These two sites do not comply with these criteria and the land's existing designation as adjoining a conservation area and adjoining (and including part of) a registered battlefield render it wholly inappropriate for consideration.

LPR-B-400	Jay and Hikari Jopling	Sustainability Appraisal	objection is in relation to all rural housing sites that have not been the subject of detailed sustainability consideration, not just in Wardington. We think it is fundamental to promote the benefits of more sustainable options including higher density development in well-connected areas like Banbury or Bicester. development in rural areas. This is the least sustainable option and would appear to be open to significant scrutiny. The SA should be investigating whether the expansion of small rural areas should be taking place at any scale, noting that their original historic functions may have diminished. Development in rural areas would result in a heavily car dependant model, creating issues with air quality, climate change, congestion, social isolation and does not promote active travel. Development in rural areas will also result in high infrastructure costs per capita leading to the need for significantly higher levels of public subsidy; more limited local employment opportunities and a greater requirement to travel; and Issues concerning the loss of rural landscapes and local identity. Due to their small size, hamlets and villages are particularly susceptible to losing their historic identity through new development.
LPR-B-401	Terence O'Connor	LPR-A-175	Object. If approved this would enable future residential developments of up to 450 homes to be planned. An expansion of this scale raises considerable concerns as the village has a current population of 600 people. The infrastructure is currently ill-equipped to cope with the additional demands of any such development. The highway infrastructure within the village itself predates modern highway standards and as such is limited in its ability to safely accommodate higher volumes of traffic particularly in areas where there is on-street parking. Limited forward visibility and the narrow geometry frequently require vehicles to give and take. The village is limited in terms of utility supplies in particular gas, where many of the properties are currently fuelled by oil powered heating systems. The carbon emissions of new development in the Wardington area is likely to compare poorly with more urbanised areas better served by existing utility supplies and would not be in keeping with the Local Authority's efforts towards reducing carbon emissions. Wardington is a remote location with little pedestrian or cycling facilities or bus services that connect local residents to schools, shops or jobs. This remote location offers limited strategic value in terms of developing affordable housing as many of those in need of affordable housing may not have access to a car. The noise caused by additional traffic along A361 not to mention the construction traffic and site activities associated with the construction of any future development is of particular concern to me as my property already receives considerable noise disturbance from traffic. Some of the land proposed for the local plan would conflict with the possible alignment for a bypass around the village which would benefit the village and be a key strategic consideration for the Local Highway Authority where future improvements to the A361 corridor may be necessitated to enable other developments. Wardington is in a conservation area and development will significantly change the appearance and character of the village. The character of the village with houses dating back to the 1800s and The Church of St Mary Magdalene would be irreversibly diminished by replacing its rural setting to one dominated by a modern housing development
LPR-B-402	Jill Mayer	LPR-A-002	Strongly object. Development would result in a huge increase in the area of housing and would result in severe overloading of present infrastructure. Concerned about the loss of green spaces and land that could be used for food production and/or local renewable energy systems. Small villages such as Adderbury can become overwhelmed by infill and ribbon developments that completely change the nature of the community. The Victorian sewage system is struggling to cope with increased volumes of sewage and run-off water and we will continue to have issues until this problem is tackled strategically. In Sweden they have managed to establish separate systems for some of the rain-water and sewage systems. This reduces peak flows and the likelihood of overflows from sewage water treatment systems. These systems can best be installed in towns and cities rather than dispersed rural areas. The site falls outside the Residential Settlement Boundary as set out in the Adderbury Neighbourhood Plan, and contravene Policy AD1. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more new homes approved at appeal on the site north of Berry Hill Rd. These developments have already begun to change the fundamental character of the village. Adderbury suffers from traffic issues such as speeding, particularly along the A4260, the Aynho Rd, Berry Hill Rd, Milton Rd and Horn Hill/Cross Hill/New Roads. OCC has installed traffic calming measures on Berry Hill Rd and Milton Rd. Development will directly place additional cars on these dangerous roads. West Adderbury is a distinct area of the parish, distant from the vast majority of facilities. The proposed development are entirely unsustainable and every new household would need to drive to access facilities. Several of the sites would, if developed, destroy the rural entrances to the village. The Adderbury Fields estate is set well back from the road with a green space acting as a buffer. The Henge Close development is shielded from the road by established hedgerows. At the other end of Berry Hill Rd, green fields are very gradually replaced by large, individual houses which are again well set back from the road. Development of these sites would be detrimental to the open nature of the Henge Close estate and to the green space and play area to the east. The few facilities present in Adderbury would be completely swamped by a development of this scale, placing massive pressures on local schools and services. Precious well used public footpaths over these sites would be lost. The residents of St Mary's Rd, many of whom have suffered from loss of privacy following the construction of Adderbury Fields, would lose existing connection with local farmland. West Adderbury is a haven for wildlife of all kinds, including hedgehogs, buzzards, kites, badgers, foxes, bats and several varieties of deer. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. Development of these sites will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. Once the latest phase of Longford Park, the new developments on the Bloxham Rd and the additional housing to the north of Banbury are complete, it is inconceivable that Cherwell will not have at least a 5 year housing supply. The rush to develop green spaces in and around our Banbury villages appears to be motivated solely by the financial interests and will provide no benefits to the majority of residents.

LPR-B-402	Jill Mayer	LPR-A-077	<p>Strongly object. Development would result in a huge increase in the area of housing and would result in severe overloading of present infrastructure. Concerned about the loss of green spaces and land that could be used for food production and/or local renewable energy systems. Small villages such as Adderbury can become overwhelmed by infill and ribbon developments that completely change the nature of the community. The Victorian sewage system is struggling to cope with increased volumes of sewage and run-off water and we will continue to have issues until this problem is tackled strategically. In Sweden they have managed to establish separate systems for some of the rain-water and sewage systems. This reduces peak flows and the likelihood of overflows from sewage water treatment systems. These systems can best be installed in towns and cities rather than dispersed rural areas. The site falls outside the Residential Settlement Boundary as set out in the Adderbury Neighbourhood Plan, and contravene Policy AD1. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more new homes approved at appeal on the site north of Berry Hill Rd. These developments have already begun to change the fundamental character of the village. Adderbury suffers from traffic issues such as speeding, particularly along the A4260, the Aynho Rd, Berry Hill Rd, Milton Rd and Horn Hill/Cross Hill/New Roads. LPR-B-403	Toni Ramsay	LPR-A-175	<p>Strongly object. The village cannot sustain the amount of traffic currently so to almost double in size will cause even more chaos than the A361 has to deal with at the moment along with the additional HS2 traffic. Waddington is a small and not well serviced village that does not need many additional residents to be an additional draw on the lack of facilities.</p>

LPR-B-404	Linda Leonard	LPR-A-152	Object. I know how much they value their village identity and I feel that the inclusion of the site for potential development in the new local plan is a travesty. LPR-A- 152 which brings the outskirts of the town to within 100m of the conservation area and would be a blight to the landscape. It is vital to retain a buffer between our towns and villages in order to protect the character of the area. Preserve the integrity of a beautiful conservation area. I am extremely concerned about the ramifications of additional traffic that would be an inevitable result of further development to the North of Banbury. Hanwell already suffers from a high throughput of traffic through the single main street, which at times winding and single track. Passing traffic goes at dangerous speeds. Increased traffic would endanger residents of the village.
LPR-B-404	Linda Leonard	LPR-A-214	Object. I know how much they value their village identity and I feel that the inclusion of the site for potential development in the new local plan is a travesty. It is vital to retain a buffer between our towns and villages in order to protect the character of the area. Preserve the integrity of a beautiful conservation area. I am extremely concerned about the ramifications of additional traffic that would be an inevitable result of further development to the North of Banbury. Hanwell already suffers from a high throughput of traffic through the single main street, which at times winding and single track. Passing traffic goes at dangerous speeds. Increased traffic would endanger residents of the village.
LPR-B-405	Greg and Jane Mullane	North Newington	North Newington is a small parish with its main facility being our Primary School and a village pub. We have no shops, no Church, no GP Surgery, no public transport and no acceptable communication technology. A car is required if you settle in the village just to commute to Banbury - getting to and from the M40 from North Newington is now a 20 minute trip to cover 5 miles. Main Street would not cope with any increase in traffic. The school buses struggle to get a free flow of traffic in the morning and at school pick up time. The village is used as a shortcut to the recycling centre at Shenington, a shortcut to the M40 Northbound from Gaydon as well as surrounding villages. Traffic to and from Wroxton and Shutford is already at a premium, any significant increase in housing in those areas as well as the North Newington parish would truly escalate this problem. Our village streets become running streams after any significant rainfall, any development, particularly the southern plot from Main Street would cause the possible flooding the current on Main Street as the proposed area is well above the current ground level of the properties. North Newington residents experience constant water pressure and sewerage problems. This is due partly to the Victorian drainage/sewer system in place which is at capacity. Any significant property development would exacerbate these current problems. We also suffer from extremely weak mobile phone signals for most major suppliers and poor quality broadband speeds. North Newington has approximately 135 homes that have been developed over the last 200 odd years. We never have had the infrastructure to accommodate any significant property development, organic growth is still the best way forward.
LPR-B-406	Joseph Caulfield	LPR-A-091	Object. There have been a number of new housing sites built in Bodicote and the surrounding area and the Village would struggle to accommodate more. This proposed development would lead to significant disruption to local residents and would require changes to the roads, schools and other infrastructure .
LPR-B-407	Megan Bowdler	LPR-A-185	Object. The proposal does not contribute to or enhance the natural environment. Nethercote is home to a range of local species as well as an array of birds which we should be striving to conserve and protect. The proposed plans remove large areas of fields and trees, completely diminishing their habitats and neglects ecosystems. Nethercote is classified as a green buffer. The proposal will add futher strain onto existing traffic issues and affect local residents health through decreasing air quality and potential leading to an air quality management area being designated. It would worsen the issue on Hennef Way in terms of air quality and traffic. The noise, air and light pollution brought by this development would be detrimental to Nethercote residents health.
LPR-B-408	Banbury West End Tennis and Squash Club	LPR-A-077	Object. The site is an important area for flood mitigation in the Sor Valley and throughout the village. Development will reduce the gradual soak into the underground aquifers and in the event of heavy rain will increase the speed that water rises across the valley effecting properties in Adderbury. You will be aware that homes throughout the village are now regularly flooded by the Sor Brook. Banbury Westend Tennis and Squash Club is also affected. Flooding of our tennis courts 5 and 6 and the squash courts has significantly increased in regularity, depth and extent over recent years. Development of these sites will exacerbate this risk not just to 5&6 and the squash courts, but to tennis courts 3 and 4, which are unable to withstand flooding and will be destroyed. We do not have the reserves to withstand such a loss and we cannot get insurance to cover flood. We endeavour to keep the costs of tennis and squash to an absolute minimum so more people can play racket sports in the village. The additional local flooding that will result from these developments present an existential risk to the long-term existence of the club. As a sports club we appreciate the importance of exercise to health and quality of life. The site has highly valued footpaths forming part of local and longer distance routes. Twyford, eastern and central areas of Adderbury have very few rural footpaths so greatly depend upon these open spaces for daily recreation.The footpaths form a network for the wider Banburyshire area, notably, the Adderbury and Bloxham circular walks. Development and urbanisation of these areas, albeit whilst maintaining public rights of way, will erode the value of these amenities to the much wider district.

LPR-B-408	Banbury West End Tennis and Squash Club	LPR-A-156	Object. The site is an important area for flood mitigation in the Sor Valley and throughout the village. Development will reduce the gradual soak into the underground aquifers and in the event of heavy rain will increase the speed that water rises across the valley effecting properties in Adderbury. You will be aware that homes throughout the village are now regularly flooded by the Sor Brook. Banbury Westend Tennis and Squash Club is also affected. Development and urbanisation of these areas, albeit whilst maintaining public rights of way, will erode the value of these amenities to the much wider district.
LPR-B-409	Sandra Bird	LPR-A-185	Object. Corned about the increase in fumes, noise and light pollution any commercial development would bring. The proposal is not a sustainable development. Huge warehouse units along both sides of the M40 would make Banbury look like a major storage depot rather than an English market town. People would not be attracted to the town which would have diastrous effects on the town's economy, especially impacting Banbury's local businesses. At the momemnt there is a green buffer between the motorway and scenery towards South Northamptonshire and the proposed works would be an awful decision for the hamlet of nethercote.
LPR-B-410	Elizabeth Campbell	LPR-A-175	Object. The village has a unique character as a conservation village. To tack the proposed development onto the village would be inappropriate, not only because of the sheer size of the area, but because it is completely out of character of the existing village. Existing services would not be able to cope with the sheer size of any development. To increase both services and housing would decimate the environment and character and the conservation status of this village. At a time when we are being asked to preserve a balance of nature, and environmental issues are uppermost, it seems wrong that this land is being considered for change of use. HS2 work is already causing untold damage and it is so important to be able to hang onto some vestige of the local flora and fauna.
LPR-B-410	Elizabeth Campbell	LPR-A-034	Object. The current warehouse is an eyesore. The threat of many more threatens to completely overshadow and blight the small historic villages that nestle either side of the A361: Chacombe, Wardington, Williamscot and Cropredy. Development on this site seems wholly unnecessary and inappropriate. The countryside must be preserved, the character of the existing villages must be preserved.
LPR-B-411	Annette Reed	LPR-A-175	Object. Are these sites within the boundary of Wardington village, especially the 10 hectares on the which is the opposite side of the A361 to the village itself. The proposal is for 20 houses on 4 hectare site & 5 on the 10 hectare site, will this be hijacked by the council and 300-400 houses built as has happened in other areas. The proposed development will be out of scale by doubling the size of the village. The village is a conservation area. The facilities within the village are very limited: a pub, village hall & a church. No shop, doctors surgery or school. Proposed access to the site onto the A361 will be dangerous. The additional traffic that this sort of development will bring will put added pressure on an already very busy roundabout over the M40, especially with the current development of warehouses being built on land next to the M40. The council is already building 30% more houses than stipulated by the Government. With agreed development of another 8500 houses already in the pipeline and land put aside for a further 8000 houses, this more than cover the Government required build for the next 20 years. Whilst I understand that new houses are required, the sites in Wardington are not in keeping with the area.
LPR-B-412	Katy Fletcher	LPR-A-152	Object. I was lead to believe by the Local Authority that there would be no development north of Dukes Meadow Drive. Village life is very important for well being. We have noticed a higher volume of traffic using the village as a rat run and can only expect this to increase due to the proposed additional housing. The roads going through the village have no traffic calming and the roads are being eroded away where I have had to make requests to fix my street due to the increase of traffic. Additional housing will be to the determent of wildlife and there has been littering in the surrounding countryside due to the increase of population. More houses = more people and this in my eyes will only get worse. I understand there is a need to create additional housing but there has already been a huge volume of new homes in the area and in a very short amount of time, the impact has already been huge. The choice to move to the village was to be surrounded by a caring community, not to live in a litter site with a growling influx of speeding cars with little respect in some cases of the local residents.
LPR-B-412	Katy Fletcher	LPR-A-214	Object. I was lead to believe by the Local Authority that there would be no development north of Dukes Meadow Drive. Village life is very important for well being. We have noticed a higher volume of traffic using the village as a rat run and can only expect this to increase due to the proposed additional housing. The roads going through the village have no traffic calming and the roads are being eroded away where I have had to make requests to fix my street due to the increase of traffic. Additional housing will be to the determent of wildlife and there has been littering in the surrounding countryside due to the increase of population. More houses = more people and this in my eyes will only get worse. I understand there is a need to create additional housing but there has already been a huge volume of new homes in the area and in a very short amount of time, the impact has already been huge. The choice to move to the village was to be surrounded by a caring community, not to live in a litter site with a growling influx of speeding cars with little respect in some cases of the local residents.

LPR-B-413	Emma Flint	Adderbury	Object. The infrastructure can't cope. I am particularly concerned about the significant increase of traffic and pollution, in particular on Oxford Road, Milton Road and through the village. It is already becoming very dangerous on all these roads, particularly at junctions and where cars use the village as a cut through. There is already pressure on our medical facilities. Our Neighbourhood Plan 2018 agreed by residents and CDC, did not propose further development. The strategy was to develop Banbury, Bicester and Kidlington and protect our villages. Prior to the Neighbourhood plan being finalised 2 significant developments were approved in Adderbury, The Milton Road and Ayhno Road. The village consequently voted for the protection afforded by our current residential settlement boundary and local gaps between Adderbury and Bodicote and Milton in order that we remain a village. Further development is not what our village needs and would severely damage what defines a village.
LPR-B-414	Robert Bradlow	Adderbury	Object. UK has something that does not really exist anywhere else in the world, which is the unrivalled community that surrounds traditional village life. As these communities have been built up over many centuries there is a sense of uniqueness to them. Proposed development will no doubt destroy the fabric of the village, as it expands such a large area surrounding it. I do believe that it would make much more sense to look at alternative sites that are on the edge of the town of Banbury, which is an already developed town. A dramatic increase in traffic congestion and problems that are arising out of the lack of investment in basic infrastructure, such as public transport and local schools. Continued development in Cherwell area should be halted until an infrastructure investment plan has been put in place that can help to mitigate the overly hasty plans to develop the fabric of the villages that surround Banbury.
LPR-B-415	Paul Harry	LPR-A-041	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. Additional development around Henge Close at LPR-A-041 would directly abut the Conservation Area and would therefore be detrimental to the setting of the listed buildings on Horn Hill Rd. Development would also be detrimental to the open nature of the Henge Close estate and to the green space and play area to the east. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.
LPR-B-415	Paul Harry	LPR-A-086	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. The large-scale developments proposed for sites LPR-A-086 would utterly change the approach to the village and would create a jarring transition from agricultural land to modern, dense housing. if developed, double the size of West Adderbury overnight. Such large scale development is entirely inappropriate for a village the size of Adderbury and is far more suited to a large town or even a city. few facilities present in Adderbury would be completely swamped by a development of this scale, placing massive pressures on local schools and services. Precious public footpaths over these sites, which are in daily use by local residents, would be lost forever. Development of LPR-A-086 would lead to the residents of St Mary's Road being completely subsumed by new estates, fundamentally changing the character of the southern edge of West Adderbury. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.

LPR-B-415	Paul Harry	LPR-A-146	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. LPR-B-417	EDSS Rural Ltd for Mr M Smith	Option 1	Support the general approach of the review and the overarching vision, particularly with regards to: targeting growth on areas which benefit from sustainable transport links and other infrastructure hubs which are required to support existing and new neighbourhoods; maintaining good transport links and infrastructure to support a flexible economy; and, focusing employment land in/around Kidlington (as well as Bicester and Banbury) which are all aligned with the long-term potential and ambitions for development at/adjacent to Oxford Parkway.
LPR-B-417	EDSS Rural Ltd for Mr M Smith	Option 2	Support for: KO1, KO2 and KO16. KO16 would reduce the dependency on the private car as a mode of travel, facilitating the creation of a zero-carbon transport network. These are aligned with the long-term potential and ambitions for development at/adjacent to Oxford Parkway.
LPR-B-417	EDSS Rural Ltd for Mr M Smith	Option 3	Support the principle of focusing employment land around the main urban centres of Banbury and Bicester, and in particular, Kidlington. Support the rationale for focusing employment at significant transport changes, which is aligned with the long-term potential and ambitions for development at/adjacent to Oxford Parkway.
LPR-B-417	EDSS Rural Ltd for Mr M Smith	Option 4	Support a mix of employment uses as critical to strengthening Cherwell's key commercial sectors. This is fundamental to the district vision to take a leading role in the Regional and National economy. The type of employment should have regard to the location and capacity of the site and the benefits of being in close proximity to major transport infrastructure hubs such as Oxford Parkway (and the land adjacent), which would be able to deliver employment uses which can meet multiple criteria in relation to reducing car travel and climate change targets.
LPR-B-417	EDSS Rural Ltd for Mr M Smith	Question - Supporting Employment	We would like to express the need for flex within town centre uses to allow scope for commercial/retail centres to evolve and respond more rapidly to demand, both within town centres and in strategic/sustainable employment sites on the edge of primary urban settlements, as per the long term potential and ambitions for on/adjacent to Oxford Parkway.
LPR-B-417	EDSS Rural Ltd for Mr M Smith	Option 5	Support options to protect and support defined areas but promoting long term flex to enable demand to be met quickly, which is aligned with the long term potential and ambitions for development on/adjacent to Oxford Parkway.
LPR-B-417	EDSS Rural Ltd for Mr M Smith	Question - Green Belt	Support policy which enables the Green Belt to be reviewed to accommodate employment land where exceptional circumstances exist. The land at/adjacent to Oxford Parkway is a logical and sustainable location for green belt release given the existing commitments and development potential over the longer term.
LPR-B-417	EDSS Rural Ltd for Mr M Smith	Question - Transport & Connectivity	Policies should: capitalise on existing/planned investment in sustainable modes including P&R and other improved bus infrastructure and rail networks and, require attractive and safe ped-cycle connections which align with the long term potential and ambitions for land at/adjacent to Oxford Parkway
LPR-B-417	EDSS Rural Ltd for Mr M Smith	Option 17	Sensible to review methodology as part of the plan process against wider objectives for the longer term. Catchment and accessibility reflects a more appropriate approach based on how the area functions.
LPR-B-417	EDSS Rural Ltd for Mr M Smith	Question - Delivering Infrastructure	We believe there is a need for pooling of shared contributions where infrastructure is to be secured in connection with multiple development allocations.
LPR-B-417	EDSS Rural Ltd for Mr M Smith	Option 26	Support a small green belt review to test for exceptional circumstances for employment uses. The land on/adjacent to Oxford Parkway is one such site outside the Green Belt boundary location which could provide a sustainable location for employment use, be supported by the strong transport links provided by Oxford Parkway rail station and Park & Ride as well as the general proximity of existing and future settlements of Kidlington, North Oxford and PR6a.
LPR-B-418	Anne Court	Adderbury/Twyford	Strongly object. The site covers mainly Agricultural land. The village will almost double in size putting stress on the already very busy roads, causing even more air pollution. The infrastructure in the village does not allow of such expansion. To build huge housing estates which will encircle the village is just abhorrent, no doubt squashing houses together with small gardens. Any further developments in the village should be on brownfield sites such as Twyford Mill and other small infiltrated sites. Any future housebuilding in the Adderbury village to be eco housing with no gas boilers fitted, all to have thermal heat pumps/air source heating and solar panels on the roof, extremely efficient windows and doors. Thoughts should be given for future houses to use recycled water and unless any future houses aren't ecological, I don't want to see any houses built at all. It is not the way forward. With regards to all housing built in the Cherwell area I certainly do not want to see mass housing built of standard construction as this is not the way forward and no contracts should be allowed to go through unless they are built as houses for the future
LPR-B-419	Tim and Teresa Shardlow	LPR-A-155	Object. The proposed development will increase the risk of flooding to Station Road, Cropredy School and neighbouring properties. The proposed development would be in flood zone 1, but the surface water run-off from the site would be discharged into the Sow Burge in an area of zone 3 flood risk. The Sow Burge is a tributary of the River Cherwell and flows adjacent to the School. The School and grounds are situated in a zone 3 flood risk area and very vulnerable. The school has flooded 3 times in the last 14 years. Significant flood events have occurred in recent years. In July 2007 Cropredy School was seriously damaged, contaminated by sewage and closed for 9 weeks. The channel capacity of the Sow Burge was exceeded. In December 2013 Station Road was closed and vehicles damaged. In March 2016 the school was closed for a day. October 2021 flooding occurred under the railway bridge after just 2 hours of rainfall.
LPR-B-420	Gill Slade	LPR-A-175	Object. The proposal would potentially more than double the number of dwellings currently in the village, with new housing being built on an area which is a fraction of the size of that now providing housing. This would alter the character of this conservation area village. The potential increase in traffic would add considerably to existing traffic. Building on the proposed areas would remove any possibility of there being a bypass to relieve the traffic problem through the village. There was considerable disruption during the 'widening' of the A361 for HS2 traffic, and yet there is still insufficient room for two HGVs to pass without one of them stopping. The land in question would be far better used for a bypass.

LPR-B-421	David Collingwood Turner	Hanwell	Object. Hanwell is a self-contained vibrant community of people who have chosen to live in a village away from the town. Encroaching development over recent years and empty assurances has left the village feeling dismayed and distrustful of local government. Hanwell is a rural village and conservation area. The last local Plan stated that such areas are to be protected. A rural perimeter is required. Hanwell is highly biodiverse which needs to be protected. Hanwell is a historical village. It has a C12th church and a Castle with a rare C17th century Italian water garden that is being excavated by archaeologists. Hanwell has a long standing Astronomical Observatory and in recent years the night sky has been increasingly light polluted from developments. The proposed development joins Hanwell to Banbury. A single field distance is inadequate. The town boundary to be set at the edge of the current development. I would like to suggest that Hanwell is made even more attractive. The fields offered for sale could be purchased and turned into native woodland to assist in the fight against climate change and achievement of net zero carbon dioxide. Incentives could be given to turn the fields around Hanwell into smaller units with the replanting of hedgerows and return of livestock. .
LPR-B-422	Peter Gough	Adderbury	Object. There seems no overall strategy for development of the village beyond trying to control of this housing development. Adderbury is becoming a sizable village but there is no Health Centre and the village shop is sub scale and so difficult as a commercial enterprise. Everyone will use their car as footpaths and cycleways are not being developed as part of any village development plan, which would see new facilities provided as part of any planned development. There will be no new employment opportunities. Greenfield sites in places like Adderbury are top of the developers list for commercial reasons so it's sad they are setting the agenda on where to build not Cherwell.
LPR-B-423	John Berry	Sibford Gower	Object. If the sites are included in the plan would inevitably lead to any planning application being in accordance with the plan and be hard to challenge. Development would effect the local highways, Pound Lane has no footpath and currently is in a disgraceful state of repair. Increased traffic would lead to further deterioration to Pound Lane and other roads e.g. Main Street which is in need of major repair. A development on this site would lead to an increase in the population of between 400 and 500 which would double the size of the existing population. Such an increase is inappropriate in a small village with no shop, limited road and public transport facilities, limited water supply and would increase the carbon footprint which I believe Cherwell are legally obliged to do. Any increase in attendance at the Primary School will lead to increased traffic flows and congestion within the village, there being no access by foot/cycle from the proposed development sites. Increased demand for mains water could lead to an additional reservoir at the top of Pound Lane and increased communications requirements would probably mean a higher mobile phone tower to accommodate additional antennas or another base station. Hard surfaces of estate roads and drives would result in increased disposal requirements and flood risk in Colony Road down the valley where surface water drainage is an issue. Disposal of foul sewage is under strain with the development off Hook Norton Road in Sibford Ferris, such developments on the proposed sites would result in further sewage works at the existing works or even on the proposed development. Sibford Gower is currently in a dark sky region which should remain. The area in between Chipping Norton and Banbury in which Sibford Gower is sited is one of the last unspoilt areas in the county and any development on this scale would erode this valuable and sensitive landscape which should be preserved.
LPR-B-424	Rev Jeffrey Ian Smith	LPR-A-091	Object. It would eliminate one of the footpaths between Bodicote and Adderbury to allow additional housing. This is one of a network of interconnected and interlocking footpaths between the two settlements that adds so much interest and value to walking in that area. These footpaths are well used. This area is not contiguous with any present 'settlement' (only the odd, isolated, houses) and it would seem wanton destruction of a very valued amenity to create such a settlement. I very much agree with the sentiment expressed in the Report that Banbury has had more than its fair share of development and the 'environs' of the town are already being badly marred by such developments. The area south of the town (ie Bodicote to Adderbury) is already very narrow and any such developments will irreversibly damage the character and nature of both places. Both of them have very distinctive identities and 'atmosphere' and to 'bleed them into each other' would be wanton vandalism.
LPR-B-425	Emma Ross	LPR-A-175	Strongly object. Development would fundamentally change the character of Wardington, which is a conservation village. Development would be out of scale with the size of Wardington. The need for services to sustain an increase in population including a school and sewerage would surely make other areas on the outskirts of Banbury a better choice. Given the new developments proposed to the A361 and need for access to the M40, a by-pass around Wardington will become necessary. The only logical land to use for this future by-pass is that which is currently designated in the Local Plan.
LPR-B-425	Emma Ross	LPR-A-168	Strongly object. We already have the ugly warehouses being built along that stretch of road, which will inevitably cause traffic issues and have massively spoiled the countryside. There is no need to spoil what's left of the beautiful area with further commercial development. The A361 is a vital road for access to the M40 and to the rail station in Banbury, and to clog it with more traffic will make commuting awful for residents of Wardington, Cropredy and Williamscot in particular.
LPR-B-425	Emma Ross	LPR-A-034	Strongly object. The scale of what is being proposed is ridiculous and completely out of tune with the local character and surrounding villages. Traffic has already been impacted by the two existing warehouse structures and they're not finished yet. A warehousing site of such proportions would be absolutely awful. Eye sores, traffic congestion, disrupting wildlife, and impinging on the character of the nearby villages.
LPR-B-426	Keith Allen	LPR-A-107	Object. This small village would be swamped with more cars. There is not any pavement into the village or even sufficient room to build a pavement, as close to the crossroads only one car at a time can navigate the road. When visiting the primary school/church/village hall/Sibford Ferris shop, the junction is inadequate in width to take more traffic. Doubling the population of a rural village is completely out of proportion with the local infrastructure and therefore inappropriate to the area with countryside adjacent to the village. Sibford Gower is an important example of understanding the environment by being a 'dark sky' village – any development of this size would completely destroy this vital issue. I hope Cherwell look at brownfield sites rather than greenfield sites.

LPR-B-427	Patrick and Sandra Clay	LPR-A-107	Strongly object. Due to successive governments failing to invest in local infrastructure, our roads are in very poor condition and are not maintained. We have no cycle ways and footpaths are inadequate in Pound Lane. Access to the local primary school from Pound Lane is dangerous due to a lack of footpaths and a bottleneck near the school junction. We have no street lighting in Sibford Gower. A massive increase in the population of the village would increase commuter traffic, damaging our valuable countryside. Due to a lack of local employment opportunities, people will commute as public transport links are very poor in our village. Development does not go hand in hand with CDC investing in public transport, infrastructure, road development and services such as water. The only investment in infrastructure we have seen has been in towns or cities such as Banbury where significant development has taken place, we recommend that if more houses need to be built, they should be built where the infrastructure can support them. By building in Banbury, CDC would benefit in terms of its investment in new development within the town. Changing the use of good quality productive agricultural land into concrete is not within the Council's plan regarding climate change and a carbon negative future. This will not leave the natural environment in a better state than it was before.
LPR-B-428	Stephen Flint	Adderbury	Object. In addition to the four recent and significant developments in Adderbury; the proposed 12 future developments would have a catastrophic impact on the local infrastructure. The significant likely increase in traffic (and pollution) particularly on the already busy Oxford, Milton and Aynho roads is a concern especially at the crossing points for the primary school. The existing pressure on medical facilities will only get worse. The Oxford road has become noticeably busier following recent developments in Adderbury and Bodicote, and has led to an increase of traffic using the centre of the village as a rat run to avoid congestion. There will be increased instances of flooding due to surface water runoff as consequence of the further urbanisation of the village. The 2018 Neighbourhood Plan did not propose any further developments. I understand that the strategy was to develop Banbury, Bicester and Kidlington and to protect villages. Prior to the Neighbourhood plan being finalised, 2 significant developments were improved in Adderbury - the Milton and Aynho Road sites. The village consequently voted for the protection that was afforded by our current settlement boundary and the local gaps between Adderbury and Bodicote, and Milton to remain a village not become subsumed into a suburb of Banbury. While I appreciate the need for more houses nationally, further development is not what our village needs given the additional four recent and significant developments that have already been incorporated to Adderbury. Further development would catastrophically damage what defines a village.
LPR-B-429	Alison Rippon	LPR-A-107	Strongly object. There is no basis for the inclusion of these sites. While permission might not be sought for this number initially I have seen large developments creeping across greenfield sites in villages nearby and believe this is completely at odds with a sustainable approach to planning. Cherwell have an opportunity to put a stop to unscrupulous and greedy development. Sibford Gower and Sibford Ferris do not have the infrastructure to sustain even medium-scale development. The foul and surface water drainage is completely inadequate. More houses in Sibford Gower would lead to an increase in commuter traffic which the narrow roads could not sustain. The 25 houses planned for Sibford Ferris are going to create problems of access for cars and additional threat to pedestrians. Most importantly is the threat to the beautiful countryside and an erosion of a rural way of life. The areas offered as potential for development are adjacent to land designated as being of outstanding natural beauty and part of the Ironstone Downland. There would be damage to hedgerows, mature trees and to the water table. To include the sites in the plan would be contrary to progressing towards a carbon negative future and ensuring our distinctive natural and built environment is protected and enhanced.
LPR-B-429	Alison Rippon	Option 31	I do not believe that rural areas should support more than their communities need to thrive. It makes much more sense to develop brownfield sites in towns where there is more employment and development will not materially increase traffic on the roads.
LPR-B-430	Charlotte Clark	Hanwell	Object. Development would have a big impact on my day to day life because I walk my dogs everyday around where the houses are planning to be built. The new homes would disrupt the countryside I enjoy and would cause a lot of upset for me and many other walkers. We are proud of our village, it's history and beautiful surrounding countryside, we do not want this to be taken away from us.
LPR-B-431	Simon Clark	Hanwell	Object. Development will encroach into the village of Hanwell. 800 year old village with a 12th century church that would lose its identity like many others and identity should be protected. This development would now ruin that move which is grossly unfair. I am also concerned that this will devalue my property as people pay a premium for an isolated village lifestyle. Traffic through the village will increase on an already narrow road. The lose of wildlife would be sad. The views from these fields are breathtaking and that vista will be lost.
LPR-B-432	Luke, Vanessa and Mary Mulley	LPR-A-107	Object. Large developments on this scale are contrary to 'natural development' which I believe should be the norm for villages. Houses developed all at the same time or in large batches mean the design visually jars with the rest of the village. Large developments prevent local businesses benefitting, no local architect will design the houses, no local builder will be employed, no local merchants will be used to source materials etc. and any money made will not stay in the community. Sibford Gower is a good distance from any town, this means that any new development would increase traffic on the road between Shipton and Banbury making the traffic situation in Swacliffe, Tadmarton, Broughton and Brailes increasingly difficult. At present the width is restricted by road side parking and the twists and turns in the road, more traffic is not going to solve this. Sibford Gower does not have nor will ever have a wealth of modern leisure activities or amenities so most social and leisure interests will require a car journey. Increases in traffic increase pollution through co2 even if all the vehicles are all going to be electric, due to the need to generate the electricity. We have a small village school, although I am sure they have space to increase their numbers slightly they certainly do not have the space to take on the potential huge number of children the possible future 350 houses could generate. The area around the school does not allow for enlargement and families in the current community and catchment area would be forced to look elsewhere. The site is an area of good, fairly flat farm land and should be 'ear marked' to stay as such, the local plan should include the need to feed people, we can't keep on removing farm land from our country in order to house people. Development land should always be brownfield sites or contaminated land in order that the development improves the environment. Please protect the villages of this special area, they are a real asset.

LPR-B-433	Cropredy Parish Council	Option 1	Supports the Vision in general. Regarding 14) 'Our rural communities', suggests including a statement about maintaining villages rural identity by preventing coalescence of settlements and protecting the rural character and quality of village by preventing inappropriate and disproportionate development.
LPR-B-433	Cropredy Parish Council	Option 2	Considers the draft objectives are comprehensive and balanced. Particular important are: KO1, KO4, KO5, KO9, K10 to KO19, KO23, KO25, KO31. Any development should not damage the character and quality of rural areas.
LPR-B-433	Cropredy Parish Council	Option 3	Employment Land should be focussed at our main urban centres of Banbury, Bicester and Kidlington and mostly on previously developed land, including in less sustainable locations. Favour some employment land in rural areas provided it is of an appropriate type and size so as not to damage the rural character and environment.
LPR-B-433	Cropredy Parish Council	Option 4	Provide mixed use sites to include general industry, distribution (B2 and B8 uses), light industry and other potentially compatible uses such as retail and leisure (E use classes)
LPR-B-433	Cropredy Parish Council	Option 5	Maximise flexibility within the town centre for different uses including residential development and other community and leisure uses.
LPR-B-433	Cropredy Parish Council	Question - Town Centre Uses (Banbury, Bicester & Kidlington)	Further 'out of town' retail development should be prevented. The evidence is the detrimental effect that the Gateway Development appears to have had on Banbury Town centre.
LPR-B-433	Cropredy Parish Council	Question - Supporting our Town Centres	For Banbury, recognise fully the importance of the urban landscape as an attractor and enhancer of civic pride and well-being. For example, continue to enhance streets such as Parsons Street encouraging independent retail and catering outlets; make more use of the Market Square, better the town to the canal; notwithstanding the planned restaurant and leisure outlets, the town tends to turn its back on the canal.
LPR-B-433	Cropredy Parish Council	Option 6	Increase the percentage requirement of affordable housing required on housing developments of 10 or more units?
LPR-B-433	Cropredy Parish Council	Option 7	Keep the same affordable housing tenure mix as set out in the 2015 Local Plan with 70% Affordable and Social Rent and 30% Social Rent?
LPR-B-433	Cropredy Parish Council	Option 8	Introduce a policy which requires all new dwellings to meet the nationally described space standard and if so, should this be a minimum requirement?
LPR-B-433	Cropredy Parish Council	Question - Separation Distances	A policy about separation would be helpful, but it would need to be context specific as higher densities are appropriate in some settings.
LPR-B-433	Cropredy Parish Council	Option 9	Introduce accessibility standards for a proportion of new homes?
LPR-B-433	Cropredy Parish Council	Question - Housing Policies	Supports the provision of affordable housing (particularly shared ownership) to provide the opportunity for residents' children to be able to return or stay in the village. Any development would need to be proportionate to the village and not be detrimental to the rural character of the village. There is a need to provide smaller dwellings for elderly residents wishing to downsize to a more 'manageable' house.
LPR-B-433	Cropredy Parish Council	Option 10	Set sustainable design and construction standards for new residential and non-residential development that only meet standards set by Government.
LPR-B-433	Cropredy Parish Council	Question - Retrofitting of Historic Buildings	Support a sensitive and bespoke approach to historic buildings. Regarding older 'non-historic buildings', the policy should be informed by technological advances.
LPR-B-433	Cropredy Parish Council	Option 11	Use a criteria-based policy to assess the appropriateness of proposals for renewable energy generation?
LPR-B-433	Cropredy Parish Council	Question - Policies for Climate Change, Sustainable Construction & Renewable Energy	Encourage a standard approach for considering all proposals for renewable energy generation including micro generation. Strengthen policies on promoting Electric Vehicles, including addressing issues in rural areas such as providing charging points for the those houses that do not have off-road parking. Policies related to carbon capture such as tree planting and sustainable farming.
LPR-B-433	Cropredy Parish Council	Option 12	Secure as close to the site as possible
LPR-B-433	Cropredy Parish Council	Option 13	Include a policy in the Plan requiring major development proposals to be supported by a natural capital assessment to demonstrate the impact of the proposals
LPR-B-433	Cropredy Parish Council	Question - Biodiversity & the Natural Environment	CPC welcomes these policies.
LPR-B-433	Cropredy Parish Council	Option 14	Seek opportunities to integrate play facilities throughout towns and developments identifying minimum standards and setting expectations through design and other place making policies e.g. inclusion of pocket parks, play streets and informal play within open space areas. However, the detail of the policy would need to be set out.
LPR-B-433	Cropredy Parish Council	Option 15	Use financial contributions from developers in lieu of on-site provision on strategic sites to enhance existing facilities, to enable increased use. Could provide better value for money provided the existing facilities were of an adequate standard and easily accessible from the new development.
LPR-B-433	Cropredy Parish Council	Question - Local Green Spaces	CPC will consider whether there are any sites within the parish that could be nominated as Local Green Space.
LPR-B-433	Cropredy Parish Council	Question - Protecting the Historic Environment	CPC considers the policies in relation to protecting the historic environment specified in the Options Paper appear comprehensive.
LPR-B-433	Cropredy Parish Council	Question - Achieving Good Design & 'Beauty'	CPC agrees with updating the Cherwell Residential Design Guide Supplementary Document and that it would be helpful to include other buildings such as offices and shops. CPC considers that the 'Design Advice' should reflect urban and rural environments and have a specific section on villages.
LPR-B-433	Cropredy Parish Council	Question - 20-Minute Neighbourhoods	The 20-minute neighbourhood is a very useful concept in urban areas, and suggests that the approach could be amended as '(10-minute?) Neighbourhood' in villages, including noting which facilities are available only through transport links to the nearest town.

LPR-B-433	Cropredy Parish Council	Question - Transport & Connectivity	Agrees with the proposed approach of prioritising reducing the need for travel and active travel. In rural areas some allowance is needed as it is not possible to meet all needs locally, but low carbon transport can mitigate the effects of additional travel. This could be helped by encouraging electric vehicles in villages through subsidies for charging points at homes and in public areas. A frequent and regular bus service from Cropredy to Banbury and Banbury railway station. CPC would welcome a review of existing cycleway provision including consultation with local cycling groups. This could include a review of the potential to connect villages by cycleways and footpaths to the nearest urban area.
LPR-B-433	Cropredy Parish Council	Option 16	1) Provide a policy with the requirements expected from new development to provide digital connections and be designed to accommodate future digital infrastructure needs (future proofing). 2) Provide a policy protecting existing telecommunications infrastructure. 3) Provide a criteria based policy on the location and mitigation requirements for telecommunications development.
LPR-B-433	Cropredy Parish Council	Question - Transport Policies	CPC agrees with identified range of policies and documents. CPC suggests including a specific policy on promoting 'low carbon' transport in rural areas through provision of Electric Vehicle charging and 'low carbon' buses, and cycleways, particular connecting rural and urban areas.
LPR-B-433	Cropredy Parish Council	Option 17	The methodology for infrastructure delivery should consider the wider factors listed (social and environmental benefits and the contributions they make to Climate Action, Healthy Place Shaping, and a Sustainable Economy. CPC considers that 'Infrastructure Delivery Plan' by place makes sense apart from the general category for 'rural areas' as this does not allow for variation in different rural settings. Therefore, some differentiation of rural areas should be considered.
LPR-B-433	Cropredy Parish Council	Option 18	Limit development at Banbury to protect its landscape setting and maintain separation between the town and surrounding villages
LPR-B-433	Cropredy Parish Council	Option 19	Any development of Banbury should be on vacant and previously developed land within the existing town boundaries.
LPR-B-433	Cropredy Parish Council	Question - Important Views of Banbury	There should be policies to protect 'views' and to protect historic buildings and settings.
LPR-B-433	Cropredy Parish Council	Option 20	Consider steps to remove certain development rights within the town centre to prevent the conversion of shops and restaurants to homes without the need for planning permission? Option 1 as this would provide more control, although it is acknowledged that appropriate conversion to residential can be beneficial by increasing the number of people in the town centre
LPR-B-433	Cropredy Parish Council	Option 21	Continue to allocate the site for residential led redevelopment involving a transition of the site away from commercial uses to a sustainable, well designed residential area. Provided the residential development maintains/enhances the historic character of the Oxford Canal.
LPR-B-433	Cropredy Parish Council	Question - Banbury's Open Spaces	Supports the objective of the 'north- south' linear park and of enhancing the Oxford Canal.
LPR-B-433	Cropredy Parish Council	Question - Addressing Inequality in Banbury	Planning policies should consider the social and well-being impacts of developments and the provision of facilities.
LPR-B-433	Cropredy Parish Council	Question - Reducing Car Dependency in Banbury	Considers car dependency would be reduced by better public transport, cycle ways and walking routes.
LPR-B-433	Cropredy Parish Council	Option 30	Housing development in rural areas should primarily meet local needs and that any additional development should be proportionate to the current size of the village and matched by appropriate infrastructure.
LPR-B-433	Cropredy Parish Council	Option 31	Provide a parish level figure to each area to allow flexibility for Neighbourhood Planning or other community led plans.
LPR-B-433	Cropredy Parish Council	Option 32	Additional weight should be given to accessibility (particularly by public transport) to urban areas otherwise residential development based on the existing hierarchy would increase car dependency. Not taking account of accessibility to urban centres in the Village hierarchy could lead to an inappropriate housing allocation. CPC considers that settlement boundaries should be defined as this would prevent disproportionate development and/or sprawling development.
LPR-B-433	Cropredy Parish Council	Option 33	Option 1 as this ensures that all developments are considered in relation to the policies.
LPR-B-433	Cropredy Parish Council	Option 34	CPC would prefer a combination of the two approaches as it is important to define particularly valuable landscape features but also provide protection for features in all areas which may be important locally.
LPR-B-433	Cropredy Parish Council	Question - Neighbourhood Planning	Welcome help and advice in producing a 'community plan' to provide a vision for the future of Cropredy that takes account of the community's views and local evidence. Production of a Neighbourhood Plan for Cropredy is not currently viable due to resource constraints and the need to have something in place by Summer 2022 to be the basis for CPC's response to Cherwell's Draft Local Plan.
LPR-B-433	Cropredy Parish Council	LPR-A-155	Any development in Cropredy should be proportionate to the size of the village (340 dwellings est.), beneficial to the village, and that any housing development should be primarily for local needs, and any development should not be detrimental to the rural character of the village and its setting. CPC considers that any appraisal of this site for potential development should take account of the following: sensitivity of the adjacent Conservation Areas of Cropredy and the Oxford Canal, the adjacent residential areas of Kyetts Corner, Creampot Lane and the dwellings between Creampot Lane and the Oxford Canal; the rural setting of Cropredy Marina; additional traffic generated; potential increase in run off with consequences for flooding; and, housing developments should be proportionate to the size of Cropredy, which has approximately 340 dwellings and not be detrimental to the rural character and setting of the village. Any development would damage the setting of the listed building, 'Springfields'. (This was the reason for the dismissal of an Appeal (24/04/2018). This would be the case with any proposed housing development. Other concerns raised in connection with previous planning applications still apply including that development would harm 'the character, rural setting and quality of the village and its heritage assets; highways safety and effects on public infrastructure, and increased risk of flooding.

LPR-B-433	Cropredy Parish Council	LPR-A-202	Any development in Cropredy should be proportionate to the size of the village (340 dwellings est.), beneficial to the village, and that any housing development should be primarily for local needs, and any development should not be detrimental to the rural character of the village and its setting. CPC considers that any appraisal of this site should take account of 'traffic issues' in School Lane, which is unadopted and poorly surfaced, and passes between Cropredy Church of England Primary School and the planned school car park (planning permission granted).
LPR-B-433	Cropredy Parish Council	LPR-A-044	Any appraisal of potential development of this site should take account the consequential risk of coalescence of the villages of Bourton and Cropredy, contrary to Cherwell's planning policy.
LPR-B-434	Joseph Woodward	LPR-A-175	Strongly object. Parts of Wardington have been designated a conservation area which is a status achieved through very careful maintenance of an area and its character. The concept of granting an area conservation status and then a few years later potentially approving the application for what could potentially be 400 new build houses immediately neighbouring the area is completely non sensical and would bring great concern to the integrity and motives of organisations such as yourselves granting such permissions. Given the overdevelopment at M40 J11 and continued applications for development, this land could be crucial for development of a potential future by-pass. Surely it makes more sense to develop other areas for consideration which have many of the amenities required for new housing than the areas around Wardington. Wardington has no schools, no shops, runs on oil, has 1 bus per hour. Development would be a blatant disregard for the character of the area which is carefully and meticulously maintained by the community, and a disregard for the environment. We cannot even prune a tree without council permission so the concept of the area being developed for new housing when alternative areas are to be considered should be a complete non starter.
LPR-B-434	Joseph Woodward	LPR-A-168	Strongly object. Commercial development would wipe out acres and acres of natural habitats and add hundreds of load bearing lorries to the A361 potentially causing all sorts of issues for surrounding villages. Development has already taken place with huge warehouses already being erected. Traffic congestion has already been impacted and the sites are not yet even functioning. To entertain the idea of additional warehousing being built would surely further add to the traffic congestion on the A361, a road which is certainly not designed to take heavy traffic. The A361 would surely see increased traffic all the way from the M1 with huge lorries potentially using the road as a cut through, an issue which would make the road much less safe and also have knock on detrimental effects to traffic levels and pollution in villages further along the A361.
LPR-B-434	Joseph Woodward	LPR-A-034	Strongly object. The A361 would undoubtedly see increased traffic all the way from the M1 with huge lorries potentially using the road as a cut through to the potential warehouse, an issue which would make the road much less safe and also have knock on detrimental effects to traffic levels and pollution in villages further along the A361. We are all trying to help nature and maintain the beauty of our countryside and are now faced with commercial developments which millions of natural habitats and add hundreds of load bearing lorries to the A361 potentially causing all sorts of issues for surrounding villages.
LPR-B-435	David and Susan Bradley	LPR-A-041	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. Additional development around Henge Close at LPR-A-041 would directly abut the Conservation Area and would therefore be detrimental to the setting of the listed buildings on Horn Hill Rd. Development would also be detrimental to the open nature of the Henge Close estate and to the green space and play area to the east. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.

LPR-B-435	David and Susan Bradley	LPR-A-086	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. The large-scale developments proposed for sites LPR-A-086 would utterly change the approach to the village and would create a jarring transition from agricultural land to modern, dense housing. if developed, double the size of West Adderbury overnight. Such large scale development is entirely inappropriate for a village the size of Adderbury and is far more suited to a large town or even a city. few facilities present in Adderbury would be completely swamped by a development of this scale, placing massive pressures on local schools and services. Precious public footpaths over these sites, which are in daily use by local residents, would be lost forever. Development of LPR-A-086 would lead to the residents of St Mary's Road being completely subsumed by new estates, fundamentally changing the character of the southern edge of West Adderbury. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.
LPR-B-435	David and Susan Bradley	LPR-A-146	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. Additional development around Henge Close at LPR-A-146 would directly abut the Conservation Area and would therefore be detrimental to the setting of the listed buildings on Horn Hill Rd. Development would also be detrimental to the open nature of the Henge Close estate and to the green space and play area to the east. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.
LPR-B-435	David and Susan Bradley	LPR-A-218	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.
LPR-B-435	David and Susan Bradley	LPR-A-258	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. The large-scale developments proposed for site LPR-A-258 would utterly change the approach to the village and would create a jarring transition from agricultural land to modern, dense housing. Development would lead to a substantial decrease in the green space between West Adderbury and Milton, increasing the risk of coalescence and impacting upon the character of both villages. A popular footpath would be lost, and irreversible damage would be caused to the amenity of the homes to the north of Adderbury Fields, and to the adjacent green space. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.

LPR-B-436	David and Jenny Yates	Option 1	2) 'New developments are built to high energy efficiency' - this statement is open to interpretation, it should demonstrate greater positivity, e.g. All new developments are built to energy efficient standards equal to Passivhaus Standard, that will not provide any additional strain on existing resources. 10) 'Our distinctive natural and built environment.....market towns define its distinctiveness' - this point should be split to create an extra distinct point. 11) 'Cherwell maintains its rural character where its landscapes, its vast range of natural and built heritage and its market towns define its distinctiveness, by limiting growth and loss of valued green space'.
LPR-B-436	David and Jenny Yates	Option 2	KO 9: Should Social be introduced after economic in the objective? This would support "as a place to live and work" KO 13: Re-word to - Protect existing biodiversity and maximise opportunities for biodiversity net gain and the enhancement of Cherwell's natural capital, and minimising pollution across the whole of Cherwell.
LPR-B-436	David and Jenny Yates	Option 3	At our main urban centres of Banbury, Bicester and Kidlington and at significant transport interchanges
LPR-B-436	David and Jenny Yates	Option 4	Provide a mixture of the above. Steps need to be put forward to secure the viability of the existing town centre, making it an attractive place to visit.
LPR-B-436	David and Jenny Yates	Question - Supporting Employment	Regarding the appearance and operation of Employment buildings policies could include the use of: green roofs and walls; appropriate tree planting; low level lighting, appropriate building height so that surroundings are not overshadowed; rainwater capture; grey water capture and reuse; exploit solar energy capture; minimise external energy pollution; minimise internal pollution; incorporate business signage on building fronts rather than standalone signs and flags; and, reduce unsightly fencing and use trees to form boundaries
LPR-B-436	David and Jenny Yates	Option 5	Flexibility should be available, but consideration needs to be given to resultant use of cars. At present the town centres are not laid out to encourage excessive traffic use. Town Centres present a complex problem that would benefit from in depth consideration To take account of current retail trends, viability of leisure business, the need to provide small retail units for entrepreneurial endeavours.
LPR-B-436	David and Jenny Yates	Option 6	Increase the percentage requirement of affordable housing required on housing developments of 10 or more units?. If Option 2 was to remain then a condition should be included that there would not be a further change to the set amounts once the build had commenced.
LPR-B-436	David and Jenny Yates	Option 7	There should be a flexible approach to provision of Social Housing dependant on location. An underlying factor should be for the Social Housing Provider to prioritise local residents.
LPR-B-436	David and Jenny Yates	Option 8	Introduce a policy which requires all new dwellings to meet the nationally described spacestandard and if so, should this be a minimum requirement?. The space standard being the minimum is questioned. Should Cherwell consider the number of new homes recently built that submitted Planning Applications for expansion, and perhaps set a Standard that goes beyond the minimum and is more in line with what is required.
LPR-B-436	David and Jenny Yates	Question - Separation Distances	It would be helpful for minimum distance separation standard to be set, as often subsequent expansion applications can infringe sufficient access to both privacy and natural light.
LPR-B-436	David and Jenny Yates	Option 9	Bloxham Parish Council Neighbourhood Plan BL8 addressed this topic, and this should be built on by Cherwell District Council in the Local Plan, especially bearing in mind the current enforcement and lack of rigor of Building Regulations.
LPR-B-436	David and Jenny Yates	Question - Travelling Communities	The county-wide GTAA should be used to inform the Plan.
LPR-B-436	David and Jenny Yates	Question - Housing Policies	It would be appropriate to have clear policies relating to sub-division of homes, infilling, use of modular buildings, conversion of retail to residential and agricultural buildings. Rather than rely on a Design code.
LPR-B-436	David and Jenny Yates	Option 10	Set sustainable design and construction standards for residential and non-residential development in Cherwell above those required by Central Government? Cherwell District Council should be aware of its scarcity of resources e.g., water, removal of sewage and electricity, therefore it should set its own target which should be above those required nationally. This would enable developers to be clear in what is expected from them.
LPR-B-436	David and Jenny Yates	Option 11	Identify and allocate specific sites for renewable energy generation and use a criteria-based policy to assess the appropriateness of proposals for renewable energy generation?. Should consideration be given to placing solar panels on large bodies of water e.g., Grimsbury Reservoir rather than the conflict of using agricultural land.
LPR-B-436	David and Jenny Yates	Question - Policies for Climate Change, Sustainable Construction & Renewable Energy	Thinking should not be limited to only providing domestic EV charging points. There needs to be proactive action for domestic energy production via a variety of means including consideration for Hydrogen provision. All new Developments would need to provide onsite energy to heat dwellings (possibly through Ground Source Heat pumps), all dwellings having integrated solar panels, management of sewage waste on site and utilise both rain water and grey water on site.
LPR-B-436	David and Jenny Yates	Question - Green Belt	Giving consideration to the difficulty in securing "Green Belt" status now and that the "Green Buffers" originally proposed by Cherwell were not given due respect by either developers or planning inspectors, if the Alternative is to put in place "Valued Landscapes" then the weight given to these would need to be established.
LPR-B-436	David and Jenny Yates	Option 12	All development should ultimately seek to reduce harmful impact to the site. If this is not possible then minimise impacts by design or effective mitigation and compensate on-site to provide equivalent or better, should be aimed for. When designing the site care should be given to the green infrastructure of native UK grown trees and shrubs, also avoiding excessive street lighting and where it is used appropriate cowls should be in place.
LPR-B-436	David and Jenny Yates	Option 13	Include a policy in the Plan requiring major development proposals to: a) be supported by a natural capital assessment to demonstrate the impact of the proposals and b) demonstrate environmental net gain;
LPR-B-436	David and Jenny Yates	Question - Biodiversity & the Natural Environment	Policies on Biodiversity and Natural Environment need to be robust and include reduction in light and Noise Pollution, improvement in Air Quality and improvement in Water Resource and Protection of valued Landscapes. There should be an emphasis on Native plants and trees that are UK grown. Provision for nesting sites for protected birds and bats known to frequent the District. Inclusion of native hedgerows that provid both shelter and feeding habitats. A policy on the percentage of the site that will need to accommodate tree and shrubs e.g. 30%. There needs to be "sign off" confirmation that all the required measures have be installed, as monitoring, certainly at present can not be carried out by the inhouse ecologist. The Policy for bird and bat boxes should also apply to any Applications made for existing buildings. For all sites integrated boxes should be recommended as standard. Use of up-to-date information on locations of species in Cherwell.

LPR-B-436	David and Jenny Yates	Option 14	All future developments should incorporate sufficient space to provide an informal open space complete with trees. This should allow for creative and imaginative play as well as informal gathering spaces for families (allowing for integration). Existing structured play facilities should be improved via Developer funding and ongoing maintenance of such also provided by Developer funding. The use of Management Companies for such areas should be discouraged by Cherwell, as often these arrangements are fraught with difficulties in getting any remedial work carried out. When Play areas that require contributions by residents of the development, this sometimes leads to conflict when others use the areas.
LPR-B-436	David and Jenny Yates	Option 15	When assessing strategic development sites, the provision of pitch provision on site should be considered as well as housing. If “hubs” are to be considered, then additional funding to provide community transportation to avoid unnecessary traffic on congested routes.
LPR-B-436	David and Jenny Yates	Question - Local Green Spaces	No Green Space provision was put forward as part of this consultation for Bloxham. Bloxham Parish Council did identify 5 such spaces in it’s NDP. Space No 5 shown on Map3 of the NDP is designated as Amenity space on the Miller Homes development on Milton Road. The land was meant to be transferred to the Parish Council. Without any consultation the Parish Council was informed by CDC that the land would be retained by the developer and managed by them possibly at a cost to residents of Weavers Field.
LPR-B-436	David and Jenny Yates	Question - Achieving Good Design & 'Beauty'	Good Design and Beauty are subjective. The CDC Design SPD whilst a reasonable base does not appear to have sufficient depth. It could be helpful for Planners to collaborate with areas that have produce NDPS to include either revisions or Policies relating to Good Design for their area.
LPR-B-436	David and Jenny Yates	Question - 20-Minute Neighbourhoods	Agree with 20-minute neighbourhood concept. Further extensions to village locations removes this aspect and introduces the use of vehicles.
LPR-B-436	David and Jenny Yates	Question - Transport & Connectivity	Congestion in rural areas appears to be increasing, despite the lack of road haulage drivers, the A361 through Bloxham appears to be as busy as ever. Any resultant congestion leads to an increase in Air pollution. As many of the main pavements are below standard requirements the air pollution is worse especially for children using these paths. An approach of diverting heavy goods vehicles away from rural roads and utilising the larger trunk routes and where possible using rail to transport goods.
LPR-B-436	David and Jenny Yates	Option 16	Possibly Provide a policy with the requirements expected from new development to provide digital connections and be designed to accommodate future digital infrastructure needs (future proofing) and provide a policy protecting existing telecommunications infrastructure.
LPR-B-436	David and Jenny Yates	Question - Transport Policies	Agree with the range of transport policies.
LPR-B-436	David and Jenny Yates	Option 17	Update the methodology to consider social and environmental benefits of schemes and the contributions they make to Climate Action, Healthy Place Shaping, and a Sustainable Economy?. Continue to prepare the IDP by place or look at areas by catchment and how accessible they are should be actioned.
LPR-B-436	David and Jenny Yates	Question - Delivering Infrastructure	Greater weight needs to be given to comments by Primary Care Teams for Health. The Oxfordshire Clinical Commissioning Group have reported Practices experiencing significant growth in recent years. Many GP Practices are grouping together and working closely with Community Health and Social Care Agencies. It may be that eventually space will become an issue.
LPR-B-436	David and Jenny Yates	Option 18	Limit development at Banbury to protect its landscape setting and maintain separation between the town and surrounding villages
LPR-B-436	David and Jenny Yates	Option 20	consider steps to remove certain development rights within the town centre to prevent the conversion of shops and restaurants to homes without the need for planning permission?
LPR-B-436	David and Jenny Yates	Option 30	Work with Local Communities and assess Housing Allocations in NDPs.
LPR-B-436	David and Jenny Yates	Option 31	Use a combination of the above. Work with Communities and use NDPs. Assess the availability of the infrastructure to support additional housing.
LPR-B-436	David and Jenny Yates	Option 32	Work with local communities and review villages to include the so-called ‘satellite’ villages that depend on the main village facilities. Consideration should also be given to establishing Settlement Boundaries in conjunction with the Parish Councils.
LPR-B-436	David and Jenny Yates	Option 33	Apply criteria-based policies to assess development proposals. Support should be given to the Rural Economy especially in encouraging agriculture and farming. When farmland is put forward for development weight should be given regards its value a farmland and could tenant farmers be encouraged with support of CDC.
LPR-B-436	David and Jenny Yates	Option 34	Retain the current approach of seeking to conserve and enhance the countryside and landscape character of the whole district and define valued landscapes/landscape features in the district which would be the subject of additional policy guidance.
LPR-B-436	David and Jenny Yates	Question - Neighbourhood Planning	Provide ongoing support to review and revise NDPs
LPR-B-436	David and Jenny Yates	LPR-A-049	This site borders the Slade Nature Reserve and the Country Park with attenuation pond established as part of the Woodlands development. Consideration should be given to the provision of Native trees (UK grown) on at least 30% of the site that borders the Slade Nature Reserve (a long-established woodland). This would be in line with the England Tree Action Plan. The site proposes an extension to the settlement boundary and moves development outside the 20-minute neighbourhood ideal. Access would be from a narrow rural road just above a junction adjacent to a Primary School. The issue of wastewater removal at present means most new development sites have required “pumping stations”. This together with the increased need for Electric vehicle charging points could place a burden on the present fragile supply. Their impact on the connecting roads and current infrastructure provision such as Doctors, Dentists and Schools should also be part of the criteria. Retention of existing hedgerows, that provide both feeding and shelter habitat that is not easily replicated once removed.

LPR-B-436	David and Jenny Yates	LPR-A-052	This site would surround the village Primary School removing the current green outlook especially from the school playing fields, turning Bloxham Primary School into an urban school. Consideration should be given that at least 30% of the site, that borders the Primary School and houses, these should be allocated to the planting of Native UK grown trees. The England Tree Action Plan should be considered. The issue of wastewater removal at present means most new development sites have required "pumping stations". This together with the increased need for Electric vehicle charging points could place a burden on the present fragile supply. Their impact on the connecting roads and current infrastructure provision such as Doctors, Dentists and Schools should also be part of the criteria. Retention of existing hedgerows, that provide both feeding and shelter habitat that is not easily replicated once removed.
LPR-B-436	David and Jenny Yates	LPR-A-070	The access to this site would be from a rural Road that already has a compromised junction with the A361. The England Tree Action Plan should be considered. The issue of wastewater removal at present means most new development sites have required "pumping stations". This together with the increased need for Electric vehicle charging points could place a burden on the present fragile supply. Their impact on the connecting roads and current infrastructure provision such as Doctors, Dentists and Schools should also be part of the criteria. Retention of existing hedgerows, that provide both feeding and shelter habitat that is not easily replicated once removed.
LPR-B-436	David and Jenny Yates	LPR-A-075	The access to this site appears to be from the A361 at a known accident hotspot. The England Tree Action Plan should be considered. The issue of wastewater removal at present means most new development sites have required "pumping stations". This together with the increased need for Electric vehicle charging points could place a burden on the present fragile supply. Their impact on the connecting roads and current infrastructure provision such as Doctors, Dentists and Schools should also be part of the criteria. Retention of existing hedgerows, that provide both feeding and shelter habitat that is not easily replicated once removed.
LPR-B-436	David and Jenny Yates	LPR-A-094	This site would border The Slade Nature Reserve and as such consideration should be given to at least 30% of the area adjacent to the Slade being allocated to Native UK grown established trees. The England Tree Action Plan should be considered. The issue of wastewater removal at present means most new development sites have required "pumping stations". This together with the increased need for Electric vehicle charging points could place a burden on the present fragile supply. Their impact on the connecting roads and current infrastructure provision such as Doctors, Dentists and Schools should also be part of the criteria. Retention of existing hedgerows, that provide both feeding and shelter habitat that is not easily replicated once removed.
LPR-B-436	David and Jenny Yates	LPR-A-100	This development would compromise several Public Rights of Way, by altering their current rural open aspect to one enclosed by housing. The England Tree Action Plan should be considered. The issue of wastewater removal at present means most new development sites have required "pumping stations". This together with the increased need for Electric vehicle charging points could place a burden on the present fragile supply. Their impact on the connecting roads and current infrastructure provision such as Doctors, Dentists and Schools should also be part of the criteria. Retention of existing hedgerows, that provide both feeding and shelter habitat that is not easily replicated once removed.
LPR-B-436	David and Jenny Yates	LPR-A-115	This site is contra to Policies BL2 BL9 BL11a of the Bloxham Neighbourhood Development Plan. The England Tree Action Plan should be considered. The issue of wastewater removal at present means most new development sites have required "pumping stations". This together with the increased need for Electric vehicle charging points could place a burden on the present fragile supply. Their impact on the connecting roads and current infrastructure provision such as Doctors, Dentists and Schools should also be part of the criteria. Retention of existing hedgerows, that provide both feeding and shelter habitat that is not easily replicated once removed.
LPR-B-436	David and Jenny Yates	LPR-A-151	This site would require access onto Bloxham Grove Road, opposite the Warriner Secondary School, and then onto the A361 at an already compromised junction. The England Tree Action Plan should be considered. The issue of wastewater removal at present means most new development sites have required "pumping stations". This together with the increased need for Electric vehicle charging points could place a burden on the present fragile supply. Their impact on the connecting roads and current infrastructure provision such as Doctors, Dentists and Schools should also be part of the criteria. Retention of existing hedgerows, that provide both feeding and shelter habitat that is not easily replicated once removed.
LPR-B-437	Autumn Edwards Hayter	LPR-A-091	Strongly object. The highlighted land is inappropriate for development and conflicts with the National Planning Policy framework and the current Adopted Local Plan. The land is currently accessed via Church street and Austin way. Both of these roads offer restrictions to two way traffic due to characteristically narrow roads, and properties without driveways. There is no scope to enhance these roads to a residual level which would sustain increased traffic volume, thus conflicting with NPPF 9, point 110 (D). Should access be considered through Cotefield way, portions of woodland would require removal, which would conflict with NPPF 15. Access to the site conflicts with NPPF 2, point 8. NPPF9, point 105 and 106. NPPF 11 points 120, 124 and 125 highlights the importance of undeveloped land, and improving access to the countryside. This land is the last remaining, undeveloped corner of the village. Longford park to the East, Banbury to the North and ongoing development West of White Post Road, the villages rural aesthetic, and existing communities enjoyment of the countryside will be detrimentally impacted. Properties upon Sefton place, Wards Crescent and Deers farm with southern facing gardens which currently overlook the countryside will be detrimentally impacted by any proposed development. This would conflict with NPPF11 point 124(D). NPPF15 point 174 highlights the importance of protecting an enhancing valued landscapes, and recognising intrinsic value of the countryside. To develop this land, as the final undeveloped corner of the village would conflict with these points. The proposed sites will only sustain a limited volume of properties. This conflicts with NPPF 11 point 125 stating policies should 'avoid homes being built in low densities', which equally conflicts with CDC policy BSC2. The proposal offers no consideration to the existing communities within the village. The site offers limited scope to contribute to the districts strategic housing targets yet offers unacceptable conflict with existing communities.

LPR-B-438	West Adderbury Residents Association	LPR-A-041	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. Additional development around Henge Close at LPR-A-041 would directly abut the Conservation Area and would therefore be detrimental to the setting of the listed buildings on Horn Hill Rd. Development would also be detrimental to the open nature of the Henge Close estate and to the green space and play area to the east. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.
LPR-B-438	West Adderbury Residents Association	LPR-A-086	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. The large-scale developments proposed for sites LPR-A-086 would utterly change the approach to the village and would create a jarring transition from agricultural land to modern, dense housing. if developed, double the size of West Adderbury overnight. Such large scale development is entirely inappropriate for a village the size of Adderbury and is far more suited to a large town or even a city. few facilities present in Adderbury would be completely swamped by a development of this scale, placing massive pressures on local schools and services. Precious public footpaths over these sites, which are in daily use by local residents, would be lost forever. Development of LPR-A-086 would lead to the residents of St Mary's Road being completely subsumed by new estates, fundamentally changing the character of the southern edge of West Adderbury. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.
LPR-B-438	West Adderbury Residents Association	LPR-A-146	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. Additional development around Henge Close at LPR-A-146 would directly abut the Conservation Area and would therefore be detrimental to the setting of the listed buildings on Horn Hill Rd. Development would also be detrimental to the open nature of the Henge Close estate and to the green space and play area to the east. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.
LPR-B-438	West Adderbury Residents Association	LPR-A-218	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.

LPR-B-438	West Adderbury Residents Association	LPR-A-258	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. The large-scale developments proposed for site LPR-A-258 would utterly change the approach to the village and would create a jarring transition from agricultural land to modern, dense housing. Development would lead to a substantial decrease in the green space between West Adderbury and Milton, increasing the risk of coalescence and impacting upon the character of both villages. A popular footpath would be lost, and irreversible damage would be caused to the amenity of the homes to the north of Adderbury Fields, and to the adjacent green space. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.
LPR-B-439	Robert James	LPR-A-041	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. In addition to this the extra traffic would be untenable with Oxford Road already at a stand still at peak times. Not only would this become worse with the development but it would severely increase traffic throughout the village.
LPR-B-439	Robert James	LPR-A-086	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. In addition to this the extra traffic would be untenable with Oxford Road already at a stand still at peak times. Not only would this become worse with the development but it would severely increase traffic throughout the village.
LPR-B-439	Robert James	LPR-A-146	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. In addition to this the extra traffic would be untenable with Oxford Road already at a stand still at peak times. Not only would this become worse with the development but it would severely increase traffic throughout the village.
LPR-B-439	Robert James	LPR-A-218	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. In addition to this the extra traffic would be untenable with Oxford Road already at a stand still at peak times. Not only would this become worse with the development but it would severely increase traffic throughout the village.
LPR-B-439	Robert James	LPR-A-258	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. In addition to this the extra traffic would be untenable with Oxford Road already at a stand still at peak times. Not only would this become worse with the development but it would severely increase traffic throughout the village.
LPR-B-440	Trevor Easterbrook	LPR-A-041	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. LPR-B-440	Trevor Easterbrook	LPR-A-218	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.
LPR-B-440	Trevor Easterbrook	LPR-A-258	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. The large-scale developments proposed for site LPR-A-258 would utterly change the approach to the village and would create a jarring transition from agricultural land to modern, dense housing. Development would lead to a substantial decrease in the green space between West Adderbury and Milton, increasing the risk of coalescence and impacting upon the character of both villages. A popular footpath would be lost, and irreversible damage would be caused to the amenity of the homes to the north of Adderbury Fields, and to the adjacent green space. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.

LPR-B-441	Jason and Charlotte Davies	LPR-A-045	Strongly object. Sibford Ferris already has proposals for 25 new homes. Future housing should be distributed to more sustainable locations with suitable public transport, facilities, services and employment. These future development undermines the theme of the Oxford 2050 plan. Sibford Ferris currently has issues with transport which would become worse with these developments. There is a very limited bus service. These developments would increase car ownership, as this is the only realistic mode of transport, as the nearest town with all the necessary facilities required to live in Sibford Ferris is 7.5 miles away. There are a significant number of cars parked on Main Street with limited pavements. We have difficulty walking safely to the local primary school due to the number of cars, narrow roads, lack of pavements on Main Street and with even more houses planned, driving to school will be the safest and only option hence increasing even more traffic at rush hours. Houses would be built using oil heating, which when burnt emits co2 and would require more tankers in Sibford Ferris to deliver this oil. There would be a further negative visual impact on the rural character of the village. Development on high quality agricultural land versus urban development The government has recently announced a change in policy were money has now been directed to encourage brownfield land to be targeted for new homes. This plan should review this change in policy and pursue more brownfield options for housing rather than use high quality agricultural land. Main street in Sibford Ferris is the main bottle neck for transport and cannot be widened or even have the possibility of adding new footpaths. The only facilities are a local shop with no parking located on Main Street. This bottleneck would only increase with more cars from these new developments.
LPR-B-441	Jason and Charlotte Davies	LPR-A-139	Strongly object. Sibford Ferris already has proposals for 25 new homes. Future housing should be distributed to more sustainable locations with suitable public transport, facilities, services and employment. The only facilities are a local shop with no parking located on Main Street. This bottleneck would only increase with more cars from these new developments. LPR-A-068 is disproportionate to the size of the village. It is used as a popular bridal walkway in beautiful countryside and these developments should have no impact on the local environment.
LPR-B-442	Suzanne Nixon-Eckersall	LPR-A-152	Object. The agricultural land has been encroached upon by more and more housing developments, each time with the assurance from Cherwell District Council that this would be the last one. There is a fairly defined line between the latest developments and Hanwell. It makes no sense for ribbon development to straggle on further along the Warwick Road. The increased traffic flow through the narrow and bendy main street of the village is dangerous and increasing air pollution. With more housing in the nearby vicinity, this would escalate by an alarming rate. Both old and more recently planted trees would have to be felled and the loss of habitat would spell the death knell for wildlife in the area. This will do nothing for the efforts to reduce climate change and global warming There would inevitably be much more light pollution. With fields built on/paved over, where is all the surplus water going to go? Down the slope to Hanwell? The facilities eg schooling, doctors' surgeries, shopping etc for an ever-increasing population are simply non-existent and would put a great strain on those of other near-by villages. To ruin this attractive and much-admired village would be a tragedy. There must be other sites within the environs of Banbury itself with a more suitable infrastructure which would be more practical and suitable.

LPR-B-443	Collete Heuwen	LPR-A-004	Object. The infrastructure in terms of roads, access, water, drainage and sewage is extremely limited. The Epwell Road site is unsuitable, the junction of West Street/High Street is already dangerous with the lack of visibility, a daily issue for motorists, cyclists, pedestrians and horse riders. Any additional development would compound the situation. The road network could not cope with increased traffic, the majority of which would need to travel along the High Street where there is ever increasing difficulty in passing, leading to the single track pinch point at Banbury Hill. The single track road at Lower End/Plot Road again is not suitable for increased traffic. The village is not suitable for construction traffic, major issues around access, parking and the general flow of traffic occur when small infill developments, property renovation/general works are carried out. The lack of suitable access has previously led to further quarrying in the area to be refused. The sewage system in the village struggles to cope, and given the nature of the landscape, ground conditions would make the upgrading of the system difficult and expensive. There have been issues with raw sewage overflowing into Sor Brook in the village. The building on green sites would increase the probability of flooding. The development of Thistle Hill would severely impact on the flood defence in the area, and takes away the vehicular access to the allotments. The electrical supply to the village only supports the village as it stands. Shutford has no bus, no school, we are several miles from doctors and dentist surgeries and every additional home in the village would increase traffic to travel to these venues, with doctors and dentists already over stretched. We have less facilities in the village. These facilities bring focus to the village and are an integral part of the rural village life the residents of Shutford work together to build a strong sense of community. The community spirit was tested and survived the COVID 19 pandemic , with everyone playing their part to support the life and soul of the village that would be diluted and lost with major developments. The village simply cannot cope with major developments , the green belt needs to be respected and the environment preserved and the bio diversity in the area respected.

LPR-B-443	Collete Heuwen	LPR-A-171	Object. The infrastructure in terms of roads, access, water, drainage and sewage is extremely limited. The Epwell Road site is unsuitable, the junction of West Street/High Street is already dangerous with the lack of visibility, a daily issue for motorists, cyclists, pedestrians and horse riders. Any additional development would compound the situation. The road network could not cope with increased traffic, the majority of which would need to travel along the High Street where there is ever increasing difficulty in passing, leading to the single track pinch point at Banbury Hill. The village simply cannot cope with major developments , the green belt needs to be respected and the environment preserved and the bio diversity in the area respected.
LPR-B-444	Paul Heuwen	LPR-A-004	This proposed site if developed would be a crime, this area is not only an area of natural beauty and a haven of wildlife but also acts as a natural defence against flooding of the Lower End area. Thistle Hill is part of the local allotment community, it may not look like a traditional allotment but is in fact supported by the local community as a valued part of the village as garden allotments, and has some of the best blackberries in the area. The road infrastructure could not take the additional traffic that the development would bring as all roads are basically single track and to increase traffic would be a danger to the local community, this along with the fact that the drainage system and energy supply to Shutford would need to be significantly improved makes any development in Shutford unfeasible and unacceptable. Shutford does not have schools, doctors, shops or other amenities, and does not need or want them, any new development would mean an unacceptable increase in vehicle movement in the surrounding area on roads that were not built for this kind of volume. Shutford is a beautiful quite village and it should be allowed to stay that way.
LPR-B-444	Paul Heuwen	LPR-A-171	This land is totally inappropriate for development as the access to this land would endanger other road users and pedestrians alike due to poor visibility when entering or exiting the land, traffic from the proposed site would be entering an already overloaded and dangerous roadway, any additional traffic especially traffic heading to Banbury traveling along the High Street, which is basically a single track road with several pinch points that cannot be made wider without knocking down current houses. This makes the land proposed totally unsuitable for development, 99% of traffic would go though the village as its the only way to get to major roads leading to local towns, this route would be used by the increased level of delivery vehicles servicing any new development on this site. Other considerations that should be taken into account are the local drainage system and electricity supply that at best only just supports the village of Shutford in its current state, the disruption and damage to the area that expanding the sewer system and energy supply that would need to be done to support any new development would be unacceptable. Shutford does not need or want further developments as they are not beneficial to the local community in any way shape or form.
LPR-B-445	Paul and Michelle Street	LPR-A-041	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. Additional development around Henge Close at LPR-A-041 would directly abut the Conservation Area and would therefore be detrimental to the setting of the listed buildings on Horn Hill Rd. Development would also be detrimental to the open nature of the Henge Close estate and to the green space and play area to the east. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.

LPR-B-445	Paul and Michelle Street	LPR-A-086	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. The large-scale developments proposed for sites LPR-A-086 would utterly change the approach to the village and would create a jarring transition from agricultural land to modern, dense housing. if developed, double the size of West Adderbury overnight. Such large scale development is entirely inappropriate for a village the size of Adderbury and is far more suited to a large town or even a city. few facilities present in Adderbury would be completely swamped by a development of this scale, placing massive pressures on local schools and services. Precious public footpaths over these sites, which are in daily use by local residents, would be lost forever. Development of LPR-A-086 would lead to the residents of St Mary's Road being completely subsumed by new estates, fundamentally changing the character of the southern edge of West Adderbury. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.
LPR-B-445	Paul and Michelle Street	LPR-A-146	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. LPR-B-446	Richard and Karen Irons	LPR-A-107	Object. Development would double the number of houses in this historic rural area. Dramatic increase in the number of motor vehicles using the narrow and unsafe roads, most do not have footpaths and already have issues with speeding and HGVs, which have created bad road surface conditions, and would make those conditions even worse. The increase in motor vehicles would increase pollution and contribute more to global warming, as most motorists would have to commute to work. The roads are unsafe for cyclists and pedestrians. There is inadequate sewage treatment for the village as it stands, another approximately 700 to 1000 residents would lead to treatment failure. The water supply to the village is only just adequate at the moment, an increase of this nature would lead to issues. Surface water drainage is a big problem, with my road frequently turning into a river, as current drainage is inadequate and flooding often occurs, less fields with more tarmac will result in significantly greater flooding issues. There will be an inevitable installation of street lighting, we are a dark sky village, this will be destroyed by a development. The local school is only adequate for the population, this would mean new child residents would have to be driven to other schools, again increasing carbon output. This development would mean the loss of the good agricultural land and significant damage to mature trees, old hedgerows and the water table.
LPR-B-447	Stuart Green	LPR-A-175	Object. Fundamental change to the character of a conservation village - every village in the area is being systematically destroyed and some villages need to be at least kept with some village character, unless CDC wish to change forever the feel of villages within Cherwell Valley Out of scale to the size of the village - CDC should consider the damage already being seen in Wardington and the surrounding areas/villages by the growth of the area without proper access, facilities, roads and safety. Environmental - COP26 needs to start somewhere, and CDC needs to present plans that are required, needed and supported by their community given funding for them comes from the community. This level of expansion and housing can easily be consumed by other more relevant areas closer or within the town areas within CDC or within other villages that have facilities and infrastructure to support. Not sustainable because of needs for services; schools; sewerage; shop; doctors; emergency service support etc - along with fundamental infrastructure not being available in Wardington, again coming back to effect to environment for every new household built needing to use cars and other infrastructure to get basic needs from external to the village and if located and invested in the village the additional investment that would require. The designated land would be needed for any future by-pass; traffic will increase with huge new developments proposed to the A361 and M40 access areas. HS2 traffic/diversions etc has already destroyed the road in the village many times and is constantly needing attention. The designated land also forms part of the greenspace, open access and public footpaths which are well used.
LPR-B-448	Aleksandra Obiedzinska	LPR-A-175	Object. Fundamental change to the character of a conservation village - every village in the area is being systematically destroyed and some villages need to be at least kept with some village character, unless CDC wish to change forever the feel of villages within Cherwell Valley Out of scale to the size of the village - CDC should consider the damage already being seen in Wardington and the surrounding areas/villages by the growth of the area without proper access, facilities, roads and safety. LPR-B-449	Kirsten and Tom Hall	Option 2	KO13 is an excellent objective, but how can this really be achieved with such huge areas of green belt being covered with housing developments?
LPR-B-449	Kirsten and Tom Hall	Option 3	At significant transport interchanges and Mostly on previously developed land, including in less sustainable locations.
LPR-B-449	Kirsten and Tom Hall	Kidlington	Object. Proposed development threatens the village's most valuable amenity and identity: its green setting, and the separation from other village identities. In the latest round of developments, Kidlington has already sacrificed a lot of this. While it's good that the community woods next to the Cherwell are to be preserved in the plan, one wonders if the willow warblers, chiff chaffs, the roe deer, the barn owls and kingfishers will stay if there is human habitation so near, and if the woods become more like a park. Certainly, where feasible, routes for cyclists, through or round fields such as these could be created to create green transport infrastructure while promoting healthy activity and enjoyment of the biodiversity. It's great that the canal towpaths have been and are being developed to promote cycling. Routes to prioritise for promotion of cycling to reduce car dependency: We are particularly conscious that there is not a safe cycle route to Gosford School, or from Kidlington to Woodstock/Marlborough School. This means our young people's first experiences of cycling alone are on dangerous roads/include dangerous junctions. We would like to put this land between the Moors and the Cherwell forward as a LGS due to its richness of wildlife and recreational value for walkers (connecting St Mary's fields with Thrupp with a varied network of paths). We are unable to locate the form for proposing this formally. Neither can we find any LGSs in Kidlington listed in Appendix 1.
LPR-B-449	Kirsten and Tom Hall	Option 13	Not require major development proposals to be supported by a natural capital assessment.
LPR-B-449	Kirsten and Tom Hall	Option 26	Accommodate employment land needs outside the existing Green Belt boundaries?
LPR-B-449	Kirsten and Tom Hall	Option 28	Explore the potential for creating a network of accessible, and wherever possible, linked green spaces around Kidlington.

LPR-B-449	Kirsten and Tom Hall	Question - Kidlington Sports, Recreation and Community Needs	Protect and enhance the existing ones.
LPR-B-449	Kirsten and Tom Hall	Question - Green Belt	All the original reasons for protecting the Green Belt are not only still valid, but there are many more benefits than were known about when the land was first designated as such. It tackles air pollution, slows the impacts of climate change, and preserves biodiversity. We need it now all the more - both to protect what biodiversity we still have and to connect Oxford city residents with countryside (with wellbeing and awareness benefits). The most weighty 'exceptional circumstances' impacting the need for the green belt are these arguments for keeping- and enhancing it.
LPR-B-450	Ian Hall	LPR-A-041	Strongly object. Lack of local facilities and unsustainable development for instance schools, doctors, dentists, local shops, post offices do not exist. In local villages existing dentists and doctors are already oversubscribed to existing residents who cannot access them. Damaging the environment and increasing global warming. All new residents would have to drive to work or any local convenience further damaging the environment. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. The large-scale developments proposed for sites LPR-A-086 would utterly change the approach to the village and would create a jarring transition from agricultural land to modern, dense housing. if developed, double the size of West Adderbury overnight. Such large scale development is entirely inappropriate for a village the size of Adderbury and is far more suited to a large town or even a city. few facilities present in Adderbury would be completely swamped by a development of this scale, placing massive pressures on local schools and services. Precious public footpaths over these sites, which are in daily use by local residents, would be lost forever. Development of LPR-A-086 would lead to the residents of St Mary's Road being completely subsumed by new estates, fundamentally changing the character of the southern edge of West Adderbury. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.
LPR-B-450	Ian Hall	LPR-A-086	Strongly object. Lack of local facilities and unsustainable development for instance schools, doctors, dentists, local shops, post offices do not exist. In local villages existing dentists and doctors are already oversubscribed to existing residents who cannot access them. Damaging the environment and increasing global warming. Precious public footpaths over these sites, which are in daily use by local residents, would be lost forever. Development of LPR-A-086 would lead to the residents of St Mary's Road being completely subsumed by new estates, fundamentally changing the character of the southern edge of West Adderbury. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.

LPR-B-451	Keith Shackleton	LPR-A-104	Objection. Concerns that site is totally unsuitable for development. Access to the site via Chapel Close is impracticable as the road is very narrow in places. This issue is exacerbated by fact some properties fronting road have no off street parking and so have to park on road. There is no footpath on either side of road and if the site were to be developed it would not be possible to construct footpath as this would reduce width of road further. The south end of Chapel Close is a popular bridleway that is used as part of Deddington Circular Walk and those using route would be put at risk by increased traffic in Chapel Close. Access into field from the end of Chapel Close could only be achieved by removing the village green, which is one of few green spaces within the village, as well as removal of a mature oak tree. Stormwater drainage on the road through village, the B4031, and along Chapel Close does not function properly, which means some sewage has to be taken away by tanker. Chapel close would not be able to accommodate vehicle movements of tanker and those from development. If the field was developed at full density, this would result in approximately 75% increase in the number of dwellings in the village, which would totally change character of the village. There are no amenities apart from a pub and additional housing would result in occupants travelling to Deddington to access essential services, which would increase traffic in this village and put pressure on parking. The site is currently a wildlife haven, with woodlands surrounding and, as well as many bird species, mammals such as deer and foxes are regularly seen. Recent infill development has taken place in village and there appears to be little space left for further development.
LPR-B-452	Richard Davis	Adderbury	Objection to site submissions for Adderbury. The scale of proposals is vast and totally disproportionate to the size of the village and whilst housing growth is planned there are no plans to increase amenities, of which currently there is only one small shop and pubs. This will force residents to drive out the village to access services and leisure activities. Traffic is already bad on Oxford road through the village and an development will make this worse. There is also limited parking in the village, an issue which will be exacerbated by further development and will cause distress to the older generation. Lastly, how do these development plans fit in with the governments targets to reduce carbon emission and protect biodiversity? Development of this scale will cause huge carbon emissions and will deplete forests for timber. Land that was use for crops and wildlife will become concrete.
LPR-B-453	Hanna Loof	Hanwell	Object. Hanwell is a small village with rich history and wildlife can be spotted on daily basis around the village. Its close location to Banbury is a bonus, but it was previously made clear that the village was never at risk of being swallowed up by Banbury. Residents are proud of the small community and feel strongly about keeping it that way. The proposed planning applications risk losing the community that has been created and have the potential to destroy the village.
LPR-B-454	Steve Cobb	Hanwell	Object. Understands the need for more housing in England and within Cherwell District, but feels expansion of housing is not being adequately supported with investment in local infrastructure and services. Particular areas of concern in Banbury are: access to M40, access to Banbury railway station, reduction in services at Horton hospital. Development to the north of the town would be a significant breach of Cherwell DC's own goals of preserving rural life and beauty.
LPR-B-454	Steve Cobb	LPR-A-152	This development would further erode the current separation between Banbury and Hanwell. The existing committed/active developments lie to the south of 2 complete agricultural fields both of which have large woodland margins that protect the views of and from Hanwell which is a Council declared/ mandated Conservation area. Development of this site would weaken the village character of Hanwell and would increase traffic using Hanwell Main Street.
LPR-B-454	Steve Cobb	LPR-A-214	This development would further erode the current separation between Banbury and Hanwell. The existing committed/active developments lie to the south of 2 complete agricultural fields both of which have large woodland margins that protect the views of and from Hanwell which is a Council declared/ mandated Conservation area. Development of this site would weaken the village character of Hanwell and would increase traffic using Hanwell Main Street.
LPR-B-455	Dr Judith Webb	Question - Policies for Climate Change, Sustainable Construction & Renewable Energy	We are in a climate crisis/climate breakdown and peat is an important aspect of Natural Capital resource in the whole county and Cherwell needs to consider what peat resource is within the District (respondent has included table at end of submission with table of District's peat resources). There is a suite of very important SAC/SSSI & LWS wetland alkaline spring fens within Oxon which may sit upon accumulated reserves of metres of peat. These are protected for their biodiversity, but it should be emphasised that: I suspect there is currently no policy to protect the green rainwater catchments of important SSSI and LWS spring fens (and so far undesignated sites) from damaging urban development. These sites have important reserves of peat, which are a huge county carbon store which must be kept wet and protected from drying and consequent oxidation. The resource area of peatland within the District is not well-known or mapped and the carbon tonnage in these wetlands, as depths of peat deposits have not been investigated (estimate for county peatland is currently 155.71ha, probably an underestimate). Restoration of peatlands in the county may not be well recognised in plan policies. I work within Freshwater Habitats Trust who are heavily involved in important work in 5 key fen sites in county, see: <a href="https://freshwaterhabitats.org.uk/projects/oxfordshire-fens-project/">https://freshwaterhabitats.org.uk/projects/oxfordshire-fens-project/</a> . The FHT Saving Oxford's Wetland Wildlife Project important work involves re-wetting drained peat in fens to save species and protect peat carbon store from oxidation and to restart peat accumulation. Should also be recognised that important carbon stores are present in soils of flood plain meadows and other types on ancient meadows. We should invest in carbon that is already in the ground and have policies to protect our Oxon peat store and get peat accumulating again. This would be much more effective than policies that promote vast amounts of tree planting to remove CO2 from the air. I am willing to give further advice on this - please just contact me, I already work with Oxford City Council on this important issue. I'm also involved in the Nature Recovery Network Strategy and mapping of networks being carried out by TVERC.

LPR-B-456	Dr Grant James Coleman	LPR-A-175	Strong objection. The village is small and the development proposal on 15.4ha is likely to almost double the existing number of properties within the parish. The existing amenities likely do not have the capacity to support this. There are no schools, shops or medical facilities in the village. There is no gas supply to the village and I assume development would require significant investment in water, electrical and sewage infrastructure. The narrow section of the A361 running through the village is dangerous. Doubling the local traffic on this and the small roads of the village itself would be perilous. Given massive increase in industrial and domestic developments on A361, both closer to Banbury and towards Daventry, combined with ongoing HS2 works, traffic volume has and will continue to increase. This has resulted in bypass of almost all villages along road from here to Brackley, with exception of Wardington. Parcel of land to the north of village in proposal would be better placed for this use. The village largely lies within a conservation area and the construction of hundreds of homes are likely to be densely built and would display architectural blandness and uniformity that is familiar in modern developments.
LPR-B-457	Kevin Foley	LPR-A-091	Object. There have been a number of new housing sites in the Bodicote area in recent years and further development in this area is not needed as the traffic levels in the village will become unmanageable.
LPR-B-458	Mrs E J R Aitken	Hanwell	Object. Hanwell is a quiet village with little pollution and traffic. There is a strong sense of community in Hanwell, which was brought to the fore with Covid and the national lockdowns. Villagers were promised that Banbury would not come any closer than Dukes Meadow Drive, but since there has been a deluge of houses built past Dukes Meadow. The promise then was that development would remain at least two fields away. The plan is for Drayton parish to effectively come up to our village conservation boundary and bring us into the town. We don't want to be another Bodicote. Whilst it is can be applauded that the council extended the shopping centre in Banbury, due to Covid, people's shopping habits have changed. It is unlikely Banbury will be able to cope with the level of development proposed and the increase in traffic levels is having a profound impact on the town. The village of Hanwell is historic, with a 12th century church and castle, a community observatory (which is being impacted by light pollution), a range of wildlife lives around the village. This will all be destroyed or moved with the encroachment of Banbury.
LPR-B-459	Cathherine White	LPR-A-065	Object. The village is not big enough to support such development and has no services or amenities. There is no public transport linking to either Deddington or larger towns of Banbury, Chipping Norton or Oxford. The road infrastructure is not suitable for increased traffic flow from further development. New development access onto the B4031 on the western side of village would be highly dangerous and cause further traffic issues. The village has no mains gas, poor water pressure, electricity supply provisions are not sufficient/reliable. The local primary school at Deddington is already oversubscribed and the local GP surgery at Deddington is already over stretched. Local hospital provision is not sufficient to support further developments. There are also an alarming number of sites being put forward around Deddington, but the village is not able to support these developments. Future development should not be in isolated rural areas and should instead be sited close to existing amenities and services. Satellite villages, which are significantly smaller, that form part of a wider Parish (such as Hempton & Clifton which sit in the Parish of Deddington) should not be covered by the same policies as those that cover the larger village within the Parish, as they do not have the same amenities, transport links etc. A Parish approach is not appropriate, instead a settlement by settlement basis should be adopted.
LPR-B-459	Cathherine White	LPR-A-148	Object. The village is not big enough to support such development and has no services or amenities. There is no public transport linking to either Deddington or larger towns of Banbury, Chipping Norton or Oxford. The road infrastructure is not suitable for increased traffic flow from further development. New development access onto the B4031 on the western side of village would be highly dangerous and cause further traffic issues. The village has no mains gas, poor water pressure, electricity supply provisions are not sufficient/reliable. The local primary school at Deddington is already oversubscribed and the local GP surgery at Deddington is already over stretched. Local hospital provision is not sufficient to support further developments. There are also an alarming number of sites being put forward around Deddington, but the village is not able to support these developments. Future development should not be in isolated rural areas and should instead be sited close to existing amenities and services. Satellite villages, which are significantly smaller, that form part of a wider Parish (such as Hempton & Clifton which sit in the Parish of Deddington) should not be covered by the same policies as those that cover the larger village within the Parish, as they do not have the same amenities, transport links etc. A Parish approach is not appropriate, instead a settlement by settlement basis should be adopted.
LPR-B-460	Avril Stretton	Hanwell	Object. It is a lovely village with thatched cottages and a historical church. Any developments would have a huge impact on the surrounding area. There has long been a problem with traffic as people use the village as a rat run, and the thought of more cars is ridiculous. It was said that the boundary of Banbury was not to extend beyond Dukes Meadow Drive but this has been ignored. Hanwell is an old village and should stay as a village surrounded by fields and trees.
LPR-B-461	Pamela Ascott	LPR-A-107	Objection to 360 homes on 30 acre plot on Pound Lane. The population of the village is just over 530 and a potential 1000 more would change the village forever. The Prime Minister has said that there will be no more building of homes on Green Belt and that there is enough brownfield land to be developed in towns cities. There is already enough additional housing being built in Sibford against the wishes of residents. The fields in consideration are next to the Ironstone Downland AONB, which would be damaged by development through harm to ancient hedgerows and nature trees. The roads in the village cannot cope with current levels of traffic and additional development would bring at least 700 more cars onto the road, and also more delivery vehicles. There are no footpaths on the road and people do not adhere to speed limits. The road is in bad repair and when it rains the silt cascades down the road like a river. If houses are built there will be less fields to soak up water and more water flowing down Colony Road. There is no industry in the village than farming so there will be a huge number of cars travelling daily to local towns or to train station in Banbury. COP26 has highlighted we need to lower carbon footprint, but there is no suitable public transport in the village. The school has always been full and there is no parking at the school. We are a dark sky village.

LPR-B-462	Paul and Elizabeth Wingrove	Adderbury/Twyford	Objection to development on Land west of Twyford, between Kings Sutton Road and Aynho Road, and Land west of Twyford. The scale of development would impact the daily lives of residents, especially those that currently face open fields. The development proposals are not proportionate to the immediate Twyford area. Traffic through the village has increased in recent years as a result of housing in area. Twyford is already used as a rat run to get from Banbury to Aynho Road. Access to Banbury and Oxford would be made by accessing village and an inevitable bottleneck will occur. King Sutton would be impacted severely by this. Access by emergency vehicles will be hampered due to increased traffic at peak times. There are no local amenities to support an increase of this size. Adderbury/Twyford has already met its obligations for housing development as a village. The health and well-being of residents will be impacted by development.
LPR-B-464	Holly and Paul Clewlow	Adderbury	All the sites proposed in Adderbury, Milcombe and Boxham fall outside the Residential Settlement Boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more new homes approved at appeal on site north of Berry Hill Road. These developments have already begun to change the fundamental character of the village, which has been traditionally rural in nature with a limited number of more modern houses. Adderbury suffers from traffic issues such as speeding. The proposed development sites will directly place additional cars on these already dangerous roads. West Adderbury is a distinct area of the parish, distant from the vast majority of facilities listed in the Parish Profile. The proposed development sites are unsustainable and would force new residents to drive to access facilities such as schools and healthcare. West Adderbury is a haven for wildlife of all kinds, including hedgehogs, buzzards, kites, badgers, foxes, bats and several varieties of deer. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. In an area known for its high water table and numerous springs, development of these sites will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. Once the latest phase of Longford Park, the new developments on the Bloxham Rd and the additional housing to the north of Banbury are complete, it is inconceivable that Cherwell will not have at least a 5 year housing supply. The rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages. Development sites in Milcombe and Bloxham would also further erode green spaces around these villages. Increase in development would cause traffic and pollution on the roads, which are already congested.
LPR-B-464	Holly and Paul Clewlow	LPR-A-041	Additional development around Henge Close would directly abut the Conservation Area and would therefore be detrimental to the setting of listed buildings on Horn Hill Road. Development of these sites would also be detrimental to the open nature of the Henge Close estate and to the green space and play area to the east.
LPR-B-464	Holly and Paul Clewlow	LPR-A-086	The proposed developments would destroy the rural entrances to the village, creating a jarring transition from agricultural land to modern, dense housing. If developed, the proposed sites would double the size of West Adderbury, this type of development is more suited to a town or city. The few facilities present in Adderbury would be swamped by development at this scale. Footpaths over these sites, which are in daily use by residents, would be lost forever. Residents of St Mary's Road would lose their existing connection with local farmland. Development of LPR-A-086 would lead to these houses being completely subsumed by new estates.
LPR-B-464	Holly and Paul Clewlow	LPR-A-146	Additional development around Henge Close would directly abut the Conservation Area and would therefore be detrimental to the setting of listed buildings on Horn Hill Road. Development of these sites would also be detrimental to the open nature of the Henge Close estate and to the green space and play area to the east.
LPR-B-464	Holly and Paul Clewlow	LPR-A-258	The proposed developments would destroy the rural entrances to the village, creating a jarring transition from agricultural land to modern, dense housing. Development of the field adjacent to the existing Adderbury Fields estate (LPR-A-258) would lead to a substantial decrease in the green space between West Adderbury and Milton, increasing the risk of coalescence and impacting upon the character of both villages. A popular footpath would be lost, and irreversible damage would be caused to the amenity of the homes to the north of Adderbury Fields, and to the adjacent green space.
LPR-B-464	R D Ascott	LPR-A-107	Object. The two parcels of land proposed at this site are not brownfield sites, which is contrary to the government's new focus of boosting construction on brownfield sites. Development of 360 new homes on the site, when the total population of the village is 533 is completely inappropriate. The fields in consideration are next to Ironstone Downland AONB. The roads, pathways and footpaths are totally inadequate, there is ongoing development at nearby Mawles Farmhouse, a brownfield site that I have no objection to, but the contractors have damaged the verges- there is not room for two cars to pass safely there. Increased traffic leaving the village would make the road from Banbury that turns into Pound Lane more difficult. The sites lie at the highest point in the village and I believe that there would be problems with water supply and drainage. Even with fields currently absorbing water, there are too many occasions when rain washes silt down the Colony. After hosting COP26, we should encourage sustainability and low carbon living. There is very little work or business here and shopping would largely be done on line. Even with a population of 533, deliveries cause disruption on the village's roads. The school could not cope with a further influx of children and it would not be possible to remedy the parking situation. The village would lose its identity as a dark sky community and would become another commuting stop, in contravention of key objective 16.. The council should also be limiting growth in rural areas and should maintain rural character, in line with key objective 15.

LPR-B-465	Oliver Rowbory	LPR-A-077	<p>Since 2014 Cherwell has made a disproportionately large contribution to meeting the District's housing supply. A significant part of this contribution has been made by Adderbury. The existing 2015 Local Plan provides enough homes to the period to 2031. Twelve potential sites measuring a total of 109.28 hectares could provide a minimum of 3,250 new houses (adopting CDC's Site Capacity Sense Check methodology - Policy BSC 1: District Wide Housing Distribution para B.102 - It is also important to make efficient use of land. In general, new housing should be provided at a net density of at least 30 dwellings per hectare. &amp; Policy Policy BSC 2) have been proposed around Adderbury including a large 60 hectare site between Twyford and the M40, stretching from the Kings Sutton Road to the Aynho Road. This compares to a current population of approximately 2,811 (Census 2011). These proposals, contradict Cherwell District Council's own Local Plan Key Objectives and existing Local Planning Policies. Any further development will have a severe visual impact on the rural character of Adderbury, specifically those proposed within the conservation area or adjoining its boundary. Indeed, sufficient land has already been allocated in the district to meet predicted demand for the next 13 years. Development on these sites expressly contradicts Policy ESD 1: Mitigating and Adapting to Climate Change. Adderbury is not a sustainable location. These locations contradict both the current Local Plan Policy and contradict the Key Objectives of the CDC Local Plan Review and therefore the proposal to allocate land at LPR-A-077 for residential development should be dismissed. Continued development of land, particularly that located within the conservation area and green belt should be refused on the basis that any further loss of this attribute would severely impact the character and beauty of Adderbury's natural heritage, lessen its natural capital and degrade its ecosystem. Any development on these sites would be contrary to Policy ESD 10: Protection and Enhancement of Biodiversity and the Natural Environment. Substantial new build structures on elevated land, filling a space within the village that positively contributes to the character and appearance of the Conservation Area in its undeveloped form, should be resisted. This area should remain free of substantial new build structures. Any new development in this area would appear unusually incongruous and out of character to the historic character of the immediate locality. Wild Oxfordshire have included this proposed development land within their North Cherwell CTA (Conservation Target Area – Other Sites) and as such, according with Policy ESD 11: Conservation Target Areas, development which would prevent the aims of a Conservation Target Area being achieved will not be permitted. The proposal to allocate land at LPR-A-077 for residential development would result in the loss of the remaining open space. Further and increased residential development in inappropriate locations (ie rural villages) where the local road infrastructure is at or near capacity has resulted in a significant increase in vehicular movements. Increased traffic congestion as a result of this over-development has therefore substantially increased vehicle emissions and has degraded air quality for residents.. This is most noticeable on the Oxford Road/Anyho Road traffic light junction but now as a consequence of increased traffic volumes vehicles are often queuing along the High Street in Adderbury as far as Chapel Lane. Further residential development in Adderbury does not support this objective as it decreases the areas natural capital, it increases air pollution, lowers connectivity and does not form part of a sustainable transport model facilitating by lowered car usage. Proposals to increase residential development in Adderbury will place unnecessary and restrictive burdens upon the health, mental wellbeing and accessibility of the village and place developer profit ahead of recreational, social and community needs and vastly increase social exclusion.</p>
LPR-B-466	Alex Rippon	LPR-A-107	<p>Obect. The development would double the housing stock of the village, but there are also many other reasons why this site should not be included in the Local Plan. I endorse all the points made in Sibford Gower Parish Council's submission. The proposal would be contrary to a number of Cherwell's own planning policies; it would represent a development site that must come towards the very bottom of any sensible measure of local or regional sustainable development; the development would have serious adverse consequences for the existing residents of Sibord Gower; the development would be a serious abrogation of Cherwell's duty to protect the best interests of Sibford Gower's present residents against opportunistic development based on greed.</p>
LPR-B-466	Alex Rippon	Sibford Ferris	<p>I also agree with the Sibford Ferris submission and think that sites at this location are not appropriate for inclusion in Local Plan.</p>
LPR-B-466	Alex Rippon	Option 31	<p>In terms of sustainability, it makes sense to focus future development in Cherwell in the Banbury area.</p>
LPR-B-466	Alex Rippon	Option 32	<p>In terms of sustainability, it makes sense to focus future development in Cherwell in the Banbury area.</p>
LPR-B-466	Alex Rippon	Option 33	<p>In terms of sustainability, it makes sense to focus future development in Cherwell in the Banbury area.</p>
LPR-B-466	Alex Rippon	Option 34	<p>In terms of sustainability, it makes sense to focus future development in Cherwell in the Banbury area.</p>
LPR-B-467	Mr & Mrs Bond	Wardington	<p>The A351 cannot currently cope with the amount of traffic on it and it is dangerous when lorries come round the bends. The noise through homes adjacent to A361 is horrific and the pollution from cars from new households will become a problem. The exit of A361 to m40 junction is quite frankly already an issue and will become worse with extra housing. The roads are already not safe to walk or cycle on. Lorries are already seen regularly to reverse out of the edgocote road on to A361 at any time day and night causing delays in traffic but are also a huge concern in terms of accidents happening. These lorries don't know where they are going and reversing and turning on the bends is already dangerous and if more houses are built in the village more traffic will come too increasing fatality risks. The land being use for houses should be used for a bypass around the village. Infrastructure in the village is weak with no shop, no school, reduced bus services and more houses would put pressure on GP practice in neighbouring village. The natural beauty of the village will be ruined and habitats too. Pollution will increase from rubbish build up on housing estates and extra routes for bin collection and postal delivery. Emergency services will be more stretched getting into the village.</p>

LPR-B-468	Christine Shafe	Adderbury	<p>Objects to all proposed development in Adderbury. consider the proposals obscene and totally out of proportion. appears that Adderbury is being 'sacrificed' and allowed to be swallowed up by Banbury and turned into an urban sprawl in an attempt to 'save' the more outlying villages. Since the 2011 census there has been a 17% increase in housing in adderbury, adding to this the consented developments still to be built, there will be a 21% increase since 2011. Assuming a 30 dph build out, the sites proposed would equate to 3,278 dwellings which would increase the village by 4 times; if only half are developed this would still alter the village beyond recognition in an unacceptable way. The Adderbury Neighbourhood plan was created but permission granted on appeal contravene the ANP as to several of the 12 sites proposed. particularly object to the fact that much of this proposed building, being outside the accepted boundary of the village, extends the village, ribbon fashion, into an urban sprawl. Furthermore, this extension of the built-up area narrows the amenity gap between Adderbury and Bodicote, Bloxham/Milton and also Deddington. Adderbury risks being swallowed up in a huge urban sprawl. The developments to date have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. Adderbury's infrastructure, in terms of both roads and local services, is already at capacity. Congestion and parking in the village is a significant issue and several of the sites proposed, would encourage or even necessitate the use of cars to access the village. Increased traffic and congestion would directly increase air pollution. Christopher Rawlins Primary School - Although it isn't currently quite at full capacity any further large housing developments would mean that children have to travel outside the village for school as there is no room on the site for expansion. The risk of flooding could also increase; development of these sites could dramatically increase runoff, compromise the floodplain and increase the risk of flooding to properties around Sor Brook. a number of the development sites proposed, particularly in West Adderbury, contain what are presently rural public footpaths which are very popular - Were these developments to go ahead it would render the experience of a 'country walk' totally pointless as people would be walking amongst houses in 'suburbia'. Development of any or all of these Greenfield sites would have a massive destructive impact on these and this at a time when we are being encouraged to protect nature and the environment. if these sites are indeed developed, then the traditional character would be lost forever. Since Brexit we have been made more aware that we should be trying to grow more food rather than rely on imports and that climate change is reaching crisis point which should see us retain green spaces. If house building within the village over the coming decade mirrors or exceeds the rate and scale of development of the past ten years, the village will change beyond recognition in a permanent and completely undesirable and unsustainable way. If Adderbury were obliged to have any further development at all, the least worst options would be the infill sites which don't extend the footprint of the village, such as LPR-A- 002, the 0.4 hectare part of LPR-A-077, or, if push comes to shove, the 0.7 hectare site of LPR-A-041; Anything else would be abhorrent. obvious and sensible thing would be to develop brown field sites within the towns. Converting shops and other buildings in towns which are empty would enable people to live at the heart of the community. logical solution would be to develop the already existing nucleus of a town in Upper Heyford and on the old airfield site.</p>
LPR-B-468	Christine Shafe	General	concerned about the fact that this Consultation Document has not been at all well publicised and that I only came across it a matter of days ago by accident.
LPR-B-468	Christine Shafe	Option 26	agree entirely with KO26.
LPR-B-468	Christine Shafe	LPR-A-086	object to and oppose the development of the sites that comprise LPR-A- 086. Not only are these agricultural fields used for the production of grain and other crops, but their development would extend the existing boundaries of the village by a vast amount. Residents living in new developments there would have no direct access to the rest of the village and would be forced to use cars to access the village and any facilities. Furthermore, such totally inappropriate development for a village would further impact on the residents of St Mary's Road who have already had to accept developments immediately to the West and North. These have already impacted on the lives of residents, changing the nature and feel of their homes. If the two fields to the West of Berry Hill Road were to be developed, St Mary's Road will have been utterly hemmed in and subsumed by new estates and all connection with the countryside lost. Adderbury's infrastructure, in terms of both roads and local services, is already at capacity. Congestion and parking in the village is a significant issue and several of the sites proposed, such as LPR-A-086 referred to above, would encourage or even necessitate the use of cars to access the village.
LPR-B-469	Helen Holbech	Wardington	Object. Wardington is a rural village with a conservation area and an increase in size to potentially 1000 residents would change character of village. The village does not have the infrastructure to support an increase in residents like this. Wardington is threatened by an increase in HS2 construction traffic and there is a risk those living close to or on the A361 might not be able to travel safely to and from their homes. An increase in traffic would exacerbate already frequent problems with leaking drains and loose manhole covers on the A361. New development would have to be accompanied by a bypass for the village.
LPR-B-470	Cllr Calum Miller	Question - Housing Policies	It is unclear why the OGNA methodology which you describe on p36 as being the "standard method (adjusted)" generates a higher demand for houses than the government's own model (footnote 6) by 5%. I think the presentation of this modelling is potentially misleading and should be carefully reviewed, and opened up to challenge/scrutiny before it is used to anchor any recommendations on housing numbers.

LPR-B-470	Cllr Calum Miller	General	I want to register that I do not think the approach to consultation is fit for purpose. It purports to be a public consultation. I have, however, had multiple complaints from local residents and parish councils within my division that the consultation is complex, unclear and very hard to respond to. Specifically, two points. (1) For those following the online prompts to submit responses via Let's Talk Cherwell, there are multiple login credentials required (including multi-factor authentication) before a response can be submitted. This seems like cybersecurity overkill and a barrier to participation. (2) For those wishing to comment on proposed sites, the drop down menu permits comment on only 10 specific sites even though some parishes (like Islip) have more than 10 proposed sites. Taking all of this into consideration, I think you should proceed very carefully in the analysis of responses and bear in mind that vested interests with the resources to participate are likely to be disproportionately reflected in the responses while local residents may be underrepresented due to barriers to participation. It is very hard for residents to comment on the vague spatial statements from the Oxfordshire Plan 2050 (stated on p16). For this reason, I suggest that comments to this consultation should not be used to substantiate specific conclusions on these options. Instead, I hope the sponsors of the Oxfordshire Plan 2050 will re-consult openly and fully once the implications of these choices are clearer.
LPR-B-470	Cllr Calum Miller	Option 2	Support for KO16, KO29, KO3, KO4, KO9, K13, KO10, KO11, KO20, KO21, KO6. I want particularly to underscore the importance of the Local Plan having a robust and precautionary approach to the potential impacts of climate change (KO12). With regard to flooding in our area, the threshold for assessing impact should be at the high central end of modelling and I would advocate the opportunity for the planning authority to take more extreme scenarios into consideration. It makes no sense for planning decisions to be made on central cases out to only 2050 when buildings should stand long past that and our forecasts for extreme weather events only grow after that time.
LPR-B-470	Cllr Calum Miller	Question - Green Belt	The Green Belt should be maintained and consideration should be given to the use of a Green Belt around other significant - and growing - towns like Bicester. There is, for example, considerable concern in communities like Wendlebury and Merton that the relentless march of Bicester's town boundaries will eventually swallow them up. The Local Plan is an opportunity to reaffirm commitment to protecting green spaces and to ensuring that current communities can retain their identity and distinctiveness by having clear separation from neighbouring conurbations. For this reason, there should NOT be a mini-review of the Green Belt around Kidlington (option 26 on p89). However, providing that the boundaries are consulted upon with parish councils and local communities are part of agreeing them, there is merit in examining the idea of settlement boundaries (p98) so long as this is not used to expand villages into neighbouring farmland when there are infill or brownfield opportunities to be developed first. In terms of the proposed development sites in appendix 2, my general comment is to be astonished by the ambition of a series of landowners to elevate the value of the land even when the sites they propose are individually or collectively inappropriate for many villages and towns. I trust your team will proceed to scrutinise these closely and fairly with a view to consistency with the other principles proposed for the local plan. In particular, sustaining (but not overwhelming) rural villages, upholding the Green Belt and protecting our district's historic and natural capital.
LPR-B-470	Cllr Calum Miller	LPR-A-160	Together, these proposals would remove any sense of a Green Belt around the southeastern perimeter of Bicester and would envelope these three villages in a way that would damage their historic and social character.
LPR-B-470	Cllr Calum Miller	LPR-A-095	Together, these proposals would remove any sense of a Green Belt around the southeastern perimeter of Bicester and would envelope these three villages in a way that would damage their historic and social character.
LPR-B-470	Cllr Calum Miller	LPR-A-143	Together, these proposals would remove any sense of a Green Belt around the southeastern perimeter of Bicester and would envelope these three villages in a way that would damage their historic and social character.
LPR-B-470	Cllr Calum Miller	LPR-A-123	This land at Gavray Drive is subject to a current outline planning application on which I have commented. My major concerns are to protect the current Wildlife Site and to ensure it is well managed in future and to ensure that any development takes full account of a precautionary approach to flooding risk. LPR-A-223 (all sites): the proposal from the Church Commissioners to build a new
LPR-B-470	Cllr Calum Miller	LPR-A-125	This land at Gavray Drive is subject to a current outline planning application on which I have commented. My major concerns are to protect the current Wildlife Site and to ensure it is well managed in future and to ensure that any development takes full account of a precautionary approach to flooding risk.
LPR-B-470	Cllr Calum Miller	LPR-A-223	The proposal from the Church Commissioners to build a new town in Islip is preposterous. The scale of their proposal is totally out of keeping to the scale of the village and is inappropriate for other reasons: (i) Green Belt; (ii) flood risk; (iii) pre-existing congestion and the intention of Chiltern/ East West Rail not to use Islip as a stopping point on EWR services and on a diminishing number of Marylebone peak time services, meaning that more car journeys are required.
LPR-B-470	Cllr Calum Miller	LPR-A-221	I strongly support development on this site and, moreover, suggest that CDC reconsider the classification of the site to brownfield. It is a former aviation fuel depot with considerable concrete installations (fuel tanks etc) that would be required to be removed to permit development. Allowing development on this site (only) in Islip would allow for a suitable growth in the village. By re-classifying it as brownfield, the Green Belt policy could be left in tact.
LPR-B-471	Prof & Mrs S Jefferis	Adderbury	Objection. The proposals are totally out of proportion with the historic character of Adderbury and will overwhelm the existing community. The rural setting will be destroyed and there is no justification for increasing population when there are no jobs, sufficient schools or a medical facility. The public transport is totally inadequate for such expansion. Road infrastructure in the village is already at breaking point from development of Milton Road, the Anyhoe Road and Oxford Road towards Banbury. Within the context of COP26, the development of such a large amount of farmland seems to go against the plans to mitigate climate change and encourage rewilding of farmland.
LPR-B-472	David Blowers	Question - Green Belt	Objection to reviewing Green Belt use as there has already been a lot and it needs protection. Agree that there should be connected network of Local Green Spaces around Kidlington and believe this should follow the existing boundary of the built up area and include all of the existing Green Belt.

LPR-B-473	Langford Community Orchard Group	Question - Local Green Spaces	Langford Community Orchard, off Dunlin Court, Bicester is proposed for designation as a Local Green Space. The site was proposed for LGS designation in the previous Cherwell Local Plan Review Issues consultation in September 2020. The Langford Community Orchard Group wish to apply for an extension of the area to be designated as LGS. A site location plan has been supplied.
LPR-B-474	Gillian & Percy Bidwell	Adderbury	All of these sites fall outside the Residential Settlement Boundary as set out in the Adderbury Neighbourhood Plan, and therefore contravene Policy AD1. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more new homes approved at appeal on the site north of Berry Hill Rd. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. The proposed developments will place additional cars on already dangerous roads. The proposed development sites are unsustainable and every household in these locations would need to drive to access facilities such as schools and healthcare. West Adderbury is a haven for wildlife of all kinds, including hedgehogs, buzzards, kites, badgers, foxes, bats and several varieties of deer. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. In an area known for its high water table and numerous springs, development of these sites will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook.
LPR-B-474	Gillian & Percy Bidwell	LPR-A-041	Additional development around Henge Close at LPR-A-041 would directly abut the Conservation Area and would therefore be detrimental to the setting of the listed buildings on Horn Hill Rd. Development of these sites would also be detrimental to the open nature of the Henge Close estate and to the green space and play area to the east.
LPR-B-474	Gillian & Percy Bidwell	LPR-A-086	The large-scale developments proposed for sites LPR-A-086 and LPR-A-258 would utterly change the approach to the village and would create a jarring transition from agricultural land to modern, dense housing. The proposed sites listed as LPR-A-086, to the north and south of the junction of the A4260 and Berry Hill Rd, would, if developed, double the size of West Adderbury overnight. Such large scale development is entirely inappropriate for a village the size of Adderbury and is far more suited to a large town or even a city. The few facilities present in Adderbury would be completely swamped by a development of this scale, placing massive pressures on local schools and services. Precious public footpaths over these sites, which are in daily use by local residents, would be lost forever. The residents of St Mary's Rd, many of whom have already suffered from loss of privacy following the construction of Adderbury Fields, would lose their existing connection with local farmland. Constructed in the 1950s/60s, St Mary's Rd and Norris Close provide low-density housing with large gardens backing onto fields. Development of LPR-A-086 would lead to these houses being completely subsumed by new estates, fundamentally changing the character of the southern edge of West Adderbury.
LPR-B-474	Gillian & Percy Bidwell	LPR-A-146	Additional development around Henge Close at LPR-A-146 would directly abut the Conservation Area and would therefore be detrimental to the setting of the listed buildings on Horn Hill Rd. Development of these sites would also be detrimental to the open nature of the Henge Close estate and to the green space and play area to the east.
LPR-B-474	Gillian & Percy Bidwell	LPR-A-218	All of these sites fall outside the Residential Settlement Boundary as set out in the Adderbury Neighbourhood Plan, and therefore contravene Policy AD1. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more new homes approved at appeal on the site north of Berry Hill Rd. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. The proposed developments will place additional cars on already dangerous roads. The proposed development sites are unsustainable and every household in these locations would need to drive to access facilities such as schools and healthcare. West Adderbury is a haven for wildlife of all kinds, including hedgehogs, buzzards, kites, badgers, foxes, bats and several varieties of deer. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. In an area known for its high water table and numerous springs, development of these sites will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook.
LPR-B-474	Gillian & Percy Bidwell	LPR-A-258	The large-scale developments proposed for sites LPR-A-086 and LPR-A-258 would utterly change the approach to the village and would create a jarring transition from agricultural land to modern, dense housing. Development of the field adjacent to the existing Adderbury Fields estate (LPR-A-258) would lead to a substantial decrease in the green space between West Adderbury and Milton, increasing the risk of coalescence and impacting upon the character of both villages. A popular footpath would be lost, and irreversible damage would be caused to the amenity of the homes to the north of Adderbury Fields, and to the adjacent green space.
LPR-B-475	Tim and Ann Brooks	General	Thank you for seeking residents' input for your Local Plan preparation. We salute the consultative spirit. In practice, however, we note that almost none of CDC's residents are actually aware of this process. This is not perhaps surprising: a visitor to the CDC website, for instance, would have to already know that they were looking for the plan development process. It is not mentioned on the Council's home page; there is not even any reference to it on the main Planning page; you have to work out for yourself that you must click through to 'More about planning policy' at the foot of that page. This presents a marked contrast to the participation of the property development sector, who of course stand to profit from any increase in building in CDC, and accordingly have turned their considerable resources to bombarding CDC with development proposals. This disparity between the interests and resources of the property industry, and residents, is a democratic deficit which we hope will be considered carefully by CDC in finalising its plan. We congratulate CDC. It is well ahead of its own targets for new house-building, as set out in its current plan: halfway through the present plan period, you have 43% of your housing target already built; and no less than 80% delivered or permissioned.

LPR-B-475	Tim and Ann Brooks	Question - Transport & Connectivity	Reducing car use is imperative for both long term sustainability of climate but also given fact Banbury is irremediably choked with traffic. Much of the centre of Banbury is dominated by retail premises; but in-person retail is constantly shrinking – as evidenced by the many vacant properties on all of Banbury’s most central streets, not to mention Castle Quay. This trend is national and irreversible. The amount of property – perfectly useable, and containing huge amounts of embodied carbon – in the town centre, which is no longer required for its historic use, is growing and will continue to do so. These properties should be repurposed for residential use, which will not only represent sustainable development, but have the very desirable effect of revivifying the town centre.
LPR-B-475	Tim and Ann Brooks	Option 18	The area CDC identifies, adjacent to the canal and the railway station, as a possible locus for residential development, should be CDC’s flagship sustainable community for Banbury. Many hundreds of sustainable new homes can and should be accommodated on this site. As with redevelopment in the town centre, the need for car use will be reduced by proximity to all essential services. Development should not be directed to villages north of Banbury, which is the opinion held by the majority of residents there. Their identity has remained the same for hundreds of years and aggressive development would destroy this. Car use is unavoidable from these locations and more development will result in more traffic. The water systems and electrical supply also could not cope with further development. The development proposals are outside the village boundaries and will result in coalescence between Banbury town and Little Bourton and Hanwell. Key objective 23 assures this would not happen.
LPR-B-475	Tim and Ann Brooks	Option 19	Development should be limited to protect Banbury's landscape setting and maintain separation between the town and surrounding villages.
LPR-B-475	Tim and Ann Brooks	Option 30	The Canalside development is an ideal area for sustainable affordable housing.
LPR-B-475	Tim and Ann Brooks	Option 32	Agree, development proposals should be extended beyond which development would not normally be permitted as much time and resource is currently spent dealing with planning proposals from developments who think they can profit from stretching village boundaries.
LPR-B-476	Dr Bridget Atkins and Richard Clarke	Question - Policies for Climate Change, Sustainable Construction & Renewable Energy	We are concerned about flood plain management. Climate change is going to increase flooding areas. Building houses (especially near flood plains) will reduce the run off of water and increase the risk of flooding to existing and new houses.
LPR-B-476	Dr Bridget Atkins and Richard Clarke	General	Population figures from ONS predict a decrease in population from 2040 therefore targets for housing should be significantly reduced and take into account predicted population. Increasing housing will put unmanageable strain on other infrastructures - such health care (which we know from professional life is struggling to contend with the current high population), water and other services. On a bigger picture the government should be looking at investing in the development or areas in the North of England rather than contributing to overpopulation of the South East.
LPR-B-476	Dr Bridget Atkins and Richard Clarke	Question - Green Belt	With the global climate and environmental emergency, anyone considering building on green belt (or even any green areas) should be ashamed. The loss of plants, trees, wildlife would be irreversible for future generations. We should be protecting and these areas and moreover encouraging more woodland, habitats for pollinators and other wildlife.
LPR-B-476	Dr Bridget Atkins and Richard Clarke	Question - Transport & Connectivity	Rep includes images of commuter traffic. The commuter traffic is already too much for Oxford to manage. The queues of traffic in and out of Oxford negates any hoped-for benefit from emission free zones in Oxford. Adding more traffic pressure will make carbon emissions significantly worse.
LPR-B-476	Dr Bridget Atkins and Richard Clarke	Question - Local Green Spaces	It is important for people's wellbeing to have areas of natural beauty and for recreation. This especially refers to the areas around East Kidlington which are a very popular site for walkers, runners, cyclists, dog walkers, nature lovers etc. We support the Kidlington Parish Council and KDW proposal for a linked network of local green spaces around the village and think this is the minimum that should be considered.
LPR-B-477	Fiona Smith	Deddington	Objection. The development proposals are not sustainable. Building on greenfield sites is catastrophic for the environment, releasing more carbon into atmosphere and destroying habitats. We need to preserve farmland to continue to grow enough food to feed everyone. Deddington is a rural village without good public transport links and large scale development will inevitably increase traffic and pollution levels. The health centre is already struggling and there is little room to expand on the current site. Parking within the village and around market square is already under strain. Large scale development, even if phased, will irreparably change the very nature of this village. Need for housing is partly being driven by desire for second homes and I have been unable to find housing for family due to this. Banbury Guardian in 2018 highlighted the fact that over 300 homes were empty in Cherwell and some had not been lived in for over 10 years. The recent pandemic has led to what many see as a permanent change in retail habits, resulting in many empty shops in our town centres. These spaces could and should be the first sites converted into housing.
LPR-B-478	Bletchington Parish Council	Option 1	Our vision for Bletchington is for our parish to be safe, attractive and well maintained; and for our parish and the rural community to be resilient and sustainable. We support the 3 themes and the draft vision for Cherwell described within the Local Plan Review

LPR-B-478	Bletchington Parish Council	Bletchington	Support the overarching intentions in the Oxfordshire Plan and the draft Cherwell plan to deliver sustainable communities within acceptable levels. The inclusion of a site in Bletchington listed for development possibilities in the future is providing an additional 4.58 hectares of development which we feel is as much as should be accommodated, especially as we are in a green belt area. We want due consideration given to the local traffic infrastructure. Bletchington has accommodated a recent new development at Duchy Fields, increasing the size of the village by 20%. Additional dwellings have increased traffic volume and the poorly designed access to the development from Station Road created a danger spot. This is a priority for Bletchington Parish. The B4027 runs through the parish, this a main Oxfordshire route providing access to the A34 with high traffic volumes. Bletchington primary school, village hall, and Co-op are on the North side of the B4027 with much of the housing on the South side of the B4027. There is significant footfall across this road and frequent passage by HGVs – for which this route is highly unsuitable due to the proximity of housing and a narrowing of the road at the Eastern point. Bletchington Parish Council remains very concerned about traffic management along this busy route. We are concerned that insufficient consideration is given to the implications of new developments on existing traffic routes in rural areas at the planning stages. Traffic management and calming measures for villages where new development is taking place should be considered at early planning stages, and funded by developers. Traffic implications of Bletchington's recent development were foreseeable and mitigations should have been planned and funded as part of the development. Bletchington is currently served by the 250 bus route, running through the village from Bicester to Oxford. This service is well used by local residents, pre-pandemic the peak time buses were often full. Long term sustainability of this route is in jeopardy and are concerned that without this route Bletchington Parish will be inaccessible except by private car. This is unacceptable and contrary the environmental and sustainable aspects of the Cherwell Local Plan Vision. Access to our neighbouring villages is only possible by private car. This is particularly challenging for accessing medical care, we do not have a GP practice in the village and many residents travel by car to Islip. Transport strategies should consider not just access to main urban areas but access between villages. It is only possible to support businesses in villages if it is possible to access them.
LPR-B-478	Bletchington Parish Council	Question - Transport Policies	Regarding Traffic Management Policies, we urge Cherwell District Council to develop a specific policy to assess the traffic impact of new developments in rural communities. It should be mandatory that this assessment is undertaken and published.
LPR-B-479	Abbeymill Homes	Option 1	Objective 4 of the proposed Vision should recognise that whilst meeting the housing needs, it is also important that they are located in the right location in relation to both delivering sustainable forms of development and responding to market demand.
LPR-B-479	Abbeymill Homes	Option 2	KO31 needs to be expanded to recognise that planned growth of rural communities including market housing, is key to sustaining local services and facilities, and not just affordable housing. Successive local plans in Cherwell have severely limited the growth of rural settlements which has been to the detriment of its rural communities and evident by the continued decline in the viability of sustaining services and facilities in such areas.
LPR-B-479	Abbeymill Homes	Option 3	At our main urban centres of Banbury, Bicester and Kidlington; at significant transport interchanges and at the larger villages represent the most sustainable options both in terms of minimising the need to travel and improving the self-containment of existing established settlements, and where travel is necessary alternative transport modes exist other than by private car.
LPR-B-479	Abbeymill Homes	Option 4	Provide a mixture of the above will offer for a balanced and diversified employment market in the district.
LPR-B-479	Abbeymill Homes	Option 5	Maximise flexibility within the town centre for different uses including residential development and other community and leisure uses. The flexibility of use of town centres and retail space has become more necessary to try and ensure active uses within such areas are maintained.
LPR-B-479	Abbeymill Homes	Option 6	Keep the percentage levels of affordable housing the same as in the 2015 Local Plan? (30% at Banbury and Bicester, and 35% across the rest of the District). Affordable housing rates in the district have been established based upon viability considerations. Increasing the percentage requirement of affordable housing risks rendering some sites unviable and undermining housing delivery rates in the district.
LPR-B-479	Abbeymill Homes	Option 7	Keep the same affordable housing tenure mix as set out in the 2015 Local Plan with 70% Affordable and Social Rent and 30% Social Rent? A mix of tenures is important in terms of providing balanced and inclusive communities, with significant demand in the district for both social rent and shared ownership.
LPR-B-479	Abbeymill Homes	Option 8	Introduce a policy which requires all new dwellings to meet the nationally described space standard and if so, should this be a minimum requirement?
LPR-B-479	Abbeymill Homes	Question - Separation Distances	The issue of separation distances between properties should continue to be assessed on an individual basis, rather than rigorous standards, as in different circumstances a greater or lesser degree of separation maybe appropriate.
LPR-B-479	Abbeymill Homes	Option 9	Housing accessibility standards should continue to rely on building regulations as this will ensure standards do not start varying between authority areas, which makes it much more difficult for developers to keep track of.
LPR-B-479	Abbeymill Homes	Question - Housing Policies	A specific policy is required to encourage entry level exception sites in accordance with Paragraph 72 of the NPPF.
LPR-B-479	Abbeymill Homes	Option 10	Not set further standards in the Cherwell Local Plan leaving this for Building Regulations and the Oxfordshire Plan. Sustainable construction standards should rely upon building regulations. This will ensure standards do not start varying between authority areas, which makes it much more difficult for developers to keep track of.
LPR-B-479	Abbeymill Homes	Option 11	Use a criteria-based policy to assess the appropriateness of proposals for renewable energy generation? The market will determine the suitability and availability of sites and bring them forwards through the development control process.
LPR-B-479	Abbeymill Homes	Option 12	Secure contributions to local environmental bodies undertaking biodiversity enhancement projects within the district. It should be recognised that often in the case of smaller sites, delivering a biodiversity net gain is hard to achieve with insufficient land available and that offsite mitigation is the only means of delivering such an outcome.
LPR-B-479	Abbeymill Homes	Option 13	Include a policy in the Plan requiring major development proposals to: a) be supported by a natural capital assessment to demonstrate the impact of the proposals and b) demonstrate environmental net gain. The impact of major development proposals should be identified as part of the application process as it represents a material consideration in determination of the proposal.

LPR-B-479	Abbeymill Homes	Option 18	Limit development at Banbury to protect its landscape setting and maintain separation between the town and surrounding villages. Banbury and the other county towns have absorbed a significant majority of growth in Oxfordshire over the last 30 years resulting in significant pressure on its infrastructure which has not been sufficiently invested in. The town has expanded significantly into the surrounding countryside and development should now be limited to protect its remaining landscape setting and avoid coalescence with surrounding settlements.
LPR-B-479	Abbeymill Homes	Option 22	Limit development at Bicester to protect its setting and maintain separation between the town and surrounding villages. As with Banbury, continued expansion of Bicester is not sustainable when its infrastructure has not been sufficiently improved to accommodate an ever expanding population. The remaining countryside surrounding the town should now be protected and avoid coalescence with nearby settlements.
LPR-B-479	Abbeymill Homes	Option 30	Direct proportionately more development to the rural areas over the plan period to meet wider district needs. Housing needs of the rural areas have been insufficiently provided for within previous local plans resulting in a continued decline in rural services and facilities, and the ageing of the rural populations due to insufficient housing opportunities for younger generations. The allocation of smaller sites is an important component of housing land supply in the district, with such sites being capable of being delivered quickly and with fewer constraints in terms of infrastructure upgrades etc. This is recognised within the NPPF which requires local planning authorities to identify at least 10% of housing land supply requirements to be on sites of up to 1ha (Paragraph 69). A more balanced distribution of growth is required in the district to reverse the decline in rural communities, with the allocation of more medium scale sites that can deliver a full range of housing opportunities. This includes affordable housing as the reliance upon small windfall proposals delivers little in the way of this form of housing. Further, increasing the scale of growth in the rural areas will also secure more infrastructure investment to address any identified local deficiencies or issues, as again, small scale proposals are generally below the threshold to require financial contributions although collectively these developments do add to the burden on local services.
LPR-B-479	Abbeymill Homes	Option 31	Work with communities to allocate specific sites to meet identified housing needs. Local communities need district level support in allocating specific sites to meet identified housing needs whilst not all communities intend to prepare a Neighbourhood Plan.
LPR-B-479	Abbeymill Homes	Option 32	Give additional weight to the availability of certain services and facilities (which do you think are the most important?). For instance, schools and GP surgeries generate significant traffic movements and have a high level of use so if a settlement provides such infrastructure this should be recognised in its categorisation. The local planning authority should also consider whether through increasing the scale of growth at certain settlements, what the scope is to facilitate the delivery of new facilities and services for its population.
LPR-B-479	Abbeymill Homes	Call for Sites Promotion - Land south of Main Street, Fringford	Land south of Main Street, Fringford is promoted for housing.
LPR-B-479	Abbeymill Homes	Call for Sites Promotion - Land west of Main Street, Fringford	Land west of Main Street, Fringford is promoted for housing.
LPR-B-479	Abbeymill Homes	Call for Sites Promotion - Land east of Heyford Road, Kirtlington	Land east of Heyford Road, Kirtlington is promoted for housing.
LPR-B-479	Abbeymill Homes	Call for Sites Promotion - Land east of Barford Road, Bloxham	Land east of Barford Road, Bloxham is promoted for housing.

LPR-B-480	Carly Castle	LPR-A-077	<p>Object. Since 2014 Cherwell has made a disproportionately large contribution to meeting the District's housing supply with Adderbury seeing a significant amount. These proposals contradict Cherwell District Council's own Local Plan Key Objectives and existing Local Planning Policies. Any further development will have a severe visual impact on the rural character of Adderbury, specifically those proposed within the conservation area or adjoining its boundary. Development contradicts Policy ESD 1. Adderbury is not a sustainable location as described in the Local Plan. The local infrastructure, particularly the through road, road junctions, access roads and roads adjoining the school are at or near capacity and create a health and safety risk to residents. The increased volumes of traffic, particularly stationary, results in poor air quality. Any further development would place an unnecessary strain on these services and does not support a sustainable economy. Any development of this land would be contrary to NPPG - Rural housing para 78. In rural areas, planning policies and decisions should be responsive to local circumstances and support housing developments that reflect local needs. Continued development of land, particularly that located within the conservation area and green belt should be refused on the basis that any further loss of this attribute would severely impact the character and beauty of Adderbury's natural heritage, lessen its natural capital and degrade its ecosystem. Any development would be contrary to Policy ESD 10 - Development which would result in damage to or loss of a site of biodiversity or geological value of regional or local importance including habitats of species of principal importance for biodiversity will not be permitted unless the benefits of the development clearly outweigh the harm it would cause to the site, and the loss can be mitigated to achieve a net gain in biodiversity/geodiversity. Substantial new build structures on elevated land, filling a space within the village that positively contributes to the character and appearance of the Conservation Area in its undeveloped form, should be resisted. This area should remain free of substantial new build structures. Any new development in this area would appear unusually incongruous and out of character to the historic character of the immediate locality. Wild Oxfordshire have included this proposed development land within their North Cherwell CTA (Conservation Target Area – Other Sites). Further and increased residential development in inappropriate locations (ie rural villages) where the local road infrastructure is at or near capacity has resulted in a significant increase in vehicular movements. Increased traffic congestion as a result of this over-development has therefore substantially increased vehicle emissions and has degraded ambient air quality for residents. Further residential development in Adderbury does not support this objective as it decreases the areas natural capital, it increases air pollution, lowers connectivity and does not form part of a sustainable transport model facilitating by lowered car usage. The CNC Local Plan Review must resist the continued erosion of villages in Cherwell and specifically around Adderbury. Any development on this land would be contrary to Adderbury Local Plan Policy AD5. Development on this land will harm both the function and open character of the village in the Conservation Area. Proposals to increase residential development in Adderbury will place unnecessary and restrictive burdens upon the health, mental well-being and accessibility of the village and place developer profit ahead of recreational, social and community needs and vastly increase social exclusion. This is of particular relevance given the lack of affordability of new developments in Adderbury. Any residential development in Adderbury does not support this Local Plan objective and does not meet the existing local plan objective that 'seeks to deliver growth as part of an 'urban focused strategy',</p>
LPR-B-481	Savills for Blenheim, Merton & St John's	Call for Sites Promotion - Land at Loop Farm, Wolvercote	<p>Land at Loop Farm, Wolvercote is promoted for mixed uses. Update to HELAA374. A site plan and letter from Stagecoach have been submitted with the representation.</p>
LPR-B-481	Savills for Blenheim, Merton & St John's	Option 1	<p>Support the suggested Vision for Cherwell as identified at paragraph 4.7, including on achieving climate action targets (point 1), energy efficiency (point 2), well-designed homes to meet our needs (point 4) and a sustainable, flexible economy with good transport links (point 6). Further explanation should be given as to how the Vision will be extended into measurable targets or objectives. For example, what does the vision for new development being built to high energy efficiency mean in practice over a plan period? With regard to the reference to Covid 19, whilst we agree that the impacts of it are significant, it is difficult to predict how long term these may be. We suggest that further consideration is given as to whether the Plan, especially if it is for a 30 year period, should be significantly informed by the impacts of Covid. We suggest that point 12 is either reworded or explained elsewhere in the Plan in terms of how Banbury, Bicester and Kidlington are to be 're-shaped and adapted' to maintain their roles as attractive, vibrant, retail, cultural and social centres for communities and visitors. We consider that the inclusion in this Consultation Document of the Oxfordshire Strategic Vision and a Draft Oxfordshire Plan Vision (July 2021) could be confusing for the reader. In addition, the inclusion of these other Visions could in part duplicate what is within the emerging Oxfordshire Plan 2050. We suggest the strategic element is left to the Oxfordshire Plan 2050</p>
LPR-B-481	Savills for Blenheim, Merton & St John's	Option 2	<p>The Local Plan Review will need to meet the tests of soundness within the NPPF. This includes being consistent with the emerging Arc Spatial Framework and the emerging Oxfordshire Plan 2050. The latter includes spatial options for the entire County and it acknowledges that ultimately, through testing, the preferred approach is likely to comprise a selection from among the spatial options within the consultation document. These options are included in the section on vision for the emerging local plan and so will need to be kept under review. Themes: We agree with the Themes contained in the Consultation Document (i.e. Maintaining and developing a sustainable Economy; Meeting the Challenge of Climate Change; and Healthy Place Shaping). These follow on from the previous consultation version. Key Objectives: Although the 31 Key Objectives are generally supported we consider there to be more objectives than is necessary and that these should be simplified and reduced in number. The following objectives are most important: KO 1, KO 2, KO 3, KO 10, KO 11, KO 13, KO 16, KO23, KO 24, KO 26, KO 28, KO 29, KO 30 and KO 31. Objective KO1 is essential to provide support for the living standards within the County and relates well to the vision for the District. KO23 should explicitly include reference to sustainable urban extensions and planned expansion on the edge of Oxford City. The spatial strategy in the Oxfordshire Plan, whilst likely to comprise a combination of options under the emerging plans for the area, is likely to have a focus on edge of Oxford growth being such a well-connected location.</p>

LPR-B-481	Savills for Blenheim, Merton & St John's	Option 3	The draft Local Plan refers to the current 'urban focussed strategy' for delivering growth and, in looking to where new development will go, points to some of the answers being given by the Oxfordshire Plan (paragraph 5.1.1). Employment land should be well connected to centres of population, both existing and proposed, and hence accessible to the workforce. This can take many forms including sustainable urban extensions and planned expansion of existing settlements. Locations for significant employment development should also be well-related to the strategic transport network, including major roads and public transport corridors. The allocation of future employment land should include previously-developed land, it is unlikely that this will be sufficient and in sufficient quantity to promote economic growth in sustainable locations, for example in close proximity to the edge of Oxford. We note that CDC has commissioned an Employment Land and Needs Assessment, to complement the OGNA, but we would need to see the details of this to comment further. Changes to the Use Classes Order and increased flexibility in Class E will also be important in the emerging strategy, especially for town centres and business parks.
LPR-B-481	Savills for Blenheim, Merton & St John's	Option 4	Option 2 is most appropriate. When identifying sites for employment, the selection of particular uses for a site should be led by the evidence on need for employment land and looking at reasonable options for identification of land for employment development. We consider that there needs to be a mind-set shift away from a focus on the traditional 'B-uses' (accepting the change in the land-use class for former B1 Business uses). Acknowledgement should also be given to the value of employment from life sciences, education uses, community uses and small-scale start up businesses. The input of the Oxford and Oxfordshire LEP and business community will be relevant here. As supported by paragraph 81 of the NPPF, the emerging Local Plan should set out a clear economic vision and strategy which positively and proactively encourages sustainable economic growth, having regard to Local Industrial Strategies and other local policies for economic development and regeneration. This needs to be integrated with the emerging content of the Oxfordshire Plan 2050.
LPR-B-481	Savills for Blenheim, Merton & St John's	Option 6	The answer to this must be led by the evidence on need for housing, both market and affordable housing. The latest position as published is the Oxfordshire Councils Growth Needs Assessment (OGNA). Levels of affordable housing have to be tested through viability appraisal so as to avoid an adverse impact on housing delivery in the context of housing an place-making within the vision and objectives for the plan. As a general approach, affordable housing need is infrequently met even in authority areas where the overall housing requirements are met in some of the accounting years. This suggests that models of delivery of affordable housing must extend beyond S106 provision as part of market-led housing development. 'Exception to Policy' development rarely features fully in local plans and yet the NPPF (section 5) requires planning policies to identify a sufficient supply and mix of sites, taking into account their availability, suitability and likely economic viability. This includes provision of a range of affordable housing types and tenures and small sites. A range of affordable housing levels is appropriate across the District and this needs to be set within development viability appraisal work and whether the Council intends to continue with S106 only without introducing the Community Infrastructure Levy.
LPR-B-481	Savills for Blenheim, Merton & St John's	Option 7	The answer has to be evidence-led and there will not be a one-size fits-all solution. The NPPF seeks a range of housing types which includes tenures. The definition under Annex 2: Glossary and relevant policy advice and guidance from Government is relevant here. This seeks by and large to expand the range of tenures defined as affordable including discount market sales and started homes. These must feature within policy or guidance within the District. As it is so difficult to plan for delivery over such a plan period it might be more appropriate not to define a tenure split in policy but refer to evidence guiding discussions on sites set within preparation of supplementary planning guidance on affordable housing.
LPR-B-481	Savills for Blenheim, Merton & St John's	Option 8	Local planning authorities have the option to set additional technical requirements exceeding the minimum standards required by Building Regulations in respect of access and water, and an optional nationally described space standard. Local planning authorities will need to gather evidence to determine whether there is a need for additional standards in their area, and justify setting appropriate policies in their Local Plans. Unlike need for affordable housing, we see this issue as being Oxfordshire-wide and not one that should be decided upon, possibly differently, by each local authority in the County. The partner authorities should consider the impact of applying NDSS or above as part of the Local Plan viability assessment. In considering the costs relating to optional Building Regulation requirements or the NDSS, authorities may wish to take account of the evidence in the most recent Impact Assessment issued alongside the Housing Standards Review. This is not a matter for inclusion in Development Plans and should not be included in this Local Plan. The imposition of minimum separation distances is too prescriptive and does not take account of local site circumstances such as topography and boundary features. Ensuring good design can be done in different ways, for example through compliance with the principles of the National Model Design Code and any local design code or SPD that is in place.
LPR-B-481	Savills for Blenheim, Merton & St John's	Option 9	No need for a policy relating to Modern Methods of Construction. It would be more appropriate to let the market resolve this, in the context of meeting other sustainability requirements and legislation.

LPR-B-481	Savills for Blenheim, Merton & St John's	Option 11	Relevant policies included in the Local Plan should be sufficiently flexibility to ensure that they remain relevant. Blenheim, Merton and St Johns have previously submitted responses to the Oxfordshire Plan. It is argued that this Plan should include the option for land currently designated as Green Belt to be released from that policy. This would allow for the development and other needs of the county to be met in a sustainable way. In Cherwell and South Oxfordshire changes to the Green Belt to allow for the expansion of the urban area of Oxford have been shown to be a sustainable option and one endorsed by both Local Plan inspectors. Land within ownership is promoted for an employment led strategic mixed use development on land at Loop Farm north of the A40, west of the A34 and south west of the A44 at Wolvercote. This site extends to approximately 23 hectares. It forms part of the wider Oxford Green Belt. The site offers the potential for an employment led strategic mixed use allocation, similar in scale to the nearby Oxford North (formerly known as Northern Gateway). This could include approximately 50,000-70,000sqm of employment floorspace; 300-400 dwellings; and leisure, which could be delivered in 6-10 years' time. This scale of development could also help fund and deliver the Loop Farm Link Road. This would link the A34 and A44 and provide a more direct route from the A40 west of Oxford to the A34. This would avoid the need for such traffic to route via the Wolvercote Roundabout. The junction of the A34, A40 and A44 is a strategic location which would encourage economic development. It is also a sustainable location close to facilities in Oxford with frequent bus services to the city centre. The potential mix of uses could allow employment on the eastern part of the site to help provide noise mitigation as a result of the proximity of the A34. It could also allow leisure uses on the western edge of the site close to the Oxford Canal. The proposal is consistent with four of the five spatial options in the draft Oxfordshire Plan.
LPR-B-481	Savills for Blenheim, Merton & St John's	Option 12	This is a County matter and should be addressed in the Oxfordshire Plan. Welcome the aspiration in that Plan for biodiversity gain. We also note that there is a proposed benchmark of 20% BNG for Oxfordshire, which we have requested is the subject of further analysis (to confirm an achievable and potentially phased target) and that more details are given.
LPR-B-481	Savills for Blenheim, Merton & St John's	Option 15	The designation of Local Green Spaces should be a matter for Neighbourhood Plans. Policies should follow the NPPF (Section 12 Achieving Well Designed Places) and avoid ambiguity between National Model Design Code and local codes and guidance. Policies can set standards which can be illustrated/explained through supplementary planning guidance at the County-level. We support the principle of the 20-minute neighbourhood. Further consideration of this should be given to see if this can be delivered through the Local Plan. Support the connectivity and transport approach outlined in the Local Plan, including moving towards a net zero transport network and a decarbonised transport system. With regard to land at Loop Farm, Wolvercote. Scale of development could also help fund and deliver the Loop Farm Link Road. This would link the A34 and A44 and provide a more direct route from the A40 west of Oxford to the A34. This would avoid the need for such traffic to route via the Wolvercote Roundabout. The junction of the A34, A40 and A44 is a strategic location which would encourage economic development. It is also a sustainable location close to facilities in Oxford with frequent bus services to the city centre. The potential mix of uses could allow employment on the eastern part of the site to help provide noise mitigation as a result of the proximity of the A34. It could allow leisure uses on the western edge of the site close to the Oxford Canal.
LPR-B-481	Savills for Blenheim, Merton & St John's	Option 16	This is a County matter and should be addressed in the Oxfordshire Plan.
LPR-B-481	Savills for Blenheim, Merton & St John's	Option 17	Costed and consulted upon infrastructure delivery plan is necessary but only where it takes a lead from the work put in for the Oxfordshire Plan 2050. This must be crossboundary and look to deliver on the set of core objectives to deliver the plan vision.
LPR-B-481	Savills for Blenheim, Merton & St John's	Option 26	Are there any local Green Belt matters we need to consider?, Blenheim, Merton and St Johns are promoting land in the Green Belt at Loop Farm on Woodstock Road, Wolvercote which has the potential for an employment led strategic mixed use allocation, similar in scale to the nearby Oxford North (formerly known as Northern Gateway). This could include approximately 50,000- 70,000sqm of employment floorspace and also 300-400 dwellings and leisure. In addition, the removal of the Loop Farm site from the Green Belt and its development for employment and housing at the scale proposed would also help fund and deliver the Loop Farm Link Road. This would link the A34 and A44 and provide a more direct route from the A40 west of Oxford to the A34. This would avoid the need for such traffic to route via the Wolvercote Roundabout.
LPR-B-482	Judith Thonrton	LPR-A-086	Strongly object. The extent and planned growth detailed in this Plan Review is a serious cause for concern. The site is outside of the previously agreed Residential Settlement Boundary which was agreed in the Adderbury Neighbourhood Plan, going against policy AD1. There is an abundance of wildlife in this area thanks to the open fields, trees and hedgerows. These include everything from frogs, toads and newts to hedgehogs, bats, hares, deers, foxes, badgers, field mice, buzzards, kestrels and kites. This entire eco system would be destroyed for ever. How can this comply with any Environmental Objective? The footpath walking routes through this beautiful green countryside are an absolute lifeline for residents. Again this natural and free activity will be irreplaceably impacted by developing and changing this natural environment. This field has a seemingly endless amount of fossils. I believe this field was once a quarry and is perhaps why there is so much, but this archaeological area must be checked. Where will all the water run off go if these fields are covered in concrete? Surely flooding will suddenly become an issue and risk to us all. I understand more affordable housing needs to be created, but I am really not sure this is a suitable location. There has to be more suitable locations which provide more local facilities and employment opportunities. They would be dependent on having use of a car to get anywhere which in turn would increase traffic on strained roads. The increase in noise and air pollution. Only a very few landowners and developers will gain any benefit - that being money - to the utter detriment of a historical and beautiful village that is Adderbury.
LPR-B-483	Mary Adams	Adderbury	Object. We have already undergone a huge change. It is gridlocked in rush hour, what a shame to further enlarge this very attractive location. Surely it would be better to establish new areas. There is no surgery schools are overloaded and traffic fumes are unpleasant.

LPR-B-484	James Sadler	Hanwell	<p>Object. Hanwell has existed as a village and community since Norman Times. If further housing is built to the North West of Banbury then Hanwell runs the risk of being absorbed into the environs of Banbury. In doing so becoming just a satellite village and losing its true identity as an element of Oxfordshire's much admired and valued rural life. There is a risk of the existing Community being lost. This is much against the considered wishes of Hanwell's residents. Contradicts and is counter to what exists in the Current local plan 2011-2031; Policy C15.</p> <p>This may be evidenced by the development which has taken place around Bodicote, south of Banbury, which has been swallowed up by the developers. Policy C15 is weak in that it fails to designate the open countryside between Hanwell and Banbury as being something akin to Green Belt, or, at least, an extension of the Hanwell Village conservation area. Hence it gives no signal to housing developers that it's not up land which it is up for grabs for development. If such building were to be allowed this would have the undesirable consequence of seeing housing on countryside that forms a calculated and important "strategic" gap between Banbury, the town, and Hanwell, the village. Large developments will mean Hanwell will no longer be a rural village in Oxfordshire. On a further historical note regarding Hanwell, St. Peter's 12th Century Parish Church which lies in the Hanwell Conservation area may be viewed from the existing open countryside south of the Village. These views have been preserved for centuries but there is no reference, or policy, for this to continue. The existing Local Plan does have a Policy (C34) to protect the views of St. Mary's 18th Century Parish Church in Bambury.</p>
LPR-B-485	Penny Sprigg	LPR-A-107	<p>Object. The proposed development would double the number of houses in this small village. The area proposed is next to an Ironstone Downland AONB and proposed development would surely impact not only on this, but on the rural characteristics of the village and its surrounds. The Cherwell LP states its intention to limit 'growth in our rural areas' and to value and conserve 'the integrity and richness of the county's historic character'. Car usage in the area would increase commensurately - public transport links are intermittent - meaning that commuter traffic would add to pollution at a time when the focus must be on reducing private car use. The exit at the north end of Pound Lane onto the main road is potentially dangerous due to a dip in the road to the west. The alternative routes for entering/exiting the village would be either to use the crossroads within Sibford Gower to take traffic past the Primary school or to head South down a winding route through a farm which is already a 'rat run' during commuting hours. Brownfield sites exist in Banbury which should surely be used for imaginative development to improve derelict areas and to enhance the town's image. Amenities already exist there. The impact of the additional pressures on the surgery and Primary School from a development on the proposed scale must be considered, alongside the inadequacy of current roads, cycleways and footpaths. Protecting the natural environment is a vital aspect of any proposed development. The Cherwell LP itself states: Key Objective 15 is to 'protect, conserve and enhance natural capital assets such as soils, woodlands, hedges and ponds in order to capture and store carbon'.</p>
LPR-B-486	Mandy Ryhmes	LPR-A-156	<p>Strongly object. Developments across these areas of green space would not only double the current size of the village but negatively impact on the village. There are too few facilities in the village to serve any more housing. The local primary school has already undergone expansion just to accommodate the already bulging village population; There is no health centre in the village so yet more residents would put even more strain on the surrounding practices. Levels of crime would increase locally with an increased population. The impact on the local wildlife which enjoys the land where the proposals are for would be obviously catastrophic. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The large-scale developments proposed would utterly change the approach to the village and would create a jarring transition from agricultural land to modern, dense housing. if developed, double the size of West Adderbury overnight. Such large scale development is entirely inappropriate for a village the size of Adderbury and is far more suited to a large town or even a city. few facilities present in Adderbury would be completely swamped by a development of this scale, placing massive pressures on local schools and services. Precious public footpaths over these sites, which are in daily use by local residents, would be lost forever. Development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.</p>

LPR-B-486	Mandy Ryhmes	LPR-A-178	Strongly object. Developments across these areas of green space would not only double the current size of the village but negatively impact on the village. There are too few facilities in the village to serve any more housing. The local primary school has already undergone expansion just to accommodate the already bulging village population; There is no health centre in the village so yet more residents would put even more strain on the surrounding practices. Levels of crime would increase locally with an increased population. The impact on the local wildlife which enjoys the land where the proposals are for would be obviously catastrophic. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The large-scale developments proposed would utterly change the approach to the village and would create a jarring transition from agricultural land to modern, dense housing. if developed, double the size of West Adderbury overnight. Such large scale development is entirely inappropriate for a village the size of Adderbury and is far more suited to a large town or even a city. few facilities present in Adderbury would be completely swamped by a development of this scale, placing massive pressures on local schools and services. Development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.
LPR-B-487	Milton Parish Meeting	Question - Town Centre Uses (Banbury, Bicester & Kidlington)	Town centres are changing and more homes should replace what were offices/shops as centres become more amenable places to live.
LPR-B-487	Milton Parish Meeting	Option 30	The stated objective of the Council and government is to enhance the environment. Cycling and walking are to be preferred to driving and traffic is to be focussed on sustainable corridors. Schools, shops and entertainment (social infrastructure) should be planned to take account of these objectives. Development is to be concentrated in larger settlements and be Oxford, Banbury and Bicester led. Rural communities are to be supported and protected with no development in open countryside. Existing business and tourist locations are to be strengthened (ie not scattered).
LPR-B-487	Milton Parish Meeting	Milton	Rural areas of Cherwell have taken 2641 houses since 2011 whereas Banbury has taken 3612 (with 1536 more unbuilt but with planning). Adderbury and Bloxham are rural communities. Their growth in the last 10 years looks set to turn them into small towns but with few facilities, requiring travel by road to reach most of those facilities in Banbury. The road system was not designed for the large amount of traffic now using it and residents complain of noise and light pollution growing in Bloxham, Milton and Adderbury, with consistent calls for reduced traffic and reduced speed. Villages operate as a single community, towns do not being a congregation of different communities which often compete. Cherwell must decide with the communities of both villages, whether Adderbury and Bloxham are to become towns and eventually part of Banbury, or whether they are to retain, at the last, their identity as villages. Roads to the north and east of Banbury are better capable of handling the increased traffic from Banbury's growth than the south and west and accordingly believe any growth in Banbury should be to Banbury's east and north. Development in the rural areas should be restricted to local needs only. Neighbourhood Plans should control the growth of rural and village development and should not be overturned by the Planning Inspectorate. The sites put forward in the parishes of Adderbury, Milton and Bloxham, do not meet any of the Council's objectives. Development in Adderbury and Bloxham should be small scale so that these communities retain their identity as 'villages in the countryside' and do not become part of and wholly reliant on the facilities of Banbury. Any development in Milton Parish should be very small scale respecting the conservation village and its environs. The proposed development of the old caravan park and its adjoining field should be the subject of a separate consultation with Milton villagers as it falls within the parish boundary but outside the village, in open countryside. Varied views on whether additional services and connections should be provided but all agree that: road traffic should not worsen; urban road painting, signage and lighting should not be sited in or around villages and the countryside; overall landscape and character of the area should be protected and certain special individual features in the landscapes given special protection; tranquillity and reduction of light pollution should be a factor in decision-making; settlements should be prevented from coalescence; commercial and economic growth should be limited to specified urban areas; and, improvement of the environment should be a major factor.
LPR-B-488	Robert Blackburn	Option 30	Village environments are valuable and should be conserved, if they are destroyed or altered by modern developments then they are destroyed or altered for ever. People enjoy the village fabric, the close association of historic buildings, public and private spaces, which together generate the unique sense of 'place', the essence of the village. Villages are not small towns. The village limits should be established, and interior should be preserved, not butchered in the interests of the car driver, especially if the origins of the traffic is from a development on the village edge. Attaching modern development to the periphery of any village should be avoided because a mediaeval urban fabric can not be comfortably wedded to modern buildings and layout. Too much new development will overwhelm the original ancient core. There is a place for modern development in its own right, but that place should not be to glue it onto the edge of an old and valued village. All developments generate road traffic, but hooking up new housing developments to the ancient network of roads and lanes should be avoided. Those networks have enough to cope with as it is. There may be some opportunities within a village for minor development, but too much infilling of this type could alter the character of the place. There will be a limit to the amount of development a place can take and that limit should be established for all rural settlements and written into planning policy.

LPR-B-489	Charles Martin	LPR-A-086	<p>Strongly object. These sites are disproportionate to the existing settlements of Adderbury and Twyford and will place pressure on existing facilities and utilities including the road systems, internet provisions, storm drainage, water and sewer systems which are already failing to keep up with the needs of the village. The development of these sites will also cause a loss of amenity for many of the village who use these areas for walking, recreation and connecting with nature, thus impacting the physical and mental health of the village. Traffic at peak times around the school is already badly compromised with drivers cutting through the back roads, often with excess speed. It is logical that the extra housing will only increase this problem and the traffic pressures and constitutes a significant threat to the safety and wellbeing of the children within the village. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. The large-scale developments proposed would utterly change the approach to the village and would create a jarring transition from agricultural land to modern, dense housing. if developed, double the size of West Adderbury overnight. Such large scale development is entirely inappropriate for a village the size of Adderbury and is far more suited to a large town or even a city. few facilities present in Adderbury would be completely swamped by a development of this scale, placing massive pressures on local schools and services. Precious public footpaths over these sites, which are in daily use by local residents, would be lost forever. Development would lead to the residents of St Mary's Road being completely subsumed by new estates, fundamentally changing the character of the southern edge of West Adderbury. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.</p>
LPR-B-489	Charles Martin	LPR-A-178	<p>Strongly object. These sites are disproportionate to the existing settlements of Adderbury and Twyford and will place pressure on existing facilities and utilities including the road systems, internet provisions, storm drainage, water and sewer systems which are already failing to keep up with the needs of the village. The development of these sites will also cause a loss of amenity for many of the village who use these areas for walking, recreation and connecting with nature, thus impacting the physical and mental health of the village. Traffic at peak times around the school is already badly compromised with drivers cutting through the back roads, often with excess speed. It is logical that the extra housing will only increase this problem and the traffic pressures and constitutes a significant threat to the safety and wellbeing of the children within the village. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. The large-scale developments would utterly change the approach to the village and would create a jarring transition from agricultural land to modern, dense housing. if developed, double the size of West Adderbury overnight. Development would be detrimental to the open nature of the Henge Close estate and to the green space and play area to the east. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.</p>

LPR-B-489	Charles Martin	LPR-A-156	Strongly object. These sites are disproportionate to the existing settlements of Adderbury and Twyford and will place pressure on existing facilities and utilities including the road systems, internet provisions, storm drainage, water and sewer systems which are already failing to keep up with the needs of the village. The development of these sites will also cause a loss of amenity for many of the village who use these areas for walking, recreation and connecting with nature, thus impacting the physical and mental health of the village. Traffic at peak times around the school is already badly compromised with drivers cutting through the back roads, often with excess speed. It is logical that the extra housing will only increase this problem and the traffic pressures and constitutes a significant threat to the safety and wellbeing of the children within the village. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The large-scale developments proposed would utterly change the approach to the village and would create a jarring transition from agricultural land to modern, dense housing. if developed, double the size of West Adderbury overnight. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.
LPR-B-489	Charles Martin	LPR-A-081	Strongly object. These sites are disproportionate to the existing settlements of Adderbury and Twyford and will place pressure on existing facilities and utilities including the road systems, internet provisions, storm drainage, water and sewer systems which are already failing to keep up with the needs of the village. The development of these sites will also cause a loss of amenity for many of the village who use these areas for walking, recreation and connecting with nature, thus impacting the physical and mental health of the village. Traffic at peak times around the school is already badly compromised with drivers cutting through the back roads, often with excess speed. It is logical that the extra housing will only increase this problem and the traffic pressures and constitutes a significant threat to the safety and wellbeing of the children within the village. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. Development would lead to a substantial decrease in the green space between West Adderbury and Milton, increasing the risk of coalescence and impacting upon the character of both villages. A popular footpath would be lost, and irreversible damage would be caused to the amenity of the homes to the north of Adderbury Fields, and to the adjacent green space. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.
LPR-B-490	Lesley Wragg	Option 30	The options offered are not satisfactory choices. An additional criterion required is that The development of rural areas would give great weight to the existing character, size of the village and well- being of exiting residents. Rural areas have already contributed to the development of Banbury e.g. Bodicote, Hanwell etc. Development of brownfield sites better enable higher density, affordable housing, reduced cars, vibrant urban centres. Development in villages needs to be proportionate and organic. Infill may be appropriate. Significantly increase the housing stock in North Newington parish all proposed sites are developed.
LPR-B-490	Lesley Wragg	Option 31	Use a combination of the above but with the caveat that consultation is meaningful. So far the consultation on this plan as a grossly inadequate timescale and discriminatory against people without computers.
LPR-B-490	Lesley Wragg	Option 32	Before discussing the weight to give to services, I stress the importance of considering villages infrastructure; roads, pavements, power, water sewage, drainage, electricity and broadband. Services must be tested for resilience before development is considered. North Newington has narrow roads, parked cars, heavily used, pavement not continuous, water pressure low in parts of village, electricity supply not always secure, storm drains not coping with heavy rain. Bus service withdrawn, walking or cycling not viable options as hazardous. Access to M40 and train station gets more difficult with the extra traffic from expansion westward of Banbury An additional criterion for a rural settlement hierarchy is needed – “The nature and character of the village should not be significantly affected by the development, especially where it abuts a conservation area.” Before any site is agreed for development a proper testing of the resilience of the infrastructure should take place.
LPR-B-490	Lesley Wragg	LPR-A-135	Support. Providing the scale and type of development proposed is suitable we would see this area as appropriate infill as it sits within the village footprint. A more suitable development in the village yielding a 10 % increase in housing stock in the village from 2015 to 2040.

LPR-B-490	Lesley Wragg	LPR-A-004	Object. Not suitable as a backland development that would increase of village footprint. Development would introduce a new road. Would reduce privacy of current residents. Current residents properties devalued. The parcel (land north of Broughton Road) comes within the Parish boundary so should be considered as part of the housing increase for North Newington although it does not directly impact on the character of the village. It will increase the traffic on the Broughton Road and storm water will run off the development and worsen the flooding that often occurs on the Broughton Road.
LPR-B-491	Patrick Whyte	Milton	Object. I live in Milton and have been shocked by the volume and speed of traffic on what should be a quiet country road between Bloxham and Adderbury. Any new development will add to that. I am not against new housing but it needs to be in the right place and existing infrastructure needs to be upgraded. Oxford County Council has talked about making 20mph the new 30mph but in Milton traffic speeds through at at least 40mph and often faster. This needs to be addressed before new houses are built in the area. There is no bus service.
LPR-B-492	David Cawdery	Milton	Object. Milton is a rural conservation village that is being threatened by continuous encroachment from both Adderbury and Bloxham and the general urbanisation that follows. All aspects of traffic, noise, light pollution and reduction of rural tranquillity should be avoided. Any development in Milton Parish should be very small scale (minor infill) respecting the conservation village of Milton and its environs.
LPR-B-493	Christine Robbins	LPR-A-091	Object. This area is used for dog walking and is a lovely open space. I thought it is a public right of way. Please do not build on this open ground. Look at all the empty building, office building and warehouses around Banbury area?
LPR-B-494	Turley for Countryside Properties Ltd	Call for Sites Promotion - Land at south east Bicester	Land at south east Bicester is promoted for housing / community use. Update to HELAA422. A vision document, Countryside as master developer brochure, technical review of the Oxfordshire Growth Needs Assessment and Path Finder Report - Marking out the route to net zero have been supplied.
LPR-B-494	Turley for Countryside Properties Ltd	Option 1	It is important that the emerging Cherwell District Local Plan provides clear commitments and ambitions which align with those emerging as part of the Oxford- Cambridge Arc Spatial Framework and Oxfordshire Plan 2050. This will ensure a consistent approach is taken to growth, sustainability and reducing climate change, recognising the wider strategic role and function that Cherwell and specifically Bicester plays in this region. It is important that the policies within the emerging Local Plan recognise and support this important function, one that provides a meaningful opportunity to balance jobs with homes and reduce the need to travel. A key part of any vision is ensuring it is deliverable. The emerging Plan should be supported by a robust evidence base that includes whole plan viability assessment, one that demonstrates the policies and targets are deliverable within the plan period. The viability assessment should take account of other requirements set by higher tier policy documents (i.e. Oxford-Cambridge Spatial Framework and Oxfordshire Plan), as well as district and site-specific requirements.
LPR-B-494	Turley for Countryside Properties Ltd	Option 2	Countryside supports the general ambitions of the Vision for Cherwell and the Draft Objectives.
LPR-B-494	Turley for Countryside Properties Ltd	Option 3	Employment land and residential developments should be co-located in order to provide benefits to local residents, the local economy and the wider investment into the area. We would suggest the sustainability of the location should be a key factor. Developing previously developed land in isolated locations, or at levels disproportionate to the role and function of a settlement for example would run contrary to the modal shift and climate change objectives of the plan. supports a proportionate focus of employment land at the urban centre of Bicester. Bicester is a key growth location and transport interchange for the District, and indeed for the region, therefore, in order to support additional housing, employment opportunities should also be encouraged and delivered.
LPR-B-494	Turley for Countryside Properties Ltd	Option 4	Policies relating to employment site allocations should include sufficient flexibility in order to allow the sites to adapt to and respond to wider economic circumstances, where evidence dictates a need for varying employment uses and where the provision of mixed use would not prejudice wider strategic objectives of the site and the employment area.
LPR-B-494	Turley for Countryside Properties Ltd	Option 6	acknowledged that there is a considerable need for affordable housing across the district, which is a key component in attracting and maintaining an economically active local population in support of Options 3 and 4, as well as meeting the government's wider objectives to address access to affordable homes for all. If an increase in the percentage of affordable housing is to be pursued, or indeed to the tenure mix requested on individual sites (Option 7), this should be underpinned by a whole plan viability assessment. This will ensure such requirements are both justified and deliverable, and importantly would not undermine the delivery of the other objectives of the plan.
LPR-B-494	Turley for Countryside Properties Ltd	Option 8	supports a policy requirement for all new dwellings, both market tenure and affordable tenure, to achieve minimum space standards outlined in the NDSS. It is important to ensure new housing provides sufficient space for living and increasingly now, for home-working. The requirement to meet the NDSS will help facilitate this. It is also considered that there should not be a prejudice between the level of internal space between market and affordable housing, as such the NDSS requirement should be for all housing tenures.
LPR-B-494	Turley for Countryside Properties Ltd	Option 9	supports the ambition to provide housing for a range of users and this will be a key focus when providing the detailed design of the Site. important to ensure that any policy related to accessibility standards and the provision of accessible units considers viability implications. A requirement for a significant proportion of dwellings to meet accessibility standards may impact the viability of a scheme due to the additional cost these adjustments accrue. Therefore, any policy should ensure it is informed by plan wide viability assessment at the outset, thereby ensuring it is justified and deliverable over the envisaged plan period.
LPR-B-494	Turley for Countryside Properties Ltd	Question - Housing Policies	It is also considered that Modern Methods of Construction(MMC) is an important and growing approach towards housing which will provide significant benefits related to housing delivery. Therefore, the emerging Local Plan should support and encourage this approach. Rep provides a list of the benefits of MMC. Countryside believe timber panel is the future of high quality, sustainable homes and will play a key role in achieving swift and sustainable housing delivery.

LPR-B-494	Turley for Countryside Properties Ltd	Option 10	supports the emphasis placed on responding positively and proactively to climate change in the emerging Cherwell Local Plan Review. This aligns closely with Countryside's own ambitions for their business operations and future development sites. Countryside therefore strongly supports the strategic objectives of the emerging Plan but note that the policy options include the possibility of introducing local sustainability standards above Building Regulations and superficially the Government's proposed Future Homes Standard (FHS). The FHS is an ambitious improvement in Building Regulations which will see new homes reduce their carbon emissions by c.75% compared to those built to the current regulations. Given the volume of new homes required within Oxfordshire and Cherwell there is a risk that the introduction of standards higher than Building Regulations (and specifically those proposed within the Oxfordshire Plan) will restrict the delivery of new homes particularly given that the supply chain is currently not able to deliver these standards at volume. These challenges will also be particularly acute for smaller housebuilders which may further restrict delivery and diversity within the market. it is important that the sustainability policies do not restrict the delivery of much needed new private and affordable housing across the District. the emerging Plan should also include policies to ensure that the spatial distribution of new housing and employment sites contribute to a reduction in carbon emissions. Policies that ensure new development is focused in sustainable locations such as Bicester by access to sustainable modes of transportation and/or key services and facilities that can be accessed via walking and cycling. To ensure consistency across the County the Cherwell Local Plan should be in line with the standards agreed in the Oxfordshire Plan. This ensures that the development requirements for sites are equal and that certain Local Plan areas are not unfairly preferred for development locations where there are differing (or less restrictive) requirements for sustainable construction measures. strongly believes that the sustainability policies of both the Oxfordshire and Cherwell Plans should not set standards above those established by Government for the following reasons; The FHS will see all new homes from 2025 built with an all-electric energy strategy thereby ensuring the carbon footprint of these dwellings reduces each year in line with decarbonisation of the national grid. All new homes from 2025 will require high standards of fabric insulation and renewable energy technologies such as heat pumps and solar PV which are a key requirement of both national and local policy. The FHS places significant technical and commercial challenges upon housebuilders and any standards higher than this risk under delivery of housing and reductions in the number of smaller housebuilders.
LPR-B-494	Turley for Countryside Properties Ltd	Option 11	supports the deployment of renewable energy across Oxfordshire and Cherwell and believes that the plan should identify suitable locations for the deployment of strategic scale renewable energy generating technologies. there should be a robust site selection exercise to identify suitable locations for renewable energy and that consideration should be given (where viable and of a correct scale) to co-locating new development with such infrastructure to reduce costs of upgrading local electricity infrastructure to accommodate all-electric development and a much greater demand for electricity.
LPR-B-494	Turley for Countryside Properties Ltd	Question - Policies for Climate Change, Sustainable Construction & Renewable Energy	firmly believes that one of the most effective ways of reducing carbon emissions is to locate new development in a manner that promotes more sustainable modes of transportation other than the private car. Ensuring a more sustainable approach to the distribution of development can have a hugely beneficial impact in terms of reducing carbon emissions given that approximately 33% of GHG emissions arise from the transportation sector. therefore recommend that within the housing policies there is a specific reference to the promotion of a sustainable pattern of development.
LPR-B-494	Turley for Countryside Properties Ltd	Option 13	supports the approach for proposals to be supported by a natural capital assessment, however, the policy will need to clarify the form and scope of the natural capital assessment. This is to ensure a consistent approach across all sites. The requirement for natural capital assessments will also need to be in line with the Oxfordshire Plan requirements to ensure consistency across the Arc. We request any future policy defines 'environmental net gain' and confirms whether this differs from biodiversity net gain. This is important to understand in order to avoid a repetitive policy requirement.
LPR-B-494	Turley for Countryside Properties Ltd	Question - Biodiversity & The Natural Environment	support the ambition to provide high quality green and blue infrastructure across the District. A policy on this should clearly define what infrastructure this encompasses and should ensure this is factored into the whole plan viability assessment of proposed allocations at the outset. Any policy requiring the protection of landscape areas / features should clearly define what criteria a landscape feature must have in order for it to be classed as important for protection. This will avoid less important landscape features being necessarily protected where they could be put to better and more efficient use, and / or enhanced through replacement planting that has wider biodiversity gain benefits.
LPR-B-494	Turley for Countryside Properties Ltd	Option 14	A combination of these three approaches would ensure that all forms and locations of development benefit from these facilities.supports the ambition to provide LAP/LEAP/NEAPs on large development sites. a policy relating to children's play space should confirm how the required extent of the provision is calculated, for example, based on the population density of the site and needs in the local area.
LPR-B-494	Turley for Countryside Properties Ltd	Option 15	It is considered that the optimal approach towards outdoor sports provision is a combination of providing facilities within urban areas, at the edge of settlements and supporting the enhancement of existing sporting provision through financial contributions where it is not possible or desirable to include facilities on-site. This will ensure all forms and locations of developments will benefit from and contribute towards outdoor sports facilities. The Policy Option refers to the option to secure and establish sports hubs "at our main settlements". If the Council were to proceed with this approach it is important this is transparent, planned and deliverable. This should be factored into urban capacity assessments at the outset, with specific requirements defined. This will ensure identified needs are deliverable within the plan period. For example, formal playing pitch needs may be more difficult to deliver within the urban area (particularly where there is a competing need to make best use of urban land for housing and other uses), than perhaps on the edge via planned strategic development sites.
LPR-B-494	Turley for Countryside Properties Ltd	Question - 20-Minute Neighbourhoods	supports the concept of a 20-minute neighbourhood as it provides accessible facilities and shops as part of the liveable neighbourhood, within a convenient 20-minute walking distance. This concept builds upon the changing approach to transport planning and climate change.

LPR-B-494	Turley for Countryside Properties Ltd	Question - Transport & Connectivity	supports this approach and are of the view that sustainable transport measures are a key factor to be considered within future development proposals themselves and in the selection of sites for allocation. supports the Council's recognition that proposed transport and connectivity approach may not be possible everywhere and notes that in these areas there will be a focus on means of transport and location of development which cause the least impact on the transport network and minimise carbon emissions, which could be through 20-minute neighbourhoods or other locational choices, as well as enhancing public and community transit options.
LPR-B-494	Turley for Countryside Properties Ltd	Option 16	The ambition of Option 16 is supported and aligns with Countryside's company strategy to ensure all properties within new residential developments of over 30 dwellings are connected to open reach fibre.
LPR-B-494	Turley for Countryside Properties Ltd	Question - Transport Policies	The initial list of topics covered under the heading of development control policies are consistent with the wider transport strategy that will underpin the Local Plan. To this end, Countryside supports the topics but will reserve comments until further details are worked up. Without prejudice to the preparation of specific policies and supporting SPDs, it will be key to ensure that the policies that are adopted do not undermine the integrity/commerciality of proposed developments. With specific reference to parking standards and any associated design guides, it will be important that any updated standards and/or guidance build in sufficient flexibility to meet current demands whilst allowing future adaptation as travel patterns change. considers that there would be real merit in the Local Plan including a policy that would support/encourage the use of car clubs across the district.
LPR-B-494	Turley for Countryside Properties Ltd	Question - Infrastructure Delivery	advocates the preparation of a new Infrastructure Delivery Plan (IDP) on the basis that the infrastructure required to support new developments should take into account the expected changes to the way we travel, which have been accelerated by the COVID-19 Pandemic. Countryside believes that the IDP should be drafted in line with the Transport Hierarchy and should be developed having regard to the key destinations that will serve a development. This should consider linkages between areas that will be a focus of activity.
LPR-B-494	Turley for Countryside Properties Ltd	Banbury	Appendix 1 shows the locations of all the sites submitted for Banbury, however the map is based on parish boundaries and does not identify those sites submitted as potential urban extension opportunities for these settlements. In the interests of consistency and transparency, we suggest these maps are updated to be settlement maps, as opposed to Parish maps. LPR-A-208 is not shown on the map at Appendix 1. map in Appendix 1 should be updated to include the call for sites submissions which are at the edge of the settlements in question. As currently shown the map of sites is not fully representative of the land submitted as available at the town.
LPR-B-494	Turley for Countryside Properties Ltd	Bicester	Appendix 1 shows the locations of all the sites submitted for Bicester, however the map is based on parish boundaries and does not identify those sites submitted as potential urban extension opportunities for these settlements. In the interests of consistency and transparency, we suggest these maps are updated to be settlement maps, as opposed to Parish maps. LPR-A-208 is not shown on the map at Appendix 1. map in Appendix 1 should be updated to include the call for sites submissions which are at the edge of the settlements in question. As currently shown the map of sites is not fully representative of the land submitted as available at the town, which would support the expansion of Bicester, and could therefore prejudice the assessment and delivery of sustainable options.
LPR-B-494	Turley for Countryside Properties Ltd	Option 22	It is important that the emerging Cherwell District Local Plan provides clear commitments and ambitions which align with those emerging as part of the Oxford- Cambridge Arc Spatial Framework and Oxfordshire Plan to 2050. It is important that the policies within the emerging Local Plan recognise and support this important function, one that provides a meaningful opportunity to balance jobs with homes and reduce the need to travel. The phased improvements and extensions to the rail line toward Oxford and Milton Keynes are a key component of this, and further supports the justification for additional growth around Bicester. support both the need for and benefits of modest integrated expansion(s) to Bicester. They contend this can be achieved in a manner that respects the identity of Bicester, and its surrounding settlements. Importantly Countryside consider such growth is capable of enhancing the sustainability of the town, along with its role and function in the wider region. These are important considerations in answering this question, as the town performs a strategic role and function that has much wider potential benefits to the district and region. Focusing strategic growth at Bicester has many sustainability advantages over a disbursed growth strategy that draws its employment base from Bicester. Reducing the need to travel being just one of them. Whilst we do not oppose growth to smaller towns and villages, this should be commensurate with the sustainability of the settlement and the objective of reducing the need to travel amongst many other factors.
LPR-B-494	Turley for Countryside Properties Ltd	Option 23	There are multiple advantages of directing development to lesser constrained options south east of Bicester, including the proximity of the site to Symmetry Park, Wretchwick Green, and central Bicester beyond, and the potential for enhanced pedestrian, cycle and public transport links to the town and wider area.
LPR-B-494	Turley for Countryside Properties Ltd	Question - Reducing Car dependency in Bicester	response refers to the benefits of the LPR-A-208 site development.

LPR-B-494	Turley for Countryside Properties Ltd	Sustainability Appraisal	Option 2 (high growth) should be the preferred option given the findings of the SA for the following reasons: - The SA appears to reject Option 2 on the grounds of greater environmental impacts however a review of the SA scoring in Table 3.2 would indicate the following: Air and Environmental Quality: Both options score the same uncertain impact with respect to air quality with the SA acknowledging that higher growth could unlock highways infrastructure investment which could have a positive impact upon air quality. Biodiversity: The SA identifies that Option 1 (lower growth) is likely to result in a lower biodiversity impacts but equally acknowledges that higher growth and the development of strategic sites could result in the creation of high quality green infrastructure that improves biodiversity. Historic Environment: The SA identifies that Option 1 (lower growth) is likely to result in lower impacts upon the historic environment. Countryside believe however that this appraisal is an extremely high level conclusion to take without the use of site specific evidence for heritage impacts and firmly believe that any mitigation can be taken on a site by site basis to reduce or negate any heritage impact. In summary, Countryside believe that the SA has failed to conclusively demonstrate that the environmental benefits of Option1 (lower growth) are significantly better than the socio-economic benefits of Option 2, particularly at this high level stage of assessment. Countryside believe that in order for this policy option to be determined and assessed correctly, this assessment should be repeated at Draft Plan stage but with reference to site specific data to determine the exact nature of any environmental impacts. This is particularly important to Bicester given that the SA recognises the potential benefit that higher growth could bring to the town through the provision of strategic highways mitigation and green infrastructure.
LPR-B-495	Caroline Firth	Bloxham, Milton and Adderbury	Object. The increase in housing on both the Adderbury and the Bloxham ends of "Milton Road" is vast. Increased traffic going at vast speeds along the Milton Road - with the 3 turnings into our village becoming more and more dangerous as cars come along over the speed limit. The roads into Banbury are congested, with traffic jams on numerous occasions - and vast numbers of houses south and west of the town in both directions. There is no more capacity for more housing on the south of Banbury.
LPR-B-496	Milcombe Parish Council	Milcombe	The level of development indicated would be totally out of proportion to the current size of Milcombe consisting of approximately 350 dwellings, this includes 92 that have either been built or are under construction in the last 20 years, if the level of development indicated above was to proceed Milcombe would cease to be an independent village and become merely a dormitory of Bloxham / Banbury. Small organic developments are to be welcomed with a mix of private and affordable properties that reflect the housing needs of local people who may want
LPR-B-496	Milcombe Parish Council	Parish Profile - Milcombe	It would be helpful for all parish profiles to include on their map, areas of land which already have planning permission but have not yet been built and those included in the current Local Plan. This would then allow a more accurate analysis of developments in the village and also in surrounding parishes, especially highlighting coalescence. It would have been helpful for the demographic information to show the current number of households in Milcombe to compare to what is being proposed on these pieces of land. The housing completions and commitment figures does not include Oak Farm Phase 2. The census information is very out of date. Will the parish profile be updated accordingly with the recent census results? It would be useful to indicate on the map, where flood zones 2 & 3 are located as this would help inform whether the proposed sites are suitable for development. Pleasing that the ridge and furrow has been identified as an area which should be protected from development and the importance of the Dovecote and green open space around it. Employment sites are referenced, however, there are many small businesses operating in the village and this information has not been included. Any new large scale development should include provision for a primary school, secondary school, doctors surgery, dental surgery and other infrastructure especially roads. Protection of bats and swifts should be considered. Flood zones taken into account. Section 106 funds to mitigate the impact of developments in the village. Boost income for existing businesses eg. Horse and Groom Public House and village shop. Local authorities should adopt the roads, footpaths, street lighting and open spaces on new developments. Management companies are a good idea in theory, however in practice, it is a very complicated system for residents to negotiate and understand and therefore, they do not get the service that are paying for, via their annual management fees. Would any of these developments impact on the footpath network around the village? Would any of these developments impact on the views of the Church? New developments should have adequate green space. Electric charging points at all new properties. Energy efficient heating at all new properties, residential and business. Adequate off-road parking provided. Preserve the rural character of Milcombe.
LPR-B-496	Milcombe Parish Council	Option 2	The document as a whole is vague and doesn't get down to specific aims and objectives.
LPR-B-496	Milcombe Parish Council	Option 2	KO 1 - This should read: Allocate sufficient suitable land to meet etc. etc. KO 10 to 19 - Nothing about reviewing current planning applications to include such things as increased insulation standards, the provision of electric vehicle charge points, the use of heat pumps and the requirement to integrate solar panels into the design. KO 20 to 31 - Nothing about Waste Management, for example the separation of Surface Water and Sewerage to stop raw sewerage discharges in to rivers etc.
LPR-B-496	Milcombe Parish Council	LPR-A-119	Object. Development is not suitable in this location. However, development would strengthen Milcombe as a viable community. Detrimental impact on infrastructure especially traffic. The site is not avoiding development in key green areas and not in proportion to other recent developments. The parcel south Manor Farm is prone to flooding. The site is not development of brownfield land.
LPR-B-496	Milcombe Parish Council	LPR-A-137	Object. Development is not suitable in this location. However, development would strengthen Milcombe as a viable community. Detrimental impact on infrastructure especially traffic. Development would narrow the gap between parishes. The site is not avoiding development in key green areas and not in proportion to other recent developments. The site is not development of brownfield land.
LPR-B-496	Milcombe Parish Council	LPR-A-158	Object. Development is not suitable in this location. However, development would strengthen Milcombe as a viable community. Detrimental impact on infrastructure especially traffic. Development would narrow the gap between parishes. The site is not avoiding development in key green areas and not in proportion to other recent developments. The site is not development of brownfield land.

LPR-B-496	Milcombe Parish Council	LPR-A-206	Development is potentially suitable in this location. However, development would strengthen Milcombe as a viable community. Detrimental impact on infrastructure especially traffic. The site is not avoiding development in key green areas and not in proportion to other recent developments. The site is not development of brownfield land.
LPR-B-496	Milcombe Parish Council	LPR-A-231	Object. Development is not suitable in this location. However, development would strengthen Milcombe as a viable community. Detrimental impact on infrastructure especially traffic. Development would narrow the gap between parishes. The site is prone to flooding. The site is not avoiding development in key green areas and not in proportion to other recent developments. The site is not development of brownfield land.
LPR-B-497	M J & P A Warren	Sibford Gower	Object. The scale of such development is totally inappropriate in such a small community. We fully support the Sibford Gower Parish Council response.
LPR-B-498	Daniel Fortune	Bloxham, Milton and Adderbury	While living in Milton I have already seen additional housing being built locally which has meant increased traffic and noise pollution, not to mention a loss of green space. Their growth in the last 10 years looks set to turn them into small towns with few facilities. The local roads were not designed for the large amount of traffic now using them. Residents already complain of noise and light pollution growing in Bloxham, Milton and Adderbury, with consistent calls for reduced traffic and reduced speed. Development in the rural areas where roads already struggle with the amount of traffic should be restricted to local requirements only. Neighbourhood Plans should govern the growth of rural and village development and should not be overturned by the Planning Inspectorate. The sites do not meet any of the Council's stated objectives, nor are they consistent with any of the previous consultation results. Any development permitted in Milton Parish should be very small-scale respecting the conservation village and its environs. The proposed development of the old caravan park and its adjoining field should be the subject of a separate consultation with Milton villagers as it falls within the parish boundary (though outside the village), in open countryside. Urban signage and lighting should not be sited in or around villages and the countryside but should be restricted to towns. Overall landscape and character of the area should be protected and certain special individual features in the landscapes given special protection in addition. Tranquillity and reduction of light pollution should be a factor in decision-making on development of any kind. Individual settlements should be prevented against coalescence and local design features should be more strongly enforced. Commercial and economic growth should be limited to specified urban areas. Improvement of the environment should be a major factor wherever previously developed land or greenfields are considered for development.
LPR-B-499	DR Graham & Mrs Jennifer Speake	Bloxham and Adderbury	Strongly object. Adderbury and Bloxham are rural communities. Their growth in the last 10 years looks set to turn them into small towns with few facilities. The local roads were not designed for the large amount of traffic now using them. Residents already complain of noise and light pollution growing in Bloxham, Milton and Adderbury, with consistent calls for reduced traffic and reduced speed. Development in the rural areas where roads already struggle with the amount of traffic should be restricted to local requirements only. Neighbourhood Plans should govern the growth of rural and village development and should not be overturned by the Planning Inspectorate. The sites do not meet any of the Council's stated objectives, nor are they consistent with any of the previous consultation results. Any development permitted in Milton Parish should be very small-scale respecting the conservation village and its environs. The proposed development of the old caravan park and its adjoining field should be the subject of a separate consultation with Milton villagers as it falls within the parish boundary (though outside the village), in open countryside. Urban signage and lighting should not be sited in or around villages and the countryside but should be restricted to towns. Overall landscape and character of the area should be protected and certain special individual features in the landscapes given special protection in addition. Tranquillity and reduction of light pollution should be a factor in decision-making on development of any kind. Individual settlements should be prevented against coalescence and local design features should be more strongly enforced. Commercial and economic growth should be limited to specified urban areas. Improvement of the environment should be a major factor wherever previously developed land or greenfields are considered for development.
LPR-B-500	Johanna Stephenson	Option 1	The proposed development of Islip is grossly disproportionate & takes no account of the effect it will have on a historic settlement & its residents or the fact that it will destroy valuable agricultural land. The effect on the ecology of the village & its rural surroundings has been largely ignored. The facts that this small community is embedded in the Green Belt, surrounded by flood zones & has a large conservation area have been glossed over. In the light of COP26 & current thinking on environmental matters, the plan to devastate a rural area is devastating.
LPR-B-500	Johanna Stephenson	Option 2	KO1: housing & employment needs should not trump environmental & agricultural imperatives. KO4: irrelevant in this case. KO5: important but not upheld by your plan. KO6: important but destroyed by your plan. KO9: important but ignored by your plan. KO25: very ignored but will be devastated by plan. Is the most important objective but appears incompatible with your plans.
LPR-B-500	Johanna Stephenson	Option 3	Option 1 and 2.
LPR-B-500	Johanna Stephenson	Option 4	Option 3 - not on agricultural land, which is essential for the future.
LPR-B-500	Johanna Stephenson	Option 5	Option 2. Provide for sufficient parking to allow people to use town centres for their needs, rather than pushing them away. Hostility to cars has led to significant destruction of town centres. Better parking and encouragement of independent retailers would help retail.
LPR-B-500	Johanna Stephenson	Option 6	Option 1.
LPR-B-500	Johanna Stephenson	Option 7	Option 2.
LPR-B-500	Johanna Stephenson	Option 9	Housing policies: Environmental building, heating, etc. and discouraging speculators, buy-to-lets & 2nd home owners – perhaps by increased levies/taxes, etc.
LPR-B-500	Johanna Stephenson	Option 10	Retrofitting existing stock should always take precedence over building new houses.
LPR-B-500	Johanna Stephenson	Option 11	Option 2. Follow recommendations arising from COP26 & subsequent debates in relation to climate change policies. Protect the green belt.
LPR-B-500	Johanna Stephenson	Option 12	Option 1. Our experience with destructive force of the development of the railway here, with hundreds of trees & shrubs removed throughout our village & surrounding fields – & never replaced – we have no faith in the willingness or ability of CDC & developers to protect biodiversity.

LPR-B-500	Johanna Stephenson	Option 13	Option 2.
LPR-B-500	Johanna Stephenson	Option 15	Protect the historic environment. 20-minute neighbourhood already exists in Islip – would be partially destroyed by extensive development
LPR-B-500	Johanna Stephenson	Option 16	Option 1 and 2.
LPR-B-500	Johanna Stephenson	Option 17	Current methodology doesn't take into account the importance of agriculture – an essential part of our infrastructure. Include a policy on agriculture.
LPR-B-500	Johanna Stephenson	Option 25	Closure of useful shops – no reason to visit the town if all businesses become defunct. No policy to control re-development of larger dwellings.
LPR-B-500	Johanna Stephenson	Option 26	Option 1.
LPR-B-500	Johanna Stephenson	Option 27	Option 1. Killing off the centre of Kidlington by making it difficult for visitors from surrounding villages would reduce traffic - & encourage online shoppers & growth of supermarkets outside.
LPR-B-500	Johanna Stephenson	Option 28	No need for either option if the green belt is protected.
LPR-B-500	Johanna Stephenson	Option 30	Rural areas are part of the heritage of our country, & that they have a part to play in the future of the country. Agricultural land isn't just for looking at – it needs protecting.
LPR-B-500	Johanna Stephenson	Option 31	Option 1.
LPR-B-500	Johanna Stephenson	Option 32	No to both options.
LPR-B-500	Johanna Stephenson	Option 33	Talk to rural communities & the people who work the land to find out what they need, rather than imposing 'criteria-based policies'?
LPR-B-500	Johanna Stephenson	Option 34	Option 1. More support required for neighbourhood planning.
LPR-B-501	Sworders for Mr Bertrand Facon	Option 20	support the proposed focus on 20 minute neighbourhoods, where people's daily needs are within a 20 minute walk or cycle ride.
LPR-B-501	Sworders for Mr Bertrand Facon	Question - Transport & Connectivity	Section 5.12 (Connectivity and Transport) focuses on connectivity between Oxfordshire and other locations, and between the major towns within Oxfordshire. More emphasis should be placed in this section of the plan on connectivity between smaller settlements within the County and the District. If development and infrastructure continues to be focused on urban areas, the gap between sustainable travel options in urban areas and in rural areas will continue to widen, and residents of rural areas will be ever more isolated. This Plan should embrace the opportunity to create a step change by improving connectivity in rural areas, which will benefit existing residents, and enable new developments to be delivered more sustainably in rural areas.
LPR-B-501	Sworders for Mr Bertrand Facon	Option 17	consider that the Infrastructure Delivery Plan should be updated by catchment and how accessible places are, to maximise the opportunities for connections to be made between places, to recognise existing patterns of infrastructure use and to influence future patterns of use.
LPR-B-501	Sworders for Mr Bertrand Facon	Option 30	recognise that there has been development of housing in rural areas since the adoption of the Core Strategy in 2015, and that much of that has been speculative development, which has not always been supported by the delivery of infrastructure and services to support those developments. However, this is not a reason to limit further development in rural areas to only meeting local needs. Indeed, it is a good reason to plan proactively for development in rural areas, to ensure that further development is properly supported by the infrastructure required and to stimulate and enhance the local economy. This is particularly the case in well serviced villages such as Bloxham, which offer a wide range of shops, services, and community facilities as well as good accessibility to Banbury, where there are opportunities to further improve the infrastructure and services. Rural housing should not just be limited to meeting local housing need. It should be recognised that properly planned rural housing, with the infrastructure to support it, provides homes in places where people want to live, where they can have a high quality of life and access to local services and facilities, and contributes to the continued vitality and viability of rural areas by introducing new residents who support the local schools, shops, community facilities, and public transport provision. As such, rural housing should be used to meet District wide housing need. Limiting new development to meeting local housing needs exacerbates the gap between urban and rural areas and the sustainable transport and facilities to which they have access.
LPR-B-501	Sworders for Mr Bertrand Facon	Option 31	strongly recommend that the Council works with communities to allocate specific sites to meet identified, district wide, housing needs. Recent years have shown that in the absence of a strong, plan led approach in rural areas, Neighbourhood Plans allocate little if any land for housing, and speculative applications can be made. If CDC works with communities to identify and allocate specific sites, these can be properly planned for, with associated infrastructure, and the process gives local communities some ownership of the process.
LPR-B-501	Sworders for Mr Bertrand Facon	Option 32	consider that appropriate weight should be given to each of a whole range of services, and that the weighting used in the assessment should be agreed and set out in a transparent process, and then all rural settlements should be assessed consistently against these criteria. Note that Bloxham has an extensive range of shops and services including three village stores, a post office, a petrol station, a GP surgery, a dentist, a pharmacy, a primary school, a secondary school and a private school, churches, public houses, a fish and chips shop, a nursery, a care home, a village hall, play areas, a barber shop a beauty salon and a physiotherapist. The village is served by an hourly bus service to Banbury and Chipping Norton. Such an extensive range of facilities provides a highly sustainable location for development and should be recognised as such in a rural settlement hierarchy. Re the definition settlement boundaries; settlement boundaries should only be defined once any draft allocations for this Plan have been proposed. They should not be used to limit development now, at a time when high housing numbers are being planned for, but should be incorporated into the discussion around the allocation of sites. Settlement boundaries are not necessarily in place simply to prevent further development. A criteria based policy would enable appropriate development to take place adjacent to settlement boundaries if this results in sustainable development in appropriate locations.

LPR-B-501	Sworders for Mr Bertrand Facon	LPR-A-052	<p>promotes the development of the site for residential development of approx.100 homes suitable for a mix of homes with generous gardens and areas of open space. The site lies within a 5 minute cycle ride of these facilities in Bloxham. The 20 minute neighbourhood concept also lies to Land at Tadmarton Road and its proximity to Banbury, now that the shared use path connecting Bloxham and Banbury has been completed, which provides a safe environment for pedestrians and cyclists to travel between the two settlements. The site covers an area of 8.5ha, but of this, only 6.4 ha is considered to be developable, as this is the area which lies adjacent to the village, on the relatively flat land at the foot of Hobb Hill, but not extending up the hill. It is proposed that there is extensive landscaping and green space within the site, as well as the provision of a car park to serve Bloxham Primary School. Landowners are currently in discussions with a neighbouring landowner to potentially include a strip of land to the west of the site, which would enable the scheme to deliver both a safe, vehicular access to the site from Tadmarton Lane, and to provide a car park within the site, for use by the village primary school, so that parents can safely pick up and drop off their children. This would help to relieve the congestion experienced in the mornings and afternoons associated with school drop offs and pick ups. Based on an assumed 1,350 households in Bloxham, the proposed development would represent a 7.4 % increase in the housing stock of Bloxham, so would provide a modest addition to the housing stock in the village. The site lies close to the village and would not encroach beyond this boundary. Existing development extends further north and eastwards from our site along Banbury Road, so development of this site would not close the gap between Bloxham and Banbury. There are no formal landscape designations on the land, and any informal designation such as a valued landscape would be taken account of through the extensive landscaping of the site and the improved access to Hobb Hill offered by the landowners. Bloxham is a highly sustainable location for new development because it offers a wide range of facilities to cater for daily needs, for all ages and types of households. Further, it is served by a regular bus service which runs seven days per week, and a cycle/footpath which links the village with Banbury. One mile to the north of Bloxham lies Vantage Business Park, which offers a range of employment opportunities, including a printing company, building supplies and a publishing company. In Banbury there are employment opportunities a hospital, a wide range of shops, banks, a library, indoor sports facilities, opticians, and the full range of retail opportunities if required. support the provision of footpaths and retention and enhancement of hedgerows. Proposals for development include enhancement and widening of the existing public footpath up Hobb Hill to provide designated local green space up and at the top of the hill, adjacent to the reservoir at the top of Hobb Hill, for the enjoyment of the views for the public. The proposals also include the potential delivery of a new pedestrian and cycle way between Courtington Lane and the site. support the Neighbourhood Plan proposal not to exceed a housing density of 30 dph. However, applying Huff House standards to all developments would be very expensive to deliver, would increase house prices accordingly, and would therefore exclude some people from the housing market. However, electric vehicle charging points could be provided, and residents would be able to safely walk or cycle to the village.</p>
LPR-B-501	Sworders for Mr Bertrand Facon	Sustainability Appraisal	<p>strongly encourage the LPA to adopt Option 2, the higher growth option. Additional development in Bloxham would not necessarily result in a proportionally greater increase in traffic than additional development in urban areas through the urban Air Quality Management Areas identified. The provision of an hourly bus service to Banbury and the recent delivery of the cycle and footway connecting Bloxham and Banbury, as well as the extensive provision of local shops and services in Bloxham, would all help to minimise additional traffic. Residents in the proposed development site will have no need to use motor vehicles to go anywhere in Bloxham. The SA notes that dispersed, smaller scale housing scheme could be delivered at the expense of a focus on strategic growth locations, and would provide a missed opportunity to support strategic biodiversity enhancements. This does not have to be the case. The biodiversity enhancements which could be provided at land at Tadmarton Road would be extensive, would benefit existing and new residents, and would connect into an existing green infrastructure network surrounding the site. support the assertion in the Sustainability Appraisal that well targeted growth within the rural area can assist with maintaining local services and facilities such as a primary school, thereby minimising the need to travel to nearby villages. This is particularly the case for our clients' site, which lies within walking distance of both primary and secondary schools, as well as shops, services and employment opportunities. The SA notes in relation to Communities that 'assuming well located growth, there is support for exploring options that would see increased growth in the rural area relative to the existing strategy however, there are uncertainties.' This approach is supported – the IDP needs to identify where infrastructure is required to support appropriate growth in rural areas. This may include improving bus services or providing better footways linking new developments to existing villages. The SA notes that it will be important that the district wide portfolio of housing sites identified by the Local Plan Review includes a good proportion of smaller sites. Smaller sites can be delivered quickly and will contribute to a five year housing land supply. It is too simplistic to dismiss a rural housing strategy on the basis of likely highway impacts. The strategy should recognise that some rural areas, such as Bloxham, are well served by public transport, and are likely to generate far fewer highway trips than other settlements with fewer facilities.</p>
LPR-B-502	Sworders for Mr J Dent	Option 20	<p>support the proposed focus on 20 minute neighbourhoods, where people's daily needs are within a 20 minute walk or cycle ride.</p>
LPR-B-502	Sworders for Mr J Dent	Question - Transport & Connectivity	<p>Section 5.12 (Connectivity and Transport) focuses on connectivity between Oxfordshire and other locations, and between the major towns within Oxfordshire. More emphasis should be placed in this section of the plan on connectivity between smaller settlements within the County and the District. If development and infrastructure continues to be focused on urban areas, the gap between sustainable travel options in urban areas and in rural areas will continue to widen, and residents of rural areas will be ever more isolated. This Plan should embrace the opportunity to create a step change by improving connectivity in rural areas, which will benefit existing residents, and enable new developments to be delivered more sustainably in rural areas. Deddington already benefits from a good bus service (S4 service) between the village and Banbury and Oxford, but the frequency of the service could be increased, to improve the public transport link.</p>
LPR-B-502	Sworders for Mr J Dent	Option 17	<p>consider that the Infrastructure Delivery Plan should be updated by catchment and how accessible places are, to maximise the opportunities for connections to be made between places, to recognise existing patterns of infrastructure use and to influence future patterns of use.</p>

LPR-B-502	Sworders for Mr J Dent	Option 30	recognise that there has been development of housing in rural areas since the adoption of the Core Strategy in 2015, and that much of that has been speculative development, which has not always been supported by the delivery of infrastructure and services to support those developments. However, this is not a reason to limit further development in rural areas to only meeting local needs. Indeed, it is a good reason to plan proactively for development in rural areas, to ensure that further development is properly supported by the infrastructure required and to stimulate and enhance the local economy. This is particularly the case in well serviced villages such as Bloxham, which offer a wide range of shops, services, and community facilities as well as good accessibility to Banbury, where there are opportunities to further improve the infrastructure and services. Rural housing should not just be limited to meeting local housing need. It should be recognised that properly planned rural housing, with the infrastructure to support it, provides homes in places where people want to live, where they can have a high quality of life and access to local services and facilities, and contributes to the continued vitality and viability of rural areas by introducing new residents who support the local schools, shops, community facilities, and public transport provision. As such, rural housing should be used to meet District wide housing need. Limiting new development to meeting local housing needs exacerbates the gap between urban and rural areas and the sustainable transport and facilities to which they have access.
LPR-B-502	Sworders for Mr J Dent	Option 31	strongly recommend that the Council works with communities to allocate specific sites to meet identified, district wide, housing needs. Recent years have shown that in the absence of a strong, plan led approach in rural areas, Neighbourhood Plans allocate little if any land for housing, and villages are then vulnerable to speculative applications. If CDC works with communities to identify and allocate specific sites, these can be properly planned for, with associated infrastructure, and the process gives local communities some ownership of the process. The Deddington Neighbourhood Plan was withdrawn in November 2019 following the publication of the Examiners' report into the Plan, but there is an opportunity for the District Council to work with the Parish as they prepare a new version of the Plan.
LPR-B-502	Sworders for Mr J Dent	Option 32	consider that appropriate weight should be given to each of a whole range of services, and that the weighting used in the assessment should be agreed and set out in a transparent process, and then all rural settlements should be assessed consistently against these criteria. Note that Deddington has a range of shops and services including a village store, a post office, a GP surgery, a dentist, a pharmacy, a primary school, churches, public houses, and a number of restaurants. It also has a nursery, a care home, a community centre, play areas, and recreational facilities. The village is served by an hourly bus service to Banbury and Oxford. Such an extensive range of facilities provides a highly sustainable location for development and should be recognised as such in a rural settlement hierarchy. Option 32 also asks whether the Council should define settlement boundaries, beyond which development would not normally be permitted. Firstly, settlement boundaries should only be defined once any draft allocations for this Plan have been proposed. They should not be used to limit development now, at a time when high housing numbers are being planned for, but should be incorporated into the discussion around the allocation of sites. Secondly, settlement boundaries are not necessarily in place simply to prevent further development. A criteria based policy would enable appropriate development to take place adjacent to settlement boundaries if this results in sustainable development in appropriate locations.
LPR-B-502	Sworders for Mr J Dent	LPR-A-074	Villages such as Deddington offer a wide range of shops, services, and education, all within a 20 minute walk or cycle ride of residential development sites such as Land East of the A4260. The site lies within a 5 minute cycle ride of these facilities in Deddington.
LPR-B-503	Jackie Hawtin and Bernard Harris	Adderbury	Recent development has increased housing in the village by circa 20% in a short amount of time. The village has already had to deal with the pressures of the extra houses without any increase in amenities or infrastructure so to consider any further development on any large scale would be seriously detrimental to village life. The rural feel of the village has already been compromised with recent development and the expansion on the scales proposed will significantly impact the village. The character and community of the village will be lost and is not something that can ever be recovered once gone. The size of the proposed development is not in keeping with a village environment. Indeed much of the proposed development contravenes the policies set out in the Adderbury Neighbourhood Plan by building outside of the accepted boundary of the village. This will result in Adderbury becoming morphed into the village of Bodicote and/or Bloxham. The size of the proposed developments is not proportionate to the existing size of the village. Developments of such size should be restricted to towns not small villages. The village would be more than doubled by some of the proposed developments. The proposed developments would no longer allow views of the village church. The infrastructure in the village is not sufficient at present let alone if further development took place. Congestion on the main road running through Adderbury (A4260) is already severe. Further increase in traffic would result in gridlock at certain times of the day. The amount of traffic is already dangerous, with the proximity of the school. The pollution of traffic from this stretch of road is worrying with many children using the roads to walk to school. The road is also the main route for ambulances travelling into the JR hospital from Banbury, it would be chaos with further traffic and emergency services trying to access the hospital in Oxford. The village has a network of fields, footpaths and ecological and wildlife habitats which have already been disturbed by recent developments and will be further impacted by the proposed developments. There will be a detrimental increase in pollution from traffic, noise and light.

LPR-B-504	Jo Samways	Question - Local Green Spaces	Land to the north of Cropredy and south of Cropredy Marina, Cropredy is proposed for designation as a Local Green Space. A site location plan has been supplied. As a resident of Kyetts Corner, Cropredy, I overlook site LPR-A-155. 6 of my 11 windows have views of this site. I am opposed to this site being considered for development because development here would: <ul style="list-style-type: none"> <li>• Have a negative impact on the natural environment.</li> <li>• Destroy the biodiversity of the area.</li> <li>• Negatively effect the ecological resilience of this rural area.</li> <li>• Negatively effect the rural economy by destroying farmland.</li> <li>• Provide a flood risk, as development on this site would mean the area would no longer be able to act as a sponge.</li> <li>• Destroy a natural winter spring.</li> <li>• Delay this areas ability to recover after the impact of the marina build which saw the spoil of the basins spread across the entire field, causing damage to the soil structure.</li> <li>• Permanently effect the views and therefore mental wellbeing of 34 households which overlook this site.</li> <li>• Permanently effect the tranquillity of the area.</li> <li>• Expanding the village in this direction goes beyond our settlement boundaries. In order to make a development in this area carbon neutral we would need to off balance the destruction of this piece of land with creation of a green space elsewhere. This field should be seen as part of our natural capital and supplying an ecosystem service and therefore protected. Instead I would suggest this land is put forward to be a green space. Perhaps a community forest.</li> </ul>
LPR-B-504	Jo Samways	Option 3	At our main urban centres of Banbury, Bicester and Kidlington and Mostly on previously developed land
LPR-B-504	Jo Samways	Option 4	Provide mixed use sites to include general industry, distribution (B2 and B8 uses), light industry and other potentially compatible uses such as retail and leisure (E use classes)
LPR-B-504	Jo Samways	Option 5	Maximise flexibility within the town centre for different uses including residential development and other community and leisure uses. I believe unused buildings in town centres should be compulsorily purchased and turned into residential apartments, sympathetically renovated to protect heritage but also to create housing for young people, with excellent transport links. Not only would this support the town centre economy but also invigorate the town centres as communities.
LPR-B-504	Jo Samways	Option 6	Increase the percentage requirement of affordable housing required on housing developments of 10 or more units
LPR-B-504	Jo Samways	Option 7	Keep the same affordable housing tenure mix as set out in the 2015 Local Plan with 70% Affordable and Social Rent and 30% Social Rent
LPR-B-504	Jo Samways	Option 8	Other - I don't know the answer to this question
LPR-B-504	Jo Samways	Question - Separation Distances	Yes.
LPR-B-504	Jo Samways	Option 9	Continue to rely on Building Regulations in respect of accessibility
LPR-B-504	Jo Samways	Question - Housing Policies	Yes - In order to fulfil the goals outlined in the policy, all new housing will have to be sustainable. I believe self build projects would give residents of Cherwell the opportunity to learn new skills in sustainable house building and be able to use these skills elsewhere. This would create innovation, knowledge based employment and support the needs of local business and communities. Housing styles should be modern and fully support modern living styles, with access to good transport links to both places of work and between rural and urban areas. When deciding what 'good' design is, Cherwell should seriously consider what modern families, especially young families, need and want. To date, modern housing developers use mock Victorian styles to create versions of the very houses, young people throughout the country are paying to convert and renovate. We should not keep building in these faux traditional styles, but embrace sustainable building techniques, but also reflect the lifestyle choices people are making. The term "in keeping" has been used, to allow mediocre design, unsustainable building practices, and un-innovative architecture across Oxfordshire in the past. This plan should seek to be innovative and allow design to reflect that. Implementing really good and innovative modern design could create knowledge based employment and enrich the environment, culture and heritage. Looking at how communities work, and focusing on self-build initiatives would not only create employment opportunities for the future but also enhance peoples mental wellbeing.
LPR-B-504	Jo Samways	Option 10	Set sustainable design and construction standards for residential and non-residential development in Cherwell above those required by Central Government
LPR-B-504	Jo Samways	Question - Retrofitting of Historic Buildings	Before building new developments, we should be looking at the circular economy and look at revitalising existing buildings or grey areas. Developers should be encouraged to sympathetically restore and enhance and restore old buildings in the centre of town. Successful developments like the sympathetic restoration of 16 Market Place Banbury should be promoted as a fantastic opportunity for the economy as well as a way of preserving our heritage. The plan should be looking at upcycling existing buildings and creating more domestic residences in our town centres, through compulsory purchasing of large empty units that are being used as land banks – e.g. 1 Malthouse Walk Banbury, and other buildings along Bridge Street Banbury. Residential apartments in town centres have advantages of excellent public transport links, but also a way of injecting the local towns economies.
LPR-B-504	Jo Samways	Option 11	Identify and allocate specific sites for renewable energy generation and Use a criteria-based policy to assess the appropriateness of proposals for renewable energy generation

LPR-B-504	Jo Samways	Question - Policies for Climate Change, Sustainable Construction & Renewable Energy	Rural Planning I believe we do need to limit development in rural areas to meet local needs and protect the environment. While Villages need to grow, and builders need jobs, housing developments shouldn't just benefit huge companies. Current huge developments take advantage of building on mass, but Cherwell should consider local builders being able to make a difference in their communities on a small scale. Instead of giving permission for huge developments by large companies, why not provide opportunity for self build initiatives, with innovative and sustainable solutions. This would enrich the local community, teach people new skills and put money back into the rural economy. In order to fulfil the goals outlined in the policy, all new housing will have to be sustainable. I believe self build projects would give residents of Cherwell the opportunity to learn new skills in sustainable house building and be able to use these skills elsewhere. This would create innovation, knowledge based employment and support the needs of local business and communities. Housing styles should be modern and fully support modern living styles, with access to good transport links to both places of work and between rural and urban areas. Good Design When deciding what 'good' design is, Cherwell should seriously consider what modern families, especially young families, need and want. Light and space, and outside areas are important to young families. To date, modern housing developers use mock Victorian styles to create versions of the very houses, young people throughout the country are paying to convert and renovate. We should not keep building in these faux traditional styles, but embrace sustainable building techniques, but also reflect the lifestyle choices people are making. The term "in keeping" has been used, to allow mediocre design, unsustainable building practices, and un-innovative architecture across Oxfordshire in the past. This plan should seek to be innovative and allow design to reflect that. Implementing really good and innovative modern design could create knowledge based employment and enrich the environment, culture and heritage. Looking at how communities work, and focusing on self-build initiatives would not only create employment opportunities for the future but also enhance peoples mental wellbeing. Planning in Banbury Before building new developments, we should be looking at the circular economy and look at revitalising existing buildings or grey areas. Developers should be encouraged to sympathetically restore and enhance and restore old buildings in the centre of town. Successful developments like the sympathetic restoration of 16 Market Place Banbury should be promoted as a fantastic opportunity for the economy as well as a way of preserving our heritage. The plan should be looking at upcycling existing buildings and creating more domestic residences in our town centres, through compulsory purchasing of large empty units that are being used as land banks – e.g. 1 Malthouse Walk Banbury, and other buildings along Bridge Street Banbury. Residential apartments in town centres have advantages of excellent public transport links, but also a way of injecting the local towns economies.
LPR-B-504	Jo Samways	Option 12	Other - Don't build on areas of biodiverse, or agricultural land, and then try and offset the damage by creating green spaces elsewhere - it's just counter productive.
LPR-B-504	Jo Samways	Option 13	Include a policy in the Plan requiring major development proposals to: a) be supported by a natural capital assessment to demonstrate the impact of the proposals and b) demonstrate environmental net gain
LPR-B-504	Jo Samways	Question - Biodiversity & The Natural Environment	The land at LPR-A-155 should be seen as part of our natural capital and supplying an ecosystem service and therefore protected. Instead I would suggest this land is put forward to be a green space. Perhaps a community forest.
LPR-B-504	Jo Samways	Option 14	Other - I'm not sure how to respond to this question
LPR-B-504	Jo Samways	Option 15	Continue with the current policy approach of securing new pitch provision as part of strategic development sites. Seek to secure and establish sports hubs at our main settlements. Use financial contributions from developers in lieu of on-site provision on strategic sites to enhance existing facilities, to enable increased use
LPR-B-504	Jo Samways	Question - Achieving Good Design & 'Beauty'	When deciding what 'good' design is, Cherwell should seriously consider what modern families, especially young families, need and want. Popular TV shows document the conversion of Victorian style town houses, with huge modern glass structures. Light and space, and outside areas are important to young families. To date, modern housing developers use mock Victorian styles to create versions of the very houses, young people throughout the country are paying to convert and renovate. We should not keep building in these faux traditional styles, but embrace sustainable building techniques, but also reflect the lifestyle choices people are making. The term "in keeping" has been used, to allow mediocre design, unsustainable building practices, and un-innovative architecture across Oxfordshire in the past. This plan should seek to be innovative and allow design to reflect that. Implementing really good and innovative modern design could create knowledge based employment and enrich the environment, culture and heritage. Looking at how communities work, and focusing on self-build initiatives would not only create employment opportunities for the future but also enhance people's mental wellbeing.
LPR-B-504	Jo Samways	Question - Transport & Connectivity	yes agree with the approach. I am encouraged by the plans desire to reduce private car ownership and improve transport links. I am worried that smaller villages may suffer. Yes approach should be different for rural areas.i agree with 71. measures to drive less - Cheaper, greener public transport.
LPR-B-504	Jo Samways	Option 16	Provide a policy with the requirements expected from new development to provide digital connections and be designed to accommodate future digital infrastructure needs (future proofing). Provide a criteria-based policy on the location and mitigation requirements for telecommunications development
LPR-B-504	Jo Samways	Option 17	Update the methodology to consider social and environmental benefits of schemes and the contributions they make to climate action, healthy place shaping, and a sustainable economy. Look at areas by catchment and how accessible they are.
LPR-B-504	Jo Samways	Question - Delivering Infrastructure	Adoption services are Oxford Centric. Physiotherapy services are Oxford Centric. As a resident of Cropredy, needing access to both of the above, I need to take time off work, and pay to travel to use the above services. A trip to an appointment in Oxford requires half a day off work.
LPR-B-504	Jo Samways	Option 18	limit development at Banbury to protect its landscape setting and maintain separation between the town and surrounding villages
LPR-B-504	Jo Samways	Option 19	other - inside the town - there is a lot of unused building in the town itself currently being land banked by people outside of the county. Look at the buildings in Bridge Street. New site suggestion - Unused buildings in Banbury Town Centre like 1 Malthouse Walk Banbury
LPR-B-504	Jo Samways	Question - Important Views of Banbury	yes. St Mary's is a beautiful historic and a tourist attraction

LPR-B-504	Jo Samways	Option 20	allow maximum flexibility of uses under permitted development rules
LPR-B-504	Jo Samways	Option 21	Continue to allocate the site for residential led redevelopment involving a transition of the site away from commercial uses to a sustainable, well designed residential area. Allocate the site for a more flexible mix of residential and commercial uses creating a sustainable and well designed, mixed use area
LPR-B-504	Jo Samways	Question - Banbury's Open Spaces	would love to see a wild swimming area created in Spiceball Park. This would be a wonderful tourist attraction, excellent for wellbeing and create a real buzz in Banbury.
LPR-B-504	Jo Samways	Question - Reducing Car Dependency in Banbury	A bus service from my village which allowed me to get to work for 9am and home again at the end of a working day. A bus service that allowed me to go into town for a meal in the evening. A bus service that allowed my daughter to get to her school
LPR-B-504	Jo Samways	Option 30	Limit development in the rural areas to that required to meet local needs. believe we do need to limit development in rural areas to meet local needs and protect the environment. While Villages need to grow, and builders need jobs, housing developments shouldn't just benefit huge companies. Current huge developments take advantage of building on mass, but Cherwell should consider local builders being able to make a difference in their communities on a small scale. Instead of giving permission for huge developments by large companies, why not provide opportunity for self build initiatives, with innovative and sustainable solutions. This would enrich the local community, teach people new skills and put money back into the rural economy. In order to fulfil the goals outlined in the policy, all new housing will have to be sustainable. I believe self build projects would give residents of Cherwell the opportunity to learn new skills in sustainable house building and be able to use these skills elsewhere. This would create innovation, knowledge based employment and support the needs of local business and communities. Housing styles should be modern and fully support modern living styles, with access to good transport links to both places of work and between rural and urban areas.
LPR-B-504	Jo Samways	Option 31	use a combination of the above
LPR-B-504	Jo Samways	Option 32	No- no more weight due to accessibility to urban centres. By adding weight to places that already have the infrastructure you just reduce the ability of the really small places to grow and turn medium sized villages into small towns...
LPR-B-504	Jo Samways	Question - Settlement Boundaries	I'm not sure. In some cases yes.
LPR-B-504	Jo Samways	Option 33	use a combination of the above
LPR-B-504	Jo Samways	Option 34	Retain the current approach of seeking to conserve and enhance the countryside and landscape character of the whole district
LPR-B-504	Jo Samways	LPR-A-155	As a resident of Kyetts corner, I overlook this site. 6 of my 11 windows have views of this site. I am opposed to this site being considered for development because development here would: <ul style="list-style-type: none"> <li>• Have a negative impact on the natural environment.</li> <li>• Destroy the biodiversity of the area.</li> <li>• Negatively effect the ecological resilience of this rural area.</li> <li>• Negatively effect the rural economy by destroying farmland.</li> <li>• Provide a flood risk, as development on this site would mean the area would no longer be able to act as a sponge.</li> <li>• Destroy a natural winter spring.</li> <li>• Delay this areas ability to recover after the impact of the marina build which saw the spoil of the basins spread across the entire field, causing damage to the soil structure.</li> <li>• Permanently effect the views and therefore mental wellbeing of 34 households which overlook this site.</li> <li>• Permanently effect the tranquillity of the area.</li> <li>• Expanding the village in this direction goes beyond our settlement boundaries. In order to make a development in this area carbon neutral we would need to off balance the destruction of this piece of land with creation of a green space elsewhere. This field should be seen as part of our natural capital and supplying an ecosystem service and therefore protected. Instead I would suggest this land is put forward to be a green space. Perhaps a community forest.</li> </ul>
LPR-B-505	Julie Gray	LPR-A-091	object to this land being included in the Local plan , it will have an adverse affect on The Red House (The late Captain Molyneux House) as well as residents backing onto this land, The Trees obviously planted for this purpose and to Block view of village for Landowners new dwelling.
LPR-B-506	Clifford Osenton	LPR-A-091	Objects. lack of access on Austin road & Church street for extra development. The present building line on the approach to Bodicote Brook is acceptable, but any more building will degrade the enjoyment of this area of the countryside. Increase in traffic will have a negative impact on the area.
LPR-B-507	Dennis Price	Sustainability Appraisal	I find that as climate change will become so over`bearing that the consultation does not adequately address this. There is far too much proposed development and the reduction of much needed Greenfield sites for nature and ourselves to enjoy. Any housing should be to passive house standards and built of sustainable and low carbon materials basically wood.
LPR-B-507	Dennis Price	Sustainability Appraisal	Too much development for any chance of being sustainable. Greenfield will be vital in a fight to cope with climate change the must not be built on. any new houses to be built of non carbon materials ie not concrete or steel, Wood is the material of choice and building to passive house standards.

LPR-B-510	Bloombridge LLP	Sustainability Appraisal	<p>principal interest concerns Kidlington. In light of our representations on the options (and in particular paragraphs 6.4.1 to 6.4.10 of the consultation paper), we find the terms of reference and findings of Cherwell's Sustainability Appraisal ("SA") to be surprising. We would go as far as saying, with respect, that the terms of reference are wrong – generally, and in relation to Kidlington. The findings have not considered a Green Belt review or housing needs in Kidlington as 'reasonable alternative' policy options because, according to the AECOM SA, the consultation on the Local Plan defers these considerations to the Oxfordshire Plan – this means that the whole SA (and next steps) is skewed. Put another way, the SA has applied "no decision" (yet) on a Green Belt review and housing growth in Kidlington as a negative when defining and choosing between options. This is plainly a false assumption – ie it is without foundation or evidence, and it lacks pragmatism. This must be addressed. the SA needs to consider (as an input/option) the potential for development in the Green Belt, and long term defensible Green Belt boundaries, not least because this is one of the functions of a local plan review (NPPF21, paragraphs 140 - 142). we note that Section 2.11 of the SA refers to difficult choices around employment allocations but does not mention a Green Belt review, which is already part of the consultation paper and surely inevitable given Oxford Technology Park is under construction (but still waiting for the Green Belt designation to be lifted). We also find the evidence in support of more social housing at paragraph 2.15.2 over simplified and unconvincing. This is best dealt with at the application level, depending on local circumstances – for example, there is no point providing social housing in a rural area or Kidlington if the resident being accommodated works in Banbury. it is not the function of the SA to propose policy solutions at this stage in the plan-making process. Specifically on Kidlington, it is difficult to see what authority the authors of the SA have in choosing alternative options for assessment, notably options which exclude a reconsideration of the Green Belt, which was reviewed, partially, as recently as last year; including a set of 'exceptional circumstances' listed at paragraph 5.17 of the Cherwell Partial Review, adopted in 2020. These 'exceptional circumstances' are still highly relevant. In short, a Green Belt review ought to be a fundamental term of reference for the plan and SA. . It is an opportunity for positive planning where 'reasonable alternatives' such as our site at The Moors have already been assessed and considered favourably by Cherwell alongside a substantial evidence base. To disregard this opportunity and evidence in the AECOM SA, at such an early stage in the process, is not reasonable – for example because it makes the findings and next steps of the SA partial and somewhat meaningless. Either a Green Belt review should have been SA'd, or the findings heavily limited in their scope to ensure all reasonable options remain open for consideration.it seems truly remarkable that an SA by LUC could support the release of Green Belt land in Begbroke and Yarnton to accommodate more than 4,000 houses in 2020, yet the potential of this area, notably Kidlington itself (ie Cherwell's 'third settlement'), could then just be set aside by AECOM's SA less than a year later – ie with no growth plan. It is hard to see how this assumption in the SA is fair, reasonable or proportionate, and we feel it must be addressed to avoid skewing the consideration of the whole local plan. the SA shows strong support for employment and economic growth in Kidlington, yet appears to have no regard to the planning, sustainability and accessibility advantages of locating houses next to the resultant jobs. To conclude on the SA, we strongly recommend that it is reviewed and re-issued, specifically in relation to the approach to growth around Kidlington.</p>
LPR-B-511	The Green Party	Sustainability Appraisal	<p>As seems to be the usual case with these documents the SA starts with the premise that growth is a given and we need to plan for more of it. Whilst 'organic' growth is certainly something we should be accommodating, we should not be deliberately encouraging growth in an area like Cherwell which has low unemployment and has already seen its fair share of growth. If the government's proposals on 'levelling up' mean anything it should be that areas in other parts of the country should be given the investment and opportunities that have already been afforded to Cherwell and Oxfordshire as a whole. In terms of my specific area - Kidlington and the surrounding villages - I'm pleased to see that issues such as flood risk have been identified and acknowledged. However it's likely that by the time the local plan is adopted these problems will have been massively exacerbated by the new proposed developments on and in areas that already regularly flood. That would seem to signpost a real problems with the assessment in that these areas are due to be changed out of all recognition compared to when these appraisals have been carried out. This is likely to have a major impact on all the key areas in the document, not least air quality, flooding, landscape and soils, biodiversity, and the quality of life of local communities living in what are currently small rural villages. In this context it would seem foolish to base the 2040 local plan on any of this current data as the area is going to be so heavily transformed over the next 20 years. I really don't know how this can be addressed. Perhaps a revised SA should be compiled closer to the time of the full plan being proposed/adopted. I would also suggest that a greater level of local consultation be included. It seems clear to me that the current report is largely speculative and rooted in data that is going to be out of date very soon.</p>
LPR-B-512	Pegasus Group for Barwood	Option 1	<p>The vision is broadly supported. However, the Vision fails to address or include any reference to any spatial aspect of how the growth of the District will be delivered; ie, is it the part of the Vision for the future of Cherwell that growth will be focussed upon the existing Urban Areas, or be subject to a rural dispersion? Will the Vision look to distribute housing along sustainable transport corridors, or maybe focus on existing centres of employment etc. The Vision needs to include an aspect of spatial outcome, if it is to be successful in delivering the growth which Cherwell is required to meet.</p>
LPR-B-512	Pegasus Group for Barwood	Option 2	<p>KO 23 makes reference to focusing development in Cherwell's sustainable locations, but does not seek to define, or explain, how that 'sustainability' is being assessed or determined. The KO should include some clearer direction against which compliance with this objective could be assessed. More generally, the objectives make no reference to the need to secure and make provision for sufficient housing for sustainable growth or seek to ensure any link between the location of employment provision and ensuring a sufficient quantity of new residential development to support that growth. KO10 deals with the move to net zero carbon development. The reference to decentralised energy is considered unhelpful. The energy market is responding to the challenges established in achieving net zero, and whilst decentralised energy may be a part of that solution, that may be no more so than more traditional centralised sources of low carbon power delivery. The Objective should remain non-specific as to the mechanism by which low carbon energy should be supplied, rather just securing that it is low carbon.</p>

LPR-B-512	Pegasus Group for Barwood	Option 6	The percentage of affordable housing required on major development sites should be based upon evidence collected by the Council in respect of affordability across the District. It would not be appropriate to arbitrarily define percentages, nor would it be appropriate to simply carry forward the percentages contained within the adopted Local Plan without having first tested to see whether they are still appropriate, and/or viable.
LPR-B-512	Pegasus Group for Barwood	Option 7	any policy requirements for the tenure mix of affordable housing should be based upon the latest available evidence in respect of housing need.
LPR-B-512	Pegasus Group for Barwood	Option 8	Whilst Barwood do not necessarily object to the utilisation of the Nationally Described Space Standard (NDSS), footnote 49 to paragraph 130 f) of the NPPF confirms that: "Policies may also make use of the nationally described space standard, <b>where the need for an internal space standard can be justified.</b> " [emphasis added]. The utilisation of the NDSS within Cherwell District should accordingly be based upon demonstrable evidence of need, which should form part of the Local Plan Review evidence base. Moreover, even if NDSS are to be applied, any policy should allow for flexibility within individual sites, for exceptions to be made where specific and sound design justification, dictates.
LPR-B-512	Pegasus Group for Barwood	Option 9	The imposition of accessibility standards through planning policy is unnecessary as they are already considered within Building Regulations.
LPR-B-512	Pegasus Group for Barwood	Option 10	Given the Government's pending introduction of the Future Homes standard, the need for any Local Plan review to set standards of sustainable construction is questioned. If there is an intent to set standards above those required by Government then this should not occur without a fully evidence viability assessment to confirm that the additional costs of so doing, would not render development unsustainable.
LPR-B-512	Pegasus Group for Barwood	Option 12	How the provision of BNG should be delivered should not be dictated as a 'one size fits all' solution but should recognise that meeting BNG will be bespoke to each individual site, and the ecology of that site. Solutions to the provision of BNG may require a combination of the types of measures set out above to ensure that adequate compensatory provision is made.
LPR-B-512	Pegasus Group for Barwood	Option 14	The supporting text appears unclear. At 5.8.6 reference is made to recent developments having a 'large number of small areas for play' and this creating a 'maintenance burden'. However, at 5.8.7 the text goes onto state that the approach being advocated is one that seeks 'play friendly environments incorporating opportunities throughout developments...'. That seems to be a strategy which would exacerbate the alleged concern regarding 'maintenance burden'. Provision of children's play through new development has been successfully integrated in many developments, through traditional use of LAPs, LEAPs and NEAPs, maintenance contributions being secured where they are transferred to LPA control or being secured by on site Management Companies. If there is considered to be a requirement to move away from traditional methods of securing adequate play provision, then this needs to be supported by a suitably evidenced justification.
LPR-B-512	Pegasus Group for Barwood	Option 18	Rep supported by a site plan and context plan for proposed development off Bloxham Road. Barwood have previously proposed the development of land at Bloxham Road, Banbury through their response to the Stage 1 Consultation and the call for sites. Those submissions remain valid and are not repeated here. What is significant about the site being promoted, which lies to the South of Banbury and hence is the direction of growth supported, is that it forms an extension to the recently constructed Redrow Development, from which Access can be gained and infra-structure shared. This provides a sustainable form of development, in maximising new robust infra-structure with surplus capacity as opposed to wholly new provision.
LPR-B-512	Pegasus Group for Barwood	Option 19	With regard to the options proposed for growth at Banbury, then if Banbury is identified as a location for growth, then Banbury is where the growth should occur. Decanting that growth to an alternative existing settlement or a new settlement which does not support Banbury, would be inappropriate. It would not be meeting the need, where the need was identified, and would likely therefore lead to unsustainable patterns of growth. Barwood support use of peripheral green field sites at Banbury, where such sites are well related to the existing urban area, have good access to public transport, can utilise existing infra-structure which has spare capacity, and which do not cause landscape or coalescence issues. To this end, Barwood promote their land interest at Bloxham Road, Banbury, as a site capable of meeting the sustainable growth aspirations of the emerging plan, in an appropriate location well served and well connected to existing employment, services and social infrastructure.
LPR-B-512	Pegasus Group for Barwood	Banbury	Barwood, note and support the recognition at para 6.2.6 of the Consultation document that Banbury has shown itself to be the stronger of the main towns in terms of the market delivery of residential development, with 'more of the allocated sites delivering in accordance with the planned trajectory'. The identification at 6.2.7 of the need to commission work related to Banbury's future employment needs, must also be balanced by an understanding of the implications of further employment growth at Banbury, to the additional demand on the local Housing Market Area, with a commensurate growth in residential development to support the planned economic growth of the Town.
LPR-B-513	Pegasus Group for Barwood & Hill	Option 1	The Paper sets out a vision for Cherwell District, which is broadly supported by the Representors. However, the Vision fails to address or include any reference to any spatial aspect of how the growth of the District will be delivered; ie, is it the part of the Vision for the future of Cherwell that growth will be focussed upon the existing Urban Areas, or be subject to a rural dispersion? Will the Vision look to distribute housing along sustainable transport corridors, or maybe focus on existing centres of employment etc, will that involve a further review of Green Belt? The Vision needs to include an aspect of spatial outcome, if it is to be successful in delivering the growth which Cherwell is required to meet.

LPR-B-513	Pegasus Group for Baarwood & Hill	Option 2	KO 23 makes reference to focusing development in Cherwell's sustainable locations, but does not seek to define, or explain, how that 'sustainability' is being assessed or determined. The KO should include some clearer direction against which compliance with this objective could be assessed. More generally, the objectives make no reference to the need to secure and make provision for sufficient housing for sustainable growth or seek to ensure any link between the location of employment provision and ensuring a sufficient quantity of new residential development to support that growth. KO10 deals with the move to net zero carbon development. The reference to decentralised energy is considered unhelpful. The energy market is responding to the challenges established in achieving net zero, and whilst decentralised energy may be a part of that solution, that may be no more so than more traditional centralised sources of low carbon power delivery. The Objective should remain non-specific as to the mechanism by which low carbon energy should be supplied, rather just securing that it is low carbon.
LPR-B-513	Pegasus Group for Baarwood & Hill	Option 6	The percentage of affordable housing required on major development sites should be based upon evidence collected by the Council in respect of affordability across the District. It would not be appropriate to arbitrarily define percentages, nor would it be appropriate to simply carry forward the percentages contained within the adopted Local Plan without having first tested to see whether they are still appropriate, and/or viable.
LPR-B-513	Pegasus Group for Baarwood & Hill	Option 7	any policy requirements for the tenure mix of affordable housing should be based upon the latest available evidence in respect of housing need.
LPR-B-513	Pegasus Group for Baarwood & Hill	Option 8	Whilst Barwood do not necessarily object to the utilisation of the Nationally Described Space Standard (NDSS), footnote 49 to paragraph 130 f) of the NPPF confirms that: "Policies may also make use of the nationally described space standard, <b>where the need for an internal space standard can be justified.</b> " [emphasis added]. The utilisation of the NDSS within Cherwell District should accordingly be based upon demonstrable evidence of need, which should form part of the Local Plan Review evidence base. Moreover, even if NDSS are to be applied, any policy should allow for flexibility within individual sites, for exceptions to be made where specific and sound design justification, dictates.
LPR-B-513	Pegasus Group for Baarwood & Hill	Option 9	The imposition of accessibility standards through planning policy is unnecessary as they are already considered within Building Regulations.
LPR-B-513	Pegasus Group for Baarwood & Hill	Option 10	Given the Government's pending introduction of the Future Homes standard, the need for any Local Plan review to set standards of sustainable construction is questioned. If there is an intent to set standards above those required by Government then this should not occur without a fully evidence viability assessment to confirm that the additional costs of so doing, would not render development unsustainable.
LPR-B-513	Pegasus Group for Baarwood & Hill	Option 12	How the provision of BNG should be delivered should not be dictated as a 'one size fits all' solution but should recognise that meeting BNG will be bespoke to each individual site, and the ecology of that site. Solutions to the provision of BNG may require a combination of the types of measures set out above to ensure that adequate compensatory provision is made.
LPR-B-513	Pegasus Group for Baarwood & Hill	Option 14	The supporting text appears unclear. At 5.8.6 reference is made to recent developments having a 'large number of small areas for play' and this creating a 'maintenance burden'. However, at 5.8.7 the text goes onto state that the approach being advocated is one that seeks 'play friendly environments incorporating opportunities throughout developments...'. That seems to be a strategy which would exacerbate the alleged concern regarding 'maintenance burden'. Provision of children's play through new development has been successfully integrated in many developments, through traditional use of LAPs, LEAPs and NEAPs, maintenance contributions being secured where they are transferred to LPA control or being secured by on site Management Companies and secured through S106. If there is considered to be a requirement to move away from traditional methods of securing adequate play provision, then this needs to be supported by a suitably evidenced justification.
LPR-B-513	Pegasus Group for Baarwood & Hill	Kidlington	Reference is made to LPR-A-237 by Kidlington Parish Council and their representation which was seeking a linear park of connected routes of paths and open spaces around Kidlington. They were not, as CDC suggest at Appendix 2 promoting the land on the outskirts of Kidlington for Local Green Space (LGS). The areas of open space identified in the Parish Council's Linear Park plan covers most of the land allocated as PR7a. Clearly, having just identified the exceptional circumstances, to remove the site from Green Belt and having allocated the site for residential development, it would be perverse to now identify the site as LGS, which is a quasi-Green Belt policy allocation. From the Representors perspective the Linear Park proposal, as far as it relates to land within their control, is an aspiration they are willing to assist in the delivery of. The large area of open space indicated on the Parish Council's Plan would need to be delivered further south on the site (within the area still within the Green Belt) to reflect the Partial Review allocation as to where built form on the site will be. However, the open space, and the footpath links providing wider off-site connectivity, are both provisions which the sites promoters are willing to work toward providing as part of their forthcoming planning application on the site. If the zone proposed by the Parish for Open Space were to be transposed literally into this area, it would prevent the adopted Partial Review policy from being able to deliver the required level of housing, as it would sit squarely over much of the area shaded pink, which the plan confirms is for residential development. That land was released from Green Belt, because the Council demonstrated that there were 'exceptional circumstances' of sufficient weight to justify its allocation. Those needs and the exceptional circumstances generally, have not changed since the Plan's adoption in September 2020. It remains vital therefore, that the allocated site remains capable of development in the terms set out by adopted Policy PR7a and is not fettered by the imposition of an Public Open Space designation which is not necessary or part of the adopted Plan strategy. This is not to say PR7a is coming forward without Public Open Space, the Policy makes provision for a strategic contribution of 11ha of formal playing pitches, and wider community and green infra-structure. This land remains subject to Green Belt designation, and is integral to both the adopted policy, and the emerging Development Brief for the site. As noted, the Representors are very willing to work with the Kidlington Parish Council to enable the delivery of that part of the 'Linear Park', in an appropriate manner, as it relates to the land within their control.

LPR-B-514	Drayton Parish Council	Drayton	The population figure is clearly inaccurate especially as it is claimed no development has taken place. All village details MUST refer to the old established village and not include of the new developments either built or planned as they will probably be moved into Banbury before the new Local Plan review is agreed. The old village has less than a 100 dwellings and a population of just over 200. The Parish Council believes the map should show the conservation area boundary as this clearly shows the areas that need to be protected from development to protect the village heritage. THE VILLAGE STRONGLY EXPECT THE GAP BETWEEN BABURY DEVELOPMENTS AND THE VILLAGE WILL BE PROTECTED BY SPECIFIC POLICIES WITHIN THE NEW PLAN. There is now a strong boundary between the new developments adjacent to Bretch Hill and those to the west of the Warwick road. This boundary is also the conservation area boundary.
LPR-B-514	Drayton Parish Council	LPR-A-152	Object as they would extend Banbury further away from the shopping and employment areas in an unsustainably way.they would also be outside the the Banbury bowl and be very obtrusive in the open countryside. They would also bring housing very close to Hanwell to the detriment of the village, the village conservation are and light pollution would affect the observatory. Hanwell has always been promised that the village would be protected from being joined up to the town
LPR-B-514	Drayton Parish Council	LPR-A-214	Object as they would extend Banbury further away from the shopping and employment areas in an unsustainably way.they would also be outside the the Banbury bowl and be very obtrusive in the open countryside. They would also bring housing very close to Hanwell to the detriment of the village, the village conservation are and light pollution would affect the observatory. Hanwell has always been promised that the village would be protected from being joined up to the town
LPR-B-514	Drayton Parish Council	Option 2	Page 16 para 3.5.5 the PC supports Nos 1 & 2. Supports KO5, KO23, and KO25. Page 36, para 5.4.4 - supports the standard method.
LPR-B-514	Drayton Parish Council	Option 3	Supports numbers 1, 3 and 4
LPR-B-514	Drayton Parish Council	Option 18	supports Nos 2 & 3 the more sustainable areas for growth
LPR-B-514	Drayton Parish Council	Option 19	supports No 2 especially the separation between villages and Banbury.
LPR-B-514	Drayton Parish Council	Option 30	supports No 1 limit rural development to local needs
LPR-B-514	Drayton Parish Council	Option 31	supports No 1 work with communities to meet local need.
LPR-B-514	Drayton Parish Council	Question - Settlement Boundaries	supports the definition of village boundaries
LPR-B-514	Drayton Parish Council	Option 34	supports No 2 especially the valued landscape areas that protect villages from urban growth. These need additional protection policies
LPR-B-515	Rosalind French	Adderbury	Concerns regarding the proposed housing. The village has seen a lot of expansion in the last 10 years and does not have the amenity to support current development or proposed. Further development would risk Adderbury being swallowed into the town of Banbury and losing its rural charm as well as the much needed green areas around Banbury. The primary school in Adderbury has struggled to cope with the recent expansion. The village shop and many residents have to take to their cars and travel to the neighbouring villages of Deddington and Bloxham to their Coops or into the town of Banbury. There will be massive environmental impacts, which surely should be at the forefront of our minds at the moment, as well as ecological implications. Adderbury has historically been prone to flooding with many of the solutions not fully resolving the issue. The development would destroy the character of the village and make the traffic and flooding problems much more severe. Traffic is already an issue within Adderbury with little being done about the congestion on the Aynho Road (outside the Primary School) and the village High Street can only allow traffic in one direction at a time. Communication about these proposals have been very sparse.
LPR-B-516	Vanessa Spooner	LPR-A-107	Concerns re: Access & Movement resulting from an increase in the number of residence on this Lane. Pound Lane is a small lane, not fit for significant vehicle movement that struggles to sustain the current vehicle movements, let alone an increase. Serious cause for concern as this road is not fit for purpose for current use, let alone more. The village is a dark sky village and we already have a significant development taking place in our attached village Sibford Ferris already contributing to light pollution, traffic movements and reducing the countryside across the Sibfords and Burdrop. The size of this plot of land in question gives me great concern, it appears large enough to potentially double the number of residences within Sibford Gower. Not opposed to appropriate sized developments that are in keeping with the countryside area, but the size of this plot of land gives me huge concern.
LPR-B-517	Edward Spooner	LPR-A-107	concerned that there has been no public consultation on this matter and that such a development would detrimentally impact on the scale of the village. The development would be damaging Oxfordshire's valuable countryside, productive agricultural land, sensitive habitat and an area of natural beauty. Development of this scale would be suited closer to Banbury on brownfield sites. The Oxfordshire vision emphasises progress towards a carbon negative future 'leaving the natural environment in a better state than we found it'. In addition Key objective 15 is to protect conserve and enhance natural assets woods and hedges. Against such development given the sites' clear weaknesses from both a sustainability and access perspective
LPR-B-518	Adderbury Residents Association	LPR-A-041	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. Additional development around Henge Close at LPR-A-041 would directly abut the Conservation Area and would therefore be detrimental to the setting of the listed buildings on Horn Hill Rd. Development would also be detrimental to the open nature of the Henge Close estate and to the green space and play area to the east. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook.

LPR-B-518	Adderbury Residents Association	LPR-A-086	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. The large-scale developments proposed for sites LPR-A-086 would utterly change the approach to the village and would create a jarring transition from agricultural land to modern, dense housing. if developed, double the size of West Adderbury overnight. Such large scale development is entirely inappropriate for a village the size of Adderbury and is far more suited to a large town or even a city. few facilities present in Adderbury would be completely swamped by a development of this scale, placing massive pressures on local schools and services. Precious public footpaths over these sites, which are in daily use by local residents, would be lost forever. Development of LPR-A-086 would lead to the residents of St Mary's Road being completely subsumed by new estates, fundamentally changing the character of the southern edge of West Adderbury. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook.
LPR-B-518	Adderbury Residents Association	LPR-A-146	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. Additional development around Henge Close at LPR-A-146 would directly abut the Conservation Area and would therefore be detrimental to the setting of the listed buildings on Horn Hill Rd. Development would also be detrimental to the open nature of the Henge Close estate and to the green space and play area to the east. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook.
LPR-B-518	Adderbury Residents Association	LPR-A-218	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook.
LPR-B-518	Adderbury Residents Association	LPR-A-258	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. The large-scale developments proposed for site LPR-A-258 would utterly change the approach to the village and would create a jarring transition from agricultural land to modern, dense housing. Development would lead to a substantial decrease in the green space between West Adderbury and Milton, increasing the risk of coalescence and impacting upon the character of both villages. A popular footpath would be lost, and irreversible damage would be caused to the amenity of the homes to the north of Adderbury Fields, and to the adjacent green space. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook.
LPR-B-519	Stephen Leonard	LPR-A-152	Opposes proposals. Destruction of greenfield land which is not sustainable. Views from the conservation area which the 2007 council appraisal pledged to protect will be desecrated. Increase in local infrastructure. Few facilities in the north of the town and public transport is woefully inadequate. Development will increase volumes of traffic on local roads and increase problems through Hanwell where the Main Street is already an issue. Previous local plan set Dukes Meadow Drive as the defensible northern edge. This has already been breached and further piecemeal development of this area would permanently destroy the village of Hanwell. The Council should think about devising permanent protection of the local arable landscape and way of life.
LPR-B-519	Stephen Leonard	LPR-A-214	Opposes proposals. Destruction of greenfield land which is not sustainable. Views from the conservation area which the 2007 council appraisal pledged to protect will be desecrated. Increase in local infrastructure. Few facilities in the north of the town and public transport is woefully inadequate. Development will increase volumes of traffic on local roads and increase problems through Hanwell where the Main Street is already an issue. Previous local plan set Dukes Meadow Drive as the defensible northern edge. This has already been breached and further piecemeal development of this area would permanently destroy the village of Hanwell. The Council should think about devising permanent protection of the local arable landscape and way of life.

LPR-B-519	Stephen Leaonard	LPR-A-205	Opposes proposals. Destruction of greenfield land which is not sustainable. Views from the conservation area which the 2007 council appraisal pledged to protect will be desecrated. Increase in local infrastructure. Few facilities in the north of the town and public transport is woefully inadequate. Development will increase volumes of traffic on local roads and increase problems through Hanwell where the Main Street is already an issue. Previous local plan set Dukes Meadow Drive as the defensible northern edge. This has already been breached and further piecemeal development of this area would permanently destroy the village of Hanwell. The Council should think about devising permanent protection of the local arable landscape and way of life.
LPR-B-520	Jonathan Fenster and Joanne Evans	LPR-A-034	Raises concerns. Previously there has been a clear delineation between the town of Banbury, including its industry and commercial infrastructure on one side of the M40 junction and the appealing rural nature of the land adjacent to the A361. The warehouse which has already been built is an eyesore and a proliferation of this type of building would, in our view, be extremely detrimental to the surrounding landscape and to the wider environment.
LPR-B-521	Greg Lowe	Milton	Comments provided in relation to the impacts of new homes built either side of Milton - resulting in more lighting, footpaths, traffic calming measures. New homes should ensure the rural character of the areas is maintained and doesn't result in hedgerow removal for paths, lighting could be placed at lower levels. The sites put forward in the parishes of Milton do not meet any of the Council's stated objectives, nor any of the previous consultation results. Any development in Milton Parish should be very small scale respecting the conservation village and its environs. The proposed development of the old caravan park and its adjoining field should be the subject of a separate consultation with Milton villagers as it falls within the parish boundary but outside the village, in open countryside
LPR-B-521	Greg Lowe	Adderbury	Adderbury and Bloxham are rural communities. Their growth in the last 10 years looks set to turn them into small towns but with few appropriate facilities, requiring travel by road to reach most of those facilities in Banbury. Most new facilities and amenities are from the town centre and to the north – communities south of Banbury cause congestion at pinch-points for miles already. The road system was not designed for the large amount of traffic now using it and many residents complain of noise and light pollution growing in Bloxham, Milton and Adderbury, with consistent calls for reduced traffic and reduced speed. The sites put forward in the parishes of Adderbury do not meet any of the Council's stated objectives, nor any of the previous consultation results. Development in Adderbury should be small scale so that these communities retain their identity as 'villages in the countryside' and do not become part of and wholly reliant on the facilities of Banbury
LPR-B-521	Greg Lowe	Question - Neighbourhood Planning	Neighbourhood Plans, updated regularly to accord with regional planning demands and defined settlement boundaries, should control the growth of rural and village development and should not be overturned by the Planning Inspectorate operating under national government guidance
LPR-B-521	Greg Lowe	Option 30	Development in the rural areas should be restricted to local needs only
LPR-B-521	Greg Lowe	Option 19	The roads to the north and east of Banbury are better capable of handling the increased traffic from Banbury's growth than the south and west - any growth in Banbury should be to Banbury's east and north.
LPR-B-521	Greg Lowe	Bloxham	The sites put forward in the parishes of Bloxham do not meet any of the Council's stated objectives, nor any of the previous consultation results. Development in Bloxham should be small scale so that these communities retain their identity as 'villages in the countryside' and do not become part of and wholly reliant on the facilities of Banbury
LPR-B-521	Greg Lowe	Option 30	road traffic should not be allowed to grow further. Urban signage and lighting should not be sited in or around villages and the countryside but that these should be restricted to towns. The overall landscape and character of the area should be protected and certain special individual features in the landscapes given special protection in addition. Tranquillity and reduction of light pollution should be a factor in decision-making on development of any kind. Settlements should be prevented from coalescence and local design features more strongly enforced. Commercial and economic growth should be limited to specified urban areas. Improvement of the environment should be a major factor wherever previously developed land or green fields are considered for development (not mitigation of damage)

LPR-B-522	Framptons for Tritax Symmetry Ltd	Option 22	<p>Tritax Symmetry (TSL) who have successfully brought forward Symmetry Park, Bicester as part of the Bicester 12 allocation. TSL has secured substantial inward investment within the logistics sector into Bicester. The PPG emphasises that the logistics industry plays a ‘critical role in enabling an efficient, sustainable and effective supply of goods for consumers and businesses’, and of particular significance to the Local Plan, ‘distinct locational requirements that need to be considered in formulating planning policies (separately from those relating to general industrial land)’. The logistics sector is also critical to the social objective of sustainable development. The logistics sector is vital to a successful economy, underpinning and supporting all other sectors. Research has shown that there is a direct correlation between new housing and logistics space, with every home generating demand for an additional 69sqft of logistics space. COVID-19 has supercharged demand. In the retail sector, online sales grew from 20% of all sales in February 2020 to 28% by the end of the year with a peak of 32% in Q4 2020. Each 1 million sqft of logistics space provides a range of construction and operational benefits including 1400 jobs in the construction sector and 2400 direct and indirect in warehouse and delivery sectors, £98m GVA boosting economic output and growing productivity for construction, £110m GVA generate for operation, £25m direct wages to construction employees and £37m to logistics employees, £5m construction and £9m fiscal benefits from NI and PAYE. Logistics operations provide a wide range of jobs for a variety of skills with flexible working hours to suit people’s lifestyles. The logistics sector is a leader in terms of environmental improvements and sustainability. Rather than commit to distant climate change/emissions targets, it is proactively making change now, embedding net zero carbon in construction practices, BREEAM improvements, energy efficiency and renewable energy technology. The commissioning of a Cherwell Employment Land and Needs Assessment is welcomed, in principle to supplement the evidence base that may be identified in the Spatial Plan. It is essential that, as set out in the PPG, evidence of market demand is assessed through discussion with TSL, the logistics development arm of FTSE 250 company Tritax Big Box REIT plc. The strategy and site allocations in the Local Plan must respond to the distinct locational requirements for the logistics sector, particularly in the context of the scale of land releases to meet occupier demand, and the accessibility of sites to the strategic highway network for both the receipt of goods by HGVs and the onward delivery of goods to customers. These locational requirements equally apply to the receipt and delivery of goods for retail customers and to businesses including manufacturers to support ‘just in time’ deliveries to continuous production lines. It is considered that the Local Plan needs to distinguish between the scale of logistics operations which can be appropriately located on the edge of the existing built-up area of Bicester, and the need to accommodate national / regional scale logistics facilities which are not well suited to an edge of urban area location. This scale of logistics operation needs to be located on sites that are well connected to the strategic highway network. These locations necessarily will be ‘free standing’ from the urban edge of Bicester. The scale of provision is such that sites can become well connected by public transport and potentially by cycling. The allocation of land for the logistics sector should recognise that the locational requirements will not be fully met by enlargement of Bicester. New allocations in the open countryside on sites well connected to the strategic highway network are necessary in order to respond to clear market signals and meet these needs.</p>
LPR-B-522	Framptons for Tritax Symmetry Ltd	Option 23	<p>consider that accommodating the needs of the national and regional scale logistics requires sites to be allocated to the west of the town, where they are well connected to the motorway network at Junction 9 M40 and Junction 10 M40. Meeting the needs for the logistics sector, other than the national / regional scale logistics, can appropriately be accommodated on land to the east of Bicester adjoining Symmetry Park. This area of land is situated between Symmetry Park and a large brownfield site. The extension of Symmetry Park, Bicester is considered to represent a logical provision to meet future employment needs. TSL has, through the call-for-sites, identified the opportunities to accommodate future needs of the logistics sector:</p> <ul style="list-style-type: none"> <li>(i) To the east of Symmetry Park</li> <li>(ii) Land at J9 M40</li> <li>(iii) Land at J10 M40</li> </ul> <p>The policy provision for the strategic scale sites at Junction 9 and Junction 10 could reasonably include a criterion which safeguards these sites for national and regional scale logistics developments. The policy presumption would be that smaller scale logistics development will be located on land adjoining the existing urban edge of Bicester including land to the east of Symmetry Park Bicester. We would be happy to discuss details of the above sites/locations at a meeting, or would be able to send plans on request.</p>
LPR-B-523	Savills for Christ Church Oxford	Call for Sites Promotion - Land east of Oxford Road, North Oxford	<p>Land east of Oxford Road, North Oxford is promoted for housing. Representation is supported by a document which provides details of site constraints, strategic connectivity, development proposals, benefits, compliance with policy options in the emerging Oxfordshire Plan 2050.</p>
LPR-B-523	Savills for Christ Church Oxford	Option 1	<p>Christ Church generally supports the proposed Vision. However, it should reference, be consistent with and have regard to the Oxfordshire 2050 Vision which is the strategic overarching Vision for the Local Plan.</p> <p>Other suggested changes are: - Pre-amble – Whilst COVID 19 has been a key issue over the past 18 months or so, it is questionable if it will remain so over the plan period. As such we suggest this is changed to simply “...provide opportunities for a healthier, more prosperous, resilient and sustainable future for all our communities.” - Item 4 – it is suggested that this element should be re-written as below, to better emphasise the need to meet housing numbers: “To meet our needs a wide choice of market and affordable housing is provided. These homes should be energy efficient and well designed.” - Item 12 – clarity should be given as to what is meant by “...re-shaped and adapted...” in relation to Banbury, Bicester and Kidlington. - Item 13 – this specifically refers to Heyford Park only and then refers to “other areas of planned growth...” We suggest that there is reference to the sites set out in the Partial Review Local Plan on the edge of Oxford in this context.</p>

LPR-B-523	Savills for Christ Church Oxford	Option 2	Whilst the objectives are generally supported by Christ Church, we consider that there are too many. 31 Key Objectives seems excessive and will lead to an unfocussed plan. There is a degree of overlap in the objectives that could be streamlined. We would suggest limiting the objectives to a handful for each heading to better focus the plan. We also question KO18 and 19 that refer to historic buildings contributing to Climate Change mitigation. Most historic buildings are highly inefficient and so we fail to see the relevance of these objectives. It would be better to refer to improving the energy efficiency of historic building. The most important objectives from our view point are: KO10, KO11, KO13, KO16, KO23, KO26, KO28, KO29, KO30 and KO31.
LPR-B-523	Savills for Christ Church Oxford	Option 3	Christ Church supports a focus for the main employment land being in the most appropriate and sustainable locations. Generally, this will mean a focus at the main urban centres of Banbury, Bicester and Kidlington, but also at significant key transport interchanges (both bus and rail) such as around Oxford Parkway Station and Park & Ride. However, it is important to consider all of the above options to provide a range of opportunities to maximise the economic benefits across the whole District and support both small scale and larger scale businesses. The NPPF seeks use of brownfield land before greenfield land but that assumes there is sufficient brownfield land in the right locations to utilise.
LPR-B-523	Savills for Christ Church Oxford	Option 4	This must respond to the demand following detailed assessment. Taking account of the Oxfordshire Industrial Strategy and the associated Delivery Plan, prepared by the LEP, there is a strong ambition to drive up the provision of R&D space and to increase employment skills to better respond to local demand and provide people with longer and more flexible careers. In particular, Oxfordshire lacks flexible laboratory and innovation space as well as Grade A office space, which are critical to attracting foreign direct investment and secure international business headquarters in the region. We therefore suggest a mix of the above driven by an assessment of need.
LPR-B-523	Savills for Christ Church Oxford	Question - Supporting Employment	The Local Plan must set out a clear Vision and objectives which positively and proactively support sustainable economic growth. This must have regard to the wider strategic employment policies set out in the Oxfordshire Plan 2050 and the requirements in the NPPF.
LPR-B-523	Savills for Christ Church Oxford	Option 5	Christ Church supports the need to provide flexibility in the Local Plan to enable town centres to thrive. This will require reuse of existing buildings as well as redevelopment where necessary.
LPR-B-523	Savills for Christ Church Oxford	Option 6	The need to meet the requirement for affordable housing is a key objective of the Oxfordshire Plan 2050. A number of options was discussed in the recent 2050 Plan consultation. These points need to be resolved prior to fixing an approach in the Local Plan. In addition, assuming a percentage is required to be set out in the Local Plan it must be evidence based and requires an assessment of viability to be undertaken.
LPR-B-523	Savills for Christ Church Oxford	Option 7	The NPPF seeks a range of housing types to be provided. In addition, there are new affordable tenures such as First Homes that will have an impact on the percentage mix. The answer should be based on the local housing need and take account of the final policy approach in the Oxfordshire Plan 2050.
LPR-B-523	Savills for Christ Church Oxford	Option 8	The Council should provide evidence as to why it would be necessary to set out a Local Plan policy to control this over and above the standard requirements in the Building Regulations. We are aware that Oxford City has such a policy. If required this should be a strategic policy that is best set out in the Oxfordshire Plan 2050 and applied uniformly throughout the County.
LPR-B-523	Savills for Christ Church Oxford	Question - Separation Distances	No. The Plan should concentrate on appropriate policies to control good design in accordance with the National Design Guide and leave the assessment of separation distances to individual applications as they will be site specific and depend on individual circumstances.
LPR-B-523	Savills for Christ Church Oxford	Option 9	Christ Church supports continuing to rely on the Building Regulations as the best means to provide accessible dwellings. The level of provision must be dependent on need. Over providing can have an impact on viability and can lead to inefficient use of land if the units are not required.
LPR-B-523	Savills for Christ Church Oxford	Question - Housing Policies	There is no need for a policy relating to Modern Methods of Construction which should be up to individual developers to decide. To control this would go above and beyond the requirements of Planning policy. Policies should refer to quality of design and environmental criteria and leave how to achieve the aims to individuals to decide how best to meet them.
LPR-B-523	Savills for Christ Church Oxford	Option 10	The policies to control this should be set at the county level through the Oxfordshire Plan 2050. In addition, the Government will be setting out clear guidance on the Future Homes Standard that will take account of evidence regarding ability to deliver etc. Given the above, option 1 is likely to be the most appropriate way forward and to avoid duplicating policy controls.
LPR-B-523	Savills for Christ Church Oxford	Option 11	There is no need for a policy on this specific matter. Other policies in the Plan and the Oxfordshire Plan 2050 will shape where such proposals are acceptable or not.
LPR-B-523	Savills for Christ Church Oxford	Question - Policies for Climate Change, Sustainable Construction & Renewable Energy	Christ Church fully supports the need to tackle climate change through the planning system. However, we suggest that the policies being proposed in the emerging Oxfordshire Plan 2050 should be relied on and should not be duplicated in the Local Plan. Any policies should be subject to appropriate technology and viability testing so as not to impact delivery.
LPR-B-523	Savills for Christ Church Oxford	Question - Green Belt	We have commented on the need for a Green Belt review through submissions on the Oxfordshire Plan 2050. The 2050 Plan is the right document to review the Green Belt. The Local Plan should follow the approach set out in the NPPF for general Green Belt policies. However, should the 2050 Plan not define precise areas of land for development then it may be necessary for the Local Plan to review the precise Green Belt boundary. Releasing sites on the edge of Oxford, within the Green Belt has previously been shown (in both the Partial Review Local Plan and South Oxfordshire District Council Local Plan) to be highly sustainable. Further releases should be considered on their merits if this results in the most sustainable development options. The NPPF refers to the need to consider enhancement of Green Belt areas where release takes place. The Local Plan should consider options for such enhancement eg improving accessibility and enhancing character of land.

LPR-B-523	Savills for Christ Church Oxford	Option 12	This matter is covered in the Oxfordshire Plan 2050 at a strategic scale especially in terms of the minimum percentage net gain. Any further policy in the Local Plan must have regard to the strategic policy and avoid duplication. If included within the Local Plan then a hierarchical approach should be set out to provide onsite if possible first, then within the local area, then within Oxfordshire and all before considering projects elsewhere.
LPR-B-523	Savills for Christ Church Oxford	Option 13	The controls already in place through the EIA Regulations, the NPPF and Local Plan policies dealing with biodiversity, trees and water already lead to development being built in the locations of least environmental impact. The mapping undertaken by the University of Oxford is a very useful tool and one that will form part of the above assessments. However, we do not see a need for major development proposals to be supported by a natural capital assessment. This would duplicate existing measures
LPR-B-523	Savills for Christ Church Oxford	Question - Biodiversity & the Natural Environment	many of the topics mentioned in this question are proposed to be covered at the strategic level through the Oxfordshire Plan 2050. Where they are not then it would be essential to include a policy in the Local Plan.
LPR-B-523	Savills for Christ Church Oxford	Option 14	The current Cherwell policy approach to play provision lacks flexibility and does not always result in the intended benefits. As such Christ Church would support option 3) above, which will result in a bespoke solution for each site. This has the benefit of taking account of local circumstances rather than simply applying a rigid formula.
LPR-B-523	Savills for Christ Church Oxford	Option 15	The approach will vary depending on the location and identified needs in each particular area. There is little point in having a rigid approach that requires a fixed response when money might be better directed to existing hubs or facilities that will provide greater benefits. It is therefore essential that an updated sports needs assessment is prepared and underpins the Local Plan.
LPR-B-523	Savills for Christ Church Oxford	Question - Achieving Good Design & 'Beauty'	This can be best supported by avoiding ambiguity between National Model Design Code, Oxfordshire Plan 2050 and local codes/guidance, thus providing developers with certainty.
LPR-B-523	Savills for Christ Church Oxford	Question - 20-Minute Neighbourhoods	Christ Church is generally supportive of the 20-minute neighbourhood principles. Care is needed as to how this would be incorporated in to policies as this approach does not fit neatly into all situations, especially in rural areas or where access to jobs and services requires a longer commute.
LPR-B-523	Savills for Christ Church Oxford	Question - Transport & Connectivity	Christ Church generally supports the transport hierarchy set out. This is a key component if we are to reach net zero developments. Spatial planning has a clear role in supporting a decarbonised transport system and meeting the hierarchy. As shown in the Partial Review Local Plan sites on the edge of Oxford, especially those adjacent to Oxford Parkway Station and Park & Ride have the highest opportunity for travel to be undertaken by sustainable modes. Developments in more remote rural areas will be inherently less sustainable for these reasons. Policy needs to encourage the best possible solutions for the whole District whilst spatially distributing growth to maximise sustainable modes of transport.
LPR-B-523	Savills for Christ Church Oxford	Option 16	This should be covered within the Oxfordshire Plan 2050. In any event, the market demands good digital connections and as such there is little need for a policy approach in the Local Plan.
LPR-B-523	Savills for Christ Church Oxford	Question - Transport Policies	This should be a county wide matter and should be left to the Oxfordshire Plan 2050 and other county wide policy documents such as the Local Transport Plan.
LPR-B-523	Savills for Christ Church Oxford	Option 17	It is essential to have an updated and accurately costed IDP document. However, the document must be county wide as most infrastructure projects are cross District in scale/impact. As such the work of the Oxfordshire Plan 2050 in this regard must be taken in to account.
LPR-B-523	Savills for Christ Church Oxford	Option 26	Appropriate locations for employment should be considered based on demand and need as well as proximity to transport hubs/sustainable modes of travel and housing. Only then should consideration whether to undertake changes to the Green Belt should be made. For example land to the south east of the Oxford Parkway Station and Park & Ride is a highly sustainable location for employment growth, easily accessible from Bicester, Oxford and Kidlington by rail, bus, pedestrian and cycle.
LPR-B-523	Savills for Christ Church Oxford	Option 27	Maintaining and protecting Kidlington village centre, especially the retail uses is key to enhancing the local community. Additional housing developments in and around Kidlington should have good accessibility to the centre to help bolster the viability of the uses.
LPR-B-523	Savills for Christ Church Oxford	Question - Reducing Car Dependency in Kidlington & the Surrounding Villages	To locate new development in close proximity to sustainable transport hubs which make opportunities for sustainable means of travel easy to choose.
LPR-B-523	Savills for Christ Church Oxford	Option 28	Creating a network of green corridors, foot and cycle paths should be explored. This should include how best to improve connectivity to key open spaces through new developments
LPR-B-523	Savills for Christ Church Oxford	Question - Kidlington Sports, Recreation and Community Needs	Through the development of the sites identified in the Partial Review Local Plan Kidlington and the surrounding area will benefit from a large increase in publically accessible open spaces, sports and recreation spaces/facilities. These should be assessed comprehensively to make best use of the facilities and in planning any future growth. (See response to Option 15).
LPR-B-523	Savills for Christ Church Oxford	Option 30	Christ Church owns land at Milcombe. It is essential that growth in the villages is supported. This should cover not just local need but a sufficient level of growth to help sustain local services and facilities and ideally enhance them.
LPR-B-523	Savills for Christ Church Oxford	Option 31	Christ Church supports a parish level figure but to then work with the local community to decide how that would be delivered via Neighbourhood Planning. It is however, recognised that to produce such a plan requires a lot of hard work and resource which not all communities will want or be able to support. The approach set out in the South Oxfordshire Local Plan in relation to Henley, Wallingford and Thame is a good model to follow. The Local Plan set a housing target for each settlement and a timescale (12 months) for those areas to produce a Neighbourhood Plan. If a plan was not produced then the Council would accept planning applications from developers to deliver the housing numbers. This promotes local involvement but where that is not forthcoming or possible then it also gives certainty over delivery.
LPR-B-523	Savills for Christ Church Oxford	Option 32	A settlement hierarchy must consider both the availability of local services and facilities but also connectivity to such services and facilities elsewhere. The assessment must also factor in the effect of growth on such a settlement in setting the hierarchy. For example, a village may not be well connected or have good services and facilities but a planned bus link or employment development close by would result in that settlement being more sustainable. Previous studies have not factored in these benefits.

LPR-B-523	Savills for Christ Church Oxford	Option 33	A combination of the options set out above would provide the most flexibility to enable the rural economy to develop as and when opportunities arise.
LPR-B-523	Savills for Christ Church Oxford	Question - Settlement Boundaries	Whilst settlement boundaries are useful for defining and applying policies they are rigid and inflexible and do not allow for circumstances that may arise during the plan period. In our experience there are more benefits in not having settlements boundaries.
LPR-B-523	Savills for Christ Church Oxford	Option 34	Maintaining the current approach to protection of the historic and natural environment should be followed. This is in line with the NPPF. Any policies should be aligned with the approach and policies that may be set out in the Oxfordshire Plan 2050.
LPR-B-523	Savills for Christ Church Oxford	Question - Neighbourhood Planning	Christ Church supports a parish level figure but to then work with the local community to decide how that would be delivered via Neighbourhood Planning. It is however, recognised that to produce such a plan requires a lot of hard work and resource which not all communities will want or be able to support. The approach set out in the South Oxfordshire Local Plan in relation to Henley, Wallingford and Thame is a good model to follow. The Local Plan set a housing target for each settlement and a timescale (12 months) for those areas to produce a Neighbourhood Plan. If a plan was not produced then the Council would accept planning applications from developers to deliver the housing numbers. This promotes local involvement but where that is not forthcoming or possible then it also gives certainty over delivery.
LPR-B-524	Victoria Conway	Option 30	Limit development in the rural areas to that required to meet local needs. The proposals for additional housing in Adderbury is completely disproportionate to the size of the village and would alter the character of this beautiful ironstone village and would contravene the neighbourhood plan.
LPR-B-524	Victoria Conway	Adderbury	The proposals for additional housing in Adderbury is completely disproportionate to the size of the village and would alter the character of this beautiful ironstone village and would contravene the neighbourhood plan.
LPR-B-524	Victoria Conway	Option 31	Use a combination of the above
LPR-B-524	Victoria Conway	Question - Settlement Boundaries	Yes, otherwise settlements would merge together and lose their individuality. Bloxham has already merged into Banbury but still had some green space separating it from Adderbury, although this is threatened by proposed development.
LPR-B-524	Victoria Conway	Option 34	Retain the current approach of seeking to conserve and enhance the countryside and landscape character of the whole district
LPR-B-524	Victoria Conway	LPR-A-178	The size of this proposed development is out of proportion with the size of the village and would significantly alter the character of the area. The increase in traffic would lead to regular congestion on the Aynho Road and increased air pollution. The village has very few amenities for residents so there would be many more cars on the road travelling for work, shopping and leisure. The countryside views and walks that local people enjoy would be destroyed, along with much wildlife and biodiversity. The sewage facilities would be under greater strain, threatening the conservation area which includes Adderbury Lakes Nature Reserve, which has already had issues with poor water quality in recent years.
LPR-B-525	Elizabeth Holbech	LPR-A-175	extremely against the building of 400 new houses with access to the main Daventry Road, even if new houses were built for the next 50 years we would still not have enough and it would cover the beautiful green countryside.
LPR-B-526	CPRE Oxfordshire	Option 1	Supports policy which minimises the amount and environmental value of land taken for development and ensures that where development occurs it is sensitively located, sustainable, appropriate to need, and the land take proportionate. Broadly supports the Vision. An additional objective should be to retain and support active local democracy, with the Plan reflecting the needs and wishes of local people. LP vision is overshadowed by the potential implementation of the OxCam Arc which may override LP aspirations (eg for Bicester to retain its market town character). 4.7.5. This should specifically reference accessible green space (not just open space) 4.7.11. This should specifically reference Cherwell's vital contribution to Oxfordshire's Nature Recovery Network
LPR-B-526	CPRE Oxfordshire	Option 2	Supports many of the objectives. KO 23: This should be underpinned by a spatial strategy based on the following hierarchy (starting from the most protected), working outwards in defence of our countryside: The citadel (Green Belt and AONB, protecting Oxford & its surrounding villages and the County's Areas of Natural Beauty respectively, SSIs and other environmental sites, and the new Nature Recovery Areas); The countryside, the inner defences (inner defence line is the open countryside, and the areas around smaller villages and settlements. The countryside should be protected for its own sake, particularly where land is highly graded, and any development which would be harmful to it must be fully and satisfactorily justified. New settlement in the countryside should be resisted because of the inevitable harm); The areas around larger villages and smaller towns (Development to meet strictly local needs, to support local infrastructure, or provide necessary housing, identified through Neighbourhood Plans); Sites already released in previous Plans (Where sites include land over and above the requirement to meet the current allocation of development, that land should be used for further development if the need arises. Where a masterplan for the original allocation has not as yet been permitted it should be revisited); Brownfield (Previously developed) sites outside the City and larger towns; and, Sites within larger towns. KO 2 - an aim to attract investment by a diversity of employment providers into Cherwell to preclude the need for residents to travel out of the area for work KO 6 - Tourism is an ever-increasing contributor to the economy of Cherwell - preservation of environment and landscapes should be at the heart of all planning decisions affecting rural areas or the cachet of 'Gateway to the Cotswolds' will ring hollow. KO10 - encourage CDC to be ambitious (as the climate emergency dictates) and seek to ensure that all new developments demonstrate a net negative carbon footprint. All transport interventions should demonstrate steps to minimise private car mileage. KO14 - the protection of existing green and blue infrastructure is of paramount importance. KO15 The aim should be not just to capture and store carbon but also to protect the local ecology KO16 - We agree with the aspirations of KO16 but the plan does not give any concrete suggestions to how to achieve less dependency on the car. KOs 13-15 and 25: As a general comment there is not much evidence of these aspirations in recent planning decisions.

LPR-B-526	CPRE Oxfordshire	Option 3	In relation to the question as framed here, it's most likely to be a combination, barring perhaps 4 and, depending on definitions, 2. The larger villages are only larger because of decades of development but we accept that there may be occasions where development is appropriate in larger villages particularly if it enables them to be more sustainable. The plan should define transport interchanges. Does this mean at, for example, rail/motorway intersections or does it include class B8 developments adjacent to motorway junctions? The Banbury 15 development is a particular example of where such a B8 development in the latter circumstances will have a highly detrimental impact on the local environment and communities. We are of the view that both of the proposals for large-scale distribution centres in the vicinity of Ardley with Fewcott should be resisted as an unwelcome intrusion into open countryside, entailing loss of farmland, damaging long-distance views, and bringing large numbers of HGVs into rural neighbourhoods.
LPR-B-526	CPRE Oxfordshire	Option 4	Option 3. Avoid an over provision of B8. The current apparent 'obsession' with B8 development (aka mega warehousing) is surely incompatible with the overarching aim of a developing a 'knowledge spine'.
LPR-B-526	CPRE Oxfordshire	Option 5	Option 2. Developments should utilise town centre and rural brownfield sites before even considering any applications for additional encroachment into green space. Expanding Bicester Town Centre southwards to cover the Oxford Rd sports field was to be considered in the abandoned LP2. We consider that this green space should be left to provide a green buffer between the St Edburg's church/Bicester town cemetery and Bicester Village shopping complex. Building a modern shopping centre here will drain the old town centre of vitality. Continued support for more small chain / independent outlets. These generally support a greater variety of shopping outlets which could allow essential eco-friendly advances such as 'refill shops' to reduce use of plastic, and craft outlets which provide locally made goods. Encouragement of local farmer and business involvement in town centre events, such as markets. This will help to support the rural economy and connect urban dwellers to local food production (reducing climate impacts) and the countryside.
LPR-B-526	CPRE Oxfordshire	Option 6	Support Option 1. Given the crisis in the unaffordability of houses, the percentage of affordable houses on developments of 10 and more units should be increased. This is especially important in villages where outwards migration of young people occurs due to lack of affordable housing thus changing the characteristics of these settlements.
LPR-B-526	CPRE Oxfordshire	Option 7	Disagree with Government policy that affordable housing is sold on the open market after some years resulting in the depletion of affordable housing stock, and consider that social housing for rent should be prioritised above other affordable housing tenures.
LPR-B-526	CPRE Oxfordshire	Option 8	Support Option 1. Separation distances can be decided on a case by case basis. In general, higher housing density should be supported because of its benefits in terms of reducing the amount of landtake, providing more affordable housing that is cheaper to buy and run, and helping reduce climate impacts through lower energy requirements and better support for public transport and other services.
LPR-B-526	CPRE Oxfordshire	Option 9	Agree with Option 1 as the need for this will increase with potential long-term health problems due to the coronavirus pandemic and with the demographic trend to an older population. Accessibility standards should be tailored to the local infrastructure capacity. No recommendation on specific sites for travelling communities but Cherwell should have a list of appropriately designated sites. Speculative applications in or on the edge of villages should be avoided. Sites should be situated such that the number of pitches for travellers should not be disproportionate to the density of the local population and all decisions should take account of the local context. There should be a de minimis settlement population below which it is deemed that designation of sites is not appropriate. The consultation document states that the decision on housing targets will be set by the Oxfordshire Plan 2050, but then goes on to state that 'It is likely to be above the standard methodology set by government'. This is an unacceptable pre-judging of the OP2050. CPRE has substantial reservations about how the 'adjusted' standard methodology figure, as presented in the recent OP2050 consultation, has been calculated and has joined many others in calling for a peer review of the Oxfordshire Growth Needs Assessment which sets out unreliable evidence to justify this. Using figures directly generated by the Government's standard methodology is the most likely to be achievable within the county's environmental constraints and therefore is the only option that CPRE would consider even vaguely appropriate. We certainly cannot hope to meet the alternative options presented in the Plan (euphemistically titled 'business as usual' and 'transformational') without significant harm to our environment and rural character. Given the large overspill of housing numbers from the Growth Deal lying behind the previous suite of Local Plans our calculation of the standard method would lead to minimal actual housing requirement from 2020 to 2040. CDC should support the Standard Methodology approach and focus instead on delivering its commitments on climate change, biodiversity and successful place-making. Housing density policy should be set within the Oxfordshire Plan 2050 (OP2050) as this is best established at a county-wide level, to avoid developers 'playing the field'. If OP2050 should choose to delegate density policy to District Plans, it is essential that the Cherwell LP should include a strong and robust policy on this issue. As a generality Oxfordshire's present housing stock has used land inefficiently with an average understood to be 34 houses per hectare or less. The housing stock needs to be rebalanced with a higher proportion of high density housing, to provide housing that is cheaper to buy and run and to accommodate smaller family units. CPRE's policy is that all new housing in the forthcoming plans should be 70-100 units per hectare, unless exceptional circumstances dictate otherwise, and that all new housing should be "climateready" for example to be able to accommodate heat pumps. The existing housing stock would remain but this would rebalance it with around a 20% injection of high density housing, giving more opportunities to upsize as well as downsize. These would be two and three storey units, not "tower blocks". The benefits would be houses which would be less expensive to buy and to maintain. This would be genuinely affordable housing (not 20% less unaffordable as "affordable" housing is presently). It would make cost-effective social housing. Being smaller and "climate-ready" it would be better insulated and more fuel efficient. High density housing means compact communities with easy to walk shops and more viable public transport and probably a more social environment too. Land is a scarce resource and this will help use it more efficiently, requiring less land take for any given number of houses.

LPR-B-526	CPRE Oxfordshire	Option 10	<p>Support option 3. Any new build should meet strict sustainable standards and the CDC Local Plan rightly has meeting climate change as a theme. Given the very challenging net zero carbon target by 2030 which has been set by CDC, Option 3 seems appropriate provided the appropriateness of the design to complement the local architecture and environment is confirmed. Paragraph B.181, 4th bullet on page 85 of the current LP has never been implemented. The policy needs to be reinforced in the LPR so that the Bicester 'eco-town' standards are adopted for all new builds. Buildings must be resilient to the effects of climate change, severe weather events and the latest technology and zero carbon construction methods and use must be incorporated into Council policy. The current LP promises that the recommended BREEAM standard 'Very Good' would be reviewed over the plan period. Although the standard 'Very Good' sounds acceptable, it is in fact only the average level and the LPR needs to increase this to the 'Exceptional' standard. The LPR needs to ensure that the checking of this BREEAM standard will be by independent inspectors from the Building Research Council not district council officers. Decentralised energy systems. Policy ESD4 of the current LP should be amended to include heat pumps as well as the Government statement that use of gas for domestic purposes will end around 2025. This means that developments approved today should not have a domestic gas supply. Every historic building should be assessed on its own unique merits and retrofitting may not always be possible. The priority is to reduce to the extent possible the heat loss and increase energy efficiency across all housing stock and employment buildings. Cherwell Council has demonstrated the successful retrofitting of the historic Garth building (Bicester Town Council offices) without apparent damage.</p>
LPR-B-526	CPRE Oxfordshire	Option 11	<p>Proper choice and management of the location of renewable energy sites is essential to minimise environmental impact. Both 1 and 2 should apply. CPRE agree that there should be a coherent plan for where renewable energy projects should be sited. The lack of policy has led to a random scattering of an increasing number of solar farms on greenfield sites. CPRE policy is for solar panels to be installed on roofs of buildings where possible rather than large solar farms. The LP should provide a mechanism for local decision making about renewable energy projects. Community energy projects should be promoted. Residents tend to accept projects more if they feel part of it. Renewable energy projects should prioritise the use of previously developed land. Where greenfield sites are proposed, projects must: benefit the rural economy; be supported and/or owned by local communities; bring net benefits to wildlife; avoid/minimise loss of productive agricultural land; and, avoid/minimise impact on landscape, tranquillity and cultural heritage. The full life-time carbon costs of any project, including associated transport and infrastructure, should be assessed, noting that 'renewable' does not necessarily equal 'low carbon'. The current LP asks for a feasibility assessment for on site renewable energy provision and this provides developers with a get out of only having to complete an assessment saying that renewable energy provision is not feasible. This loophole should be closed. Battery storage should be installed along with solar panels to allow the occupier to use the energy generated during daylight hours for use after dark. Without battery storage the excess electricity is exported to the grid and does not benefit the householder. We would recommend careful consideration on a policy for the installation of solar panels. These should be based on industrial developments or new housing. A minimum requirement of solar panels could be set aside for new housing developments. We reiterate our opposition to using farmland in and around villages for solar farms particularly where they are going to power urban settlements. The CDC Plan should map out what the renewable energy requirement is for the district and what is required from the plan to meet this. A separate policy should cover 'Vehicle to Grid' charging and recharging of mobility scooters, e-bicycles, e-motorcycles and other electric mobility devices. There is a need for these to be able to be recharged safely at home or off street. Strong policy on water use is required, including reduction of demand in new development through greywater harvesting. At an absolute minimum, CDC should be seeking to follow the highest possibly standards in terms of Fittings (as set out in Table 2.2 Part G of Building Regulations) but we would encourage and support the Council to pursue an approach that exceeds current Building Regulations and is more in line with the emerging Future Homes Standards. Government policy states that Green Belt is a permanent designation and that, once established, Green Belt boundaries should be capable of enduring beyond the plan period. Since the Part 1 Review was only adopted around a year ago, we can see no justification for any further allocations at this point. Although billed as a potential 'small-scale' release of Green Belt land to meet employment needs, the removal of yet more Green Belt land at Kidlington would be significant on top of the substantial inroads already made in the Cherwell LP Part 1 Review and this should be rejected. The large-scale employment sites being developed at Oxford North, Salt Cross and elsewhere, should be more than adequate to meet need.</p>
LPR-B-526	CPRE Oxfordshire	Option 12	<p>If biodiversity net gain or compensatory measures cannot be achieved on site then the default position should be refusal of development applications. Off-site compensation simply encourages developers to suggest they cannot manage this. Given COP26 and the emphasis on the environmental agenda, there should be no compromise here. Developers should show that they have used the rules of hierarchy and using mitigation off site should be a last resort. Any claims that they cannot meet requirements must be robustly challenged. There is a need to strengthen the wording of policies 10,11 and 13 to prevent developers finding loopholes. In Option 1 'close to the site' should be defined - anywhere in CDC or within a prescribed distance of the development site? Prioritising in CTAs alone may result in harmful loss of threatened species where equivalent habitat loss is not able to be created in the CTA. As with the Oxfordshire Plan there should be an option to consider a 20% BNG. CDC should insist all calculations use the latest methodology (ies) as stipulated by DEFRA. All applicants should make their calculations publicly available and CDC should assure itself that it has the necessary resource to challenge BNG assumptions.</p>

LPR-B-526	CPRE Oxfordshire	Option 13	Support Option 2. All proposals should include the assessment of the local environment. Consistency of assessment by CDC is essential. Nature's value depends on who is making the assessment eg 'scrub' is a valuable habitat for wildlife and is thus valued by ecologists but it is not valued by developers. The Core and Recovery Zones of Nature Recovery Networks should be designated at the same level as Areas of Outstanding Natural Beauty ie no development unless truly exceptional circumstance were shown with clear evidence that no other location is possible. CPRE suggest 5 further Policies for inclusion. 1) Increase BNG requirement for every development to be 20% above baseline. 2) Expand Conservation Target Areas and strengthen the Conservation Target Area policy ESD 11 to give better protection. 3) A Tree Cover policy is needed. Current tree cover in Cherwell is 9% and should be increased to 30%. CDC must collaborate with OxTrees to find suitable areas for tree planting/regeneration 4) CDC should not 'double designate' land for both nature conservation and development in the LP. The biodiversity of several LWS and CTAs has declined because development needs were prioritised over nature conservation. Examples are Gavray Drive (Policy Bicester 13), Wretchwick Green (Policy Bicester 12), and RAF Bicester airfield (Policy Bicester 8). CDC are at fault here because the LWS designation of Bicester airfield is not even mentioned in the Bicester Motion inset on page 82 of the draft LPR. 5) Increase the number of employment hours for CDC ecologists to provide a satisfactory service. Experience has shown that two mornings per week is insufficient to effectively scrutinize 3,500– 4,000 planning applications per year, make site visits, check the developer's baseline biodiversity data, subsequent Biodiversity Net Gain calculations and mitigation measures and then check whether the mitigation measures are effective.
LPR-B-526	CPRE Oxfordshire	Option 14	Any significant development must contain accessible green space provision for children.
LPR-B-526	CPRE Oxfordshire	Option 15	Support Option 1. If proposers wish to undertake developments of a significant size, they should be required to make provision for sports facilities appropriate to the scale of the development. CPRE encourages this type of designation as per NPPF 101-103 and recommends that the submitted LGSs are designated where they adhere to the NPPF criteria. Concerned that many communities remain unaware of this opportunity and would urge CDC to do more to promote the importance of this potential designation. Yes, it should be sacrosanct that significant historic sites are protected completely. Any areas of historic interest must be surveyed before any agreement by councils is made to develop them. The Local Plan needs to better explain what it means by protection. Does protection mean developments that are directly adjacent to those elements of the historic environment that the plan is aiming to protect? Conservation areas must be strongly protected as well as their borders and land at their curtilage peripheries. Support action to address this as part of building healthy & sustainable communities. Recommendations included: strong benefits in designing at higher densities than is the norm; local authorities need to use proactive design codes – design parameters established for each site – and design review processes for all major housing schemes; end the current disconnect between highways design and planning aspirations when it comes to new housing areas; and, schemes that don't meet minimum requirements should be refused on design grounds and this should be supported, without question, by the government regardless of progress towards meeting housing targets in the area. Agrees with 20-minute neighbourhood concept. This is a concept most likely to work well within suburban areas, particularly if they are being developed around the urban hubs of the district. Whilst a harder proposition in rural areas, where the availability of services, amenities and infrastructure is much more varied, there seems to us no reason why the same overall principles should not apply, albeit at a different scale eg developing the village hall as a space for all ages and using farm shops to increase local food provision. Indeed, the features of a 20 minute neighbourhood appear to be the essential ingredients of ensuring a vibrant village community. Villages are often surrounded by countryside, farmland may still not deliver the accessible green space that is required so adequate provision remains a consideration. Reducing the need to travel needs to be viewed in terms of both urban and rural areas. Developments such as expansion of Chesterton Sports facility and Great Wolf are examples of developments that do not help in this regard. These developments with their large car parks do not encourage people to drive less. The Local Plan needs to be more ambitious in this regard if CDC's aim of net zero by 2030 is to mean anything. It is not only about reducing the need for travel but also improving accessibility to sustainable and reliable public transport at a reasonable cost. Both of the proposals for large-scale distribution centres in the vicinity of Ardley with Fewcott should be resisted as an unwelcome intrusion into open countryside, entailing loss of farmland, damaging long-distance views, and bringing large numbers of HGVs into rural neighbourhoods. In particular, we should beware of rail freight distribution centres which have the rail part separated from the road part and are on railways that don't carry freight.
LPR-B-526	CPRE Oxfordshire	Option 16	Support option 3. The range of transport policies may be fine but no consideration appears to have been taken regarding future capacity requirements given proposed housing and employment development. The majority of employment development in the 2011-30 Plan is of a distribution/logistics nature. This, along with the very significant housing developments, inevitably increases the needs for transport requirements. Whilst rail connectivity in Cherwell overall is good, road transport facilities are already under considerable strain and, with further development will only get worse. Nowhere in the draft Plan is this issue addressed. All three M40 junctions in Cherwell are already operating at well over capacity. Junction 11 – Issues here will be exacerbated following the inclusion of five new possible sites adjacent to the junction in addition to the current developments at Banbury 15 on the junction. Additionally, this junction is the access to the M40 for the whole of a now hugely expanded Banbury population. There is no mention of an additional motorway junction or a relief road to carry traffic from the south side of the town. Junction 10 – Outline proposals for new warehousing and a road/rail freight depot here will only exacerbate the issues associated with an already badly designed junction. Junction 9 – The continued development of Bicester and increased A34 traffic will require this junction to be totally remodelled. In addition to motorway related issues the Plan must take account of the general road transport flow matters in addition obviously to addressing climate change related matters. Whilst most road transport matters are the responsibility of Oxfordshire County Council and Highways England, this Local Plan cannot ignore them. Public transport, particularly in the rural areas, would better utilised if it were more frequent and made better provision for early morning and late evening availability. The type of transport will be dictated by the unique circumstances of each location.
LPR-B-526	CPRE Oxfordshire	Option 17	Support option 1 - this is essential.

LPR-B-526	CPRE Oxfordshire	Option 18	Support Option 2. Banbury is increasingly becoming a hub for tourism to the Cotswolds and also the Chilterns making much of its cachet of 'Gateway to the Cotswolds'. Increased sprawling development in any direction from the town would dilute its attraction to such trade to the detriment of the commercial health of the local economy as a whole as well as to the quality of life in and around Banbury. We therefore support option 2.
LPR-B-526	CPRE Oxfordshire	Option 19	It is invidious to specify as optimal for development one particular direction from Banbury. Green field construction around Banbury is to be avoided at all costs with development of brownfield areas optimised before any further encroachment on green field sites. There are no apparent details in the document of projected housing requirements for 2040 vs those for 2030 for Banbury and Bicester? Likewise there is no mention of improved road capacity - all access from the area to the M40 has to go through Banbury. The document contains no mention of a relief road or new junction. The capacity of the M40 J11 is already critically threatened. Any consideration of proposals for commercial development have to go hand in with consideration of road capacity. Commercial manufacturing investment would be an overwhelmingly better option in terms of traffic capacity in the area than further distributive capacity and would bring better paid and higher grade jobs to the area. Likewise there is no mention of medical treatment or educational capacity to cope within the consideration of Banbury developments. There is already a major problem coping with the primary medical and educational needs of the current population of the area. Support protection of views of St Mary's Church and the policy should be strengthened. These historic sites below should be protected: North Bar; Horsefair; South Bar; Banbury Cross; Lady on a Horse statue; and, Banbury Town Hall.
LPR-B-526	CPRE Oxfordshire	Option 20	Support Option 2 provided it is properly administered by CDC.
LPR-B-526	CPRE Oxfordshire	Option 21	Option 1 but again with the caution against agreeing any development until the future transport and medical infrastructure for Banbury has been fully considered. Option 2 would be a second choice but with a slant towards residential over commercial provided excellent connectivity for bus and active travel with the station is prioritised. Better, more frequent transport links between local villages and Banbury.
LPR-B-526	CPRE Oxfordshire	Option 22	Support option 2 as preference and then option 3. CPRE notes that significant levels of growth from the current LP2031 are yet to be delivered. In 2021, halfway through the life of the plan, only 2,879 houses of the 10,129 planned for have been delivered (=28%). Outward expansion of Bicester to engulf its local villages and make it a massive conurbation is not acceptable. The town would then lose its identity as a market town and destroy the characteristics of the neighbouring villages. The previous LP1 had a 'green buffer' policy to protect areas between Bicester and the villages. This was deleted by the planning inspector as he thought the planning rules would give the villages sufficient protection. However, if all the sites submitted for consideration in the LPR are accepted then Caversfield, Launton, Ambrosden and Wendlebury will merge with Bicester and ecologically valuable land will be destroyed and the local landscapes ruined and village identity lost. The Upper Ray Conservation Target area lies to the east of Bicester and must be kept free of development because it is of high nature conservation importance. It is protected by Policies ESD10 and 11.
LPR-B-526	CPRE Oxfordshire	Option 23	It is invidious to specify as optimal for development one particular direction from Bicester. Green field construction around Bicester is to be avoided at all costs with development brown field areas optimised before any further encroachment on green field sites. There are no apparent details in the document of projected housing requirements for 2040 vs those for 2030 for Banbury and Bicester? Likewise there is no mention of improved road capacity. Commercial manufacturing investment would be an overwhelmingly better option in terms of traffic capacity in the area than further distributive capacity and would bring better paid and higher grade jobs to the area. Likewise there is no mention of medical treatment or educational capacity to cope within the consideration of Bicester developments. There is already a major problem coping with the primary medical and educational needs of the current population of the area.
LPR-B-526	CPRE Oxfordshire	Option 24	CPRE would generally support conversion to residential where businesses are no longer viable. However, the numerous small properties in Sheep St and Market Square developed from 1670 onwards for commercial uses on the ground floor with accommodation above. Most properties are listed and have small rooms which are unsuitable for conversion to habitable units which comply with modern standards. There is therefore a risk that such conversions will result in homes which do not meet standards for light and space.

LPR-B-526	CPRE Oxfordshire	Option 25	Bicester lacks cultural facilities such as an art gallery, theatre or concert hall. A growing town of 30,000-60,000 people should provide these. Specific sites for a new build cultural centre such as the two sites (LPR-A-240) promoted by Cllr Dan Sames might be suitable. Space could be provided on NW Bicester east site LPR-A-177 for an eco-friendly cultural centre. Other sites could be the old Magistrates court (LPR-A-110) and Bicester Village Station Rd site (LPR-A-122). Areas to protect include North St, Sheep St, Market Square, Market Hill, Causeway, Church St, King's End, The Garth, London Rd as far out as the town railway station, Piggy Lane and the old St Edburg's school. Bicester's Historic Conservation Areas and Bicester Airfield Conservation Area and Local Wildlife Site must be protected. The tranquil area around St Edburg's Church and the town cemetery must also be protected. The shortfall in natural green space in Bicester has markedly increased since it was assessed in 2011, . The biodiversity of the open spaces is reduced by overgrowth with aggressive perennials such as brambles and ivy. Litter problems and neglect occur in Launton Fields Park, Duxbury Close, land by Bicester Community College, and Jarvis Lane. Support Council policy on promoting and enhancing green infrastructure. Gavray Drive LWS is a unique site for Bicester and CPRE support the designation of this land as a Local Nature Reserve as well as a Local Green Space. A new Town Park at Pingle Field is much needed and the preservation of the adjacent green space by the Oxford Road is important because Bicester is expanding further south and there is a lack of green space in this area. There should be no further development at Bicester Airfield LWS s. A requirement for Bicester to have its own Green Belt should go along with the Garden Town designation and provide green infrastructure. The re-instatement/renovation of the Bicester Fields Park Tree Trail would enhance biodiversity and make the footpath between the Town station and Langford Village an improved amenity as well. Robust green infrastructure prevents flooding and this should be highlighted in policies. . The amenity and biodiversity value of the Bure stream and other water courses in Bicester should be enhanced. The work on the Bure stream in Manorsfield Road has been successful in this regard and similar transformations would bring benefit. . Pollution levels in the water (nitrate and phosphates) should be monitored. The contribution to green infrastructure made by existing formal parks and amenity spaces should be increased by planting to increase biodiversity and reduction of mowing frequency to allow wildflowers to bloom and set seed. An innovative project in Todmorden aims to increase biodiversity as well as local food production by rejuvenating neglected spaces and small corners in that town. There are many small pockets of land in Bicester that could be enhanced and cared for in this way bringing community and environmental benefits. Existing allotment sites should be protected and new sites found so more residents can grow their own food locally. Perhaps some of the smaller sites put forward for LP2 could be used for allotments to increase the town's green infrastructure. Cherwell Council could also pioneer a 'Garden Share Scheme'. Construction of Launton Grange care home, the electricity sub-station and Windrush Close housing have reduced the area of the 'linear park' intended for the south of Skimmingdish Lane. The proposal for a linear park round Bicester should be a policy in the LPR. Development of small sites within the town, other than 'brownfield sites' should not be allowed if the quality and area of Bicester's green infrastructure is to be increased. If housing supply is short, then the density of housing should be increased in strategic sites. CPRE support all the sites in Bicester that are put forward for LGS designation and consider that all fulfil the criteria as per the NPPF. Better and more frequent public transport between villages and town.
LPR-B-526	CPRE Oxfordshire	Option 26	Strongly objects to option 1.
LPR-B-526	CPRE Oxfordshire	Option 27	Support Option 1. Better public transport in locality to reduce car dependency.
LPR-B-526	CPRE Oxfordshire	Option 28	Support Options 1 and 2; both should be carried out. Strongly support option 1 but it is essential to protect and enhance existing green spaces and POWs. With the extent of development planned for Kidlington with loss of much Green Belt land, there must be sufficient funds to carry out both 1 and 2. Supports the designation of the Church Street Conservation Area and Bury Moor Fields as Local Green Spaces.
LPR-B-526	CPRE Oxfordshire	Option 29	Support Option 2. Any further outward expansion of the strategic site will cause unacceptable harm to the surrounding villages and countryside. Both of the proposals for large-scale distribution centres in the vicinity of Ardley with Fewcott are an unwelcome intrusion into open countryside, entailing loss of farmland, damaging long-distance views, and bringing large numbers of HGVs into rural neighbourhoods.
LPR-B-526	CPRE Oxfordshire	Option 30	Support Option 1. Development in rural areas should be restricted to local needs and be mindful of local infrastructure. There may be some scope for some development to be redirected to wider areas. For example to support new employment in villages and limit travel from outside of the village and the wider district. However this should be strictly controlled, criteria based and ensure that rural areas remain characterful and landscape is protected. The current policy wording for housing in villages must be changed. Any housing number allocated to villages should reflect permissions given, not housing delivered – otherwise developers can keep seeking new permissions without building out existing allocations. This minor text error in current policy has led to a number of damaging speculative applications being granted.
LPR-B-526	CPRE Oxfordshire	Option 31	Option 1. CDC should always work with communities and particularly on numbers for each parish and all developments should be based on genuine need. Cherwell has largely met its 2031 plan for villages already. The 2011-30 Plan included a target of 3,031 new houses in rural areas. Since then 2,641 house have been built (or planning permission has been granted for). Thus 87% of the target has been achieved in 50% of the time. It is therefore highly likely that the target figure for 2030 will be well exceeded. An approximate assessment of the housing proposals in Appendix 2 – Schedule of Sites in the Banbury and Bicester areas (ie excluding Kidlington, Heyford and any development related to Ox- Cam Arc) suggests that a further 35,000 houses (assuming a conservative density of 40 houses per hectare) could be included in the Plan. This figure, when added to the urban housing numbers, would in only ten years considerably exceed the top end of even the most unrealistic housing needs forecasts. This excludes all the other considerations regarding development in rural areas that the Plan should take account of, ie for example excluding building outside existing rural settlement areas, building only on brownfield land, etc. In summary,very few if any of the proposals for housing development included in Appendix 2 are probably required.
LPR-B-526	CPRE Oxfordshire	Option 32	Combination of both 1 and 2 would be appropriate.
LPR-B-526	CPRE Oxfordshire	Option 33	Option 3 in terms of flexibility as appropriate. The question is, how you define meeting the needs of the rural economy? Is the development of a warehouse on the edge of a village contributing to the rural economy or to the broader Cherwell economy.

LPR-B-526	CPRE Oxfordshire	Option 34	We could answer yes to both options. We are not quite sure why these are separate choices. We should both conserve and ensure proper guidance is in place. Both 1 and 2 are needed given the extent of development that may be included in the LPR. CDC should explain the relevant rules regarding Neighbourhood Plans which we learnt from the recent overruling of the Adderbury NP by the inspectorate. Frequent interaction with Parish Councils and communities is essential. A robust Dark Skies policy would be a valuable and critical addition.
LPR-B-526	CPRE Oxfordshire	LPR-A-071	Strongly object. This land is the portion of Gavray Meadows LWS that lies east of the ring road (A4421) and is included in the River Ray Conservation Target Area. It must be protected as specified in policies ESD10 and 11 in order to preserve its function as a green corridor of high wildlife and potential amenity value for migration of wildlife in and out of the urban areas of Bicester. It will be even more essential to preserve this function when Wretchwick Green estate (Bicester 12) is built out, thus reducing the green space east of the A4421. The plans for Wretchwick Green were modified to respect and enhance the wildlife corridor function of the land south of the railway. Submitted plans for Bicester 13, land north of Gavray Drive (21/03558/OUT), also keep the Gavray Meadows LWS and that part of the Conservation Target Area free from development.
LPR-B-526	CPRE Oxfordshire	LPR-A-208	Object. It will block the important wildlife corridor from Gavray Meadows Local Wildlife Site through Wretchwick Green (Bicester 12) and on to the adjacent Blackthorn Hill LWS.
LPR-B-526	CPRE Oxfordshire	LPR-A-132	Object. Cherwell District Council must be made aware that these sites are designated respectively as a Local Wildlife Site 62C01 and an SSSI. The former was surveyed in 2018 and the Thames Valley Environmental record centre report below supplies all the evidence that this site is of high nature conservation importance and is protected under adopted Local Plan policies ESD10, 13 and 17. The adjacent Bicester Airfield Local Wildlife Site will soon be reduced in both biodiversity value and size when two new developments which have planning permission are constructed. A third development promoted by Bicester Motion on the airfield is currently being considered by the council. CPRE is not satisfied that the biodiversity net gain from the proposed mitigations for the extensive loss of biodiversity can be achieved on Bicester Airfield. We consider that the preservation of the wildlife sites is essential to maintain the biodiversity of the locality and also the wildlife corridor from Bicester Airfield LWS. Site lends itself to delivery of biodiversity enhancements in order for other developments in the District to be able to deliver 'net gain'. The development of this site for recreation and leisure would lead to increased activity and impact negatively on the resident wildlife.
LPR-B-527	Roger Colbeck	Milton	Object. Adderbury and Bloxham are rural communities. Their growth in the last 10 years looks set to turn them into small towns but with few facilities, requiring travel by road to reach most facilities in Banbury. The road system was not designed for the large amount of traffic now using it and residents complain of noise and light pollution growing in Bloxham, Milton and Adderbury. The roads to the north and east of Banbury are better capable of handling the increased traffic from Banbury's growth than the south and west - any growth should be to Banbury's east and north. Development in the rural areas should be restricted to local needs. Neighbourhood Plans should control the growth of rural and village development and should not be overturned by the Planning Inspectorate operating under national guidance. The sites put forward in the parishes of Adderbury, Milton and Bloxham, do not meet any of the Council's stated objectives, nor any of the previous consultation results. Development in Adderbury and Bloxham should be small scale so that these communities retain their identity as 'villages in the countryside'. Any development in Milton Parish should be very small scale respecting the conservation village and its environs. The proposed development of the old caravan park and its adjoining field should be the subject of a separate consultation with Milton villagers as it falls within the parish boundary but outside the village. That road traffic should not be allowed to grow further, that urban signage and lighting should not be sited in or around villages and the countryside but that these should be restricted to towns, that the overall landscape and character of the area should be protected and certain special individual features in the landscapes given special protection in addition, that tranquillity and reduction of light pollution should be a factor in decision-making. Settlements should be prevented from coalescence and local design features more strongly enforced, commercial and economic growth should be limited to specified urban areas and that improvement of the environment should be a major factor wherever previously developed land or greenfields are considered for development. I am very worried about the continuing encroachment of large housing estates close to existing villages in the southern area of Banbury.

LPR-B-528	Amanda Fossey	Milton	<p>Object. Adderbury and Bloxham are rural communities. Their growth in the last 10 years looks set to turn them into small towns but with few facilities, requiring travel by road to reach most facilities in Banbury. The road system was not designed for the large amount of traffic now using it and residents complain of noise and light pollution growing in Bloxham, Milton and Adderbury. The roads to the north and east of Banbury are better capable of handling the increased traffic from Banbury's growth than the south and west - any growth should be to Banbury's east and north. Development in the rural areas should be restricted to local needs. Neighbourhood Plans should control the growth of rural and village development and should not be overturned by the Planning Inspectorate operating under national guidance. The sites put forward in the parishes of Adderbury, Milton and Bloxham, do not meet any of the Council's stated objectives, nor any of the previous consultation results. Development in Adderbury and Bloxham should be small scale so that these communities retain their identity as 'villages in the countryside'. Any development in Milton Parish should be very small scale respecting the conservation village and its environs. The proposed development of the old caravan park and its adjoining field should be the subject of a separate consultation with Milton villagers as it falls within the parish boundary but outside the village. That road traffic should not be allowed to grow further, that urban signage and lighting should not be sited in or around villages and the countryside but that these should be restricted to towns, that the overall landscape and character of the area should be protected and certain special individual features in the landscapes given special protection in addition, that tranquillity and reduction of light pollution should be a factor in decision-making. Settlements should be prevented from coalescence and local design features more strongly enforced, commercial and economic growth should be limited to specified urban areas and that improvement of the environment should be a major factor wherever previously developed land or greenfields are considered for development. I am very worried about the continuing encroachment of large housing estates close to existing villages in the southern area of Banbury. There is no bus connection at all for Milton or any public transport. There is no pathway for cyclists or horse riders.</p>
LPR-B-529	Alexander Severn	Milton	<p>Strongly object. The services can not cope. As an example - Do you know that at this very moment, there are two sets of "ad hoc" road works and thus, one way traffic, between this hamlet and Bloxham. Never a week goes by without this road having a blockage of some sort, generally due it being dug up to repair a fault or provide a service to a new development. Traffic on the road linking these communities has now reached dangerous levels, both in volume and speed. The chicane at the Adderbury end has only caused frustrated drivers to speed ever more so, as they proceed towards Bloxham. Enough damage to this rural community has been done already.</p>
LPR-B-530	Victoria Malcher	LPR-A-077	<p>Object. Since 2014 Cherwell has made a disproportionately large contribution to meeting the District's housing supply. A significant part of this contribution has been made by Adderbury. The existing 2015 Local Plan provides enough homes to the period to 2031. Twelve potential sites could provide a minimum of 3,250 new houses (adopting CDC's Site Capacity Sense Check methodology - Policy BSC 1: District Wide Housing Distribution para B.102 &amp; Policy Policy BSC 2) have been proposed around Adderbury including a large 60 hectare site between Twyford and the M40, stretching from the Kings Sutton Road to the Aynho Road. This compares to a current population of approximately 2,811. These proposals contradict Cherwell District Council's own Local Plan Key Objectives and existing Local Planning Policies. Any further development will have a severe visual impact on the rural character of Adderbury, specifically those proposed within the conservation area or adjoining its boundary. Development contradicts Policy ESD 1: Mitigating and Adapting to Climate Change. "Measures will be taken to mitigate the impact of development within the District on climate change. Distributing growth to the most sustainable locations". Adderbury is not a sustainable location as described in the Local Plan. The local infrastructure, particularly the through road, road junctions, access roads and roads adjoining the school are at or near capacity and create a health and safety risk to residents. Increased volumes of traffic, particularly stationary, results in poor air quality. Development would place an unnecessary strain on these services and does not support a sustainable economy. Development would be contrary to NPPG - Rural housing para 78. In rural areas, planning policies and decisions should be responsive to local circumstances and support housing developments that reflect local needs. The current supply of housing more than adequately provides for housing demand. Continued development of land, particularly that located within the conservation area and green belt should be refused on the basis that any further loss of this attribute would severely impact the character and beauty of Adderbury's natural heritage, lessen its natural capital and degrade its ecosystem. Development would be contrary to Policy ESD 10. Substantial new build structures on elevated land, filling a space within the village that positively contributes to the character and appearance of the Conservation Area in its undeveloped form, should be resisted. Any new development in this area would appear unusually incongruous and out of character to the historic character of the immediate locality. Wild Oxfordshire have included this proposed development land within their North Cherwell CTA and according with Policy ESD 11: Conservation Target Areas, development which would prevent the aims of a Conservation Target Area being achieved will not be permitted. Further and increased residential development in inappropriate locations (ie rural villages) where the local road infrastructure is at or near capacity has resulted in a significant increase in vehicular movements. Increased traffic congestion as a result of over-development has substantially increased vehicle emissions and has degraded ambient air quality for residents. This is of particular concern when severely congested roads with stationary traffic are located adjacent to schools and private residences. This is most noticeable on the Oxford Road/Anyho Road traffic light junction. Further development in Adderbury does not support this objective as it decreases the areas natural capital, it increases air pollution, lowers connectivity and does not form part of a sustainable transport model facilitating by lowered car usage.</p>

LPR-B-531	John and Judy Critchfield	LPR-A-077	<p>Object. Amount of development has altered the character of the village. There is a danger that further development on the scale apparently envisaged (in particular surrounding Twyford) would mean that there is little more than a single field separating an extended Adderbury with an extended Bodicote that is generally seen as being subsumed within Banbury. Development would fundamentally alter the character of the village. There is also a danger that the development of sites proposed at the end of the village would increase the coalescence between Adderbury and Milton. The village would not have the resources to sustain the scope of development envisaged. The additional traffic would arise from the development Negative impact from noise pollution both arising from new housing and suffered by inhabitants of new housing that would be closer to the M40. Who would be able to access housing developed. I understand that houses in Henge Close (a recent development on the Milton Road) are currently on the market for more than £500k. That cannot be a resource that would enable young families wishing to start a life in the village. We note that the site information proformas state that Adderbury has extensive transport by bus, stating that bus routes include accessibility to Banbury and Oxford. This rather implies a wider network than is actually the case. In fact there is an hourly service that goes to Oxford one way and Banbury the other. In practice neither the buses nor the cycle lanes are used to the extent that would significantly reduce the dependence on travel by car to the areas served and many local areas are not served at all. The main effect on transport of building additional houses (in Adderbury and elsewhere) is likely to be an increase in the volume of car traffic. Adderbury only has one shop which is no more than a convenience store. There is no Doctor or Dental surgery in the village and people currently attend Banbury, Deddington and Bloxham surgeries. We believe these are also working at full or near full capacity. There is one Post Office, which is open two half days a week. There is only one primary school in the village which has increased its size by half. We believe that the expanded school is nearly full and understand that the school is unable to expand further. The proformas state that the sites have good road frontage via an access to Croft Lane. It is hard to see how this could be the case even once any development (even if the minimum number of houses were to be built) was complete and it is particularly difficult to see how the resources and equipment necessary for construction could be delivered: Croft Lane is not wide enough to accommodate two vehicles passing; road narrows and has houses either side; junction of Croft Lane onto the main High Street has obscured visuals due to the hedging at the end house; and, Croft Lane passes over a pavement before joining the main road. This would create a potential site for accidents. In the application the site is deemed 'flat'. We agree that the smaller field and that the top corner of the larger field is reasonably flat. However, this is not the case for much of the area within the larger field, which drops away to a 1:7 gradient before the point at which the proposed site ends. The field is prone to flooding and could increase flooding elsewhere. There is intrinsic value in the landscape of the Sor Brook valley, which is enjoyed by many. This is recognised in the Adderbury Local Plan. It would be lost and there would be a danger that development would impact on the bio-diversity of the area</p>
LPR-B-532	D Planning for Blue Cedar Homes	Option 19	<p>Local Plan needs to make provision for elderly persons accommodation within the emerging Local Plan. The future need for specialist accommodation for older people broken down by tenure and type may need to be assessed and can be obtained from a number of online tool kits provided by the sector. The assessment can set out the level of need for residential institutions (Use Class C2). Many older people may not want or need specialist accommodation or care and may wish to stay or move to general housing that is already suitable, such as bungalows, or homes which can be adapted to meet a change in their needs." [Emphasis added]. There is a Government imperative for Local Planning Authorities to ensure that adequate provision is made for all types of housing need and in particular for the elderly. It is important that this Local Plan calculates the specific need for all types of elderly persons accommodation during the Plan period. This includes provision for care homes, nursing homes, retirement village and bespoke elderly persons accommodation for owner occupation which enables elderly residents to downsize within the area that they have lived and thus free up their accommodation further. It is not sufficient for the Local Plan just to specify support for the provision of elderly persons accommodation, we also believe that the Local Plan should identify specific sites for such accommodation. These sites in the main should be standalone and not included within larger residential allocations. Blue Cedar Homes specifically develop their own residential sites for elderly persons which are not part of larger residential allocations. Many of their locations are within rural settlement and it is important that policies for rural settlements do not prohibit such development i.e. many existing policies only allow infill and such policies frustrate the ability to bring forward sympathetically designed schemes which meet an identified local need. Careful thought must be given to how such policies are drafted and we would suggest that the policies for rural settlements enable small scale retirement schemes to come forward either within or adjacent to settlement boundaries on suitable sites.</p>

LPR-B-533	Ben Malcher	LPR-A-077	<p>Object. Since 2014 Cherwell has made a disproportionately large contribution to meeting the District’s housing supply. A significant part of this contribution has been made by Adderbury. The existing 2015 Local Plan provides enough homes to the period to 2031. Twelve potential sites could provide a minimum of 3,250 new houses (adopting CDC’s Site Capacity Sense Check methodology - Policy BSC 1: District Wide Housing Distribution para B.102 &amp; Policy Policy BSC 2) have been proposed around Adderbury including a large 60 hectare site between Twyford and the M40, stretching from the Kings Sutton Road to the Aynho Road. This compares to a current population of approximately 2,811. These proposals contradict Cherwell District Council’s own Local Plan Key Objectives and existing Local Planning Policies. Any further development will have a severe visual impact on the rural character of Adderbury, specifically those proposed within the conservation area or adjoining its boundary. Development contradicts Policy ESD 1: Mitigating and Adapting to Climate Change. “Measures will be taken to mitigate the impact of development within the District on climate change. Distributing growth to the most sustainable locations”. Adderbury is not a sustainable location as described in the Local Plan. The local infrastructure, particularly the through road, road junctions, access roads and roads adjoining the school are at or near capacity and create a health and safety risk to residents. Increased volumes of traffic, particularly stationary, results in poor air quality. Development would place an unnecessary strain on these services and does not support a sustainable economy. Development would be contrary to NPPG - Rural housing para 78. In rural areas, planning policies and decisions should be responsive to local circumstances and support housing developments that reflect local needs. The current supply of housing more than adequately provides for housing demand. Continued development of land, particularly that located within the conservation area and green belt should be refused on the basis that any further loss of this attribute would severely impact the character and beauty of Adderbury’s natural heritage, lessen its natural capital and degrade its ecosystem. Development would be contrary to Policy ESD 10. Substantial new build structures on elevated land, filling a space within the village that positively contributes to the character and appearance of the Conservation Area in its undeveloped form, should be resisted. Any new development in this area would appear unusually incongruous and out of character to the historic character of the immediate locality. Wild Oxfordshire have included this proposed development land within their North Cherwell CTA and according with Policy ESD 11: Conservation Target Areas, development which would prevent the aims of a Conservation Target Area being achieved will not be permitted. Further and increased residential development in inappropriate locations (ie rural villages) where the local road infrastructure is at or near capacity has resulted in a significant increase in vehicular movements. Increased traffic congestion as a result of over-development has substantially increased vehicle emissions and has degraded ambient air quality for residents. This is of particular concern when severely congested roads with stationary traffic are located adjacent to schools and private residences. This is most noticeable on the Oxford Road/Anyho Road traffic light junction. Further development in Adderbury does not support this objective as it decreases the areas natural capital, it increases air pollution, lowers connectivity and does not form part of a sustainable transport model facilitating by lowered car usage. The CNC Local Plan Review must resist the continued erosion of villages in Cherwell and specifically around Adderbury. Proposals to increase residential development in Adderbury will place unnecessary and restrictive burdens upon the health, mental well-being and accessibility of the village.</p>
LPR-B-534	Define for William Davies Homes	Call for sites Promotion - Land east of South Newington Road, Bloxham	Land east of South Newington Road, Bloxham is promoted for housing. A development concept masterplan has been supplied.
LPR-B-534	Define for William Davies Homes	Option 1	<p>supports the vision of CDC to ensure that “there is a choice of energy efficient, well-designed market and affordable homes to meet our needs.” In that context, it notes that the Vision recognises Cherwell’s position within the Oxford-Cambridge Arc and the “significant opportunities” that the Arc provides in relation to delivering a “healthier, more prosperous, resilient and sustainable” future and COVID-19 recovery. The implications that this has in terms of the quantum of development that CDC should plan for to 2040 is discussed in response to Option 30. Notwithstanding the position in relation to the quantum of development that CDC should seek to plan for, WDH welcome CDC’s Vision that the District’s rural communities will realise their full potential, not least by providing “new rural models of transport and service provision” to complement existing services in order to create a more sustainable and wellconnected rural network where communities can thrive and benefit from their connectedness to higher order urban areas. As discussed in WDH’s response to Option 30, that is a wholly appropriate vision for rural areas in the context of the challenges that they face, and thus it is imperative that the LPR positively plans to meet the needs of such areas. WDH’s response to Option 30 highlights how that should be achieved through focusing residential development to sustainable rural settlements, which the National Planning Policy Framework (NPPF, paragraph 79) highlights can “enhance or maintain the vitality of rural communities” and “support local services.” The provision of housing in rural settlements should, therefore, be identified as a key aspect of CDC’s Vision, and that should clearly be aligned with the planned provision of infrastructure.</p>
LPR-B-534	Define for William Davies Homes	Option 2	<p>WDH welcome CDC’s intention to fully meet its own housing needs (Key Objectives (KO) 1 and 2) and to achieve that by distributing development to Cherwell’s most sustainable locations. In that context, the merits of sustainable villages such as Bloxham are noted, and are discussed in WDH’s response to Option 30. Given the constraints relating to other main settlements (discussed in further detail in response to Options 18, 22, 29 and 30), the focusing of development to sustainable rural settlements would be a wholly appropriate approach to meeting CDC’s housing needs in accordance with NPPF paragraph 79. As such, CDCs intention to “support vibrant rural communities by seeking to protect and expand local services and facilities” (KO31) is welcomed, and the role that residential development can play in achieving that is noted.</p>

LPR-B-534	Define for William Davies Homes	Option 6	WDH recognise the importance of providing affordable housing to meet the evidenced housing needs of the District, and as such recognise the intention of any affordable housing policy. It is important, however, that the approach taken by CDC to meeting those housing needs is justified on the basis of appropriate evidence and that the affordable housing policy is deliverable over the plan period (as required by NPPF paragraphs 35b and 35c respectively). As such, the approach advocated by WDH is for CDC to commission a Housing and Economic Needs Assessment that considers the housing needs (including affordable housing needs) of the District, and recommends an affordable housing requirement for developments in the District. It is critical, however, that any suggested affordable housing requirement is taken into account in a Viability Assessment that seeks to ensure that “the total cumulative cost of all relevant policies will not undermine the deliverability of the plan” (PPG Ref. 10-002-20190509), in order to ensure that the policy requirement is “deliverable” in accordance with NPPF paragraph 16b. If it is the case that the affordable housing requirement identified based wholly on the District’s needs alone would render development sites unviable and is therefore not deliverable, CDC should seek to cap that affordable housing requirement to an amount that would ensure the deliverability of development sites in the District. That may well be the case given the District’s acute affordability issues and lengthy affordable housing waiting list. In addition to that, CDC’s affordable housing policy should allow for flexibility in a site’s affordable housing delivery to take account of scheme viability and other site-specific factors. In that event, WDH note that uplifting the level of CDC’s housing delivery above its base housing needs would increase the overall level of affordable housing need delivered in the plan period, and would begin to redress the affordability issues in the District that have been explicitly referred to in recent appeal decisions (such as Appeal Ref. 3228169). That approach to increasing development to facilitate affordable housing delivery is particularly relevant to rural areas given that CDC’s ‘Delivering our Options’ consultation document specifically references the particularly acute affordability issues in rural areas and the need for affordable rural housing. In that regard, it is also noted that CDC should seek to maximise both market and affordable housing delivery in such areas by directing growth to sustainable rural villages (see WDH’s response to Option 30).
LPR-B-534	Define for William Davies Homes	Option 7	As with the District’s overall affordable housing requirement (Option 6), CDC’s affordable housing tenure requirement should be informed by a Housing and Economic Development Needs Assessment that considers the needs for each tenure type, as well as the Government’s requirements in relation to ‘First Homes’ / Discounted Market Sales. As with Option 7, the affordable housing tenure requirement should be taken into account in a Viability Assessment that seeks to ensure that “the total cumulative cost of all relevant policies will not undermine the deliverability of the plan” and the policy requirement and plan as a whole is deliverable.
LPR-B-534	Define for William Davies Homes	Option 8	WDH note the Government’s guidance in relation to the adoption of the nationally described space standards (NDSS), with a Written Ministerial Statement dated 25th March 2015 having confirmed that “the optional new national technical standards should only be required [...] if they address a clearly evidenced need, and where their impact on viability has been considered.” As such, for CDC to justify their adoption of such standards, up-to-date and appropriate evidence is required that demonstrates an actual need for dwellings that comply with the NDSS. Moreover, should that evidence justify the imposition of an NDSS requirement, that requirement should be considered in a comprehensive viability assessment that considers all of the plan’s requirements. That viability assessment should take into account that the density of their development will inevitably reduce as a result of NDSS dwellings being more space-intensive. In addition to that, it is also suggested that CDC carefully considers the implications of the imposition of such standards on housing affordability (as a result of the additional cost of extra floorspace being passed onto buyers) and the potential impact on development delivery rates.
LPR-B-534	Define for William Davies Homes	Option 9	Whilst WDH recognise the importance of providing accessible housing as part of meeting the District’s housing needs, and the needs of specific groups, the NPPF clearly states that any policies should be justified based on up-to-date and proportionate evidence (NPPF paragraph 35b), such as a Housing and Economic Development Needs Assessment that considers the need for accessible housing in the District. That assessment should take account of the distinct difference between a need for purpose-built accessible housing (i.e. care homes and supported housing) and accessible dwellings in ‘estate-like’ residential development, and clearly recommend requirements for M4(2) and M4(3) housing on that basis. Should that evidence identify that an accessible housing requirement is justified, it should be tested within a viability assessment that considers the cumulative cost of all policy requirements and ensures that the requirement does not render sites unviable and therefore undeliverable. Any policy in relation to housing accessibility should also provide sufficient flexibility to respond to site-specific factors that may influence the delivery of accessible housing, as well as viability.
LPR-B-534	Define for William Davies Homes	Option 10	Whilst the intention of the policy option is recognised, CDC should not seek to require sustainability measures that go above and beyond the Government’s adopted Building Regulations unless there is clear evidence to justify that approach. Rather, CDC should seek adherence to the latest Building Regulations both to ensure that the policy is in accordance with national policy and to ensure that it does not quickly become out-of-date. The approach of referring to the latest Government standards would reflect that the Government’s clear objective in recent years, through the updating of its adopted Building Regulations and the emerging Future Homes Standards, is to create a standardised approach to energy efficiency and sustainable construction that is clear and is able to be implemented by developers as cost-effectively as possible. To seek to go above and beyond the Government’s own requirements would, therefore, both be contrary to the Government’s policy approach and would undermine the economies of scale for product manufacturers, suppliers and developers that the Government is seeking to achieve. As such, it is WDH’s clear position that any policy relating to sustainable construction, and sustainable measures more widely, should seek adherence with the latest Building Regulations (or replacement standards). However, if CDC are minded to exceed those requirements, then they must justify that based on an up-to-date evidence of need, and should consider the uplifted requirement in a viability assessment of the plan’s cumulative policy requirements.

LPR-B-534	Define for William Davies Homes	Question - Policies for Climate Change, Sustainable Construction & Renewable Energy	WDH note the benefits of promoting a 'fabric first approach' to increasing the energy efficiency of new houses and therefore managing climate change. Indeed, William Davis has adopted a holistic fabric first approach in their house type design as an alternative to renewable energy infrastructure, which seeks to reduce each dwelling's inherent energy demand. The approach also includes the installation of water saving appliances to aid water efficiency, highly efficient gas condensing boilers to reduce fuel costs, and gas savers and waste water heat recovery systems to reduce carbon emissions. This fabric first approach has a number of clear benefits, notably that it is built into the property for its whole life and achieves the aim of reducing CO2 emissions. In comparison to renewable technologies there is no maintenance required, and it avoids the concern as to whether the technologies are actually being used. Therefore, CDC's policy approach towards energy efficiency, sustainable construction and managing climate change should allow greater flexibility by including reference to the potential inclusion of other measures of mitigating climate change such as the above approach. In addition, and as set out in response to Option 10, CDC are reminded that any such policies should not seek to go beyond the standards set out in the most recent Building Regulations (or replacement standards) given the Government's clear objectives to create a standardised system in that regard.
LPR-B-534	Define for William Davies Homes	Question - Green Belt	Paragraph 5.6.5 of CDC's 'Developing our Options' consultation document states that any new county-wide strategic matters relating to the Oxford Green Belt will be addressed by the Oxfordshire Plan. In that context, CDC are reminded that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified (NPPF paragraph 140), and that strategic policy-making authorities must first demonstrate that it has "examined fully all other reasonable options for meeting its identified need for development" prior to releasing Green Belt land. That includes maximising the potential of suitable, available and achievable non-Green Belt sites that are located in sustainable locations. In that context, WDH's response to Option 30 highlights the suitability of their site at Land East of South Newington Road, Bloxham; which should therefore be allocated ahead of any Green Belt release.
LPR-B-534	Define for William Davies Homes	Option 12	Whilst it would appear most sensible to focus off-site biodiversity net gain compensatory measures to locations that would maximise their effectiveness (i.e. Conservation Target Areas / identified Nature Recovery Network locations), WDH does not have a specific preference or objection to any of the options of delivering an off-site biodiversity net gain (BNG) set out in Option 12. Indeed, WDH would be in favour of a policy that clearly sets out the specific range of mechanisms that the Council would consider appropriate for BNG compensation in a manner that is "clearly written and unambiguous, so it is evident how a decision maker should react to development proposals" (NPPF paragraph 16d). As part of that, the policy should clearly set out the required rate of off-site compensation (in terms of cost per unit), which must be justified based on up-to-date evidence and should be clearly set out in the policy.
LPR-B-534	Define for William Davies Homes	Option 13	Whilst the intention of a natural capital audit is understood, such an assessment is not required by national policy or guidance, and indeed CDC have not yet provided evidence that justifies the need for the assessment. Moreover, it is not clear how the environmental aspect of the audit would vary from a biodiversity net gain assessment (also required by the plan), nor is it clear what the proposed methodology for the audit would be as yet. As such, it suggested that the plan does not require a natural capital assessment for those reasons. However, should CDC continue to pursue that approach, it is important that a standard methodology / calculator is developed to ensure consistency when assessing proposed developments (i.e. similar to the BNG calculator). That would ensure that the policy is clear and easily enforceable (NPPF paragraph 16d).
LPR-B-534	Define for William Davies Homes	Option 14	The policy should set out that any considerations in relation to children's play provision / contributions should first assess the existing children's play provision and needs of specific localities, and then should seek to determine how best respond to any identified need. The policy should provide flexibility to respond to those needs through the most suitable measure, whether that be through on-site play space provision or through a contribution to existing facilities. The policy should set out that decisions on the appropriate approach to be taken should be informed based on site-specific circumstances and opportunities present to expand existing facilities nearby.
LPR-B-534	Define for William Davies Homes	Question - Achieving Good Design & 'Beauty'	It is noted that any design policy within the new local plan should not merely replicate the guidance of the NPPF, Planning Practice Guidance (PPG) or the Government's National Model Design Code, and should not include generic guidance. That also stands for any Supplementary Planning Documents or Supplementary Planning Guidance documents adopted by CDC after the adoption of the emerging plan, and indeed CDC should also take into account how any SPDs would relate to the Government's own design coding agenda. It is therefore suggested that it would be more appropriate for design guidance to be prepared at the local level where there is a need to do so, perhaps through CDC preparing area-specific design SPDs. That would ensure that guidance is specific and relevant to the specific key design considerations of localities.
LPR-B-534	Define for William Davies Homes	Question - 20-Minute Neighbourhoods	Whilst the principles of the '20-minute neighbourhood' are noted, the imposition of those principles for plan-making purposes could overlook the merits of focusing development within rural settlements. That is a key imperative of the NPPF, which outlines that development in rural areas can "enhance or maintain the vitality of rural communities" and "support local services" (NPPF paragraph 79), and is clearly required in the District as a result of the depletion of services and facilities and increased housing affordability issues experienced in Cherwell's rural areas. The need for residential development in Cherwell's rural areas is discussed in more detail in WDH's response to Option 30. As such, it would be appropriate to allow some leeway to rural settlements when considering elements of the 20-minute neighbourhood model, which reflects that villages (such as Bloxham) can develop into a 20-minute neighbourhoods as a result of the infrastructure that new developments can support, and similarly that groups of villages can collectively become neighbourhoods in themselves when support is given to enhancing and maintaining the services and facilities within them.
LPR-B-534	Define for William Davies Homes	Question - Transport & Connectivity	Whilst the proposed transport and connectivity approach in principle, the plan as a whole (including any transport-based policies and the overall spatial strategy) should recognise that "opportunities to maximise sustainable transport solutions will vary between urban and rural areas" which NPPF paragraph 105 states should be "taken into account in both planmaking and decision-making." The plan should reflect, therefore, that whilst sustainable transport solutions may not currently be as available in rural areas, the focusing of development in such locations can provide the investment required to provide or enhance sustainable transport opportunities, and improve the level of accessibility that Cherwell's significant rural population can benefit from

LPR-B-534	Define for William Davies Homes	Option 16	WDH do not have any specific preference relating to the options set out. However, should CDC pursue the option of requiring new development to provide digital connections and be future-proofed to accommodate future digital infrastructure needs, CDC must take that the cost of that into account in a comprehensive Viability Assessment.
LPR-B-534	Define for William Davies Homes	Option 17	In relation to the latter question, whilst it would be acceptable to prepare the Infrastructure Delivery Plan (IDP) on the basis of individual settlements, CDC should recognise that rural centres frequently work together to provide the day-to-day services and facilities required to support the population of their catchment, and thus groups of settlements often effectively act as a combined neighbourhood. The IDP's approach should reflect that, perhaps by setting settlement-specific requirements for the District's larger settlements and grouped requirements for the District's rural villages.
LPR-B-534	Define for William Davies Homes	Option 18	further strategic growth and development at Banbury should be limited to reflect its sensitive landscape setting and the need to maintain separation between the town and surrounding villages, as well as to ensure that CDC does not exacerbate the strain that has already been placed on the town's infrastructure as a result of the considerable development in Banbury in recent decades. Those are clear issues that have been recognised by CDC both in this Developing our Options consultation paper, and in previous stages of the LPR. The Developing our Options paper highlights that Banbury has been a key location for housing growth for many years, with 3,612 dwellings having been delivered since 2011, largely at strategic allocations on the edge of the town. That is set to continue throughout the plan period, with existing commitments as of 31st March 2021 totalling an additional 2,747 dwellings at Banbury. Similarly, there has been significant employment-based development in Banbury in recent years as a result of the approach taken in recent local plans. That level of growth has clearly resulted in strain to the settlement in recent years, with the consultation document highlighting that "there are several challenges for Banbury including deficiencies in physical and social infrastructure, as well as issues with air quality and the impact of development on the surrounding rural landscape." That was reflected in the Sustainability Appraisal (SA) that accompanies this consultation document, which found that there were a higher number of favourable outcomes for the lower-level growth option than the higher-level growth option. That SA highlighted that recent development has resulted in an "already congested road network" with associated "significant" air quality issues and that significant additional development in the town without substantial infrastructure provision may exacerbate those issues, and also contribute to climate change issues. Given that there is still a large amount of development to come forward in the near future, that alone gives sufficient justification to reduce the amount of residential development allocated in the town in the upcoming plan period. In addition to that, the SA highlights that Banbury has a sensitive historic environment, that further expansion of the town "risks encroachment on historic villages (mostly with designated conservation areas) and / or registered parks and gardens", and that Banbury is surrounded by an "inherently sustainable landscape"; which is also identified as a key constraint by CDC's consultation document. The SA finds in relation to that sensitive landscape context that "these factors lead to a concern with higher growth", which is a sensible conclusion given that substantial growth could only be accommodated by locating development at sites at the town's more visually prominent peripheral areas at the threshold to its sensitive rural surrounds. In the context of those constraints and given that, by the SA's own admission, there is not a "particular housing need associated with Banbury" it would clearly be a wholly inappropriate approach to accommodate significant housing growth in the town in the upcoming plan period. Indeed, pursuing that approach despite the above concerns would ultimately impact on housing delivery and the deliverability of the spatial strategy, thus undermining the plan itself. Rather, it would be more appropriate for CDC to disperse residential development more equally across the District by directing development to sustainable villages that are well-connected to the main service centres of Banbury and Bicester given the constraints to development in those locations.

LPR-B-534	Define for William Davies Homes	Option 22	<p>Bicester “is one of the fastest growing areas in Oxfordshire” with the majority of development in recent years having “been focused on a small number of large, strategic sites.” Indeed, the Council’s adopted Local Plan identified some 10,000 dwellings to be delivered at Bicester to 2031, as well as 140ha of employment land; which is clearly a significant level of growth. CDC’s consultation document outlines that, whilst over 2,879 dwellings have been delivered since 2011 at Bicester’s strategic sites and permissions are in place for a further 4,039 dwellings, “several of the sites have been slower to deliver homes than anticipated and the total [number of houses] delivered is somewhat short of the projections set out in the 2015 Plan of 5,359.” That document finds that this is due to a number of reasons relating to the size, scale and complexity of the developments, delays in provision of key infrastructure required to support the development, and some sites obtaining full planning permission later than was originally anticipated. Clearly those constraints, particularly in relation to the delay in providing key infrastructure, must be dealt with before directing further residential growth to Bicester. Indeed, whilst CDC’s SA identifies that new development would facilitate the significant and strategic road infrastructure provision needed to facilitate the development itself and also realise transport and air quality-based improvements, it is important that CDC take a realistic view of the amount of development that could come forward in the plan period, and allocate land accordingly. In the context that previously allocated sites and their associated infrastructure have not come forward quickly and are currently experiencing issues, the amount of additional development that is likely to come forward is limited. CDC’s spatial strategy should reflect that by limiting the amount of development directed to Bicester. Furthermore, providing for a more modest amount of housing in the upcoming plan period would avoid potential issues in relation to market absorption of housing, and associated housing delivery rates. Indeed, the Letwin Review of Build Out Report (October 2018) highlights that there is a limit to the level of housing that the market will ‘absorb’ where that supply is a homogenous supply in a concentrated area; which would increasingly be the case should CDC continue to focus growth to the peripheries of Bicester (and similarly Banbury). The Letwin Review outlines that the limit to market absorption can dictate level of delivery from large sites in such areas, which would likely occur should CDC continue to direct growth to the settlement in the upcoming plan period. That, in addition to the clear constraints to development set out above, further calls into question the deliverability of any potential further development sites in Bicester. As such, CDC should limit the amount of additional development at Bicester to allow those issues to be resolved and existing commitments to finally come forward. Instead, and so as to meet the District’s housing needs and also tackle some of the key matters arising within the District, it would be more appropriate to disperse residential development across the District rather than depending on delivery from Banbury and Bicester as in recent years. CDC should achieve that balance by directing development to sustainable and wellconnected villages</p>
LPR-B-534	Define for William Davies Homes	Option 29	<p>WDH believe that the emerging Local Plan should not seek to focus any additional development to Heyford Park due to the limited capacity of the new settlement to accommodate additional significant growth both from a deliverability and suitability perspective. As such, CDC should limit development only to the element that is already planned for. Principally, WDH has concerns as to whether any further allocations adjacent to the settlement would be deliverable, given the degree of the original allocation that has not yet been delivered. CDC’s Developing our Options consultation paper sets out that the 2015 Local Plan allocated the RAF Heyford site as a location for a new settlement of c. 2,350 dwellings, of which 1,670 dwellings are remaining to be delivered in the plan period to 2040. Given the amount of supporting infrastructure that is required to service an entirely new settlement, it is not inconceivable that those final dwellings may only be delivered towards the latter years of the plan period. As such, the settlement could only accommodate a small element of housing after the completion of the initial development, particularly once any additional site(s) have prepared and submitted a planning application, received permission, negotiated a Section 106 Agreement, discharged all conditions, undertaken precommencement works including infrastructure provision, and delivered dwellings. In that light, there is no certainty that any additional development could come forward in this new settlement prior to 2040. In any event, it is considered that the settlement is unsuitable for further large-scale development, with CDC’s own consultation document highlighting that the settlement had “many constraints which include landscape, heritage as well as considering how sustainable the site is and whether or not accessibility in accordance with a more sustainable transport hierarchy can be achieved.” The settlement’s constrained nature is reflected in the SA assessment of the scenarios for growth in the settlement, which concludes that there is a significantly higher amount of negative impacts associated with a higher level of growth than the lower level of growth. The commentary supporting that highlights that the settlement is “relatively poorly connected” giving rise to concerns in relation to transport and climate change matters, that historic environment is a “primary constraint to further growth at Upper Heyford” by virtue of its “wide-ranging sensitivities”, and that there are “inherent landscape sensitivities that are a constraint to further growth at Upper Heyford” in addition to that. As such, there should only be very limited growth (if any at all) at RAF Upper Heyford given that the settlement is clearly unsuitable for large-scale development and that it is not certain that any further development beyond the extant allocations would be deliverable. It would be more appropriate for CDC to disperse residential development more equally across the District by directing development to sustainable villages that are well-connected to the main service centres of Banbury and Bicester given the constraints to development in those locations.</p>

LPR-B-534	Define for William Davies Homes	Option 30	<p>WDH support the latter option of “directing disproportionately more development to the rural areas over the plan period to meet wider district needs”, which would be an entirely justified and appropriate approach given the District’s current supply of housing and the constrained nature of its larger urban areas (such as Banbury, Bicester, Kidlington, and Upper Heyford) to deliver further significant growth in addition to that recently delivered and currently committed. CDC’s emerging local plan will be required to identify sufficient land to meet the surplus housing requirement; which is likely to be significant. As set out in WDH’s response to Options 18, 22 and 29, the capacity of Cherwell’s larger settlements of Banbury, Bicester and RAF Upper Heyford to accommodate significant residential development in addition to the development that is already committed is limited. it would not be appropriate to continue to pursue the approach taken in recent local plans of allocating considerable land in Bicester, Banbury and at RAF Upper Heyford. That approach would fail to reflect the unsuitability of such locations, and in any case would not provide certainty that development would come forward as required. It is critical, therefore, that CDC moves away from that approach to development in the upcoming plan period. it would be more appropriate to pursue a more dispersed spatial strategy for growth in the upcoming plan period, reducing the focus on the constrained settlements of Bicester, Banbury and RAF Upper Heyford. CDC should achieve that by directing an increased level of residential growth to sustainable settlements that have a healthy range of services and facilities, and are well-connected to those higher order settlements. That re-focused spatial strategy would provide more certainty that the required level of development will come forward through the plan period, by reducing CDC’s dependence on a small number of large allocations in the District’s two main urban areas that have previously experienced delays in their delivery (as above). Instead, the proposed dispersed spatial strategy would provide a wider portfolio of sites that would have much-needed variations in site size, developer (and as such house types), and target housing markets, That approach would be wholly in accordance with the NPPF. Increased rural development can play a key role in dealing with those acute socio-economic issues. much of the rural development in recent years has come forward via speculative, unplanned developments. Those are clearly issues that CDC could and should begin to address in the upcoming plan period (as opposed to deferring them to Neighbourhood Plans and such). Critically, that scale of development would also begin to redress the housing affordability issues that are prevalent in rural areas, and the associated socio-economic matters discussed above. To distribute that increased level of development amongst rural villages in a sustainable manner, an audit of rural villages to ascertain their current and potential sustainability is required to inform a ‘rural settlement hierarchy’ (as suggested by CDC in Option 32). That audit should take into account a settlement’s housing needs, its suitability to accommodate development in terms of the services and facilities available in the settlement, what could be provided alongside further development, its accessibility to nearby higher order centres, and the availability of suitable, available and achievable sites in and around the settlement. Growth should be distributed accordingly on that basis.</p>
LPR-B-534	Define for William Davies Homes	Bloxham	<p>WDH note the merits of Bloxham as a sustainable location for growth given its readily available range of services and facilities, connectivity to surrounding urban areas, lack of planning constraints (such as Green Belt designation), and in the context of its role as the District’s second largest village after Kidlington (not included by CDC as an option for further growth due to planned developments and Green Belt designation). Indeed, Bloxham benefits from a range of services and facilities within the settlement itself, including convenience stores, a petrol station, a post office, a doctor’s surgery, a pharmacy, a dentist, a primary school, a secondary school, and places of worship. It also benefits from a number of pubs, bars, restaurants, takeaways and cafes, as well as a good range of recreational / sports facilities including a Sports Centre with adjacent playing pitches, a separate multi-use games area and cricket pitch, a recreation ground with a play area, a pitch and putt golf course, and a network of public rights of way connecting the settlement to the wider countryside. In addition to that, the site is well-connected to nearby settlements. The 488 bus service that travels through Bloxham via the A361 (South Newington Road / High Street / Bloxham Road) provides hourly services on weekdays and Saturdays to Chipping Norton, Hook Norton and Banbury. That provides access to the services, facilities and key employment opportunities within those settlements (particularly Banbury), and also provides an opportunity for multi-modal journeys, with Banbury Bus and Train Stations providing access to the wider region. As such, Bloxham is clearly an inherently sustainable location for growth, and therefore is a suitable location to accommodate an increased amount of residential development; particularly given the constraints to development in nearby Banbury as set out above.</p>
LPR-B-534	Define for William Davies Homes	Option 31	<p>clear preference in response to Option 31 is for CDC to allocate specific sites in sustainable rural settlements to meet identified housing needs through the process of this ongoing local plan review, rather than to leave that to potential future Neighbourhood Plans. That is particularly critical in the context of the challenges that are being experienced in Cherwell District. As identified by CDC, the previous approach of not seeking to allocate specific sites in rural areas resulted in housing developments coming forward at unplanned sites through speculative planning applications, which has previously meant that “it has been more challenging [for CDC] to coordinate infrastructure improvements and supporting services.” That has resulted in strains to key infrastructure, services and facilities in rural areas, which are considered by CDC to be “relatively limited” and increasingly depleted in recent years. To avoid that scenario in the upcoming plan period, it is important that suitable sites are identified at the beginning of the plan period through the local plan review process, to ensure that any infrastructure required can be properly planned for and delivered where and when it is required to support development. Allowing for that to be deferred to neighbourhood plans does not provide that certainty, and leaves open a window of opportunity for further speculative applications on unplanned sites whilst those plans are being prepared. That is particularly the case given that not all neighbourhood areas have an intention or the resources required to bring forward neighbourhood plans. As such, it would be more suitable for CDC to bring forward sites based on its spatial strategy and site selection methodology, and indeed that approach would ensure that CDC could begin to remedy some of the key issues arising in rural areas by positively planning for their needs at an early stage of the plan period.</p>

LPR-B-534	Define for William Davies Homes	Option 32	CDC's approach to directing growth to the most sustainable rural villages on the basis of a rural settlement hierarchy should be informed by an audit of rural settlements that takes into consideration the current availability of services and facilities, the potential for the delivery of new and enhanced services and facilities alongside development, and their accessibility to higher order settlements. That audit should also take account of the amount of suitable, available and achievable land within or adjacent to the settlement. As set out in WDH's response to Option 30, Bloxham should be identified as a sustainable location for growth given the services and facilities from which the settlement offers, and given its accessibility to higher order service centres including Banbury.
LPR-B-534	Define for William Davies Homes	Question - Settlement Boundaries	CDC should identify sufficient residential allocations in rural areas through the emerging local plan review, rather than deferring that to Neighbourhood Plans. Once those allocations have been identified, it would be sensible to define the settlement boundaries around the settlement and those allocations. To sit alongside that, it is assumed that the plan will include an 'open countryside' policy that will set out the types of development allowed outside of the settlement boundaries. It is important to note that such a policy should provide some flexibility for other types of development where there are material circumstances that justify the development, or if the public benefits outweigh any identified harm.
LPR-B-535	Louise Aitken	LPR-A-077	Object. Since 2014 Cherwell has made a disproportionately large contribution to meeting the District's housing supply. A significant part of this contribution has been made by Adderbury. The existing 2015 Local Plan provides enough homes to the period to 2031. Twelve potential sites could provide a minimum of 3,250 new houses (adopting CDC's Site Capacity Sense Check methodology - Policy BSC 1: District Wide Housing Distribution para B.102 & Policy Policy BSC 2) have been proposed around Adderbury including a large 60 hectare site between Twyford and the M40, stretching from the Kings Sutton Road to the Aynho Road. This compares to a current population of approximately 2,811. These proposals contradict Cherwell District Council's own Local Plan Key Objectives and existing Local Planning Policies. Any further development will have a severe visual impact on the rural character of Adderbury, specifically those proposed within the conservation area or adjoining its boundary. Development contradicts Policy ESD 1: Mitigating and Adapting to Climate Change. "Measures will be taken to mitigate the impact of development within the District on climate change. Distributing growth to the most sustainable locations". Adderbury is not a sustainable location as described in the Local Plan. The local infrastructure, particularly the through road, road junctions, access roads and roads adjoining the school are at or near capacity and create a health and safety risk to residents. Increased volumes of traffic, particularly stationary, results in poor air quality. Development would place an unnecessary strain on these services and does not support a sustainable economy. Development would be contrary to NPPG - Rural housing para 78. In rural areas, planning policies and decisions should be responsive to local circumstances and support housing developments that reflect local needs. Continued development of land, particularly that located within the conservation area and green belt should be refused on the basis that any further loss of this attribute would severely impact the character and beauty of Adderbury's natural heritage, lessen its natural capital and degrade its ecosystem. Development would be contrary to Policy ESD 10. Substantial new build structures on elevated land, filling a space within the village that positively contributes to the character and appearance of the Conservation Area in its undeveloped form, should be resisted. Any new development in this area would appear unusually incongruous and out of character to the historic character of the immediate locality. Wild Oxfordshire have included this proposed development land within their North Cherwell CTA and according with Policy ESD 11: Conservation Target Areas, development which would prevent the aims of a Conservation Target Area being achieved will not be permitted. Further and increased residential development in inappropriate locations (ie rural villages) where the local road infrastructure is at or near capacity has resulted in a significant increase in vehicular movements. Increased traffic congestion as a result of over-development has substantially increased vehicle emissions and has degraded ambient air quality for residents. This is of particular concern when severely congested roads with stationary traffic are located adjacent to schools and private residences. . Further development in Adderbury does not support this objective as it decreases the areas natural capital, it increases air pollution, lowers connectivity and does not form part of a sustainable transport model facilitating by lowered car usage. The CNC Local Plan Review must resist the continued erosion of villages in Cherwell and specifically around Adderbury. Proposals to increase residential development in Adderbury will place unnecessary and restrictive burdens upon the health, mental well-being and accessibility of the village and place developer profit ahead of recreational, social and community needs and vastly increase social exclusion. This is of particular relevance given the lack of affordability of new developments in Adderbury.
LPR-B-536	Zoe Morgan	LPR-A-175	Strongly object. The village environment and inclusive community would be compromised if the village were to drastically change. Development at this scale would be detrimental to the village. If the site was developed then the promised bypass would not be possible. The development would not be sustainable with the lack of services and fragile infrastructure.
LPR-B-537	Kevin Willis	LPR-A-175	Object. Development would fundamental change to the character of a conservation village. It is out of scale to the size the village and not sustainable because need for services; school; sewerage etc. Designated land would be needed for any future by-pass. Traffic will increase with huge new developments proposed to A361 M40 access.
LPR-B-538	Kenneth Wright	LPR-A-077	Object. There are limited facilities. Adderbury has already seen its fair share of new housing and does not need anymore. Croft Lane narrows very sharply with no room for a footpath.
LPR-B-539	Patricia Wright	LPR-A-077	Object. Development would destroy the unique nature of Addersbury. Croft Lane is not a main road and unsuited to carry more traffic.
LPR-B-539	Patricia Wright	LPR-A-156	Object. Development would destroy the unique nature of Addersbury. Croft Lane is not a main road and unsuited to carry more traffic.
LPR-B-540	Middleton Stoney Parish Council	Option 1	Welcome the 3 key themes identified but believe more consideration needs to be given to the needs of the near third of Cherwell's population that live outside the urban areas. In particular: more emphasis on dealing with the already intolerable levels of traffic which threaten "healthy place shaping" in many villages including Middleton Stoney; more emphasis on "good design" in new development, and a real focus on using existing land banks/infill before new greenfield sites are approved; support greater digital connectivity but would welcome more details of what is proposed; and, disappointed that the plan makes no provision for improving green spaces in rural areas such as upgrading bridleways and footpaths.

LPR-B-540	Middleton Stoney Parish Council	Option 1	Vision should explicitly recognize and agree to tackle the unsustainable burden of existing traffic flows through villages before new development is authorized. There should be explicit recognition of the need for people in rural areas to have easy access to green spaces too through a reinvigorated network of public footpaths.
LPR-B-540	Middleton Stoney Parish Council	Option 2	Support promoting net zero carbon for new developments but believe more consideration needs to be given to ensuring road infrastructure and resources need to reflect new developments. In particular the assertion at para 4.2.3 that Cherwell has excellent transport links does not reflect the fact that much of the existing infrastructure cannot cope. This will be exacerbated if as proposed 44% of the new region's planned new housing is allocated to Bicester. Support key objectives 13,14,15 and 26 but are not sure that the Plan follows through on them. In particular there should be provision for local communities to designate and preserve green spaces, and new industrial building should be focused in existing urban conurbations
LPR-B-540	Middleton Stoney Parish Council	Option 3	A combination of all of the above options but would make a strong plea for limitations on the building of new warehouses which provide little quality employment and exacerbate existing traffic problems.
LPR-B-540	Middleton Stoney Parish Council	Option 8	Introduce a policy which requires all new dwellings to meet the nationally described space standard and if so, should this be a minimum requirement?
LPR-B-540	Middleton Stoney Parish Council	Option 10	Set sustainable design and construction standards for residential and non-residential development in Cherwell above those required by Central Government?
LPR-B-540	Middleton Stoney Parish Council	Question - Achieving Good Design & 'Beauty'	too much recent development has been of poor design and built to low standards.
LPR-B-540	Middleton Stoney Parish Council	Option 14	This section is a good example of the "urban" mindset underlying this Plan. There should be support for villages to maintain and improve playgrounds.
LPR-B-540	Middleton Stoney Parish Council	Question - Transport Policies	The Plan needs to focus much more on alleviating the blight of current traffic problems.
LPR-B-540	Middleton Stoney Parish Council	Option 22	Limit development at Bicester to protect its setting and maintain separation between the town and surrounding villages. Development of Bicester has been uncontrolled, ugly with the town centre being hollowed out. A new approach is clearly necessary.
LPR-B-540	Middleton Stoney Parish Council	Option 23	We do not favour any further green field development, particularly to the West of Bicester.
LPR-B-540	Middleton Stoney Parish Council	Option 29	We do not favour any further development of Heyford Park. There is still no plan to mitigate the considerable traffic consequences of existing/planned development.
LPR-B-540	Middleton Stoney Parish Council	Option 30	Limit development in the rural areas to that required to meet local needs
LPR-B-540	Middleton Stoney Parish Council	Option 31	Work with communities to allocate specific sites to meet identified housing needs
LPR-B-540	Middleton Stoney Parish Council	Middleton Stoney	Middleton Stoney is not appropriate since they would significantly impact on the green spaces in the village, add to traffic problems. There is no local need.
LPR-B-541	Margaret Easterbrook	LPR-A-041	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. Additional development around Henge Close at LPR-A-041 would directly abut the Conservation Area and would therefore be detrimental to the setting of the listed buildings on Horn Hill Rd. Development would also be detrimental to the open nature of the Henge Close estate and to the green space and play area to the east. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.

LPR-B-541	Margaret Easterbrook	LPR-A-086	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. The large-scale developments proposed for sites LPR-A-086 would utterly change the approach to the village and would create a jarring transition from agricultural land to modern, dense housing. if developed, double the size of West Adderbury overnight. Such large scale development is entirely inappropriate for a village the size of Adderbury and is far more suited to a large town or even a city. few facilities present in Adderbury would be completely swamped by a development of this scale, placing massive pressures on local schools and services. Precious public footpaths over these sites, which are in daily use by local residents, would be lost forever. Development of LPR-A-086 would lead to the residents of St Mary's Road being completely subsumed by new estates, fundamentally changing the character of the southern edge of West Adderbury. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.
LPR-B-541	Margaret Easterbrook	LPR-A-146	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. Additional development around Henge Close at LPR-A-146 would directly abut the Conservation Area and would therefore be detrimental to the setting of the listed buildings on Horn Hill Rd. Development would also be detrimental to the open nature of the Henge Close estate and to the green space and play area to the east. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.
LPR-B-541	Margaret Easterbrook	LPR-A-218	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.
LPR-B-541	Margaret Easterbrook	LPR-A-258	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. The large-scale developments proposed for site LPR-A-258 would utterly change the approach to the village and would create a jarring transition from agricultural land to modern, dense housing. Development would lead to a substantial decrease in the green space between West Adderbury and Milton, increasing the risk of coalescence and impacting upon the character of both villages. A popular footpath would be lost, and irreversible damage would be caused to the amenity of the homes to the north of Adderbury Fields, and to the adjacent green space. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. inconceivable that Cherwell will not have at least a 5 year housing supply. rush to develop green spaces in and around our Banburyshire villages appears to be motivated solely by the financial interests of a few, and will provide no benefits whatsoever to the majority of residents of these villages.

LPR-B-542	Peter and Aniea Ruggins	Sibford Gower	Object. The scale of development is inappropriate. Development would result in loss of agricultural land and extensive damage to habitats and negatively impacting the water table. The site is in the highest part of the village and is next to an area of outstanding natural beauty. Roads are inadequate with no footpaths. The doctors surgery is extremely busy. Sibford Gower is a dark vsky village. Development of brownfield sites in and around towns is more sustainable where amenities are available.
LPR-B-543	Land & Partners for Mr & Mrs Bishop	Call for Sites Promotion - Land to the west of Hook Norton Road, Sibford Ferris	Land to the west of Hook Norton Road, Sibford Ferris is promoted for housing. Update of HELAA321.
LPR-B-544	Rosconn Strategic Land for HRN Stilgoe	Call for Sites Promotion - Land south west of Adderbury	Land south west of Adderbury is promoted for housing.
LPR-B-545	Lichfields for Taylor Wimpey Limited	Call for Sites Promotion - Land north and south of Milton Road, Bloxham	Land north and south of Milton Road, Bloxham is promoted for housing. Update to HELAA100. A vision document and sustainability analysis technical note have been supplied.
LPR-B-546	The Bulford Trust	Call for Sites Promotion - Land north of The Moors, Kidlington	Land north of The Moors, Kidlington is promoted for mixed use development. Update to HELAA152. A pre-application report and transport feasibility report have been supplied.
LPR-B-547	Savills for Lone Star Land	Call for Sites Promotion - Land north of Broughton Road, Banbury	Land north of Broughton Road, Banbury is promoted for housing.
LPR-B-547	Savills for Lone Star Land	Call for Sites Promotion - Land at Bretch Hill, Balmoral Avenue, Banbury	Land at Bretch Hill, Balmoral Avenue, Banbury is promoted for housing. Update to HELAA035. The representation is supported by an indicative masterplan.
LPR-B-548	Christina Goldsworthy	Bloxham, Milton and Adderbury	Object. Adderbury and Bloxham are rural communities and their growth in the last 10 years looks set to turn them into small towns but with few facilities, requiring travel by road to reach most of those facilities in Banbury. The road system was not designed for the large amount of traffic now using it. Residents are subjected to increasing levels of traffic, noise, light and environmental pollution in Bloxham, Milton and Adderbury, with consistent calls for reduced traffic and reduced speed. The roads to the north and east of Banbury are better capable of handling the increased traffic from Banbury's growth than the south and west - any growth in Banbury should be to Banbury's east and north. Development in the rural areas should be restricted to local needs only. Neighbourhood Plans, updated regularly to accord with regional planning demands and defined settlement boundaries, should control the growth of rural and village development and should not be overturned by the Planning Inspectorate operating under national government guidance. The sites put forward in the parishes of Adderbury, Milton and Bloxham, do not meet any of the Council's stated objectives, nor any of the previous consultation results. Development in Adderbury and Bloxham should be small scale so that these communities retain their identity as 'villages in the countryside' and do not become part of and wholly reliant on the facilities of Banbury. Any development in Milton Parish should be very small scale respecting the conservation village and its surrounding area. The proposed development of the old caravan park and its adjoining field should be the subject of a separate consultation with Milton villagers as it falls within the parish boundary but outside the village, in open countryside. Urban signage and lighting should not be sited in or around villages and the countryside but that these should be restricted to town. The overall landscape and character of the area should be protected and certain special individual features in the landscapes given special protection. Tranquillity and reduction of light and environmental pollution should be a factor in decision-making on development of any kind. Settlements should be prevented from coalescence and local design features more strongly enforced. Commercial and economic growth should be limited to specified urban areas. Improvement of the environment should be a major factor wherever previously developed land or green fields are considered for development.
LPR-B-549	D A Bowdler	LPR-A-185	Object. Further development here would be disastrous for our neighbours and us. The area is seen to be a green buffer between Banbury and the attractive landscape of this part of South West Northamptonshire. To build on the north side - east of the motorway junction - would ruin the openness of the rising countryside to the east of the town. Our lives would be negatively affected by noise pollution and road fumes, and the development would inevitably ruin the wildlife, impacting the flora and fauna of the area. None of the major landowners or developers live within the hamlet of Nethercote. The proposal of a 'relief' road from the A422 to Overthorpe Road will only add further misery to the inhabitants of Nethercote. Other residents and I have to use Ermont Way and Overthorpe Road for access, and cannot see how said relief road will benefit the town. Very few vehicles going to and from Overthorpe Road Industrial Estate travel east towards Brackley. Nethercote is well known for flooding in the surrounding fields, which would inevitably worsen and increase with the hard surfacing of roads, aprons, service yards etc. This water would need to drain somewhere if the fields are built upon, which would cause increase flood risk to our homes.

LPR-B-550	Felice Rea	LPR-A-104	<p>Object. It is in a rural area with very poor access and would be shoehorning properties into a field where there are no amenities and which is subject to flooding. There are more accessible options in terms of access and local amenities. The proposed site has very poor access and will require significant changes to road infrastructure which there is not space to do. The site is at the bottom of Chapel Close which ends with a bridleway and to a small gravel track to 4 properties. The Close is already a busy single lane road with no pavements and will not be able to handle further traffic. The bridleway is well used and with no pavements in Chapel Close is already hazardous with traffic flow. Chapel Close is a narrow lane and in most parts cannot accommodate two way traffic. More traffic would be dangerous for residents and users of the bridleway. Plot 4 is a sloping site with a large pond above it and to one side is a water sewage treatment plant which I believe only has capacity for existing volumes. Plot 4 does suffer flooding, the whole area including Bridleway does get extremely waterlogged. Further development is likely to lead to further flooding. There is an abundance of wildlife and further development would destroy natural habitat. Development of the site will lead to both light and noise pollution which will further have a detrimental impact on the village. Clifton is a very rural location which does not have the capacity or infrastructure for significant development. There are no pavements on most of the main road through the village making it dangerous for cyclists and pedestrians and access difficult to nearby Aynho and Deddington unless driving. There is no bus service either which will therefore increase road traffic in an area not designed for heavy flows. The main road to Aynho is narrow in parts, single lane and no pavements. There are very few businesses in Clifton so any development will increase commuter traffic without any benefit to the local community and will have a detrimental environmental impact.</p>
LPR-B-551	Wood Group UK for Bloor Homes	Option 30	<p>It is critical that the Local Plan provides a clear strategy for the Rural Areas. It is important that the role that rural areas will play in meeting housing need is recognised in the Local Plan. The Options Paper uses the term 'rural areas' but this is not defined. It is considered essential that the Local Plan provides a clear spatial strategy for the Rural Area which has sufficient granularity and a clear settlement hierarchy that sets out the role of relevant settlements that contribute to a sustainable pattern of development and help meet future development needs within the District. This approach would help ensure that development is directed to the most sustainable locations in the Rural Area and that existing infrastructure can be best utilised or enhanced where needed.</p>
LPR-B-551	Wood Group UK for Bloor Homes	Option 30	<p>The Local Plan should plan positively to ensure that the role of the Rural Area in meeting future needs is optimised. Limiting development to meet local needs (however these are defined) could be overly restrictive and result in a mismatch between supply (suitable sites) and need. The Local Plan should provide a clear strategy that helps direct development to the most sustainable settlements within the Rural Area. The scale of development should at least reflect needs arising within the area and recognise that an element of market housing will be required to help deliver affordable housing. Growth also has a role to play in supporting existing services, facilities and public transport networks. Planned growth can also provide tangible enhanced facilities and services. Rural sites also have a role to play in ensuring a mix of sites (in terms of size and location) is available within the Borough. Small and medium sized sites also have a role in helping to ensure that the Council can demonstrate a 5 year land supply over the life of the Local Plan. Rural sites, in the right location, can also help support existing infrastructure in locations that reduce the need to travel (relative to more isolated rural areas). The Options document also recognises that affordable housing need remains high in Cherwell and that more needs to be done in order to deliver affordable housing. Development should be directed to sites that are the least constrained. Planning Practice Guidance (Paragraph: 101 Reference ID: 41-101-20190509) sets out the approach to identifying development requirements (which clearly goes beyond consideration of local need). Reference to NPPF175, NPPF161 and NPPF32 is made in relation to how the local plan should allocate land with the least environmental or amenity value; the plan should take a sequential approach to the location of development; and that the sustainability appraisal of the local plan should demonstrate how the plan has addressed relevant economic, social and environmental objectives (including opportunities for net gain). It is noted that the land at Banbury Road LPR-A-056 is not subject to any significant constraints and is in a sustainable location.</p>
LPR-B-551	Wood Group UK for Bloor Homes	Option 31	<p>Allocating sites in the Local Plan is the most secure way of meeting needs. Working with communities to allocate specific sites in the Local Plan is considered to be the most secure way of meeting future development needs. It has the advantage of providing certainty in terms of delivering the spatial strategy, meeting housing requirements and associated infrastructure needs and may be appropriate in those instances where a NDP has not progressed. This approach would also provide certainty on delivery and for infrastructure planning. The Council should provide a parish level figure where an NDP is genuinely being prepared in order to ensure that proper provision for future development needs is met. This is consistent with the role of the local authority as the strategic policy making authority. The Council could also clarify what it considers to be a strategic site that should be identified in the Local Plan, with NDPs identifying non-strategic sites. The Council should consider a policy similar to the South Oxfordshire Local Plan H4 which provides a policy safeguard for those instances where a neighbourhood area has been declared but a plan is not progressed. In the case of Deddington, it is clear that this is a sustainable location for growth and the north is an obvious direction for growth. Consideration could also be given to a trigger mechanism to make it clear that further development on the edge of sustainable settlements (including Deddington) can be brought forward if the Housing Delivery Test (for needs arising within the District) shows that the delivery is not being achieved. This could form an element of the Council's action plan as required by the NPPF. An example is noted from the Inspector at the Scarborough Local Plan. The LPR-A-056 site can accommodate 150 homes and should be allocated in the Local Plan on that basis. This will make a significant contribution to local housing need identified in the Parish Profile.</p>

LPR-B-551	Wood Group UK for Bloor Homes	Option 32	The identification of Service Villages is Supported but the other elements of the hierarchy may need refining in order to deliver a sustainable pattern of development. Deddington is considered to be appropriately identified as a service village (at the top of the hierarchy), given the range of existing services. It is also noted that it performed relatively well in a study published in 2009 that appraised the 33 most sustainable villages in Cherwell (including Deddington) against a set of transport criteria to determine the most suitable locations, in transport terms, for housing development. Deddington was within the 14 top performing villages. It is noted that the adopted Local Plan identifies the service villages as suitable for 'minor' development but does not define this. Infilling and conversions are also allowed but, in all cases, development is restricted to the 'built up limits' of villages which is considered to be overly restrictive. It is also noted that the current settlement hierarchy acknowledges but does not differentiate between Service Villages that are in (or partly in) the Green Belt, which would clearly affect their ability to accommodate growth. Deddington is not in the Green Belt and not therefore constrained in this respect.
LPR-B-551	Wood Group UK for Bloor Homes	Question - Settlement Boundaries	The identification of settlement boundaries is not considered appropriate because it would need to be evidenced based and could be overly restrictive. The presumption in favour of sustainable development in the NPPF also means that such boundaries would not necessarily provide the certainty that communities think they provide. Planning positively for future growth would provide greater certainty. If boundaries are to be identified they should take account of allocated sites.
LPR-B-551	Wood Group UK for Bloor Homes	Call for Sites Promotion - Land at Banbury Road, Deddington	Land at Banbury Road, Deddington is promoted for housing. Update to HELAA323
LPR-B-552	Ellie and Gary Hawtin	Adderbury	strongly object. Recent development has increased housing in the village by circa 20% in a short amount of time. The village has already had to deal with the pressures of the extra houses without any increase in amenities or infrastructure so to consider any further development on any large scale would be seriously detrimental to village life. The rural feel of the village has already been compromised with recent development and the expansion on the scales proposed will significantly impact the village. The character and community of the village will be lost and is not something that can ever be recovered once gone. The size of the proposed development is not in keeping with a village environment. Indeed much of the proposed development contravenes the policies set out in the Adderbury Neighbourhood Plan by building outside of the accepted boundary of the village. This will result in Adderbury becoming morphed into the village of Bodicote and/or Bloxham. The size of the proposed developments is not proportionate to the existing size of the village. Developments of such size should be restricted to towns not small villages. The village would be more than doubled by some of the proposed developments. The proposed developments would no longer allow views of the village church. The infrastructure in the village is not sufficient at present let alone if further development took place. Congestion on the main road running through Adderbury (A4260) is already severe. Further increase in traffic would result in gridlock at certain times of the day. The amount of traffic is already dangerous, with the proximity of the school. The pollution of traffic from this stretch of road is worrying with many children using the roads to walk to school. The road is also the main route for ambulances travelling into the JR hospital from Banbury, it would be chaos with further traffic and emergency services trying to access the hospital in Oxford. The village has a network of fields, footpaths and ecological and wildlife habitats which have already been disturbed by recent developments and will be further impacted by the proposed developments. There will be a detrimental increase in pollution from traffic, noise and light.
LPR-B-553	Darius Welsh	LPR-A-204	few Green spaces within walking distance for residents in Bicester. As well as being an orchard and wildlife area it serves as a local community hub. It is maintained by a number local volunteer groups who also aim to integrate the orchard into the wider Bicester community and infrastructure. The Langford Community Orchard Group is a successful group who not only maintain the orchard, they provide a social environment for people to join and enjoy the sense of well being that comes from the feeling of contributing and achieving something for your community. It also serves as an education and skills provider. Having these areas as designated green spaces will support CDC with its objectives of Healthy place Shaping and Meeting the Challenge of Climate change. I also think they are perfectly placed to support CDC in providing options to live healthier lifestyles.
LPR-B-553	Darius Welsh	LPR-A-125	invaluable green space for the residents of Langford village and Bicester. It is appreciated by residents as one of the few natural green spaces to enjoy within walking distance and is popular for dog walking, Sports activities and Family outings. It is being squeezed out of existence by expansion on its borders from transport work on the east, Industry on the north and retail units on the west. Without a protective intervention this will completely disappear under the pressures of development. any development on the site will put unmanageable traffic pressures through the Langford Village estate.
LPR-B-554	Bruce Duncan	Adderbury	Object to the proposals to expand towards Milton. Adderbury is a village with very few facilities. It has already been substantially increased in size without any enhancement of their facilities. It is now in danger of being made into small towns that will have to depend on Banbury for most of their needs. The roads connecting Adderbury, Milton and Bloxham to Banbury are not designed to carry the amount of traffic that currently uses them, let alone any increase in that traffic. This is particularly so on the road connecting Adderbury to Bloxham that runs across the South of Milton.
LPR-B-554	Bruce Duncan	Bloxham	Object to the proposals to expand towards Milton. Bloxham is a village with very few facilities. It has already been substantially increased in size without any enhancement of their facilities. It is now in danger of being made into small towns that will have to depend on Banbury for most of their needs. The roads connecting Adderbury, Milton and Bloxham to Banbury are not designed to carry the amount of traffic that currently uses them, let alone any increase in that traffic. This is particularly so on the road connecting Adderbury to Bloxham that runs across the South of Milton.
LPR-B-555	David and Beryl Greenwood	Deddington	Deeply concerned re development on green field sites around Deddington. Existing infrastructure does not allow for more building on the scale proposed. The developments will result in the increase in traffic on the roads resulting in increased congestion at the Deddington Traffic Lights (already problematic at peak times) and the limited capacity of the school and Health Centre. Footpaths are narrow and inadequate and the streets are narrow and totally unsuited to accommodate a modern influx of development

LPR-B-556	MCNP Forum	Option 1	While we support the broad vision and much of the detail, we think that there is not enough emphasis on the importance of finding a balance between the development necessary to achieve this vision, on the one hand, and on the other the conservation and enhancement of the natural world, the landscape and open countryside that survives today in Cherwell, but which may be gone within a decade if not properly managed.
LPR-B-556	MCNP Forum	Option 2	KO 1. The definition of need is highly controversial. Support for housing and employment should be for meeting local needs, not aspirational targets for continued growth (an unsustainable concept when considered alongside environmental and climate change targets). It is particularly welcome to see objective KO5 supporting farming. We also think that KO9 makes a similar point to our comment above about the need to recognise the character and beauty of Cherwell's landscape etc. We note that KO10, which we fully support, would involve a very considerable change in development control policies, which currently do not succeed in meeting this important objective. We particularly support KO28 in the context of meeting the needs of a rural population. For example, health policies at the present time remain focussed on serving urban populations, and fail to provide sustainable primary healthcare services for people living in the countryside (see also our comments on the Health Impact Assessment).
LPR-B-556	MCNP Forum	Option 3	Support options 1 & 3. We do not support unbridled development at transport interchanges because of the huge impact this can have on the countryside. Limited local employment in larger villages is also supported.
LPR-B-556	MCNP Forum	Option 4	We are very concerned about the proliferation of large-scale B8 developments in open countryside in and around Cherwell. We think that the impact of huge logistics centres (principally vast warehouses), if approved, will negate much of the Vision set out by the 2040 Local Plan. For example: the loss of farmland, the effect on long-distance views, the great increase in HGVs in formerly quiet rural areas, the increase in traffic volumes on major roads, the scale of use of unsustainable construction materials, and the loss of distinctiveness of a largely rural District. There should therefore be, in particular, no strategic rail freight or road transport hubs in Cherwell.
LPR-B-556	MCNP Forum	Question - Supporting Employment	Require provision of bus services from the major urban centres (Banbury, Bicester, Kidlington) and railway stations to all new employment sites which will employ in excess of 100 people. We support more working at or near homes, encouraging ultrafast broadband and better mobile phone signals. The preference would be for development that supports higher wage, higher-skilled employment and training rather than leisure, retail and hospitality. Local "green" jobs in research and new technology should be supported.
LPR-B-556	MCNP Forum	Option 5	Some change of use to residential could be permitted, but with an overall aim to foster a vibrant community, making use of specialist providers and small-scale enterprises, rather than a dormitory culture.
LPR-B-556	MCNP Forum	Question - Supporting our Town Centres	Encourage more markets including specialist markets e.g. crafts, food, local artists, antiques and second hand, eco or re-cycled etc.
LPR-B-556	MCNP Forum	Option 6	support option 1: increase the percentage of affordable and rented on all developments, not just 10 or more. Increase percentage of homes for young families and bungalows for disabled and/or elderly.
LPR-B-556	MCNP Forum	Option 7	support Option 1. As wages are tending to fall behind house prices, we suggest increasing the social rented element to, say, 35% and reduce the affordable/rented to 65%. We strongly agree with the statement in 5.4.11 to "seek social rented homes over other types of affordable housing such as affordable rent or intermediate housing, noting that a social rented home is the only truly affordable housing option for many low-income households in the district." No mention of shared ownership – this should be encouraged and supported with a policy requiring a minimum number of such dwellings for all developments of 10 or more homes.
LPR-B-556	MCNP Forum	Option 8	support option 1. It should be a minimum
LPR-B-556	MCNP Forum	Question - Separation Distances	Yes, there should be such a policy, but it must be accompanied by another policy requiring developers to plant trees on street frontages.
LPR-B-556	MCNP Forum	Option 9	Higher accessibility standards should be set. New homes with no possibility of a ground floor bedroom/ bathroom are just storing up problems for the future.
LPR-B-556	MCNP Forum	Question - Travelling Communities	Permanent, properly managed sites should be provided where travellers can reside for periods of time.
LPR-B-556	MCNP Forum	Question - Housing Policies	Offsite construction methods should be actively supported to minimise local disruption, and to support sustainable technologies. It is difficult to see how policy on infilling can be dealt with under the heading of design. It is often more a question of density, access, or impact on historic layouts.
LPR-B-556	MCNP Forum	Option 10	Many developers seem reluctant to adopt high levels of sustainable design and construction. Option 3 would encourage more emphasis on this. For example, the use of locally-available sheep's wool for insulation should be encouraged.
LPR-B-556	MCNP Forum	Question - Retrofitting of Historic Buildings	agree that bespoke policies per building will be necessary
LPR-B-556	MCNP Forum	Option 11	Option 1 - Identify – yes; but allocate sites – no; best left to the expert market. Require all new-build residential and industrial properties (inc. warehouses) to install solar pv (with grid output connection) and/or solar hot water generation sufficient to meet the electricity/ hot water needs of the property.
LPR-B-556	MCNP Forum	Question - Policies for Climate Change, Sustainable Construction & Renewable Energy	There should be a requirement to provide electric car charging infrastructure generally and to take the opportunity to provide points in all new build housing.
LPR-B-556	MCNP Forum	Question - Green Belt	Bicester should have a Green Belt to protect surrounding villages and countryside. MCNP Forum would welcome involvement of its member parishes in designing a suitable process for considering the nature and extent of such a Green Belt.
LPR-B-556	MCNP Forum	Option 12	Yes, in that order. However, CDC should also press developers harder to provide net gain on site wherever possible.
LPR-B-556	MCNP Forum	Option 13	support option 2

LPR-B-556	MCNP Forum	Option 14	Option 3 seems to be the most flexible and forward-looking, but it should not be used as an excuse for providing minimum levels of facility. Standards must remain high. Provision for older children must be considered e.g. facilities and building suitable for use by youth groups. If there is nothing for them, those living in rural situations can become disenfranchised resulting in anti-social behaviour. We would like to see active support for existing playgrounds in rural villages too since the cost of refurbishment can be prohibitive.
LPR-B-556	MCNP Forum	Option 15	All three options may be needed. Sports facilities should, above all, not involve having to travel great distances, and be accessible by public transport.
LPR-B-556	MCNP Forum	Question - Local Green Spaces	MCNP put forward over 30 Local Green Spaces and the Examiner approved 24 of them. In the forthcoming review of our NDP we will be identifying more such spaces for designation.
LPR-B-556	MCNP Forum	Question - Protecting the Historic Environment	We support the focus on retaining Ancient Trackways, as there are several such features in the MCNP area. Conservation areas should be specifically mentioned in policies. The MCNP has a policy (PD4) that DM officers have found difficult to enforce. It requires applicants to submit a Heritage Impact Statement in cases where development might adversely affect a Conservation Area. We would like to see this requirement supported in a Local Plan policy.
LPR-B-556	MCNP Forum	Question - Achieving Good Design & 'Beauty'	The assessment of good design and "beauty" requires expertise. It is not something that can easily be done by a Development Management officer with no training in design or architecture. The Local Authorities with the most successful track records in persuading developers and other applicants to improve their designs have done so by employing suitably-qualified and experienced staff. We would like to see Cherwell move in this direction.
LPR-B-556	MCNP Forum	Question - 20-Minute Neighbourhoods	The diagram on p.57 is interesting. For some of the villages in our rural area nearly all of the features are in place. Notably absent, however, are "community health and well-being facilities" and "keeping jobs and money local". The former is a fault of current health service policy, which favours GP services etc as urban facilities
LPR-B-556	MCNP Forum	Question - Transport & Connectivity	Reducing the need to travel should not be any different for rural areas. Perhaps time taken rather than distance travelled would be a better measure of impact. The relocation of key services, such as primary health care facilities, to locations such as Heyford Park, if well-connected with public transport, would greatly benefit – in particular – older people in the community who currently have to travel considerable distances for clinic and hospital appointments.
LPR-B-556	MCNP Forum	Option 16	support more homeworking, supported by the necessary infrastructure. There is still very poor mobile and WiFi coverage in many rural villages e.g. in areas of Heyford Park, Steeple Aston etc. This is needed to enable more home working and to keep children safe when they are out and about. Option 1 is essential. Digital infrastructure is still not yet regarded as an essential utility alongside water, electricity, etc.
LPR-B-556	MCNP Forum	Question - Transport Policies	MCNP has found it frustrating that transport issues, particularly those relating to traffic volumes, are the responsibility of OCC as Highways Authority. We would like to see CDC adopt policies that more effectively protect rural areas of the District from increasing levels of traffic and pollution. Rural areas are in increasing danger of being marginalised by poorly designed traffic systems that effectively increase congestion and reduce access.
LPR-B-556	MCNP Forum	Option 17	support Option 1; we would support the preparation of a new IDP to identify infrastructure required to support any new allocations within the Local Plan.
LPR-B-556	MCNP Forum	Question - Delivering Infrastructure	Primary care, hospital and other health provision has been omitted. This is an important gap that should be addressed. See also our comments on the Health Impact Assessment. MCNP would support the re-opening of Ardley station for passenger use.
LPR-B-556	MCNP Forum	Option 22	support Options 2 and 3. Bicester housing could be built higher (as apartments) rather than sprawling further.
LPR-B-556	MCNP Forum	Option 23	Further development at Bicester must be limited to protect surrounding countryside and maintain separation between the town and surrounding villages.
LPR-B-556	MCNP Forum	Option 24	support option 1
LPR-B-556	MCNP Forum	Option 29	It is the view of many of the parish members of MCNP Forum that Heyford Park must remain within the limits established in the existing Local Plan, on the grounds that the impact of any outward growth on the surrounding villages and countryside would cause unacceptable harm. Land within the existing boundary could potentially be utilised for housing need post-2031. However, if a future need is identified for further housing development at Heyford Park, MCNP Forum would wish to engage with CDC and the applicants to discuss how best this need can be met. The Forum would favour any such provision being based on specific identifiable needs for the area including affordable housing for particular segments of the population. Such housing would need to be accompanied by public transport infrastructure improvements. There is also an identified need for a cemetery in line with MCNP policy.
LPR-B-556	MCNP Forum	Option 30	support Option 1 and we have locally-specific policies, PD1 to PD6, in the MCNP.
LPR-B-556	MCNP Forum	Option 31	MCNP's approach has been to use Option 2, apportioning an approximate number of additional dwellings permitted in the Plan period, for Category A and B villages. These numbers will need to be reviewed during 2022.
LPR-B-556	MCNP Forum	Option 32	We have generally supported the categorisation of villages, and refer to it in the rationale for our own policies PD1 and PD2. However, some of our villages have been frustrated by the absence of periodic review of the categories. For example, where pubs and shops have closed, or bus services have been reduced, continued Category A status of a village can put it at risk of unwanted development. Status should be reviewed by CDC on an ongoing basis.
LPR-B-556	MCNP Forum	Question - Settlement Boundaries	We have done so successfully in our neighbourhood plan policies, and would encourage other villages to do likewise.
LPR-B-556	MCNP Forum	Option 33	option 1
LPR-B-556	MCNP Forum	Option 34	Option 1

LPR-B-556	MCNP Forum	Question - Neighbourhood Planning	<p>A more important issue for us in the Mid-Cherwell Neighbourhood Plan (MCNP) Forum is: there has been no contact from CDC with our NP group regarding the Local Plan Review. As we had such a helpful start to our “made” existence in May 2019 with the workshop held with CDC officers, it is particularly disappointing that there has been no real follow-up. We appreciate that numbers of officers have left CDC and new staff have taken up posts, and also of course that Covid has presented real difficulties, but the lack of continuity in the important relationship between our NDP and the Planning Department needs to be addressed. It might perhaps help if an individual officer was assigned to lead on communications, and for it to be a pro-active role. This is particularly important as we approach the need for a Review of the MCNP in 2022. We also play an important role in the Oxfordshire-wide organisation that supports NDP groups throughout the County, and there is great potential for it - ONPA (Oxfordshire Neighbourhood Plans Alliance) - to work with Cherwell DC to encourage and support embryonic NDPs in the District.</p>
LPR-B-556	MCNP Forum	Health Impact Assessment	<p>comments in relation to rural services: Page 41 Access to services: this section points out that access to services is a significant problem for an ageing population in rural parts of Cherwell. This issue has been taken up by MCNP Forum with several references in our NDP to the need for more primary care facilities to be established. One project we have promoted alongside CDC is the need for a new primary care centre to be established at Heyford Park to serve people living in the neighbourhood (an estimated 3,800 people live within a three-mile radius of Heyford Park in addition to the 8,000 Heyford Park residents expected by 2031). CDC has consistently supported this idea and the Dorchester Group has earmarked a site for a new primary care facility in its Masterplan for the development. Unfortunately, OCCG has consistently refused to give support to this proposal. However, some progress has recently been made after a successful appeal at national level supporting the establishment of a new pharmacy at Heyford Park with 3 associated clinical rooms. This will allow patients of the Alchester Medical Group (AMG) to be seen at Heyford Park for the majority of their care including access to the associated pharmacy which will dispense their prescriptions. AMG is also committed to expanding this service into a full Branch Surgery once numbers of registered patients are sufficient to justify this. This new service will create the basis of an opportunity to develop one of the 20 minute “health and wellbeing facilities” referred to on page 57, aimed at offering rural residents better access to local services. Similar opportunities may occur in other rural areas of Cherwell. This could be complemented by a new rural bus service operating say 6-8 times a day linking the villages in this part of the neighbourhood plan area. This could be an employment opportunity for people wishing to run a community transport service. However, we should also reduce the need to travel into Oxford / Banbury / Bicester for local out-patient services which could easily be provided on a local basis, accessing funds from new NHS funding for digitally-enhanced services such as mobile X-ray units, especially as Heyford Park is the base for most of the current mobile scanning services in Oxfordshire. Some of the housing at Heyford Park (say 30 - 50 housing units) should be allocated for key workers in health and social care on a rental or shared ownership basis to boost recruitment of these vital staff. This would attract key younger staff newly qualified and looking to start NHS careers in Oxfordshire. We particularly note the following on p.39: 5.2 POPULATION • There has been a marked increase in the number of elderly people compared with other age groups in Cherwell. • The level of services and facilities in the rural areas is generally declining. We would therefore expect to see policies in the Local Plan that address these findings. There are existing plans for a 45- 60 unit Extra Care housing scheme at Heyford Park, which we expect to see come to fruition over the next few years.</p>

LPR-B-557	James Castle	LPR-A-077	<p>Objects to LPR-A-077. The proposed development contradicts and does not support KO1, KO23, KO8, KO9, KO13, KO16, KO28 of the local plan review doc and contradicts Strategic Objective 12 (SO) of the adopted local plan. Cherwell has made a disproportionately large contribution to meeting the District's housing supply. A significant part of this contribution has been made by Adderbury. Existing 2015 Local Plan provides enough homes to the period to 2031. 12 sites totalling 109.28ha, providing circa 3,250 new homes are proposed around Adderbury; compared to the current population of 2,811 (2011 census). Any further development will have a severe visual impact on the rural character of Adderbury, specifically those proposed within the conservation area or adjoining its boundary. development on these sites expressly contradicts Policy ESD 1: Mitigating and Adapting to Climate Change. "Measures will be taken to mitigate the impact of development within the District on climate change. Distributing growth to the most sustainable locations". Adderbury is not a sustainable location as described in the Local Plan. The local infrastructure, particularly the through road, road junctions, access roads and roads adjoining the school are at or near capacity and create a health and safety risk to residents. This risk is not only from a sheer volume perspective but clear links with increased volumes of traffic, particularly stationary, results in poor air quality. Any further development would place an unnecessary strain on these services and does not support a sustainable economy. Any development of this land would be contrary to NPPG - Rural housing para 78. It has been clearly demonstrated that the current supply of housing more than adequately provides for the housing demand, therefore there is no further need for housing development in this location. Continued development of land, particularly that located within the conservation area and green belt should be refused on the basis that any further loss of this attribute would severely impact the character and beauty of Adderbury's natural heritage, lessen its natural capital and degrade its ecosystem. Any development on these sites would be contrary to Policy ESD 10: Protection and Enhancement of Biodiversity and the Natural Environment. Substantial new build structures on elevated land filling a space within the village that positively contributes to the character and appearance of the Conservation Area in its undeveloped form, should be resisted. This area should remain free of substantial new build structures. Any new development in this area would appear unusually incongruous and out of character to the historic character of the immediate locality. Wild Oxfordshire have included this proposed development land within their North Cherwell CTA (Conservation Target Area – Other Sites) and as such, according with Policy ESD 11; development which would prevent the aims of a CTA being achieved will not be permitted. The proposal to allocate land at LPR-A-077 for residential development would result in the loss of the remaining open space to the detriment of the character and appearance of this part of the Conservation Area. Further and increased residential development in inappropriate locations (ie rural villages) where the local road infrastructure is at or near capacity has resulted in a significant increase in vehicular movements. Increased traffic congestion as a result of this overdevelopment has therefore substantially increased vehicle emissions and has degraded ambient air quality for residents. This is of particular concern when severely congested roads with stationary traffic are located adjacent to schools and private residences. This is most noticeable on the Oxford Road/Anyho Road traffic light junction but now as a consequence of increased traffic volumes vehicles are often queuing along the High Street in Adderbury as far as Chapel Lane. Further residential development in Adderbury decreases the areas natural capital, it increases air pollution, lowers connectivity and does not form part of a sustainable transport model facilitating by lowered car usage. The CNC Local Plan Review must resist the continued erosion of villages in Cherwell and specifically around Adderbury. KO23 specifically guides against unsustainable and irresponsible development of valued green space, countryside and conservation area land in relation to Cherwell's towns and in this specific case, its villages. The Cherwell Plan notes that c.21,734 of new housing supply is required. However, since 2016, completions have averaged 1,265 per year. In addition, the area has over 8,000 homes with permission that have yet to be built and further land capable of accommodating 8,600 homes which has been allocated for development, but which has yet to receive planning permission. Based on current build rates and current planning consent together with existing available sites, Cherwell has over 13 years of underutilised supply to meet future demand. Any development on this land would be contrary to Adderbury Local Plan Policy AD5: Local Gaps. The Neighbourhood Plan defines</p>
LPR-B-558	Agneta Monkell	Adderbury	<p>Fully supports the objections put forward by WARA in separate rep. Would like the Councils response to the pattern of applications being refused, repeated and approved on the third go. Urbanisation of the english countryside is the most important aspect. A simple solution would be rectangular communal garden squares surrounded by blocks of flats; saves land and works perfectly well. In other European countries, roughly 50% of new builds are blocks of flats which preserves the countryside. In England the corresponding figure is 15%. Suggests reading a chapter of Jeremy Paxman's book "the english, a portrait of a people" which sets out the irreversible and devastating consequence of England turning in to a sprawling suburbia.</p>
LPR-B-559	Kathy Yorke	Sibford Gower	<p>Questions how the services and infrastructure will cope with an additional 350 homes. The proposals seem totally inappropriate.</p>
LPR-B-560	Lisa Arts	LPR-A-086	<p>this area has already experienced a significant increase in housing, resulting in disruption to local wildlife, anti-social behaviour, increased traffic and also vehicle speeding (evidenced by the need to introduce traffic calming measures). Additional housing developments would not only exacerbate these problems in the local area but would also impact Adderbury as a whole. Tthe community feeling within the village would be lost, the scenery would be affected, footpaths would be disrupted and traffic congestion would be increased further. There is already limited parking space in the village for amenities such as the hairdressers. Furthermore, additional housing will cause Adderbury to lose its rural and charming village character.</p>
LPR-B-561	Thomas Wootton	LPR-A-178	<p>The overall land submitted for potential development through the plan is c.770 hectares of which site LPR-A-178 covers 60 hectares almost 8% of the overall submission. If the 60 hectare site was fully developed this would dramatically increase the overall size of Adderbury and could potentially change the feel of "village" life forever. This development would also result in the loss of local farmland used for walking and exercise where often wildlife, crops and livestock provide connection to the great British countryside and support wellbeing. If this site is developed it would also add to the other sizeable developments on the south side of Banbury which could lead to an overwhelming pull on existing infrastructure. This could also lead to the eventual deterioration of the boundaries between Adderbury and Banbury.</p>
LPR-B-561	Thomas Wootton	General	<p>pose the question of awareness re this consultation. From my limited interactions there seems be an overall lack of awareness unless you have social media. With this in mind I assume the council is comfortable the communication strategy adequately considered all demographics and levels of digital literacy</p>
LPR-B-562	Colin Galloway	Adderbury	<p>Strongly objects. Proposed development is totally out of proportion to the village facilities. The current road structure is quite unsuitable if approval is given to all these development sites. We have had several new developments over the last few years which have caused huge congestion within the village and on the road to Banbury. We also feel that a proper public consultation with MAXIMUM publicity should have been given to this project. Most people in the village are completely unaware of the plans.</p>

LPR-B-563	Boyer Planning for Wates Developments	Call for Sites Promotion - Land south of Green Lane, Chesterton	Land south of Green Lane, Chesterton is promoted for housing. Update to HELAA359. A vision document has been supplied.
LPR-B-563	Boyer Planning for Wates Developments	Option 1	generally supports the proposed vision, but has no specific observations on its content.
LPR-B-563	Boyer Planning for Wates Developments	Option 2	KO 1, Wates considers that land should be allocated to meeting housing needs in-full, including an appropriate quantum of any unmet need as may arise from neighbouring authorities. With regard to KO 2; agree that it is essential that the new Local Plan supports home working, in order to reduce the need for daily travel. This potential also needs to be reflected in the spatial strategy, as rural communities may benefit from recent changes in working practices and commuting, such that they are better able to accommodate future development. KO 31, it is agreed that supporting vibrant rural communities is a key objective, particularly so because (outside of Bicester and Banbury, and where the district adjoins Oxford) Cherwell is largely rural. Wates adds that Chesterton (where it is promoting land for residential development) is a particularly suitable location for new housing, as the settlements benefits from good public transport connections into Bicester. The frequency of the existing bus service is also set to increase as a consequence of the Great Wolf development at Bicester Golf Course (where a S016 obligation will provide a subsidy for the route). It is also the case that pedestrian and cycle infrastructure between Chesterton and the Bicester, has been greatly improved through the introduction of the new parkland and routes situated to the east Chesterton / west of Vendee Drive. The Park and Ride on the A41 / Vendee Drive junction is also made more accessible as a consequence of these improvements, and this provides very frequents services between Oxford and Bicester. A Vision Document (illustrating the proposed development) is provided at Appendix 1 to this representation. A Location Plan, which also identifies local services in Chesterton, is provided at Appendix 2. An Illustrative Masterplan is provided at Appendix 3.
LPR-B-563	Boyer Planning for Wates Developments	Option 3	Wates promotes land primarily for residential development. However, employment land and/or employment generating uses sometimes form part of Wates' holistic masterplanning and place-making proposals. Based on this experience, Wates maintains that the success of an employment site depends on a wide range of factors, including the sectoral focus and operational nature of potential occupiers. This is indeed recognised at NPPF paragraph 83. Large logistics centres (for example) are typically successful when located in close proximity to the strategic road network. Last-mile distribution facilities require proximity to population centres. Bicester and Banbury have been particularly suited to capturing these uses, as shown by recent schemes at Wendlebury / Chesterton. This will help to generate additional employment opportunities for residents of these villages. Wates anticipate that the main urban centres will continue to provide a focus for officerelated development. However, as a consequence of the pandemic, smaller settlements now have greater potential to support employment, particularly so as remote working has emerging as a credible and widespread practice. As a result, there has been a tangible growth in small-scale office hubs / flexible spaces in rural locations, as well as significant demand for new home working dwelling extensions and garden annexes. Consistent with the above, Wates remarks that home-working is a particularly sustainable basis for employment, as the propensity to commute (by motorised vehicle) is reduced. The potential to improve the sustainability of large and small villages (and to revitalise local shops and other facilities), though residential developments that are genuinely designed to enable home-working, should be factored into the Local Plan options. This will help to ensure that the Local Plan accords with the requirements of NPPF paragraphs 84 and 85 and will contribute to achieving net zero carbon emissions.
LPR-B-563	Boyer Planning for Wates Developments	Option 4	The NPPF is clear (at paragraphs 82 and 83) that Local Plans should identify and meet employment needs of different sectors and proactively encourage economic growth. As such, only option 3 complies with national planning policies.
LPR-B-563	Boyer Planning for Wates Developments	Question - Supporting Employment	KO 2 identifies supporting home working as a key objective for the new Local Plan, in order to reduce the need for commuting / daily travel. There is also some discussion regarding home working within other parts of the consultation document, particularly in relation to 'liveable neighbourhoods', digital infrastructure, and transport and connectivity. However, the Local Plan and the evidence base should be further developed to explore the implications of the trend towards remote working in greater detail. This is necessary because the focus of local economic development may have changed in quite important ways. For example, many companies now have less of an operational imperative to maintain large-scale office footprints, when compared to pre-pandemic levels. Conversely, the potential for remote working means that highly-skilled employees now have much greater flexibility regarding where they live. One implication of this change, is that it is perhaps less important (from the perspective of promoting local prosperity) to capture new inward investment in the form of (for example) a physical new headquarters building. Conversely, it has become more important to provide an attractive location for a company's skilled and well-remunerated employees to live. Cherwell (as an attractive Oxfordshire district) is well-placed to attract highly skilled workers who might have traditionally worked in London. New housing development at rural villages is would serve to draw-in such people, whose high levels of disposable income is likely to reinforce the viability of local services.
LPR-B-563	Boyer Planning for Wates Developments	Option 6	The affordable housing requirement applied through the new Local Plan should respond to evidence of need. However, it must be based on a comprehensive Viability Assessment. This needs to account for all projected infrastructure requirements, in order that planning obligations (cumulatively) do not impede successful delivery. Wates maintain that such an approach is necessary in order that the new Local Plan achieves consistency with the requirements of the Planning Practice Guidance relation to 'Viability and plan making', as referenced at NPPF paragraph 58.
LPR-B-563	Boyer Planning for Wates Developments	Option 7	The tenure mix should be based on detailed Plan-wide evidence, taking account of the cumulative impacts of all planning obligations on development. Such matters will need to be considered through a comprehensive Viability Assessment.

LPR-B-563	Boyer Planning for Wates Developments	Option 8	The NPPF at footnote 49 indicates that local planning policies may make use of the nationally described space standards (NDSS), but only where the need for such a standard can be justified. With respect to affordable housing (and in Wates' experience), Registered Providers in Oxfordshire (and elsewhere) will typically require that all affordable units, which they will adopt, are built to accord with the NDSS. In effect then, this is already the established, conventional requirement, which the new Local Plan could apply. However, at this stage, Wates would remark that the evidence cited in support of the application of the NDSS appears only to relate to affordable housing provision. There is then no specific presented evidence that indicates that market housing should meet with the minimum standards. Nonetheless, Wates would raise concerns regarding the proposal to apply the NDSS as a minimum requirement for all market and affordable dwellings. Certainly, most volume housebuilders do (in general) now seek to design their house types to comply with the NDSS. However, there may well be instances where it is not possible to meet the standard, because of the circumstances of a particular development and the characteristics of a site. Likewise, there is a need to provide variety and choice, and a blanket minimum requirement may preclude innovations through off-site manufactured housing, custom and self-build developments, and low-impact formats, such as so-called 'tiny homes'. Nonconventional housing stock will play an important role in improving affordability and reaching net zero targets. Wates maintain that a better approach would be to regulate development proposals through general development management policies, that allow for amenity to be considered in context.
LPR-B-563	Boyer Planning for Wates Developments	Question - Separation Distances	Wates remarks that where Local Plans and/or supporting SPDs strictly apply minimum separation distances, this tends to result in lower development densities overall. To this it is added that the updated NPPF places a greater emphasis on design, including achieving tree-lined streets. Whilst that's generally to be welcomed, the requirement to provide tree-lined streets will add to land-take and will also drive down achievable densities. A similar effect occurs through the incorporation of swales and other aboveground SuDs / Green Infrastructure features. Wates' primary concern is that the cumulative impacts of design policies on development density need to be properly considered. If a favoured policy approach results in lower average densities, there will be a corresponding need to allocate more land for development.
LPR-B-563	Boyer Planning for Wates Developments	Option 9	It is increasingly commonplace for Local Plans to require a percentage of new homes to be wheelchair accessible, in accordance with Part M(3) of the Building Regulations. It is similarly common for Local Plans to require a percentage of new homes to be provided as 'accessible and adaptable' dwellings, in accordance with Part 4(2). Wates consider that it may be appropriate to introduce such a requirement in the new Local Plan. However, it is important that any such requirement is based on detailed evidence of need and is factored into the Plan-wide assessment of viability.
LPR-B-563	Boyer Planning for Wates Developments	Option 10	Wates endorses the move to zero carbon development and supports Local Planning policies that seek to achieve this. However, in this instance, there is a case for ensuring that any additional local standards are agreed on an Oxfordshire-wide basis. This will ensure consistency across the County, which will make it easier for developers to respond to any requirements. In addition, it is remarked that additional standards are likely to impact on development costs are therefore viability. Therefore, any proposed local standards need to be costed and factored into the Viability Assessment that will support the Plan. It may well be the case that rural areas within the district where higher residential values can be achieved will be those best able to absorb additional build-costs. This may need to be reflected in the spatial strategy and distribution of development.
LPR-B-563	Boyer Planning for Wates Developments	Question - Policies for Climate Change, Sustainable Construction & Renewable Energy	supportive of policies that seek to address climate change and the move to net zero. However, it is important that all policies / standards are considered holistically, such that impact on design and viability can be fully understood and assessed.
LPR-B-563	Boyer Planning for Wates Developments	Option 12	Wates considers that the Local Plan position should follow the approach set out in the Environment Bill, which allows for flexibility. In this respect, we note that it may not be appropriate to secure biodiversity net gain on the closest available site, as the suitability of a site for enhancement will depend on the nature of the habitats involved. Conservation Target Areas and land within the Nature Recovery Network may well be appropriate locations to secure mitigation. However, other land may come forward that is also suitable for enhancement. Indeed, there is a growing private sector market to deliver land for the purpose of BNG and the Plan's policies should not impede this (as a source of supply). Wates agree that it is very important (to integrated within the Plan) an effective mechanism to provide developer contributions.
LPR-B-563	Boyer Planning for Wates Developments	Option 13	Wates agree that natural capital assessments can represent a useful spatial planning tool at a strategic level, which can be used to inform Local Plans and (in future) Nature Recovery Strategies. However, the usefulness of such assessments for individual applications needs further consideration. Ultimately, it is important that the Plan does not introduce new development management requirements unnecessarily or where this would lead to duplication. In this respect, the consultation document infers that the principal benefit (of requiring natural capital assessments to accompany major planning applications) would be that this helps to secure a BNG. However, the Environment Bill will require that this is demonstrated through the Biodiversity Metric. In turn, this already necessitates baseline surveys of the habitats in and around a development site. As such, it's not clear what an applicationspecific natural capital assessment would add to the process.
LPR-B-563	Boyer Planning for Wates Developments	Question - Biodiversity & the Natural Environment	Wates would remark that it is important that all policies / standards are considered holistically, such that impact on design and viability can be fully understood and assessed. Based on experience elsewhere, Wates notes that the cumulative effects of landscape / biodiversity buffers, SuDs and Green Infrastructure, can reduce development densities. That may well be justified as an appropriate response to site constraints. However, it does have implications for the average housing densities that the Plan may achieve.
LPR-B-563	Boyer Planning for Wates Developments	Option 14	Wates supports a flexible approach (option 3), as this will allow for site-specific responses to be developed. This flexibility is important, as developments now need to achieve greater integration between all forms of open space and Green Infrastructure. This is not to say that LAP, LEAPs and NEAPs should not be provided where appropriate. However, it is important to recognise the contribution that informal and incidental spaces (where well-designed) make towards overall open space calculations.

LPR-B-563	Boyer Planning for Wates Developments	Option 15	Wates remarks that sports hubs (such as that recently approved at Chesterton) bring with them the benefits of scale and typically provide higher quality assets. This assists with viability and induces demand, and helps support healthy communities.
LPR-B-563	Boyer Planning for Wates Developments	Question - Protecting the Historic Environment	Wates notes that the approach to assessing heritage impacts is set out clearly and comprehensively in the NPPF, the Planning Practice Guidance and in national legislation. As such, any new Local Plan policy should to achieve conformity with national requirements, but should not need to add additional (unnecessary) complexity by going beyond them. However, it is remarked that having an up-to-date list of non-designated heritage assets (a 'Local List') would provide greater clarity for developers.
LPR-B-563	Boyer Planning for Wates Developments	Question - Achieving Good Design & 'Beauty'	supports the emphasis on achieving 'beauty', which is set out in the updated NPPF. However, Wates agree with the sentiment expressed in the consultation document (at para 5.11.1), which states that place-making is about more than simply what buildings look like. The Cherwell Design Guide (2017) already provides a framework for effective masterplanning and design, and it can be applied at both outline and detailed levels. Policies in the new Local Plan should build on this existing work. Nonetheless, there may be a case for updating the document to (for example) address the impacts of new technologies and to account for the changing way that SuDs and Green Infrastructure is masterplanned within new developments.
LPR-B-563	Boyer Planning for Wates Developments	Question - 20-Minute Neighbourhoods	A 20-minute neighbourhood is a concept that is likely more applicable to existing urban areas and new strategic allocations, in so far as the concept relies on high-levels of population density to sustain a wide spectrum of services and interactions. However, Wates would remark a 20-minute neighbourhood is not a new concept. As such it does not fully reflect recent trends towards online shopping and working from home. Likewise, it is not a concept that could be easily replicated in rural areas, where achieving sustainable development may require a different approach (as is recognised at NPPF paragraphs 85 and 105). Nonetheless, many of the notions described through a 20-minute neighbourhood already reflect what is generally regarded as representing 'good design'. It may therefore be appropriate to reference the concept in the Plan, with appropriate caveats.
LPR-B-563	Boyer Planning for Wates Developments	Question - Transport & Connectivity	The pandemic has accelerated the evolution of technologies that are changing the nature of transport and connectivity. Remote working has become highly prevalent and online sales and deliveries constitute a growing part of shopping preferences. Likewise, the introduction of electric vehicles (including autonomous vehicles) is now an important aspect of Government transport policy, both for the purposes of delivering goods and for facilitating personal travel. Wates believes that these changes will reduce the need for travel, as well as the carbon footprint associated with travel. The effect will be to render rural locations more sustainable and this should be reflected in the Plan's spatial and housing distribution strategy. However, during this time of transition, it is important that the Plan includes policies that support 'future-proofing'. The Plan can promote this particularly through policies relating to electric vehicle infrastructure. For example, requiring new homes to be served (as a minimum) by passive charging infrastructure (i.e., conduits that would allow EV chargers to be installed at a later date) would be a relatively affordable measure. In addition, the Plan (or a subsequent SPD) could include design measures requiring that visitor parking bays be provided for autonomous delivery vehicles, as well as autonomous car sharing facilities (as are being trialled in the USA). Such measures could further reduce the need for car ownership, even in rural areas, and the Plan should anticipate this. It is however crucial that any new requirements are given appropriate consideration in the Local Plan Viability Assessment. It is also important that any proposed measures are factored into assumptions about achievable development densities.
LPR-B-563	Boyer Planning for Wates Developments	Option 16	Wates believes that high-quality digital infrastructure is vital to support effective remote working, which in-turn reduces the propensity for travel. It may therefore be appropriate to include a policy which specifies requirements for digital infrastructure as part of new developments. However, the Plan should be clear about what form / standard of digital infrastructure is needed.
LPR-B-563	Boyer Planning for Wates Developments	Option 22	Wates maintains that Bicester (alongside Banbury) represents the most sustainable location to accommodate housing growth within the Plan-area. However, there is an opportunity to meet some of the required growth at those satellite villages which are wellconnected to it. Chesterton (where Wates is promoting land for development) benefits from good public transport connections into Bicester. Indeed, the frequency of the bus service is set to increase as a consequence of the Great Wolf development at Bicester Golf Course (where a S016 obligation will provide a subsidy for the route). It is also the case that pedestrian and cycle infrastructure between Chesterton and the Bicester, has been greatly improved through the introduction of the new parkland to the east Chesterton / west of Vendee Drive. The Park and Ride on the A41 / Vendee Drive junction is also made more accessible as a consequence of these improvements, and this provides very frequents services between Oxford and Bicester. The continued expansion of Bicester (through strategic allocations) brings with it increasing concerns about separation with the villages. A response to this would be to grow the satellite villages, particularly in the direction away from Bicester. In the case of Chesterton, this would mean development to the south / south east. Such a strategy would facilitate growth at settlements that benefit from good connections to Bicester and which therefore have access to a wide-range of services. Indeed, anecdotally it should be noted that Chesterton is as geographically proximate to the centre of Bicester, as some areas within the strategic allocations to the north west and south east of the town. A Vision Document (illustrating the proposed development) is provided at Appendix 1 to this representation. A Location Plan, which also identifies local services in Chesterton, is provided at Appendix 2. An Illustrative Masterplan is provided at Appendix 3.

LPR-B-563	Boyer Planning for Wates Developments	Option 23	Wates considers that a strategy based on the satellite villages around Bicester should be considered. In particular, Chesterton (to the west of Bicester) is very-well related to the town and is connected to it through public transport links, as well as enhanced pedestrian and cycle infrastructure. The range of services and employment opportunities available within the village is also improving. This is as a result of the approved Great Wolf development at Bicester Golf Course and the new Bicester Sports Association facilities. Land South of Green Lane is particularly suitable for residential development. It lies to the south west of the settlement, such that the delivery of new homes at this location would not reduce the sense of separation between Chesterton and Bicester. The site is also very well placed to provide connectivity between the newly approved sports facilities that lie immediately to the west and the rest of the village. The site is not subject to any significant constraints or designations, and is well bounded by existing tree-lined boundaries. The site is also large enough to accommodate substantial areas of new Green Infrastructure, tree planting, biodiversity net gain and community facilities. A Vision Document (illustrating the proposed development) is provided at Appendix 1 to this representation. A Location Plan, which also identifies local services in Chesterton, is provided at Appendix 2. An Illustrative Masterplan is provided at Appendix 3.
LPR-B-563	Boyer Planning for Wates Developments	Option 30	Whilst there is a requirement for development to be concentrated in an around the large urban centres, the delivery of new homes within the rural area has proved to be an important component of housing supply under the current Local Plan. Accordingly, Wates maintains that the rural areas should continue to play a role in meeting the housing needs of the wider District. This is essential, not least because of the length of time it takes to deliver large-scale strategic allocations. In this context, development at other settlements will help to sustain the supply of new homes in the early part of the Plan-period and (by extension) will support a rolling five-year housing land supply, as per NPPF paragraph 74. Moreover, there is also an opportunity to deliver growth at the satellite villages around Bicester (which have good connections to the town), noting that changes in technology and behaviours (such as the propensity for home working) have rendered these settlements more sustainable. There should therefore be an expectation that the rural areas make a contribution towards achieving sustainable development and meeting housing needs. As has been outlined, Chesterton (as a satellite settlement to Bicester) is a particularly suitable location to accommodate future development.
LPR-B-563	Boyer Planning for Wates Developments	Option 31	The NPPF allows Local Plans to allocate land for development and requires that Plan's meet identified levels of housing need in-full. Noting that the current Local Plan has not always been successful at sustaining the required 5-year housing land supply, there is a case for the allocation of non-strategic sites (in rural areas) via the new Local Plan. This will help to promote timely delivery and a support diversity of supply. Neighbourhood planning could certainly play a role in meeting housing needs and there will be communities that want to identify local sites for development. However, Neighbourhood Planning is by now a well-established concept. Therefore, where a particular Parish Council has not (up to this point) decided to prepare a Neighbourhood Plan, it is reasonable to infer that they will not do so in future. In such instances, the Local Plan should look to allocate sites at the rural settlements. This is essential to secure the supply of deliverable sites for housing.
LPR-B-563	Boyer Planning for Wates Developments	Option 32	Consistent with previous comments made in this representation, Wates maintains that the Rural Settlement Hierarchy (and the approach to housing in the rural areas) should reflect the impact of new technologies and changing consumer habits. For example, a settlement that has lost its village shop or post-office, is not necessarily rendered unsustainable in an environment where online deliveries are prevalent. In a similar fashion, rural settlements are becoming less car dependent, given the propensity for people to work from home. However, in this new context, it is equally clear that having access to high-quality public open space, sports facilities, etc, is a key benefit to health a well-being and quality of life. The same is also true of cycle and walking routes, and (in this respect) Wates remarks that the satellite settlements around Bicester have (by virtue of the infrastructure improvements achieved by the Council through the current Plan) have become much more accessible. Chesterton, for example, benefits from new parkland to the east of the village / west of Vendee Drive, which makes it far easier to walk into the town or access it by bike. These improvements also allow for improved access to the park and ride facility on the A41 / Vendee Drive. The existing bus route is also to be improved through S106 contributions associated with the permitted Great Wolf water park development. New sports facilities have also been approved on land immediately to the south west of the settlement.
LPR-B-564	Vicky Clark	Question - Kidlington Infill Housing	Acceptable parking arrangements would be a key criteria in such a policy to understand if the proposal is acceptable.
LPR-B-564	Vicky Clark	Option 26	Accommodate employment land needs outside the existing Green Belt boundaries
LPR-B-564	Vicky Clark	Option 27	Maintain and protect the existing Kidlington Village Centre
LPR-B-564	Vicky Clark	Question - Reducing Car Dependency in Kidlington & the Surrounding Villages	Safer dedicated cycling route that are not part of the main road
LPR-B-564	Vicky Clark	Option 28	Just focus on protecting and enhancing existing green spaces and public rights of way
LPR-B-564	Vicky Clark	Option 30	Limit development in the rural areas to that required to meet local needs. In rural areas I believe that only brown field sites should be used to create housing. We need the green spaces and fields to be able to explore nature with our children and not clog it up with concrete.
LPR-B-564	Vicky Clark	Option 31	Use a combination of the above
LPR-B-564	Vicky Clark	Option 32	Yes more weight should be given to the availability of certain services and facilities. Most important are Secondary School, pharmacy and regular bus service. More weight should be given to the accessibility of the settlement to our urban centres by walking and cycling.
LPR-B-564	Vicky Clark	Question - Settlement Boundaries	Yes as villages are becoming absorbed into towns. I have chosen to live in the countryside so I am able to explore the natural environment with my family, if I wanted to be in town I would have chosen to live in one.
LPR-B-564	Vicky Clark	Option 33	Allocate specific sites in the rural areas to meet the needs of the economy
LPR-B-564	Vicky Clark	Option 34	Define valued landscapes/landscape features in the district which would be the subject of additional policy guidance

LPR-B-564	Vicky Clark	Islip	development in Islip should be kept to a minimum and should only be on brownfield sites. One of the reasons we live in a rural area is because there is a community and green spaces. The mass development that have been proposed would ruin Islip. Development should be kept to areas where there are amenities already established.
LPR-B-564	Vicky Clark	Question - Neighbourhood Planning	Set up review meetings at a set time in local halls.
LPR-B-564	Vicky Clark	Option 30	Proposed sites should consider the bigger impact that a residential development will have on the current villagers. Development should be proportionate for all surrounding villages and not condensed into one area.
LPR-B-565	Eric Cronin	Adderbury	interested in cycling "connections between town centres and villages" and the "health and environmental benefits." Especially between Adderbury and Banbury. The Oxford Rd., is very busy with no cycle route and this is acting as a barrier to cyclists from the south of Banbury for them to get to work and for leisure cyclists. During the early phases of building Longford Park, the developers were not required to extend the existing cycle path south of the Flyover along the Oxford Rd. Now that a new phase is to be built we need to make sure that the opportunity is taken to connect Adderbury and Banbury. At least to the Longford Park estate. Once this is done there is connectivity between Adderbury and all the industrial and retail parks to the north via Bankside,
LPR-B-566	Dr Michael Boswell	LPR-A-091	The rural character and the special landscape setting of the village is being compromised and the separation between the settlements of Banbury and Bodicote has already been eroded by the Longford Park development and it is further intended to diminish the separation between Bodicote and Twyford through developments on both sides of the Oxford Road. the developments are far from a sympathetic infilling, being of a much larger and dominant scale compared with Bodicote village. The ingress of new residents is disproportionate relative to the 3771 village population. Development sites around Bodicote village account for a near majority of allocated development sites around the whole of Banbury according to the Cherwell Local Plan. Bodicote village boundary is considered highly sensitive in providing the setting for the village. The open nature of the south and west boundaries of the village should be preserved to maintain the characteristics of the landscape setting. the developments would result in an increase in traffic and the likelihood of short cuts through the village. No traffic management plans implemented following other developments in the village; traffic management is required. Serious implications on the highly sensitive historic core of the village which contains LBs within conservation area. No Neighbourhood Plan has been formulated since the development of Longford Park; a Neighbourhood Plan is required to facilitate development consonant with local wishes and needs. Developments should preserve the rural and historical character of the village and the setting of the village. Further development on green field sites is unwelcome. The scale of the proposed development impinges on the setting of the village.
LPR-B-567	Savills for Bloor Homes (Western)	Call for Sites Promotion - Land at Withycombe Farm, Bretch Hill, Banbury	Land at Withycombe Farm, Bretch Hill, Banbury is promoted for housing. Update to HELAA027.
LPR-B-567	Savills for Bloor Homes (Western)	Option 1	Supports the main principles set out by the Suggested Vision for Cherwell. A clear focus upon a sustainable vision and identifying the key components in achieving this. Growth will be required in order to meet the Suggested Vision but limited reference to achieving this. Later sections of the Plan refer to the role that the allocation of land will play in meeting housing and employment needs for the District and it is considered that reference to growth should be made within the Suggested Vision. By way of example, bullet 12) identifies that (through the Local Plan) 'Banbury, Bicester and Kidlington have reshaped and adapted to maintain their roles...'. The importance of these centres and maintaining their roles is acknowledged, however it is not immediately clear as to what re-shaping and adaption means. Clarification here would assist the reader and it is considered that growth at these locations will assist in achieving this particular item. Reference to the Oxfordshire Strategic Vision and Draft Oxfordshire Plan Vision is correctly made, its repetition in full is perhaps unnecessary.
LPR-B-567	Savills for Bloor Homes (Western)	Option 2	Separation of Key Objectives to sub categories is helpful. It is considered the extensive list of Key Objectives (31 in total) distracts from the actual content, which in some instances is repetitive in nature. A reduction to the number of Key Objectives will better focus the plan. Supports KO1. This is essential to provide support for the living standards within the County and relates well to the vision for the District. Support the other objectives proposed including raising the value of the local economy, support for the growth of all sectors to create an inclusive economy, increase in education, training and skills, and encouragement of local companies to invest in the local workforce. KO23 - this should explicitly include reference to sustainable urban extensions and planned expansion on the edge of Banbury. The spatial strategy, whilst likely to comprise a combination of options under the emerging plans for the area, is likely to have a focus on edge of Banbury growth being such a wellconnected location.
LPR-B-567	Savills for Bloor Homes (Western)	Option 3	Bloor Homes considers employment land should be well connected to centres of population, both existing and proposed, and hence accessible to the workforce. This is likely to result in a focus at main urban centres but it is recognised that a variety of approaches, to support the District as a whole, may be appropriate in differing scales.
LPR-B-567	Savills for Bloor Homes (Western)	Option 6	Support an evidence-led approach to establishing the housing need in respect of both affordable and market provision. Levels of affordable housing has to also be tested through viability appraisal so as to avoid an adverse impact on housing delivery in the context of housing and place-making within the vision and objectives for the plan. A range of affordable housing levels may continue to be appropriate across the District but this needs to be established within development viability appraisal work.
LPR-B-567	Savills for Bloor Homes (Western)	Option 7	An evidence-led approach is supported, recognising that the NPPF supports a range of housing types and tenures. An error in the second option above appears to refer to 30% social rent, when in fact Policy BSC3 of the 2015 Local Plan refers to 30% 'as other forms of intermediate affordable homes'.
LPR-B-567	Savills for Bloor Homes (Western)	Option 8	Local planning authorities have the option to set additional technical requirements exceeding the minimum standards required by Building Regulations in respect of access and water, and an optional nationally described space standard. Local planning authorities will need to gather evidence to determine whether there is a need for additional standards in their area, and justify setting appropriate policies in their Local Plans. Unlike need for affordable housing, this issue is considered as being Oxfordshire-wide and not one that should be decided upon, possibly differently, by each local authority in the County.

LPR-B-567	Savills for Bloor Homes (Western)	Question - Separation Distances	Minimum separation standards should not be set in development plan policy as this can be too prescriptive and fail to take into consideration local conditions and site characteristics. An SPD or local design code could be an appropriate means of considering this matter.
LPR-B-567	Savills for Bloor Homes (Western)	Option 9	Reliance upon buildings regulations is appropriate. If the Council is minded to introduce accessibility standards it should be via an evidence-led approach to meet identified need.
LPR-B-567	Savills for Bloor Homes (Western)	Option 10	Local planning authorities will need to gather evidence to determine whether there is a need for additional standards in their area, and justify setting appropriate policies in their Local Plans. This issue is considered as being Oxfordshire-wide and not one that should be decided upon, possibly differently, by each local authority in the County.
LPR-B-567	Savills for Bloor Homes (Western)	Option 12	A single approach is not necessarily appropriate. A variety of measures is likely to be necessary in order to secure gains on a district or county wide basis.
LPR-B-567	Savills for Bloor Homes (Western)	Option 14	A combination of local 'neighbourhood' facilities and wider-serving facilities is important to serve day-to-day recreational needs. Therefore a combination of options could be appropriate.
LPR-B-567	Savills for Bloor Homes (Western)	Option 15	The sports needs of local communities will vary significantly depending on existing service provision and access to wider-serving facilities. Provision should take account of existing facilities in order to provide the most appropriate approach relevant to the area. This could be via on-site provision or financial contribution to new facility provision.
LPR-B-567	Savills for Bloor Homes (Western)	Question - Achieving Good Design & 'Beauty'	The NPPF, in particular section 12 Achieving Well Designed Places, is relevant and should inform policies in this regard. It is important to avoid ambiguity between the National Model Design Code, any local codes and policy / supplementary planning guidance.
LPR-B-567	Savills for Bloor Homes (Western)	Question - Transport & Connectivity	An appropriate transport strategy is important in delivering sustainable development and thereby achieving the appropriate balance that is summarised by paragraph 5.12.7 – 5.12.10. Land on the edge of urban areas which are, or can become, well connected through public transport and walking and cycling are typically preferable to more rural or isolated sites where the opportunities for travel by sustainable travel modes, or linked trips, are lower.
LPR-B-567	Savills for Bloor Homes (Western)	Question - Transport Policies	This is a matter which applies on a county-wide basis and could be left for the Oxfordshire Plan 2050 and Local Transport Plan – with appropriate referencing.
LPR-B-567	Savills for Bloor Homes (Western)	Option 17	A costed and consulted upon infrastructure delivery plan is necessary but only where it takes a lead from the work put in for the Oxfordshire Plan 2050. This must be crossboundary and look to deliver on the set of core objectives to deliver the plan vision.
LPR-B-567	Savills for Bloor Homes (Western)	Option 18	Banbury is one of the most sustainable locations within the District and based on service and facility provision should continue to accommodate future growth. The extent of growth required will, to some extent, influence the appropriate growth strategy to pursue but Bloor Homes promote that urban extensions and edge of settlement growth will be required. The western edge of Banbury has previously been assessed as a sustainable development location. Consider further urban extensions into the open countryside is considered the most appropriate approach in order to deliver sustainable growth.
LPR-B-567	Savills for Bloor Homes (Western)	Option 19	Consider sites to the west of the town is appropriate, though growth requirements may dictate that more than one option is required.
LPR-B-568	Barton Wilmore for Bicester Sports Association	Call for Sites Promotion - BSA Sports Facility, Akeman Street, Chesterton	BSA Sports Facility, Akeman Street, Chesterton is promoted for leisure use. Update to HELAA349.
LPR-B-568	Barton Wilmore for Bicester Sports Association	Option 1	Support the Council's stated commitment to work with their partners to ensure investments in social and physical infrastructure is timely and to ensure that people are given the opportunity to access sport and recreational activities when and where they need it.
LPR-B-568	Barton Wilmore for Bicester Sports Association	Option 2	Support the inclusion of KO 28 which seeks to provide sufficient accessible, well maintained good quality services, facilities and infrastructure to meet needs including for sport and recreation. This is consistent with the NPPF which requires Local Plans to provide a strategy which, as a minimum, seeks to meet the area's objectively assessed needs (NPPF paragraph 35).
LPR-B-568	Barton Wilmore for Bicester Sports Association	Option 15	A combination of seek to secure and establish sports hubs at our main settlements and use financial contributions from developers in lieu of on-site provision on strategic sites to enhance existing facilities, to enable increased use is considered likely to be the most sustainable strategy moving forwards. The proposed expansion of the Chesterton Site will establish a high-quality, multi-sports venue capable of sustainably serving the Bicester area and it is therefore considered imperative that the Local Plan Review fully recognises and appreciates the contribution that this facility has to play in meeting Bicester's existing and future needs and provides a framework which supports ongoing enhancements of this facility moving forwards.
LPR-B-568	Barton Wilmore for Bicester Sports Association	Question - Bicester's Open Spaces	The Council should identify and clearly allocate land which currently contributes, or is capable of contributing, towards sport and play provision to ensure that there is a clear sight of provision that is sufficient to meet the identified needs of the District over the plan period. Paragraph 6.3.25 of the CIP2 clearly acknowledges that 'whilst major new development in the town will deliver new open space, sport and play facilities we know from our evidence that there are shortages in provision'. It is not sound for the Strategy to rely solely on the strategic sites and a more proactive approach to identifying other sites (such as Chesterton) which can play a pivotal role in outdoor sports pitch provision serving the Bicester area moving forwards.

LPR-B-569	Diana Sadler	LPR-A-214	Any suggestion to develop this site should be thrown out immediately. encroach so close to the village of Hanwell that they are effectively merging Banbury and Hanwell. Hanwell is a “distinctive” village, “rich in historic heritage”, and set in a conservation area. Any development north of the current housing limit will completely and irrevocably damage this heritage and conservation of it. The development site would certainly not “cherish, protect and enhance the rich historic heritage” of Hanwell village, goals which are set out in the Local Plan. The current Local Plan 2011-2031 has a Policy C15 (Prevention of coalescence of settlements) however the site would completely contradict this policy. Hanwell village residents were led to believe that Dukes Meadow drive was the line the development would not cross, however this has been undone with the extensive developments already taken place along the Warwick Road. This must not be breached in future. The continued sprawl of Banbury damages the image of Banbury as a small market town. Banbury has a fascinating history which should be preserved and celebrated. There has been an unfair bias towards development to the north and south of Banbury over the last decade. Noticeably less development in the south-west direction along the Broughton Road and also to the East of Banbury. The development would go against KO23. Hanwell village is home to the Hanwell Community Observatory. The light pollution from additional housing will have a huge impact on the observatory which contains large astronomical telescopes. Light pollution is also a problem for biodiversity of an area with wildlife moving away from the light. The developments must not be driven by financial forces.
LPR-B-569	Diana Sadler	LPR-A-152	Any suggestion to develop this site should be thrown out immediately. encroach so close to the village of Hanwell that they are effectively merging Banbury and Hanwell. Hanwell is a “distinctive” village, “rich in historic heritage”, and set in a conservation area. Any development north of the current housing limit will completely and irrevocably damage this heritage and conservation of it. The development site would certainly not “cherish, protect and enhance the rich historic heritage” of Hanwell village, goals which are set out in the Local Plan. The current Local Plan 2011-2031 has a Policy C15 (Prevention of coalescence of settlements) however the site would completely contradict this policy. Hanwell village residents were led to believe that Dukes Meadow drive was the line the development would not cross, however this has been undone with the extensive developments already taken place along the Warwick Road. This must not be breached in future. The continued sprawl of Banbury damages the image of Banbury as a small market town. Banbury has a fascinating history which should be preserved and celebrated. There has been an unfair bias towards development to the north and south of Banbury over the last decade. Noticeably less development in the south-west direction along the Broughton Road and also to the East of Banbury. The development would go against KO23. Hanwell village is home to the Hanwell Community Observatory. The light pollution from additional housing will have a huge impact on the observatory which contains large astronomical telescopes. Light pollution is also a problem for biodiversity of an area with wildlife moving away from the light. The developments must not be driven by financial forces.
LPR-B-569	Diana Sadler	LPR-A-205	Grave concerns about the proposed development site.
LPR-B-569	Diana Sadler	LPR-A-047	Grave concerns about the proposed development site.
LPR-B-569	Diana Sadler	LPR-A-154	Grave concerns about the proposed development site.
LPR-B-569	Diana Sadler	Question - Green Belt	the Council should place greater emphasis on more sustainable options including brown field sites. For example, Banbury Town Centre has many unoccupied buildings all able to be developed into flats, perfect for transport links and amenities, whilst also increasing the use of the centre, which in turn encourages enterprise and sparks regeneration. This is a far more sustainable option and much better for the local and global environment. Make use of creative infill in town and the larger villages which already have infrastructure in place. Heyford Park offers a fantastic opportunity for building a centre with sustainability and the local and global environment at the forefront. I would encourage the council to place the environment right at the top of its list of considerations. Tree planting needs to be of paramount importance. Even a glance at an ordnance survey map of Banbury and the surrounding area shows an abhorrent lack of woodland. Not only will this provide amenity for the town and surrounding villages, be good for wildlife and biodiversity, but also help in what is now crucial for our climate, to store carbon. Sprawl of towns with very limited public transport leads to increased dependence on cars. This is a very poor environmental decision.
LPR-B-569	Diana Sadler	Hanwell	Hanwell village will not cope well with an increase in traffic due to the additional housing. It has a narrow road, with 3 pinch points where traffic is single file. More houses will inevitably cause an increase of traffic through the village, potentially leading to hold ups at these pinch points and increase pressure. The road through the village is not suitable for an increase in traffic. The increase in traffic is a very real safety concern also. Hanwell has narrow pavements and I have often witnessed cars drive over the pavement to avoid slowing at the pinch points in the village. Hanwell village is home to the Hanwell Community Observatory. The light pollution from additional housing will have a huge impact on the observatory which contains large astronomical telescopes. Light pollution is also a problem for biodiversity of an area with wildlife moving away from the light.

LPR-B-569	Diana Sadler	Question - Development Management Policies	<p>Development management policies should be updated and introduced through the Local Plan Review as follows: Update of existing policy: C15</p> <p>Prevention of coalescence of settlements</p> <p>The current Cherwell Local Plan 2011-2031 is not robust in references to non-coalescence. B.2 Theme Two: Policies for Building Sustainable Communities, states "B.89 We aim to avoid development in inappropriate locations and coalescence with neighbouring settlements." The Council "aiming to avoid" coalescence is not a good enough level of protection for Hanwell. The current Local Plan 2011-2031 contains Policy C15 (Prevention of coalescence of settlements) as a 'saved' policy from the 1996 Plan that continues to be in place. This policy is outdated and weak. It lacks clarification on the degree of extending the edge of towns (i.e. reduction of open land between settlements) that will result in the identity of individual settlements being lost. It lacks a definition of "coalescence" and "close proximity" in the context of development in Cherwell, or a definition of the "strategic gap" that should be preserved between settlements. It lacks any indication of the weighting that should be given Policy C15 versus competing development pressures. It lacks reference to the multiple benefits of retaining open countryside around rural settlements, by only stating that "rural communities may feel particularly threatened where they are in close proximity to urban areas". Policy C15 must be replaced or overhauled to address the above weaknesses. The new policy must become an effective planning policy to define and then protect the strategic gap between towns and surrounding villages. At present, Policy C15 does not deter housing developers proposing sites to build houses over farmland between Hanwell and Banbury to within 100m from the edge of the Hanwell village Conservation Area (reference: LPR-A-214). 100m between the edges of Banbury and Hanwell cannot objectively be considered a sufficient preservation of open land between the town and village. However, in the absence of a robust policy there is insufficient clarity on these matters.</p> <p>In the past, Policy C15 has not deterred housing developers promoting and building on sites over farmland around Banbury. It is not just Hanwell that is impacted; Bodicote also since 1996.</p>
LPR-B-569	Diana Sadler	Question - Development Management Policies	<p>Development management policies should be updated and introduced through the Local Plan Review as follows: New policy: Landscape designations.</p> <p>Landscape designations are required to protect open agricultural land around towns, to ensure this is not built upon resulting in coalescence with surrounding villages. Such important "strategic gaps" between settlements are important to distinguishing nearby settlements, and should be preserved through either:</p> <p>(a) extending the boundary of existing village Conservation Areas; or</p> <p>(b) creating a new formal "Green Buffer" designation.</p> <p>Without such designations and strategic policy there is a risk of piecemeal erosion of land between towns and surrounding villages. Once land is developed the countryside is lost forever, and surrounding villages become closer to coalescence with the edge of expanding towns. Such designations are vital to protect the limited open land between Banbury and Hanwell village. Despite existing policies and attempts to preserve open land between the town and village, Banbury has continued to expand northwards. Through the Local Plan, greater powers are required for CDC to protect the ensure the town and villages do not merge to protect the distinctive identity and setting of Banbury and its surrounding settlements. The areas of countryside, or gaps, between both the existing or planned edge of Banbury and the surrounding settlements, are important in maintaining the character and setting of the town and villages and creating distinctive approaches and their rural setting. The Green Buffer should prevent development extending beyond the settlements to such an extent that the identity of individual settlements is lost, and development coalesces, and valuable open countryside is lost. The designation will be essential to protect important gaps, preventing development which would harm its character. These designations are required to ensure planning decisions give more weight to protecting open land rather than to the delivering housing land (the 5 year supply of homes). The reliance on general policies to protect open land in Cherwell Local Plan 2011-2031 has failed to protect agricultural land between Banbury and surrounding villages. If CDC are serious in addressing shortcomings in the Cherwell Local Plan 2011-2031, the Local Plan review must come up with robust policies to protect the strategic gap between say Banbury and Hanwell village.</p>
LPR-B-570	Anthony Scholz	LPR-A-041	<p>Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. Additional development around Henge Close at LPR-A-041 would directly abut the Conservation Area and would therefore be detrimental to the setting of the listed buildings on Horn Hill Rd. Development would also be detrimental to the open nature of the Henge Close estate and to the green space and play area to the east. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook.</p>

LPR-B-570	Anthony Scholz	LPR-A-086	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. The large-scale developments proposed for sites LPR-A-086 would utterly change the approach to the village and would create a jarring transition from agricultural land to modern, dense housing. if developed, double the size of West Adderbury overnight. Such large scale development is entirely inappropriate for a village the size of Adderbury and is far more suited to a large town or even a city. few facilities present in Adderbury would be completely swamped by a development of this scale, placing massive pressures on local schools and services. Precious public footpaths over these sites, which are in daily use by local residents, would be lost forever. Development of LPR-A-086 would lead to the residents of St Mary's Road being completely subsumed by new estates, fundamentally changing the character of the southern edge of West Adderbury. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook.
LPR-B-570	Anthony Scholz	LPR-A-146	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. Additional development around Henge Close at LPR-A-146 would directly abut the Conservation Area and would therefore be detrimental to the setting of the listed buildings on Horn Hill Rd. Development would also be detrimental to the open nature of the Henge Close estate and to the green space and play area to the east. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook.
LPR-B-570	Anthony Scholz	LPR-A-218	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook.
LPR-B-570	Anthony Scholz	LPR-A-258	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. The large-scale developments proposed for site LPR-A-258 would utterly change the approach to the village and would create a jarring transition from agricultural land to modern, dense housing. Development would lead to a substantial decrease in the green space between West Adderbury and Milton, increasing the risk of coalescence and impacting upon the character of both villages. A popular footpath would be lost, and irreversible damage would be caused to the amenity of the homes to the north of Adderbury Fields, and to the adjacent green space. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook.
LPR-B-571	Adrienne Baba	Bloxham	understand there is a desperate need for new housing. There should be a maximum limit placed on such developments so that local services such as schools, surgeries and roads are not overstretched (which is already the case in Bloxham). There are also plenty of other reasons why these developments are detrimental to the locality, such as reduction of habitat for local wildlife, erosion of conservation areas and increased traffic pollution. In an ideal world some of the land earmarked for development (often land-banked for decades) could be used instead to benefit villagers, for example as village allotments giving people the chance to grow their own vegetables (good for physical and mental health, the environment, biodiversity) or for planting trees (good for carbon capture, landscape, wildlife). Regardless of planning and land-banking and for the same reasons cited above, every village should have access to an allotment (not all do) and a commitment to tree planting should be part of every village's policy.
LPR-B-572	Fisher German for Mr N Goodwin and Mr and Mrs P Beecroft	Call for Sites Promotion - Land to the west of the M40 and north of the A34, Weston on the Green	Land to the west of the M40 and north of the A34, Weston on the Green is promoted for mixed use development. Update to HELAA392.

LPR-B-572	Fisher German for Mr N Goodwin and Mr and Mrs P Beecroft	Option 1	Support the Council's proposed vision. In particular we support the recognition that Cherwell's spatial location within the Oxford-Cambridge Arc is one key factor which provides significant opportunities for post COVID-19 recovery.
LPR-B-572	Fisher German for Mr N Goodwin and Mr and Mrs P Beecroft	Option 3	A varied portfolio of land is required to ensure the greatest choice and competition in the market, appealing to different sectors and end-users and enabling different developers into the market. A homogeneous supply of employment land will restrict the market and impact employment delivery rates. We consider the only logical spatial option is option 5. This ensures a balanced dispersal of development, from key employment developments across all four spatial options, with growth directed in a manner which is commensurate to each. Due regard must be had for other matters when distributing and allocating sites, such as site suitability, Green Belt, market demand, site availability, site access, viability and availability of key infrastructure and services. There may be a site which may be seen to be preferable due to a location in a main urban centre, but it may have site specific problems relating to contamination and viability that makes the redevelopment of the site for employment uses unviable, with residential being preferable due to the higher land values to pay for remediation. The above approach ensures that employment land is delivered throughout the plan area geographically and throughout the plan period temporally, to ensure employment growth reflects and serves population growth. Clearly in locating the majority of development in just one spatial location, as proposed by the question, is inappropriate in that it would necessitate significant increases in commuting with those living outside of such areas needing to commute for work. Distributing growth through the options will provide geographically dispersed employment growth which would reduce the need for all residents to commute into larger centres, reducing congestion and pollution which would place high strain on the road network if located in just one spatial option. The recommended approach is considered particularly necessary given the existing strategy does focus growth on a spatially small part of Cherwell, with employment growth focused at Banbury, Bicester and to a lesser extent at Kidlington. On this basis, there are legitimate arguments that these areas should have a lower level of growth in terms of new allocations moving forward, given they already benefit from extant strategic employment allocations with significant land remaining for development. Option 1 would simply place further pressure on these settlements, encouraging unsustainable patterns of commuting and impacting on local highways, services, and infrastructure provision.
LPR-B-572	Fisher German for Mr N Goodwin and Mr and Mrs P Beecroft	Option 4	It is assumed the first sentence is an error, as it is verbatim the question asked at Option 3 and relates to location rather than composition of employment land, as per options 1-3 above. We are of the opinion that the introduction of Class-E was a clear signal from Government that greater flexibility is required in the uses of buildings without the need for planning permission, particularly in response to issues such as the decline of the high-street and economic downturns. It is to us unacceptable if Local Planning Authorities attempt to subvert the new Class-E without reasonable justification. Whilst we understand the rationale of seeking to control uses forthcoming on employment sites, we consider an approach which seeks to limit uses to only B-class uses is overly restrictive and in conflict with the flexibility Class-E was introduced to deliver. We consider the Council should increase flexibility on its employment sites by adopting a wider definition of suitable uses which could be brought forward on such sites. For example, proposals could be required to be employment generating. Many Class-E uses are likely to have a significantly higher employee numbers than traditional B uses, particularly B8 uses. In terms of job provision, other uses could be more economically beneficial and as such shouldn't be entirely excluded. For example, the Employment Density Guide 3rd edition (November 2015) sets out that B8 uses tend to range between an employment density of 70-95sqm per full time employee. In terms of Retail uses for example, the employment density can be as low as 15-20sqm per full time employee. Retail is likely to provide significantly more jobs than traditional B8 uses. It is requested that the definition of suitable uses on employment sites be extended to employment generating uses rather than using the use class order. This could be caveated with requirements for uses to deliver an appropriate employment density, for example no uses with an employment density lower than B8 uses, to ensure no loss in job provision through such a revision. Or the level of employment generating uses outside of E(g)/B2/B8 could be restricted to be no more than 50% of the site for example. Clearly there could be requirements that such proposals would need to demonstrate that they do not have undue impacts on the town centre for example. The Council could open up the Policy to enable the development of B and all E Class uses as suggested. The Council could ensure there is supporting criterion to ensure such a policy would not have adverse impacts on the town centre for example. This approach would enable the delivery of uses which would be entirely suitable in such locations, such as showroom retail, gyms, nurseries, medical etc. The policy should apply some flexibility and caveats as to when other uses would be acceptable. It is unproductive and inefficient to have land which could be brought forward for economically beneficial purposes vacant awaiting uses which may not be suitable or unviable. It is vital that there is flexibility to ensure landowners and developers can bring forward economic growth flexible, commensurate with modern requirements and in the way most suiting for each individual site, reflective of demand, location, access to public transport, availability of services, etc.

LPR-B-572	Fisher German for Mr N Goodwin and Mr and Mrs P Beecroft	Option 6	Urge caution to any attempt to increase the expected rate of affordable housing and any such attempt must be supported by significant viability evidence and market support. Increasing the rates of affordable housing will reduce land returns and could see landowners instead wish to bank land, rather than release for a lower sum to pay for additional affordable housing, above a reasonable level. This could result in lower levels of housebuilding, and whilst schemes coming forward may deliver a higher ratio of affordable housing, if building drops too much this could result in less affordable housing being delivered in overall terms. The drop in market housing delivery would however reduce the supply of new housing, which would accelerate house price growth and worsen issues of affordability, not remedy them. It is worthy to note the substantial contributions that will be required both to satisfy wider policies within the plan and to ensure local health and school capacities. There are also forthcoming requirements to deliver biodiversity net gains which will further impact the viability of sites. Paragraph 16 of the NPPF sets out that plans must be both positive and deliverable. Paragraph 58 affirms that it is the role of up-to-date policies to inform development management process, and as such the Council must demonstrate its policies and attributable development burden will be deliverable at this stage. It is not acceptable to try and kick such an issue back to site specific viability work at the planning application stage. The most efficient way to increase affordable housing delivery would be to increase the number of housing allocations, delivering more market and affordable housing. This would slow house price growth in general terms and would deliver more affordable units, both of which would significantly improve the current housing position and accord with the Governments goals to boost significantly the supply of housing, whilst also contributing to the overarching goals and aims of the Oxford Cambridge Arc.
LPR-B-572	Fisher German for Mr N Goodwin and Mr and Mrs P Beecroft	Option 8	Any attempt to introduce such standard on all new dwellings must be supported by significant evidence on viability and also on the impacts such a move would have on house prices. Many housebuilders build various different house types of the same number of bedrooms, precisely to provide choice to the market. In particular this benefits those who may not be entitled to affordable housing, but may not be able to afford a larger house which of course would come with associated increase in price. Housebuilders are best placed to make such judgements as ultimately it is they who will need to sell their product to the available market at a profitable price. There is also freedom in the market to decline to purchase a property if purchasers consider a property is too small to meet their needs. Furthermore, some people will prefer the reduced maintenance and cleaning associated with a smaller-footprint property. To introduce such a requirement, the Council would need to provide evidence that the houses being built in the area are demonstrably too small and that there is evidence which necessitates a policy intervention. Strongly object to 2nd criterion. Affordable housing should be tenure blind, that means it should not be possible to differentiate differing tenures of property. Clearly if all affordable units are bigger than their market counterparts, this would have a significant impact on their ability to be truly tenure blind. It may cause significant issue to housebuilders, who may not be able to use the same house type for affordable and market housing, given the requirements on affordable would necessitate a larger house type. This could add significant cost and delay as new house types are drawn up and delivered to meet this policy requirement, or impact viability as affordable housing costs spiral upwards against likely receipts for market equivalents. It would seem to us to be entirely unethical that the market housing buyers, who ultimately fund the delivery of the affordable units through their house purchase, would then be in a position where the dwellings they could purchase would be smaller than the affordable equivalent. Whilst we agree that affordable housing should be of a standard and quality to match that of market, we equally disagree that affordable housing should be delivered at a larger size than their market equivalents. If such a policy requirement was to be introduced, the Council would need to demonstrate that it would be viable, not have undue impacts on housebuilders and provide evidence which would support the view that affordable housing delivered currently is not sufficiently sized and that it is causing issues which require policy intervention.
LPR-B-572	Fisher German for Mr N Goodwin and Mr and Mrs P Beecroft	Question - 20-Minute Neighbourhoods	Agree that 20-minute neighbourhoods offer a useful metric for urban and strategic development but given the rural nature of the Plan area cannot be applicable to all developments, particularly those in the more rural areas. It could form the basis of new development within urban areas and particularly strategic scale development, which could utilise the principle during the masterplanning phase to ensure new communities are truly walkable.
LPR-B-572	Fisher German for Mr N Goodwin and Mr and Mrs P Beecroft	Question - Transport & Connectivity	The increasing transition to homeworking, the prevalence of online shopping and the growing sustainability of personal cars, in particular the growing popularity of hybrid and electric models, mean that whilst still forming a useful tool, the transport hierarchy as displayed is beginning to be somewhat antiquated to be used in isolation. In more rural areas, the application of the hierarchy in isolation is inappropriate and considering low carbon alternatives is likely to be beneficial. This includes looking at elements such as internet connectivity and the sustainability credentials of schemes being advanced, particularly where they contain mitigatory measures such as renewable energy as an integral part of the proposal which would assist offsetting transport carbon creation.
LPR-B-573	Walsingham Planning for Mr Richard uthill	Option 30	support option 2 to direct proportionately more development to the rural areas over the plan period to meet wider district needs. Though brownfield development on suitable sites is to be preferred, allocating appropriate amounts of suitable greenfield sites will be necessary to meet housing need. Villages and smaller settlements have an important role to play in distributing growth across the District. Any new draft policy should build in flexibility to a spatial approach to housing land and allocations across the District, and should have sufficient scope to allow the decision taker to have regard to the potential of sites on an individual basis.
LPR-B-573	Walsingham Planning for Mr Richard uthill	Option 31	support option 3 which is a combination of options 1 & 2, it is important to ensure flexibility and a responsive planning policy framework and avoid prescriptive policies that fail to account for individual circumstances that will change spatially as well as over time. Ultimately, in tandem with Option 30, support the need to allocate sufficient housing in the rural areas to meet identified housing needs. Local need can of course be both market and affordable housing. We believe this should be through the identification of a housing requirement figure for the rural areas that can then be delivered through a criteria based policy for which planning applications can be determined and/or through the identification of sites through Neighbourhood Plans.

LPR-B-573	Walsingham Planning for Mr Richard uthill	Option 32	The options presented appear to be paving the way for a review of the settlement hierarchy and categorisation, which we noted previously, however no specific wording or Policy content is presented. A strict interpretation of settlement hierarchy fails to account for situations such as this, it potentially gives licence to restrict development in a location that is well-served by local services and facilities and where there is a local need for housing. This is contrary to paragraph 79 of the NPPF. Indeed, by encouraging modest growth amongst these villages it ensures that the shared services can be sustained and therefore prevents further longer journeys to the main centres. The adopted Local Plan policies allow next to no additional housing for these villages, which is a threat to the sustainability of their services and amenities. Allocations and/or positively worded policies are required to deliver modest growth in villages such as Wardington.
LPR-B-573	Walsingham Planning for Mr Richard uthill	Question - Settlement Boundaries	Settlement boundaries should not be introduced in a District which currently doesn't define them. Planning policies need to remain flexible to account for changing circumstances in the future. Defined and rigid settlement boundaries would fail to achieve this, and with respect this question fails to take account of the changing circumstances and shifting sands which COVID-19 presents. If boundaries are to be considered, they need to be large enough and policies flexible enough (e.g. to consider 'edge of boundary locations') to accommodate growth and not be a barrier to future development needs of the District. This question appears to be placing a potential barrier to development and a barrier to realising the future potential of settlements, it is introducing restrictions and introducing a lack of flexibility.
LPR-B-573	Walsingham Planning for Mr Richard Tuthill	Call for Sites Promotion - Land adjoining Judges, Wardington and Land off The Greensward, Wardington	Land adjoining Judges, Wardington is promoted for housing. Update to HELAA400.
LPR-B-573	Walsingham Planning for Mr Richard Tuthill	Call for Sites Promotion - Land off The Greensward, Wardington	Land off The Greensward, Wardington is promoted for housing. Update to HELAA401.
LPR-B-573	Walsingham Planning for Mr Richard uthill	Option 31	The adopted Local Plan policies allow next to no additional housing for lower category villages, villages which as discussed above can form a network of settlements which share facilities and services. The lack of growth in such locations is a threat to the sustainability of their services and amenities, and fails to provide housing to meet a local need. The distribution of growth throughout the District in sustainable locations and of a scale that is proportionate to their location needs to be built into flexibly-worded policies in order to achieve the aims of the consultation document and the issues raised. Allocations and/or positively worded policies are required to deliver modest growth in villages such as Wardington.
LPR-B-574	JCPC for Moorfields Advisory	Option 1	Under (14) Our Rural communities there should be specific reference to the value and importance of delivering additional housing growth in such areas in order to support the objective of creating thriving village communities.
LPR-B-574	JCPC for Moorfields Advisory	Option 2	KO31 should be amended to make reference to the need to deliver market housing in rural communities (not just affordable housing) as it is by maintaining and securing additional resident population in rural villages that assists the viability of local services and facilities. KO23 should be amended to recognise that, whilst development is to be focussed to the most sustainable locations, a settlement hierarchy will be adopted that cascades development down through the villages and rural settlements of the District in recognition of the value of such to KO31 (as amended above)
LPR-B-574	JCPC for Moorfields Advisory	Option 3	5 - a combination of all of the above
LPR-B-574	JCPC for Moorfields Advisory	Option 6	Rates of affordable housing should be evidence-based and consistent throughout the District. The proportion of affordable housing set out in (2) above should be a maximum.
LPR-B-574	JCPC for Moorfields Advisory	Option 7	Other affordable housing tenures – such as low cost market housing – should be promoted and prioritised ahead of social rented housing in order to encourage social mobility through housing tenures.
LPR-B-574	JCPC for Moorfields Advisory	Question - Separation Distances	No, should remain a matter of judgment based on site conditions.
LPR-B-574	JCPC for Moorfields Advisory	Option 9	2 - rely on Building Regulations
LPR-B-574	JCPC for Moorfields Advisory	Option 10	1 - Leave for Building Regulations (and future policy direction, if any)
LPR-B-574	JCPC for Moorfields Advisory	Question - Green Belt	No the Green Belt should be maintained given that a fundamental feature of the Green Belt, and reason for its designation, is its permanence.
LPR-B-574	JCPC for Moorfields Advisory	Option 12	Financial contributions (where compliant with the Regulations) subject to thorough testing and a higher level policy that requires (if at all) a specific degree of net gain.
LPR-B-574	JCPC for Moorfields Advisory	Option 13	1 - Include a policy in the Plan requiring major development proposals to be supported by a natural capital assessment to demonstrate the impact of the proposals
LPR-B-574	JCPC for Moorfields Advisory	Question - 20-Minute Neighbourhoods	The principle of 20-minute neighbourhoods, and the benefits, are accepted and acknowledged. However, the delivery of such should not be sacrosanct or a specific policy requirement as it may not be practical, feasible or deliverable on sites depending on the specific characteristics of the site. Reference to such could be purely aspirational. It should also be recognised that this is less practical or deliverable in the rural areas of the District.
LPR-B-574	JCPC for Moorfields Advisory	Option 29	2 - No further development should be permitted at Heyford Park beyond that which is already planned. It would be more beneficial to the sustainability of existing rural settlements for any rural housing to be spread, on a hierarchical basis (judged on sustainability) between existing villages/settlements. Such an approach would best support the viability of local services and facilities and the social cohesion of existing settlements. Further growth at Heyford Park would undermine this prospect to the detriment of well established communities.
LPR-B-574	JCPC for Moorfields Advisory	Option 30	2 - there should be a step-change in the delivery of housing in rural areas, with a significant proportion of the District-wide housing need directed to the rural areas. This should be based on an analysis of the sustainability of existing settlements (i.e developing criteria that allow the sustainability of settlements to be assessed (eg availability of shops and services, public transport, jobs, communities facilities, and access to larger centres) together with their existing size. Then, having established a settlement sustainability hierarchy, housing growth should be proportionately allocated to settlements based on their sustainability score.

LPR-B-574	JCPC for Moorfields Advisory	Option 31	Whilst a combination of the above may be practical, it should not be at the exclusion of the Local Plan allocating such sites – in the same way that the Local Plan will do so for the other larger settlements of the District. There is no reasonable or logical basis for distinguishing, in this respect, between the approach to be taken in the towns and villages of the District
LPR-B-574	JCPC for Moorfields Advisory	Option 32	The hierarchy should be based on sustainability scoring as detailed in response to Option 30. That would include: shops, services, facilities, community facilities, parks and open space, employment opportunities, public transport, population size, access to (and proximity to) larger centres etc. The criteria and scoring should, itself, be subject to full public consultation.
LPR-B-574	JCPC for Moorfields Advisory	Option 33	3 - a combination
LPR-B-574	JCPC for Moorfields Advisory	Option 34	The current approach – which facilitates objective and subjective assessment based on site specific circumstances – remains the best and most appropriate.
LPR-B-575	Bidwells for Thakeham Homes	Call for Sites Promotion - Land between the M40/A41 and Graven Hill, south of Bicester	Land between the M40/A41 and Graven Hill, south of Bicester is promoted for housing / mixed use. An Evolution Document has been supplied.
LPR-B-575	Bidwells for Thakeham Homes	Option 1	Supportive of the suggested Vision. The type of place the Local Plan envisages will be created aligns with that set out in the emerging Oxfordshire Strategic Plan. Pleased to see reference to Cherwell's strategically important position within the Oxford-Cambridge Arc, which will be a driver for growth in the area, and the focus on a more sustainable form of growth, both from an environmental and social perspective, which aligns with Thakeham's principles.
LPR-B-575	Bidwells for Thakeham Homes	Option 2	The list of objectives provided is very comprehensive and look to provide a clear framework to guide the delivery of the Vision to 2040. Whilst the objectives will likely need to evolve to become more locationally specific as strategy is developed, it is good to see a focus on sustainability, promoting net zero carbon development and generally minimising the impact of development on the environment, which will be essential to the success of the development strategy. It is good to see the objectives focusing on healthy-place shaping which will also be integral to the success of the development strategy, with a need to ensure future development maximises opportunities for journeys to be made on foot or bicycle. This will necessitate ensuring new developments prioritise non-motorised transport and include a full range of day to day services and facilities, appropriately laid out, which can often best be achieved within strategic scale developments, such as that proposed at South Bicester.
LPR-B-575	Bidwells for Thakeham Homes	Option 3	It is inevitable that a blended approach will be necessary. Most employment land should be located at and around Banbury and Bicester, which will likely dovetail with significant transport interchanges. Kidlington is constrained by the Oxford Green Belt and any release of land from the Green Belt will be a strategic matter and would therefore be a matter for the Oxfordshire Plan rather than the Cherwell Local Plan Review.
LPR-B-575	Bidwells for Thakeham Homes	Option 4	This will be largely dependent on the level of need for each use class, which is a matter for the Oxfordshire Plan, and their specific locational needs. Employment generating uses should be located as close to existing or proposed residential areas as possible to encourage shorter journeys or associated with existing or proposed key transport links. This is particularly the case for mixed employment sites that may include leisure or retail uses. The plan will need to ensure that there are a mix of job opportunities across the District to ensure that all skill levels are catered for.
LPR-B-575	Bidwells for Thakeham Homes	Option 6	The affordable housing requirement that would best be considered across the whole of Oxfordshire as part of the overall housing need position. It is recommended that how affordable housing is distributed should be determined through a viability study and a study into where the need arises rather than maintaining the existing split across the District. The type of development that will likely be planned in different areas needs to be considered in setting the targets and this should be factored in to the viability considerations to ensure there are not future issues with under delivery when site specific factors are taken into account.
LPR-B-575	Bidwells for Thakeham Homes	Option 7	The affordable housing requirement will be a matter for the Oxfordshire Plan. Thakeham are content to support any affordable housing tenure mix provided it meets the needs of the District and ensures that all households are accommodated. Care needs to be considered as regards the impact of First Homes that this does not distort the tenure mix such that shared ownership is squeezed out completely or reduced to levels that do not allow sufficient family accommodation to be available to those who need it. Examples might include families trading up in shared ownership accommodation for larger accommodation or formation of two new households following divorce but where neither household would qualify as first time buyers.
LPR-B-575	Bidwells for Thakeham Homes	Option 8	Thakeham supports the Council's aspiration to see good quality homes delivered across their district, such policy requirement which seeks all dwellings to meet NDSS need to be supported by robust evidence that there is a specific need to introduce such standards.
LPR-B-575	Bidwells for Thakeham Homes	Question - Separation Distances	Arbitrary separation distances are not an appropriate tool to achieve good urban design since they cannot reflect the specific character of an area. It is instead recommended that policies directly address issues of privacy and natural light, allowing the District Council to focus on the issues specific to the site.
LPR-B-575	Bidwells for Thakeham Homes	Option 9	Any policy requirements in respect of housing accessibility requirements should be based off identified need, with sufficient flexibility incorporated to ensure that provision is directed to the right places. In particular, blanket policy requirements for M4(2) in all new developments should not be adopted as these requirements should be based off identified need, whilst requirements in relation to M4(3) can be particularly onerous and should only be directed to developments where there is an identified end user.
LPR-B-575	Bidwells for Thakeham Homes	Question - Housing Policies	Thakeham strongly welcomes policy endorsement for modern methods of construction, which it proposes to use at South Bicester. Thakeham are keen to locate their MMC factory within the South Bicester development which would diversify the supply of homes in the area, drive up quality and ensure a more efficient use of materials in the construction process, which is integral to delivering the objectives for the area. Policy support for this approach would therefore be welcome. However, it is noted that a similar option was set out in the recent Oxfordshire Plan consultation, and it may be better to have a county-wide policy ensuring consistency of approach rather than potentially having different standards in each LPA area.

LPR-B-575	Bidwells for Thakeham Homes	Option 10	Thakeham has a commitment to all homes being zero carbon in lifetime use and carbon neutral in production by 2025, with a focus on first improving the fabric of buildings, constructed from sustainable timber sources, consideration of sustainable energy features and a sustainable procurement strategy which encourages the use of recycled materials. Thakeham hopes to locate their new MMC factory at its South Bicester development providing new jobs in the area and ensuring all of its developments in Oxfordshire will have locally sourced MMC constructed homes helping to reduce the environmental impact of construction. Thakeham have recommended that any construction standards for Oxfordshire are set out in the Strategic Plan and not deferred to the District Plans which is proposed as an alternative option. Deferment to District Plans would hinder the aspiration to address climate change across Oxfordshire and would also potentially lead to an element of confusion moving forward as different authorities adopt different policy standards. It may dissuade some SMEs from working in different parts of the county due to the challenges of adhering with different requirements, which would hinder job growth created by these SMEs.
LPR-B-575	Bidwells for Thakeham Homes	Option 11	There should be an aspiration to maximise the use of renewable energy in new developments, with any policy being complementary to the overall aspiration for reducing the production of greenhouse gases – noting any policy requirements need to be viable. Strategic development can contribute to delivery of renewable energy, both through renewable energy in buildings and through onsite provision. In the example of South Bicester, zero carbon placemaking will be underpinned by low carbon energy production, alongside battery and alternative storage solutions, with the potential to facilitate multidirectional energy paths and flows across the development. Smaller scale development will not be in a position to generate onsite provision in the same way as South Bicester so it is important that policies consider the contribution renewable energy within buildings can make to maximising renewable energy generation. It is important that policies are not overly prescriptive and provide flexibility in approach to cater for the likely evolution of renewable energy over the Plan period, particularly as this evolution may be quicker than any future updates to planning policy.
LPR-B-575	Bidwells for Thakeham Homes	Question - Policies for Climate Change, Sustainable Construction & Renewable Energy	It is important that the benefits that development can bring to existing communities and the natural environment are recognised, particularly when they improve resilience to climate change. By way of example, South Bicester will deliver significant benefits to the local community in terms of the management of flood water through taking a strategic approach to management of flood water on site. This would include a 'flood bypass' for Wendlebury, diverting water from the centre of the village, significantly reducing risk for existing residents. The nature of the site at South Bicester means that there is a significant opportunity to deliver a net gain in biodiversity as part of a holistic approach to ecological and landscape enhancement. South Bicester will deliver an extensive amount of different types of water, wildlife and landscape uses, where higher value habitats will be created.
LPR-B-575	Bidwells for Thakeham Homes	Option 12	Thakeham support the aim of delivering net gain on site where this is achievable and appropriate. If it is not achievable onsite, it is suggested that offsite contributions are used to enhance targeted areas identified in the Plan rather than sites 'nearby'. This will ensure the Plan maximises the level of biodiversity net gain across the District in the most efficient way. Thakeham are aiming to achieve 20% net gain in biodiversity as part of the South Bicester development.
LPR-B-575	Bidwells for Thakeham Homes	Option 13	Thakeham advocate the need to aim for net environmental gain across the District and natural capital will be a key part of this. Thakeham would prefer to see policies setting out specific requirements for development to achieve this aim, such as those associated with biodiversity net gain, rather than a requirement for a particular form of assessment that would not necessarily prove policy compliance.
LPR-B-575	Bidwells for Thakeham Homes	Question - Biodiversity & the Natural Environment	Whilst having a policy on net gain will be essential in driving up ecological enhancements through development, it should also be recognised that the Local Plan has a role to play by directing growth to those areas where development can take advantage of identified opportunities for ecological enhancement. By way of example, the southern part of the South Bicester site lies within an area mapped as a Natural England Network Expansion Zone where new or enhanced ecological connections would contribute to the targets for the area, making it an ideal opportunity to use development as a mechanism for delivering net gain in an area where it would make a difference to the wider ecological network.
LPR-B-575	Bidwells for Thakeham Homes	Option 14	Suggestions one and two apply a one-size-fits-all approach that in practice doesn't always work. Thakeham's preference is suggestion three as this will likely provide the best outcome for local communities.
LPR-B-575	Bidwells for Thakeham Homes	Option 15	Thakeham believe that strategic sites should seek to provide as much provision to meet their own needs as possible. This will not be possible for all sites and therefore financial contributions should continue to be used to mitigate the increase in demand. How these contributions are spent should be on a case-by-case basis: if there is a clear deficit within a settlement, a new hub might be appropriate, but if improvements to existing infrastructure would resolve the deficit this should take precedence.
LPR-B-575	Bidwells for Thakeham Homes	Question - Achieving Good Design & 'Beauty'	It is likely that design codes will need to vary between settlements and sites, and it is likely some details will need modification over time to reflect changes in government guidance. As such it is recommended that the Local Plan includes a policy requiring development to have regard to the latest local design codes but leave the codes themselves to supplementary planning documents, site specific development briefs and neighbourhood plans. Care will need to be taken to ensure any policy is consistent with the proposed policy approach set out in the emerging Strategic Plan.
LPR-B-575	Bidwells for Thakeham Homes	Question - 20-Minute Neighbourhoods	Fully endorse the concept of 20-minute neighbourhoods.
LPR-B-575	Bidwells for Thakeham Homes	Question - Transport & Connectivity	Larger strategic sites provide an opportunity to shape travel habits by providing social infrastructure alongside housing, and providing public transport hubs that can be used to serve employment areas further afield. For example, at South Bicester, Thakeham propose walking and cycling over car travel with pedestrian, cycle and bus links to Bicester Village Station. All Thakeham homes will have a fast-electric vehicle charging point and Thakeham will also provide incentives for cycle ownership.
LPR-B-575	Bidwells for Thakeham Homes	Option 17	Thakeham advocate an updated methodology that reflects the increasing importance of climate, healthy places and sustainable economy, which are all central to the proposals for South Bicester. In terms of the Infrastructure Delivery Plan, a catchment basis is recommended for social infrastructure such as education, health and public open space. Place is still important, but a methodology based on place quite often fails to recognise patterns of usage that cross administrative boundaries.

LPR-B-575	Bidwells for Thakeham Homes	Option 18	As a key settlement, Banbury should be a focus of additional growth over the next Plan period. Experience has shown that trying to define the nature or location of growth in the abstract is unhelpful. For example, the difference between an urban extension and a new settlement is only a matter of distance and is highly subjective. Instead, it is more appropriate to consider the actual site options available and which would provide the most sustainable pattern of growth in and around Banbury.
LPR-B-575	Bidwells for Thakeham Homes	Option 22	As per Thakeham's representations to the Strategic Plan, Bicester should be a key location for growth over the next plan period given the availability of employment, the access to sustainable modes of transport and, importantly, the availability of suitable strategic development sites. Experience has shown that trying to define the nature or location of growth in the abstract is unhelpful. For example, the difference between an urban extension and a new settlement is only a matter of distance and is highly subjective. Instead, it is more appropriate to consider the actual site options available, their characteristics, including for example their connectivity to public transport, and generally which would provide the most sustainable pattern of growth in and around Bicester. Our view is that this would point towards development at South Bicester as being the most appropriate location for further growth, irrespective of whether it is considered as a new settlement or an urban extension.
LPR-B-575	Bidwells for Thakeham Homes	Option 23	If the Oxfordshire Plan does not facilitate substantial green belt release in Cherwell, most likely around Kidlington, the strategy for Bicester will need to recognise that the town will act partially as a commuter hub to serve Oxford. While as much as possible should be done to make use of the rail services into Oxford, it is inevitable that many will continue to either use private cars or buses and coaches to reach the diffuse employment opportunities around the City. Consequently, it is logical for future greenfield sites to be located to the south of Bicester to provide ease of access to employment and public transport corridors into Oxford. Thakeham's South Bicester proposals not only provide links to the Bicester Village Train Station but are well located to ensure that Oxford-bound road traffic does not cause further capacity issues within or around Bicester.
LPR-B-575	Bidwells for Thakeham Homes	Question - Bicester's Open Spaces	As a rule, these spaces and facilities should be subject to a policy stating that proposals resulting in their loss would normally be refused. However, there should be a degree of flexibility to ensure that developments that provide significant net gain in spaces and facilities are not unreasonably penalised to the loss of some existing areas.
LPR-B-575	Bidwells for Thakeham Homes	Question - Reducing Car Dependency in Bicester	Sites should provide an integrated transport solution such as what is being proposed for South Bicester. In addition, the selection of sites is fundamental with South Bicester providing exceptional links to Oxford without the need to travel through Bicester first. Strategic development at South Bicester would facilitate the creation of a transport hub with the scale of the development enabling the area to be planned in such a way that the range of new services and facilities can be linked by dedicated cycle and pedestrian routes which limit the need to travel by car for local journeys. Strategic scale development would also viably contribute to improving bus services in the area, further enhancing opportunities for sustainable travel.
LPR-B-575	Bidwells for Thakeham Homes	Option 26	Green belt release is a strategic matter and should be left to the Oxfordshire Plan.
LPR-B-575	Bidwells for Thakeham Homes	Question - Settlement Boundaries	Whilst Thakeham support the use of settlement boundaries to provide certainty as to where development will be permitted, it is important that any boundaries are drawn to encompass new growth planned through the Local and Strategic Plans. There have been instances where settlement boundaries are not defined until after a development has taken place, but we would advocate any new settlement boundaries being drawn around new allocations to provide clarity that they are integral to the settlement which they adjoin.
LPR-B-575	Bidwells for Thakeham Homes	Question - Development Management Policies	The development management policy review is long overdue and very welcome, but in terms of timing and the scope of the Cherwell Local Plan, the preparation of a robust development strategy causes some difficulty as the amount of employment, housing or other forms of development, nor its distribution, cannot be known until the Oxfordshire Plan has been adopted.
LPR-B-576	Walsingham Planning for Richborough Estates		Rep provided WeTransfer link only - no rep content
LPR-B-577	Historic England	Question - Retrofitting of Historic Buildings	Historic England recognises the need for urgent action to mitigate and adapt to climate change and is committed to the achievement of net zero. We are researching and promoting how the historic environment can positively contribute to overall global sustainability through adaptation and mitigation. There are few 'one size fits all' energy improvement solutions appropriate for these homes and studies show reusing these buildings is key to cutting the UK's carbon emissions. agree with the council's assertion that each building will require bespoke approaches that consider the risks and benefits of different measures. modern approaches to energy efficiency may not be appropriate for traditional buildings. Furthermore, as the consultation document rightly points out, the significance of heritage assets could be harmed by inappropriate retrofit measures. Support historic buildings being dealt with on a case-by-case basis and therefore we would prefer them to sit outside any policy standard within the local plan. reference and links provided to Historic England documents on energy efficiency and historic buildings and climate change.
LPR-B-577	Historic England	Question - Green Belt	note that the plan does not anticipate strategic matters relating to the Oxford Green Belt being addressed by this plan. may wish to comment should this position change.

LPR-B-577	Historic England	Question - Protecting the Historic Environment	the local plan will need to, as a starting point, be consistent with national policy. This means ensuring that national policy is correctly reflected in the plan. if strategic policies are to be contained within this plan HE would advocate a strategic policy for the historic environment in accordance with NPPF paragraphs 20 & 21. to demonstrate a positive strategy for the conservation and enhancement of the historic environment, the plan should go beyond this. in order to demonstrate the positive strategy required by the NPPF, heritage should be considered holistically throughout the plan. heritage should not be thought of as only a constraint, but also as something that can be drawn on to achieve positive outcomes. Heritage at risk also needs to be given full consideration. This approach also appears to be supported locally. Strong heritage policies will take account of locally specific issues and respond accordingly. It is therefore welcome that the council has identified ancient routeways as an area to be considered for a specific policy approach. This helps to demonstrate that the council is being proactive in the management of the historic environment. Request for the following to be set out as evidence base for the Reg 19 stage: <ul style="list-style-type: none"> <li>• List of conservation areas, whether supported by appraisal, date of appraisal/last review and whether the council considers a review is due;</li> <li>• Status of list of non-designated heritage assets/local heritage assets (i.e. content, last updated, criteria and method for identifying new assets);</li> <li>• Status of local heritage at risk list, scope (grade II listed buildings (non-ecclesiastical), non-designated assets).</li> <li>• Commentary on the relationship between the above items and the plan itself (part of the positive strategy)</li> </ul>
LPR-B-577	Historic England	Question - Achieving Good Design & 'Beauty'	The NPPF requirement for the plan to set out a positive strategy applies to the historic environment. the issues of design and the historic environment will often interact and as such we would advocate a robust approach to design policy in the plan and supplementary documents. In considering how best to take account of the National Design Guide and the National Model Design Code, the historic environment and relevant evidence (including any necessary updating) should be considered at the outset of the creation of new design policy. Historic England would be pleased to provide further advice as the need arises.
LPR-B-577	Historic England	General	The plan does not currently include any site allocations: it only includes a list of all sites that have been submitted as part of the call for sites process. HE do not have capacity to comment on such a long list of sites. However, will comment on proposed site allocations when they are consulted upon, presumably at the next iteration of the plan (reg 19, proposed submission). Appendix 2 of rep provides links to good practise advice and HE advice notes which it is recommended are reviewed as part of the plan preparation.
LPR-B-577	Historic England	Option 29	Previously raised concern about further site development through the Oxfordshire Plan second Reg 18 consultation and CDC Sept 2020 consultation. HE's position has always been that all 56 hardened aircraft shelters, as well as a number of further unscheduled buildings within the airfield are of national importance. In addition to the prospect of further housing-led development in or around the former base, a pre-application for the Oxfordshire Strategic Rail Freight Interchange, has now been submitted (Nationally Significant Infrastructure Project). Concerned about the harm that could ensue from these two projects, individually and cumulatively. Heritage assets that could be harmed would include the Upper Heyford Conservation Area itself and the settings of the scheduled Cold War Structures and the unscheduled structures of national importance (given the functional relationship between the scheduled and unscheduled structures, and the rest of the base, most, if not all of the base is likely to be considered within the setting of the scheduled and/or unscheduled structures). More specifically, the combination of further development around the eastern end of the runway and the rail freight interchange, also located to the eastern end of the runway, would be likely to harm the setting of the airfield and its runway. The setting of the airfield is important in understanding its function, with the area to the east of particular importance to understanding the operation of the runway, as well as the evolution of the base. There may be some scope for further development at or near Heyford Park, but in order to identify potential harm and suitable locations for development, a heritage impact assessment would be required at plan-making stage. This should not be left until planning application stage, as to do so would mean any identified development capacity would not be sufficiently evidenced and as such, this would render the plan unsound.
LPR-B-577	Historic England	Option 34	support the definition of valued landscapes/landscape features in the district which would be the subject of additional policy guidance. This would help to differentiate more sensitive areas from less sensitive thereby helping to direct development away from more sensitive areas.
LPR-B-578	JCPC for Manorwood Consultancy	Option 1	Under (14) Our Rural communities there should be specific reference to the value and importance of delivering additional housing growth in such areas in order to support the objective of creating thriving village communities.
LPR-B-578	JCPC for Manorwood Consultancy	Option 2	KO31 should be amended to make reference to the need to deliver market housing in rural communities (not just affordable housing) as it is by maintaining and securing additional resident population in rural villages that assists the viability of local services and facilities. KO23 should be amended to recognise that, whilst development is to be focussed to the most sustainable locations, a settlement hierarchy will be adopted that cascades development down through the villages and rural settlements of the District in recognition of the value of such to KO31 (as amended above)
LPR-B-578	JCPC for Manorwood Consultancy	Option 3	5 - a combination of all of the above
LPR-B-578	JCPC for Manorwood Consultancy	Option 6	Rates of affordable housing should be evidence-based and consistent throughout the District. The proportion of affordable housing set out in (2) above should be a maximum.
LPR-B-578	JCPC for Manorwood Consultancy	Option 7	Other affordable housing tenures – such as low cost market housing – should be promoted and prioritised ahead of social rented housing in order to encourage social mobility through housing tenures.
LPR-B-578	JCPC for Manorwood Consultancy	Question - Separation Distances	No, should remain a matter of judgment based on site conditions.
LPR-B-578	JCPC for Manorwood Consultancy	Option 9	2 - rely on Building Regulations
LPR-B-578	JCPC for Manorwood Consultancy	Option 10	1 - Leave for Building Regulations (and future policy direction, if any)

LPR-B-578	JCPC for Manorwood Consultancy	Question - Green Belt	No the Green Belt should be maintained given that a fundamental feature of the Green Belt, and reason for its designation, is its permanence.
LPR-B-578	JCPC for Manorwood Consultancy	Option 12	Financial contributions (where compliant with the Regulations) subject to thorough testing and a higher level policy that requires (if at all) a specific degree of net gain.
LPR-B-578	JCPC for Manorwood Consultancy	Option 13	1 - Include a policy in the Plan requiring major development proposals to be supported by a natural capital assessment to demonstrate the impact of the proposals
LPR-B-578	JCPC for Manorwood Consultancy	Question - 20-Minute Neighbourhoods	The principle of 20-minute neighbourhoods, and the benefits, are accepted and acknowledged. However, the delivery of such should not be sacrosanct or a specific policy requirement as it may not be practical, feasible or deliverable on sites depending on the specific characteristics of the site. Reference to such could be purely aspirational. It should also be recognised that this is less practical or deliverable in the rural areas of the District.
LPR-B-578	JCPC for Manorwood Consultancy	Option 29	2 - No further development should be permitted at Heyford Park beyond that which is already planned. It would be more beneficial to the sustainability of existing rural settlements for any rural housing to be spread, on a hierarchical basis (judged on sustainability) between existing villages/settlements. Such an approach would best support the viability of local services and facilities and the social cohesion of existing settlements. Further growth at Heyford Park would undermine this prospect to the detriment of well established communities.
LPR-B-578	JCPC for Manorwood Consultancy	Option 30	2 - there should be a step-change in the delivery of housing in rural areas, with a significant proportion of the District-wide housing need directed to the rural areas. This should be based on an analysis of the sustainability of existing settlements (i.e developing criteria that allow the sustainability of settlements to be assessed (eg availability of shops and services, public transport, jobs, communities facilities, and access to larger centres) together with their existing size. Then, having established a settlement sustainability hierarchy, housing growth should be proportionately allocated to settlements based on their sustainability score.
LPR-B-578	JCPC for Manorwood Consultancy	Option 31	Whilst a combination of the above may be practical, it should not be at the exclusion of the Local Plan allocating such sites – in the same way that the Local Plan will do so for the other larger settlements of the District. There is no reasonable or logical basis for distinguishing, in this respect, between the approach to be taken in the towns and villages of the District
LPR-B-578	JCPC for Manorwood Consultancy	Option 32	The hierarchy should be based on sustainability scoring as detailed in response to Option 30. That would include: shops, services, facilities, community facilities, parks and open space, employment opportunities, public transport, population size, access to (and proximity to) larger centres etc. The criteria and scoring should, itself, be subject to full public consultation.
LPR-B-578	JCPC for Manorwood Consultancy	Option 33	3 - a combination
LPR-B-578	JCPC for Manorwood Consultancy	Option 34	The current approach – which facilitates objective and subjective assessment based on site specific circumstances – remains the best and most appropriate.
LPR-B-579	Walsingham Planning for L&Q Estates	Option 2	Any future draft wording of policies needs to avoid being too prescriptive and inflexible and ensure responsiveness is built into them. This need for flexibility will be absolutely essential as the economy seeks to navigate and then recover from the challenges presented by the current COVID-19 crisis. The planning system should be a tool to unlock the potential of sites rather than restrict or hamper them. KO1 - Though brownfield development on suitable sites is to be preferred, allocating appropriate amounts of suitable greenfield sites will be necessary to meet housing need. Villages and smaller settlements have an important role to play in distributing growth across the District. It is important to note that 'sustainable locations' should not just be considered to be the main urban areas of the District. Other settlements, such as larger rural villages, also form sustainable locations where growth should be accommodated as an integral component of the spatial strategy to shape the delivery of the emerging vision and key objectives of the Plan. It is noted that the Council cannot currently demonstrate a 5 year housing land supply, and it is a requirement of the NPPF to maintain this. Current policies and allocations have not delivered enough homes, therefore new allocations need to be made in order to meet this need. KO15 - It is not clear what the new policy concerning 'natural capital' seeks to achieve, bearing in mind there are already a suite of policies which cover areas such as trees, biodiversity, habitats, landscape impact etc. Policies – including the Key Objectives – need to realise the potential of individual sites and allow a site-by-site assessment rather than the application of broad-brush policies which are in turn too restrictive. .
LPR-B-579	Walsingham Planning for L&Q Estates	Option 6	recognise the importance of affordable housing provision. A flexible approach should be adopted at this stage in identifying the percentage requirement until a review of infrastructure costs and values has been carried out. It is going to be important for economic recovery and wider housing delivery to avoid placing undue burdens and restrictions on development. there is the need to ensure any new policy isn't prescriptive and allows for individual site circumstances and viability to be taken into account; this is the case with current Policy BSC 3 of the adopted Local Plan.
LPR-B-579	Walsingham Planning for L&Q Estates	Option 8	re-emphasise the need to ensure flexibility in policies and standards and to avoid an overly prescriptive approach. Understand the ambition for space standards, there will however be occasions where site constraints or market demands require a site specific flexible or innovative approach to separation distances and space standards. Not everywhere will be a uniform housing estate on a greenfield site. Good design and layout is more important than a prescriptive standard that must be adhered to at all costs. Separation Distances may be better considered through a design guide SPD.
LPR-B-579	Walsingham Planning for L&Q Estates	Question - Separation Distances	re-emphasise the need to ensure flexibility in policies and standards and to avoid an overly prescriptive approach. Understand the ambition for space standards, there will however be occasions where site constraints or market demands require a site specific flexible or innovative approach to separation distances and space standards. Not everywhere will be a uniform housing estate on a greenfield site. Good design and layout is more important than a prescriptive standard that must be adhered to at all costs. Separation Distances may be better considered through a design guide SPD.

LPR-B-579	Walsingham Planning for L&Q Estates	Option 10	support Option 2 which seeks to reflect standards set by Central Government. It will be important for economic recovery and ongoing development in the District to avoid placing undue burdens and restrictions on the planning system. There is the need for flexibility to be built into any policy which reflects changes in national level guidance, standards and ambitions, any new policy should be flexible which moves with Government standards and objectives over time.
LPR-B-579	Walsingham Planning for L&Q Estates	Option 12	need to be flexible and avoid a one size fits all approach. As currently drafted, the need to have options and present alternatives risks a Policy becoming too narrow, inflexible, and a burden on development. It is a 'cart before horse' approach to plan-making. The consultation document is seeking to narrow down the possibilities, and in doing so risks future draft Policy becoming too prescriptive. For example, there will be situations where option 1 is appropriate and situations where option 3 is appropriate. Any new Policy may wish to seek to incorporate a combination of all of the options in order to ensure individual development proposals are assessed with maximum flexibility in mind.
LPR-B-579	Walsingham Planning for L&Q Estates	Option 13	preference is for Option 3 and no change to the existing arrangement. There is already a suite of other existing policies which cover this topic, and in the absence of any draft wording it is unclear what this Policy will introduce above that already considered as part of a planning application (e.g. landscape impact, biodiversity net gain etc.). risks placing additional burdens and obstacles on the planning system and development proposals.
LPR-B-579	Walsingham Planning for L&Q Estates	Question - 20-Minute Neighbourhoods	supportive of the 20-minute neighbourhood principles as part of proposals at LPR-A-185. The site would meet the criteria of a 20-minute neighbourhood and would represent a well located, designed and sustainable development at Ambrosden.
LPR-B-579	Walsingham Planning for L&Q Estates	Option 30	support option 2 to direct proportionately more development to the rural areas over the plan period to meet wider district needs. Though brownfield development on suitable sites is to be preferred, allocating appropriate amounts of suitable greenfield sites will be necessary to meet housing need. Villages and smaller settlements have an important role to play in distributing growth across the District. It is important to note that 'sustainable locations' should not just be considered to be the main urban areas of the District. Other settlements, such as larger rural villages, also form sustainable locations where growth should be accommodated as an integral component of the spatial strategy to shape the delivery of the emerging vision and key objectives of the Plan. Any new draft policy should build in flexibility to a spatial approach to housing land and allocations across the District, and should have sufficient scope to allow the decision taker to have regard to the potential of sites on an individual basis. Current policies and allocations have not delivered enough homes, therefore new allocations need to be made in order to meet this need.
LPR-B-579	Walsingham Planning for L&Q Estates	Option 31	support option 3 which is a combination of options 1 & 2, it is important to ensure flexibility and a responsive planning policy framework and avoid prescriptive policies that fail to account for individual circumstances that will change spatially as well as over time. Support the need to allocate sufficient housing in the rural areas to meet identified housing needs. Local need can of course be both market and affordable housing.
LPR-B-579	Walsingham Planning for L&Q Estates	Option 32	options presented appear to be paving the way for a review of the settlement hierarchy and categorisation. the services which Ambrosden possesses have not significantly changed to warrant a different classification. It is a Category A large village which possess a school, post office, shops, public house, and a church, as noted by the 'Parish Profile' of Ambrosden produced by the Council as supporting evidence to this consultation. The circumstances have not changed since the previous policy classification was introduced, and Ambrosden remains one of the higher order settlements in the District capable of accommodating modest in scale housing growth.
LPR-B-579	Walsingham Planning for L&Q Estates	Question - Settlement Boundaries	Settlement boundaries should not be introduced in a District which currently doesn't define them. Planning policies need to remain flexible to account for changing circumstances in the future. Defined and rigid settlement boundaries would fail to achieve this, and with respect this question fails to take account of the changing circumstances and shifting sands which COVID-19 presents. If boundaries are to be considered, they need to be large enough and policies flexible enough (e.g. to consider 'edge of boundary locations') to accommodate growth and not be a barrier to future development needs of the District. This question appears to be placing a potential barrier to development and a barrier to realising the future potential of settlements, it is introducing restrictions and introducing a lack of flexibility.
LPR-B-579	Walsingham Planning for L&Q Estates	Call for Sites Promotion - Land off Blackthorn Road, Ambrosden - Parcel 1	Land off Blackthorn Road, Ambrosden - Parcel 1 is promoted for housing. Update to HELAA406.
LPR-B-579	Walsingham Planning for L&Q Estates	Call for Sites Promotion - Land off Blackthorn Road, Ambrosden - Parcel 2	Land off Blackthorn Road, Ambrosden - Parcel 2 is promoted for housing. Update to HELAA407.
LPR-B-580	Walsingham Planning for R2 Developments	Option 2	Any future draft wording of policies needs to avoid being too prescriptive and inflexible and ensure responsiveness is built into them. This need for flexibility will be absolutely essential as the economy seeks to navigate and then recover from the challenges presented by the current COVID-19 crisis. The planning system should be a tool to unlock the potential of sites rather than restrict or hamper them. KO1 - Allocating appropriate amounts of suitable greenfield sites will be necessary to meet housing need. Villages and smaller settlements have an important role to play in distributing growth across the District. It is noted that the Council cannot currently demonstrate a 5 year housing land supply, and it is a requirement of the NPPF to maintain this. Current policies and allocations have not delivered enough homes, therefore new allocations need to be made in order to meet this need. KO15 - It is not clear what the new policy concerning 'natural capital' seeks to achieve, bearing in mind there are already a suite of policies which cover areas such as trees, biodiversity, habitats, landscape impact etc. In support of KO20, it will be necessary to allowing appropriate levels of development in rural settlements, to deliver the market and affordable homes necessary to allow families to remain in their local area and to meet the needs of ageing populations. This doesn't necessarily require allocations but instead could be through a flexible, permissive policy approach for the lower tier settlements (i.e. the villages) identified by the Settlement Hierarchy. Policies – including the Key Objectives – need to realise the potential of individual sites and allow a site-by-site assessment rather than the application of broad-brush policies which are in turn too restrictive.

LPR-B-580	Walsingham Planning for R2 Developments	Option 6	support Option 2 to keep the percentage levels the same. It is going to be important for economic recovery and wider housing delivery to avoid placing undue burdens and restrictions on development. The policy needs to be based on up to date evidence, and the policy needs to have built in to it the ability to take viability into account. There is the need to ensure any new policy isn't prescriptive and allows for individual site circumstances and viability to be taken into account; this is the case with current Policy BSC 3 of the adopted Local Plan.
LPR-B-580	Walsingham Planning for R2 Developments	Option 8	re-emphasise the need to ensure flexibility in policies and standards and to avoid an overly prescriptive approach. would note footnote 49 of the NPPF states that policies may make use of the nationally described space standard, but only where the need for an internal standard can be justified. Understand the ambition for space standards, there will however be occasions where site constraints or market demands require a site specific flexible or innovative approach to separation distances and space standards. Not everywhere will be a uniform housing estate on a greenfield site. Good design and layout is more important than a prescriptive standard that must be adhered to at all costs. Separation Distances may be better considered through a design guide SPD.
LPR-B-580	Walsingham Planning for R2 Developments	Question - Separation Distances	re-emphasise the need to ensure flexibility in policies and standards and to avoid an overly prescriptive approach. would note footnote 49 of the NPPF states that policies may make use of the nationally described space standard, but only where the need for an internal standard can be justified. Understand the ambition for space standards, there will however be occasions where site constraints or market demands require a site specific flexible or innovative approach to separation distances and space standards. Not everywhere will be a uniform housing estate on a greenfield site. Good design and layout is more important than a prescriptive standard that must be adhered to at all costs. Separation Distances may be better considered through a design guide SPD.
LPR-B-580	Walsingham Planning for R2 Developments	Option 10	support Option 2 which seeks to reflect standards set by Central Government. It will be important for economic recovery and ongoing development in the District to avoid placing undue burdens and restrictions on the planning system. There is the need for flexibility to be built into any policy which reflects changes in national level guidance, standards and ambitions, any new policy should be flexible which moves with Government standards and objectives over time.
LPR-B-580	Walsingham Planning for R2 Developments	Option 12	need to be flexible and avoid a one size fits all approach. As currently drafted, the need to have options and present alternatives risks a Policy becoming too narrow, inflexible, and a burden on development. It is a 'cart before horse' approach to plan-making. The consultation document is seeking to narrow down the possibilities, and in doing so risks future draft Policy becoming too prescriptive. For example, there will be situations where option 1 is appropriate and situations where option 3 is appropriate. Any new Policy may wish to seek to incorporate a combination of all of the options in order to ensure individual development proposals are assessed with maximum flexibility in mind.
LPR-B-580	Walsingham Planning for R2 Developments	Option 13	preference is for Option 3 and no change to the existing arrangement. There is already a suite of other existing policies which cover this topic, and in the absence of any draft wording it is unclear what this Policy will introduce above that already considered as part of a planning application (e.g. landscape impact, biodiversity net gain etc.). risks placing additional burdens and obstacles on the planning system and development proposals.
LPR-B-580	Walsingham Planning for R2 Developments	Option 30	support option 2 to direct proportionately more development to the rural areas over the plan period to meet wider district needs. Allocating appropriate amounts of suitable greenfield sites will be necessary to meet housing need. Villages and smaller settlements have an important role to play in distributing growth across the District. Any new draft policy should build in flexibility to a spatial approach to housing land and allocations across the District, and should have sufficient scope to allow the decision taker to have regard to the potential of sites on an individual basis. Council cannot currently demonstrate a 5 year housing land supply, and it is a requirement of the NPPF to maintain this. Current policies and allocations have not delivered enough homes, therefore new allocations need to be made in order to meet this need. Combined with the impact of COVID-19 it would follow that policies need to have more flexibility enshrined in them than is currently the case. it will be necessary to allow appropriate levels of development in rural settlements to deliver the market and affordable homes necessary to allow families to remain in their local area and to meet the needs of ageing populations. This doesn't necessarily require allocations but instead could be through a flexible, permissive policy approach for the lower tier settlements (i.e. the villages) identified by the Settlement Hierarchy. Successive Local Plans have placed restrictive policies upon rural villages limiting development to minor development, infill and conversions. Opportunities for such development are finite and have gradually depleted, and minor development has been lacking. Therefore, allocated development at rural villages is necessary to deliver the housing requirement proportionally and sustainably throughout the District.
LPR-B-580	Walsingham Planning for R2 Developments	Option 31	support option 3 which is a combination of options 1 & 2, it is important to ensure flexibility and a responsive planning policy framework and avoid prescriptive policies that fail to account for individual circumstances that will change spatially as well as over time. it would be less onerous for the Council to identify a housing requirement for rural areas (or identified settlements or Parishes) and use a criteria-based approach to identification, rather than make a large number of small allocations which each then need to be justified. This would allow a flexible approach to the spatial distribution of housing in the rural areas. Support the need to allocate sufficient housing in the rural areas to meet identified housing needs. Local need can of course be both market and affordable housing.

LPR-B-580	Walsingham Planning for R2 Developments	Option 32	options presented appear to be paving the way for a review of the settlement hierarchy and categorisation. Whilst Shutford is a category C village in the adopted Local Plan, it is part of a close network of small villages reliant upon each other for shared services and amenities. The 'Parish Profile' of Shutford produced by the Council as supporting evidence to this consultation highlights the Church, public house, recreational facilities, and local bus service. However, within 4km of the village are a number of surrounding villages (including Shutford, North Newington, Swalcliffe, Balscote, Sibford Gower/Ferris, Tadmarton, Shenington and Wroxton) which together provide a level of local services that an individual village of 500 residents could not sustain. A strict interpretation of settlement hierarchy fails to account for situations such as this, it potentially gives licence to restrict development in a location that is well-served by local services and facilities and where there is a local need for housing. Paragraph 79 of the NPPF is explicit in requiring housing to be located where it will enhance or maintain the vitality of rural communities in order to promote sustainable development in rural areas. It states that where there are groups of smaller settlements, development in one village may support services in a village nearby. Indeed, by encouraging modest growth amongst these villages it ensures that the shared services can be sustained and therefore prevents further longer journeys to the main centres. The adopted Local Plan policies allow next to no additional housing for these villages, which is a threat to the sustainability of their services and amenities. Allocations and/or positively worded policies are required to deliver modest growth in the village of Shutford.
LPR-B-580	Walsingham Planning for R2 Developments	Question - Settlement Boundaries	re-emphasise the need to ensure flexibility in policies and standards and to avoid an overly prescriptive approach. would note footnote 49 of the NPPF states that policies may make use of the nationally described space standard, but only where the need for an internal standard can be justified. Understand the ambition for space standards, there will however be occasions where site constraints or market demands require a site specific flexible or innovative approach to separation distances and space standards. Not everywhere will be a uniform housing estate on a greenfield site. Good design and layout is more important than a prescriptive standard that must be adhered to at all costs. Separation Distances may be better considered through a design guide SPD.
LPR-B-580	Walsingham Planning for R2 Developments	Call for Sites Promotion - Land to the west of Fringford, Fringford	Land to the west of Fringford, Fringford is promoted for housing. Update to HELAA399.
LPR-B-580	Walsingham Planning for R2 Developments	Call for Sites Promotion - Land to the north of Epwell Road, Shutford	Land to the north of Epwell Road, Shutford is promoted for housing. Update to HELAA202.
LPR-B-581	JCPC for Merssers Deeley, Morgan, Horton, Astonhill Land Ltd	Option 1	Agree with the vision and the focus on the key settlements of the District.
LPR-B-581	JCPC for Merssers Deeley, Morgan, Horton, Astonhill Land Ltd	Option 3	1 - The focus should be on the most sustainable existing urban centres – that is, a focus on Banbury, Bicester and Kidlington as set out in (1) above.
LPR-B-581	JCPC for Merssers Deeley, Morgan, Horton, Astonhill Land Ltd	Option 4	The approach should be flexible recognising structural shifts in the market/economy likely over the plan period. To that extent, Classes B and E should be facilitated, but not to the preclusion of Sui Generis activities that have employment-generating capabilities
LPR-B-581	JCPC for Merssers Deeley, Morgan, Horton, Astonhill Land Ltd	Question - Supporting Employment	Nothing specific, but the policies should be sufficiently flexible to be responsive to market changes and demands
LPR-B-581	JCPC for Merssers Deeley, Morgan, Horton, Astonhill Land Ltd	Option 6	Levels of affordability (in plan policy) should be subject to general viability testing at a macro-level, but indications are that the levels (in (2)) should be maintained or decreased.
LPR-B-581	JCPC for Merssers Deeley, Morgan, Horton, Astonhill Land Ltd	Option 7	Dependent on housing needs assessment, but suggestion is that other affordable housing tenures should be pushed and promoted ahead of social rented schemes to act as a catalyst for greater social/housing progression and mobility.
LPR-B-581	JCPC for Merssers Deeley, Morgan, Horton, Astonhill Land Ltd	Option 8	This question needs to be considered alongside objectives/considerations in respect of density, separation distances, garden sizes. Different forms of development (eg greenfield development, development on previously developed land within existing settlements) will have varying capabilities to meet the requirements whilst facilitating the proper, efficient and effective development of land. To that extent, if standards are to be referenced at all, the policy should indicate those standards will be applied flexible to recognise different site circumstances.
LPR-B-581	JCPC for Merssers Deeley, Morgan, Horton, Astonhill Land Ltd	Question - Separation Distances	This question needs to be considered alongside objectives/considerations in respect of density, separation distances, garden sizes. Different forms of development (eg greenfield development, development on previously developed land within existing settlements) will have varying capabilities to meet the requirements whilst facilitating the proper, efficient and effective development of land. To that extent, if standards are to be referenced at all, the policy should indicate those standards will be applied flexible to recognise different site circumstances.
LPR-B-581	JCPC for Merssers Deeley, Morgan, Horton, Astonhill Land Ltd	Option 9	2 - rely on Building Regulations
LPR-B-581	JCPC for Merssers Deeley, Morgan, Horton, Astonhill Land Ltd	Option 13	1 - Include a policy in the Plan requiring major development proposals to be supported by a natural capital assessment to demonstrate the impact of the proposals

LPR-B-581	JCPC for Merssers Deeley, Morgan, Horton, Astonhill Land Ltd	Question - 20-Minute Neighbourhoods	The principle of 20-minute neighbourhoods, and the benefits, are accepted and acknowledged. However, the delivery of such should not be sacrosanct or a specific policy requirement as it may not be practical, feasible or deliverable on sites depending on the specific characteristics of the site. Reference to such could be purely aspirational, albeit it is not a facet of good planning that has already endured for a number of years.
LPR-B-581	JCPC for Merssers Deeley, Morgan, Horton, Astonhill Land Ltd	Option 22	Firstly Bicester, in a strategically significant location in regional and national terms, should accommodate significant additional growth. That should necessarily be in the form of major urban extensions in to the open countryside (Option (1)) but in a form that maintains the generally concentric form and morphology of the settlement (that is, not an extension to an existing, recent strategic extension that would unbalance the form of the settlement, but one that completes the concentric form of the town).
LPR-B-581	JCPC for Merssers Deeley, Morgan, Horton, Astonhill Land Ltd	Option 23	Given matters expressed in response to option 23, growth should be considered (and focussed) to the north and east of the town and, more specifically to the north-east. In particular, site LPR-A-085 (Land north-east of Skimmingdish Lane/Bicester Road) would – either individually or in conjunction with adjoining land – ensure a re-balancing of Bicester that reflects the morphology of the town, and has the potential to positively integrate with planned strategic infrastructure.
LPR-B-581	JCPC for Merssers Deeley, Morgan, Horton, Astonhill Land Ltd	Question - Bicester's Open Spaces	Strategic scale urban extensions could provide significant additional green spaces together with sport and recreation facilities. Such developments would contribute positively to a network of green infrastructure. In such respects, development of LPR-A-085 (Land northeast of Skimmingdish Lane/Bicester Road) would afford the potential for the delivery of significant improvements to formal and informal open space and sport and recreation facilities.
LPR-B-581	JCPC for Merssers Deeley, Morgan, Horton, Astonhill Land Ltd	Question - Local Green Spaces in Bicester	Whilst there are no specific comments on the submitted sites, it should be recognised that strategic-scale urban extensions afford the potential for the delivery of new (hitherto publicly inaccessible) areas of Local Green Space that would be of particular community benefit and, with comprehensive planning, would secure a network of connected accessible open spaces. The development of LPR-A-085 (Land north-east of Skimmingdish Lane/Bicester Road) provides an opportunity to secure such Green Space benefits.
LPR-B-581	JCPC for Merssers Deeley, Morgan, Horton, Astonhill Land Ltd	Call for Sites Promotion - Land north east of Skimmingdish Lane / Bicester Road, Bicester	Land north east of Skimmingdish Lane / Bicester Road, Bicester is promoted for housing. Update to HELAA337.
LPR-B-581	JCPC for Merssers Deeley, Morgan, Horton, Astonhill Land Ltd	Call for Sites Promotion - Land north of Launton	Land north of Launton is promoted for housing. Update to HELAA449.
LPR-B-582	Alan Thompson	LPR-A-152	concerns re traffic and environmental issues. Hanwell is essentially a rat run between the Southam Road and Warrick road. The traffic levels at peak times are not only extremely high but average speeds are well in excess of current speed restrictions. high traffic volumes/speeds results in road rage; Increased local housing will only serve to worsen this problem. I have no doubt whatsoever, there will be a fatality in the near future if this is allowed to go unchecked. From an environmental perspective, the increase in litter as a direct result from increased housing is nothing short of horrendous. From the litter and pollution generated from the initial construction phase through to new residents' litter, the environmental impact is unacceptable. The evidence is there for all to see at the boundary between the latest development and what remains of our green belt. It's a sad fact that our villages are steadily being consumed by the constant expansion of towns. Enough is enough. Hanwell has shouldered it's fair share of local development.
LPR-B-582	Alan Thompson	LPR-A-214	concerns re traffic and environmental issues. Hanwell is essentially a rat run between the Southam Road and Warrick road. The traffic levels at peak times are not only extremely high but average speeds are well in excess of current speed restrictions. high traffic volumes/speeds results in road rage; Increased local housing will only serve to worsen this problem. I have no doubt whatsoever, there will be a fatality in the near future if this is allowed to go unchecked. From an environmental perspective, the increase in litter as a direct result from increased housing is nothing short of horrendous. From the litter and pollution generated from the initial construction phase through to new residents' litter, the environmental impact is unacceptable. The evidence is there for all to see at the boundary between the latest development and what remains of our green belt. It's a sad fact that our villages are steadily being consumed by the constant expansion of towns. Enough is enough. Hanwell has shouldered it's fair share of local development.
LPR-B-583	Julie Holloway	Shutford	Shutford is a category C village for planning purposes as it does not have the required services / infrastructure for development. There is no school, doctors surgery or shop. We have a village hall, pub , church and small playground only. roads in and around Shutford are of poor quality and have very little lighting. Single tracked roads, pinch points, roads unsuitable for heavy/additional traffic - all make the village unsustainable for large construction projects or vehicles. Shutford has a lot of underlying stone and this has made even small developments difficult in the past. There have been historical and ongoing problems with the village sewerage / drainage problems inc. a report of raw sewage overflowing into Sor Brook. Given the state of the ground conditions these would be difficult and extremely costly to improve on and upgrade. Thistle Hill is an extremely valuable natural resource . The Environment Bill states that local authorities are responsible for delivering on all aspects included within the bill. Neither site proposed in the village should be included in the final plan.
LPR-B-584	Mrs David	Hempton	Ref to LPR-A-001 to LPR-A-150. Objects to proposed development of 1.2 acre site on land south of The Lane, Hempton. No access to the site and strongly opposes the use of The Lane as it is so narrow. Traffic in Hempton is dangerous enough now - ridiculous to think of adding more.

LPR-B-585	Edgars for Lagan Homes	Option 30	2 - should be supported, as it includes a number of important benefits. small-medium sized sites in villages can make an important contribution to the vitality and viability of villages. Existing services and facilities that are available to residents rely upon a sufficient population in order to remain viable, and to continue in supporting local residents for their daily needs without requiring to travel greater distances. Small-medium development sites can contribute towards population, assisting in contributing to economic vitality and directly contributing to existing local services and facilities. small-medium rural sites have an important role to play in supporting the sustainability of the rural areas of the district. small-medium sites in more rural areas are often quicker to implement and deliver. Ref to NPPF para 69. The authority should not solely rely on a small number of strategic sites, as these can be slower to deliver; allocating smaller sites in rural areas can support wider delivery numbers, consistency in new homes delivery and affordable homes delivery, and in general terms can present less risk of delivery issues than compared to strategic sites. This point is supported by the fact that Table 1 of the Local Plan Review Paper 2 outlines that in the period 2011-2021 in Cherwell the 'rural areas' was the category where the most homes had been delivered in percentage terms against the originally planned for figures for the 2011-2031 period. Given this, further allocation should be made to the rural areas. Option 30 (2) of Housing in Rural Areas would align with Option 5 of the latest version of the Oxfordshire Plan. Option 5 of the Oxfordshire Plan related to a 'focus on supporting rural communities'. Any strategic regional plan should include support for rural areas, and Local Plans should help to support this through allocating specific sites and directing levels of growth to rural areas. Site LPR-A-101 has been submitted previously for the allocation and delivery of 15 homes. the site could come forward with a high-quality design the responds to the local context and supports the village of Fritwell in economic terms and in terms of providing affordable housing.
LPR-B-585	Edgars for Lagan Homes	Option 31	Option 31 (1), allocating specific sites to meet identified housing needs, is an appropriate measure. Allocating sites through the Local Plan process would provide certainty on housing delivery for the rural areas and certainty to meeting identified housing needs. In a Plan-led system, Lagan Homes would support further allocations of specific sites to meet housing need. The rural areas would benefit from the certainty that site allocations can provide. It is important to ensure that sufficient site allocations are made for housing in order to deliver both locally, and in terms of wider regional growth visions. This should include a role for villages, for example Category A villages, rather than exclude such places, to ensure that contributions are made across the board. Re site LPR-A-101 Since the submission of the site to the previous call for sites, Lagan Homes has been investigating the potential design (minimising and mitigating heritage impacts) and investigating the quantum in more detail and would welcome discussions with CDC on this well-screened small site in a location that would contribute to Fritwell as an existing Local Plan defined 'Category A' village, contributing socially and economically to the local context.
LPR-B-585	Edgars for Lagan Homes	Option 32	the Local Planning Authority should have awareness of the level of certainty there is in existing services and facilities being maintained. Allocating growth to rural areas can be key to ensuring that villages remain sustainable, with new development helping to support existing services and facilities. Directing growth only to the most sustainable locations in the district could lead to a decline in viability of services and facilities of the rural areas over time - Therefore, supporting rural areas is a key consideration in developing any rural settlement hierarchy.
LPR-B-585	Edgars for Lagan Homes	LPR-A-101	Site LPR-A-101 has been submitted previously for the allocation and delivery of 15 homes. the site could come forward with a high-quality design the responds to the local context and supports the village of Fritwell in economic terms and in terms of providing affordable housing. Since the submission of the site to the previous call for sites, Lagan Homes has been investigating the potential design (minimising and mitigating heritage impacts) and investigating the quantum in more detail and would welcome discussions with CDC on this well-screened small site in a location that would contribute to Fritwell as an existing Local Plan defined 'Category A' village, contributing socially and economically to the local context.
LPR-B-586	Emma Brown	LPR-A-077	Objects. Croft Lane is unsuitable to accommodate more traffic from the proposed development. Visibility is already restricted when cars park to use local facilities. Parking in the village has got worse over time, with delivery vehicles/bin lorries blocking the narrow lane. Development would result in major disruption to residents of Croft Lane as they would be unable to access their properties due to construction traffic. Croft Lane is also a popular lane for walkers and dog owners and provides access to the countryside. The field is unique as it has access from croft lane and meadow view allowing access to the countryside along the public footpath.
LPR-B-587	Mrs K Winter	Sibford Gower	Notes that CDC seem intent on destroying the villages. Conservation of the countryside, agricultural land and wildlife no longer seem to matter; will be lost forever if covered with concrete. May need all the agricultural land we have to feed ourselves in the future. 360 homes will result in 720+ cars using roads which were not made for the current level of traffic let alone more. Government looks to reduce car usage not increase it. No work in the village which will mean people will have to travel to work by car and all outings will require car usage. Facilities in village include a small shop and limited post office with no room for expansion. the development will require new infrastructure - water, electricity for car charging, street lighting. Street lighting not favoured as it will be detrimental to the wildlife and natural world. Banbury is derelict - empty properties should be used for housing where infrastructure already exists rather than use agricultural land. Historic part of England. Never going to catch up on the housing situation anyway due to foreigners coming to the country and people owning a second home. 720 trees should be planted instead.

LPR-B-588	North Newington Parish Council	Parish Profile - North Newington	<p>The parish profile attached to the Local Plan is out of date and inaccurate. Information provided to update. <b>Primary School</b> – Bishop Carpenter C of E – School Lane: 102 places – oversubscribed in 2021, the school has access issues in extreme weather due to its position in the village and school drop off and pick up times often result in road blockages and tailbacks onto Main Street and the Banbury Road. There is no safe means by which parents from outside of the village can walk or cycle with their children to school and for those living in the village the walk to school is not fully paved from any direction. <b>Recreation Ground / Playing Field:</b> Comes under Oxfordshire County Council jurisdiction but is maintained by the school / parish. Facilities are minimal – i.e., 2 goal posts. <b>Equipped play area:</b> Maintained by the parish, suitable only for under 9’s. <b>Bus Services:</b> Removed in October 2021, the service was of little use to the village due to the pick-up and drop off times. Similar services have been in place and removed due to lack of viability over the past 10 years. School bus services which are not mentioned in the parish profile are oversubscribed and extremely expensive, with some of those living on the Shutford road end of the village unable to access the service. Please note two of the proposed developments are on this side of the village. <b>Day Nursery</b> – Castle Preschool No footpath from the village to the preschool and two extremely dangerous corners on the route mean that village residents are often unwilling or unable to walk or cycle with their children to the local facility. <b>Digital Connectivity:</b> High speed broadband often compromised by bandwidth issues. Mobile phone reception is limited on all major networks. <b>Neighbourhood Plan:</b> The Parish Council are exploring the opportunity / benefits of adopting a neighbourhood plan.</p>
LPR-B-588	North Newington Parish Council	North Newington	<p>transport infrastructure concerns resulting from new development - village used by many in surrounding villages as a 'rat run'; new development in North Newington and the surrounding villages would escalate an existing problem. Existing roads are narrow due to parking constraints, and road access is more difficult during peak school times. Parish council supports the promotion of the 20MPH for Oxfordshire villages campaign. Public transport is non-existent and safe cycle and walking routes to Banbury do not exist. Limited transport infrastructure to support the village. Access to the M40 or trainline is constrained by existing high levels of traffic on Broughton road. Sewerage and Drainage - questions whether there is infrastructure capacity to accommodate new developments in terms of power, water and drainage. Housing on the southern plot from Main Street would cause possible flooding to current properties. Existing residents experience with water pressure and sewerage problems; more development would exacerbate the issues. Conservation and community wellbeing - if not carefully considered, the creation of more homes in rural areas could lead to adverse impact on the wellbeing of existing residents; a holistic net gain in well being for existing and new residents should be considered. Development in the village with a large number of conservation sites would be detrimental to the fabric and history of the village. The proposed development behind Main Street is out of character and on an incline and therefore would likely be visible from the road changing the nature of the village landscape. There are a number of public rights of way from the village. important to maintain the footpaths around the village which provided a great many people with access to nature and exercise during the restrictions throughout the pandemic. reference to NPPF 2021 in relation to the three objectives for housing development and commentary re the north newington proposals. North Newington is not the right type of land in the right place, due to its limited infrastructure. North Newington is a Category C village without the amenities needed to meet this social objective. There is no village shop, village hall or even a frequent bus service. Social needs would therefore not be met. Taking agricultural land to build houses is certainly not adhering to this environmental objective. Animal and wildlife habitats would be destroyed, and traffic would be increased, adding to congestion and pollution. The Parish Council’s preference would be for greater development to progress within the existing urban conurbations and particularly on brownfield sites. Such developments are likely to be more environmentally sustainable, affordable to a greater demographic and economically viable to build. This can be supplemented by proportionate and considered infill reflecting an ‘option C’ village as defined in the current Local Plan. prefer that each development plot is considered by their own merits and would not be supportive of increasing dwelling numbers at a greater rate than delivered in recent years.</p>
LPR-B-589	Stephen and Denise Mobbs	LPR-A-041	<p>Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. Additional development around Henge Close at LPR-A-041 would directly abut the Conservation Area and would therefore be detrimental to the setting of the listed buildings on Horn Hill Rd. Development would also be detrimental to the open nature of the Henge Close estate and to the green space and play area to the east. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. Noise , light &amp; air pollution will be exacerbated &amp; the urbanisation of these rural areas will destroy the appearance forever.</p>

LPR-B-589	Stephen and Denise Mobbs	LPR-A-086	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. The large-scale developments proposed for sites LPR-A-086 would utterly change the approach to the village and would create a jarring transition from agricultural land to modern, dense housing. if developed, double the size of West Adderbury overnight. Such large scale development is entirely inappropriate for a village the size of Adderbury and is far more suited to a large town or even a city. few facilities present in Adderbury would be completely swamped by a development of this scale, placing massive pressures on local schools and services. Precious public footpaths over these sites, which are in daily use by local residents, would be lost forever. Development of LPR-A-086 would lead to the residents of St Mary's Road being completely subsumed by new estates, fundamentally changing the character of the southern edge of West Adderbury. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. Noise , light & air pollution will be exacerbated & the urbanisation of these rural areas will destroy the appearance forever.
LPR-B-589	Stephen and Denise Mobbs	LPR-A-146	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. Additional development around Henge Close at LPR-A-146 would directly abut the Conservation Area and would therefore be detrimental to the setting of the listed buildings on Horn Hill Rd. Development would also be detrimental to the open nature of the Henge Close estate and to the green space and play area to the east. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. Noise , light & air pollution will be exacerbated & the urbanisation of these rural areas will destroy the appearance forever.
LPR-B-589	Stephen and Denise Mobbs	LPR-A-218	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. Noise , light & air pollution will be exacerbated & the urbanisation of these rural areas will destroy the appearance forever.
LPR-B-589	Stephen and Denise Mobbs	LPR-A-258	Strongly object. Site falls outwith the residential settlement boundary as set out in the Adderbury Neighbourhood Plan. Between 2015-2021, there have been 198 housing completions in the parish of Adderbury, with outline permission for 40 more. These developments have already begun to change the fundamental character of the village, in particular of West Adderbury, which has traditionally been rural in nature with a limited number of more modern houses. It is accepted by Oxfordshire County Council and Cherwell District Council that Adderbury suffers from traffic issues such as speeding; proposed development site will directly place additional cars on these already dangerous roads. The proposed development site is entirely unsustainable and every single household in these locations would need to drive to access facilities such as schools and healthcare. The large-scale developments proposed for site LPR-A-258 would utterly change the approach to the village and would create a jarring transition from agricultural land to modern, dense housing. Development would lead to a substantial decrease in the green space between West Adderbury and Milton, increasing the risk of coalescence and impacting upon the character of both villages. A popular footpath would be lost, and irreversible damage would be caused to the amenity of the homes to the north of Adderbury Fields, and to the adjacent green space. Development of the proposed sites would disrupt existing green corridors and habitats, and result in a severe reduction in biodiversity, particularly amongst pollinators. development will dramatically increase run-off and inevitably increase the flood risk to properties around the Sor Brook. Noise , light & air pollution will be exacerbated & the urbanisation of these rural areas will destroy the appearance forever.

LPR-B-590	Charlotte Hefferman and Timothy Palmer	LPR-A-175	entirely opposed to any large scale housing development that would dramatically disturb the character of the village, and it's setting within the landscape. Wardington has 57 Grade II Listed Buildings and sits in a Conservation Area. Part of site 1 is within the Wardington Conservation Area and adjoins a listed building. the proposed site is not within the boundaries of the village settlement and so does tally with the Category B policy of infilling and conversion within settlement limits. The latter would relate to development/ conversion within the settlement boundaries, sensitive to the listed designation of buildings. The proposed plan is outside of this so the policy does not apply. development on the proposed site would remove the open space, surrounding that aspect of the village, which is an essential part of the sense of place and it is the open landscape that frames the village. The development will result in more cars in the village, and the existing narrow roads are not suitable for increased traffic. increased air, noise pollution and congestion in the village will diminish the quality of life of local residents. The site development does not align with the Cherwell Local Plan for sustainability. It does not promote active travel, but rather a greater dependence on car travel, due to the need to travel for work and employment opportunities. The site development would incur the loss of rural landscapes and local identity. Due to their small size, hamlets and villages are particularly susceptible to losing their historic identity through new development. To the east of the village, the construction of HS2 is already significantly impacting the landscape. Planning policy needs to protect small rural villages from the impacts of such developments. The land's existing designation as adjoining a conservation area and adjoining a registered battlefield, mean it is completely inappropriate for planning consideration and we would like to request that the Council carefully considers all aspects of this proposed development, in relation to the negative impact this would have on the local area and people, and in terms of how it fails to align with the Council's Local Plan for Sustainable Development
LPR-B-591	Angela Green	Adderbury	Strongly objects. No facilities in the village except a small local shop and 4 pubs. No doctors or dentists or take aways. Roads already subject of heavy congestion, roads are narrow, out dated and dangerous and often flood. Further planned increase to the village is completely disproportionate to the village; the 60ha site would be more than double the size of Twyford. New development backing on to respondents property has resulted in noise disturbance from dogs and cars starting, lighting disturbance from car lights. Development of the land will result in the loss of agricultural land for growing crops and rearing sheep; need to produce more food locally. Development would result in loss of country walks and views over fields; the heart of country life. Development would result in the destruction of the environment and local wildlife habitats. Land proposed to the east of Adderbury would be impacted by the noise, light and pollution from the M40. Other villages in Cherwell that can accomodate development.
LPR-B-592	Framptons for Skape Banbury	Option 2	The 'health' of Town Centres and Town Centre population is inter-twined. This need to be reflected in both plan and policy making. The following amendments to the key objectives are requested. KO7: Support Cherwell's urban centres, including where beneficial, redevelopment and renewal, to maintain and enhance their vitality, viability, distinctiveness and safety. Acknowledge the importance of residential led mixed-use developments in Town Centre developments as a regeneration tool. KO 23 focus development in Cherwell's sustainable locations, making efficient and effective use of land, conserving and enhancing the countryside and landscape and the setting of its towns and villages. KO23 does not go far enough. The following additional KO is requested. "As a means to facilitate Town Centre regeneration, focus development on brownfield Town Centre sites, and acknowledge the importance of residential led mixed-use developments in Town Centre developments as a regeneration tool".
LPR-B-592	Framptons for Skape Banbury	Option 5	The approach of Option 2 should be the preferred approach. As the Country come out of the pandemic, the planning system, now more than ever, needs to grasp the changing role of the Town Centre and the implications for plan and policy making. Quote provided from The House of Commons, Housing Communities and Local Government Committee report February 2019 titled 'High Streets and Town Centres in 2030' paragraph 38. The Committee considers that high streets and town centres will experience 'large-scale structural change' which will require intervention by local authorities. Intervention will by necessity include adjustment to planning policies and the rebalancing of planning decisions in order to respond to the structural economic change to town centres. The Committee considers (98) that 'planning is crucial to high street and town centre transformation' It is essential that planning policy move away from the out-dated approach of protecting retail use within Town Centre. Regeneration and the 'health' of Town Centres can no longer be maintained and improved by focusing on the retail function of Town Centre.
LPR-B-592	Framptons for Skape Banbury	Question - Supporting Our Town Centres	The Council's Town Centre and Retail Study (September 2021) (TCRS) concluded that there are a number of areas within the Town Centre that needs regeneration and that these areas should be brought forward in a holistic manner. Calthorpe Street & Marlborough Road is included within the areas that need regeneration. many of the Town Centre shops are failing and facing huge viability challenges. Quotes from paras 9.11 and 9.21 of the TCRS which illustrate the need for bold interventions, increase in-town living, greater encouragement of residential developmet in the town centre. The TCRS has identified 6 sites that represent key regeneration opportunities. Site 3 - Calthorpe Street & Marlborough Road is included in this list. The TCRS further describes the site and confirms its suitability for residential development. Town Centre policy should acknowledge the role that residential development can play in regeneration. Planning policy should encourage residential development on Brownfield sites within Town Centres. The Local Plan should allocate Town Centre sites that are suitable for residential mixed-use development, that will assist in Town Centre regeneration. Site 3 Site 3 - Calthorpe Street & Marlborough Road – as set out in the TCRS should be allocated in the emerging Local Plan for residential mixed-use development. In line with government direction, to ensure the most effective use of land through housing densities, there must be scope for tall buildings, in appropriate Town Centre and other locations, such as transport hubs, around bus and train stations. Development plans should define what would constitute a tall building, this may simply be a building that is taller than those around it. Suggested planning policy wording – (wording taken from National Design Guide (2021)) 'As a means to facilitate Town Centre regeneration, residential development on Brownfield Town Centre sites will be supported. In appropriate locations, well-designed tall buildings can play a positive urban design role in the built form, and can act as landmarks, making a positive contribution to views, as well as increasing housing density'
LPR-B-592	Framptons for Skape Banbury	Option 6	Option 2 preferred.
LPR-B-592	Framptons for Skape Banbury	Option 7	Option 2 preferred.

LPR-B-592	Framptons for Skape Banbury	Option 8	Option 1 preferred.
LPR-B-592	Framptons for Skape Banbury	Question - Separation Distances	No, this could compromise the design process and the effective use of land. Embedded effective design elements can mitigate amenity issues such as, massing, overlooking and privacy.
LPR-B-592	Framptons for Skape Banbury	Option 9	Option 1 preferred.
LPR-B-592	Framptons for Skape Banbury	Option 10	Option 1 preferred.
LPR-B-592	Framptons for Skape Banbury	Option 11	Option 1 preferred.
LPR-B-592	Framptons for Skape Banbury	Option 12	Option 2 preferred.
LPR-B-592	Framptons for Skape Banbury	Question - 20-Minute Neighbourhoods	Yes, only in the urban areas of Banbury and Bicester.
LPR-B-592	Framptons for Skape Banbury	Option 18	Planning policy should prioritise development on brownfield sites in Town Centre locations.
LPR-B-592	Framptons for Skape Banbury	Option 19	Planning policy should prioritise development on brownfield sites in Town Centre locations. In line with the findings of the TCRS, the site that have been identified as key regeneration site should be allocated in the emerging Local Plan. Site 3 - Calthorpe Street & Marlborough Road – as set out in the TCRS should be allocated in the emerging Local Plan for residential mixed-use development. Please see answer to earlier QUESTION SUPPORTING TOWN CENTRES
LPR-B-592	Framptons for Skape Banbury	Option 20	Option 2 should be progressed. As the Country come out of the pandemic, the planning system, now more than ever, needs to grasp the changing role of the Town Centre and the implications for plan and policy making. Quote provided from The House of Commons, Housing Communities and Local Government Committee report February 2019 titled 'High Streets and Town Centres in 2030' paragraph 38. The Committee considers that high streets and town centres will experience 'large-scale structural change' which will require intervention by local authorities. Intervention will by necessity include adjustment to planning policies and the rebalancing of planning decisions in order to respond to the structural economic change to town centres. The Committee considers (98) that 'planning is crucial to high street and town centre transformation' It is essential that planning policy move away from the out-dated approach of protecting retail use within Town Centre. Regeneration and the 'health' of Town Centres can no longer be maintained and improved by focusing on the retail function of Town Centre.
LPR-B-592	Framptons for Skape Banbury	Question - Reducing Car Dependency in Banbury	Prioritising residential development on brownfield site development in Town Centres.
LPR-B-593	Framptons for Wardington Parish Council	Option 2	supports the key objectives set out in the consultation. Fundamentally the purpose of the Plan is to address and use implications arising from both the need to accommodate future growth, particularly in housing and employment provision, and the urgency to respond to the climate emergency. While it is acknowledged that the national planning context for the preparation of development plans is evolving, the consequential changes will be subservient to the principal functions of the Local Plan. As such, it is considered that the Plan could usefully set out the overarching key objectives of the Local Plan so that all land use planning considerations remain focussed upon the objectives of the highest imperative. As presently drafted the objectives may all be considered to have the same weight. The extensive list of objectives devalues those which should be of the highest imperative in plan-making and decision-taking. The other objectives then flow from these overarching objectives. The overarching key objectives should be: <ul style="list-style-type: none"> <li>• To address the challenge of the climate emergency.</li> <li>• To ensure that new development contributes to sustainable development.</li> </ul>
LPR-B-593	Framptons for Wardington Parish Council	Question - 20-Minute Neighbourhoods	consider that this principle is sound, but emphasises the need for future growth to be located adjoining existing urban areas, and larger rural settlements of the District which have a range of facilities and services. It is of course accepted that the level of services in the larger (Category A villages) will not replicate the level of services available that may be available in the urban areas. Nevertheless, some level of growth should be allocated to the villages which have a range of services - so as to both support the existence of these villages and to avoid villages that cannot support such facilities, being under pressure to accommodate growth that would not amount to a sustainable pattern of development.
LPR-B-593	Framptons for Wardington Parish Council	Question - Transport & Connectivity	agrees with the approach set out in the Transport Hierarchy in promoting sustainable patterns of development. It is of course acknowledged that the opportunities to promote sustainable transport will not be the same in rural areas as urban areas. Nevertheless, the underlying objective of the Transport Hierarchy should not be abandoned for the rural areas. The evolution of low carbon technology for transport does not address the need to promote active travel, particularly by walking. Further significant levels of growth across the rural areas of the District are unlikely to be conducive to the provision of effective public and community transport.
LPR-B-593	Framptons for Wardington Parish Council	Option 30	consider that in the interests of promoting sustainable patterns of development, the primary focus of growth should continue to be the main urban areas of the District, and then the larger villages which have a wide range of services and facilities. In other settlements such as Wardington, which has minimal facilities, housing should be limited to meet local needs as may be identified by the local community. WPC do not support any form of dispersal strategy for growth across the rural areas to meet wider District needs. Such an approach will lead to patterns of development that are not sustainable, particularly in terms of connectivity between new housing and services. The consequences will be that the character and identity of small village communities will be eroded. Increased travel will be promoted between small rural settlements and larger centres. No overall strategic benefit in the interests of sustainable development is to be gained from a dispersal strategy of growth across the rural areas of the District.

LPR-B-593	Framptons for Wardington Parish Council	Option 31	consider that the preferred approach to the provision of housing to meet local needs is to work with the local communities to establish whether: (I) There is a local need, (II) The scale of any local need. The alternative of setting a Parish level figure could result in unsustainable patterns of development, where there is a mismatch between the Parish figure and a demonstratable scale of local housing need.
